To theſe opinions reſpecting the character of the *French* nation, we ſhall add thoſe of Dr. *Moore*. "The literati are received at the houſes of the firſt nobility, on the moſt liberal footing. It can ſcarcely be imagined the influence which this body of men have in the gay and diſſipated city of *Paris*. The opinions of eminent men of letters not only determine the merit of works of taſte and ſcience, but they have conſiderable weight on the manners and ſentiments of people of rank, and of the public in general, whilſt the opinions and the conduct of the faſhionable world have a powerful effect on the air, the behaviour, and converſation of the learned, which in general is polite and eaſy; equally purified from the aukward timidity contracted in retirement, and the diſguſting arrogance inſpired by univerſity honours or church dignities. At *Paris* the pedants of *Moliere* are to be ſeen on the ſtage only." *View of Manners in France*, I. 26.—The ſame writer is of opinion that there is no country in *Europe* where royal favour, high birth, and the military profeſſion, could be allowed ſuch privileges as they have in *France*, and would produce ſo few inſtances of rough and brutal behaviour to inferiors. *P.* 29.

We ſhall conclude our delineation of the character of the *French* nation with the following truly characteriſtic lines:

A nation here I pity, and admire,
Whom nobleſt ſentiments of glory fire;
Yet taught by cuſtom's force, and bigot fear,
To ſerve with pride, and boaſt the yoke they bear.
Whoſe nobles born to cringe, and to command,
In courts a mean, in camps a generous band;
From each low tool of power content receive
Thoſe laws, their dreaded arms to *Europe* give.

Whoſe people vain in want, in bondage bleſs'd,
Tho' plunder'd gay, induſtrious tho' oppreſs'd;
With happy follies riſe above their fate,
The jeſt and envy of each wiſer ſtate.
Yet here the muſes deign'd awhile to ſport,
In the ſhort ſunſhine of a fav'ring court:
Here *Boileau*, ſtrong in ſenſe, and ſharp in wit,
Who from the ancients, like the ancients writ;
Permiſſion gain'd inferior vice to blame,
By flatt'ring incenſe to his maſter's fame.
Here *Moliere*, firſt of comic wits, excell'd
Whate'er *Athenian* theatres beheld;
By keen yet decent ſatire ſkill'd to pleaſe,
With morals mirth uniting, ſtrength with eaſe:
Now charm'd I hear the bold *Corneille* inſpire
Heroic thought with *Shakeſpear's* force and fire:
Now ſweet *Racine* with milder influence move
The ſoften'd heart to pity and to love.

Lord LYTTELTON.

The nobility and gentry of *France* never apply themſelves to trade; they ſeem indeed naturally deſigned for the court or the army; and if they happen to be of a melancholy diſpoſition, here are always convents, and numerous preferments to be met with in the church. The *French* gentry imbibe a high ſenſe of honour, which renders them brave, and the art of war has been carried to great perfection in this kingdom, there being no people upon earth who attack or defend a place better than the *French*, or are better ſkilled in the ſcience of fortification. As polite accompliſhments, there are few *French* gentlemen who do not learn to dance, to fence, and to ride the great horſe. Their uſual diverſions are gaming, walking, or taking the air in coaches, and attending plays and operas.

The *French* language is formed out of thoſe of the *Gauls*, the *Romans*, and the *Franks*. Under the patronage of *Louis* XIV. it was rendered more pure, copious, and correct, by the writings of *Boileau*, *Corneille*, and other eminent men of that age, which, in reſpect to the advancement of the polite arts in general, has juſtly been ſtyled "the *Auguſtan* age of *France*." Since that period, *Monteſquieu*, and many others, but moſt eſſentially *Voltaire* and *Rouſſeau*, have brought the language to a ſtate of perfection.

The eſtabliſhed religion in *France*, ſince the repeal of the edict of *Nantes* in 1685, is the *Roman Catholic*; yet in *Dauphiné*, *Languedoc*, and other provinces, there are ſuch a number of ſecret *Proteſtants*, that they have been computed to amount to no leſs than three millions; but theſe, on account of their religious aſſemblies, at which ſometimes great numbers have been preſent, have been cruelly harraſſed and perſecuted; and in 1745 ſome *Proteſtant* preachers were hanged, laymen were ſent to the gallies, women to the convents, and children forced away from the arms of their parents. The *French* Proteſtants have been obliged to perform their public worſhip with as much ſecrecy as if it were a crime to hear the Goſpel read, and to offer up their devotions to their Maker; for this purpoſe they were accuſtomed to meet in private cellars and caverns remote from public view. The *Romiſh* clergy alſo were frequently very active in perſecuting them; but the power of inflicting pains and penalties is veſted in the temporal magiſtrates alone. In *Alſace*, however, the Proteſtants are openly tolerated by virtue of a treaty, and in many places even the *Jews*. Indeed, the freedom of writing, which may be ſaid to have been firſt introduced into *France* by *M. de Voltaire*, and for the laſt thirty years has remarkably prevailed even in that deſpotic government, has tended very much to ſoften the rage of religious bigotry; and whilſt it has made deiſm faſhionable among the pert freethinkers, has in ſome good meaſure delivered conſcientious *Chriſtians* from the ſcourge of intolerant zeal.

The privileges of the *Gallican* church, or the church of *France*, are ſo conſiderable, as greatly to exceed thoſe of any other kingdom or ſtate profeſſing the religion of the church of *Rome*. The king of *France* claims ſuch powers in eccleſiaſtical matters, as place him, in effect, at the head of the church, almoſt to the entire excluſion of the *Romiſh* pontiff. The ſpread of *Janſeniſm* has been very extenſive of late years, and the parliaments have on all occaſions ſhewn their partiality for thoſe tenets, which have been ſucceſsfully diſſeminated by pere *Queſnel*, in his verſion of and commentary upon the New Teſtament. Theſe doctrines have been ſtrongly oppoſed by the whole body of eccleſiaſtics, with the archbiſhop of *Paris* at their head. The diſpute produced an open rupture, and the king at length ſided with the church; but no power, whether eccleſiaſtical or civil, will long impede the ſecret yet energetic operation of common ſenſe and rational conviction.

By a royal edict, given at *Verſailles* in *November* 1787, and regiſtered by the parliament of *Paris* in *January* following, the marriages of Proteſtants in *France*, whether natural-born ſubjects or ſtrangers, are rendered legal; and a burial-place is allotted for them in every town. [See a full account of this act of juſtice and policy in page 470 of this volume.]

In the whole kingdom are eighteen archbiſhops, excluſive of that of *Vignon*, in the *Venaiſſin*, purchaſed from the ſee of *Rome* in 1769, over whoſe juriſdiction the iſland of *Corſica* is now placed; a hundred and twenty-three biſhops, including three in the *Venaiſſin*, five in the iſland of *Corſica*, a titular biſhop of *Sarept*, in *Syria*, to which dignity no revenue is annexed, and the biſhop of *Quebec*, whoſe revenue is ſtated at one thouſand two hundred livres, or fifty-two pounds *per annum*; twenty-two thouſand two hundred and ninety-one prieſts; ſeven hundred and ſeven abbies for men; three hundred and ſeventeen abbies and priories for women, beſides a great number of other convents; together with two hundred and fifty commanderies of the order of *Malta*, among which are ſix grand priories, and four principal commanderies. The annual revenues of the archbiſhops and biſhops amount in the whole to four millions three hundred and thirty-ſeven thouſand livres (189,744 *l.* ſterling). The number of monks and nuns is computed in the whole at above a hundred and ninety thouſand, whoſe income is ſaid greatly to exceed a hundred millions of livres (4,375,000 *l.* ſterling). It has been calculated that the eccleſiaſtics in *France* compoſe one-eightieth part of the whole population of the country. The eccleſiaſtical ſtate is compoſed of eighteen provinces, each of which conſiſts of an archbiſhopric, and the biſhops ſubordinate to it. The king of *France* nominates to all archbiſhoprics, biſhoprics, and moſt of the inferior church dignities; but very material alterations are now likely to be introduced in eccleſiaſtical concerns, in conſequence of the revolution in the *French* government.

The *French* have always diſtinguiſhed themſelves by their ſkill in arts and ſciences. Painting was firſt brought to great perfection among them under *Francis* I. when *Roux* and *Franciſco Bologneſe* introduced all the beauty of that art into *France* toward the beginning of the ſixteenth century; and ſince that time this kingdom has produced ſeveral eminent maſters. In 1648 was inſtituted at *Paris* the royal academy of painting and ſculpture; but painting has for more than half a century been on the decline in *France*, in proportion as it has riſen to a flouriſhing ſtate in *England*. Engraving has been brought to a perfection unequalled in any other part of *Europe*, until of late years *Great Britain* has attained as great a degree of eminence in that art. *France* has alſo made great advances in ſtatuary. It has likewiſe been famous for its architects; and the great *Colbert*, in 1671, founded a royal academy of architecture, who now hold their meetings in the *Louvre*. The *French* learned the art of ſhip-building from the *Engliſh*. Their reputation in military architecture is well known, and they alſo excel moſt nations in gunnery and fire-works. At *Paris*, beſides the ancient univerſity and royal college, are four academies, namely, the *French* academy, the academy of inſcriptions and *belles lettres*, that of ſurgery, and the academy of ſciences, with three others for the education of young noblemen. Beſides theſe, there are eight other univerſities in *France*, and ſeveral academies for the ſciences and the polite arts.

The manufactures and commerce of *France* were likewiſe greatly promoted by the attention and abilities of the great *Colbert*, by whoſe advice *Louis* XIV. erected the manufacture of the *Gobelins*, at *Paris*, which is ſo called from two brothers, *Giles* and *John Gobelin*, who under *Francis* I. found out the method of dying a moſt beautiful ſcarlet, which was afterward called by their name. The houſe of the *Gobelins*, at *Paris*, is full of the works of the moſt excellent maſters in tapeſtry, fillegree, and ſculpture; and in the article of tapeſtry alone no leſs than two hundred perſons are conſtantly employed. There are alſo conſiderable manufactures of tapeſtry in ſeveral other parts of the kingdom. Silk manufactures were firſt ſet up in *France* in the reign of *Louis* IX. yet in the time of *Henry* II. ſilk was ſo ſcarce, that the king was the firſt who had ever been ſeen to wear a pair of ſilk ſtockings, which were a part of his dreſs at the marriage of his ſiſter. The ſucceeding kings made good regulations with reſpect to the culture of ſilk, and the planting of white mulberry-trees; but it was not till the time of *Louis* XIV. that this was brought to any conſiderable degree of perfection, and under his government the quantity of raw ſilk produced in the provinces of *Dauphiné*, *Languedoc*, and *Provence* alone, annually amounted to one million eight hundred thouſand pounds weight. The revocation of the edict of *Nantes*, in 1685, proved very fatal to this and every other branch of commerce and manufacture, by driving the moſt induſtrious and ſkilful ſubjects out of the kingdom, for the ſake of enjoying thoſe rights of conſcience of which they were deprived in their native land. Hence the art of weaving ſilk is become almoſt univerſally known, and *England* has been enabled to ſurpaſs, in the elegance and beauty of its patterns, the *French* themſelves. Within theſe laſt hundred years the *French* have conſiderably improved their woollen manufactures, in which they have been aſſiſted by the clandeſtine exportation of wool from *Great Britain* and *Ireland*. Hence the cloths and other woollen ſtuffs made at *Abbeville*, are little inferior either in fineneſs or goodneſs to the *Engliſh*. Several provinces abound in manufactures of linen, thread, and ſail-cloth; and at *Cambray* is made the fine and beautiful linen called *Cambray* linen, or cambrick; and *St. Quintin* excels in its lawns. The glaſs manufacture is alſo of great advantage to *France*. In 1688 one *Abraham Thevert* contrived a method for caſting better and larger plates of looking-glaſs than had been before known; but a manufacture has now been eſtabliſhed ſeveral years in the north of *England*, which produces plate glaſs equal in dimenſions to the largeſt that are caſt in *France*. *Vincennes* has a manufacture of very handſome porcelain.

The commerce of *France* is very conſiderable, although very different from what it was at the beginning of the preſent century. In articles of luxury, cambricks only excepted (for we ſpeak not of the almoſt direct productions of the ſoil, ſuch as wines and brandy) the *French* have met with very ſucceſsful competitors; but the local advantages which the ſouthern parts of the kingdom poſſeſs for the *Mediterranean* and *Levant* trade, being ſuch as offer the moſt flattering incentives to exertions, they have been made, notwithſtanding the heavy impediments which an arbitrary government, and a want of large capitals among individuals, laid in their way. This branch of commerce they have won from the *Engliſh*, who formerly poſſeſſed it, almoſt excluſively, but now are left far behind. In the imports from the *Weſt India* iſlands, *France* ſtill ſurpaſſes all other nations; but its *Aſiatic* commerce has ſuffered a fatal blow, by the ſhort-ſighted politics which brought on a rupture with *Great Britain*, by a participation in the cauſe of *America*.

In the year 1786 a *commercial treaty* was executed between *Great Britain* and this country, which conſiſts of forty-ſeven articles. It gives a free liberty of navigation and commerce in all the ports of each ſovereign in *Europe*. In matters of religion, the ſubjects of the two crowns are allowed perfect freedom, and permitted to perform the exerciſes of their religion privately, in their own houſes; and liberty ſhall not be refuſed to bury the ſubjects of either kingdom, who die in the territory of the other, in convenient places to be appointed for that purpoſe. The ſixth article ſettles a *tariff* for the manufactures and merchandize imported from each country into the other, by which the wines of *France* imported directly into *Great Britain* ſhall in no caſe pay any higher duties than thoſe which the wines of *Portugal* pay. *Vinegar* is reduced in its duties about one-half, being at preſent thirty-two pounds eighteen ſhillings and ten pence *per* ton. *French brandies* ſeven ſhillings *per* gallon. *Beer* imported into *France* from *Great Britain*, thirty *per cent. ad valorem*. *Hard-ware*, *cutlery*, *cabinet-ware*, and *turnery*, all works of iron, ſteel, copper, and braſs, ſhall have no duty higher than ten *per cent. ad valorem*. Cotton and woollen manufactures of all kinds to pay an import duty in both countries of twelve *per cent. ad valorem*; but all manufactures of cotton or woollen mixed with ſilk, remain prohibited on both ſides. *Cambricks* and *lawns* ſhall pay in both countries an import duty of five ſhillings each demi piece of ſeven yards and three quarters, *Engliſh* meaſure; *linens* made of flax or hemp, manufactured in the dominions of the two ſovereigns in *Europe*, ſhall pay no higher duties, either in *Great Britain* or *France*, than linens manufactured in *Holland* or *Flanders*, imported into *Great Britain*, now pay. On *ſadlery* an import duty of fifteen *per cent. gauzes* ten *per cent. millenery* twelve *per cent. porcelain*, *earthen-ware*, and *pottery* twelve *per cent. plate-glaſs* and *glaſs ware* in general twelve *per cent.* The king of *Great Britain* reſerves to himſelf a right of impoſing a farther duty on all linens or cottons ſtained or printed, on beer, glaſs-ware, plate-glaſs, and iron, equal to the internal duties impoſed upon the manufacture, or the import duties which are charged on the raw materials; and the king of *France* reſerves to himſelf the ſame right on cottons, iron, and beer. Articles of merchandize not particularized ſhall pay in the dominions of the two ſovereigns the import and export duties payable in each of the ſaid dominions by the moſt favoured *European* nation at the time of the date of the treaty; and the ſhips belonging to the ſubjects of the ſaid dominions ſhall reſpectively enjoy therein all the privileges and advantages which are granted to thoſe of the moſt favoured nations. If either ſovereign has granted or ſhall grant any bounties on the exportation of any articles, the growth, produce, or manufacture of his dominions, the other party ſhall be allowed to add to the duties ſettled by this treaty ſuch an import duty as ſhall be equivalent to the ſaid bounty; but this is not to extend to drawbacks. No ſhips belonging to ſubjects of *Great Britain* or *Ireland* ſhall pay freight duty in the ports of *France*, and the ſhips belonging to the ſubjects of *France* ſhall be exempt from paying any duty or charge in the ports of *Great Britain* or *Ireland*. Contraband goods are particularly enumerated; they conſiſt in fire arms, and all kind of implements of war. *Wearing apparel*, *tin*, *iron*, *lead*, *copper*, *braſs*, *coals*, *wheat*, *barley*, and all ſorts of *corn*, *tobacco*, all kinds of *ſpices*, *ſalt fiſh*, *cheeſe*, and *butter*, *cordage*, *ſail-cloth*, *hemp*, *tallow*, *pitch*, *tar*, *ſhips' maſts*, *timber* of all kinds, ſhall be deemed goods not contraband; theſe may be carried to places belonging to an enemy, except only ſuch places as are beſieged, blocked up, and inveſted. In caſes of ſhipwreck on the coaſts of either kingdom, all that can be ſaved ſhall be faithfully reſtored to the proprietors, on paying only the expences incurred, according to the rate of ſalvage ſettled on both ſides.

The general principles of this treaty were the ſame with thoſe of a former one, which had been ſettled by queen *Anne*'s miniſtry, but rejected by the *Britiſh* parliament in the year 1713. Theſe commercial regulations between the two rival nations are ſuppoſed to have procured for *Great Britain* very conſiderable advantages, and greatly to exceed thoſe which are derived by *France*. The enlarged politics of the preſent times have likewiſe cauſed the abolition of a moſt unjuſt and deſtructive law, called *droit d'aubaine*, or the right of eſcheat, by which the effects of foreigners who happen to die in *France* became the property of the crown, to the excluſion of the heirs of the deceaſed.

The navigable rivers are of great advantage to the inland trade, and theſe have been joined at a vaſt expence by canals, the moſt famous of which is the royal canal in *Languedoc*, which will be particularly deſcribed in the ſequel. The coaſt trade is very conſiderable; for by this the maritime provinces reciprocally ſupply each other with their own produce. The land trade is carried on with *Swiſſerland*, by the way of *Lyons*; to *Germany*, through *Metz* and *Straſburgh*; to *Holland*, by the way of *Liſle*; and to *Spain*, by the way of *Perpignan* and *Bayonne*. The *French* ports on the Channel and the Weſtern ocean are frequented by all the trading nations of *Europe*. The trade with *England*, the *United Provinces*, and *Italy*, is of great advantage to *France*. However, but few *French* ſhips are ſeen in the ports of the northern nations.

They alſo carry on a conſiderable traffic to *Guinea* for gold, ivory, and ſlaves for their *American* colonies. To all which may now be added a commerce with the *American States*, which, however, ſeems to promiſe no great acceſſion of wealth to *France*.

In *France* accounts are kept in *livres*, *ſous*, and *deniers*. One livre contains twenty ſous, and one ſou twelve deniers. The *French* livre, however, is generally conſidered as of the value of ten-pence half-penny; the livre *Tournois* is only ten-pence: one ſou is worth a half-penny, and conſequently the denier is the ſixth part of a farthing. Three deniers make a *liard*, which is alſo a ſmall piece of copper.

The *French* ſilver coin is the *ecu*, or *crown*, equal to three livres, ſixty ſols, or ſeven hundred and twenty deniers, or to our half-crown. One *louis blanc* is five ſhillings.

The gold coins are the *louis d'or*, of one pound value; there are alſo *double* and *half louis*; and a *piſtole* is eight ſhillings and four-pence.

SECT. III.

A Sketch of the Hiſtory of FRANCE, *and a View of the Cauſes which led to the great Revolution in its Government. The Titles of the King; his Succeſſion to the Throne; his Arms; the different Orders of the* Nobility, *and of* Knighthood; *the* Parliaments; *the great Officers of the Crown and of the Houſhold; the great Councils of State and* Courts *of* Juſtice; *the* Laws, Taxes, Revenues, Land Forces, *and* Navy *of* FRANCE.

FRANCE was anciently inhabited by the *Celtæ*, on whom the *Romans* firſt conferred the name of *Gauls*, and *Julius Cæſar* reduced the country to a *Roman* province. In the fifth century the *Burgundians*, *Viſigoths*, and *Bretons*, ſettled in ſeveral parts of *Gaul*. Theſe were followed by the *Franks* from *Germany*, who under *Merovic* and *Childeric* conquered a part of *Gaul*, and under *Clovis* (or *Louis*) extended their dominion from the *Rhine* to the mouth of the *Loire*: for *Clovis*, who was baptized in 496, quelled the *Burgundians*, *Viſigoths*, and inhabitants of *Brittany*.

The kingdom of the *Franks* was then divided into *Auſtraſia*, or the eaſt part, and *Neuſtria*, or the weſt; and on the deceaſe of *Clovis*, his four ſons divided their father's kingdom among them.

The lands of *Gaul* were, on their being conquered by the *Franks*, diſtributed among their officers, and theſe with the clergy formed the firſt great councils or parliaments. Thus the government appears to have been a mixed monarchy, in which nothing of moment was tranſacted without the grand council of the nation, conſiſting of the principal officers who held their lands by military tenures; while the conquered *Gauls* were reduced to a ſtate of ſervitude, and manured the lands for the *Franks*.

Gaul, when it became the poſſeſſion of northern invaders, did not acquire that degree of freedom to its conſtitution which *Britain* received about the ſame time, from conquerors who ſprung from the ſame common ſtock. The *Franks* appear to have loſt their freedom by the early introduction of feudal tenures.

Such was the conſtitution of the government, till *Charles Martel*, in 739, uſurped the ſovereignty. This nobleman was marſhal of *France*, or mayor of the palace, and had long exerciſed the ſovereign power in the name of *Chilperic*, or *Childeric*, a weak and indolent prince. The *Saracens*, who had made themſelves maſters of the ſouth of *France*, penetrating into the heart of the kingdom, were entirely defeated by him, in conſequence of which atchievement he conſidered himſelf as the deliverer of *Chriſtendom*: and ſuch was his popularity, that, with the conſent of the people, and even of the pope, he aſſumed the dominion of *France*; for, having a victorious army at his command, he not only depoſed the king, but rendered himſelf an abſolute prince, by depriving the nobility and clergy of their ſhare in the government.

His ſon *Pepin* ſucceeded him in the throne; but reſtored the privileges of the nobility and clergy, on their agreeing to exclude the former race of kings. He alſo divided the provinces among his principal nobility, allowing them to exerciſe ſovereign authority in their reſpective governments; till at length, aſſuming a kind of independency, they only acknowledged the king as their head: and this gave riſe to the numerous principalities, and their ſeveral parliaments, every province retaining the ſame form of government that had been exerciſed in the whole; and no laws were made, or taxes raiſed, without the concurrence of the nobility and clergy.

Charles, the ſon of *Pepin*, known by the name of *Charlemagne*, or *Charles the Great*, conquered *Italy*, *Germany*, and part of *Spain*, and was crowned emperor of the *Romans*, by pope *Leo* III. in the year 800; and from him deſcended the race of kings, called the *Carolovinian*, or *Carlovingian* line. About eighty years after the death of *Charlemagne* (which happened in the year 814) the empire of *Germany* was ſeparated from *France*, and the latter country ſuffered much from the invaſion of the *Normans*.

The *Carolovinian* race of kings continued ſovereigns of *France* till the reign of *Louis* V. when, in 987, *Hugh Capet*, a popular nobleman, aſſumed the throne, and began the *Capetine* line of monarchs. *Cruſadoes*, or expeditions to the *Holy Land*, for the recovery of *Jeruſalem* from the *Saracens*, being preached up by order of the pope, the princes of every kingdom in *Europe* engaged in theſe, falſely called "Holy Wars," in which Chriſtianity was to be propagated by fire and ſword; and in which ſeveral hundred thouſand Chriſtians periſhed: but though they at length took *Antioch*, *Jeruſalem*, and ſeveral other places of ſtrength, yet thoſe were all wreſted from them in the courſe of two hundred years. *Louis* IX. (called St. *Louis*) with moſt of the nobility, were taken priſoners in *Egypt*, on one of theſe expeditions, and their ranſoms were rated at an immenſe ſum. He had two ſons, *Philip* and *Robert*; from the elder, who was the third king of that name, and ſirnamed *the Hardy*, the kings of the houſe of *Valois* were deſcended, which line commenced in the perſon of *Philip* VI. A. D. 1388; they poſſeſſed the crown more than three hundred years; from the deſcendants of *Robert* the race of *Bourbon* princes ſprang. *Davilà*.

In 1285, the kingdom of *Navarre* was added to the crown of *France*, by the marriage of *Philip* IV. with *Jane*, queen of *Navarre*. During this reign the conſtitution of the government received a conſiderable alteration; for, the nobility and clergy refuſing to grant the king the ſupplies he demanded, and having drawn on himſelf the fierce reſentment of *Boniface* X. one of the moſt bold, turbulent, and aſſuming churchmen that ever obtained the papacy, he ſummoned the deputies or repreſentatives of the commons to parliament, and conſtituted them a third eſtate, in the year 1302.

In 1344, *Hubert* count dauphin of *Vienne* transferred his dominions to the crown of *France*, on condition that the king's eldeſt ſon ſhould ever after be ſtyled *Dauphin*.

Edward III. king of *England*, laying claim to the crown of *France*, on account of his being deſcended in a direct line from *Philip* IV. invaded that kingdom; and in 1346, obtained a complete victory at *Creſſy* in *Picardy*, and the next year took *Calais*. In 1356, the *French* were again defeated at *Poictiers*, by *Edward* the *Black Prince*, the eldeſt ſon of *Edward* III. and king *John* and his ſon *Philip* brought priſoners to *England*.

At length the *French* king *Charles* VI. being ſeized with a kind of phrenſy, which rendered him unfit to govern, the dukes of *Burgundy* and *Orleans* contended for the adminiſtration; and the quarrel grew to ſuch an height, that the duke of *Burgundy* cauſed the duke of *Orleans* to be aſſaſſinated in the ſtreets of *Paris* (A. D. 1407) which laid the foundation for a civil war. And *Henry* V. of *England*, invading *France*, obtained a victory at *Agincourt* in 1415. A reconciliation having been propoſed between the duke of *Burgundy* and the family of *Orleans*, a conference was held between the young duke of *Orleans* and the duke of *Burgundy*, for the purpoſe of accommodating their differences. A ſecond conference was ſoon after held, when the dauphin and the duke of *Orleans* cauſed the duke of *Burgundy* to be murdered (A. D. 1419). Upon this the queen and *Philip* the young duke of *Burgundy* joined the *Engliſh*, with whoſe aſſiſtance *Henry* made an almoſt entire conqueſt of *France*; and a parliament being held at *Paris*, the king of *England* was made regent of *France*, during the life of *Charles* VI. and declared ſucceſſor to that crown: he at the ſame time married the princeſs *Catharine*, the *French* king's daughter. *Henry* dying, and leaving an infant ſon, *Henry* VI. he was crowned king of *France* at *Paris*, in 1431; but *Charles* the dauphin, afterward *Charles* VII. alſo cauſing himſelf to be proclaimed king, recovered all the countries that had been taken by the *Engliſh*.

In the year 1498, died *Charles* VIII. the laſt of the firſt line of the houſe of *Valois*; on which the crown deſcended to *Louis* XII. duke of *Orleans*, ſirnamed "the father of the people." He died in the year 1515, and was ſucceeded by *Francis* I. great grandſon of *Louis* I. duke of *Orleans*, by his ſecond ſon *John* earl of *Angouleſme*; *Louis* XII. being grandſon to the ſame *Louis*, by his eldeſt ſon *Charles*, who was likewiſe duke of *Orleans*. *Francis* had before married *Claude*, who was the eldeſt daughter of *Louis* XII. and his ſecond couſin. He was called "the great king, and the father of learning." *Mezeray*.—He came to the crown in the flower of youth, being little more than twenty years of age; his perſon and deportment united manly beauty to heroic dignity; he poſſeſſed ſuperior dexterity in all the robuſt exerciſes which were faſhionable in that age; he was likewiſe brave, generous, magnificent, courteous, and eloquent, which gained him the admiration and love both of the nobility and people; indeed, according to *Mezeray*, he had been the greateſt of kings, if an high opinion of himſelf, founded on ſuch rare accompliſhments, had not corrupted his mind, and if the flattery of courtiers, and the faſcinating ſnares of beauty had not deluded him into a falſe idea of grandeur, and, inſtead of invariably purſuing a courſe of true greatneſs, he had not been frequently deluded by ſuperficial appearances and a fondneſs for vain-glory. His reign, which continued thirty-two years, is an important period in the hiſtory of *Europe*; he was the formidable competitor of the emperor *Charles* V. for territory, power, and renown; but was at length compelled to yield to his more crafty and ſucceſsful rival. His ſon *Henry* II. ſucceeded him, who married *Catharine*, of the houſe of *Medicis* (of which family ſee a particular account p. 367 of this volume). In his reign, *Calais* reverted to *France*, after having been poſſeſſed by the *Engliſh* two hundred and ten years. *Henry* reigned twelve years, and his three ſons ſucceſſively mounted the throne. Under the firſt, namely *Francis* II. the religious diſputes began to break out in *France*; the Proteſtants were perſecuted; and under *Charles* IX. theſe diſputes occaſioned two civil wars; after the concluſion of which, on the 18th of *Auguſt* 1572, was perpetrated the barbarous maſſacre of *Paris*, which has left an indelible ſtain on the *French* nation. Afterward *Henry* III. being thought to favour the Proteſtants, was aſſaſſinated by one *Clements*, a monk. His legal ſucceſſor was *Henry* IV. king of *Navarre*, the firſt of the houſe of *Bourbon* that ſat on the throne of *France*: but he being a Proteſtant, was obſtinately oppoſed by the popiſh party; and, though he changed his religion in order to conciliate the attachment of his ſubjects, yet, having paſſed the edict of *Nantes*, for the toleration of the Proteſtants, he was aſſaſſinated in 1610, by *Ravaillac*, a monk, in the ſtreets of *Paris*.

This important edict conſiſted of ninety-two articles: it gave to the *Hugonots* the free exerciſe of their religion, the undiſturbed enjoyment of their eſtates, and rendered them eligible to offices of judicature and finance. Both *Mezeray* and *Sully*, who on all occaſions treat the Proteſtants of *France* with great aſperity, repreſent this edict as extorted from the king.

Louis XIII. a minor of nine years of age, ſucceeded to the throne (A.D. 1610) *Mary de Medicis*, his mother, being declared regent; ſhe continued to invade the liberties of the people, and to revive the perſecution againſt the Proteſtants, which occaſioned another civil war. Cardinal *Richlieu* being preſently after appointed prime miniſter, he entirely ſubdued the parliament of *Paris*, and overthrew all remains of liberty. The king, when not quite fifteen years of age, married *Ann* of *Auſtria*, infanta of *Spain*, who was only five days younger than himſelf; at the ſame time his ſiſter, madame *Elizabeth* of *France*, was married to *Philip*, prince of the *Auſturias*, eldeſt ſon of the king of *Spain*, and afterwards the fourth king of that name. The queen of *France* bore no child until the year 1638, when a ſon was born; and three years afterward ſhe brought another ſon.

On the death of *Louis* XIII. in the year 1643 (the cardinal *Richlieu* dying about the ſame time) his eldeſt ſon, *Louis* XIV. an infant not quite five years of age, ſucceeded to the throne; the queen dowager being appointed regent during his minority, and cardinal *Mazarine* prime miniſter. As his reign was the longeſt, ſo it was the moſt ſplendid in the *French* monarchy; in it he carried the power of *France* to its greateſt height. To his kingdom he added the provinces of *Alſace* and *Rouſillon*, with a conſiderable part of the *Netherlands*, *Franche Comté*, or the earldom of *Burgundy*, and the principality of *Orange*. He alſo enlarged his dominions in *America* and *Aſia*, and placed his grandſon, *Philip* of *Anjou*, on the throne of *Spain*; while navigation and manufactures were improved throughout the kingdom. But the conſummate abilities of the duke of *Marlborough*, both in the field and the cabinet, effectually curbed this ambitious monarch; diveſted him of many conqueſts, exhauſted his treaſures, vanquiſhed his armies, and ſpread want and wretchedneſs over his dominions; the very capital of which trembled for its ſafety, being actually menaced by the conqueror. *Lewis* bore this reverſe of fortune with true magnanimity, although in the ſeaſon of proſperity his arrogance had been unbounded, and he had wantonly ſpread ſlaughter and deſolation through rich and populous countries which his arms had ſubdued. In particular, on his invading the palatinate of the *Rhine* in 1689, he burnt and deſtroyed all the fine towns in that country. He alſo repealed the edict of *Nantes*, and began a ſevere perſecution againſt the Proteſtants; who fled into *England*, *Pruſſia*, and other countries, where they brought their induſtry, their ſkill, and their exemplary manners.

Louis XIV. was ſucceeded by his great grandſon *Louis* XV. the late king, on the firſt of *September* 1715, who was crowned at *Rheims* on the 25th of *October* 1722. *Louis* XVI. the preſent king of *France* and *Navarre*, was born in 1754; ſucceeded his grandfather *Lewis* XV. in 1774; and married, in 1770, *Maria Antonietta*, ſiſter of the emperor of *Germany*, born 1755.

The reign of *Louis* XIV. has been celebrated as the æra which produced every thing great and noble in *France*. He has been held up to the world as the munificent patron of the arts, and a prince whoſe conceptions and plans were always dignified and grand. The true character of kings can only be juſtly determined by poſterity, and the reputation of this celebrated monarch has not been ſtrengthened by time. After every proper tribute of applauſe is rendered him, it may be aſſerted, that in general, he rather diſplayed a prepoſterous vanity than true greatneſs of character, which has been productive of ſuch baneful effects, that the decline of the *French* monarchy may be ſaid to have originated from the conduct of that prince. The immenſe ſums which he expended in raiſing buildings, where art was made to triumph in deſpite of nature; his boundleſs ambition, which cauſed all *Europe* to combine againſt him; theſe vain-glorious and profuſe purſuits exhauſted the revenues and ſtrength of the nation, whilſt his bigoted policy led him to drive his proteſtant ſubjects out of his dominions, to the loſs of many uſeful arts and manufactures, which ſerved to ſtrengthen and enrich other ſtates. During the long reign of his grandſon, the adminiſtration of affairs became ſyſtematically feeble and deſtructive; the body of the people were more oppreſſed, and the finances more deranged, whilſt an increaſing brood of rapacious harpies glutted themſelves on the public ſpoils. The people, ſtrongly attached to their ſovereign, bore their oppreſſions with a ſubmiſſive ſpirit, ſecretly execrating the miniſters, but pitying their abuſed ſovereign.

The writings of a *Monteſquieu* firſt taught an enſlaved people to reaſon upon the principles of government and natural rights. Thoſe writings alike expoſed the tyranny of churchmen over the conſciences, or of kings or their minions over the lives and fortunes of mankind. *Voltaire* and *Rouſſeau* afterward directed the force of their eloquent pens to the ſame objects; to them lately ſucceeded *Raynal*, though the laſt, perhaps not the leaſt efficacious, in this ennobling cauſe. All that ſpeculative reaſoning could effect againſt power and habits was effected by theſe elevated minds; notwithſtanding which, it remained for a young, a weak, and a deluded prince, to perpetrate the act of political ſelf-ſlaughter.

A great ſtateſman is known by the comprehenſive and extenſive views on which his conduct is formed; where there is no true energy of mind, preſent advantages will be ſeized, regardleſs of remote conſequences. The hiſtory of the world furniſhes innumerable inſtances of the latter claſs of politicians; whilſt the former are rare indeed!

France, ſtimulated by revenge againſt a rival nation, whoſe ſuperiority had been fatally felt in a waſteful war, and hoping to procure an extenſive and lucrative commerce to be wreſted from that very rival, took a decided part in the diſpute between *Great Britain* and her *American* colonies, very ſoon after the acceſſion of *Louis* XVI. All the maſs of miſchief impending on a deſpotic government, in ſuch a courſe of conduct, was rendered inviſible by the flattering objects which were held out to view; theſe received every advantage from the artful repreſentations, the unremitting aſſiduities, the cool circumſpective head, and penetrating underſtanding of the plenipotentiary from the new ſtates of *America*, who rendered ſubſervient to his purpoſes that cabinet which had long been diſtinguiſhed for overreaching every power in *Europe* in the ſubtilties of negotiation. When, in the paroxyſm of their admiration of this hoary-headed ſtateſman, the *Pariſians* ſtruck a medal to commemorate their alliance with *America*, they inſcribed it with a motto, the full and appropriated ſenſe of which they then knew not in the moſt diſtant idea: *Cœlo fulmen, tyrannoque ſceptrum eripuit.*

In conſequence of this alliance, it became faſhionable in *France* (where every thing is governed by faſhion) to admire that ſpirit of liberty which had led the *Britiſh* colonies to emancipate themſelves from the ſhackles of the mother country; whilſt the *French* troops, who were ſent to that continent as allies of theſe free proteſtant ſtates, were every where witneſs of the benefits reſulting from a conſtitution founded in freedom. The conteſt at an end, and the military returned home, the miſunderſtandings and contentions which, for ſeveral years, had ſubſiſted between the king and his parliaments, were not likely to abate by the ſentiments which had now ſpread through the nation. The diſtreſſed ſtate of the finances made it neceſſary for the king to aſſemble the *Notables*, conſiſting of a ſelection from the three eſtates of the kingdom, the nobility, the clergy, and the commonalty; a meaſure which has very rarely been adopted by the kings of *France*, and never proved conducive to their deſigns. This meeting produced ſtrong remonſtrances againſt grievances, without any effectual offers of relieving the exigencies of government. Soon after the breaking up of this aſſembly, the nation in general became clamorous for the eſtabliſhment of a *tiers-etat*, or third eſtate, compoſed of delegates from each diſtrict throughout the kingdom.

We have already ſeen that ſuch an aſſembly had been called by *Philip* IV. and a few inſtances more occur of the kings of *France* reſorting to that expedient; the laſt inſtance of which was in the year 1614, two years before cardinal *Richlieu* came into the miniſtry, whoſe great but deſtructive talents extinguiſhed every remaining ſpark of liberty in the *French* government. On that occaſion, the ſpiritual houſe, or chamber, conſiſted of 140 members, among whom were 5 cardinals, 7 archbiſhops, and 47 biſhops; the chamber of the nobility conſiſted of 132 perſons, and that of the third eſtate of 182 deputies, all of whom were either officers of juſtice, or concerned in the revenue. It is evident that the true intereſts of the people at large were not likely to be promoted in an aſſembly ſo compoſed. The cry of the nation, therefore, was not for a repetition of ſuch a mockery of repreſentation, but for a general deputation from the provinces and principal towns in the kingdom, which ſhould give to the people at large a ſubſtantial weight in the conſtitution, by rendering their concurrence neceſſary to the framing of laws, and their authority dreaded by corrupt and profligate miniſters. Great had been the ſufferings, and, hitherto, ſubmiſſive the behaviour, of the nation, oppreſſed by a weight of taxes, levied in the moſt rigorous manner, and ſo ſcandalouſly miſapplied that they were very far from rendering the public revenue adequate to the expenditure; bowing down the neck to a haughty nobility, who were themſelves exempt from thoſe contributions. At length the feelings of men prevailed over the habits of patient acquieſcence.

The king of *France*, rendered unpopular rather through the miſconduct of the queen conſort, and her favourites, than by any overt act of his own (on whom was entailed all the accumulating miſchiefs which had originated in the miſrule of the laſt reign) in vain attempted to ſuppreſs this riſing ſpirit by a military force: the troops in general refuſed to act. The moſt ardent and active ſpirit of liberty was every where ſpread. Neither the bulwarks of kingly authority, nor the mounds of the nobility and clergy were able to repel the mighty torrent: it bore down all before it with an impetuoſity irreſiſtible. At length, the *Grand Monarque* of *France*, after having retired to *Verſailles*, and there entrenched himſelf with a few adherents, deprived of power, and trembling for his life, as the beſt means to ſecure the latter, determined to make a ſurrender of the former; he therefore quitted his retreat, and repaired to the national aſſembly (the three orders of the ſtates having now adopted that denomination) imploring their protection, and ſubmitting implicitly to their regulations.—Such is the aſtoniſhing revolution in *France!*

That the nobility of *France* are rancorouſly inimical to admitting the people, by repreſentatives, to any ſhare in the conſtitutional government of the kingdom, is ſaid to have appeared in ſeveral very atrocious acts of treachery and maſſacre; but in civil contentions truth is rarely to be obtained: yet it cannot be doubted, that the people will acquire a very conſiderable degree of weight, or rather a decided aſcendency in the new form of government, when it ſhall be ſettled; and it may be expected, that every *Frenchman* will be protected in his perſon by ſomething ſimilar to the *habeas corpus* in *England*; he will likewiſe probably acquire the right of freely diſcuſſing all ſubjects by means of the preſs; and farther, a general toleration in religious matters is likely to take place, whilſt the national church ſhall remain protected and ſecured: and it is no leſs to be expected than deſired, that whenever this toleration is rendered conſtitutional in *France*, it will be undiſgraced by any thing like a *corporation* and *teſt act*, and that men of probity, ability, and fortune, will not be excluded from ſerving their country, by filling offices of truſt and magiſtracy, merely becauſe that, being conſcientiouſly chriſtians, they are not of the eſtabliſhed church.

Nor can the reſt of *Europe* behold with indifference an event that muſt very ſoon cauſe an entire change in its political ſyſtem. A nation inhabiting one of the fineſt parts of that diviſion of the globe, conſiſting of twenty-four millions of people, when ſecured in their perſons and property by law, muſt riſe to a degree of greatneſs which every diſintereſted lover of his ſpecies would wiſh to ſee, and which the man whoſe views are circumſcribed by local attachments will dread to feel.

The title of the king is *Louis* XVI. by the grace of God king of *France* and *Navarre*. The title of ſire or lord, is given him by his ſubjects, as a mark of his unlimited power; and foreigners ſtyle him the moſt Chriſtian king, or his moſt Chriſtian majeſty; but the king's ſubjects are not to make uſe of it. Since the year 1349, when *Hubert* count dauphin of *Viennois*, as hath been already intimated, united his country to the crown of *France*, the king's eldeſt ſon, and preſumptive heir to the crown, has been ſtyled dauphin.

It is a political axiom in *France* as well as in *England*, that the king never dies, but as ſoon as his eyes are cloſed, the next prince of the blood ſucceeds to the throne, and is inſtantly inveſted with the ſupreme authority; but where the king is a minor, that is, before he has entered the fourteenth year of his age, the adminiſtration of the government is entruſted to a regent, uſually the queen-mother, or a prince of the blood, according to the determination of the parliament of *Paris*, in which the other parliaments of the kingdom generally acquieſce. But if the deceaſed king has appointed a regent by his will, that is ſeldom diſputed.

The arms of *France* are, three fleurs de lys or, in a field azure, ſupported by two angels, in the habit of *Levites*, each holding in his hand a banner with the ſame arms: the creſt is an open crown: the whole under a grand azure pavilion ſtrewed with fleurs de lys, or, and ermine, and over it a cloſe ground with a double fleur de lys, or, on the ſides of which are flying ſtreamers, on which are written the words uſed in battle, MON JOIE S. DENNIS, and above them on the royal banner or oriflame, LILIA NON LABORANT NEQUE NENT.

The nobility of *France* are divided into four claſſes: the firſt includes only the princes of the blood, conſiſting of the houſe of *Orleans*, and the two branches of the family of *Bourbon*, thoſe of *Conde* and *Conti*. Next to theſe immediately follow the king's natural children who have been legitimated, and theſe precede all the nobility of the kingdom. To the ſecond claſs belong the high nobility, as the dukes and peers of the realm, counts, and marquiſes, the principal officers of the court and other departments; the knights of the Holy Ghoſt, the governors of provinces, lieutenant-generals, bailiffs, &c. The third claſs is compoſed of the common ancient nobility, who in ſome provinces, particularly in *Languedoc*, are ſtyled nobles; but in moſt of the others *ecuyers*, or eſquires. Theſe are divided into the *nobleſſe de race*, and the nobleſſe *de naiſſance*; the firſt are thoſe whoſe anceſtors have been for a hundred years at leaſt in poſſeſſion of employments which confer nobility; and the ſecond are thoſe nobles whoſe anceſtors were created ſuch, and from whoſe patent it appears that they had been commoners. In the fourth claſs are the new nobility, whom the king has either raiſed by patent, or ennobled by their employments: thus the officers of the crown, the king's ſecretaries, the counſellors of the parliament of *Paris*, and of other high tribunals in that city, are claſſed under this rank. The *etchevins*, or chief magiſtrates of the ſeveral cities are alſo ennobled. The military nobility are alſo of this claſs. The nobles enjoy particular privileges, they being exempted from paying the poll-tax, from the quartering of ſoldiers, the duties of *franc-fief*, with other privileges of leſs importance; but the revolution which has taken place in this kingdom will unqueſtionably deprive them of theſe privileges and exemptions; and, in fact, we now rather record what was, than what at preſent is, or hereafter may be.

In *France* there are three orders of knighthood: Firſt, that of St. *Michael*, inſtituted in 1469, and though originally compoſed of only 36 knights, was afterward enlarged to 100. A perſon muſt be a knight of this order before he can enter into that of (ſecondly) the *Holy Ghoſt*, which was founded in 1578, by *Henry* the IIId, and is compoſed of 100 perſons beſides the ſovereign, and conferred only on princes of the blood, and perſons of the higheſt rank. Thirdly, the order of St. *Louis*, which was inſtituted in the year 1693, by *Louis* the XIVth, merely as a diſtinction for military merit, and is worn by almoſt every officer, and even by ſubalterns.

The courts in which juſtice is now uſually adminiſtered, are, firſt, the parliaments, which are the laſt reſort when the adminiſtration does not interpoſe. Theſe are at preſent thirteen, namely, thoſe of *Paris*, *Toulouſe*, *Rouen*, or *Normandy*, *Grenoble*, *Bourdeaux*, *Dijon*, *Aix*, *Rennes*, *Pau*, *Metz*, *Beſançon*, *Douay*, and *Lorraine*, or *Nancy*, appointed in 1775. They principally conſiſt of a certain number of preſidents and inferior judges, who purchaſe their places either of the crown, or of thoſe who are in poſſeſſion of them: for all magiſtrates and officers of juſtice in *France* openly purchaſe their places, and the government makes a conſiderable revenue by theſe ſales. They enjoy their poſts for life, except they have been guilty of ſome crime in the exerciſe of their office. The parliament of *Paris* is the moſt conſiderable in the kingdom, for hither the king frequently comes in perſon, and here the royal edicts are recorded and promulged; till when they have not the force of laws. It is compoſed of the princes of the blood, dukes, and peers of *France*, beſides the ordinary judges, and takes cognizance of all offences committed by peers, where the court does not interfere.

What the eſſential properties of a *French* parliament are, may be inferred from the bold truths which that of *Bourdeaux* delivered to their ſovereign, *Lewis* XV. in the year 1764, in a remonſtrance preſented to him. "As often," ſay they, "as we regiſter an edict for laying a tax upon the people, in conſequence of the oath we have taken to the king, we bear witneſs to the people, on the one hand, that the tax is juſt, and that we know no other leſs tedious, leſs burdenſome, leſs illegal way of raiſing the neceſſary ſupplies; and we bear witneſs to the king, on the other hand, that his people, ever filled with that zeal for his ſervice which is ſo neceſſary to be maintained, are ſtill in a condition to furniſh the ſupplies demanded. Such is the ſituation in which every member is placed between the king and his people, under the eyes of a God who is the terrible avenger of all falſehood and prevarication."

The great officers of the crown are, the *chancellor*, who preſides in all courts and councils of ſtate in the king's abſence; the *keeper of the ſeals*, four *ſecretaries of ſtate*, the *marſhals* of *France*, the *colonel-general* of the horſe, the great maſter of the artillery, the *admiral* of *France*, two *vice-admirals*, the *general* of the galleys, the four great officers of the order of the Holy Ghoſt, namely the *chancellor*, the *maſter* of the *ceremonies*, the *great treaſurer*, and the *ſecretary*; the chief preſidents of the ſeveral parliaments, with the governors and lieutenant-generals of the provinces.

The great councils by which all affairs of ſtate are governed are ſeven in number: (1) The ſupreme council of ſtate. (2) The ſecretary of ſtate's office. (3) The council of finances. (4) The privy council. (5) The grand council. (6) The high court of chancery; and (7) The council of commerce.

Juſtice is adminiſtered in the kingdom by inferior, middle, and ſuperior courts; to the inferior courts belong the prevotes, mayors, judicatures, chatellanies, and other juriſdictions dependent on the crown, or particular lordſhips. From theſe appeals lie to the bailiwics, or precinct courts, and from theſe again to the provincial courts. The middle tribunals pronounce definitively in certain ſmall cauſes, both civil and criminal; but the more important cauſes are cognizable only by the parliament, which decides cauſes in the laſt reſort.

With reſpect to the laws by which juſtice is adminiſtered, the civil law prevails in many of the provinces; while others have their own cuſtomary laws. Thoſe of principal note among the latter are about ſixty; but, including the juridical cuſtoms of ſingle places, they make about two hundred and eighty-five. Beſides theſe, there are ordinances, edicts, and declarations, which are of univerſal force. In 1666, under *Lewis* XIV. the civil and criminal proceſſes were amended, and reduced to a general uniformity.

A ſtrict diſtinction is made in *France* between the canonical and papal eccleſiaſtical law; and by the obligatory canons, or church ordinances, are only underſtood thoſe canons of the firſt ages of Chriſtianity, and the œcumenical councils, that have been confirmed by the conſent of the churches bound by them, which could not be tranſacted without the approbation of the civil power. Thus the interpolated decretals of the ſee of *Rome* are abſolutely excluded. The king's ordinances iſſued for the protection of the liberties of the *Gallican* Church, conſtitute the moſt conſiderable part of the eccleſiaſtical law. The revenues drawn from *France* by the ſee of *Rome* are likely to be now entirely withheld.

The revenues of the king are both ordinary and extraordinary. The ordinary revenues comprehend the domains, which conſiſt in lands, lordſhips, and foreſts: the aids or duty on wines, which are the twentieth part of the wine ſold by wholeſale, and the eighth or tenth of that retailed: the gabelle, or ſalt-duty, which is here extremely high.

The cuſtoms, wine-licence, ſalt and ſtamp-duty, tobacco, poſt, &c. are farmed out to the farmers-general, who have their under farmers and receivers. The great officer for levying the taxes is the comptroller-general.

The extraordinary impoſitions were accuſtomed to be of what number and kind the king pleaſed. Among theſe is the augmentation of the tax for the ſupport of the army, the taillon, the tenth or twentieth part of the revenue of the whole kingdom in lands, houſes, offices, &c. and the erection and ſale of new offices.

The ambition and extenſive views of *France*, with its various wars, have neceſſarily burthened the ſubjects with enormous taxes and impoſitions; and theſe being aggravated by the rapacity of the financiers and collectors, the people have often been reduced to the laſt extremity of wretchedneſs, from which, but for the many reſources which nature and induſtry have put into their hands, they could never have recovered.

"The ſtate of the finances of this kingdom," ſays *M. Necker*, in his *Compte rendu au Roi*, "has been conſtantly made a matter of myſtery, or, if ſometimes ſpoken of, it has been in the preambles of edicts, and always at the moment when there was occaſion to borrow." It was the endeavour of that enlightened financier to explode ſuch a deſtructive plan of conduct, and for that purpoſe, in the month of *January* 1781, he laid before the king the reſult of an elaborate inveſtigation of the various branches of the revenue, and the ſeveral articles of public expenditure, in a digeſted ſtatement of each, arranged under diſtinct heads. This was afterward made public. He there repreſents the revenues of *France* as fully amounting to 430,000,000 livres, being 18,812,500*l.* ſterling, whilſt the receipts at the royal treaſury were no more than 264,000,000, or 11,550,000*l.* the ſurplus being conſumed in charges allowed upon the general receipts, in annuities upon the *Hotel de Ville*, in other objects aſſigned upon the general farms, &c. &c. The ordinary revenue, however, thus reduced in its paſſage to the treaſury, this miniſter ſtated that he had brought, by his regulations, annually to exceed the ordinary expences in the ſum of 10,200,000 livres, or 446,250*l.* ſterling. It appears in the ſame publication, that a charge of near 28,000,000 of livres, or 1,226,531*l.* ſterling, was annually incurred by penſions of various kinds and denominations, upon which article of expenditure the financier expreſſes his doubt if all the ſovereigns of *Europe* combined diſtribute more than one-half of that ſum in that manner. Theſe favourable repreſentations of the finances of *France* have not, however, been realized ſince that miniſter's removal; but, on the contrary, the expenditure has, every year, very largely exceeded the public receipts, owing rather to profuſion and miſmanagement, than any actual deficiency in the ſources of revenue. In the year 1788, the deficiency of the revenue exceeded that of any former year, which led *M. de Calonne*, at that time miniſter of *finance*, to attack the repreſentations of *M. Necker*, as giving a flattering and falſe account of the ſtate of the kingdom; to which *M. Necker* has replied, accuſing *M. de Calonne* of unfairneſs in ſtating facts, and defending the general and important heads of the arrangement which he had made of the revenue.

The land forces of *France* amount in time of peace to about two hundred thouſand men, among which are a great number of *Swiſs*, *Germans*, and other foreigners; and in time of war they are frequently augmented to four hundred thouſand. The number of fortreſſes belonging to the kingdom is very great, and exact plans of them, as alſo of the foreign fortreſſes, to the number of a hundred and eighty, may be ſeen in the gallery of the *Louvre*, where there is a royal academy for training up young gentlemen in the ſeveral branches of the art of war. Beſides the magnificent building of the invalids in the capital, where diſabled ſeamen are admitted, there are in the whole kingdom above ſeventy other military hoſpitals.

The navy of *France* is alſo very conſiderable. Claſſes are inſtituted throughout all the maritime provinces, where the ſea-officers, ſailors, and others belonging to the navy, reſide. Each claſs ſerves three or four years alternately, and thoſe who are not in actual ſervice on board the king's ſhips, may enter on board thoſe of the merchants. In the beginning of the war of 1755, *France* had an hundred and eleven men of war.

In the ſix years war with *Great Britain*, which commenced in the year 1755, and terminated in 1760, the loſs which the navy of *France* ſuſtained was forty-five men of war taken, having on board one thouſand ſeven hundred and thirty-eight guns; forty-two deſtroyed, with one thouſand ſeven hundred and eighty guns; and eighteen caſually loſt, with ſeven hundred and eighty-ſix guns; whilſt the *Engliſh* in that war had only five ſhips taken, carrying one hundred and forty-two guns; four deſtroyed, with ſeventy-two guns; and fifteen caſually loſt, carrying ſeven hundred and thirty-eight guns. In the ſucceeding war, which commenced in 1778, and ended in 1783, *France* had forty-nine ſhips of war taken, carrying nine hundred and ſixty-two guns; and twenty deſtroyed, carrying four hundred and ſixty-two guns. The *Engliſh* in the ſame war had thirty-two ſhips taken by the *French*, carrying ſix hundred and eighty-two guns; and twelve ſhips deſtroyed, with three hundred and twenty-eight guns.

France is at preſent divided into thirty-ſix generalities, or general governments, beſides *Corſica*, which is now formed into a province, and which has been already deſcribed, page 362 of this volume. In treating of theſe, we ſhall begin at the ſouth-eaſt.

SECT. IV.

Of the Situation, Extent, Climate, Produce, and Rivers of PROVENCE; *with a Deſcription of its principal Cities, particularly* AIX, ARLES, MARSEILLES, TOULON, *the Iſlands of* HIERES, *and the little State of* AVIGNON.

PROVENCE, which derives its name from the *Latin Provincia*, is bounded on the north by *Dauphiny*; on the eaſt by the *Alps* and the river *Var*, which divide it from the territories belonging to the king of *Sardinia*; on the ſouth by the *Mediterranean*; and on the weſt is ſeparated from *Languedoc* by the *Rhone*. Its utmoſt length is about a hundred and forty miles, and its breadth from the iſles of *Hieres* to the village of *Sauze* about ninety.

Upper Provence enjoys a pretty temperate air, and has much meadow ground, well ſtocked with cattle. It alſo produces corn, apples, and pears, though but little wine. *Lower Provence* does not produce one half of the corn conſumed by its inhabitants; but, the ſoil being dry and ſandy, oranges, lemons, pomegranates, and olives, with maſtich, cypreſs, palm, and the *African* cacia-trees, thrive extremely; as do alſo ſhrubs of all kinds. *Provence* is every where ſhaded with plantations of mulberry-trees, for the nouriſhment of ſilk-worms, ſilk being its ſtaple commodity. The wine in *Lower Provence* is thick, luſcious, and heady; but the ſort moſt admired is *muſcadel*.

In this part of *France* is the *beccafigo*, a ſmall delicious bird, that feeds only on grapes and figs; and among the ſea-fiſh here is a remarkable kind called the *date*, which is ſo named from the reſemblance of its ſhape to that fruit, and is found within hollow ſtones in the road and harbour of *Toulon*. In order to get them out, the ſtone muſt be broken; theſe fiſh alſo abound along the coaſt of the marquiſate of *Ancona*, on the *Adriatic*. In this province are ſome quarries of black agate.

The rivers here are inconſiderable; they are the *Durance*, the *Sourge*, the *Largens*, and the *Var*; the laſt divides *France* from *Italy*. Along the coaſt of the *Mediterranean* are ſeveral capes, bays, and harbours; the principal of which is *Toulon*.

Geographers differ in the diviſion of this province; ſome divide it into two parts, ſome into three, and others into ſixteen; we ſhall divide it into *Upper* and *Lower Provence*, and ſhall begin with the latter, the principal places in which are the following:

AIX, in *Latin Aquæ Sextiæ*, called *Aquæ* from its baths, and *Sextiæ* from its being enlarged and beautified by *Sextus Calvinus*. This was the firſt ſettlement made in *Gaul* by the *Romans*, one hundred and twenty-four years before *Chriſt*. This city, which is the capital of *Provence*, and the ſeat of its parliament, ſtands in a valley of conſiderable extent, planted chiefly with olives, in 43° 32′ N. latitude, and 5° 26′ E. longitude from *Greenwich*, twenty miles to the northward of *Marſeilles*, and thirty-five to the ſouth-eaſt of *Avignon*. It is rather populous than large; the ſtreets are well paved, and the houſes handſome, moſt of them being built of free-ſtone. There is a beautiful ſpacious walk within the city, called "The Cours," or *Orbitelle*: it is above three hundred yards long, formed by a triple avenue of venerable elms, that ſcreen two rows of regular and ſtately houſes: it is refreſhed by four fountains; one of its extremities is cloſed by the front of a church, the other admits a cheerful view of the country. *Swinburne*, II. 454. In the cathedral is a conſecrated roſe of gold, the preſent of pope *Innocent* IV. to count *Raymond Berenger*. Here, and in the other churches of the city, are to be ſeen the tombs of ſeveral earls of *Provence*, and ſome good pictures by *French* painters; in that of the *Minims* is a ſmall elegant monument, erected by *Frederic* II. king of *Pruſſia*, to the memory of his friend the marquis *D'Argens*, author of the *Lettres Juives*. In this city are alſo two colleges, with an univerſity founded in

1409, an academy of the polite arts, erected in 1668, a public library in the town-houſe, eighteen convents, a palace formerly the reſidence of the counts of *Provence*, and now of the high bailiff. Here is alſo a mint. In its ſuburbs the warm mineral ſpring, once ſo celebrated by the *Romans*, was found a ſecond time in 1704, when digging for the foundation of a houſe. The waters are found ſerviceable in the gout, the gravel, ſcurvy, palſy, indigeſtion, aſthma, and conſumption. The magiſtrates have raiſed a plain building, in which there are two private baths, and a bed-chamber adjoining to each. *Smollet*, II. 244. Mr. *Swinburne* ſays, the waters are ſcarcely warm, and almoſt taſteleſs. II. 456. The town is plentifully ſupplied with water, flowing on all ſides from the impending hills. *Swinburne*, II. 454. In the year 1771 an inundation overſpread all the lower quarter of the city, to the height of from twelve to fifteen feet; all the vintage was entirely deſtroyed, together with much cattle and numbers of inhabitants.

ARLES, the ancient *Arellas*, *Arelata*, and *Arelatum*, is a large and well-built city, ſeated on the eaſt bank of the *Rhone*, in 43° 41′ N. latitude, and in 4° 38′ E. longitude from *Greenwich*, upon very uneven ground, and almoſt ſurrounded by a moraſs, which renders the air thick and unhealthful. Over the *Rhone* is a wooden bridge, to preſerve the communication with *Languedoc*. The ſtreets of this city are narrow, but the houſes in general are well built: it abounds with rich clergy and poor nobility. *Swinburne*, II. 420. The archbiſhop ſtyles himſelf prince of *Montdragon*. In the ſame ſquare with the cathedral and archiepiſcopal palace, ſtands the town-hall, a ſhewy inſulated building; the apartments are noble; in one is a fine portrait of cardinal *De Richelieu*. *Swinburne*, II. 420. Beſides the cathedral, it contains one collegiate, and ſeven pariſh-churches, with an abbey, fourteen convents, an hoſpital, and a royal academy of ſciences founded in 1688.

Arles was anciently the capital of the kingdom of *Burgundy*, which was alſo called the kingdom of *Arles*, and the diſtrict belonging to this city is ſtill very extenſive. Several councils have been held here, the moſt ancient and diſtinguiſhed of which was in 1314. It is remarkable for the beauty of its ſituation, and numerous remains of antiquity. *Conſtantine* the Great, and after him his ſons, honoured this city with their preſence. At preſent its circumference is not great, nor its population conſiderable.

Among the numerous *Roman* antiquities to be found at *Arles* is a large obeliſk of porphyry, which, being dug up here in the year 1675, was ſet up and dedicated to *Lewis* XIV. It is of *Egyptian* origin, but is without hieroglyphics. It conſiſts of one entire ſtone, fifty-two feet high, and ſeven feet in diameter at the baſe. On the top is placed an azure globe, ſtrewed with golden lilies, and a ſun, which was that prince's device; but its new plain pedeſtal of ſandſtone ill agrees with the valuable monument above.

There are alſo the ruins of an amphitheatre, ſuppoſed to have been built by *Julius Cæſar*; it is of an oval form, an hundred and ninety-four fathoms in circumference, the longeſt diameter of the area ſeventy-one fathoms, and the ſhorteſt fifty-two. The porticos are three ſtories high, built of free-ſtone of a prodigious ſize; each ſtory contains ſixty arches, which ſtill remain, and the walls are of a ſurpriſing thickneſs, but very much decayed.

This amphitheatre is of a ſmaller dimenſion than that of *Niſmes*, but, like it, is disfigured by the miſerable dwellings of the poor: it never was finiſhed, the work having probably been interrupted by the prohibition iſſued againſt gladiatorial ſhews, ſoon after Chriſtianity aſcended the throne of the *Cæſars*. Through a ſtrong attachment to thoſe ſanguinary entertainments, tranſmitted from father to ſon, ſince *Provence* belonged to the *Romans*, or at leaſt ſince it was ſubject to the kings of *Arragon*, the people of *Arles* retained the taſte for bull-feaſts down to the preſent age; wild bulls were frequently driven from *Camargue*, and combats exhibited in the ancient amphitheatre before a vaſt concourſe of ſpectators, who were agitated by the ſame fierce emotions, and expreſſed them by the ſame frantic exclamations, that reſounded in the ſhews of ancient *Rome*, and are ſtill to be heard in the bull-feaſts of *Spain*. The frequent loſs of human lives induced government to aboliſh theſe ſavage ſports at *Arles*. *Swinburne*, II. 424.

Near the city is what they call the *Eliſcamps*, or *Elyſian Fields*, and there the *Romans* uſed to bury the aſhes of their dead. Accordingly there are here ſeen an incredible number of ſtone and marble ſarcophagi, ſome ſtanding half, and ſome entirely out of the ground. Theſe fields afterward became a Chriſtian cemetry. In the middle of them ſtands an obeliſk, which marks the graves of four conſuls of *Arles*, who fell victims to the plague of 1720, which, from *Marſeilles*, ſpread its deſtructive contagion, though not with equal malignity, along the coaſt of the *Mediterranean*, and into the interior parts of *Provence*.

Not far from hence the *Rhone* divides itſelf into two large branches, forming the iſland of *Camargue*, called in *Latin Camaria*, which is one of the beſt and moſt fruitful ſpots in this country, and is interſected with ſeveral canals. It is eighteen miles in length. An incredible number of horſes and cattle are bred here, which are almoſt wild. The horſes are active and hardy, but unruly and ugly. *Swinburne*, II. 416.

MARSEILLES, in *Latin Maſſalia*, and *Maſſilia*, the ſecond city of *Provence*, but the firſt in point of trade, is large, rich, and the moſt ancient place in all this province: it is ſaid to have been a town five hundred years before the birth of *Chriſt*. It is ſeated at the foot of a rocky mountain near the ſea, and is placed by Dr. *Maſkelyne* in 43° 18′ N. latitude, and 5° 22′ E. longitude from *Greenwich*; thirty miles to the north-weſt of *Toulon*. It is divided into the *Old* and *New Town*: the former ſtands on an eminence, and conſiſts of narrow crooked ſtreets, with mean houſes; but in the latter the ſtreets are ſtraight and broad, and adorned with handſome edifices. The walk is a very fine ſtreet, called "The *Cours*," with beautiful houſes on each ſide, and in the middle two rows of lofty trees, which form a fine viſta, where there are a number of benches for reſting-places. This city is the reſidence of a high bailiff, and has a biſhop, ſuffragan to the archbiſhop of *Arles*. It has alſo a mint, with four pariſh-churches, including the cathedral, which is ſaid to have been a temple of *Diana*, and the moſt ancient in *France*, and two collegiate ones, with two abbies, an academy of the polite arts, and an obſervatory. In the abbey of St. *Victor* are many tombs, and ancient inſcriptions, in commemoration both of *Pagans* and *Chriſtians*. It is one of the moſt ancient monaſtical foundations in *France*, and can boaſt for its members many reſpectable characters who have riſen to the higheſt dignities of the church. In moſt of the churches are paintings of merit by *Puget*, who was a native of this city, and other maſters of the *French* ſchool; this artiſt is ſtill more eminent as a ſculptor than as a painter. The eſcutcheon of the royal arms over the door of the town-hall, which is executed by him, is a piece of exquiſite taſte and delicacy of touch. This city alſo contains a large arſenal, well ſtored with materials for fitting out the king's gallies. The entrance into the harbour, on account of a rocky cape near it, is difficult, and has not depth of water ſufficient for men of war. The port of *Marſeilles* runs one thouſand ſix hundred paces into the land, forming an oval baſon, ſurrounded on each ſide, except at the entrance. The harbour is ſhut up with a chain, and ſhips of war, or heavy burthen, uſually ride at anchor in the road between the iſlands and the main land. There are commonly five hundred veſſels in the port, and it is computed that near four thouſand ſhips and barks enter it in the courſe of a year. Along the fine quay that lines it, the ſtir and buſtle is prodigious. *Smollet*, II. 233. *Swinburne*, II. 464.

On the land ſide is one of the moſt beautiful plains in the world, in which there are ſaid to be no leſs than twelve hundred country-ſeats of the citizens, which are called *Baſtides*, with their gardens and vineyards, whither they retire from the noiſe of the town, which is very diſagreeable, on account of the multitude of ſlaves in the ſtreets rattling their chains, ſome of whom ſerve as porters, and others have little ſhops and huts, where they are allowed to work at their trades. In theſe little ſhops or booths, ſituated on a part of the quay, there may be ſeen tradeſmen of all kinds ſitting at work, chained by one foot. At night they are obliged to lie on board their gallies. *Smollet*, II. 234. "This diſtrict, I am told," ſays Mr. *Swinburne*, "is a kind of market for ſtolen goods, as well as a receptacle for all ſorts of idle and profligate company. No place abounds more with diſſolute company of both ſexes than *Marſeilles*, and in the abundance of proſtitutes that appear in the ſtreets, it is almoſt upon a par with *London*." *Travels*, II. 465.

Gold and ſilver ſtuffs are made here, and almoſt all the trade of *France* with *Spain* and *Italy* is carried on by *Marſeilles*, which is alſo the centre of the commerce of the *Levant*. The ſtatement which Mr. *Swinburne* gives of its commerce is as follows: "It is computed," ſays he, "that buſineſs is annually tranſacted upon this exchange for near fifteen millions ſterling."

	Livres.
The exports to the *Levant* amount annually to	31,000,000
The imports from thence are valued at -	50,000,000
Exports to the *Weſt Indies* and *Cayenne*	17,000,000
Imports from ditto - - - - -	21,000,000
Eaſt India trade - - - - - -	3,500,000
Corn trade - - - - - -	6,000,000
Trade with *Spain* and the reſt of *Europe* -	29,000,000
Imports from *North America* in ſalted cod and train-oil - - - - - -	4,000,000
——— in oil from *Sicily*, &c. - -	14,000,000
Exports in ſoap - - - - -	14,000,000
——— in various manufactures - -	2,500,000
	192,000,000

which is equal to 8,400,000 *l.* ſterling. The other tranſactions, which ſerve to complete the ſum eſtimated, conſiſt in inſurances, and profits upon bullion.

In the year 1720 this city was viſited by a moſt dreadful peſtilence, brought in a ſhip from the *Levant*; it raged ſomewhat more than ſeven months. Above ſixty thouſand perſons died of the diſorder in the city. This deſolation is not yet obliterated from the minds of the inhabitants; ſome ſurvivors remained alive but a few years ago (from 1789) to tranſmit a traditional account of it to after-ages. There are two fine pictures, painted by *Puget*, repreſenting ſome of the horrid ſcenes of that time. "They are," ſays lady *Craven*, "only too well executed. I ſaw ſeveral dying figures taking leave of their friends, and looking their laſt anxious, kind, and wiſhful prayers on their ſick infants, that made the tears flow down my cheeks. I was told the phyſicians and noblemen, who were aſſiſting the ſick and dying, were all portraits: I can eaſily conceive it, for in ſome faces there is a look of reflection and concern which could only be drawn from the life." *Letters*, p. 34, 35. This fatal event has cauſed the laws of quarantine to be very ſtrictly enforced in the *Lazaretto* here, which is an extenſive inſulated building.

Mr. *Swinburne* deſcribes *Marſeilles* as enjoying "the cleareſt of atmoſpheres." "The climate," he ſays, "in ſummer is ſultry, though tempered at certain hours by ſea-breezes; in winter the north-eaſt winds blow invariably for many weeks, and are beyond meaſure cutting; but when they ceaſe, the winter days of this country are as pleaſant as the fineſt ſummer ones in our northern regions. *Travels*, II. 458, 563.—And Dr. *Smollet* ſpeaks of the vaſt difference which is experienced in the air of *Aix* and *Marſeilles*, although not more than ten or twelve miles diſtant; and he inſtances it in the caſe of the late Lord *Holland*, who paſſed a winter at *Aix*, where he grew worſe every day; but no ſooner removed to *Marſeilles*, than all his complaints abated. Yet the climate here is not near ſo warm as at *Nice*, where flowers, fruits, and vegetables are raiſed, which will not grow and ripen either here or at *Toulon*. *Travels*, II. 241.

TOULON, a pretty large city, ſeated in a bottom, almoſt encompaſſed with hills on the land-ſide, and on a bay of the *Mediterranean*, which forms a ſecure and commodious harbour. Dr. *Maſkelyne* places it in 43° 7′ N. latitude, and in 5° 57′ E. longitude, from *Greenwich*; near four hundred miles ſouth-eaſt from *Paris*. It is defended by very ſtrong fortifications towards the land-ſide, and the new part of the town is very handſome. The biſhop of this city is ſubject to the archbiſhop of *Arles*. The old and new harbour lie contiguous, and by means of a canal you paſs from one to the other, both having an outlet into the ſpacious outer harbour, which is ſurrounded with hills, and formed by nature almoſt circular. Its circuit is of very great extent, and at the entrance of both ſides is defended by a fort with ſtrong batteries. The new harbour, which was made by order of *Louis* XIV. is alſo well defended by batteries, and round it ſtands the arſenal, where every man of war has its own particular ſtorehouſe; but the guns and cordage are laid up ſeparately. The general magazine, which ſupplies whatever may be wanting in the particular ſtore-houſes for ſingle ſhips, contains an immenſe quantity of all kinds of ſtores, diſpoſed in the greateſt order. The baſin, docks, and arſenal of *Toulon* warrant the remark which was made by a ſtranger who viſited them, that "the king of *France* was greater there than at *Verſailles*."

In the year 1707, the army of the allies, conſiſting of thirty thouſand men, commanded by the prince of *Savoy* and prince *Eugene*, having croſſed the *Var* with ſmall oppoſition, appeared before *Toulon* on the 15th of *July*, whilſt a *Britiſh* fleet, commanded by Sir *Cloudeſley Shovel* and Sir *John Norris*, co-operated in the ſiege; but although the place was in a weak ſtate of defence, yet the activity and bravery of the beſieged, oppoſed to the dilatorineſs and want of concord in the proceedings of their aſſailants by land (for the fleet was very active and effectual) gave marſhal *Teſſe* opportunity to raiſe an army and march to its relief, and the allies retreated in the night of the 22d of *Auguſt*. Eight capital ſhips were burnt in the harbour, ſeveral magazines were blown up, and one hundred and ſix houſes were deſtroyed. In the year 1721 the town ſuffered greatly by the plague.

The inhabitants make a kind of coarſe woollen cloth, and its neighbourhood abounds in capers.

HIERES, the ancient *Areæ*, is a ſmall town, formerly much more conſiderable than at preſent; it having once had an harbour where pilgrims uſed to embark for the *Holy Land*. This town has a diſtrict court, and ſeveral public offices. The ſoil is excellent, and, being laid out in orchards, produces the fineſt fruit in *France*. A great deal of ſalt is made here, both from ſea-water and a large ſalt lake; but the air was unwholeſome, till this inconvenience was remedied by forming a canal, which extends from the lake to the ſea.

This town gives name to the ISLANDS OF HIERES, which lie in the neighbouring ſea, and, in conjunction with the continent, form a fine road. Theſe iſlands are three in number. The principal, which lies neareſt the town, is *Porquerolles*, ſo called from the great number of wild hogs, which ſwim over hither from the continent, for the ſake of the acorns, abundance of oaks growing here. It is four *French* leagues in length, one in breadth, and is defended by an old caſtle. The ſecond is *Portecroz*, that being the name of the harbour where a fort is built. The third is *Titan*, or *Levant*, from its ſituation to the eaſtward of the former; but though it is four *French* leagues in length and one broad, it is uninhabited.

ANTIBES, the *Antipolis* of the antients, is ſaid to have been built, like *Nice*, by a colony from *Marſeilles*; but Dr. *Smollet* was of opinion that it was later than that town. *Travels*, II. 224.—At preſent it is the frontier of *France* toward *Italy*, pretty ſtrongly fortified, and garriſoned with a battalion of ſoldiers. The town is ſmall and inconſiderable, but the baſin of the harbour is ſurrounded toward the ſea by a curious bulwark, founded upon piles driven in the water, conſiſting of a wall, ramparts, caſemates, and quay. Veſſels lie very ſafe in this harbour, but there is not water at the entrance of it to admit ſhips of burden; the ſhoals run ſo far off from the coaſt, that a ſhip of force cannot lie near enough to batter the town. Its chief ſtrength by land conſiſts of a ſmall quadrangular fort, detached from the body of the place, which in a particular manner commands the entrance of the harbour. The wall of the town, built in the ſea, has embraſures and ſalient angles, on which a great number of cannon may be mounted. Dr. *Maſkelyne* places it in 43° 35′ N. latitude, and 7° 8′ E. longitude from *Greenwich*. Dr. *Smollet*, who viſited this place in the year 1765, related that in the laſt week of the month of *April* the corn in this vicinity was in ear, the cherries were almoſt ripe, and the figs had begun to blacken. *Travels*, II. 227.

The principal place in *Upper Provence* is SISTERON, a city that has a ſmall citadel, ſeated at the foot of a rock on the *Durance*, thirty miles to the ſouth-weſt of *Embern*, and is the ſee of a biſhop, ſuffragan to the archbiſhop of *Aix*.

Mr. *Swinburne* ſpeaks of the dreſs of the women, whom he met returning from market, which reſembled the airy garments upon the dancing nymphs of *Herculaneum.* Theſe peaſant girls wear light open mantles, looſely flowing to their knees, over a ſhort petticoat, that diſcovers their taper legs and ſilk ſtockings; bracelets of gold beads adorn their wriſts, a ſilk handkerchief confines part of their jet black locks, without hiding their keen eyes and animated countenances: this eaſy habit ſuits admirably with the elegance of their form and the ſuppleneſs of their limbs. *Travels*, II. 425.—Such a deſcription but ill accords with the accounts which are given of the general appearance of poverty and wretchedneſs exhibited by the peaſantry of *France!* The ſame traveller relates, that in a plain near *Arles* he ſaw a great number of fowlers ſtationed, who were turning ſmall mirrors for the purpoſe of dazzling the larks, and drawing them down within reach of their guns. II. 415.

ORANGE, on the confines of *Languedoc* and *Dauphiny*, about thirty miles north of *Avignon*, once the capital of a ſovereign principality, poſſeſſed by the families of *Baux*, *Chalons*, and laſtly of *Naſſau*, has been long annexed to the crown of *France*. During the time when *France* and *Spain* maintained their ſevere conflict for ſuperiority, the ſtadtholders of *Holland* quietly poſſeſſed this little ſtate; but as ſoon as the ſtadtholder, in the perſon of *William* III. of *England*, formed the grand alliance againſt *Louis* XIV. this principality of *Orange* was confiſcated; and although a clauſe in the peace of *Ryſwick* ſtipulated for its reſtitution, yet when that king died, five years afterward, *Orange* was declared to have eſcheated to the crown of *France*. This change of maſters, and the effects of the revocation of the edict of *Nantz*, by which the Proteſtants were ſtripped of every privilege, cauſed a rapid emigration, which reduced the city to a ſtate of poverty and ſolitude. *Orange* was a *Roman* colony, which ſome ſuppoſe to have been the *Arauſio Cavarum*; it is ſtill diſtinguiſhed by ſeveral noble remains of antiquity, among which is a triumphal arch, and antiquaries have ſuppoſed it to have been erected in honour of *Caius Marius* and *Luctatius Catullus*, after the great victory they obtained not very far from this ſpot over the *Cimbri* and *Teutones*, in the ſix hundred and fifty-firſt year of *Rome*; but this is much controverted: here is likewiſe a circus or amphitheatre, an aqueduct, and a temple.

AVIGNON, ſituated in *Provence*, about the middle of its weſtern border, ſeparated from *Languedoc* by the *Rhone*, and twenty miles to the north of *Arles*, was the *Avenio Cavarum* of the *Romans*; it was afterward ſubject ſucceſſively to the *Burgundians*, *Franks*, the kingdom of *Arles*, the counts of *Provence*, and the ſovereigns of *Naples*. It was ſold by queen *Joan* I. of *Naples*, counteſs of *Provence*, to pope *Clement* VI. (A. D. 1348) for the ſum of 8000 florins; and from that period it continued under the dominion of the ſee of *Rome*: but when the duke de *Crequi*, the *French* ambaſſador, was inſulted at *Rome*, in the year 1662, the parliament of *Provence* paſſed an arret, declaring the city of *Avignon*, and the county of *Venaiſſin*, which was annexed to it, part of the ancient domain of *Provence*, and therefore re-united it to the crown of *France*; it was afterward reſtored to the *Roman* ſee at the peace of *Piſa*. The comtat, or dioceſe of *Venaiſſin* was ceded by *Philip* the *Hardy*, of *France*, to pope *Gregory* X. in the year 1273; *Carpentras* is its capital. A ſucceſſion of popes reſided at *Avignon* for the ſpace of ſeventy years, viz. from 1308 to 1377, and from thence ruled *Europe* with a deſpotic ſway, although exiles from *Rome*, and diſowned there. It is about three miles and two furlongs in circumference, ſurrounded by handſome battlemented walls and turrets, not unlike thoſe of *Rome*; its ditches are ſhaded by pleaſant avenues of elms; on the weſt ſide it is waſhed by the *Rhone*; it is adorned with a great number of magnificent churches and convents, which are richly embelliſhed with painting, ſculpture, ſhrines, relicks, and tombs. From the oppoſite hills this city ſeems to be a foreſt of ſteeples, the bells of which are never at reſt by day or night: this inceſſant tinkling made *Rabelais* call the place *l'iſle ſonante*; one of theſe bells is of ſilver, and rung upon no occaſion but the death of a pope. The public edifices are large, ſolid, and as grand as the taſte of the age could make them, moſt of them being built in the fourteenth century, while the popes reſided here; they occupy the moſt elevated ſpace within the walls. The cathedral is ſmall and dull; nor does it contain any curioſity except a ſilver altar, ſome coſtly veſtments, and the tombs of pope *John* XXII. and *Benedict* XII. It has likewiſe the chair or throne of the ancient popes, in which they ſat during their reſidence here. The church of the *Cordaliers* is remarkable for the boldneſs and loftineſs of its roof, but much more for the tomb of *Petrarch*'s *Laura*, who during her life, and after her deceaſe, received the tribute of his muſe in more copious numbers than ever were inſpired by any of her ſex, either in ancient or modern times. The bodies of *Laura* and her huſband, *Hugh de Sade*, are depoſited in an obſcure corner of the church, under a monument diſtinguiſhed only by an obliterated ſcroll, and a mullet, which was the arms of the family. *Francis* I, himſelf a poet, and a paſſionate admirer of the fair ſex, cauſed the tomb to be opened in his preſence, and having read the verſes *Petrarch* had depoſited with his adored miſtreſs, cloſed down the lid, and inſcribed it with ſome lines of his own compoſition. In the year 1177 a bridge was built from *Avignon* acroſs the *Rhone*, at the ſolicitation of a young ſhepherd, who pretended a miſſion from heaven for collecting alms toward building a bridge acroſs that river. This bridge was the boaſt of the country, but it is now in ruins, the rapidity of the ſtream having carried away moſt of the arches. On the other ſide of the city runs a branch of the *Sorgue*, formed by the famous fountain of *Vaucluſe* in this neighbourhood, where the poet *Petrarch* reſided, and the ruins of what is called his villa are ſtill ſhewn. "It is," ſays Dr. *Smollet*, "a charming tranſparent ſtream, abounding with trout and crawfiſh." *Travels*, II. 250.

The population of *Avignon* is not equal to its extent; it is computed to contain only thirty thouſand inhabitants, above a thouſand of which are eccleſiaſtics, and ſome hundreds of Jews. The ſtreets are narrow and dirty, and the diſmal lanes in which the Jews are ſtyed are abſolute ſinks of naſtineſs and infection: the fierce and ſteady winds which blow here for a long continuance, ſerve to purify this fetid atmoſphere, and preſerve the town from plagues and epidemical diſeaſes. *Swinburne*, II. 433.

In the year 1768, the *French* king reclaimed the city and territories of *Avignon* and the *Venaiſſin*, as fiefs belonging to him; and it was contended, that the dominions of the crown of *France* being unalienable, a ſovereign may at any time retake poſſeſſion of any part that was alienated, unleſs ſecured by authentic treaties of peace or exchange between ſovereigns. The year following, *Louis* XV. agreed to pay the new pope, *Clement* XIV. ſix millions of livres (262,500 *l.* ſterling) for the territories of *Venaiſſin*. An archbiſhop and four biſhops have ſince been created for the comtat. The city of *Avignon* has been ſince reſtored to the pope.

SECT. V.

Of the Province of DAUPHINÉ; *its Situation, Extent, Produce, and Singularities; its Medicinal Springs, Rivers, and principal Cities, particularly* GRENOBLE, AMBRUN, VIENNE, *and* VALENCE.

THE province of *Dauphiné* or *Dauphiny*, is bounded on the north by the country of *Breſſe* and the river *Rhona*; on the eaſt it is ſeparated from *Piedmont* by the *Alps* and *Savoy*; on the ſouth it borders on *Provence*; and on the weſt is circumſcribed by the *Rhone*. It is nearly of a triangular form, and each ſide of the triangle is about a hundred *Engliſh* miles in length.

Lower Dauphiné in ſome parts is very productive; but *Upper Dauphiné*, and indeed above two-thirds of the whole province, being very mountainous, are ſo barren, that great numbers of the natives ſeek for ſubſiſtence in other parts; yet theſe mountains have ſome uſeful products, and contain many curioſities. In thoſe of *Ambrun* and *Die*, are found marcaſites. The golden mountain, as it is called, yields a ſpecies of cryſtal. Several mountains are covered with *larch-trees*, on the rind of which is gathered *manna*, *benjamin* of a delightful fragrance, and *agaric*, which is uſed in phyſic and ſcarlet dyes. Among the wines produced in this province, the moſt eſteemed are thoſe of the *Hermitage* and *Cote-roti*; the firſt of which is ſold on the ſpot for three livres the bottle, and the other for two. The country likewiſe yields a conſiderable quantity of corn and much graſs, but very little oil. It is agreeably ſhaded with wood. The mountains abound with beaſts and fowls that are not found in any other part of *France*, particularly the *chamois*, *bear*, and *marmot*, which have been already deſcribed; *pheaſants*, *hawks*, *eagles*, &c. This province was united to the crown of *France* in the year 1343, and is ſuppoſed to contain ſix hundred and ſixty-four thouſand ſix hundred inhabitants.

The waters of *La Mothe*, in this province, are highly eſteemed, as a certain remedy againſt all diſorders of the ſtomach, fluxes, and even lameneſs, they being much better than the waters at *Aix*, in *Savoy*. *La Mothe* is a valley about five leagues from *Grenoble*, that runs between two high mountains, and has no other proſpect but that of bare and ſteep rocks. The only dwellings here are wretched huts of ſtraw, ſo that the country is in every reſpect diſagreeable. The *Drac*, a very rapid river, proceeding from the high part of the diſtrict of *Gap*, is, as it were, ſqueezed in at *La Mothe* between two high rocks, previous to its falling into the *Iſere*. On its ſhore, at the foot of a very ſteep rock, is the mineral ſpring, which, if the river riſes but half a foot, is covered with its turbid water. To come at the ſpring, a perſon muſt clamber half a *French* league over ſteep rocks and dreadful precipices, which ſeem to threaten the paſſenger with immediate deſtruction; and therefore it is no wonder that theſe excellent waters are but little frequented. There are ſeveral other mineral ſprings in this province.

The principal rivers are the *Rhone*, the *Durance*, the *Iſere*, and the *Drome*. In this province are two archbiſhoprics, and five biſhoprics. The civil law takes place here; the inhabitants have alſo particular cuſtoms of their own, and likewiſe a parliament, which is alſo a court of taxes. The principal places in this province are the following:

GRENOBLE, in *Latin Gratianapolis*, the capital of the province, is pleaſantly ſeated at the foot of a mountain on the river *Iſere*, near the place where the river *Drac* diſcharges itſelf into it. It is a pleaſant city, and, beſides other fortifications, is defended by a citadel, called the *Baſtile*. It is calculated to contain twenty-four thouſand three hundred inhabitants. The river *Iſere* divides the city into two unequal parts, the ſmalleſt of which is called *La Perriere*. The name of the largeſt is *Bonne*; this latter is the moſt beautiful, conſiſting of ſtraight handſome ſtreets, and containing ſeveral magnificent public buildings, particularly churches and convents; the cathedral church is a fine ancient building in the *Gothic* taſte, and St. *Andrew*'s church is remarkable for its curious ſpire, and a tomb of excellent workmanſhip. There are two bridges over the *Iſere*. This place is diſtinguiſhed for its manufactures of leather and gloves.

The GRAND CHARTREUSE, the moſt celebrated of all the convents belonging to the order of *Carthuſians*, is ſeated on the *Alps*, at the diſtance of three leagues from *Grenoble*. There are two ways leading to it, but both are carried over ſteep rocks and precipices of a dreadful height, the terror of which is increaſed by the roaring of the river *Guyer la Mort*, during its precipitate courſe among them. The convent, which ſtands on an eminence, is environed with rocks and mountains covered with wood, that riſe to a much greater height. This convent forms a ſpacious oblong ſquare walled in, and without it are a few inns and ſtables. In the large hall of this convent is annually held the general chapter of the order of the *Carthuſians*, where the *German* priors take the precedence of all others; and at their arrival may ride into the court of the convent, which none of the reſt are permitted to do; but, like ſtrangers, muſt alight at the gate. In the hall are fine paintings, repreſenting the life of St. *Bruno*, and likewiſe the pictures of the generals of the order. The former are copies of the admirable paintings in the *Chartreuſe* at *Paris*. In a large gallery may be ſeen views of all the *Carthuſian* convents in *Chriſtendom*, moſt of which are executed by eminent hands. The church is not large, but magnificent; and among other relics, it is ſaid to contain the arm of St. *Bruno*, his body being interred in *Calabria*. The firſt ſettlement of *Bruno* and his diſciples was half a league from this place, and it having no particular name, was ſo called from *Carthreuſe*, a village ſtill in being, ſituated near it in a valley. From the kitchen of this monaſtery above a hundred perſons are daily fed, and among them thirty monks and forty lay-brothers; all ſtrangers are entertained here gratis. The wine-cellar conſiſts of two lanes lined with caſks of an extraordinary ſize, which being immoveable, are filled through the roof by means of leather pipes. This convent is the head of the order, and chooſes the general, who is obliged to reſide here during life.

BRIANÇON, the capital of a territory called *Briançonois*, is ſeated forty-five miles to the ſouth-eaſt of *Grenoble*, on the ſide of a ſteep rock, on the top of which ſtands a caſtle; near the town the two little rivers of *Dure* and *Ance* unite their ſtreams, and thus form the river *Durance*.

AMBRUN, or EMBRUN, the capital of the territory of *Ambrunois*, is ſituated on a ſteep rock, at the foot of which runs the river *Durance*, and is about twenty miles to the ſouth of *Briançon*. It is a ſtrong place both by art and nature, and is the ſee of an archbiſhop, who ſtyles himſelf prince and count of *Ambrun*, and baron of *Guilleſtre* and *Beaufort*, and has alſo one-half of the lordſhip and juriſdiction of the city.

VIENNE, anciently called *Vienna Allobrogum*, the capital of a diſtrict in *Lower Dauphiné* called *Viennois*, is a very ancient city ſeated on the *Rhone*, ſeventeen miles to the ſouth of *Lyons*. It was a *Roman* colony, and a conſiderable city, which the ancients ſpared no pains nor expence to embelliſh. It is ſtill a large town, ſtanding among ſeveral hills, on the banks of the *Rhone*, but all its former ſplendor is loſt, its commerce decayed, and moſt of its antiquities buried in ruins. The cathedral is a beautiful ſtructure. The church of *Notre Dame de la Vie* is ſaid to have been a *Roman* prætorium. The archbiſhop of this place enjoys the title of upper primate of *Gaul*; he has four ſuffragans, namely, the biſhops of *Valence*, *Die*, *Grenoble*, and *Viviers*. In this city are made anchors and ſword-blades, with other manufactures in iron and ſteel; there are alſo paper-mills.

VALENCE, in *Latin Valentia*, the capital of a diſtrict called *Valentinois*, is ſeated on the *Rhone*, forty-eight miles to the ſouth of *Lyons*, and is pretty well built; it is large, and one of the moſt ancient cities in *France*, it having been formerly a *Roman* colony. The epiſcopal palace is a fine building: beſides the cathedral, it contains one chapter, and three abbies; with ſix convents, and an univerſity.

SECT. VI.

Of the Situation, Extent, Produce, and principal Rivers of FRANCHE COMTE'; *with a Deſcription of* BESANÇON, SALINES, DOLE, *and* GRAY.

THE earldom of *Burgundy*, or *Franche Comté*, is bounded on the north by *Lorrain*, on the eaſt by the earldom of *Mumplegard* and *Swiſſerland*, and on the ſouth and weſt by the government of *Burgundy* and *Champagne*. Its extent from ſouth to north is about ninety miles, and from the ſouth-eaſt to the north-weſt ſixty. Almoſt one-half of it is a level country, abounding in corn, wine, paſtures, hemp, &c. and the other half is mountainous, but produces a good breed of cattle, and ſome corn and wine. This province was annexed to the kingdom of *France* by the peace of *Nimeguen*, in 1678; it is ſuppoſed to contain ſix hundred and ſeventy-eight thouſand eight hundred inhabitants.

This country contains mines of copper, iron, lead, and ſilver. Near the village of *Touillon* is a ſpring that runs and ceaſes at ſtated times; and the town of *Salines* has profitable ſalt-ſprings and marſhes. In this diſtrict are likewiſe quarries of alabaſter and marble; and alſo near the river *Doux* is a large grotto in which nature has formed pillars, and a ſurpriſing variety of figures; and near *Leugne* is a natural icy cavern, which freezes in ſummer and thaws in winter.

The principal rivers of this province are the *Saone*, the *Ougnon*, the *Doux*, the *Louve*, and the *Dain*.

Franche Comté has a parliament of its own; it is ſubject to a governor, lieutenant-general, and ſub-governor; and is divided into four large diſtricts, the principal places in which are the following:

BESANÇON, in *Latin Veſontio*, and *Beſontium*, the capital of the country, is a hundred and ſixty miles to the ſouth-eaſt of *Paris*, and is the ſeat of an archbiſhopric, a parliament, an intendency, a bailiwic, a county and a mint-court, &c. It is divided by the river *Doux* into the *Upper* or *Old Town*, and the *Lower* or *New Town*, and is ſurrounded by a wall and other fortifications: it is alſo defended by a citadel that ſtands on a ſteep rock. Until the peace of *Weſtphalia* it was an imperial city, but at that time was transferred to *Spain*: it was afterward taken by *France*, and its fortifications were greatly ſtrengthened by *Louis* XIV. The cathedral, which is dedicated to St. *John*, ſtands at the foot of *Mount St. Stephen*; and the archbiſhop, who ſtyles himſelf a prince of the empire, has three ſuffragans under him. The city contains an univerſity, three hoſpitals, and had a college of Jeſuits. The town-houſe, the governor's palace, and that of *Granville*, are the moſt remarkable buildings in the place; the laſt of which is furniſhed with a great variety of excellent ſtatues and pictures, and a library containing a great number of valuable books and manuſcripts. In the neighbourhood of *Beſançon* are the ruins of an amphitheatre, a hundred and twenty feet in diameter, and of ſome pagan temples, with a triumphal arch dedicated to the emperor *Aurelian*.

SALINES, in *Latin Salinæ*, ſo called from an excellent ſalt-ſpring which yields the crown a great revenue, is pleaſantly ſituated on a rivulet in a valley between two mountains, twenty miles to the ſouth of *Beſançon*, and two hundred to the ſouth-eaſt of *Paris*. It is a long town, chiefly conſiſting of one ſtreet. The hall, in which the inhabitants have their magazine of ſalt, and where the courts of juſtice are held, is a magnificent building. The town is defended by a wall, and near it ſtands Fort *Belin*, which is ſeated on a hill, and on another is Fort *Brecon*, and a caſtle.

DOLE is ſeated on the river *Doux*, eighteen miles to the ſouth-weſt of *Beſançon*, in a diſtrict of the ſame name, which, from its beauty and fertility, is ſtyled *Val d'Amours*, or the *Vale of Love*. *Dole* was formerly, while *Beſançon* continued a free imperial city, the capital of the country, the ſeat of a parliament, of a chamber of accounts, and of an univerſity. On its being taken by *Louis* XIV. in 1668, he cauſed the fortifications to be demoliſhed; it was afterward taken by the *Spaniards*, who again fortified it; but the *French* retaking it in 1674, it was a ſecond time diſmantled, and the parliament and univerſity afterward removed to *Beſançon*. It is ſtill a pretty town, the ſtreets are ſpacious, and the houſes tolerably well built. Here are ſtill the remains of ſeveral *Roman* antiquities, particularly of two aqueducts.

GRAY, in *Latin Gradicum*, is a pretty trading town, ſeated on the *Saone*, about ten miles to the north-weſt of *Beſançon*, and was well fortified, till taken by *Louis* XIV. in 1668, who demoliſhed the works. Here they ſhip great quantities of corn, iron, and other merchandize, for *Lyons*.

SECT. VII.

The Situation, Extent, Produce, and Mountains of ALSACE. *The Inundations of the* RHINE; *with the Gold Duſt and beautiful Pebbles found in that River. Of the other Rivers of* ALSACE. *The Number of its Inhabitants; the Manner in which that Country became ſubject to* FRANCE; *with a Deſcription of* STRASBURG, *and the other Cities.*

ALSACE terminates to the ſouthward on *Swiſſerland* and *Franche Comté*, to the eaſtward on *Ortenau* and *Briſgau*, to the northward on the *Palatinate*, and to the weſtward on *Lorrain*, extending from north to ſouth about eighty-five miles. It became a part of *France* at the peace of *Nimeguen*. The country in general is very pleaſant, and abounds in all kinds of grain, fruit, eſculent vegetables, flax, tobacco, and wood: its wine is very palatable, and its paſtures are alſo rich. That part which lies between the mountains, the river *Ill*, and the plain of *Soults*, in *Upper Alſace*, to the diſtance of ſix miles beyond *Hagenau*, yields an exuberance of grain, wine, and paſtures. The country from *Mount Saverne*, and the levels from about *Straſburg* to the *Rhine*, are incomparably fertile and delightful, the lands being rich in all kinds of grain, tobacco, culinary vegetables, ſaffron, and hemp.

There is a chain of mountains in this country called the *Waſgau*, in *French* the *Voſge*. This chain begins in the neighbourhood of *Langres*, and extending at firſt from weſt to eaſt, ſeparates the country of *Burgundy* from *Lorrain*. After this, winding toward the north, it ſeparates *Lorrain* from *Alſace*, and forms another curve toward the electorate of *Triers*. The ſummits and vallies of this chain, as well as the plains of *Alſace*, according to *Buſching*, produce a hundred and fifty kinds of trees and ſhrubs, and fifteen hundred and fifty ſpecies of herbs, which all grow wild. This chain has alſo ſome excellent paſtures, and the eminences, where the ſoil is favoured with a ſunny expoſure, produce very agreeable red and white wine, of which a great deal of brandy, vinegar, and tartar is made. This chain of mountains has alſo for theſe ſeveral centuries been famous for its mines of ſilver, copper, and lead; ſeveral parts alſo abound in iron, antimony, cobalt, ſulphur, and other minerals. It is likewiſe obſervable, that theſe mountains are thick ſet with an uncommon number of churches, convents, and chapels.

The *Rhine*, which ſerves as a frontier to this country on the eaſt, frequently cauſes terrible devaſtations, not only in winter, but in the midſt of ſummer, when the ſnow melts on the *Alps*. Its inundations then ruin the fields, by covering them with ſand. The violent torrents of the *Rhine*, which generally happen every year, frequently alter the ſituation of the iſlands within it. One ſingularity of this river is, that in its ſand are found particles of gold, which the torrents in their fall waſh from the *Alps*, and bring into it. Accordingly it is only below *Baſil* that the ſand contains this precious mixture, which in autumn and winter, when the river is at the loweſt, is drawn out with the ſand, and, after paſſing through ſeveral waters, the gold is extracted. The particles of this metal are ſeldom ſo large as a grain of millet; the gold is indeed very fine and beautiful; but is ſo ſcarce, that the city of *Straſburg*, which has the privilege of gathering gold for the length of four thouſand paces, ſcarce collects five ounces in a year. The *Rhine* alſo contains many cryſtals, and particularly pebbles, that receive a beautiful poliſh, and are much uſed in *France* under the name of *Rhine* pebbles.

The following rivers iſſue from the above chain of mountains, and run into the *Lower Alſace*; the *Leber*, the *Cher*, the *Andlau*, the *Ergers*, and the *Breuſch*; theſe three laſt run into the *Ill*. The *Serr*, the *Motter*, the *Seltzbach*, the *Lauter*, and the *Queich*, which run into the *Rhine*. In *Upper Alſace* the *Berre* and the *Ill*, which alſo flow into the *Rhine*.

In *Upper Alſace* and *Sundgau* are thirty-two large and ſmall towns, in *Lower Alſace* thirty-nine, and in both are upwards of a thouſand ſmall towns and villages. The common language of the inhabitants is the *German*, and they are partly *Lutherans* and partly *Roman catholics*; a toleration to Proteſtants being eſtabliſhed in this province, which is ſuppoſed to contain ſix hundred and twenty-ſix thouſand four hundred inhabitants.

Alſace has been ſubject to ſeveral *German* families, and particularly to the houſe of *Auſtria*; but at the peace of *Munſter* (A. D. 1648) the emperor ceded to the crown of *France* all right to the town of *Briſac*, the landgravate of *Upper* and *Lower Alſace*, *Sundgau*, and the diſtrict of the ten united imperial cities in *Alſace*, with the whole ſovereignty belonging to them. On the other hand, *France* engaged that the inhabitants ſhould continue unmoleſted in the enjoyment of their freedom; and promiſed to be ſatisfied with the power which the houſe of *Auſtria* had enjoyed over them, and had transferred to *France* by that treaty. In the ſucceeding wars *France* took the ten imperial cities in *Alſace*, and as by the peace of *Nimeguen* no expreſs ſtipulation was made for their reſtitution, the king treated them as a part of his acquiſitions, and directed a chamber of appeals at *Briſac*, to which not only thoſe cities, but the nobility of the empire, and all others holding imperial lands in *Alſace*, were to bring their proceſſes, and not to the imperial chamber of the empire. At the peace of *Ryſwic*, in 1697, the emperor and the empire ceded to *France* the perpetual ſovereignty of the city of *Straſburg*, and of all its dependencies on the left ſide of the *Rhine*.

The principal place in *Upper Alſace* is STRASBURG, in Latin *Argentoratum*, the capital of the whole country. It is a royal, free, imperial city, and the ſeat of a mint-court. It ſtands in 48° 35′ N. latitude, and 7° 46′ E. longitude from *Greenwich*, near two miles diſtant from the *Rhine*; and is ſurrounded by the rivers *Ill* and *Breuſch*, which alſo run through it; beſides which, an arm of the *Rhine* is conveyed to the city. It is not very well fortified, but by means of a ſluice in the city the country round it may be laid under water. The ramparts are extremely pleaſant, and planted round with trees, and toward the *Rhine* it has a regular citadel.

The city is large and populous; it containing about thirty thouſand inhabitants. The ſtreets are in general narrow, two only excepted, and are adorned with few handſome houſes. The public buildings are, the town-houſe, the epiſcopal palace, that of the intendant, the arſenal, and the play-houſe. In the city hoſpital is kept corn of a great age, and they are ſaid to have wine that is ſome hundred years old. The *French* hoſpital is a fine building, and was erected by *Louis* XIV. for the reception of his ſoldiers.

The cathedral is a very ancient *Gothic* ſtructure, it having been finiſhed in the year 1449, and conſequently the Proteſtants are not chargeable with the ſatyrical ſculptures which are to be ſeen on the cornices and pedeſtals, repreſenting monkies, aſſes, hogs, and other animals in monkiſh habits; and amongſt the reſt a monk, in the robes of his order, in an indecent poſture with a nun. It is ſuppoſed that theſe were done by order of the ſecular clergy, to be revenged on the monks for the ill offices they were always doing them. "The cathedral of *Straſburg*," ſays Dr. *Moore*, "is conſidered by ſome people as the moſt impious, and by others as the merrieſt *Gothic* church in Chriſtendom." *Travels*, I. 344.—The ſteeple of the cathedral is reckoned one of the higheſt in *Europe*, it being five hundred and ſeventy-four feet in height; from its top may be ſeen the town of *Straſburg*, the extenſive plains of *Alſace*, with the *Rhine* flowing through them. The clock of this ſtructure has been greatly admired; for it not only ſhewed the hours of the day, but the motion of the ſun, moon, and ſtars: among other things, there was an angel which turned an hour-glaſs every hour, and the twelve apoſtles proclaimed noon by each of them ſtriking a blow with a hammer on a bell: there was likewiſe a cock which ſtepped out and crowed every hour: but this curious clock has been long out of order. Among the curioſities within this church are the furniture and ornaments which *Louis* XIV. preſented to it; they are extremely rich and magnificent; fifty perſons, it is ſaid, were employed on them during eleven years, and they coſt that prince ſix hundred thouſand dollars: the principal of theſe is a ſplendid altar-cloth. There are here alſo a triple ſet of miſſal veſtments and altar furniture, ſix large ſilver chandeliers, each ſo heavy that it requires a ſtrong man to carry it, and a crucifix of double the weight. Theſe ſeven pieces of plate put together weigh a thouſand and ſixty-ſix pounds eight ounces.

In this cathedral two large bells are ſhewn; one of braſs, which weighs ten tons; the other of ſilver, which is ſaid to weigh above two tons. They alſo ſhew a large *French* horn, for the purpoſe of preſerving the remembrance of a conſpiracy which is ſaid to have been formed by the *Jews*, about four centuries ago, to betray the city, and that this horn was intended for giving the ſignal of attack. The plot however was timely diſcovered; many of the *Jews* who dwelt there were burnt alive, and the reſt, after being plundered of their money and effects, were baniſhed the town. To commemorate this deliverance, the horn is ſounded from the battlements of the ſteeple twice every night. The *Jews* however deny every circumſtance of this ſtory, except the murdering and pillaging their countrymen; and aſſert that the whole was invented to furniſh a pretext for ſuch robberies and murders. *Moore's Travels*, I. 349.

There are alſo here three collegiate churches, two of which are parochial, together with four others belonging to the *Romiſh* community; but the *Lutherans* are in poſſeſſion of St. *Thomas*'s church, in which the illuſtrious count *Maurice* of *Saxony* was interred in the year 1751; yet the Proteſtants perform their public worſhip at *Wolfiſheim*, and not in the city. The *univerſity* and *gymnaſium* here belong to the *Lutherans*; and here are alſo an *anatomical theatre*, a *phyſic garden*, a *royal ſociety* founded in 1752, and particularly inſtituted for reſearches into the natural hiſtory of *Alſace*: there are alſo ſix convents, and formerly a college of Jeſuits.

The city council is half *Lutheran* and half *Roman Catholic*; but moſt of the burghers are *Lutherans*. The ſupreme magiſtrate here, ſince the city has become ſubject to *France*, is the royal prætor, who takes care of the king's rights, and that nothing be done in the college of magiſtrates contrary to his majeſty's pleaſure. The inhabitants, however, contribute nothing to the royal revenue; for all the impoſts levied here are expended in the ſupport of the city.

About twenty years ago (from 1789) the magiſtrates of *Straſburg* publiſhed an ordinance by ſound of trumpet, forbidding all perſons, without diſtinction of age or ſex, country or religion, to beg in that city, or within its juriſdiction, publicly or privately, on any pretence whatſoever. In order effectually to ſuppreſs begging, proper funds were eſtabliſhed for the ſupport of all ſuch whoſe age and infirmities render them incapable of getting a livelihood; whilſt thoſe who are capable of working, are employed, and receive encouragement in proportion to what they execute. The children of beggars, as alſo of indigent parents, are received into a houſe appointed for that purpoſe, and there maintained and educated.

To this city belong five diſtricts, or lordſhips. The biſhopric of *Straſburg*, which is the richeſt in the whole kingdom of *France*, alſo comprehends a conſiderable tract of territory, ſubject to the biſhop as a temporal lord. It lies ſcattered in *Upper* and *Lower Alſace*, and on the other ſide of the *Rhine*, where he has two diſtricts. He ſtyles himſelf prince of the empire, and landgrave of *Alſace*; and though at preſent ſubject to *France*, yet, by virtue of the diſtricts on the other ſide of the *Rhine*, is actually a ſtate of the empire, and has a ſeat and voice in the diet: he has alſo many vaſſals under him, and among them almoſt all the nobility in *Lower Alſace*, together with a great part of thoſe in the *Upper*.

FORT LOUIS is a very ſtrong and handſome fortification, upon an iſland in the *Rhine*, twenty miles to the north-eaſt of *Straſburg*. It was erected in the year 1686, and conſiſts of a ſpacious and regular quadrangle, with four large baſtions, and the ſame number of half-moons. Near it is a ſmall town, formed of ſtraight ſtreets, and the whole iſland is fortified round.

COLMAR, the capital of *Upper Alſace*, is ſituated near the river *Ill*, thirty-five miles ſouth by weſt of *Straſburg*, and had ſtrong walls, which *Louis* XIV. cauſed to be demoliſhed in the year 1673; but after the treaty of *Ryſwic* he encompaſſed it with new walls. The inhabitants are ſaid to enjoy all their privileges; moſt of them are *Lutherans*, but a full toleration prevails.

SECT. VIII.

Of the Duchies of LORRAIN *and* BAR; *their Situation, Extent, Produce, and Rivers; the Manners and Language of the Inhabitants. The Manner in which they became ſubject to the preſent Duke of* LORRAIN; *his Titles, and a Deſcription of the principal Cities in thoſe Duchies.*

THE duchy of *Lorrain* derives its name from *Lothario*, grandſon to the emperor *Louis* I. and was formerly of much greater extent. It is at preſent bounded on the eaſt by the *Lower Palatinate* and *Alſace*, from the latter of which it is ſeparated by the *Vogean* mountains, on the ſouth by *Franche Comté*, on the weſt by *Champagne*, and on the north by *Metz*. Its greateſt breadth from north to ſouth is about a hundred miles, and it is nearly as much from eaſt to weſt. It was united to the crown by the treaty of *Vienna* in 1738; the province is ſuppoſed to contain 834,680 inhabitants.

It enjoys a very temperate climate, and has a fruitful ſoil, which particularly abounds in grain, though it has many woods and mountains; but in theſe are good game, and alſo excellent paſture. The country has alſo ſalt-ſprings, with ſome mines of iron, copper, tin, and ſilver. In the mountains of *Wiſgau* are found agates, chalcedonies, and other gems. Its lakes too abound in fiſh, particularly the lake of *Lindre*, the profits of which are ſaid to amount to ſixteen thouſand livres per annum, 700l. ſterling.

The principal rivers in this duchy are the *Maeſe*, the *Moſel*, and the *Saar*. Here are alſo the ſmall rivers of *Voloy*, *Mortaire*, and *Meurte*.

The inhabitants have always been reputed brave ſoldiers, and their modern dukes have conſtantly kept on foot a particular army, which have performed ſignal ſervice. But the *French* have frequently had the policy to turn the power of *Lorrain* to their own advantage, and to the prejudice of the duke. The *Lorrainers* are alſo laborious; but have little trade with ſtrangers, they having no navigable rivers, and all neceſſaries within themſelves; but what little trade they have conſiſts of corn and linen.

The language ſpoken here is *French*, except in the *German* diſtricts, where that language is ſpoken. The *Romiſh* religion prevails all over the country.

Lothario, the younger ſon of the emperor of the ſame name, may be conſidered as the firſt founder of the ſtate of *Lorrain*, its name being derived from him. The country, after his deceaſe, was divided among his relations, and in after times was ſometimes poſſeſſed by the *Germans*, and ſometimes by the *French*, which cauſed continual diſputes between the emperors of *Germany* and the kings of *France*. At length, in 1733, *France* took poſſeſſion of this duchy; and in the preliminaries of peace in 1735 it was concluded, that not only the duchy of *Bar*, but likewiſe that of *Lorrain*, the earldom of *Falkenſtein* excepted, ſhould be ceded to *Staniſlaus*, king of *Poland*, and father-in-law to *Louis* XV. and after his deceaſe both duchies, together with the abſolute ſovereignty of them, ſhould for ever belong to the crown of *France*. On the other hand, the emperor *Charles* VI. engaged in return to cede the great duchy of *Tuſcany* to his ſon-in-law *Francis Stephen*, the late emperor, to atone for his loſing *Lorrain*. This was ſettled in 1736, and the following year *Staniſlaus* took actual poſſeſſion of the duchies of *Lorrain* and *Bar*, and the duke of *Lorrain* became poſſeſſed of *Tuſcany*. The eldeſt ſon of the duke of *Lorrain*, during the life of his father, is ſtyled count of *Vaudemont*, and alſo writes himſelf, while unmarried, margrave of *Pont à Mouſſon*; but after his marriage he aſſumes the title of duke of *Bar*.

The principal places in the duchy of *Lorrain* are the following:

NANCY, the capital of the duchy, and the ancient reſidence of the dukes, is ſeated in a delightful plain near the river *Meurte*, ſeventy-five miles to the weſt of *Straſburg*, and is divided into the *Old* and *New Town*. The former is both the ſmalleſt, and makes the meaneſt appearance, it being built with narrow ſtreets; but in it ſtands the palace, which was begun by duke *Leopold Joſeph*; yet only the main body is finiſhed. The ſpacious long ſquare, or wide ſtreet before it, has a fine appearance. In the palace are eighteen very exquiſite pieces of tapeſtry, repreſenting the atchievements of *Charles* IV. duke of *Lorrain*. Here are alſo ſhewn the ſabres of two *Burgundians*, who where killed with *Charles* the *Bold*; and likewiſe that duke's helmet, lined with red velvet, and a yellow creſt on the top. This helmet uſed to be carried every year in proceſſion by the captain of the *Swiſs*, while two other *Swiſs* carried the ſabres. Near the palace is a beautiful garden upon one of the baſtions, from which there is a very fine proſpect. Adjacent to this garden ſtands the opera-houſe, which was built by *Bibiena*, an *Italian* architect, who alſo built the theatre at *Vienna*. This houſe is not remarkable for its ſize, but is extremely well contrived, and on each ſide of it is a good tribuna, which is a great ornament to it.

The *New Town* is larger, and contains broad and ſtraight ſtreets, with ſeveral beautiful houſes; but, according to the faſhion of this country, they are generally low. In this city are three pariſh and three collegiate churches, with two abbies, ſeventeen convents, one college, one hoſpital, an academy of ſciences, and one commandery of the knights of *Malta*. Among the collegiate churches is the ſtately cathedral, which is immediately ſubject to the pope. This is a magnificent building, it being adorned with two towers and a cupola after the *Italian* taſte. In the collegiate church of St. *George* ſtands not only the monument of *Charles* the *Bold*, duke of *Burgundy*, who was ſlain in 1476, but alſo the tombs of the ancient dukes of *Lorrain*. The latter dukes are interred in the church of the *Capuchins*. The city was formerly fortified, but by the peace of *Ryſwic* was diſmantled; only the works of the *Old Town* ſtill remain. It is the ſeat of a parliament, which was eſtabliſhed in 1775.

LUNEVILLE, in Latin *Lunaris Villa*, a ſmall, very ancient, and once fortified town on the river *Veſouze*, ſtands in a low marſhy country, twelve miles to the ſouth-eaſt of *Nancy*. It is at preſent the capital of a provoſtſhip, and has a fine palace, in which not only the two laſt dukes of *Lorrain* chiefly reſided, but it was the reſidence of king *Staniſlaus*, till the year 1755, when the right wing of the palace was entirely burnt down.

It is remarkable that at a few miles diſtance from *Luneville* is BEAUPRE', an abbey of Proteſtant *Benedictines*, but they follow the *Ciſtercian* rule of St. *Benedict*. It is ſeated on a delightful country, and has an abbot, nine prieſts, nineteen religious and twenty-three lay-brothers, with a yearly revenue of eighty thouſand *Lorrain* livres.

The duchy of BAR, or BARROIS, was anciently an earldom, ſo called from the caſtle of *Bar*, erected in the year 964 by *Frederick* I. whom the emperor *Otho* created earl of *Bar*. The principal place in this diſtrict is

BAR LE DUC, the capital of the country, ſeated on a riſing ground on the banks of the river *Ornain*, about forty miles to the weſt of *Nancy*, and is a handſome well-built city.

SECT. IX.

Of the MESSIN, *or Government of* METZ, *and the Counties of* VERDUN *and* TOULOIS: *their Situation, Produce, Rivers, and principal Cities.*

THE government of METZ conſiſts of the countries of *Meſſin*, *French Barrois*, *La Saare*, and *French Luxemburg*. Its principal rivers are the *Maeſe*; the *Moſelle*, which riſes in one of the *Waſgau* mountains, and is conſtantly navigable from *Metz*, diſcharging itſelf into the *Rhine*; the *Meurte*, which alſo riſes in the *Waſgau* chain, and runs into the *Moſelle*; the *Orney*, or *Ornain*; the *Saare*, which runs into the *Moſelle*; and the *Saone*, which falls into the *Rhone*.

This country was ceded to *France* in 1648; including the *Verdunais*, it is ſuppoſed to contain 249,200 inhabitants.

The MESSIN, or the country round the city of *Metz*, is but indifferently fertile, and produces little wheat. It was anciently a part of the kingdom of *Auſtraſia*, of which *Metz* was for a long time the capital, and the uſual reſidence of the king. When the children of *Charles* the Great, and *Louis* the Pious, divided the dominions of that crown, the kingdom of *Lorrain* roſe out of the remains of that of *Auſtraſia*; and toward the end of the ſecond royal line of *France*, *Metz*, *Toul*, and *Verdun*, three principal cities, ſhook off the yoke, and, to ſecure their freedom, put themſelves under the protection of the emperor. The power was divided between the biſhop and the magiſtrates; but the latter, by the aſſiſtance of the people, obtaining the ſuperiority over the former, the biſhop had no other power in the city of *Metz*, and the county of *Meſſin*, than a ſhare in the election of the magiſtrates, and in the adminiſtration of the oath of office. The magiſtrates enjoyed an unlimited authority in the city and in the country of *Meſſin*, and the biſhop in the domains of his biſhopric on this ſide the *Vis*; though in certain caſes appeals lay to the imperial chamber, which they acknowledged as the ſupreme power of the empire. In 1552, *Metz*, *Verdun*, and *Toul*, put themſelves under the protection of *France*, which kept poſſeſſion of theſe three cities, under the name of the protected diſtrict, till the year 1648, when, at the peace of *Weſtphalia*, the three biſhoprics were abſolutely transferred to *France*.

METZ, in *Latin Metæ* and *Metis*, the capital of the country, lies between the *Moſelle* and *Seille*, which here unite their ſtreams; and is ſituated twenty-eight miles to the north of *Nancy*. The *Old Town* is large, but the ſtreets are narrow; and though the houſes are built in the old taſte, they are handſome ſtructures. The *New Town* is likewiſe large, and much more beautiful than the former. As there are here many *Jews*, they have a ſynagogue. Here is a parliament. Among its fortifications are three citadels. The biſhop, who ſtyles himſelf prince of the *Roman* empire, is ſuffragan to the archbiſhop of *Treves*, and has a dioceſe of ſix hundred and thirteen pariſhes.

The biſhopric of *Metz* and its diſtrict muſt be diſtinguiſhed from the *Meſſin*, and is a long but irregular tract of land, the lord of which is the biſhop; but he has been deprived of his temporal juriſdiction, which chiefly belongs to the duke of *Lorrain*, particularly the ſalt-works, in lieu of which the biſhop receives thirty thouſand livres, 1313*l.* ſterling, and four hundred buſhels of ſalt, which the duke, or at preſent the *French* king, cauſes to be annually delivered into the biſhop's magazine.

SARE-LOUIS is a town and fortification, begun by *Louis* XIV. on the river *Saare*, in 1688, and finiſhed about four or five years after. It is ſituated about thirty-two miles to the north-eaſt of *Metz*. Its ſtreets are regular, and the fortifications form a regular hexagon. This town, with a diſtrict belonging to it, has been ceded by the duke of *Lorrain* to *France*.

The country of *Verdun* extending along the *Maeſe*, has many large towns and villages; but only one city, which is that of *Verdun*.

The city of VERDUN, in *Latin Verodunum*, or *Veredunum*, the capital of the country, is ſituated about thirty-eight miles to the north-weſt of *Nancy*; it is the ſee of a biſhop, and has a provincial and a manor court. It conſiſts of three parts, namely, the *Upper*, *Lower*, and *New Town*; and, beſides its other fortifications, is defended by a fine citadel. The biſhop, before the city and diſtrict were annexed to the crown of *France*, was a prince of the empire, and ſtill ſtyles himſelf ſuch, as alſo count of *Verdun*. The archbiſhop of *Treves* is his metropolitan. It was formerly an imperial city, but in the year 1552 the inhabitants put themſelves under the protection of *France*, and in 1648 they fell abſolutely under the power of the *French* king.

The earldom of *Toulois* being ſmall, is hemmed in by *Lorrain*; and, together with the city of *Toul*, and the other biſhoprics of *Metz* and *Verdun*, put itſelf, in 1552, under the protection of *France*, which in 1648 obtained the abſolute ſovereignty over them.

TOUL, in *Latin Tullum*, the principal city in this earldom, and the ſee of a biſhop, is ſeated on the *Moſelle*, over which is a fine ſtone bridge, with a regular fortification. This town, which ſtands ten miles to the weſt of *Nancy*, has a provincial and diſtrict court, and was formerly an imperial city. Its biſhop was a prince of the empire, which title, together with that of earl of *Toulois*, he ſtill aſſumes: he is ſuffragan to the archbiſhop of *Treves*, and his dioceſe contains fourteen hundred pariſhes; yet his revenue is little more than ſeventeen thouſand livres, 744*l.* ſterling, and he pays at the court of *Rome* two thouſand five hundred florins. In this city is a fine cathedral.

SECT. X.

Of FRENCH FLANDERS; *its Situation, Produce, and principal Places; with a particular Deſcription of* GRAVELINES, L'ISLE, DOUAY, CAMBRAY, *and* DUNKIRK.

WE have already given a deſcription of *Flanders* in general in page 277, where we have deſcribed that part belonging to the houſe of *Auſtria*, and with this we have concluded our account of *Germany*, that country making a part of the circle of *Burgundy*. We have given *Dutch Flanders* under the ſection which treats of the *Generalité Lands*, in page 297, under which name the *Dutch* include that country; and we ſhall now give a deſcription of *French Flanders*, which is properly inſerted here, as it conſtitutes a part of *France*, and is in no reſpect a ſeparate country.

FRENCH FLANDERS contains a part of the ancient earldom of *Flanders*, the *Cambreſis*, the country of *Hainault*, and a ſmall part of the earldom of *Namur*. This country is bounded on the north by the *Seine* and the *German* ocean, on the eaſt by the *Auſtrian Netherlands*, on the ſouth by *Artois*, and on the weſt by the *German* ocean.

French Flanders being a part of the earldom of *Flanders*, which *Louis* XIV. over-ran in 1667, it thence obtained its name. It abounds in corn and vegetables of all kinds, as alſo in flax. Its paſtures are excellent, and conſequently produce fine cattle; but for want of wood, or coal, the inhabitants are obliged to make uſe of turf for their fuel.

The principal places in *French Flanders* are the following:

GRAVELINES, or *Gravelingen*, a ſmall but ſtrong town ſeated near the mouth of the *Aa*, on the *Engliſh* channel, fifteen miles to the ſouth-weſt of *Dunkirk*, and, beſides its other fortifications, is defended on the land-ſide by a good citadel, and to the ſea by a fort. It was taken and burnt by the *Engliſh* in the year 1383, but afterward rebuilt in a better manner, and walled round. In 1528 it was fortified by the emperor *Charles* V; but in 1644 it was taken by the *French*, and in 1652 by the archduke *Leopold*. In 1658 it was again taken by the *French*, and was yielded to them by the treaty of the *Pyrenees* the year following. In 1694 an *Engliſh* fleet, commanded by Sir *Cloudeſley Shovel*, laid it entirely in aſhes; but it was rebuilt, and its fortifications have ſince been greatly improved by marſhal *de Vauban*, ſo that it is now a place of ſtrength. It is ſituated, according to Dr. *Maſkelyne*'s tables, in 50° 59′ N. latitude, and 2° 8′ E. longitude from *Greenwich*.

L'ISLE, LISLE, or RYSSEL, the capital of *French Flanders*, and of all the *French* conqueſts in the *Netherlands*, is ſituated on the *Deule*, thirty-ſeven miles to the ſouth-eaſt of *Dunkirk*. It is beautifully built, and is large, handſome, and populous; it is the reſidence of the governor-general. It has a collegiate church, and about thirty other churches, a great number of convents, and a noble hoſpital called *L'hôpital Comteſſe*. Several of the buildings are very fine, particularly the exchange, which is a ſquare ſtructure, ſurrounded with piazzas. This city is ſtrongly fortified; which the *Engliſh* and their allies experienced in the reign of queen *Anne*, when prince *Eugene*, after the battle of *Oudenarde*, ſat down before it in 1708 for near three months, and though he at laſt took it, it was with the loſs of a great number of men; but it was reſtored to the *French* by the treaty of *Utrecht* in 1713.

Both the ancient and new fortifications are very numerous and conſiderable, they having been greatly improved by marſhal *de Vauban*. The citadel, which was the firſt building executed by that great engineer, is a pentagon, compoſed of five regular baſtions, defended by ſeveral works, and ſurrounded with a deep ditch, a covert-way, and glacis. To this fortreſs are two gates, one toward the city, and the other toward the country. The eſplanade, or ſpace between the city and citadel, is planted with four rows of trees, which form very pleaſant walks. The general governor of *French Flanders* is alſo governor of this city, in whoſe abſence his place is ſupplied by the king's lieutenant. The citadel has alſo a governor, and a lieutenant of the king.

The magiſtracy of *L'Iſle* and its diſtrict is compoſed of a mayor, ſtyled *revart*, and twelve echevins, or ſheriffs, all of whom are annually changed. There are here conſiderable manufactures of ſilk, cambric, fine linen, and other ſtuffs; and their camblets are highly eſteemed. The trade of *L'Iſle* through *France* by land-carriage, or by the way of *Dunkirk*, is conſiderable. The moſt profitable commerce is that to *Spain* and the *Weſt-Indies*, either on their own account, or by commiſſion. It is ſituated, according to Dr. *Maſkelyne*'s tables, in 50° 38′ N. latitude, and 3° 4′ E. longitude from *Greenwich*.

Douay, a pretty large and well-fortified city, lies on the river *Scarpe*, twelve miles to the eaſt of *Arras*, and is of an oval form, larger than *L'Iſle*, but leſs populous by one-third. It is defended by Fort *Scarpe*, which ſtands about a mile below the city, and the whole country may be laid under water by means of ſluices. Here is an univerſity, founded in the year 1559, and a famous *Engliſh* ſeminary.

The principal trade of this city conſiſts in the making and ſelling of worſted camblets, which are bought up by all the neighbouring people, eſpecially at the annual fair kept here in *September*. The magiſtracy conſiſts of twelve echevins, the firſt of whom is ſtyled the chief. In 1710 the confederates made themſelves maſters of the city; but loſt it again in the year 1712.

The *Cambreſis* is about ten leagues in length, and from five to ſix broad, though in ſome places not above two or three. It is fruitful and populous.

Cambray, in *Latin Cameracum*, and *Camaracum*, the capital of the *Cambreſis*, is ſituated on the *Scheld*, fifteen miles to the ſouth-eaſt of *Douay*, in 50° 11′ N. latitude, and 3° 14′ E. longitude from *Greenwich*, according to Dr. *Maſkelyne*'s tables; and is a pretty large well-fortified city, defended by a citadel and fort. It is the ſee of an archbiſhop, and, beſides its cathedral, contains two chapters, ten pariſh-churches, two abbies, and two hoſpitals. The archbiſhop ſtyles himſelf prince of the holy *Roman* empire, as indeed he formerly was, and count of *Cambreſis*: he is, however, lord of the city. This city is famous for its cambrick, which took its name from it: it has been ſubject to *France* ever ſince the year 1667.

Chateau-Cambresis, the capital of the earldom of *Cambreſis*, lies thirteen miles to the ſouth-eaſt of *Cambray*, and was once fortified; but at preſent lies open, and contains one abbey. The archbiſhop, who has here a very magnificent palace, and fine gardens, is lord of this place.

In the year 1559 the famous treaty of *Chateau-Cambreſis* was concluded here, between *Henry* II. king of *France*, and *Philip* II. king of *Spain*, by which the *French* gave a hundred and ninety-eight towns for St. *Quintin*, *Ham*, and *Le Catelet*.

French Hainault is a part of the earldom of *Henegau*, and its principal city is the following:

Valenciennes, a large and populous city, ſeventeen miles to the north-eaſt of *Cambray*, is ſeated on the river *Scheld*, which not only divides it into two parts, but almoſt runs round it. The fortifications are after the manner of *Vauban*; it has a good citadel on the *Scheld*, and very fine ſluices. The inhabitants have manufactures of woollen ſtuff, and very fine linen. This city was taken by the *French* in 1677.

The government of **Dunkirk** contains only the town of the ſame name, and ſome neighbouring villages. At the peace of *Utrecht*, and all the other treaties that have been concluded ſince, down to that of 1763 incluſively, it was agreed, that the fortifications and harbour ſhould be demoliſhed; but by the ſeventeenth article of the treaty of peace ſigned at *Verſailles* in the year 1783, "the king of *Great-Britain* being deſirous to give to his moſt *Chriſtian* majeſty a ſincere proof of reconciliation and friendſhip, and to contribute to render ſolid the peace re-eſtabliſhed between their majeſties, conſents to the abrogation and ſuppreſſion of all the articles relative to *Dunkirk*, from the treaty of peace concluded at *Utrecht* in 1713 to this day."

Dunkirk, called by the *French Dunquerque*, is ſeated on the *Colne*, which here falls into the *Britiſh* channel; according to Dr. *Maſkelyne*'s tables, in 51° 2′ N. latitude, and 2° 22′ E. longitude from *Greenwich*; twenty-ſix miles to the eaſt of *Calais*. It derives its name from a church built there on the *Duns*, or ſand-banks, erected, as it is ſaid, by St. *Eloi*, who firſt preached Chriſtianity among the *Flemings*. Some houſes were gradually built near it, ſo as to form a little town, which *Baldwin*, earl of *Flanders*, in the tenth century, encompaſſed with a wall; and it enjoying a harbour commodious for trade, the inhabitants engaged in commerce, by which it grew large and wealthy, and had even ſome ſhips of war; ſo that in the twefth century the inhabitants fitted out a ſmall fleet againſt the *Norman* pirates, and performed ſuch eminent ſervices, that *Philip*, earl of *Flanders*, conferred ſome conſiderable privileges on the town. In the thirteenth century it was ſold to the biſhop of *Cambray*, who enlarged the town and improved the harbour. It was afterward in the poſſeſſion of ſeveral different families, and in 1538 the emperor *Charles* V. erected a caſtle here; but in 1551 it was taken and deſtroyed by the *French*. It was afterward poſſeſſed by *Spain*; and, though the town recovered itſelf, the inhabitants had a great ſhare in the diſturbances which aroſe in the *Netherlands*. In 1646 and 1658 it was taken by the *French*, and in the laſt-mentioned year ceded to the *Engliſh*, for aſſiſting *France* againſt *Spain*. In 1662, *Charles* II. king of *England*, ſold the town to *France* for five millions of livres, 168,750 *l.* ſterling, by which means *Louis* XIV. acquired alſo *Mardyke*, and the other villages which the *Engliſh* had built round *Dunkirk*.

Louis, upon this, ordered the city to be well fortified, erected a fine citadel, and built *Fort Louis*, which ſtands to the ſouth on the canal of *Bergen*, about a mile and a half from the town. The harbour was alſo put into a moſt excellent condition, two moles of piles forming a canal in the ſea, a thouſand fathoms in length, and about forty in breadth, and at each end of the moles were erected two batteries. Beſides theſe, on each ſide of the dyke was a fort, together with the battery of *Revers*; the caſtle of *Gaillard* on the eaſt, and a little farther *Fort Blanc*. Between all theſe forts ſhips were to paſs in their way to the harbour, contiguous to which was alſo a large baſon. In 1787 it was computed to contain 27,000 inhabitants.

This city enjoyed a flouriſhing trade, and in 1706 contained 1639 houſes. The *Engliſh*, for the ſecurity of their commerce, which had ſuffered immenſe damage from the privateers of *Dunkirk*, ſtipulated, as we have obſerved, with *France*, at the peace of *Utrecht*, that the fortifications ſhould be deſtroyed, and the harbour filled up, the dams and ſluices demoliſhed, and never repaired. This was actually begun; but it was found, or at leaſt pretended, that by filling up the harbour, the country round, for about ten *French* leagues, would be in danger of being overflowed. To remedy this inconvenience, ſeveral fruitleſs negociations paſſed between *France* and *England*, and in the mean while a new canal was made at *Mardyke*. By the treaty concluded at the *Hague*, between *France*, *England*, and *Holland*, in 1717, it was agreed, that the large entrance of the new ſluice at *Mardyke*, which was forty-four feet broad, ſhould be entirely demoliſhed; and that no harbour, ſluice, or baſon, ſhould ever be made either at *Dunkirk* or *Mardyke*, or within two *French* leagues round; and that the demolition of the works of *Dunkirk* ſhould be entirely completed: but *France* making no great haſte in this work, it was in 1748 made an article of the peace at *Aix la Chapelle*. After which, *France*, inſtead of fulfilling theſe engagements, began ſome new works, which gave freſh umbrage to the court of *England*; who received certain intelligence that the city was again fortified on the landſide, the baſon widened, and rendered as commodious for the reception of ſhips as ever the harbour had been. The *French* court replied, that theſe works had no other view than to free the inhabitants from the exhalations of the ſtagnating water; a pretence as falſe as it was ridiculous, ſince the *French* made the greateſt advantage of this place during the war of 1755; but at the concluſion of it, again agreed to demoliſh the works, and fill up the bar, which was the more neceſſary to be inſiſted upon, as the *French* have no other harbour in the *Channel*, but that of St. *Malo's*, which is only capable of receiving ſhips of between thirty and forty guns; but all theſe reſtrictions, as we have ſeen, are now entirely done away.

Mardyke is a village about four miles to the eaſt of *Dunkirk*, and was formerly conſiderable only on account of its fort, built on the ſea-ſhore, which has often been beſieged and taken, and was at laſt demoliſhed. *Mardyke* at length became celebrated for its noble canal, which *Louis* XIV. cauſed to be formed, under the direction of *Le Blanc*; it being 3338 fathoms and two feet in length. It began at the canal of *Bergen*, near *Dunkirk*, and extending, with the breadth of between twenty-five and thirty fathoms, no leſs than 1500 fathoms in length, from eaſt to weſt; then winding from ſouth to north, and 300 fathoms farther, had an incomparable ſluice with two baſons, one of which was forty-four feet broad, it being contrived for the reception of large veſſels; the other twenty-ſix feet in breadth, and intended for thoſe that were ſmall.

After the late peace, *M. de Calonne*, who was then in adminiſtration, invited upwards of an hundred *American* families, who reſided about *Nantucket*, to ſettle at *Dunkirk*. Theſe people had been employed in the fiſhery, particularly the whale-fiſhery, which, in conſequence of the ſeparation of *America* from *Great Britain*, could be no longer purſued there. The religious perſuaſions of theſe people were thoſe of the Quakers and Baptiſts; but ſuch were the aſſurances which they received of the ample ſecurity and protection which they ſhould enjoy in every particular reſpecting their civil rights and religious freedom, that fourteen veſſels arrived in the harbour of *Dunkirk*, in the year 1786, conveying theſe families with their effects. How far ſuch a remarkable emigration may prove ſatisfactory and beneficial to both parties remains to be aſcertained.

SECT. XI.

Of the County of ARTOIS; *its Situation, Extent, Produce, Government, and principal Cities.*

THE county of *Artois*, which forms a part of the *Netherlands*, is bounded on the north by *Flanders*, on the eaſt by *Hainault*, and on the ſouth and weſt by *Picardy*. It is twenty-ſix *French* leagues in length, and about half as much in breadth. This is one of the beſt and fineſt provinces in the whole kingdom, and, beſides its great fertility, carries on a conſiderable trade in flax, hops, wool, and oil of turnip-ſeed; it has alſo ſeveral manufactures of linen.

Its principal rivers are the *Scarpe*, the *Aa*, and the *Canche*.

This country, together with *Picardy*, is ſubject to one governor-general, a lieutenant-general, and two deputy-governors, one for *Arras* and *Bapaume*, and the other for *Aire* and St. *Omer's*. Here is a provincial council, which in civil affairs is ſubordinate to the parliament of *Paris*. It is one of thoſe provinces in *France* which poſſeſs a right of holding, from time to time, a provincial aſſembly, compoſed of the three bodies of the province. *Berry*, *Foix*, *Britany*, and ſome other, enjoy the like privilege. Provinces poſſeſſing this right are called *Pays d'Etats*.

The principal places in the county of *Artois* are the following:

ARRAS, the *Origiacum* of *Ptolemy*, and the *Atrebatæ* of *Cæſar*, is ſituated in a diſtrict of the ſame name, and ſtands on the *Scarpe*, twelve miles to the ſouth-weſt of *Douay*. It is ſituated, according to Dr. *Maſkelyne*'s tables, in 50° 17′ N. latitude, and 2° 46′ E. longitude. It is a very ancient and large place, divided into two parts, the one called the city, and the other the town, the latter of which is the more modern of the two; each of theſe is ſurrounded with old walls, which have round towers, built after the ancient manner, and a gate, over which was an inſcription in *French*, "That when the *French* ſhall take *Arras*, the mice ſhall eat the cats," as if that event was impoſſible; but its practicability has been proved, for the *French* became maſters of it in 1640.

The old walls were repaired by *Vauban*, who added ſeveral baſtions, and a great number of new works in the ditch, which is large and very deep, particularly lunettes, built after *Vauban*'s manner, and the firſt works of that kind which that excellent engineer performed. The ditch is ſurrounded with a covert-way, and a glacis as uſual, beyond which are ſeveral redoubts of a pentagonal figure, placed in the re-entering angles, and each has its particular ditch, covert-way, and glacis. The citadel is ſomewhat higher, towards the country; it is not very large, but is eſteemed one of the ſtrongeſt in the kingdom; it being an oblong pentagon, compoſed of five baſtions, as many half-moons, four tenailles, placed in the curtains, and a fauſſe-braye, which covers the front on the city-ſide. All theſe works are ſurrounded with a ditch, into which the *Scarpe* runs, or at leaſt a canal drawn from that river.

This town has handſome broad ſtreets, and is inhabited by wealthy traders and artificers, who make ſail-cloth and tapeſtry, eſpecially the latter, which was invented here, and therefore that manufacture obtained the name of *Arras*: this is indeed very beautiful, though inferior to the tapeſtry made at *Paris*, *Bruſſels*, and *Antwerp*. The large market-place here is ſurrounded with fine buildings, among which is the governor's houſe. The cathedral, which is dedicated to the Virgin *Mary*, is a fine ſtructure, in which are preſerved ſome famous relics. The abbey of St. *Vaſt* has a magnificent church belonging to it; and among the chapels here, is one called the chapel of the *Holy Candle*, in which was kept a candle, pretended to have been given by the Bleſſed Virgin to the inhabitants, to cure them of an inward heat, which burnt and conſumed them. The biſhop is ſuffragan to the archbiſhop of *Cambray*, and has a dioceſe of four hundred pariſhes. He is lord of the city, and preſident in the aſſembly of the ſtates.

AIRE, in *Latin Aeria*, and *Aria*, a conſiderable fortreſs on the river *Lys*, near the confines of *Flanders*, and about ten miles to the ſouth-eaſt of St. *Omer's*. This is a ſtrong and well-fortified place, having, beſides the walls, baſtions, half-moons, horn-works, redoubts, counterſcarps, and ditches, with a moraſs, which encompaſſes it on three ſides. On that ſide which is acceſſible, at the diſtance of a cannon-ſhot from the city, and the river *Lys*, ſtands Fort St. *Francis*, to which the city communicates by a regular canal. This fort is a ſmall, but regular pentagon, compoſed of five baſtions, encompaſſed by a ditch, a covert-way, and glacis. The *Lys* divides the city into two unequal parts. It is ſituated in 43° 32′ N. latitude, and 5° 27′ E. longitude from *Greenwich*.

Notwithſtanding the ſtrength of this place, the *French* took it in 1641, and ſoon after it was retaken by the *Spaniards*. In 1676, it was again taken by the *French*, and was confirmed to them at the peace of *Nimeguen*. In *November* 1710, it ſurrendered to the allies, after a very vigorous ſiege, the trenches having been open for ſix weeks; but by the treaty of *Utrecht*, it was reſtored again to the *French*.

Between *Aire* and St. *Omer's*, are the ruins of the once conſiderable city of *Terouenne*, which alſo ſtood on the river *Lys*. It was famous on account of its being inveſted by *Henry* VIII. king of *England*, in perſon, in the year 1503, aſſiſted by the emperor *Maximilian*, who on this occaſion wore a St. *George*'s croſs. At this ſiege, the *French*, attempting to throw proviſions into the town, were defeated by the *Engliſh*, with great ſlaughter, and from the hurry with which they fled, this was called the *Battle* of the *Spurs*, intimating that theſe were the principal weapons they made uſe of to eſcape in ſafety. A fortnight after this battle, the city was taken, but diſmantled and quitted. The *French* afterward repaired it; but the emperor *Charles* V. taking it in 1553, levelled it with the ground, ſince which time it has never been rebuilt.

ST. OMER'S, the capital of a bailiwic, is called in *Latin Andomaropolis*, and was formerly called *Sithin*. Situated, according to Dr. *Maſkelyne*'s tables, in 50° 45′ N. latitude, and 2° 15′ E. longitude from *Greenwich*. It is a conſiderable city, ſeated on the *Aa*, eight miles north-weſt of *Aire*, partly on an eminence, and partly on a moraſs, and is one of the beſt fortifications in the *Netherlands*; it being defended not only by a caſtle, but by large baſtions, between which are half-moons, ſurrounded with large ditches, which are indeed too high to have any water in them; but are ſo deep, that it would be very difficult to mount from them to the walls of the ramparts. It is the ſee of a biſhop, ſuffragan to the archbiſhop of *Cambray*.

In this city are ſeveral fine ſtreets, and a large ſquare, with many handſome houſes, among which is the town-houſe. The cathedral, dedicated to St. *Omer*, is a noble ſtructure, chiefly remarkable for its chapels, which are embelliſhed with fine marble and beautiful paintings. Beſides the cathedral, are ſix pariſh-churches, and a very rich abbey of the order of *Benedictines*. On each ſide of the

porti[illegible]

portico belonging to it ſtands a large ſquare ſteeple of great height, where a conſtant watch is kept, to give notice whether there be an enemy in the neighbourhood of the city; the gates of which are never opened till it be day-light, and the watch has given notice, by a ſignal, that he has diſcovered no danger. Here are alſo ſeveral convents and nunneries, two hoſpitals for maidens, a general hoſpital for the ſick, an orphan-houſe for poor boys, another for girls, and a houſe for twelve poor old men, in memory of the twelve apoſtles; beſides ſeveral other foundations, particularly one for annually giving a ſum of money to poor girls in marriage. Here is alſo an *Engliſh* ſeminary.

The city is populous, and has ſome trade, a number of ſmall veſſels coming up here from the ſea by means of the river *Aa*. The government of St. *Omer's* is under a mayor, who is annually changed, and twelve echevins, and under its juriſdiction are above an hundred villages.

To the north-eaſt of St. *Omer's* are floating iſlands that move backward and forward, according to whatever motion is imparted to them. Upon theſe iſlands are ſeen graſs always growing, and the people draw them with ropes to the ſhore in order to drive their cattle into them: they have alſo ſome trees growing here, but theſe they keep very low, leſt the wind ſhould have ſuch an aſcendency over them as to drive the iſlands with too much violence.

SECT. XII.

Of the Province of PICARDY; *its Situation, Extent, Produce, Rivers, Commerce, and principal Cities, particularly* AMIENS, ABBEVILLE, CALAIS, *and* BOULOGNE.

PICARDY is bounded on the north by *Hainault*, *Artois*, and the Straits of *Calais*; on the eaſt by *Champaigne*; on the ſouth by the Iſle of *France*; and on the weſt by *Normandy* and the *Engliſh* Channel. This province is long and narrow, it being uſually compared to a bent arm, and in this figure is nearly one hundred and fifty miles in length, but not above forty in breadth, and in many places not above twenty. It is generally a level country, and produces wine, fruit of all kinds, plenty of corn, and great quantities of hay; but wood being ſcarce, moſt of the inhabitants burn turf; they have, however, ſome pit-coal, but it is not ſo good as that of *England*. It was united to the crown of *France* in the year 1463, and is ſuppoſed to contain five hundred and thirty-three thouſand inhabitants.

Its principal rivers are the *Some*, the *Oiſe*, the *Canche*, the *Lanthie*, the *Lys*, the *Aa*, the *Scarpe*, and the *Deule*. The whole extent of the *Some* is confined to *Picardy*; it becomes navigable at *Bray*, and, after receiving ſeveral ſmall rivers, divides into twelve channels, which are afterward united, after which it falls into the *Britiſh* Channel. The *Oiſe* has its ſource in *Picardy*, on the confines of *Hainault*, and, after receiving ſeveral rivers, becomes navigable at *La Fere*, and falls into the *Seine* at *Conſlans*. The *Canche* falls into the *Britiſh* Channel below *Eſtaples*. The *Lanthie* alſo falls into the Channel. The *Lys* falls into the *Scheld*. The *Aa* is made navigable at St. *Omer's*, by means of ſluices, and at laſt diſcharges itſelf into the Channel. The *Scarpe* falls into the *Scheld*; and the *Deule* was formerly no larger than a brook, but now, by means of canals and ſluices, is become a conſiderable river.

The ſituation of this province on the ſea, its many navigable rivers and canals, with the induſtry of the inhabitants, render it the ſeat of a flouriſhing trade. In it are made beautiful ſilk ſtuffs, woollen ſtuffs, coarſe linen, lawn, and ſoap; it alſo carries on a large trade in corn and pit-coal. In the government of *Calais* and *Boulogne* are annually bred five or ſix thouſand colts, which being afterward turned looſe in the paſtures of *Normandy*, are ſold for *Norman* horſes. The fiſheries on this coaſt are alſo very advantageous.

Picardy is divided into *Upper*, *Middle*, and *Lower Picardy*, and is again ſubdivided into four deputy-governments, the principal places in which are the following:

AMIENS, in *Latin Ambianum*, the capital of *Picardy*, and of the earldom of *Amienois*, is ſeated on the *Some*, ſixty-five miles to the ſouth of *Calais*, and eighty to the north of *Paris*, in 40° 53′ N. latitude, and 2° 18′ E. longitude from *Greenwich*. It appears very delightful from the largeneſs of its ſtreets, the beauty of the houſes, and the extent of the ſquares, in two of which ſeven fine ſtreets meet. On the ramparts are planted two rows of trees, which form a very agreeable walk. The river *Some* enters the city in three different channels, through the ſame number of bridges; and after watering ſeveral parts of the town, theſe unite again at the other end, near St. *Michael's* bridge. It is computed to contain forty-three thouſand five hundred inhabitants.

The cathedral, dedicated to the Virgin *Mary*, is one of the fineſt and beſt embelliſhed in all *France*: the pillars, choir, chapels, tombs, and paintings, are particularly adorned; and more eſpecially the principal entrance, which is flanked with two lofty towers, on which are placed ſeveral ſtatues. Among other relics they pretend to have here the heart of St. *John* the Baptiſt. In this city is alſo a collegiate church, a chapter of St. *Nicholas*, fourteen pariſh-churches, ſeveral abbies and convents, and an academy of the arts and ſciences, with ſeveral hoſpitals. The biſhop is ſuffragan to the archbiſhop of *Rheims*; and within his dioceſe, beſides the above cathedral, are twelve collegiate churches, twenty-ſix abbies, fifty-five priories, ſeven hundred and fifty rectories, one hundred and three chapels of eaſe, and forty-eight communities. Here is an office for the finances, and a mint. In this city, and the neighbouring villages, the inhabitants carry on a manufacture of ferrets, and alſo make a conſiderable quantity of black and green ſoap.

ABBEVILLE, that is, the *Abbot's Town*, is the capital of *Ponthieu*, a diſtrict of *Picardy*, and is ſeated in 50° 7′ N. latitude, and 1° 50′ E. longitude from *Greenwich*, twenty miles to the north-weſt of *Amiens*, and fifty-two to the ſouth of *Calais*, in a very delightful plain on the *Some*, which divides itſelf into ſeveral branches, and parts the city into two main diviſions, the one toward the *Low Countries*, and the other toward *Normandy*. It is alſo watered by the rivulets of *Scardon*, *Sottins*, and *Corneille*, or *Taniere*. The tide here flows up the *Some* to the height of about ſix feet, by which means, and its ſituation, it is rendered a commodious port; it being but fifteen miles from the *Engliſh* Channel.

Abbeville was originally no more than a farm or manor belonging to the abbey of St. *Requier*, from which it had its name: it afterward became a borough, from the concourſe of people who came and ſettled in it. It is now well fortified, and encompaſſed with walls, which are flanked with baſtions and large deep ditches. The houſes are moſtly of timber, old and meanly built; it is likewiſe extremely dirty, and next to *Amiens* is the moſt populous town in all *Picardy*. It contains a collegiate church dedicated to St. *Ulfranc*, which is a lofty ſtone building, fourteen pariſh-churches, fifteen convents, a commandery of the order of *Malta*, and a college. It has a provincial court, with a bailiage, a foreſt-court, a court of commerce, a court of admiralty, and a ſalt-office. As it is conveniently ſituated for commerce, it carries on a great trade in *corn*, *oil*, *hemp*, *flax*, *cordage*, and *ſoap*. The *woollen manufacture* eſtabliſhed here in 1665, by Mr. *Roberts*, a *Dutchman*, has ſucceeded ſo well, that at preſent its cloths are little inferior in fineneſs and goodneſs to thoſe of *England*. In it are alſo made very beautiful *barragons*, together with *mocades*, a kind of carpets, *dimity*, *pluſh*, *coarſe linen*, *ſpun wool*, and *fire-arms*.

CALAIS is a ſtrong ſea-port town in *Lower Picardy*, in 50° 57′ N. latitude, and 1° 51′ E. longitude from *Greenwich*, according to Dr. *Maſkelyne's* tables; 152 miles to the north of *Paris*, the road to which is divided into thirty-four poſts. It is ſeated in a marſhy plain, on the narroweſt part of the *Britiſh* Channel, which is here only about ſeven leagues broad: here the white chalky cliffs of *Dover* may be ſeen from the coaſt; and between *Dover* and *Calais* go two packet-boats twice a week. The figure of this city, including the citadel, is an oblong ſquare, the two long ſides of which are each about two hundred and twenty perches in length, and the two ſhorteſt about ninety. One of the largeſt ſides is toward the ſea, and very well fortified; the other is toward the land, and is defended with baſtions lined with ſtone, and covered with half-moons and deep ditches, nine or ten perches broad, that can be filled, at pleaſure, either with ſalt water or freſh. The ſhort ſide, that lies oppoſite to the fort of *Nieulai*, may be defended by being laid under water, and the other ſide, called the *Attack* of *Gravelines*, is ſtill better fortified. The whole is encompaſſed by a covert-way; and Fort *Nieulai*, juſt mentioned, is ſaid to be a perfect piece of fortification in its kind: it has four baſtions, and from thence the whole country about *Calais* may be laid under water in leſs than twenty-four hours. The citadel has ſtill its ancient circuit and ditches, but the chevalier *de Ville* has ſurrounded it with a new encloſure, formed of three regular baſtions; and it is ſo advantageouſly ſituated, that it not only commands the town and fort, but likewiſe all the neighbouring country. Ships enter the port by a long canal, made by order of *Louis* XIV. between two moles; at the head of each is a horn-work, defended by a half-moon, and encompaſſed by a wall, a deep ditch, and a covert-way.

This port is very happily ſituated; but has ſeveral inconveniences, for no veſſel can enter it without ſome danger; it being almoſt choaked up, and there is no road for ſhips to ride at anchor. The canal at *Calais* is, however, of great uſe to the inhabitants for inland navigation; for by means of this canal one may eaſily paſs by water from *Calais* to St. *Omer's*, *Gravelines*, *Dunkirk*, *Bruges*, and *Ypres*. However, notwithſtanding the convenient ſituation of *Calais*, with reſpect to *England* and *Holland*, it is leſs populous than might be expected, although ſome late publications in *France* have ſuppoſed it to contain twelve thouſand inhabitants; but this is probably an exaggeration.

The ſtreets of *Calais* are ſtraight, well paved, and adorned with ſeveral houſes in the modern taſte. In the city is only one pariſh-church, which is a fine building, with a very magnificent dome, and a beautiful altar of marble; there is another church in the ſuburbs of St. *Peter*. It has four convents, two communities for the inſtruction of youth, and two alms-houſes.

The inhabitants carry on a good trade in *wine*, *brandy*, *ſalt*, *flax*, *horſes*, and *butter*. They are exempt from all taxes; but pay high aſſeſſments for the repairs of the fortifications and canals. The city has a particular governor, a deputy-governor, and a mayor; and to the government of *Calais* belong twenty-four pariſhes.

Edward III. king of *England*, took the city, after a memorable ſiege, in the year 1347; and, after the *Engliſh* had held it in their poſſeſſion about two hundred years, it was retaken by the duke of *Guiſe* in 1558, during the reign of queen *Mary*, who laid the loſs of this place much to heart. It was, however, agreed by the treaty of *Chateau-Cambreſi*, that *Calais* ſhould continue in the hands of the *French* during the ſpace of eight years, after the expiration of which term it was to be reſtored to the *Engliſh*. Queen *Elizabeth* accordingly demanded it; but the chancellor *de L'Hopital* refuſed to reſtore it, under pretence that during the firſt religious war in *France*, which began three years after the above treaty of peace, the *Engliſh* had ſeized *Havre de Grace*, and by this means had violated the treaty, and forfeited their right to *Calais*; which the *French* kept, though the *Engliſh* did not keep *Havre de Grace*, it being retaken by the *French*; but *Elizabeth* ſeems to have thought the recovery of *Calais* no important acquiſition, for ſhe might, moſt certainly, have procured the reſtitution of it, had ſhe been ſo determined. *Albert*, archduke of *Auſtria*, and governor of the *Low Countries*, made himſelf maſter of *Calais* in the year 1596; but it was reſtored two years after to *Henry* IV. of *France*, by virtue of the treaty of *Vervins*. Since which, this city has been bombarded by the *Engliſh*, in the years 1694, 1695, and 1696.

BOULOGNE has been ſuppoſed to be the ancient *Geſſoriacum*, or the *Portus Itius*, from whence *Cæſar* ſailed to *Britain*; and ſince named *Bononia*. It is the capital of a diſtrict called the *Boulonnoiſe*, which extends about twelve leagues. The people of the *Boulonnoiſe* enjoy ſome extraordinary privileges, and, in particular, are exempted from the *gabelle* or duties upon ſalt. It is a particular government, entirely independent of the governor-general of *Picardy*. The town is in 50° 43′ N. latitude, and 1° 37′ E. longitude from *Greenwich*. It ſtands upon a hill, at the mouth of the little river *Liane*, ſixteen miles to the ſouth-weſt of *Calais*. The harbour is very incommodious, with a narrow entrance, into which merchant-ſhips can only enter at time of flood; and St. *John's* road before the city, for ſhips of war can come no farther, is much expoſed, no veſſels being able to weather it there, unleſs the wind blows from ſome point between the north and ſouth-eaſt; for with all other winds the ſea is extremely rough and boiſterous. It is contracted at the mouth by two ſtone *jettes*, or piers, ſo injudiciouſly placed, that they collect a bank of ſand juſt at the entrance of the harbour. A ſmall fort was built in the war of 1755, by the prince *de Croy*, upon a rock about a league to the eaſtward of *Boulogne*, which Dr. *Smollet* deſcribed as placed in ſuch a manner that it can neither offend nor be offended. *Travels*, I. 31. It is ſurrounded by the ſea at high water, and when a freſh gale blows toward the ſhore, the waves break over the top of it; and our author is of opinion that it will, ſooner or later, be overturned into the ſea. *P*. 32. Upon the top of a high rock, which overlooks the harbour, are the remains of an old fortification, which is indiſcriminately called *Tour d'Ordre*, and *Julius Cæſar's fort*. The original tower was a light-houſe, built by *Claudius Cæſar*, and called *Turris ardens*, from the fire burning in it; and this the *French* have converted into *Tour d'Ordre*, or, the "Tower of Orders;" but no veſtiges of this *Roman* work remain; what now appear are the ruins of a caſtle built by *Charlemagne*. *Smollet's Travels*, I. 32.

On the ſide of the harbour oppoſite to the *Lower Town*, the ooze, impregnated with ſea-ſalt, produces a prodigious abundance of the fineſt ſamphire.

Boulogne is a large handſome town, with broad open ſtreets, very well paved; the houſes are of ſtone, well built, and commodious. The number of inhabitants may amount to ſixteen thouſand. It is divided into the *Upper* and *Lower Town*, the former of which is well fortified, with a ſtrong citadel; it is a ſhort mile in circumference, ſtands on an elevated ſpot, ſurrounded by a high wall and rampart, planted with rows of trees, which form a delightful walk, commanding a fine view of the country and *Lower Town*, and, in clear weather, the coaſt of *England*. In it are ſeveral public ſquares and beautiful fountains, together with a palace, where juſtice is adminiſtered. Here is alſo a cathedral dedicated to the Virgin *Mary*, only venerable for its antiquity; alſo the parochial church of St. *Joſeph*; an abbey of St. *Vilemar*; beſides two or three convents of nuns, to one of which there are ſeveral *Engliſh* girls ſent for their education, on account of the ſmallneſs of the expence; a ſeminary for the education of ſuch as deſign to take holy orders; and an hoſpital built at the expence of the family of *Aumont*. The *convent* of *Capuchins* having fallen to decay, was, about thirty years ago (from 1789) repaired, chiefly by the contributions of *Britiſh* travellers, collected by father *Graeme*, a native of *North Britain*, who had been an officer in the army of *James* II. and was ſaid to have turned monk of this mendicant order by way of voluntary penance, for having killed his friend in a duel. He cauſed the *Britiſh* arms to be put up in the church, as a mark of gratitude for the benefactions received from that nation. Among other public edifices, here is an hoſpital or workhouſe, which maintains ſeveral hundred poor people, who are kept conſtantly at work, according to their age and abilities, in making thread, all ſorts of lace, a kind of catgut, and in knitting ſtockings. This eſtabliſhment is under the direction of the biſhop. The churches in this town are but indifferently built, and poorly ornamented. There is not one picture in the place worth looking at. *Smollet*, II. 37. The *Lower Town* is continued from the gate of the *Upper Town*, down the ſlope of a hill, as far as the harbour, ſtretching on both ſides to a large extent, and is much more conſiderable than the *Upper*, with reſpect to the beauty of the ſtreets, the convenience of the houſes, as well as the number and wealth of the inhabitants. Theſe, however, are all merchants or *bourgeois*, which term comprehends merchants, ſhopkeepers, and artifans; for the nobleſſe, or gentry, live together in the *Upper Town*, and never mix with the others. The biſhop of this place is ſuffragan to the archbiſhop of *Rheims*, and has under his juriſdiction two hundred and ſeventy-ſeven pariſhes, with one hundred and forty-ſeven chapels of eaſe. The people of *Boulogne* appear to be deſcended from the *Flemings*; they have fine ſkins, fair hair, and florid complexions, very different from the natives of *France* in general. In a part of *Boulogne*, called the quarter of the *Matelots*, dwell a number of poor *Canadians*, who were removed from the iſland of St. *John*, in the gulf of St. *Laurence*, when it was reduced by the *Engliſh*. Theſe people are maintained at the king's expence, who allows them ſoldiers pay.

Here are a few conſiderable houſes of wine-merchants, who deal in *Bourdeaux* wine, which they ſend to the port of *London*, and other parts of *England*, *Scotland*, and *Ireland*. The fiſhery of mackarel and herrings is ſo conſiderable on this coaſt, that it is ſaid to yield annually eight or nine hundred thouſand livres (from thirty-five to forty thouſand pounds ſterling). The beſt part of the fiſh caught on this coaſt, ſuch as ſoles, ſkaite, and whitings, is ſent up to *Paris* in *chaſſe-marines*, by a company of contractors; but no great quantities are procured, as the ſhallows run a great way from the ſhore, and the fiſh live chiefly in deep water. The oyſters here are very large, coarſe, and rank. But the moſt beneficial ſpecies of traffic to the inhabitants of *Boulogne* in general, was the trade they carried on with the *Engliſh* ſmugglers, from the coaſt of *Kent* and *Suſſex*, who purchaſed tea, coffee, ſmall wine, tobacco, cambrics, and other articles, for which they paid in *Engliſh* guineas; but the regulations lately made by the *Britiſh* parliament, and the great reduction in all the import duties upon foreign goods into *Great Britain*, have entirely ruined this contraband merchandize.

In the year 1478, *Louis* XI. ſurrendered this country to the Virgin *Mary*, declaring that for the future he and his ſucceſſors ſhould hold it from her immediately as her vaſſals, paying her for homage a golden heart at their acceſſion to the crown; in purſuance of which, *Louis* XIV. paid twelve thouſand livres (525 *l.* ſterling) for himſelf and his father *Louis* XIII.

Boulogne was taken by *Henry* VIII. king of *England*, in the year 1544, and afterward reſtored to the *French* king *Henry* II. by a treaty of peace in 1550, in conſideration of his paying three hundred thouſand crowns.

There are coal-pits in theſe parts, but wood is commonly uſed for fuel. The air of *Boulogne* is cold and moiſt; froſts generally continue longer here than in *London*, and fruits are more backward than in *England*.

Here is plenty of a delicate-taſted bird, known in *England* by the name of *wheat-ears*, which is a pleaſant corruption of the *French* name *cul blanc*, taken from their colour, which is white toward the tail. Here are excellent turkies, and no want of game; the hares in particular are very large, juicy, and high-flavoured.

SECT. XIII.

The Situation, Extent, Produce, Rivers, and Government of CHAMPAGNE *and* BRIE; *with a Deſcription of the principal Cities, of* TROYES, CHALONS, RHEIMS, *and* SENS.

THE province of *Champagne* is bounded on the north by *Hainault*, and part of the biſhopric of *Liege*; on the eaſt by *Luxemburg* and *Lorrain*; on the ſouth by *Burgundy*; and on the weſt by the *Iſle of France* and *Picardy*; it being one of the moſt conſiderable provinces in the whole kingdom. This province extends, from the weſt to the ſouth-eaſt, or from *Lagny* to *Bourbon*, forty-ſix leagues in length; and from ſouth to north, or from *Ravieres* to *Rocrois*, about fifty-four. It derives its name from the large plains in its centre, but its borders are full of foreſts, hills, and mountains. It was united to the crown of *France* in the year 1284, and has been ſuppoſed by ſome late writers to contain eight hundred and twelve thouſand inhabitants.

This country produces plenty of grain, but is particularly famous for its wine, which is exported in great quantities; and the natural commodities in which the inhabitants trade are corn, wine, iron, wood, and cattle, with hay, woollen and ſilk ſtuffs, linen, &c.

Its principal rivers are the *Meuſe* or *Maeſe*, the *Seine*, the *Maine*, the *Aube*, and the *Aiſne*. The *Meuſe* receives its ſouree near the village of *Meuſe*; the *Seine* riſes in *Burgundy*; the *Maine* in *Baſſigny*; the *Aube* has its ſource on the frontiers; and the *Aiſne* or *Aine* riſes in this province.

In this country are two archbiſhoprics and four biſhoprics. It is governed by the parliament, the chamber of accounts, and exchequer of *Paris*, except the territory of *Sedan*, which belongs to the parliament of *Metz*. The principal cities in this country are the following:

TROYES, the ancient *Auguſtomana*, or *Auguſtobona*, the capital of the province, is ſeated in *Lower Champagne*, on the river *Seine*, about ſeventy miles to the S. E. of *Paris*, in 48° 18′ N. latitude, and 4° 5′ E. longitude from *Greenwich*, and is large, but far from being ſo flouriſhing and populous as formerly. It has fourteen pariſh-churches, including the cathedral, and two collegiate churches; with four abbies, ten convents, one college, one ſeminary, and one hoſpital. The cathedral, which is dedicated to St. *Peter*, is a very noble ſtructure; its portico is in a fine taſte, but the tower on the left ſide of it remains unfiniſhed.

The city is ſurrounded with walls, but they are not kept in good repair; and formerly it had three caſtles, from which it is ſuppoſed to have obtained its preſent name; but there are now few remains of them left. The biſhop of *Troyes* is ſuffragan to the archbiſhop of *Sens*; his dioceſe contains three hundred and ſeventy-two pariſhes, ninety-eight chapels of eaſe, with ſeventeen abbies. This city ſtill carries on a tolerable trade, eſpecially in *linen*, *flax*, *hemp*, and *cotton fuſtians*, *canvas*, *wax* and *tallow candles*, *needles*, *ſerges*, and *tapeſtry*.

CHALONS, or CHAILONS, a large city ſeated on the *Maine*, in a ſmall territory called the *Chalonois*, ninety-five miles to the eaſt of *Paris*, in 48° 57′ N. latitude, and 4° 22′ E. longitude from *Greenwich*. In this city is a cathedral, two chapters, eleven pariſh-churches, three abbies, nine convents, and, until the ſuppreſſion of the order, a college of Jeſuits. The biſhop, who is alſo a count and peer, is ſuffragan to the archbiſhop of *Rheims*, and in his dioceſe are comprehended three hundred and four pariſhes, ninety-three chapels of eaſe, with nineteen abbies. The inhabitants carry on a conſiderable trade in *ſhalloons*, which took their name from this place, and in other *woollen ſtuffs*.

RHEIMS, the ancient *Durocortorum*, and *Civitas Remorum*, the capital of a diſtrict called the *Rhemois*, is ſituated, according to Dr. *Maſkelyne*'s tables, in 49° 15′ N. latitude, and 4° 3′ E. longitude from *Greenwich*, ſixty-two miles to the north of *Troyes*, and eighty-five to the north-eaſt of *Paris*, and is one of the moſt ancient and celebrated cities in the whole kingdom. It is about four miles in circumference, and contains ſeveral fine ſquares, large ſtreets, well-built houſes, and magnificent churches. Among theſe is the cathedral of *Our Lady*, which is a fine ſtructure, though of *Gothic* architecture; the principal door is remarkable for its workmanſhip; and the great altar, at which the coronation of the kings of *France* is performed, is plated with gold. The treaſury of this cathedral muſt be very great, as every king at his coronation makes an offering here. The book of the Goſpel upon which the king takes the coronation oath, is ſaid to be written in the *Sclavonic* tongue, and the cover is of gold ſet with gems. The archbiſhop of this place is the firſt duke and peer of *France*, perpetual legate of the ſee of *Rome*, and primate of all *Gallia Belgica*. He alſo crowns the king; he has an annual revenue of 50,000 livres (2188 *l.* ſterling) and his taxation at the court of *Rome* is four thouſand ſeven hundred and fifty florins. Here are alſo three collegiate churches, five abbies, nine convents, a commandery belonging to the order of St. *Anthony*, a commandery of the knights of *Malta*, and, until the Jeſuits were expelled, they had here a large ſeminary and a fine college.

The abbey of Benedictines of St. *Remy* in this city is one of the nobleſt belonging to that order in all *France*; and on the altar of its church is kept the holy phial, which, at the baptiſm of *Clovis*, in 496, by biſhop *Remigius*,

gius, they pretend was brought from heaven by a dove, at the prayer of that ſaint, the crowd being ſo great that he was unable to get to the font with the uſual oil. This phial is of a dark red glaſs, about the length of one's little finger, and nearly reſembles in ſhape a ſmall Hungary water bottle. It has a gold ſtopper, and is fixed in a perforated ſquare caſket faſtened on a ſilver ſalver, it being ſeen only through a cryſtal cover placed over the caſket. The oil is ſaid to be grown dry, but on every unction of a king of *France* a ſmall quantity of it is taken out, and mixed with the oil prepared for the unction. The univerſity here was founded in the years 1547 and 1549. Among the other public buildings are three ſpacious hoſpitals. The city carries on a conſiderable trade in *wine*, *woollen* and *ſilk ſtuffs*. It has ſeveral remarkable remains of *Roman* antiquities, particularly three gates of the city, which to this day bear the names of ſo many pagan deities, namely of *Mars*, of the *Sun*, and *Ceres*.

Sens, the *Agendicum* of the ancients, the capital of a diſtrict called the *Senonois*, is ſeated on the *Yonne*, in 48° 12′ N. latitude, and 3° 17′ E. longitude from *Greenwich*; and is large but not very populous, though it is well ſituated for trade. This city is the ſee of an archbiſhop. The cathedral, which is dedicated to St. *Stephen*, is admired for its ſtately front, it being adorned with various figures and lofty towers; as alſo on account of its rich chapels, ancient tombs, and the magnificence of the high altar, where is a table of gold enriched with precious ſtones, on which is repreſented in relievo the Four Evangeliſts, together with St. *Stephen*.

Several councils have been held in this city, one of the moſt famous of which was that in the year 1140. It contains a provincial diſtrict and foreſt-court, together with a ſalt-office. Here is a manufacture of that kind of ſtuffs, which are called in *England* "*Mancheſter* velvets," which are made and dyed to great perfection, under the direction of *Engliſh* workmen, who have been ſeduced from their own country.

Meaux, in *Latin Meldi*, the capital of a diſtrict called *Brie Champenoiſe*, is ſeated on the river *Marne*, twenty-five miles to the north-eaſt of *Paris*, in 48° 58′ N. latitude, and 2° 53′ E. longitude from *Greenwich*. The biſhop is ſuffragan to the archbiſhop of *Paris*; his dioceſe is divided by the river *Marne* into two large archdeaconries, to each of which belong three rural deaneries; under theſe are nine abbies, ſeven chapters, and two hundred and twenty-ſeven pariſhes. Beſides the cathedral, there are in this city one chapter, five abbies, ſeveral convents, one alms-houſe, and one hoſpital.

SECT. XIV.

Of the Government of BURGUNDY; *its Name, Situation, Extent, Rivers, Government, and a Deſcription of the principal Cities; particularly* DIJON, AUTUN; *and* TREVOUX, *the Capital of the ſmall Principality of* DOMBES.

BURGUNDY, called by the *French Burgogne*, derives its name from the *Burgundians*, who, toward the beginning of the fifth century, ſettled in *Swiſſerland* and *Franche Comté*, whence ſpreading themſelves toward the rivers *Soane* and *Rhone*, they erected a kingdom of their own, which was gradually reduced by the kings of the *Franks*. It was united to the kingdom of *France* by *Clothayre* I. in the year 517, and it has been lately repreſented as containing 1,087,300 inhabitants. This country is bounded on the north by *Champagne*, on the eaſt by *Franche Compté*, on the ſouth by *Lyonnois*, and on the weſt by the *Bourbonnois* and *Nivernois*. It extends from eaſt to weſt above thirty *French* leagues, and from north to ſouth above forty-five. In this government are four biſhoprics.

It is fertile in corn and fruit, but is particularly diſtinguiſhed for its excellent wine.

The rivers here are the *Seine*; the *Dehune*, which runs into the *Soane*; the *Brebince*, or *Bourbince*, which iſſues out of the lake of *Longpendu*; with the *Armançon*, the *Ouche*, and *Tille*, and ſeveral mineral ſprings.

Dijon, in *Latin Divio*, the capital of the country and government of *Burgundy*, is ſituated in the *Dijonois*, about a hundred and forty miles to the ſouth-eaſt of *Paris*, in 47° 19′ N. latitude, and 5° 2′ E. longitude from *Greenwich*. It is fortified after the ancient manner, and defended by a caſtle flanked with great round towers. It is a pretty large city; the ſtreets are well paved, broad, and ſtraight; the houſes are handſome; and the churches and ſquares beautiful.

In this city are ſeven pariſh-churches, four abbies, three large hoſpitals or alms-houſes, ſeveral convents, with a chapel in which is kept a ſuppoſed miraculous hoſt; and the Jeſuits had here a magnificent houſe. There is in this city an academy of ſciences, and in 1723 a college of law was alſo erected.

The walks before the city are a quarter of a league in length, planted with three rows of linden-trees, and terminated by a delightful grove. This city is the reſidence of the governor, the parliament, an intendancy, a taillage-office, a provincial, ſupreme, and particular court, a ſalt-office, &c.

Autun, the *Auguſtodunum* of the ancients, ſtands in 46° 57′ N. latitude, and 4° 18′ E. longitude from *Greenwich*, on an eminence near three hills on the river *Arux*, and is about a mile in length, and as much in breadth. It conſiſts of the *Upper* and the *Lower* city, in the latter of which is the citadel, and there are held the provincial tribunal, a foreſt court, a ſalt-office, and ſeveral other courts. In this city is one cathedral, five abbies, two ſeminaries, two priories, one collegiate, and twelve pariſh-churches. There was here alſo a college of Jeſuits, and there are at preſent ſix convents, particularly a fine Chartreuſe, ſituated in the ſuburbs, in the church of which lie the laſt dukes of *Burgundy*; it has alſo two hoſpitals. In the midſt of the city is an open place called *The Field of Mars*, and there are ſtill the remains of three Pagan temples, one of them dedicated to *Janus*, and another to *Diana*. Here are likewiſe two ancient gates of excellent workmanſhip, which ſome have taken for triumphal arches, with a circus and the remains of a pyramid; which laſt, to all appearance, has been a tomb.

Auxerre, in *Latin Antiſſiodorum*, the capital of the earldom of *Auxerrois*, is ſituated in 47° 48′ N. latitude, and 3° 34′ E. longitude from *Greenwich*, on a hill near the river *Yonne*, ninety-two miles to the ſouth of *Paris*. It is the ſee of a biſhop, ſuffragan to the archbiſhop of *Sens*; his palace is a moſt noble ſtructure. In this city are alſo a collegiate and eight pariſh-churches, five abbies, ſix convents, one commandery of the knights of *Malta*, and, till the expulſion of the Jeſuits, they had a ſeminary and a college in this city; there are here likewiſe two hoſpitals. This place, by means of the *Yonne*, carries on a good trade. Here is a great manufacture of looking-glaſſes.

Trevoux, the ancient *Tivurtium*, the capital of the principality of *Dombes*, and of the caſtellany of *Trevoux*, is ſeated on a hill by the *Saone*, a hundred and eighty-eight miles to the ſouth by weſt of *Paris*, and is the reſidence of a governor, a parliament, a diſtrict-court, and a mint. It is ſaid to have derived its name from its ſituation on one of the highways which *Agrippa* made into *Gaul*, and which here divides into three branches.

This city, with the little principality of *Dombes*, belongs to the duke of *Maine*, and was declared by *Louis* XIV. an independent principality. Hence the prince of *Dombes* has the power of life and death, can confer nobility, coin money, and impoſe what taxes he pleaſes on his ſubjects, though he has his own parliament. His certain revenue is about 150,000 livres (6563 *l.* ſterling) and this little principality is governed by a governor-general in the prince's name.

SECT. XV.

Of the Situation, Produce, Government, and principal Cities of the Government of Lyonnois; *with a particular Deſcription of the City of* Lyons.

LYONNOIS, called by *D'Anville Lionois*, is bounded on the north by *Burgundy*, on the eaſt it is ſeparated by the *Saone* and *Rhone* from *Dauphiné*, on the ſouth it is bounded by *Vivarais* and *Velais*, and on the weſt by *Auvergne*. It comprehends the three ſmall provinces of *Lyonnois*, *Beaujolois*, and *Forez*; and produces corn, wine, and fruit, particularly an excellent kind of large cheſnut called *marrons*. The firſt of theſe diſtricts alone merits a particular deſcription.

The principal rivers are the *Rhone*, *Soane*, and *Loire*; beſides ſeveral ſmall ones, as the *Furan*, *Azerque*, *Rhin*, *Lignon*, &c. Here is alſo a mine of copper and vitriol, with ſeveral mineral ſprings.

"The *Lyonnois*," ſays Dr. *Smollet*, "is one of the moſt agreeable and beſt-cultivated countries I ever beheld: diverſified with hill, dale, wood, and water, laid out in extenſive corn-fields and rich meadows, well ſtocked with black cattle, and adorned with a ſurpriſing number of towns, villages, villas, and convents, generally ſituated on the brows of gently-ſwelling hills, ſo that they appear to the greateſt advantage." *Travels*, II. 259.—What greatly heightens theſe natural beauties is the charming paſtoral *Soane*, which winds its ſilent courſe ſo ſmoothly and gently, that one can ſcarcely diſcern which way its current flows. "It is this placid appearance," continues our author, "that tempts ſo many people to bathe in it at *Lyons*, where a great number of perſons are drowned every ſummer; whilſt there is not an inſtance of any perſon thus periſhing in the *Rhone*, its rapidity deterring every one from bathing in its ſtream."

LYONS, in *Latin Lugdunum*, the capital of the *Lyonnois*, and of the whole government, ſtands fifteen miles to the north of *Vienne*, in *Dauphiné*, in 45° 46′ N. latitude, and 4° 50′ E. longitude from *Greenwich*, at the conflux of the *Soane* and the *Rhone*; the former runs through a part of the city, and has two bridges of wood, and a narrow one of ſtone; but the ſtone bridge over the *Rhone* is a noble ſtructure. "This bridge," ſays Dr. *Smollet*, "ſeems to be ſo ſlightly built, that I ſhould imagine it would be one day carried away by the rapidity of the river, eſpecially as the arches are ſo ſmall, that after great rains they are ſometimes ſtopped up, or at leaſt do not admit a ſufficient paſſage for the increaſed body of water. In ſome meaſure to remedy this dangerous defect, a middle pier has been removed, and two arches thrown into one. This bridge, as alſo that of St. *Eſprit*, is not built in a ſtraight line acroſs the river, but with a curve, which forms a convexity to oppoſe the current. Such a bend is certainly calculated for the better reſiſting the general impetuoſity of the ſtream, and has no bad effect to the eye." *Travels*, I. 142.—It has been remarked, that the *Soane* reſembles a *Spaniard* in the ſlowneſs of its current, and that the *Rhone* is emblematical of *French* rapidity; and Mrs. *Piozzi* remarks, "it is equally obſervable that the junction adds little in appearance to their ſtrength and grandeur, and that each makes a better figure ſeparately than when united." *Travels*, I. 28.—The city is about a fourth part as large as *Paris*, and is very populous; but moſt of the ſtreets are narrow. The houſes are generally high and well built, but diſgraced by the raggedneſs and mean appearance of their paper windows: they are ſaid to contain above ninety thouſand ſouls. Lady *Craven* ſays, "many parts of this city are frightful: the houſes are crowded together, each ſtory, as it riſes, projecting over the other; and the ſtreets narrow and ſtinking: but the environs are beautiful."

In *Lyons* are ſeveral fine ſquares, in one of which is the town-houſe, the moſt elegant in *Europe*, which was begun in 1647, and finiſhed in 1655. It is a large building in the form of an oblong ſquare, and on each ſide of the front is a wing four hundred and twenty feet in length. In the middle of the front is a tower, with a cupola on the top, and in the angles project two large pavilions. The great gate is adorned with two columns of the Ionic order, and leads into a large hall arched over, where are to be ſeen the buſts of *Philip* the Fair, *Charles* VIII. and *Henry* IV. with the pictures of all the kings of *France* of the name of *Louis*: the roof is alſo finely painted.

The cathedral of *Lyons* is dedicated to St. *John*, and the chapter conſiſts of gentlemen of the beſt families. They boaſt of ſeveral kings and princes having been formerly members of it; particularly in the thirteenth century, when at one time they had the ſon of an emperor, nine ſons of kings, fourteen ſons of dukes, thirty of counts, and twenty of barons. To this chapter belong not only the cathedral, but the churches of St. *Stephen* and the *Holy Croſs*. The cathedral is indeed a large ſtructure, particularly famous for its clock, which, like that at *Straſburg*, is celebrated for the variety of its motions, moſt of which have ceaſed; for at every hour a cock at the top clapped his wings thrice, and crowed twice, after which an angel coming out of a door, ſaluted the Virgin *Mary*, and at the ſame time the Holy Ghoſt deſcended, and an image of God the Father gave the benediction. Beſides the cathedral, are three chapters or collegiate churches, thirteen pariſh churches, and there were two colleges of Jeſuits, the largeſt of which was the moſt ſtately in all the kingdom. This ſtructure is a regular quadrangle, curiouſly painted in freſco, though ſomething defaced on the eaſt ſide, where the winds from the mountains beat upon it. Over the front door, and over part of the church of that college, is an obſervatory, one of the boldeſt pieces of architecture in *Europe*. Their chapel has a fine altar-piece of lapis-lazuli, and an excellent piece of painting by *Blanchard*. Their library is a ſpacious and handſome apartment, in which are about 40,000 volumes; among which are ſome manuſcripts of the Bible, but theſe are not very ancient: one of the moſt valuable pieces is a manuſcript of *Pliny*'s Natural Hiſtory, of conſiderable antiquity. The paintings in the *Hotel de Ville* are chiefly by *Blanchard*. In the chapel called *des Penetents* is a fine picture by *Rubens*.

Without the gate of St. *Juſtus* is a large ſuburb, where the bare-footed *Carmelites* have a delightful convent, with ſpacious gardens, from which there is a fine proſpect of the city: in their church is an altar of agate and lapis-lazuli. The *Capuchins* have alſo the pretended miracles of their ſaint painted on the walls of their cloiſter; among which is one of his paying his apothecary with prayers, inſtead of money. The nunnery of St. *Peter* is a fine ſtructure, and the pariſh-church of St. *Niege* is adorned with ſeveral fine pieces of painting by *Le Brun*.

In one of the ſquares ſtands an equeſtrian ſtatue in braſs of *Louis* XIV. *La Belle Cour* is a ſpacious area, and near it are a mall and a delightful walk.

The arſenal here is a fine building, well ſtored with military implements; here are alſo three forts, but one of them only is garriſoned, and that ſerves for the priſon of the city. In this city are ſtill to be ſeen ſome remains of *Roman* antiquities, as baths, aqueducts, and part of an amphitheatre.

This is the ſee of an archbiſhop, who is primate over the archbiſhoprics of *Rouen*, *Tours*, *Sens*, and *Paris*; ſo that appeals lie from them to him. He has alſo ſix biſhops for his ſuffragans; and, beſides the title of archbiſhop, he has that of count of *Lyons*.

Round the city lie ſome mountains, which, being variegated with convents, ſeats, gardens, and vineyards, form a very delightful proſpect.

On the banks of the *Rhone*, near *Lyons*, Lady *Craven* ſaw ſeveral perſons ſifting gravel: they find among it little bits of ſolid gold, which are waſhed down from the mountains.

Moſt of the inhabitants are makers of ſilk, gold, and ſilver laces. Formerly the looms in and about this city amounted to eighteen thouſand; but in 1698, this number was found reduced to four thouſand. It is ſtill, however, in great repute for the above manufactures, particularly for its bombazeens, which are admired for their beautiful luſtre; and its trade extends not only over all *France*, but even to *Spain*, *Italy*, *Swiſſerland*, *Germany*, and the *Netherlands*. Lady *Craven* mentions a wheel which ſhe ſaw at *Lyons*, to wind ſilk on bobbins, erected on the fourth ſtory of the building, and turned by a horſe; this wheel ſets ſeveral on all the other floors in motion, and thoſe turn many thouſand bobbins. *Letters*, p. 25.—Here is a very conſiderable manufacture of velvets carried on by *M. Pernon*, of which Mrs. *Piozzi* ſpeaks in the following terms: "Nothing which I ever ſaw at *London* or *Paris* can compare to the beauty of theſe velvets, or with the art neceſſary to produce ſuch an effect, whilſt the wrong ſide remains ſmooth, and is not ſtruck through by the threads. The hangings for the empreſs of *Ruſſia*'s bed-chamber are wonderfully executed, the deſign elegant, and the colouring brilliant. The ſcreen too for the grand ſeignior is finely finiſhed, being not only magnificent, but diſplaying true taſte." *Travels*, p. 30.

SECT. XVI.

Of LANGUEDOC; *its Situation, Extent, Climate, remarkable Winds, Minerals, Mountains, and Produce: Of the Plant called* Woad, *and the* Fork-Tree. *The Springs and Rivers of this Province; and a Deſcription of the* Canal *which forms a Communication between the* Ocean *and the* Mediterranean. *The natural Rights which have been lately reſtored to Proteſtant Subjects of* France. *The* Trade *and* Government; *its principal Cities,* Toulouſe, Narbonne, Montpellier, Niſmes, *their Antiquities, and a Deſcription of the Aqueduct called* Pont du Guard, *&c.*

LANGUEDOC is bounded on the eaſt by the *Rhone*, which ſeparates it from *Provence* and *Dauphiné*; on the north by *Lyonnois*, *Auvergne*, and *Guienne*; on the weſt a part of it is divided by the *Garonne* from a part of *Gaſcony*; and on the ſouth it terminates on the countries of *Rouſſillon* and *Foix*, and alſo on the *Mediterranean*. The eaſtern coaſt, from *Agde* as far as the *Rhone*, is remarkably increaſed, the ſea having retired from it conſiderably, as evidently appears on conſulting the accounts of ancient Geographers with reſpect to the ſituation of ſeveral of its maritime places, and comparing them with their preſent ſtate. The figure of this country is very irregular; its extent, however, from eaſt to weſt, may be computed at about ſeventy leagues; from north to ſouth; in the narroweſt part, it is between ten and twelve, but in the broadeſt weſtward it is almoſt thirty, and to the eaſtward near thirty-two.

The winds in this country are very remarkable. Along the ſouthern coaſt, which is properly a long valley, extending from *Toulouſe* to the ſea, it generally blows a weſt wind, though it is ſometimes north and ſometimes ſouth-weſt. This wind gradually increaſes, and, being cool, refreſhes the country in ſummer. The inhabitants call it *Cirs*, in conformity to its ancient name *Circius*. Oppoſite to this blows another from the eaſt or ſouth-eaſt, which is called *Autun*. It is firſt perceived near *Narbonne*, and at *Caſtlenaudari* is very violent: this wind, being hot, cauſes head-achs, with loſs of appetite, and ſeems to ſwell the whole body. In the eaſtern part of *Languedoc* is frequently felt a cold and very ſtrong north wind, which follows the courſe of the *Rhone* in the valley thro' which it runs, from north to ſouth, and is called *Biſe*, or *Black*. Sometimes, in direct oppoſition to the latter, blows a ſea-wind, which is uſually accompanied with a drizzling rain; but when dry, has the ſame morbid effects as the *Autun* in *Upper Languedoc*; beſides, in the heat of ſummer, from the coaſt of *Leucate* to the *Rhone*, ſea-breezes conſtantly ſet in, at nine or ten o'clock in the morning, and, to the great refreſhment of the air, laſt till about five in the evening. Laſtly, it is alſo obſervable that at the foot of the *Pyrenees*, near the village of *Blaud*, in a narrow valley wholly environed with mountains, except toward the north-weſt, and through certain openings two or three hundred paces wide, blows a very cool weſt or north-weſt gale, which chiefly prevails in ſummer, and then only in the night. In clear and warm weather this gale is much ſtronger than in a thick and cold air. In ſummer it cools the whole valley, and in winter prevents white froſts; and, as it blows only in the night, the inhabitants of the village of *Blaud* can winnow their corn at no other time.

This province produces ſome very beautiful marble, and in ſeveral places in *Lower Languedoc* are found *turquoiſes*. There are here alſo lead and iron mines.

This country is very mountainous, particularly the *Cevennes*, which are of great height and very ſteep; yet theſe being, as it were, the head quarters of the *Proteſtants*, abound in people. It produces plenty of corn, fruit, and fine wine; with large plantations of olives and mulberry-trees, the latter for ſilk worms, and the former for oil; though this laſt is inferior to that of *Provence*. They here tread out the corn in the manner practiſed in the *Eaſt*, by cauſing a number of mules and horſes to turn round a circle upon the grain, which is ſtrewed under them, and afterward alſo tread the ſtraw into ſmall pieces, to ſave the trouble of chopping it.

Among the products of the ſoil may be reckoned *woad*, which particularly grows in *Upper Languedoc*. This plant has its root uſually an inch thick, and a foot, or a foot and a half in length, with five or ſix leaves growing from it, that are a foot long, and ſix inches broad. The flower repreſents a croſs, and bears an oblong ſeed, which is ſometimes of a violet, and ſometimes of a yellow colour; but the former is the beſt. It is uſually ſown in February, and requires a good ſoil, with great care after it begins to ſhoot. When the herb is ripe, it is cut off cloſe to the ground, and immediately pounded to a paſte, which is made up into cakes, or balls; and theſe, when thoroughly dried in the ſun, are reduced to a powder, which gives a very beautiful and laſting blue.

The *fork-tree* is alſo one of the curioſities of this country, though it is alſo found in *Spain* and *Italy*. The ſtem of this tree is from two to four feet high, which having reached, its farther growth is generally checked. At the top of its ſtem grow a conſiderable number of ſtraight ſhoots, which are ſuffered to riſe five or ſix feet, and about the third year are cut into the form of three-pronged forks; and in the ſixth, ſeventh, and frequently not till the ninth, when they have completed their growth, are carefully cut off cloſe to the ſtem, and undergo a ſecond formation in a hot oven.

There are here ſeveral periodical and medicinal ſprings. The principal rivers are the *Rhone*; the *Garonne*, which iſſues from the *Pyrenean* mountains; the *Aude*; the *Tarne*, which proceeds from the *Gevaudan*; the *Allier*, which ariſes in the ſame country; and the *Loire*, which iſſues from the *Vivarez*, and falls into the *Mediterranean*.

The *ROYAL CANAL*, formed in order to make a communication between the *Atlantic Ocean* and the gulf of *Lyons* in the *Mediterranean*, that veſſels might paſs from one ſea into the other, without going round by *Spain*, is one of the nobleſt works that any country has ever produced, and therefore deſerves a particular deſcription. Under *Louis* XIV. *Paul Riquet*, of *Bezieres*, after employing twenty years in a minute conſideration of every particular, during which he had no other counſellor than his gardener, completed his plan. The firſt ſtone was laid in the year 1667, and the canal was opened in 1681, but it was not completed until many years after.

This canal begins at the harbour of *Cette* on the *Mediterranean*, and traverſes the lake of *Thau*, and a quarter of a mile below *Toulouſe* is conveyed by three ſluices into the *Garonne*. It is every where ſix feet deep; ſo that a cargo of eighteen hundred quintals may be forwarded to any place upon it, and its breadth, from one bank to the other, is a hundred and forty-four feet.

At *St. Ferreol*, a quarter of a mile below *Revel*, between two rocky hills, that are in the form of a half-moon, is a large reſervoir, twelve hundred fathoms in length, five hundred in breadth, and twenty deep, the whole ſurface being ſix hundred and eighty-ſeven thouſand four hundred and thirty-eight feet. Into this baſin of water the rivulet of *Laudot*, which runs down the hills, is received, and encloſed by a wall two thouſand four hundred feet long; a hundred and thirty-two in height; and twenty-four feet thick; having a ſtrong dam defended by a ſtrong wall of free-ſtone. Under the dam runs an arched paſſage reaching to the main wall; where three large cocks, of caſt braſs, are turned and ſhut by means of iron bars; and theſe cocks diſcharge the water, through mouths as large as a man's body, into an arched aqueduct, where it runs through the outer wall, and when got beyond it, goes under the name of the river *Laudot*; continuing its courſe to the canal called *Rigole de la Plaine*. From thence it is conveyed to another fine reſervoir near *Naurouſe*, two hundred fathoms in length, a hundred and fifty in breadth, with the depth of ſeven feet; and out of this baſin it is conveyed, by means of ſluices, both to the *Mediterranean Sea* and to the *Ocean*, according as the canal requires it. Though the above cocks remain open for ſome months ſucceſſively, yet there is no viſible diminution of the water in the great reſervoir. Near *Bezieres* are eight ſluices, which form a regular and grand caſcade, nine hundred and thirty-ſix feet long, and ſixty-ſix high, by means of which veſſels may paſs croſs the river *Orb*, and continue their voyage on the canal. Above it, between *Bezieres* and *Gapeſtan*, is the *Mal-Pas*, where the canal is conveyed for the length of a hundred and twenty fathoms, under a mountain cut into a very lofty arcade, the greateſt part of which is lined with free-ſtone, except toward the end, where it is only hewn through the rock, which is of a ſoft ſulphureous ſubſtance. At *Agde* is a round ſluice, with three openings, three different depths of the water meeting there; and the gates are ſo ingeniouſly contrived, that veſſels may paſs through by opening which ſluice the maſter pleaſes; an invention that ſtruck the great *Vauban* himſelf with admiration. The leſſer rivers and ſtreams, that might have prejudiced the canal, have been carried under it by water-courſes, of which there are forty-four, beſides eight bridges.

This canal coſt thirteen millions of livres, (ſomething more than half a million ſterling) part of which money was furniſhed by the king, and part by the ſtates of *Languedoc*. The king generouſly granted to *Riquet*, the inventor and conductor, and his male heirs, all the juriſdiction and revenues belonging to it; ſo that the crown does not come into poſſeſſion till the extinction of that line. Ships paſſing on it, for every hundred weight pay twenty ſous, (10*d.* *Engliſh*) and even the king himſelf pays the ſame toll for military ſtores, &c. ſent by way of this canal; ſo that the revenue, eſpecially in time of a briſk trade, is very conſiderable. However, the charges attending it are alſo very great; for the ſalaries of the ſeveral directors, receivers, comptrollers, lieutenants, clerks, and watchmen, annually amount to one hundred thouſand livres, (4000 *l.* ſterling) beſides the great expence of repairs. The counts of *Caraman*, deſcendants of *Riquet*, are alſo obliged to keep paſſage-boats, which are drawn by mules or horſes; theſe go and return at ſtated times. According to Mr. *Swinburne*, 360 boats navigate this canal, each of which performs annually ſix voyages. The conveyance of goods is paid for by the league; paſſengers pay by the day. The proprietors of the works receive a thouſand livres, (43 *l.* 15 *s.* ſterling) each voyage. The whole annual income, the ſame writer ſtates to be, 2,160,000 livres, (94,500 *l.* ſterling) the current expences and coſts of repairs are ſuppoſed to amount, one year with another to 1,610,000 livres (70,437 *l.* 10 *s.* ſterling) per annum, and the net profits to 550,000 livres (24,062 *l.* 10 *s.* ſterling). *Travels II.* 369. The length of this canal from *Toulouſe* to *Bezieres*, where it joins the river *Orb*, is 125,435 *French* toiſes, equal to one hundred and fifty-two *Engliſh* miles. "The ſyſtem of inland navigation," ſays the ſame writer, "has been ſo much improved of late years, that I make no doubt but this canal would be ſhortened many leagues, were it to be undertaken afreſh. It is full of angles and turns that do not appear neceſſary; and on the contrary, in one or two places has been driven ſtrait at an enormous expence, through numberleſs obſtacles, when a ſhort ſweep would have conveyed the waters, with greater eaſe and leſs expence, to the place of their deſtination. There are fifteen locks upon it in the fall toward the ocean, and forty-five on the ſide of the *Mediterranean*. The higheſt point between the two ſeas is at *Naurouge*, which is elevated one hundred toiſes (more than 200 yards) above the level of each ſhore. The canal is carried over thirty-ſeven aqueducts, and croſſed by eight bridges." *Swinburne's Travels, II.* 367.

The coaſt of *Languedoc* is dangerous, and alſo in want of good and ſecure harbours. The city of *Montpellier*, by means of the river *Lez*, and the lakes near it, carries on, at the harbour of *Cette*, the greateſt maritime trade in all *Languedoc*; but the whole is not very conſiderable. The commerce of this province principally conſiſts of manufactures and other goods. Wine is exported hence to the coaſts of *Italy*; oil to *Switzerland* and *Germany*; and, when the harveſt proves abundant, corn to *Italy* and *Spain*; dried cheſnuts and raiſins are ſent to *Tunis* and *Algiers*; and cloth to *Switzerland*, *Germany*, and the *Levant*.

Toward the middle of the ſixteenth century the Reformation made a rapid progreſs in this province; but was ſoon followed by civil broils, and attacked with all the rage of perſecution, which was carried on here with greater fury than in other parts of *France*; and *Languedoc* was the ſcene of continual commotions and cruelties for above an hundred years. But, notwithſtanding the torrents of blood that were poured out here, in order to exterminate the *Hugonots* (and in the whole kingdom of *France*, more ſhocking ſcenes of cruelty were not exhibited than in this ſingle province) yet there ſtill continues to reſide in theſe parts a great number of Proteſtants. So ineffectual are fire and ſword to accompliſh the purpoſes of bigotry and ſuperſtition. By an edict given at *Verſailles* in *November* 1787, and regiſtered by the parliament of *Paris* in *January* 1788, the ſubjects of the *French* king, who diſſent from the eſtabliſhed religion of the country, are reſtored to ſome of the rights of men and citizens, which they had been deprived of for more than a century, by the revocation of the edict of *Nantz*. Particularly, their marriages are rendered legal, by the publication of banns by a curate or vicar, and an entry made in a book to be provided for that purpoſe. Conſanguinity is diſpenſed with, beyond the third degree. The whole ceremony of marriage to conſiſt, in the parties, accompanied by four witneſſes, going to the houſe of the curate or vicar, where one of the parties ſhall reſide, or to the civil magiſtrate of the place, and there declaring that they have taken, and do take each other as man and wife, and that they promiſe fidelity to each other. Upon which the curate, vicar, or magiſtrate is directed to declare to the parties that they are legally united in indiſſoluble marriage. Marriages already contracted between Proteſtants may be legalized, and the children of ſuch marriages legitimated, by the parties appearing perſonally, accompanied by four witneſſes, and making a declaration before the curate, vicar, or magiſtrate, of their union, and delivering in an account of the number, age and ſex of their children. The birth of children of diſſenting ſubjects, who have been married in the manner preſcribed by the edict, is thereby ordered to be certified either by baptiſmal record, or by a declaration made before the magiſtrate of the place, by the father and two reſident witneſſes, or in his abſence by four witneſſes alike reſident. Children born of parents whoſe religious perſuaſion does not admit the neceſſity of baptiſm, are merely to have their birth declared, with the ſect of the parents, and proof given that they were married according to the form preſcribed by the edict. By the 27th article the magiſtrates of towns, boroughs, and villages are directed to procure a proper and decent ſpot of ground for the interment of ſuch ſubjects or ſtrangers who cannot be interred in conſecrated ground.

The *Popiſh* clergy are here extremely numerous and wealthy, there being in *Languedoc* three archbiſhops and twenty biſhops, and the whole eccleſiaſtical revenues amount to twenty-five millions forty-one thouſand eight hundred and fifty-two livres per annum (or, 1,001,674 *l.* ſterling.) It has alſo a great number of inferior courts, ſubject to the ſupreme ones, which are the parliament of *Toulouſe*, and the chamber of accompts and taxes at *Montpellier*. The parliament conſiſts of the clergy, the nobility, and the commons, who are called together by the king annually in October.

The principal places in this province are the following:

TOULOUSE, or THOULOUSE, the capital of *Languedoc*, and one of the moſt ancient cities in the kingdom, is ſituated, according to *Dr. Maſkelyne*, in 43° 36′ N. lat. and in 1° 21′ E. longitude from *Greenwich*, in a diſtrict called the *Toulouſain*, in a moſt delightful plain on the *Garonne*, and, next to *Paris*, is ſaid to be the largeſt city in the kingdom. The circumference is ſaid to be about four miles. The ſtreets are moſtly broad, and the houſes built of brick; it is not, however, very populous, and though ſo finely ſituated, its trade is inconſiderable, the ſtaple article being *Spaniſh* wool. The genius of the citizens of *Toulouſe*, inclines more to letters than to commerce. The law draws to it many perſons, the church alſo ſwallows up a large portion of the inhabitants: poverty and idleneſs take poſſeſſion of the inferior claſs. The *Capitoulat*, or chief municipal magiſtracy, which is compoſed of eight perſons, holds out a temptation to every wealthy merchant which greatly tends to check the ſpirit of trade; for, as the office confers the rank and privileges of nobility not only to the perſons inveſted with the dignity, but alſo to their deſcendants, mercantile concerns muſt be renounced; and the capitals, which might be uſefully employed in commerce, are otherwiſe diſpoſed of.

This city is the ſeat of an intendency and receiver's office, of a governor, a provincial court, a royal tribunal, an admiralty, a foreſt-court, a mint, and other public offices; it is alſo the reſidence of an archbiſhop, and the ſecond parliament of the kingdom. The dioceſe of the archbiſhop contains two hundred and fifty pariſhes, his revenue amounts to ſixty thouſand livres a year, (2400 *l.* ſterling) and his taxation at the court of *Rome* is five thouſand florins.

According to *Mr. Swinburne*, this city is crowded with churches. The cathedral is an ancient handſome ſtructure, but contains nothing remarkable: in the ſpacious area before it is a fountain, over which is an obeliſk curiouſly wrought. In the church of St. *Sernin*, or St. *Saturnin*, are ſaid to lie thirty bodies of ſaints, and among them ſeven of the Apoſtles, one of whom they pretend to be St. *James the Younger*, though St. *Jago de Compoſtella*, in *Spain*, alſo boaſts of being poſſeſſed of the body of that Apoſtle. Near this city ſtands a ſecularized abbey. The church of *Là Dorade* is thus called from a gilded, but now a coal black image of the *Virgin Mary*, which ſtands on the great altar, and in any time of calamity is the conſtant refuge of the inhabitants. The name of the ſtatuary was *Luke*, which being marked on the baſe, has made the common people imagine that this image was carved by St. *Luke*. The church of the *Carmelites* has a large and magnificent chapel; that of the *Dominicans* is alſo large and ſplendid. Under the choir of the *Franciſcan* church is a vault, where bodies dry without mouldering or putrefaction; but become extremely light. The ſociety of the *Blue Penitents* in this city is one of the moſt renowned fraternities in the whole kingdom, having in its regiſters kings, princes of the blood, and eminent eccleſiaſtics. Here the Inquiſition was firſt eſtabliſhed; and the proceedings which terminated in the condemnation and execution of *John Calas*, for the imputed murder of his ſon, in 1761, prove that the ſeeds of the fanaticiſm and prieſtly cruelty which produced that cruel tribunal, are not yet deſtroyed in this province.

The univerſity of *Toulouſe* is reputed the ſecond in *France*, and conſiſts of ſeveral colleges. The four faculties, namely, divinity, law, philoſophy, and phyſic, with the liberal arts, are taught here. Here is alſo an academy of polite literature, founded by royal patent in *September* 1694. It is called *Les Jeux Fleuraux*, and every year, on the third day of *May*, they give away four prizes, one of gold and three of ſilver flowers, to thoſe who diſtinguiſh themſelves by writing the beſt copy of verſes. The above ſociety meets in the town-houſe, which is a ſpacious building called the *Capitolium*, in which there is a white marble ſtatue of *Clementia*, who is ſaid to have inſtituted the above-mentioned *Floral* prizes in the year 1340.

The hall of this ſtructure is adorned with the buſts of the illuſtrious and celebrated natives of *Toulouſe*, as alſo of two Gothic kings, ſome counts of *Toulouſe*, and ſeveral diſtinguiſhed civilians. There are here preſerved five large parchment folios, finely written and illuminated, being the annals of the city from the year 1288 to the preſent time.

Here is alſo an academy of ſciences and liberal arts. The ſtone bridge over the *Garonne*, which was built by *Francis Manſard*, is a hundred and thirty-five fathoms long, and twelve broad; it reſts on ſeven arches of different magnitudes; but, except the corners, which are of ſtone, is wholly built of brick. The only remains of antiquity here are the brick arches of a ſmall amphitheatre. *Swinburne's Travels, II.* 358.

NARBONNE, the ancient NARBO, is a fortified city, ſixty-four miles to the weſt of *Montpellier*, ſeated on a canal which paſſes through it, and joins the river *Aude*, according to *Dr. Maſkelyne*, in 43° 11′ N. latitude, and 3° E. longitude from *Greenwich*. It ſtands in a plain, the ſite of which is ſo low as to expoſe the city to inundations from ſeveral adjoining rivers which flow toward the ſalt lakes. *Swinburne, II.* 372. It is the reſidence of an archbiſhop, whoſe province contains a hundred and forty-four pariſhes, and its revenue amounts to ninety thouſand livres per annum, (3600 *l.* ſterling) out of which he pays at *Rome* nine thouſand florins. The cathedral called *St. Juſtus* and *St. Paſtor*, is remarkable for its fine organs and curious paintings, in which are repreſented the raiſing of *Lazarus* from the dead, the laſt judgment, and other pieces. There are alſo five other pariſh churches. The remains of *Roman* antiquities ſtill to be ſeen here conſiſt of ſtones and inſcriptions, chiefly placed in the walls of the court of the archbiſhop's palace; and in the garden is a beautiful *Roman* ſepulchre of white marble. The trade of *Narbonne* depends chiefly upon the exportation of its wheat, which is much eſteemed for ſeed-corn, and, except olives, is the only important production of the dioceſe. It is ſent by a canal to the ſea, where it is ſhipped for thoſe provinces along the coaſt where little corn is grown. This place is likewiſe famous for its honey.

MONTPELLIER, in Latin MONS PESSALANUS, is ſeated on a hill by the river *Lez*, fifty miles to the north-eaſt of *Narbonne*, according to *Dr. Maſkelyne*, in 43° 36′ N. lat. and 3° 53′ E. long. from *Greenwich*; and, next to *Toulouſe*, is the moſt conſiderable city in *Languedoc*. It has many fine houſes; but the ſtreets are very narrow, which is attended with this convenience, that in hot weather they have linen awnings drawn over them, under which a perſon may walk without being incommoded by the ſun. The air here is ſo pleaſant and healthy, that numbers of foreigners, and eſpecially of the *Engliſh*, reſort hither for the recovery of their health, particularly when labouring under hectic diſorders. The city is adorned with ſeveral ſtately edifices, as the hall of juſtice, the churches of *St. Peter* and the *Virgin Mary*, and a ſtrong citadel flanked with four royal baſtions, which commands the town and the neighbouring country. In the ſquare of *Louis the Great*, which is without the city, is the pleaſant walk of *Peyron*, in which ſtands an equeſtrian ſtatue of that monarch in bronze, upon a pedeſtal of a greyiſh white marble: this the ſtates of *Languedoc* erected in honour of him. *Mr. Swinburne* calls this walk "the grandeſt in *Europe*." *Travels, II.* 380.

The *univerſity* here is particularly famous for phyſic, it being founded by phyſicians who were expelled *Spain* in the year 1180. The ſcarlet gown of that wanton and ſportive philoſopher *Rabelais*, with which all doctors of phyſic are inveſted at taking their degrees, has long ceaſed to be an original, the ſtudents having, from time to time, cut off little ſlips, ſo that the robe now uſed is ſaid to be at leaſt the third or fourth ſubſtitute. The privileges of this univerſity are very conſiderable, and it boaſts having taught, or enrolled among its members, many of the greateſt phyſicians *France* has produced in the laſt or preſent century. Some of the moſt honourable privileges which this ſeminary enjoys are ſaid to have been obtained by the favour of *Rabelais*, of witty memory. In 1706 a royal academy of ſciences was founded here, and they have an excellent phyſic garden, in which public lectures on botany are read. The inhabitants are principally employed in making *verdigris*, likewiſe in manufacturing *dimities*, *ſilks*, and *woollen ſtuffs*; they have alſo a conſiderable trade in *wool* brought from the *Mediterranean*, in wine, aqua-vitæ, Hungary-water, cinnamon-water, &c.

The walls of this city were built in the year 1208, by a ſon of *Simon* the victorious, king of *Arragon*, to whom his father gave the kingdom of *Majorca* and the earldom of *Montpellier* as an appanage. They encloſe a round knoll. The city formerly belonged to the Proteſtants, as one of their cautionary towns; and though *Henry* IV. made over to them this and other places, his ſon *Louis* XIII. took it from them, after a vigorous defence, in 1622.

FRONTIGNAC, or FRONTIGNAN, a ſmall town ſeated on the lake of *Thau*, ſeventeen miles to the ſouth-weſt of *Montpellier*, is remarkable for its excellent muſcadine wine, its jar-raiſins, and its handſome town-houſe. This wine is called by the *Engliſh*, *Frontiniac*. The above lake, which is alſo called *Maguleone*, is twelve leagues in length, and ſeparated from the ſea only by a narrow tract of land; but in one place has a communication with the gulf of *Lyons*, which, according to *Buſching*, takes not its name from the city of *Lyons*, which is ſeated at a great diſtance from the ſea, but rather from the violent ſtorms ſo frequent in this ſhallow part of the *Mediterranean*, and which deſtroy the ſhips as a furious lion does its prey.

NISMES, or NIMES, in *Latin* NEMAUSUS, a large city, thirty miles to the north of *Montpellier*, is very pleaſantly ſituated, it having on one ſide hills covered with vines, and on the other a very fertile plain. The ſtreets are in general narrow, but kept clean, and the houſes, which are of ſtone, are handſomely built. One third of the inhabitants are ſaid to be ſecret *Proteſtants*. In this city is an academy of polite literature, founded in 1682. It is defended by a citadel conſiſting of four baſtions. There are here ſuch a multitude of manufactures, that its cloth and ſilk trade alone exceeds that of the whole *province*.

In this city and its neighbourhood are ſeveral illuſtrious monuments of antiquity: one of the principal of theſe is an amphitheatre, ſaid to be the leaſt damaged of any in *Europe*.

At no great diſtance from the city, and a mile and a half from the market-town of REMOULINS, is a bridge called *Pont du Guard*, a moſt valuable piece of *Roman* antiquity, it being part of the greateſt aqueduct by which the ſpring of *Eure* was carried the length of nine hours, or twenty-ſeven miles diſtance, to *Niſmes*, and there diſtributed in the amphitheatre, public fountains, and private houſes. The above bridge conſiſts of three ranges of arches, built one upon another, over the river *Gardon*, and thus connecting the high rocks on both ſides the river, ſo as to afford a free paſſage to the water of the ſpring abovementioned, from one mountain to the other. The lower part conſiſts of ſix arches, four hundred and thirty-eight feet in length, and eighty-three in height. The ſecond conſiſts of eleven arches each, fifty-ſix feet in diameter, and ſixty-ſeven in height; and is of ſuch an extraordinary width, that, beſides the pillars on which the upper part or range of arches reſts, there is a horſe and foot-way leading through it, ſecured by a breaſtwork. The third range, which reſts on the ſecond, and is five hundred and eighty-five feet and a half in length, conſiſts of thirty-five arches, each of which is ſeventeen feet in diameter; and over this uppermoſt range runs the aqueduct, which is of ſuch a height and breadth, that with a little inclination of the body a perſon may walk in it. The whole is of a very hard and durable freeſtone. From an eminence towards *Uzez*, a ſmall epiſcopal town, near the ſpring of *Eure*, are here and there ſeen entire ranges of arches, all which belong to this vaſt aqueduct.

QUISSAC is a ſmall place ſeated on the *Vidourle*, between which and the town of *Sauve*, at the foot of a mountain near the river, is a periodical ſpring, which runs and intermits twice in twenty-four hours. The flow laſts ſeven hours twenty-five minutes, and the intermiſſion five hours. This is ſuppoſed to be occaſioned by a cave or reſervoir in the mountain, which being filled every five hours, diſcharges itſelf through a canal in the form of a ſiphon. This water is drank as a mineral, and when heated is uſed for bathing. It contains a conſiderable quantity of ſulphur, and is reputed very good for all diſorders of the eyes.

In *Languedoc* is the diſtrict of *Albigeois*, from whence the *Albigenſes* take their name, they being a brave and upright people, who ſo early as the eleventh century oppoſed popery, and profeſſed to adhere to the pure doctrines of the Goſpel, amidſt the violent perſecutions which their integrity drew upon them. The country produces plenty of corn, wine, fruit, and ſaffron; but the people are poor. The capital of this country is ALBY, the cathedral of which is one of the richeſt and fineſt buildings in the kingdom: the epiſcopal palace is alſo very noble. The walk called *La Lice*, a little above the city, is extremely pleaſant, and the little town of *Chateauvieux* forms a handſome ſuburb. At a council held here in 1176, the doctrines of the *Albigenſes* were anathematiſed.

SECT XVII.

Of the Governments of ROUSILLON *and* FOIX; *their Situation, Extent, Mountains, Produce, Rivers, and Trade; with a Deſcription of the City of* PERPIGNAN.

THE county of ROUSILLON is ſeparated to the north from *Languedoc* by the *Leſſer Pyrences*, to the eaſt it borders on the *Mediterranean*, and to the ſouth and weſt is divided by the large *Pyrenean mountains* from *Catalonia* and *Cerdagne*. Its length from eaſt to weſt is about fifty miles, and it is twenty-five in breadth. Its name is derived from its ancient capital *Ruſcino*.

Among the ſeveral mountains here, the higheſt are thoſe of *Maſſane* and *Canigou*; the latter of which is ſaid to be fourteen hundred fathoms in height. This country is on all ſides environed with mountains; and the ſummer-heats are ſo intenſe, that the inhabitants are almoſt univerſally ſwarthy and meagre.

The ſoil is very fruitful in corn, wine, and forage; and in ſome parts ſo uncommonly fertile, that, after the corn harveſt is got in, they ſow millet, and thus procure two, and ſometimes three harveſts in a year. Mules are here uſed for the plough. The wealth of the country conſiſts in olives and oranges, which are almoſt as common here as apples and pears in *Normandy*. They have very little wood, and that only of ſhrubs; and from their want of navigable rivers, the only way of being ſupplied with goods from other countries is by means of mules.

The inhabitants have a conſiderable number of ſheep, which are much eſteemed for the uncommon delicacy of their fleſh. Oxen are alſo fattened here, for the gratification of the wealthy; but the breeding of cows is neglected, their milk being of a bad quality; the pigeons, quails, and partridges of *Rouſſillon* are excellent. The chief branch of trade in this province is oil, which they ſell to the annual amount of two hundred thouſand livres; (8700*l.* ſterling) they alſo export corn, millet, and wool.

The *Tet*, *Tec*, and *Agly*, its only rivers, are no more than rapid brooks, which diſcharge themſelves into the ſea. Here are alſo hot-baths; and at *Cannet*, and the lake of St. *Nazaire*, the ſea water is conveyed into canals, and there converted into ſalt by the heat of the ſun.

This country, which formerly belonged to the king of *Arragon*, was taken by *Louis* XIII. and by the peace of the *Pyrenees* in 1669 was ceded to *France*. It contains but one biſhoprick. At *Perpignan* is a ſuperior court, or council, to which lie appeals from all the inferior courts. In it is alſo a mint. The contributions payable by the inhabitants conſiſt of a poll-tax, which produces about forty thouſand livres, (1750*l.* ſterling).

PERPIGNAN, in Latin PERPENIACUM, the capital of the country, is ſeated on the river *Tet*, partly in a plain, and partly on a hill. It is fortified with a high and thick wall, ſtrengthened with baſtions: It has alſo a citadel, which is a fine work, and the ſuburbs are likewiſe defended by a fort. It is, however, a place of no great extent; but is very populous, there being here a ſuperior royal council, or high court of juſtice, an intendency, a chancery, a ſalt-office, and a mint. Its biſhop is ſuffragan to the archbiſhop of *Narbonne*, and has a dioceſe of a hundred and eighty pariſhes. Beſides the cathedral it has four pariſh churches, a ſeminary, twelve convents, and had two convents of *Jeſuits*. It has likewiſe an univerſity, founded in 1349, with ſeveral alms-houſes and hoſpitals. Among the other public buildings is a large cannon foundry. The greateſt diſadvantage of this city is the want of good water fit for drinking.

The government of FOIX contains the diſtrict and county of *Foix*, with the territories of *Andorre* and *Donezan*. It is bounded on the north and eaſt by *Languedoc*, on the ſouth by the *Pyrenean mountains* and *Rouſſillon*, and on the weſt by *Gaſcony*. The principal rivers are the *Auviege* and the *Rize*. This country is a dependency on the parliament of *Toulouſe*, and conſtitutes part of the lands of the ſtates, who are annually called together by the king. Its trade conſiſts of cattle, raſins, turpentine, pitch, cork, jaſper, and particularly iron.

UPPER FOIX lies among the mountains, and all its products are wood, iron, and mineral waters, with ſome paſtures. In this country are ſeveral caverns, in which are very ſingular figures, formed by the petrifying quality of the waters. LOWER FOIX produces ſome grain and wine. There are in this government four ſmall towns.

The little diſtrict and ſovereignty of DONEZAN, juſt mentioned, is nine miles in length, and the ſame in breadth; it is ſeparated from the county of *Foix* by a chain of mountains, and contains nine market-towns and villages. The territory or valley of ANDORRE has alſo ſeveral villages.

SECT. XVIII.

Of the Government of Lower Navarre *and* Bearne; *their Situation, Extent, Hiſtory, Produce, and principal Cities.*

WE have already deſcribed that part of *Navarre* which belongs to *Spain*, in treating of that kingdom, and now come to *French*, or *Lower Navarre*, which is united under the ſame government with the principality of *Bearne*. Theſe two contiguous countries are bounded on the north and eaſt by *Gaſcony*, on the ſouth by the *Pyrenean mountains*, and on the weſt by another part of *Gaſcony*.

Lower Navarre is one of the ſix bailiwics which formerly compoſed the kingdom of *Navarre:* but in 1512, *Ferdinand*, king of *Arragon* and *Caſtile*, having, under frivolous pretences, poſſeſſed himſelf of the kingdom of *Navarre*, all that *Catharine*, the lawful heireſs, and her huſband, *John d'Albret*, could procure to be reſtored to them was this little ſpot. They were alſo poſſeſſed of *Bearne*. *John*, their ſon, had no better ſucceſs; he poſſeſſed the ſame countries, but the title of ſovereign was confined to the ſcanty remnant of *Navarre*, which was called a kingdom. *Johanna*, his daughter, in 1584 married *Anthony* of *Bourbon*, to whom ſhe brought the above-mentioned countries as a dowry. Their ſon *Henry* became king of *France*, and was the fourth of that name: his ſon and ſucceſſor *Louis* XIII. annexed *Lower Navarre* and *Bearne* to the crown of *France*.

The kingdom or province of *Lower Navarre*, ſeparately conſidered, is bounded on the north by *Gaſcony*; on the eaſt by a part of *Gaſcony* and *Bearne*; on the ſouth it is ſeparated from *Upper Spaniſh Navarre* by the *Pyrenean Mountains*; and on the weſt borders on *Labourd*, a diſtrict of *Gaſcony*; extending only twenty-four miles in length, and fifteen in breadth.

The country is mountainous, and produces little. The inhabitants ſpeak the *Baſque* dialect, which is the ſame with that of *Biſcay*. The principal rivers are ſmall; they are the *Nive*, which has its ſource from the *Spaniſh* mountains, and the *Bidouſe*, which has its ſource here; and both fall into the *Adour*.

In the whole country of *Lower Navarre* there is neither abbey, collegiate church, nor convent; the only eccleſiaſtical buildings remaining here being four parochial priories. The Reformation ſpread here during the reign of *Henry* II. king of *Navarre*; but in 1694 there was, at leaſt in appearance, a general return to the *Romiſh* church. In *Bearne* are two biſhoprics. The whole government is ſubject to the juriſdiction of the parliament of *Pau*; yet both *Lower Navarre* and *Bearne* have ſtates of their own, each paying the king annually four thouſand eight hundred and ſixty livres, (213l. ſterling) as an ordinary contingent, with two thouſand more toward the maintenance of the troops. To the governor they allow ſeven thouſand ſeven hundred and forty livres, and to the deputy-governor two thouſand ſeven hundred and forty.

Lower Navarre is divided into five diſtricts, its principal town is

ST. JEAN PIED DE PORT, or "St. John at the foot of the Gate," which is ſituated at the entrance of the paſs that leads through the *Pyrenean Mountains* into *Spain*. It ſtands on the river *Nive*, twenty miles to the ſouth-eaſt of *Bayonne*, and has a citadel placed on an eminence that commands the paſs.

In *Lower Navarre* are only three or four other ſmall towns, and ſome inconſiderable villages.

The principality of BEARNE is of much greater extent, it being about forty-eight miles in length, and thirty-ſix in breadth; but is mountainous, and, except in the plains, generally barren. Some of the mountains contain mines of copper, iron, and lead, and are covered with pines fit for maſts and planks; very little wheat or rye is produced in this country; but great quantities of maillac, which is a kind of *Indian* corn, and alſo flax: but the very rocks are planted with vines, and in ſome places the inhabitants make excellent wine.

The chief cities in this principality are *Pau*, *Oleron*, and *Navarreins*.

PAU, in Latin *Palum*, the capital, ſtands on an eminence, at the foot of which runs the river *Gave Bernois*. It is ninety-ſeven miles to the ſouth of *Bourdeaux*, and is the ſeat of a parliament and a bailiwic. It has a caſtle in which *Henry* IV. was born; alſo five convents, two hoſpitals, and at the expulſion of the *Jeſuits* they had a college here. It is a ſmall but pretty town, and ha manufactures of cloth.

OLERON is a ſmall but populous city, ſeated on the banks of the river *Gave*, which, from this city, is called the *Gave of Oleron*, ten miles to the ſouth-weſt of *Pau*. It has a bailiwic-court, and is the ſee of a biſhop, who is ſuffragan to the archbiſhop of *Auch*, and has a dioceſe containing two hundred and ſeventy-three pariſhes, with a yearly revenue of thirteen thouſand livres (569l. ſterling) out of which he pays ſix hundred florins to the See of *Rome*. Its trade was formerly much more conſiderable than it is at preſent.

NAVARREINS, a town built by *Henry d'Albret*, king of *Navarre*, and prince of *Bearne*, is alſo ſituated on the *Gave of Oleron*, ſixteen miles to the ſouth-eaſt of *Bayonne*. It ſtands in the midſt of a fertile plain, and is a ſquare city, pretty well built. It is the ſeat of a governor, and a king's lieutenant. It is ſurrounded with walls; but is not very ſtrong, being commanded by the neigbouring hills.

SECT. XIX.

Of GUIENNE *and* GASCONY; *their Situation, Extent, Produce, Rivers, Hiſtory, Government, and principal Cities; particularly* Bourdeaux, Perigord, Agen, Montauban, Auch, *and* Bayonne.

THE government of *Guienne* and *Gaſcony* is bounded on the north by *Saintonge*, *Angoumois*, *Limoſin*, and *Auvergne*; on the eaſt by *Auvergne* and *Languedoc*; on the ſouth by the *Pyrenean Mountains*; and on the weſt by the bay of *Biſcay*. Its extent from ſouth to north is about eighty leagues, and from eaſt to weſt about ninety. This country was formerly a part of the ancient kingdom of *Aquitaine*, and abounds in corn, wine, fruit, hemp, and tobacco. Its trade in wine in particular is ſo very conſiderable, that the city of *Bourdeaux* alone exports annually a hundred thouſand tons. It alſo produces brandy, prunes, and many other commodities. It has likewiſe mines of copper, and fine quarries of marble of all colours.

It has ſeveral ſprings of medicinal waters, and its principal rivers are, the *Garonne*, which receives many ſmall ſtreams; and the *Adour*, which riſes in the mountains of *Bigorre*, and falls into the ocean.

Charlemagne created his ſon *Louis* king of *Aquitaine*, but ſoon after this kingdom was divided into the duchies of *Aquitaine* and *Gaſcony*, which, by the marriage of *William* IV. duke of *Aquitaine*, with *Briſce*, heireſs to *Gaſcony*, were united, and continued in that family till the year 1150, when by the marriage of *Eleanor* with *Henry* II. king of *England*, this duchy fell to that crown, and during almoſt three hundred years was ſubject to the *Engliſh*, who were diſpoſſeſſed of it by *Charles* VII. in 1453. *Louis* XI. in 1469, conferred it on his brother *Charles*, who was the laſt duke of *Guienne*, it being on his deceaſe again annexed to the crown of *France*. In 1753, the title of duke of *Aquitaine* was revived in the perſon of the *Dauphin*'s ſecond ſon. In this government is an archbiſhop, with nine ſuffragans.

BOURDEAUX, in Latin *Burdigala*, the capital of *Guienne*, is ſituated on the *Garonne*, according to Dr. *Maſkelyne*'s tables, in 44° 50′ N. latitude, and in 35′ W. longitude from *Greenwich*; two hundred and ſixty miles to the ſouth-weſt of *Paris*. It is pretty large and populous, having a great number of ſtately houſes built of ſtone; but they are old, and the ſtreets very narrow. The inhabitants are ſaid to amount to forty thouſand. The neweſt and handſomeſt part of the city is the *Royal Square*, near the harbour; in which ſtands a grand magazine, and the exchange. This ſquare is adorned with a ſtatue of *Louis* XIV. in braſs. *Bourdeaux* is a place of conſiderable traffic, it being reſorted to by merchants from moſt parts of *Europe*. Its haven, which is very capacious and ſafe, is called *Le Port de la Lune*, or the *Port of the Moon*, from its being in the form of a creſcent. The tide flows into it very high, and carries ſhips of large burden up to the quay. This city itſelf is in the form of a triangle, the two ſhort ſides toward the ſea, and the largeſt toward the river *Garonne*. The palace, the town-houſe, the handſome markets, the public fountains, the quay, and the cathedral dedicated to *St. Andrew*, are worth the attention of a traveller; as is alſo the caſtle called the *Chateau Trompette*, which ſtands at the entrance of the quay, and commands the whole harbour. There is alſo another caſtle, at the other end of the quay, called *Le Chateau de Haa*, which is alſo very ſtrong: in both theſe fortreſſes a garriſon is conſtantly kept. There is alſo a fort called *St. Louis*, or *St. Croix*; but it is of no great importance. During the reign of *Louis* XIV. the fortifications of *Bourdeaux* were conſtructed by *Vauban*; but the ramparts are now ſaid to be ruinous. At the mouth of the *Garonne*, ſix leagues below the city, ſtands, on a ſmall iſland, a ſtately watch-tower, where they light flambeaux every night for the direction and ſecurity of ſuch veſſels as ſail up or down that river; a precaution highly neceſſary, on account of the many rocks and ſhelves which lie in it.

This city is the ſee of an archbiſhop, the ſeat of a parliament, a court of aids, a ſeneſchalſhip, a provincial tribunal, an admiralty, and a treaſurer's office. It has alſo an exchange and a mint. The archbiſhop has nine ſuffragans under him, with a province of four hundred and fifty pariſhes, beſides about fifty chapels of eaſe. His revenue is fifty-five thouſand livres per annum (2506l. ſterling) and his taxation at the court of *Rome* four thouſand florins. The cathedral is a large *Gothic* ſtructure, which contains nothing remarkable but the ſilver ſhrine of relics on the great altar. The church and convent of the *Dominicans* are new and elegant ſtructures, but thoſe belonging to the *Carthuſians* have a ſplendor ſeldom ſeen in any convents of that Order. In this city is likewiſe an abbey of *Benedictines*, of the Order of *St. Maur*. The *Jeſuits* had, till their expulſion in 1764, a fine college here. The univerſity was founded in 1441, and in 1712 the king erected here an academy of ſciences and polite arts.

There are ſtill here ſome viſible remains of *Roman* antiquities, particularly an amphitheatre built by the emperor *Gallienus*, whoſe place it is called; only ſome parts of the ſide walls are ſtanding, with the two principal gates.

The trade of this city is very conſiderable, and for its improvement a kind of toleration is granted to the *Engliſh*, *Dutch*, *Danes*, *Hamburghers*, and *Lubeckers*, and even to the *Portugueſe Jews*; but theſe laſt have no ſynagogue, nor are any Proteſtants indulged in the public exerciſe of their religious worſhip, only the *Engliſh* are connived at, and have a miniſter in a lay habit, and the other foreign Proteſtants are not prohibited reading a ſermon privately to their families. The *Scots*, on account of the ſervices they formerly performed for the *French*, have conſiderable privileges allowed them in this city, and a gate of *Bourdeaux* bears the enſigns of one of the name of *Douglas*; even to this day *Scottiſh* veſſels have peculiar immunities allowed them in trade, and from this port they generally ſhip their wines. In this city *Edward the Black Prince* reſided for ſome years, during which time his ſon, afterward *Richard* II. king of *England*, was born.

PERIGUEUX, the capital of a very large diſtrict named *Perigord*, the ſee of a biſhop and the ſeat of a bailiwic, and a court of juſtice, is ſeated on the river *Iſle*, in a fine country, ſixty-five miles to the north-eaſt of *Bourdeaux*; the biſhop is ſubordinate to the archbiſhop of *Bourdeaux*, and has a dioceſe containing four hundred and fifty pariſhes. This city has four convents, one hoſpital, and had a college of *Jeſuits*. The old town is called *La Cité*; and the new town, which is about a hundred paces diſtant, is named *La Ville*.

AGEN, the capital of a diſtrict called the AGENOIS, is pretty large and well inhabited. It is ſeated on the river *Garonne*, ſeventy-five miles to the ſouth-eaſt of *Bourdeaux*. The biſhop ſtyles himſelf count of *Agen*, but this is only a titular honour; he is ſuffragan to the archbiſhop of *Bourdeaux*, under whom he has a dioceſe of three hundred and ſeventy-three pariſhes, and one hundred and ninety-one chapels of eaſe. There are here a cathedral and a collegiate church, two pariſh-churches, with ſeveral convents; and there was here a college of *Jeſuits*. This city is finely ſituated for trade, but makes little advantage of it.

MONTAUBAN, in Latin *Mons Albanus*, a well-built handſome city, in the diſtrict of *Lower Quercy*, is ſeated on the river *Tarn*, twenty-ſeven miles to the north of *Toulouſe*, and is the ſee of a biſhop, with the ſeat of a court of aids, a provincial court, and a bailiwic. It properly conſiſts of three parts, the Old and New Town, with the town of *Bourbon*, which lies on the other ſide of the river, and is a ſuburb. In this city are two collegiate churches, an academy of polite literature, one ſeminary, eight convents, and a general hoſpital; it had alſo a college of *Jeſuits*. Its principal trade conſiſts of woollen ſtuffs.

In 1562, the inhabitants became Proteſtants, and fortified the city in ſo ſtrong a manner, that *Louis* XIII. beſieged it in 1621 without ſucceſs, and was unable to reduce it till the year 1629, when he cauſed its fortifications to be razed.

GASCONY, called by the French GASCOGNE, conſtitutes the ſouth part of the government of *Guienne*, and includes the country lying between the *Garonne*, the ocean, and the *Pyrenean Mountains*. It receives its name from the *Gaſcones* and *Vaſcones*, by the moderns called *Baſques* or *Vaſques*, a people who lived on the *Pyrenean Mountains* in *Spain*, and toward the cloſe of the ſixth century ſettled on the north-ſide of thoſe mountains, where they defended themſelves againſt the *Franks*; but were at laſt obliged to ſubmit. It is bounded on the north by *Guienne*; on the weſt by *Languedoc* and the county of *Foix*; on the ſouth by the *Pyrenean Mountains*, which ſeparate it from *Spain*; and on the weſt by the ſea of *Gaſcony*, or bay of *Biſcay*. The inhabitants are ſaid to have quick parts, but are ſo addicted to boaſting, that from them the term *gaſconade* is become proverbial for bragging ſtories. The country is not very fertile, it producing little corn, though it has great plenty of fruit, and the mountains afford timber fit for building ſhips. The principal places in this province are the following:

AUCH, the ancient *Eluſaberris*, and afterward AUGUSTA, is the capital of the diſtrict of *Armagnac*, and of all *Gaſcony*. It ſtands on the ſide and top of a hill, at the foot of which runs the river *Gers*, thirty-ſeven miles to the weſt of *Toulouſe*, and is divided into the *Upper* and *Lower Town*, between which there is a communication by means of two hundred ſtone ſteps. This place is the ſee of an archbiſhop, and has an intendency, a treaſurer's office, a bailiwic, a provincial and royal court. The lordſhip of this city is divided between the archbiſhop and the count of *Armagnac*. The dioceſe conſiſts of three hundred and ſeventy-two pariſh churches, and two hundred and ſeventy-ſeven chapels of eaſe, and the revenue of the archbiſhop is ninety thouſand livres (3937l. ſterling) out of which he pays to the court of *Rome* ten thouſand florins. The cathedral is one of the moſt magnificent in the kingdom; the chapter is compoſed of fifteen dignitaries, and twenty-five canons; and among the latter there are five which are only honorary. The king himſelf is the firſt of them, as count of *Armagnac*; the four others are the barons of *Monteſquieu*, *Montaut*, *Pardaillau*, and *L'Iſle*.

BAYONNE, in Latin *Lapurdum*, the capital of the diſtrict of *Labourd*, is ſeated, according to Dr. *Maſkelyne's* tables, in 43° 29′ N. lat. and 1° 30′ W. longitude from *Greenwich*, at the junction of the *Adour* and *Nive*, near the mouth of the former; and a little below the city they diſcharge themſelves into the bay of *Biſcay*. It is of pretty conſiderable extent, and is the ſee of a biſhop: it has alſo a bailiwic-court, an admiralty, and a mint. The name of *Bayonne* is compounded of two *Baſque* words *Baia* and *Ona*, ſignifying a good harbour, and it well deſerves that title; it is accordingly much frequented, though the ſhallows render the entrance to it ſomewhat difficult.

This is the only place in *France* that has the advantage of being ſituated on two rivers, into which the tide flows; the *Nive* runs through it, and the *Adour* cloſe by its walls; ſoon after which they unite, and divide the city into three parts; that called the *Great Town*, lies on the ſide of the *Nive*; the *Little Town* is between the *Nive* and the *Adour*; and the ſuburb of *St. Eſprit*, in which great numbers of *Jews* reſide, lies on the other ſide of the river. The two firſt parts, beſides their other works, have each a ſmall fort; the ſuburb has good fortifications, and a regular ſquare citadel, which ſtanding on an eminence, commands the three ſeveral parts of the city, the harbour and the adjacent country. Moſt of theſe works were repaired and improved by *Vauban*, for though the city is not very large, it is of the utmoſt importance, from its being one of the keys to *France* by the ſide of *Spain*.

Beſides its cathedral and collegiate church, the ſuburb has another collegiate church; in this city are likewiſe five convents, and one college. But neither the cathedral, which is dedicated to the *Holy Virgin*, nor any of the other public or private buildings, have any thing remarkable.

SECT. XX.

Of the Situation, Extent, Produce, and Rivers of the Government of AUVERGNE, *with an Account of its principal Cities.*

THE government of *Auvergne*, which takes its name from its ancient inhabitants the *Averni*, is bounded on the north by *Bourbonnois*; on the eaſt by *Forez*, a large diſtrict in the government of *Lionnois*; on the ſouth by *Guienne* and the *Cevennes*; and on the weſt by *Limoſin*, the diſtrict of *Quercy* in *Guienne*, and *La Marche*; and is about a hundred miles in length, and ſeventy-five in breadth.

LOWER AUVERGNE is a very pleaſant fertile country, abounding in corn, wine, fruit, forage, and hemp; it far excels *Upper Auvergne*, which is cold, and full of mountains, that are covered with ſnow ſeven or eight months in the year, though its paſtures are excellent, and the inhabitants deal largely in cattle. The ſituation of the mountains occaſions the winds to blow in ſuch eddies, that no windmills ſucceed here.

The principal rivers are the *Allier*, which riſes in the *Gevaudan*, and falls into the *Loire*; the *Dordogne*, which ſprings from *Mont d'Or*, the higheſt mountain in the country; the *Allagnon*, which riſes in Mount *Cantal*, and after a rapid courſe falls into the river *Allier*.

The higheſt mountains in this country are *Le Pui de Dome*, the perpendicular height of which is eight hundred and ten fathoms; the *Cantal* nine hundred and eighty-four; and *Mont d'Or* one hundred and thirty: the two latter are no leſs famous for the curious plants that grow on them. At *Pontgibaud* is a ſilver mine, but the produce not anſwering the expence, the working of it has been diſcontinued; however, the coal mines in the neighbourhood of *Briſac* are very profitable.

Beſides the corn, wine, cattle, cheeſe, coals, and other products of the earth, many manufactures are carried on in this country, particularly ſilks, ſtuffs, cloths, very beautiful laces and paper, which is eſteemed the beſt in all *Europe*. Every year ſome thouſands of labourers go from hence to get in the harveſt in *Spain*, and return with the beſt part of their earnings.

The whole country is ſubject to the parliament of *Paris*, but is governed by different laws; *Lower Auvergne* having a particular code of its own, while in *Upper Auvergne* the civil law takes place. This country is divided into five large diſtricts, and two bailiwics. Under its governor are two lieutenant-generals, and two ſub-governors.

ST. FLOUR, the capital of *Upper Auvergne*, ſtands on a mountain of difficult acceſs. It is the ſee of a biſhop whoſe dioceſe conſiſts of two hundred and ſeventy pariſhes. Beſides its cathedral, it has a collegiate church, and had a college of *Jeſuits*. The inhabitants carry on a good trade in grain, this city being, as it were, the general magazine of the neighbouring country, which produces much rye. Its cloth, carpets, and knives, are alſo greatly eſteemed.

AURILLAC, a town which diſputes the title and rank of capital with *St. Flour*, is ſeated in a valley on the banks of the river *Jordane*, two hundred and fifty miles to the ſouth of *Paris*, and thirty to the ſouth-weſt of *St. Flour*. It is pretty well built and populous; it alſo confers the title of count. Here is a diſtrict and bailiwic court; it has likewiſe a caſtle ſeated on a high rock, and a collegiate church, which is properly a ſecularized abbey, the abbot of which is lord of the town, and holds immediately of the pope. Here is alſo an abbey, and four convents. The *Jeſuits* had a college here. In this town are manufactures of tapeſtry and lace.

CLERMONT, the ancient AUGUSTONEMETUM, afterward *Auvergne*, the capital of the whole country, ſtands on a ſmall eminence in *Lower Auvergne*, between the rivers *Artier* and *Bedat*. Its ſtreets are narrow, and the houſes are dark. It contains a tax-chamber, a bailiwic, and a country-court, &c. This was formerly the principal place belonging to the counts of *Auvergne*, who therefore ſtyled themſelves counts of *Clermont*. The biſhop is firſt ſuffragan to the archbiſhop of *Bourges*; he is alſo lord of the ſmall towns of *Billon* and *Croupieres*, and enjoys a dioceſe of eight hundred pariſhes, with a revenue of fifteen thouſand livres, (656l. ſterling) out of which he is taxed at the court of *Rome* four thouſand five hundred and fifty florins. Beſides its cathedral it has three collegiate churches, and three abbies; in that of *St. Allier* the bodies of ſeveral ſaints are ſaid to be depoſited. In the chapel of *St. Vinerand*, and in that of *St. André*, are the tombs of the old counts of *Clermont*, and the dauphines of *Auvergne*. It has likewiſe many convents, and had a college of *Jeſuits*.

In the neighbourhood of this city are wells, where any ſubſtance laid in them ſoon contracts a ſtony cruſt. The moſt remarkable of theſe is that in the ſuburb of *St. Allier*, which has formed a famous ſtone bridge mentioned by many hiſtorians. This bridge is a ſolid rock, compoſed of ſeveral ſtrata formed during the courſe of many years, by the running of the petrifying waters of this ſpring. It has no cavity or arches, till after above ſixty paces in length, where the rivulet of *Tiretaine* forces its way through. This petrifying ſpring, which falls on a much higher ground than the bed of the rivulet, gradually leaves behind it ſome lapideous matter, and in proceſs of time has thus formed an arch, through which the *Tiretaine* has a free paſſage. The neceſſity which this petrifying matter ſeemed to be under of forming itſelf into an arch, could continue no longer than the breadth of the rivulet, after which the water of the ſpring ran regularly under it, and there formed a new petrifaction reſembling a pillar. The inhabitants of theſe parts, in order to lengthen this wonderful bridge, have diverted the brook out of its old channel, and made it paſs cloſe by the pillar, by which means they cauſed the ſpring to form a ſecond arch, and thus they might have produced as many arches and pillars as they pleaſed; but the great reſort of people to ſee this natural curioſity becoming troubleſome to the *Benedictines* of the abbey of *St. Allier*, within whoſe juriſdiction the ſpring lies, in order to leſſen its petrifying virtue, they divided the ſtream into ſeveral branches, which has ſo well anſwered their intent, that at preſent it only covers with a thin cruſt thoſe bodies on which it falls perpendicularly.

pendicularly. But in thoſe over which it runs in its ordinary courſe, no traces of its petrifying qualities are any longer perceivable. It is the only water uſed for drinking in this ſuburb, and no bad effect is felt from it.

SECT. XXI.

Of the two Governments of LIMOSIN, *and* LA MARCHE; *their Situation, Extent, Climate, Produce, Rivers, and principal Towns.*

LIMOSIN, or LIMOUSIN, derives its name from the ancient *Lemovices*, and is bounded on the eaſt by *Auvergne*; on the ſouth by *Guienne*; on the weſt by *Perigord*, in *Guienne*, and *Angoumois*; and on the north by *La Marche* and *Poitou*. Its extent from north to ſouth is about twenty-five *French* leagues, and from eaſt to weſt ſomewhat leſs.

Upper Limoſin is very mountainous, and conſequently cold, but *Lower Limoſin* is more temperate. The former produces little wine, and that too very indifferent, but that of *Lower Limoſin* is extremely good. It produces ſuch numbers of cheſnut-trees, that the inhabitants derive their principal ſubſiſtence from them. The grain which grows here is rye, barley, and *Turkiſh* corn. They have alſo mines of copper, tin, iron, and lead, and in this country are ſome iron works.

Its chief rivers are the *Vienne*, the ſource of which lies in the borders of *Lower Limoſin* and *La Marche*; the *Vezere*, which riſes in the ſame country; the *Coureze*, which falls into the *Vezere*; and the *Dordogne*, which divides *Limoſin* from *Auvergne*, and the diſtrict of *Quercy* in *Guienne*.

The country is ſubject to the parliament of *Bourdeaux*, and beſides its governor, has one lieutenant-general, and two ſub-governors. The principal places it contains are

LIMOGES, in Latin *Lemoviæ*, the capital of the country, which is ſituated on the river *Vienne*, partly on a hill and partly in a valley, thirty leagues to the weſt of *Clermont*. The town is about a league and a half in circumference, but ill-built, the houſes being generally of wood, ſmall, and dark; but the cathedral is a magnificent ſtructure; beſides which it has a collegiate church, three abbies, one convent, and a college and ſeminary, which formerly belonged to the *Jeſuits*. It contains a bailiwic, a county and royal court, with other public offices, and alſo a mint. Its biſhop is ſuffragan to the archbiſhop of *Bourges*, and his dioceſe, which extends over *Upper* and part of *Lower Limoſin*, *La Marche*, and a part alſo of *Angoumois*, contains nine hundred pariſhes; and his revenue amounts to twenty thouſand livres, (875l. ſterling) out of which he pays ſixteen hundred florins to the court of *Rome*.

TULLE, properly *Tuelle*, is a town ſituated in *Lower Limoſin*, near the confluence of the little rivers *Coureze* and *Solane*, fifteen leagues to the ſouth of *Limoges*, and a mile and a half in circumference. It contains about twelve hundred houſes and five thouſand people. Its biſhop, who is lord and viſcount of the town, is ſuffragan to the archbiſhop of *Bourges*; and his dioceſe, which conſiſts of ſeventy pariſhes, brings him in a revenue of twelve thouſand livres, (near 525l. ſterling) out of which he pays to the ſee of *Rome* fourteen hundred florins. It has ſix convents, and had a college of *Jeſuits*.

BRIZE LA GAILLARDE is ſeated near the confluence of the *Coureze* and *Vezere*, ſeventeen leagues to the ſouth of *Limoges*, and five to the weſt of *Tulle*, in a valley environed with little hills, planted with vines and cheſnut-trees; the ſituation being extremely beautiful. It is the only fine town in the province: the houſes are elegantly built, and the walks about it are extremely pleaſant. In this little town are found all the pleaſures and conveniences of life. It contains about a thouſand houſes and five thouſand perſons.

The government of LA MARCHE is bounded on the north by *Berry*; on the eaſt by *Auvergne*; on the ſouth by *Limoſin*; and on the weſt by *Poitou*; it being about twenty-two *French* leagues in length from north to ſouth, and eight in breadth from eaſt to weſt.

It is, like *Limoſin*, divided into *Upper* and *Lower*, and the ſoil and climate in both are the ſame. Its principal rivers are the *Vienne*; the *Great* and *Little Creuſe*, which diſcharge themſelves into the *Vienne*; the *Cher*, and the *Gartempe*, the latter of which falls into the *Creuſe*. The upper parts of the diſtrict are pretty fruitful in corn.

GUERET, the capital of the *Upper* and *Lower Marche*, is ſeated on the river *Gartempe*, ten leagues to the north-eaſt of *Limoges*: in this place the courts of juſtice are held; but it has only one pariſh church, one college, one priory, two convents, and an hoſpital. The other places in this government are equally inconſiderable.

SECT. XXII.

Of the Government of SAINTONGE *and* ANGOUMOIS; *their Situation, Extent, Produce, Rivers, and principal Cities.*

SAINTONGE is bounded by *Poitou* and *Aunis* on the north; by *Angoumois* and *Perigord* on the eaſt; by *Guienne* and the river *Gironde* on the ſouth; and by the *Bay of Biſcay* on the weſt; extending twenty-five leagues in length, and twelve in breadth. It derives its name from the *Santoni*, its ancient inhabitants.

The country abounds in corn, wine, and all kinds of fruit; and the inhabitants, who are ſituated near the ſea, make great quantities of excellent ſalt. Its horſes are alſo much eſteemed. In it are ſome mineral ſprings. Its principal rivers are the *Charente*, which abounds in fiſh; it riſes near *Charennac*, and runs into the ſea; and the *Butonne*, which riſes in *Poitou*, and falls into the *Charente*.

This country is divided by the *Charente* into the ſouth, or *Upper Saintonge*; and into the north part, or *Lower Saintonge*. It is ſubject to the parliament of *Bourdeaux*, a few pariſhes excepted, which are within the juriſdiction of *Angoumois*. The governor-general is alſo deputy-governor of this country. The principal places in *Upper Saintonge* are

SAINTES, the capital, which is ſeated on the *Charente*, fifty eight miles to the northward of *Bourdeaux*, and twenty to the eaſt of the *Bay of Biſcay*. It is a little ill-built city; but contains a provincial and a bailiwic court, with other public offices, and is the ſee of a biſhop, ſuffragan to the archbiſhop of *Bourdeaux*. His dioceſe contains five hundred and ſixty-five pariſhes and chapels, and his revenue amounts to twenty thouſand livres, (875l. ſterling) out of which his *Roman* tax is two thouſand florins. The ſtreets are narrow and mean, but in the ſuburbs is an abbey, and the *Jeſuits* had a college here. Some ancient ruins diſcover its antiquity; as, a triumphal arch ſuppoſed to be erected in the reign of *Tiberius*, the ruins of an amphitheatre, of ſeveral aqueducts, and another triumphal arch.

PONS, a handſome town, ſtands high on the little river *Seigne*, over which it has ſeveral bridges, whence it probably received its name. It is divided into the *Upper* and *Lower*, and contains three pariſh-churches, three convents, three alms-houſes, and a commandery of the *Knights of Malta*.

ST. JOHN D'ANGELI, in Latin *Angeliacum*, ſtands on the river *Butonne*, five leagues to the north-eaſt of *Saintes*, and has a royal court of juſtice. While this place continued in the poſſeſſion of the Proteſtants, it was populous and well fortified; but being reduced in 1621 by *Louis* XIII. the fortifications were razed, and the city deprived of its privileges. It has an abbey and three convents. Its brandy is much eſteemed, and the inhabitants alſo make woollen ſtuffs.

ANGOUMOIS is bonuded by *Poitou* on the north, by *Limoſin* on the eaſt, by *Perigord* on the ſouth, and by *Saintonge* on the weſt; it being between fifteen and ſixteen *French* leagues in length, and about ſixteen in breadth.

The country is full of little hills, and has none of any conſiderable ſize. It produces wheat, rye, barley, *Spaniſh* corn, oats, ſaffron, wine, and fruit: it alſo yields ſome excellent mines of iron, and is particularly famous for manufacturing paper. Its principal rivers are the *Charente* and *Touvre*, the latter of which riſes here, and runs into the former.

This country is ſubject to the parliament of *Paris*, and contains a bailiwic, and territorial juriſdiction. In it are the following places:

ANGOULESME, the capital of *Angoumois*, is ſeated on the top of a hill ſurrounded with rocks, at the foot of which runs the river *Charente*, thirty miles to the eaſtward of *Saintes*. According to Dr. *Maſkelyne's* tables it ſtands in 45° 39′ N. latitude, and in 0° 34′ W. longitude from *Greenwich*. It confers the title of *duke*, is the ſee of a biſhop, and has a bailiwic, a country and foreſt court, an office of the five great farms, &c. and is ſaid to contain eight thouſand perſons. Its biſhop is ſuffragan to the archbiſhop of *Bourdeaux*, and has a dioceſe of two hundred pariſhes, with a revenue of twenty thouſand livres, (875l. ſterling,) out of which he is taxed by the court of *Rome* a thouſand florins. Here are twelve pariſh churches, and the abbey of St. *Cibard*, in which lie buried the counts of *Angoumois*; together with ten convents, a college which formerly belonged to the *Jeſuits*, and a general hoſpital.

COIGNAC, or COGNAC, the ſecond town of the country, ſtands ſeven leagues to the weſtward of *Angouleſme*, in a moſt delightful ſituation on the *Charente*. It has a caſtle, in which *Francis* I. was born, and three convents; but it is better known to us by its excellent wine and brandy.

SECT. XXIII.

Of the two Governments of NIVERNOIS *and* BOURBONNOIS; *their Situation, Extent, Rivers, Produce, Government, and principal Towns.*

THE government of NIVERNOIS is bounded on the north by *Burgundy*, and the *Gatinois*; on the eaſt by *Burgundy*, on the ſouth by *Bourbonnois*, and on the weſt by *Berri*. Its figure is nearly circular, and it is about twenty leagues over either way.

It produces corn, wine, and fruit; except in the diſtrict of *Morvant*, which is a mountainous country, that produces ſcarce corn enough for the ſubſiſtence of the inhabitants. It has large woods, ſome pit-coal, and mines of iron. Among the many rivers which water *Nivernois*, three of them are navigable; theſe are the *Loire*, the *Allier*, and the *Yonne*. The other ſtreams ſerve to render the country fruitful and pleaſant: there are here alſo ſome mineral ſprings.

This country is ſubject to the parliament of *Paris*, and has its own particular laws, unleſs the very recent reſtrictions on the authority of the *French* parliaments in general, ſhould have introduced an innovation in this particular. Over it is a governor, a lieutenant-general, and a deputy-governor. It is divided into eight diſtricts, the principal places in which are the following:

NEVERS, the ancient *Noviodunum*, and afterward *Nivernum*, is ſituated in the diſtrict called *Le Vaux de Nevers*, (or the vale of *Nevers*) and is the capital of the country. It is built in the form of an ampitheatre, on the banks of the *Loire*, which is here joined by the little river *Nievre*, thirty leagues to the ſouth-eaſt of *Orleans*. It has a handſome ſtone bridge of twenty arches; but the ſtreets are narrow and the ground uneven. The cathedral, dedicated to St. *Cyr*, is a fine ſtructure; beſides which there are eleven pariſh-churches, two abbeys, ſeveral convents, and the *Jeſuits* had here a college. It is computed that the inhabitants amount to about eight thouſand. Among the other buildings is an old caſtle, which fronts a large ſquare, that conſiſts of handſome houſes uniformly built. There are here a foreſt and bailiwic court, with a ſalt office. The biſhop is ſuffragan to the archbiſhop of *Sens*, and his dioceſe conſiſts of two hundred and ſeventy-one pariſhes. His revenue amounts to twenty thouſand livres, (875l. ſterling,) and he pays twelve hundred and fifty florins to the ſee of *Rome*. This place is celebrated for its porcelain and glaſs-houſes, and for its works in enamel. The inhabitants alſo carry on a great trade in corn, hemp, wood, pit-coal, iron and tin-wares. The fields about the town are extremely pleaſant, particularly the public walks in the adjoining park.

CLAMECY, a town ſeated in a diſtrict called *Le Vaux de Yonne*, and upon the banks of that river, which is here joined by the *Buvron*, and rendered navigable. In it is a caſtellany, and a ſalt-office. *Pantenor*, one of its ſuburbs, ſtands on the other ſide of the *Yonne*, and in the year 1180 was the reſidence of the biſhop of *Bethlehem*, who had been compelled to leave *Paleſtine*. The biſhop of the city, who ſtill ſtyles himſelf biſhop of *Bethlehem*, is created by the count de *Nevers*, and enjoys all the privileges of the other *French* biſhops, though his revenue amounts to no more than a thouſand livres, (44l. ſterling,) and this town is his whole dioceſe.

The government of BOURBONNOIS is bounded on the north by *Nivernois* and *Berri*, on the eaſt by the duchy of *Burgundy*, on the ſouth by *Auvergne*, and on the weſt by *Upper Marche*. It is about thirty *French* leagues in length, and twenty in breadth.

It is fertile, particularly in corn, fruit, and forage: it alſo produces good wine, though not in a ſufficient quantity for exportation. It has likewiſe a few coal-pits, and a great number of mineral ſprings and warm baths. Its rivers are the *Loire*, the *Allier*, and the *Cher*. The admirable *Sterne* calls the BOURBONNOIS, "the ſweeteſt part of *France*," and ſpeaks in raptures of travelling through it, "in the hey-day of the vintage; when nature is pouring her abundance into every one's lap. A journey, through each ſtep of which muſic beats time to labour, and all her children are rejoicing as they carry in their cluſters." *Sentimental Journey*.

This country is ſubject to the parliament of *Paris*, tho' the duke of *Bourbon*, to whom it belongs, has the nomination of all civil officers, yet their proper maſter is the king. Beſides the governor and lieutenant-general, here are alſo two ſub-governors; and in the whole country are twenty-two ſmall towns; the principal of which are

MOULINS, in Latin *Molinæ*, the capital of the country, ſeated on the *Allier*, in a pleaſant fertile plain, almoſt in the middle of *France*, thirty miles to the ſouth of *Nevers*, and fifty-five to the north of *Clermont*. It is well built, and is one of the moſt agreeable places in the kingdom. It contains an intendency, a chamber of domains, a caſtellany, and ſeveral courts. It has likewiſe a collegiate church, five convents, an hoſpital, and a college, which lately belonged to the *Jeſuits*. Here the author above quoted, lays the ſcene of his moſt intereſting and pathetic ſtory of *Maria*. *See Sentimental Journey*.

Bourbon l'Archambaud, a ſmall town fifteen miles to the weſt of *Moulins*, is famous for its hot baths, and cold mineral ſprings.

SECT. XXIV.

Of the Governments of BERRI *and* TOURAINE; *their Situation, Extent, Produce, Rivers, Government, and principal Towns.*

THE country of BERRI is bounded on the north by the *Orleanois*, on the eaſt by the *Nivernois*, on the ſouth by the *Bourbonnois* and *La Marche*, and on the weſt by *La Marche* and *Touraine*. Its extent from eaſt to weſt is between twenty-ſeven and twenty-eight *French* leagues, and from north to ſouth thirty-five or thirty-ſix.

The air here is temperate, and the ſoil produces wheat, rye, and wine; the latter, in ſome places, is equal to that of *Burgundy*. It grows a conſiderable quantity of hemp and flax. In one place in this country is found *oker*, which is ſeldom met with in *France*.

The principal rivers here are the *Loire*, the *Creuſe*, and the *Cher*; the *Large* and *Leſſer Sandre*, the *Nerre*, and the *Indre*. In this country is alſo the lake of *Villiers*, which is between ſeven and eight leagues in circuit.

BERRI is under the juriſdiction of the parliament of *Paris*, and is governed by its own laws. Subordinate to the governor are one lieutenant-general and two ſub-governors. It is divided into *Upper* and *Lower Berri*, the principal places in which are the following:

BOURGES, the capital of *Upper Berri*, and of the whole country, is ſituated on a hill between the river *Evre* and

Orron, to the banks of which it gradually deſcends, thirty-five leagues to the ſouth of *Paris*, and ſeventeen almoſt ſouth-eaſt of *Orleans*. Theſe two rivers encompaſs it on every ſide except on that next the gate of *Bourbonnaux*. It is a large ſpacious city, containing a cathedral, four collegiate churches, beſides two annexed to the ſeminary, four abbies, and ſixteen pariſh-churches, with a beautiful and large college, which formerly belonged to the *Jeſuits*. You meet here with many eccleſiaſtics, gentlemen, and ſcholars; and it is computed that there are in this city fifteen thouſand ſouls; but not many of them are tradeſmen; the place having no other trade than what is neceſſary for the ſubſiſtence of the inhabitants. It is the ſee of an archbiſhop, and has an intendency, a ſalt-office, an independent royal tribunal, and ſeveral other offices and courts. The cathedral, which is dedicated to St. *Stephen*, is a fine *Gothic* ſtructure, ſtanding on the higheſt part of the city: the archbiſhop, who is ſtyled patriarch and primate of *Aquitaine*, has five ſuffragans, with a dioceſe of nine hundred pariſhes, and a revenue of thirty thouſand livres, (1313l. ſterling;) out of which he pays four thouſand and thirty-three florins to the ſee of *Rome*.

The palace built by prince *John* of *France*, duke of *Berri*, is a magnificent edifice, in one part of which, called the king's apartment, the governor reſides, and the other ſerves for the courts of juſtice; the great hall in the latter, which has no pillars to ſupport it, is eſteemed one of the fineſt and largeſt rooms in the kingdom. The town-houſe erected by *Jaques Coeur*, is one of the moſt elegant buildings ever erected by a private man, and was purchaſed by the great *Colbert*, about A. D. 1670, who gave it to the corporation of this city. The ſquare of *Bourbon* is the largeſt in *Bourges*, and here anciently ſtood a *Roman* amphitheatre. The public walks and the malls are much admired, and the great number of religious houſes are another conſiderable ornament to the city. The univerſity of *Bourges* was either founded or revived in the year 1463, and conſiſts of four faculties.

Julius Cæſar took *Bourges* by ſtorm; and the inhabitants having exerciſed ſome cruelties on the *Roman* ſoldiers that had fallen into their hands, he glutted his revenge by deſtroying near forty thouſand of the natives. In the fifteenth century *Charles* VII. made this the place of his reſidence, while the *Engliſh* were maſters of almoſt all the reſt of the kingdom; on which occaſion the *Engliſh* called him, by way of deriſion, king of *Berri*.

ISSOUDUN, in Latin *Exolidunum*, a large town, the ſecond in rank in the province, ſtands in a beautiful plain, ſeventeen miles to the ſouth-weſt of *Bourges*, and is the principal place in *Lower Berri*. It contains a ſalt-office, a manor-court, and other public courts and offices. It is divided into the Upper and Lower Town, and has a caſtle, which commands the place: it has alſo one abbey, two collegiate, and four pariſh-churches, five convents, and two hoſpitals.

The province of TOURAINE, which derives its name from the *Turones*, is bounded on the north by the river *Maine*, on the eaſt by the *Orleanois*, on the ſouth by *Berri* and *Poitou*, and on the weſt by *Anjou*. Its greateſt extent from eaſt to weſt is twenty-two *French* leagues, and from north to ſouth twenty-four.

The air is temperate, and the country ſo delightful that it is called the Garden of *France*; but it is not every where alike. The tract called the *Varennes*, which lies along the *Loire*, has a ſandy ſoil, that produces rye, barley, millet, garden-plants, and an herb which makes a good yellow dye. That called the *Verron* is richer, and yields corn, wine, very fine fruit, and particularly large plums. *La Champagne* is a ſmall ſtrip of land between the rivers *Cher* and *Indre*, abounding in grain, and particularly wheat. *La Brenne* is a ſwampy country, but the eminences along the *Loir* and *Cher* are covered with vineyards. The country of *Novers* is diſtinguiſhed by its having ſome mines of iron, and one of copper.

This country is governed by laws of its own; but the inhabitants have, or until very lately had, a right of appeal to the parliament of *Paris*. There are twenty-ſeven towns or boroughs in the country; the principal of which are the following:

TOURS, the *Cæſarodunum*, or *Turoni* of the ancients, and the capital of the country; it lies in a plain extending between the river *Loire* and the *Cher*, and is fifty-two miles to the north-eaſt of *Poitiers*, and a hundred and twenty-ſeven to the ſouth-weſt of *Paris*; according to *Dr. Maſkelyne*'s tables in 47° 24′ N. lat. and 0° 41′ E. longitude from *Greenwich*. The city is large and well built, and the ſtreets very clean, on account of ſeveral rivulets running through them from ſix public fountains. In this city is a very fine mall, above a thouſand paces in length, and adorned on each ſide with two rows of fine elms. The inhabitants are ſo ſcrupulous, that after it has rained, no perſon is ſuffered to play, nor even to walk on it till it be dry, under a penalty of ten livres, (8s. 9d. *Engliſh*.) This city has a mint, a receiver's office, and a ſalt-office, an intendency, a provincial, a bailiwic, and foreſt court. The cathedral is a fine ſtructure, with two lofty towers, a curious clock, and a library, where are ſeen ſeveral ancient manuſcripts faſtened by chains upon deſks. The two moſt valuable of theſe manuſcripts are, one of the *Pentateuch*, written in ſmall capitals, which is reckoned to be a thouſand years old; and another of the four Goſpels in *Saxon* characters, which ſome think to be of the ſame age as the *Pentateuch*, and others, twelve hundred years old. There are here alſo five collegiate churches, three abbeys, twelve convents, and the *Jeſuits* had a college. The city is the ſee of an archbiſhop, under whom are eleven ſuffragans, ſeventeen abbeys, twelve collegiate churches, ninety-eight priories, three hundred pariſhes, and a hundred and ninety-one chapels. His revenue is forty thouſand livres, (1750l. ſterling,) and he pays to the court of *Rome* nine thouſand five hundred florins. Here is alſo a royal palace, and an academy of polite literature.

While the manufactures of gold, ſilver, and ſilk brocades were in a flouriſhing condition, this city was computed to contain ſixty thouſand inhabitants, which number is now reduced to thirty thouſand. It is governed by a mayor and twelve echevins.

AMBOISE, in Latin *Ambaſia*, is ſeated at the confluence of the *Loire* and the *Amaſſe*, twelve miles to the eaſtward of *Tours*; it contains a ſalt-office, with a royal and foreſt court. In it are two pariſh-churches, four convents, and one hoſpital. Near the town is a large caſtle ſtanding on a high rock, in which are the ſtatues of *Charles* VIII. and his conſort *Anne*: as alſo a ſtag's head of very extraordinary dimenſions, it being ten feet high and eight feet broad, from the extremity of one horn to the other. This was ſuppoſed to be natural, till it was at laſt diſcovered to be factitious, and only made of wood. There are here alſo ſeveral other curioſities. In this town *Charles* VIII. was ſlain. This was alſo the place where the civil war in 1561 firſt broke out, and where the name of *Huguenot* had its riſe.

SECT. XXV.

Of the two Governments of POITOU *and* AUNIS; *their Situation, Extent, Produce, Rivers, and principal Cities; with a more particular Deſcription of* Poitiers, Rocheſort, *and* Rochelle.

THE province of *Poitou* is bounded on the north by *Touraine* and *Anjou*; on the eaſt by *La Marche* and part of *Berri*; on the ſouth by *Angoumois* and *Aunis*; and on the weſt by the bay of *Biſcay*. It extends from north to ſouth twenty-two *French* leagues, and from eaſt to weſt forty-eight. It received its name from the ancient *Pictavi*, or *Pictoni*.

The country is diverſified with champaign lands, woods, and paſture-grounds, with a few foreſts. The principal trade of the inhabitants conſiſts in oxen, mules, horſes, and woollen ſtuffs.

The largeſt rivers are the *Vienne*, which riſes on the borders of *Limoſin*, and being joined by the *Creuſe*, falls into the *Loire*; the *Sevre Niortoiſe*, which riſes in this country, and, after receiving the *Venotee*, diſcharges itſelf into the ſea; theſe are all navigable: here is alſo the *Clain*, which riſes in the frontiers of *Angoumois*, and falls into the *Vienne*.

This province was erected into an earldom by *Charlemagne*. *Henry* II. king of *England* obtained it by marriage with *Eleanor*, daughter of the laſt *Duke* of *Aquitaine*, and it continued ſubject to the kings of *England*, with ſome interruptions, till the unfortunate reign of *Henry* VI. when it was taken in 1436, ſince which time it has continued annexed to the crown of *France*. It is ſubject to the parliament of *Paris*, and has but one provincial court. Under the governor is a lieutenant-general, and two deputy-governors.

This province is divided into two parts. *Upper Poitou*, which conſtitutes the eaſtern part of the country, is larger, more fruitful, pleaſant, and healthy, than the *Lower*; we ſhall begin with the former, the principal places in which are the following:

POITIERS, or POICTIERS, in Latin *Auguſtoritum*, the capital of the country, is ſeated upon a hill, on the left bank of the little river *Clain*, into which falls another rivulet. It lies about eighteen leagues to the eaſt of the ſea coaſt, and ſeventy miles to the north-eaſt of *Rochelle*, according to *Dr. Maſkelyne*'s tables in 46° 35′ N. lat. and 0° 20′ E. long. from *Greenwich*. Were its circuit to be only conſidered, it would, perhaps, be eſteemed the firſt in the kingdom, next to *Paris*; but it is far from being peopled in proportion to its extent, there being corn-fields and meadows within the walls; for the city has been ſo reduced by the civil wars, that it is almoſt become a deſart. It is, however, the ſeat of a ſeneſchalſhip, a preſidial court, an office of the finances, and a country court. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of *Bourdeaux*, and has a dioceſe of ſeven hundred and twenty-two pariſhes, with a revenue of twenty-two thouſand livres, (973*l.* ſterling) out of which he pays to the court of *Rome* two thouſand eight hundred florins. The cathedral is of an uncommon ſize, and built in the *Gothic* ſtyle. In this city are four collegiate churches, ſeventeen other pariſh-churches, four abbeys, twenty-one convents, and two ſeminaries; the *Jeſuits* had alſo a college here. An univerſity was founded in 1431, and there are likewiſe three hoſpitals. In 1687 the inhabitants erected in the Royal Square a pedeſtrian ſtatue of *Louis* XIV. The manufactures of this town are gloves and combs; and woollen caps and ſtockings are exported from hence.

Some remains of *Roman* antiquities are ſtill to be ſeen here; among which is an amphitheatre, and a triumphal arch, or rather gate. The Palace, and thick round tower cloſe by it, are ſaid to be *Roman* works; but they bear evident marks of *Gothic* origin.

In the neighbourhood of this city *Edward the Black Prince* obtained a memorable victory over the *French*, in the year 1356, when he took *John* their king, with his ſon *Philip*, priſoners.

NIORT is the beſt trading town in the province; it is ſeated on the river *Soure*, and has a bailiwic, a royal juriſdiction, and a foreſt court. It contains a caſtle, two pariſh churches, nine convents, and a general hoſpital. Here are ſome manufactures of wool.

LUCON, a city in *Lower Poitou*, is ſeated in a moraſs twenty-three leagues to the ſouth-weſt of *Poitiers*, and enjoys the title of a barony. It is the ſee of a biſhop, who is lord and baron of the town, and ſuffragan to the archbiſhop of *Bourdeaux*. His dioceſe conſiſts of two hundred and thirty pariſhes, and he has a revenue of twenty thouſand livres, (875*l.* ſterling,) out of which he pays to the court of *Rome*, one thouſand florins. The air of this place is unwholeſome, and, beſides the cathedral, it contains only one pariſh-church, one ſeminary, and two convents.

The government of AUNIS is bounded on the north and weſt by *Poitou*; on the ſouth by *Saintonge*; and on the weſt by the bay of *Biſcay*. It is watered by the *Soure*, which riſes in *Poitou*, and there are good harbours along the coaſt. The country is ſomewhat barren, but produces ſome corn, and a great deal of wine; the marſhes afford good paſturage.

This little province depends on the parliament of *Paris*, but is partly governed by its own common law, founded on cuſtom. Under the governor is a lieutenant-general, and a deputy-governor.

ROCHEFORT, a modern regular built town, ſeated on the river *Charente*, twenty-three miles to the ſouth of *Rochelle*; in 46° 2′ N. lat. and 0° 59′ W. longitude from *Greenwich*, according to *Dr. Maſkelyne*'s tables. It was formerly a ſmall village belonging to a private family, from whom *Louis* XIV. bought it, in 1664, in order to raiſe it to a city; as from this place to the ſea, which is about four miles diſtant, the river was found to be deep enough for the largeſt ſhips to navigate, the bottom affording good anchorage, and the banks being even and ſolid. Theſe local advantages determined that active monarch to erect the town of *Rochefort*. It has a very commodious harbour, and is one of the ſtations for the royal navy of *France*; ſo that here are all the neceſſary magazines for ſhipping, and a ſpacious and convenient dock. Here are alſo a victualling warehouſe, a foundry, a manufacture of ſail-cloth, the Hôtel called *Cazernes*, which was originally uſed for the education of three hundred gentlemen of noble families, deſigned to ſerve in the navy, and who are taught at the king's expence; but it now ſerves to lodge the marines, and is an hoſpital for ſick ſoldiers, &c.

The entrance of the river is well defended by ſeveral forts, particularly one in the *Iſle of Aix*, the redoubt facing it called *Aiguille*, *Fort Fourax*, *de la Pointe*, and *Vergeron*; and about a league below *Rochefort* is a long ſtoccado acroſs the river. On the twenty-firſt of *Sept.* 1757, the *Iſle of Aix*, with the fort upon it, was taken by captain *Howe*, now lord *Howe*, in the *Magnanime*, after about an hour's reſiſtance, when the whole garriſon, which conſiſted of near ſix hundred men, were made priſoners of war. This advantage was the only one derived to *England* from a very formidable armament, which had been fitted out for the purpoſe of attacking *Rochefort*, but ſome ſecret operations of the cabinet, which have never been brought to light, rendered the expedition abortive.

ROCHELLE, in Latin *Rupelle*, the capital of the province and government, in 46° 9′ N. lat. and 1° 10′ W. longitude from *Greenwich*, according to *Dr. Maſkelyne*'s tables, is ſeated on the ſea. It has a good harbour, but is rather handſome than large. The city has broad and ſtraight ſtreets, with neat houſes, ſupported by piazzas and porticos, which afford ſhelter both from the rain and ſun. It is the ſee of a biſhop, ſuffragan to the archbiſhop of *Bourdeaux*, with a dioceſe of one hundred and eighty pariſhes, and a revenue of ſeventeen thouſand livres, (745*l.* ſterling,) out of which he is taxed by the court of *Rome* ſeven hundred and forty-two florins. Here is alſo an intendency, a provincial and a bailiwic-court, an admiralty, a chamber of commerce, and a mint. The *Jeſuits* had a college, and there is alſo one for the ſtudy of phyſic, anatomy, and botany.

Rochelle was the principal ſeat of the Reformed in *France*, and the inhabitants embracing *Calviniſm* in the ſixteenth century, ſuffered extremely during the civil wars; for they fortified the town, and frequently defended it with the utmoſt bravery. It was long poſſeſſed by that body, till at length *Louis* XIII. after a long and famous ſiege, made himſelf maſter of it in 1628, chiefly for want of the promiſed ſuccours from *England*, which were kept back by the duke of *Buckingham*, the infamous miniſter and favourite of king *James* I. Famine at length obliged the beſieged to capitulate, in conſequence of which their privileges were taken from them, and the fortifications demoliſhed, except only two towers that defend the port; but *Louis* XIV. cauſed new and very ſtrong fortifications to be raiſed round it. The port is almoſt of a circular figure, and near fifteen hundred paces in circuit. One of the above-mentioned towers defending the port is a priſon for ſtate criminals, and the other is called the *Tower of the Chain*, which effectually defends the harbour from all attacks by ſea.

The principal manufacture carried on here is the refining of ſugar; here is alſo a manufacture of earthen-ware. A conſiderable trade is carried on to the *Weſt India* iſlands, to which all the neceſſaries of life are ſent, and from thence the veſſels employed in it bring back the produce of thoſe countries. The *Engliſh* in the time of peace, together with the *Dutch*, *Danes*, and *Swedes*, annually ſend to *Rochelle* a great number of ſhips, and take in exchange wine, brandy, ſalt, paper, linen, cloth, and ſerges. When *Great Britain* waged war with her *American Colonies*, a new branch of commerce was puſhed by the *Rochellians*, with the newly independent ſtates; but the wealth which they acquired by that branch of trade cannot be aſcertained.

The iſle of Re, in Latin *Radis*, lies between two and three *French* leagues from the Continent, and is four miles in length and two in breadth. It is very populous and fertile, producing plenty of wine, of which is made a very fine ſort of brandy. It has a little fortified town, named *St. Martin*, which has a harbour and a citadel, and is likewiſe defended by three other forts.

The iſle of Oleron, in Latin *Uliarus*, is about three *French* leagues diſtant from the main land; it is five in length, two in breadth, and extremely fruitful. The inhabitants have been diſtinguiſhed for being able and expert ſailors during ſix or ſeven hundred years paſt, and about the year 1194, *Richard* I. of *England*, in conſort with the inhabitants, formed a code of laws, for the regulation of ſea-affairs, which are called "the *Laws of Oleron*," and have ſerved as a model to other maritime powers with regard to thoſe intereſts. Theſe iſlanders have always enjoyed very conſiderable privileges, both under the dukes of *Aquitaine*, and the kings of *France*, and had a governor peculiar to themſelves, who had a very extenſive authority. This iſland, together with that of *Re*, was taken in the ſixteenth century by the citizens of *Rochelle*; and as theſe iſlanders were very well affected to their conquerors, on account of the reformed religion, which moſt of them profeſſed, the *Rochellers* continued maſters of both till the year 1625, at which time *Louis* XIII. retook them.

SECT. XXVI.

Of the two Governments of Anjou *and* Saumur, *their Situation and Extent; with a Deſcription of* Angers *and* Saumur.

THE government of Anjou, which received its name from the ancient *Andes*, or *Andegavi*, is bounded on the north by the river *Maine*; on the eaſt by *Touraine*; on the ſouth by *Poitou*; and on the weſt by *Brittany*. Its greateſt length from eaſt to weſt is twenty-ſix *French* leagues, and from north to ſouth twenty-four.

The country is a pleaſant ſucceſſion of hills and vallies, producing corn, wine, peaſe, beans, flax, hemp, and fruit-trees. Its fine paſtures alſo furniſh great herds of cattle. It has likewiſe mines of coal, iron, and ſaltpetre, together with quantities of marble, ſtone and ſlate.

In this country are reckoned no leſs than forty-nine great and ſmall rivers; but only ſix of theſe are navigable. They are the *Loire*, the *Vienne*, the *Toue*, the *Magenne*, the *Loir*, and the *Sarte*. This country is under the parliament of *Paris*; but has laws of its own. Subordinate to the governor is one lieutenant-general, and two ſub-governors. The principal city in this government is

Angers, anciently *Juliomagus*, and in Latin *Andegavum*, the capital of the country, which lies a little above the place where the rivers *Loire* and *Sarte* fall into the *Mayenne*, which divides the city into two equal parts. *Dr. Maſkelyne's* tables place it in 47° 28′ N. lat. and 0° 34′ W. longitude from *Greenwich*. The firſt walls were raiſed by *John*, ſurnamed *Lackland*, king of *England* and duke of *Anjou*; but prince *Louis*, afterward king *Louis* VIII. ſon to *Philip Auguſtus*, cauſed thoſe walls to be demoliſhed; however, *St. Louis* his ſon and ſucceſſor, rebuilt them as they now remain. This is a large and populous city, containing nine thouſand houſes, and about thirty thouſand inhabitants; it has ſixteen pariſhes, twelve of which are within the town, and four in the ſuburbs. Here are likewiſe eight collegiate churches, and a great number of convents both of men and women. This city is the ſee of a biſhop, who is ſuffragan to the archbiſhop of *Tours*. His dioceſe contains ſix hundred and ſixty-eight pariſhes; his revenue amounts to twenty-ſix thouſand livres, (1138*l.* ſterling,) and his taxation at the court of *Rome* is ſeventeen hundred florins. The cathedral is remarkable for three very high ſteeples built on its portico, of which that in the middle reſts upon the foundations of the other two. Its roof is very high, large, and bold; it is not ſupported by any pillars; and the whole ſtructure is in general elegant. Part of the town ſtands very low; ſo that it is proverbially ſaid in the neighbouring country, "*Angers* is a low town, has high ſteeples, rich ſtrumpets, and poor ſcholars."

It has a ſtrong caſtle built on a rock, and encompaſſed with ditches, the river runs at its foot. This caſtle was built by *St. Louis* during the wars with the *Engliſh*, and it now ſerves as a ſtate priſon.

The univerſity, which is one of the moſt famous in *France*, was founded by *St. Louis*. Here the civil and canon-law, divinity, phyſic, and the liberal arts, are taught. A chair for a profeſſor of the mathematics has been lately erected here, in the college of the fathers of the Oratory. *Louis* XIV. in 1615, eſtabliſhed in this city a royal academy, with the ſame privileges as that of *Paris*: it conſiſts of thirty-ſix members, who muſt all be natives or inhabitants of the province. Here is a great proceſſion annually celebrated at a feſtival called *le Fête du Dieu*, which is on *Corpus Chriſti* day, when all the prieſts and monks, with the principal inhabitants, and numbers of ſtrangers, carry lighted torches in their hands, and repreſentations of Scripture hiſtories engraved, to atone for the pretended crimes of their archdeacon *Berengarius*, who oppoſed tranſubſtantiation about the year 1019, when that doctrine was firſt preached here.

This city is under the government of a mayor and four aldermen, annually choſen; twelve counſellors, eight aſſeſſors, an attorney, a commiſſary, and a recorder. Their juriſdiction extends over the manufactures ſet up in the town, ſuburbs, and liberty. Theſe manufactures conſiſt of fine woollen ſtuffs, ſtriped with ſilk and gold. They alſo bleach wax and linen cloth. In the town are likewiſe ſome ſugar-bakers.

The Saumurois, or government of *Saumur*, contains a part of *Anjou* and *Upper Poitou*: it is under the direction of a governor, a lieutenant-general, and a ſub-governor. Its principal place is

Saumur, in Latin *Salmurus*, the capital, and the ſeat of the public courts and offices, twenty-two miles to the ſouth-eaſt of *Angers*, and a hundred and ſixty to the ſouth-weſt of *Paris*. It contains a fine caſtle, three pariſh-churches, nine convents, and one royal college. Here is an important paſſage over the *Loire*, upon which there is a famous bridge. This city was much more opulent while in the poſſeſſion of the *Proteſtants*; but has ſtill an univerſity. Near it is the magnificent abbey of the *Benedictines*.

SECT. XXVII.

Of the Government of Orleanois; *its Situation, Extent, Diviſions, Rivers, Canals, and principal Cities.*

THE government of Orleanois conſiſts of ſeveral ſmall countries, and is bounded on the north by *Normandy* and the *Iſle of France*; on the eaſt by the *Iſle of France*, *Champagne*, and *Burgundy*; on the ſouth by *Nivernois* and *Berri*; and on the weſt by *Touraine*, and *Maine*; including *Orleanois Proper*, *Sologne*, *Beauſſe Proper*, or *Chartraine*, *Dunois*, *Vendomois*, *Blaiſois*, the greateſt part of *Gatinois*, and *Perche Gouet*. The whole government extends about thirty-two leagues in length from eaſt to weſt, and twenty-eight in breadth.

The rivers which run through, or have their ſource in it, are the *Loire*, the *Loiret*, which riſes a league from *Orleans*, and falls into the *Loire*; the *Cher*, which alſo runs into the *Loire*; the *Laconie*, which riſes in the wood of *Orleans*, and loſes itſelf in the ſame river; the *Aigle*, which riſes in this government, and alſo mingles with the *Loire*; the *Hyere* (which loſes itſelf under ground, and, when it afterward appears again near *Montigny*, is called *le Ganelon*,) falls into the ſame river.

In this diſtrict are ſome canals. That of *Briare*, which joins the river *Loire* to the *Loing*, opens a communciation between the countries lying on the *Loire* and the city of *Paris*. That of *Orleans* alſo joins the above-mentioned rivers; this canal, which was begun in 1682, and finiſhed in 1692, is near eighteen leagues in length, and contains thirty ſluices.

The whole government is ſubject to the parliament of *Paris*, and contains four large and three ſmall juriſdictions. The trade carried on here by means of the *Loire* is the moſt extenſive in the whole kingdom, comprehending not only all that comes from the ſouthern and weſtern parts, but likewiſe from foreign countries. The principal ſtaple is at *Orleans*. Under the governor are three lieutenant-generals, and three ſub-governors.

Orleanois Proper is one of the fineſt countries in *France*; it being fertile in corn, wine, and excellent fruit; and abounding in cattle, game, and fiſh. The principal places in this government are the following:

ORLEANS, anciently *Genabum*, or *Cenabum*, and afterward *Aurelianum*, and *Aureliana*, the capital of the government, is ſeated on the *Loire*, over which it has a fine ſtone bridge of ſixteen arches, leading to a ſuburb on the ſouth ſide of the river. On this bridge is to be ſeen a beautiful monument of caſt braſs ſtanding on a ſtone pedeſtal, that has ſome ornaments in the *Gothic* taſte. In the centre of the monument is a crucifix, on the top of which ſtands a pelican with its brood pecking its own breaſt; before the crucifix is the *Virgin Mary* ſitting with the dead body of *Chriſt* reclined on her lap. On the right ſide is king *Charles* VII. kneeling and ſtretching out both his hands toward the croſs, and on the left ſide the famous maid of *Orleans*, alſo repreſented kneeling, both armed cap-a-pie with ſwords by their ſides; the king has the *French* coat of arms, and wears a crown on his helmet. But the helmet of the maid is placed by her; her hair is tied behind, and the reſt of it hangs looſe on her back. Theſe ſtatues are not ſo big as the life. A ſolemn proceſſion is annually obſerved here on the twelfth of *May*, in commemoration of the deliverance of the city by the Maid of *Orleans*. The town ſtands in a moſt agreeable plain, and is built in the form of a bow; the ſtreets in general are narrow, but ſome of them are broad and ſtraight. This city, which is about four miles in circuit, is however but meanly built, and, except a few of the tradeſmen, the inhabitants are poor. It is the ſee of a biſhop, and contains an intendancy, a caſtellany, a country-court, a foreſt-court, a ſalt-office, and other courts and offices. It has a fine cathedral built in the *Gothic* ſtyle, an abbey, three collegiate churches, twenty-two pariſh-churches, an univerſity conſiſting only of civilians, which was formerly very famous, though it is at preſent in no great repute, one ſeminary in which divinity is taught, and a public library. The *Jeſuits* had alſo a college here. Its biſhop, who is ſubordinate to the archbiſhop of *Paris*, has a dioceſe of two hundred and ſeventy-two pariſhes, and a revenue of twenty-four thouſand livres, out of which he pays two thouſand florins to the court of *Rome*. The public walk is properly a part of the city ramparts, levelled and planted with beautiful rows of trees. The ſuburb on the farther ſide of the river makes a tolerable appearance, and has a *Carthuſian* monaſtery.

In the year 1344 it was raiſed to a dukedom and peerage, and *Lewis* XIV. gave it to his brother *Philip*, in which houſe it continues.

This city was beſieged by the *Engliſh* in 1428, and ſo ſtraitened, that the inhabitants reſolved to ſurrender to the duke of *Burgundy*, then in the *Engliſh* army, and their ally. But the *Engliſh* not being willing that the city ſhould be given up to him, he was diſguſted at it, and *Joan* of *Arc*, heading the ſoldiers, raiſed the ſiege in 1429; from which ſhe obtained the name of the Maid of *Orleans*.

The *Foreſt* of *Orleans* lies to the north of the city and of the river *Loire*, and is the largeſt in the whole kingdom. It contains about fourteen thouſand acres planted with wood; but is interſperſed with ſeveral plains and villages. It is twenty leagues, or ſixty miles, in length, and in ſome places ſeven or eight leagues, and in others only two or three in breadth. It contains high and lofty trees, as oaks, elms, &c. In this foreſt they fell timber every year to the value of a hundred thouſand livres, the profits of which belong to the duke of *Orleans*.

CHARTRES, the *Autricum* of the ancients, is the capital of the country of *Chartrain*; it is ſituated on the river *Eure*, about fourteen leagues to the ſouth-weſt of *Paris*; and is divided into two parts by the above river, the largeſt of which ſtands on an eminence. It is the ſee of a biſhop, and has a noble cathedral; but the city has little beauty to recommend it, the ſtreets being narrow, and the buildings old. The biſhop, who is ſuffragan to the archbiſhop of *Paris*, has a dioceſe of eight hundred and ten pariſhes; his annual revenue amounts to twenty-five thouſand livres, out of which he pays four thouſand florins to the court of *Rome*.

BLOIS, in *Latin Bleſæ*, the capital of the diſtrict of *Blaiſois*, ſtands partly on an eminence, and partly in a plain on the river *Loire*, over which it has a well-built ſtone-bridge. It is ſituated ten leagues to the S. W. of *Orleans*, in a pure air, and in the midſt of one of the fineſt countries in *France*. It is a large handſome city; but the greateſt beauty of it is the palace, or caſtle, the reſidence of ſeveral of their kings, with gardens adorned with fountains and other water-works, and a park ſuitable to the magnificence of the buildings. Over the great gate is a ſtatue of *Lewis* XII. In the grand court before the palace ſtands one of the largeſt collegiate churches in *France*. It is remarkable that there is an image of the *Virgin* over every gate of the city; theſe were ſet up in 1631, when, after having ſuffered much by the plague, they imagined, on its ceaſing, that they were miraculouſly delivered by the queen of heaven, as they ſtyle her. The pariſh-church of *St. Solenne*, the largeſt in *Blois*, having been deſtroyed by a tempeſt, was magnificently rebuilt by *Lewis* XIV. and converted into a cathedral. Their fountains are alſo large, and well ſupplied by a noble aqueduct, ſuppoſed to be the work of the ancient *Romans*.

The natives are repreſented as being remarkable for their good ſenſe and genteel behaviour, as well as for ſpeaking *French* in perfection, which is ſuppoſed to proceed from the frequent reſidence of the court in this city.

The principal trade here is in *wine* and *brandy*; and the city is alſo diſtinguiſhed for making the beſt watches in the kingdom.

CHAMBORD, a royal palace ſeated in a wood on the river *Coſſon*, is a magnificent edifice of free-ſtone, built by *Francis* I. It is ſaid to exceed any *Gothic* edifice in *France*, and to have ſuch various beauties, that the greateſt maſters may learn ſomething from it. The body of the building is compoſed of four large pavilions, and the whole is ſurrounded with a wall of hewn-ſtone, flanked with towers, which at a diſtance give it a magnificent appearance. In this palace *Staniſlaus*, the dethroned king of *Poland*, and father of the queen of *France*, reſided nine years. It was afterward conferred on the celebrated *Maurice*, count *Saxe*, a marſhal of *France*, natural ſon of *Auguſtus* king of *Poland*, whoſe father was competitor with *Staniſlaus* for that crown. Marſhal *Saxe* died here in the year 1750, when the king gave it to his heir the count *de Friſe*, who poſſeſſed it only five years, and then died.

MONTARGIS, the capital of the *Gatinois Orleanois*, is ſituated on the river *Loing*, near the place where the canal of *Orleans* falls into it, twenty-five leagues to the ſouth of *Paris*. The town is not large; but, having been burnt down, is handſomely rebuilt, and has a caſtle pleaſantly ſituated on a hill, that commands the town and the neighbouring country.

SECT. XXVIII.

The Government of Maine *and* Perche.

THE government we are now going to deſcribe comprehends the province of *Maine*, the earldom of *Laval*, and the greateſt part of the earldom of *Perche*.

The county of MAINE is bounded on the north by *Normandy*, on the eaſt by *Perche*, on the ſouth by *Touraine* and *Orleanois*, and on the weſt by *Anjou* and *Brittany*, extending eighty-eight miles in length from eaſt to weſt, and fifty in breadth from north to ſouth.

It has mines of *iron*, quarries of *marble*, and, being very fruitful, abounds in *corn*, *wine*, *flax*, and *cattle*: their *fowls* are particularly admired, and are well known at *Paris*. Its principal rivers are the *Mayenne* or *Maine*;

the *Huiſne*, which riſes in *Perche*, and runs into the *Sarte*; the *Sarte*, which alſo riſes in the *Perche*, and, after receiving the *Orne*, the *Huiſne*, the *Enſerne*, and the *Little Loire* in its paſſage, falls into the *Mayenne*.

This country was formerly an earldom, but has been united to the crown ever ſince the year 1584. It is governed by its own laws; but is ſubject to the parliament of *Paris*, and has a particular ſub-governor.

The principal places in this government are the following:

Mans, in *Latin Cenomanum*, the capital of the province of *Maine*, is ſituated on a hill, at the foot of which runs the river *Sarte*, which here unites its water with the *Huiſne*, thirteen leagues to the north-weſt of *Tours*, and thirty-two to the ſouth-weſt of *Paris*. It is the ſee of a biſhop, and has a ſalt-office, a provincial and foreſt-court, &c.

Laval, the capital of an earldom, is ſeated on the *Maine*, eight leagues to the weſtward of *Mans*, and is encompaſſed by a wall and other fortifications in the antique taſte: it has alſo an ancient caſtle of the ſame kind; but it is incapable of making any great defence, ſince the improvement of the art of war. It has a ſalt-office, a country and foreſt-court, &c. This town was taken by ſcalade in 1446, by the brave *Talbot* earl of *Shrewſbury*, who commanded the *Engliſh* army.

Perche is bounded by *Normandy* on the north, by the *Iſle* of *France* and *Orleanois* on the eaſt, by the river *Maine* on the ſouth, and by *Normandy* on the weſt; it not being above fifteen leagues in length, and twelve in breadth.

It is a hilly country, and the eminences produce only graſs for cattle; but the vallies and plains bear all kinds of grain and hemp; they alſo abound in apples, of which they make cyder, the uſual drink of the country: they have indeed a few vineyards, but the wine is ſo poor, that cyder is generally preferred before it. They have here alſo ſome iron mines, and mineral waters.

This country enjoys its own laws; is ſubject to the parliament of *Paris*, and is governed by a particular ſub-governor. The whole country does not belong to this government, *Perche Gouet* being ſubject to that of *Orleanois*, and *Timerais* to that of the *Iſle* of *France*.

SECT. XXIX.

Of the Government of Paris; *with a particular Deſcription of that City, and the neighbouring Places.*

THE boundaries of this government are not eaſily determined, the *French* geographers themſelves not being agreed about them. It, however, includes, beſides the city, a part of the neighbouring country; and, beſides the governor, here are two lieutenant-generals, one of which is appointed for the city, the other for the *prevoté* and *vicomté*, through its utmoſt extent. Within the boundaries of this juriſdiction are contained four others; theſe are the *Louvre* and the *Tuilleries*, as alſo thoſe of the *Baſtile* and the *Royal Hoſpital* of Invalids, the four governors of which receive their orders immediately from the king.

Paris, in *Latin Lutetia Pariſſii*, and *Lutetia Pariſiorum*, the capital of *France*, is ſeated in a large plain on the river *Seine*, in the middle of the *Iſle* of *France*, according to Dr. *Maſkelyne's* tables in 48° 50′ N. latitude, and 2° 20′ E. longitude from *Greenwich*, two hundred and twenty-five miles to the ſouth-eaſt of *London*, ſeventy miles to the ſouth-eaſt of *Rouen*, five hundred and fifty to the weſt of *Vienna*, ſeven hundred to the north-weſt of *Rome*, and ſix hundred and twenty-five to the north-eaſt of *Madrid*.

This city is of a circular form, about ſix or ſeven miles in diameter; and, including the ſuburbs, is eighteen or twenty in circumference. Its ſtreets have been computed to amount to nine hundred and twelve, in which are about twenty thouſand houſes; from four to ſeven ſtories high; beſides churches, convents, chapels, colleges, communities, and warehouſes. *Buſching* ſays the number of its inhabitants cannot much exceed four hundred thouſand; and he founds his calculation on the annual bills of mortality, on the average of eight years, which produced ſeventeen thouſand eight hundred deaths in a year, which he ſuppoſes to be the twenty-fifth part of the inhabitants, but a more modern calculator who reſided in that city, computed the population of *Paris* in the year 1778, to be eight hundred twenty-three thouſand two hundred and ſeventy-ſix, and that it was then on the increaſe. In the year 1777 the number of births in *Paris* was twenty-two thouſand two hundred and ſixty-ſix, and of deaths ſeventeen thouſand one hundred and twenty-two, the latter of which was upwards of two thouſand ſhort of the preceding year.

This great city contains forty-ſeven pariſh-churches, beſides twenty others; three abbies and twelve priories for men, ſeven abbies and ſix priories for women; ſeventeen collegiate churches, thirteen of which have chapters; fifty convents and fraternities of eccleſiaſtics and laics; forty-three nunneries, and fourteen female communities; eleven ſeminaries, twenty-ſix hoſpitals, and forty chapels; an univerſity, ſix academies, beſides three others where young gentlemen are taught bodily exerciſes; five public libraries, four royal palaces, four caſtles, above a hundred hôtels, ſome of which are ſtately ſtructures; ſeventy-three market-places, ſixty fountains, twelve bridges over the *Seine*, ten of which are of ſtone, and eleven gates.

Among the diſadvantages of this city it muſt be obſerved, that *Paris* affords no good water fit for drinking, the inhabitants being obliged either to uſe that of the *Seine*, which is fetid, and occaſions dyſenteries; or that produced from ſprings, which is ſtill worſe, it being productive of the gravel and ſtone. No capital in *Europe* is worſe ſupplied with fiſh. The ſtreets are lighted at night ſix months in the year; but this is performed in a very inelegant manner, by hanging up lanterns in the middle of the ſtreets upon cords, which are put acroſs from one window to another.

There are good regulations in caſe of fire, for the firſt preſident of the parliament, and the lieutenant of the police, the horſe and foot patrole, and ſome companies of the *French* and *Swiſs* foot guards, are obliged to repair to a fire with all the expedition the diſtance of the place will admit; but the actual extinguiſhing of it is committed to the care of the monks of the four *Mendicant* orders, who on ſuch occaſions are to expend, for the benefit of the public, part of the ſtock they have acquired by begging. An attempt was lately made to eſtabliſh inſurance offices in *Paris*, to indemnify from loſſes by fire, on the plan of thoſe in *London*, but they were ſuppreſſed by order of government.

To give a more particular deſcription of this city: it conſiſts of three parts; namely, the Town, which lies on the north of the *Seine*, the City, which is environed by that river, and the *Univerſity*, which lies to the ſouth of it, with twelve ſuburbs. In 1702 it was alſo ſubdivided into twenty quarters or wards.

The city is in the centre, and is the moſt cleanly and wealthy; it conſiſts of three iſlands formed by the *Seine*; theſe are the *Iſle Du Palais*, the *Iſle* of *Saint Louis*, and the *Iſle Louviers*. The laſt is ſmall, and contains only ſtore-houſes for wood; it fronts the arſenal, and has a communication with the quarter of *St. Paul* by means of a wooden bridge.

The *Iſle Du Palais*, or the Iſland of the *Palace*, properly conſiſts of *Old Paris*, and is ſo called from the place in which the parliament meets, and which takes up a great part of it. The metropolitan church ſtands at one end of this iſland, where are alſo ſeveral little pariſh-churches, the hoſpital of *Hotel Dieu*, or the Houſe of *God*, which extends to the other ſide of the river toward the ſouth, and a vaſt number of ſmall crooked ſtreets or lanes, built with very high houſes, moſt of which are inhabited by ſeveral families.

This iſland has a communication with different parts of the city by means of ſeven ſtone bridges. The principal of theſe is the **Pont Neuf**, or *New Bridge*, which is the fineſt bridge in *Paris*. It conſiſts of twelve arches, and is ſeventy-two feet broad, reckoning the parapets. The middle or carriage-way is thirty feet broad, and on each ſide is a foot-way raiſed.

Over the piles on each ſide are alſo ſemicircular lodgements, in which are an hundred and ſeventy-eight ſmall ſhops belonging to the king's footmen, which only ſerve to obſtruct a moſt beautiful proſpect. In the centre of

the

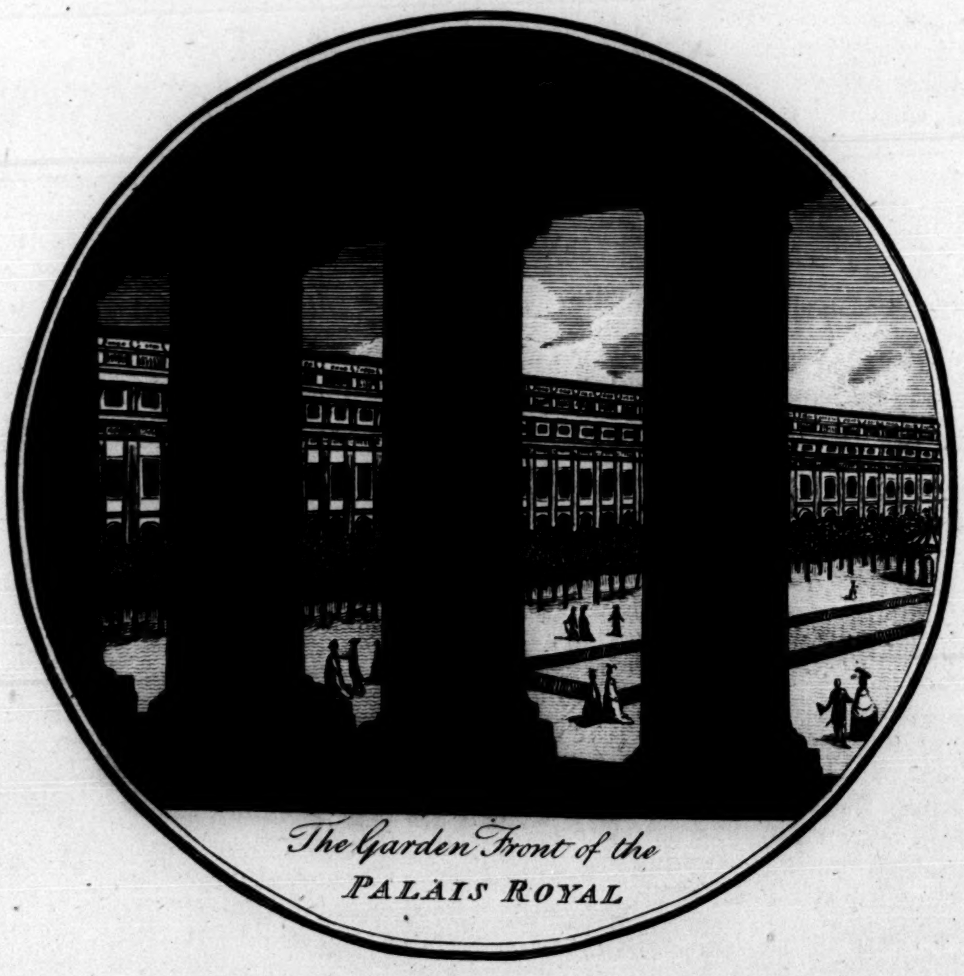
The LOUVRE
on the Side toward the Seine



The Garden Front of the
PALAIS ROYAL

Publish'd Oct. 31. 1788 by C. Stalker. Stationers Court.

the bridge is a fine equeſtrian ſtatue of *Henry* IV. in braſs, larger than the life, and ſtanding on a marble pedeſtal, on the ſides of which are *baſſo relievos*, with inſcriptions repreſenting the victories and principal actions of that hero. At the four corners are tied four ſlaves, alſo of braſs, who trample upon antique arms. This ſtately monument is incloſed within iron rails. Another ornament of the *Pont Neuf* is the *Samaritaine*, a building three ſtories high, in which is an engine that ſupplies ſome parts of the city with water. It is thus named from there being in the front a groupe of figures repreſenting the ſtory of *Chriſt* and the *Samaritan* woman.

Another bridge, called the PONT AU CHANGE, has a ſtatue of *Lewis* XIV. in braſs; and both this and the bridge of *Notre Dame*, on which are alſo water-works, have each two rows of houſes upon them; thoſe of the firſt being four, and of the laſt two ſtories high.

In the above iſland ſtands the cathedral of NOTRE DAME, which is a large and *Gothic* ſtructure, three hundred and ninety-ſix feet long, a hundred and forty broad, and a hundred and two in height: on the inſide are four rows of pillars, thirty in a row, with forty-five chapels, built between the outermoſt rows and the wall. The pillars in the nave of the church are adorned with large and beautiful pictures; and the choir was ſplendidly repaired and beautified by *Lewis* XIV. It has a ſmall ſpire in the middle, and at the weſt end two ſquare towers three hundred and eighty ſteps high; theſe are flat at the top, with a baluſtrade of free-ſtone, whence you have a noble proſpect of the city and the neighbouring country. In one of the towers are two large bells, one of which weighs forty thouſand, and the other thirty-one thouſand pounds weight.

Near this ſtructure ſtands the palace of the archbiſhop, in one of the halls of which is the library of the advocates, founded for the public uſe. There are alſo in the iſland a great number of pariſh-churches.

To the north of theſe iſlands ſtands that diviſion called *Le Ville*, or "the Town," which is daily beautified by rebuilding the old houſes. On the eaſt is the arſenal, near the river, which conſiſts of ſeveral courts, and has beautiful walks in the garden near the city-wall; and toward the north-eaſt is the *Baſtile*, a kind of fortreſs conſiſting of eight large round towers, joined together by other ſtrong buildings, and ſurrounded with ditches and baſtions. It is a priſon for ſtate criminals, and here the king keeps a governor, a lieutenant, and an independent company of ſoldiers.

Among the palaces in *Paris*, that of the LOUVRE is eſteemed the principal ornament of the city. It is commonly divided into the Old and New. The old part of this royal palace was begun to be built with ſtone by *Francis* I. in 1528, and was finiſhed by *Henry* II. in 1548. Succeeding kings improved and enlarged it, till *Lewis* XIV. ordered it to be rebuilt on a new plan, which, if completed, would have rendered it a truly magnificent ſtructure. The plan of the whole building forms an equilateral quadrangle, containing a court in the centre three hundred and ſeventy-ſix feet ſquare. The principal of the four main wings was built by *Lewis* XIV. as alſo the greateſt part of the two others, which form the ſides, together with a new front to that part which lies next the *Seine*. The four inner fronts, according to the plan, were to have conſiſted of eight pavilions, and eight *corps de logis*. The whole building is three ſtories high in the new part; the firſt of the *Corinthian* order, the ſecond of the *Compoſite*, and the third of the *Attic*.

In the hall of the Hundred *Swiſs* is a kind of gallery ſupported by four gigantic figures. In this hall great entertainments were given, the queen *Catharine de Medicis* cauſed plays and interludes to be exhibited there for the amuſement of the court. *Henry* IV. built a gallery along the river ſide quite to the *Tuilleries*, which is reckoned the fineſt in *Europe*; and under it is the royal printing-houſe.

At ſome diſtance behind the *Louvre* ſtands the place called the TUILLERIES, built in 1564 by order of queen *Catharine de Medicis*, in a place where they formerly made tiles, in *French tuilles*, from whence the palace takes its name; and this ſtructure was alſo improved by *Lewis* XIV. It is one range of building, with a dome in the middle, and a pavilion at each end. Before it is a handſome large ſpace divided into three courts; the whole adorned with columns, pilaſters, and other ornaments. Behind this palace are pleaſant gardens adorned with fine walks, planted with evergreens, and other trees, with beautiful parterres, where may be ſeen all the year round every flower in ſeaſon. It has alſo three beautiful fountains, and a large octagonal canal. Toward the river is a fine terrace above a hundred perches long and eighty-four broad, planted with three rows of trees; and from this terrace is a moſt beautiful proſpect over the adjacent country. Theſe gardens are public, and great numbers of well dreſſed people in ſummer evenings reſort thither. All who wear a black bag and a ſword are permitted to walk here, though all their other cloaths are not worth a crown.

The palace of LUXEMBURG was built by queen *Mary de Medicis* on the ruins of the old *hôtel* of *Luxemburg*, which name it has retained. It is one of the moſt perfect and regular pieces of architecture in all *France*. Here is a gallery of fine paintings done by the celebrated *Rubens*, who ſpent two years in that work. It conſiſts of the hiſtory of the life of *Mary de Medicis*, repreſented allegorically in twenty-four large pictures, nine feet broad and ten feet high, placed in the piers between the windows. The other apartments are alſo richly furniſhed, and adorned with a fine collection of valuable paintings. The gardens of this palace are elegantly laid out, and ornamented with fountains. They are daily viſited in ſummer-time by the nobility and others, like thoſe of the *Tuilleries*; but more eſpecially on *Sundays*, when ſeveral thouſands of all ranks make their appearance there. It is here the cuſtom for the gentlemen and ladies of the firſt quality, though richly dreſſed, to ſit down to diſcourſe on the graſs.

The royal palace was built by cardinal *Richelieu*, who made a preſent of it to *Lewis* XIII. It conſiſts of ſeveral ſets of buildings ſeparated by large courts, and is adorned with fine gardens. Several new apartments have been added to it ſince the cardinal's time, and here queen *Anne* of *Auſtria*, mother to *Lewis* XIV. reſided during the minority of her ſon. In this ſtructure are now held the courts of juſtice, the moſt eminent of which is the parliament.

The *royal obſervatory (obſervatoire royal)* is a very ſtately edifice, built in 1667, after a deſign of *Claude Perrault*, upon the higheſt ground in *Paris*, in the *Fauxbourg St. Jacques*; and as neither iron nor timber has been employed in its conſtruction, except for the ſtaircaſe, it has coſt great ſums. It is reckoned to be about eighty or ninety feet in height; at the top is a noble platform commanding a fine view of *Paris* and its environs. In the different floors of this building there are a number of trap-doors placed perpendicularly over each other, and when theſe are opened, the ſtars may be very clearly diſtinguiſhed at noon-day from the bottom of the cave. *White's Letter in the Mancheſter Memoirs*, II. 361. Several aſtronomers, maintained by the king, have apartments here. The *French* make their firſt meridian paſs through this obſervatory, which Dr. *Maſkelyne* lays down, by obſervation, to be 2° 20′ E. from *Greenwich*.

One of the greateſt curioſities about *Paris*, and yet ſcarcely known there, is a vaſt ſubterranean cavern, called "the *Quarries*," which have been formed by the immenſe quantities of ſtone dug out from thence, to compoſe the buildings of the city at firſt, and afterward of the ſuburbs. Of theſe *Mr. White*, member of the Royal Medical Society of *Edinburgh*, has given an account, in a letter addreſſed to his father, which is inſerted in the *Mancheſter Memoirs*, *Vol.* II. *page* 361—370. He viſited this ſtupendous cavern, accompanied by the late ingenious *Mr. Smeathman*, whoſe curious account of the white *Ants* of *Africa*, we laid before our readers in vol. I. page 419, and who, unfortunately for the world, died in the prime of life, and in the midſt of uſeful undertakings.

The whole company conſiſted of forty perſons, each carrying a wax candle in his hand; they were attended by a number of guides with torches. Formerly there were many ways of acceſs to this place, but the officers of the police found it neceſſary to reduce their number;

Mr. White believes there are at preſent only two, and theſe are kept conſtantly locked. One of theſe entrances is at the *Obſervatoire Royal*, in the *Fauxbourg St. Jacques*, (*St. James*'s ſuburbs), the other at the *Val de Grace*. The extent of this quarry, from the entrance to the exit, is computed, by *Mr. White*, to be about two *French* leagues; but as the diſtance from the *Obſervatory* to the *Val de Grace* is ſcarcely half a mile, the ſubterranean walks, if any thing near the extent deſcribed, muſt take a very circuitous winding courſe, and terminate not far from the ſpot where they began. Indeed it is highly probable that the diſtance which our author has laid down, greatly exceeds the actual meaſurement; for all conjectures on the extent of ground paſſed over in ſo tedious and troubleſome a perambulation muſt neceſſarily be fallacious. The deſcent at the *Obſervatory*, which is by ſteps, is 360 feet perpendicular; at the entrance the path is narrow for a conſiderable way, after which you enter wide and ſpacious ſtreets, all of which are marked with names in the ſame manner as the ſtreets of *Paris*. Poſſibly each of theſe ways receives its name from the ſtreet above, the materials for the building of which were dug from that particular ſpot. To aſſiſt the inſpectors of theſe *quarries*, (for ſo the principal guides are called) in finding their way through ſuch dark, extenſive, and intricate windings, plans have been drawn, which they carry with them, but our traveller could not obtain one, although extremely deſirous of making the acquiſition. The general height of the roof is about nine or ten feet, but in ſome parts it riſes to thirty and even forty feet: in ſome particular places the roof is perfectly level. Toward the middle of this dreary region, they entered a kind of ſaloon, cut out of the rock, which is ſaid to be exactly under *St. James*'s church, in the ſuburbs of that name; this was illuminated with great taſte, and ſuch a ſight being entirely unexpected, excited a very agreeable ſurpriſe. At one end was a repreſentation in miniature of ſome of the principal forts in the *Eaſt Indies*, with cannon, centinels, &c.; and in another place, a regiment of ſoldiers with their commander at their head, all formed of a kind of clay which is dug upon the ſpot; theſe were ingeniouſly contrived, and the light which was thrown upon them, produced a very agreeable effect. On the other ſide of this hall a cold collation was prepared, and ſome very excellent burgundy, which effectually diſpelled the terrors excited by ſuch a dreary, and even dangerous ſubterranean journey. In ſome places here, as in many other deep caverns in various parts of the world, there is a petrifying quality which acts upon the dropping water; and the air, in the more narrow paſſes, is unfavourable to reſpiration. After having ſpent between four and five hours in traverſing theſe receſſes, they returned to the cheerful face of day by the paſſage at the *Val de Grace*, but the height of the aſcent there is not given, nor does our author deſcribe the width of any one of the ſubterranean ſtreets through which he paſſed, ſo that no judgment can be formed of the degree of lateral ſupport which is given to the roof; but he ſpeaks of the danger which appears in ſeveral places of the roof falling in, and the conſequent hazard to which many of the buildings in the ſuburbs of *Paris* are expoſed, as ſome parts are propped with timbers which are much decayed, whilſt others are effectually ſecured by immenſe ſtones cemented with mortar. Nor are theſe apprehenſions unſupported by facts, for in the court-yard of the *Engliſh Benedictine* convent, within a few yards of the houſe, the roof has fallen in 193 feet; and in the *Tableaux de Paris* (the only publication in which any mention is made of theſe quarries) it is aſſerted, that inſtances have happened of the earth falling in, and at one time eight men were ſwallowed up in a gulf of 150 feet deep; but the attention of government having been drawn by ſuch accidents, care has been taken to render theſe cavities more ſecure. The ignorance in which the inhabitants of thoſe diſtricts live, with reſpect to the exiſtence of ſuch vaſt vaults directly under their dwellings, is truly aſtoniſhing, government being very careful to ſuppreſs the knowledge of it, leſt a general alarm ſhould be ſpread; on which account, to be admitted into them, is a favour very hard to be obtained. *Mr. White* ſays, that ſome part of this quarry was formerly inhabited by a famous gang of robbers, who infeſted the country for many miles round.

The Gobelins at *Paris* is a houſe ſo called from one *Gobelin*, a celebrated dyer, who removing from *Rheims* to *Paris* in the reign of *Francis* I. bought that houſe. He had diſcovered the ſecret of dying the beautiful ſcarlet called from him the ſcarlet of the *Gobelins*. *Lewis* XIV. bought that and ſome of the neighbouring houſes, where he eſtabliſhed a manufacture of the fineſt tapeſtries, and alſo ſettled a great number of gold and ſilver-ſmiths, embroiderers, painters, carvers, and other artificers in every branch tending to ſplendor and magnificence. They are all under the direction of the ſuperintendant of the buildings, arts, and manufactures of *France*. There have been above eight hundred workmen employed here at a time; and though their number be ſince conſiderably decreaſed, yet there are ſtill to be ſeen many things of the moſt curious workmanſhip worthy the inſpection of a traveller.

With reſpect to the churches, the moſt remarkable, after that of *Notre Dame*, which has been already deſcribed, are the following:

The church and nunnery of *Val de Grace* was founded by queen *Anne* of *Auſtria*, upon the ſuppoſed miraculous birth of *Lewis* XIV. after ſhe had been married twenty-two years without having any offspring. Her heart and that of *Henrietta Maria* of *England*, ducheſs of *Orleans*, lie entombed here. The altar and cupola are exceeding fine. The nuns of this convent muſt all be of noble extraction, and chooſe a lady abbeſs once in three years. *Madam la Valiere*, one of *Lewis* the XIVth's miſtreſſes, retired to this monaſtery ſoon after her leaving the court.

In the church which formerly belonged to the *Jeſuits*, and which ſtands in *St. Anthony*'s ſtreet, is depoſited the heart of *Lewis* XIII. incloſed in a gold caſe, ſupported by two angels of ſilver. Here is alſo a fine altar with ſeveral braſs ſtatues, and the monuments of the princes of *Condé*.

St. Eustace is a large and beautiful church.

The University of *Paris* is ſaid to have been founded by *Charlemagne* in 791. In this univerſity are upward of thirty colleges, the moſt conſiderable of which are the *Sorbonne*, the college of *Navarre*, the college of the *Four Nations*, and the *faculty* or college of *phyſic*.

The college of Sorbonne was founded in 1250; but was very poor when cardinal *Richlieu* cauſed it to be rebuilt in 1629. The preſent building is a very magnificent ſtructure, in which are apartments for thirty-ſix doctors, with a library and halls for public lectures and acts. To the three profeſſors chairs the cardinal added three others of a royal foundation. This is thought to be the ſtricteſt college in *Europe*, the degree of doctor being only given to thoſe who hold the *Sorbonnic* act, which is to anſwer all diſputants from ſun-riſe to ſun-ſet: on which account the title of doctor of the *Sorbonne* is of great repute. The doctors wear black gowns, and when exerciſes are performed have white fur hanging acroſs the breaſt.

The *college* of Navarre was founded by *Jane*, queen of *Navarre*, conſort of *Philip* the *Fair*, in 1305, for ſtudying divinity; and in 1683 three other chairs were added. In this college are kept the records of the univerſity.

The *college* of the Four Nations is the fineſt in the univerſity, and deſigned for the reception of the children of gentlemen, or eminent citizens of four different nations, namely, *French*, *Italians*, *Spaniards*, and *Germans*. There ſhould be ſixty fellows in this college, by virtue of its original foundation; but they have been reduced to half that number. It is alſo called the college of *Mazarine*, from the cardinal of that name, who by his laſt will bequeathed to it two millions of livres. The univerſity adopted this college upon condition that neither divinity, law, nor phyſic ſhould be taught in it; nor any academy annexed to it in which ſtudents ſhould be taught to ride, fence, or dance. Beſides the ordinary profeſſors, here is one for mathematics. This college has a ſtately front, in the form of a theatre, facing the *Louvre*, which is on the oppoſite ſide of the *Seine*.

The faculty of phyſic has a college built in 1477, in which are five profeſſors, who are annually choſen. In this college is an amphitheatre, in which are annually given complete courſes of anatomy, ſurgery, pharmacy, phiſiology, botany, and chemiſtry. The bachelors of phyſic are obliged to attend, in order to write the preſcriptions of the phyſicians. The faculty is compoſed of all the doctors and licentiates who have taken their degrees in the univerſity of *Paris*: they have a dean at their head, and a cenſor. Theſe doctors and licentiates have the ſole right of practiſing phyſic at *Paris*, no phyſician of any other univerſity being ſuffered to practiſe there, unleſs he be phyſician to the king or the royal family. All the profeſſors in the univerſity have ſettled ſalaries, and in moſt of the colleges there are fellowſhips for the ſtudents.

The ſeveral academies deſerve to be particularly mentioned. Theſe are, I. The *French Academy*, founded in 1633, by cardinal *Richelieu*, for the improvement of the *French* language: it conſiſts of forty members, who meet on Mondays, Thurſdays, and Saturdays, in a hall of the *Old Louvre*.

II. The *Royal Academy* of inſcriptions and *Belles Lettres*, inſtituted for the advancement of polite literature. In this academy ancient monuments are explained, and the tranſactions of the kingdom perpetuated by medals, inſcriptions, &c. It conſiſts of four ſorts of members: theſe are twelve honorary, and twenty penſioners, with twenty-ſix aſſociates and twelve ſtudents. Their days of meeting are on Wedneſdays and Saturdays.

III. The *Royal Academy* of *Sciences*, inſtituted in 1666, which has alſo its honorary members, penſioners, aſſociates, and ſtudents.

IV. The *Royal Academy* of *Painting* and *Sculpture* was founded in 1648. Such works of the painters and ſculptors as are admitted into this academy are diſpoſed in three halls, and marked with the names of the ſeveral artiſts. Here are alſo the pictures of a great number of celebrated painters, and among the ſtatues ſeveral of *Gyps* taken from antiques.

V. The *Royal Academy* of *Architecture* was founded in 1671, but was not authorized by letters patent before the year 1717. It is divided into two claſſes: the firſt is compoſed of ten architects, a profeſſor, and a ſecretary; and the ſecond of twelve other architects. The profeſſor, whoſe poſt, as well as that of the ſecretary, is for life, is obliged to read public lectures every Monday and Thurſday in the hall of the *Louvre*.

The moſt conſiderable of the hoſpitals in this city are, that for diſabled ſoldiers, the *Hotel Dieu*, *Trinity Hoſpital*, and the *General Hoſpital*; into the latter of which 10,000 people are ſaid to be frequently received. The *Royal Hoſpital* for diſabled ſoldiers may be conſidered as a large palace; it takes up above ſeventeen acres. Here are four large courts, all of the ſame form, ſurrounded with regular buildings four ſtories high. In the middle is a fifth court, larger than all the four taken together. It is encompaſſed with a double row of arches, one above the other, forming very narrow galleries. The chapel is very beautiful, and its altar adorned in the moſt ſplendid manner. This hoſpital is the aſylum for lame and ſuperannuated officers and ſoldiers. The great order and ſtrict diſcipline obſerved in it cannot be ſufficiently admired. It has a governor, a lieutenant of the king, and a major.

L' Hotel Dieu, or "the Houſe of God," is the moſt ancient and largeſt hoſpital in *Paris*. As all poor ſick people are admitted into it, there have been ſometimes four thouſand perſons in it at one time. They are attended with the greateſt care by the nuns of the order of *St Auguſtine*, who diſcharge the office of nurſes. To the honour of this hoſpital, all manner of patients are admitted, without regard to their country, religion, or diſeaſe; and no ſecurity is required for their burial in caſe of death; nor are thoſe who labour under any incurable diſeaſe ever diſcharged, and ſuffered to periſh in the ſtreets.

In the ſuburbs of *St. Victor* is the *General Hoſpital*, which alſo goes by the name of *La Salpetreria*; ſaltpetre having been formerly made here. In it is a noble foundation for the female ſex, near ſeven thouſand of whom are here provided for, and live under the inſpection of ſixty ſiſters, ſubordinate to whom are eighty governeſſes, and a conſiderable number of maid-ſervants. Into this place are received foundlings, who take up one ward: girls and young women, who ſew and knit: a great number of bad women, who are here compelled to ſpin woollen: ſome hundred of female idiots, who live in little houſes built in the form of a ſtreet: many other poor women, ſome of whom are kept here gratis, and others pay a ſmall matter: delinquents who are confined, but not put to work. *L' Hoſpital des Enfans Trouvé's*, or the *Foundling Hoſpital*, which is a part of this building, receives vaſt numbers of infants. Mr. *Hume* ſays, "It is computed, that every ninth child born in *Paris* is ſent to this hoſpital." *Eſſay on the populouſneſs of ancient nations*. The ſentiments of that writer ſeem not favourable to ſuch inſtitutions, for he adds "to kill one's own child is ſhocking to nature, and muſt therefore be ſomewhat unuſual; but to turn over the care of if upon others is very tempting to the natural indolence of mankind." — See an account of a ſimilar inſtitution at *Moſcow* by the preſent empreſs of *Ruſſia*, in page 46 * of this volume.

To the *General Hoſpital* alſo belongs the caſtle of *Biceſtre*, which is ſeated on an eminence at a ſmall diſtance from the abovementioned hoſpital, and is on all ſides defended by a wall, which is of very conſiderable compaſs, containing within it many large buildings, and ſeveral open ſquares. In this caſtle are near four thouſand perſons of the other ſex, particularly poor men, who are entertained here gratis, and ſome who pay for their reception into the houſe; perſons diſordered in their ſenſes, whoſe ward reſembles a village, it being built in regular ſtreets; twenty-five men and as many women afflicted with the venereal diſeaſe. Common priſoners are kept here in a particular houſe, walled in, and every one in a cell by himſelf: but the moſt remarkable thing here is the large well, which is a modern work: it is of a circular form, and from top to bottom lined with free-ſtone. To the ſurface of the water it is a hundred and twenty-eight feet in depth, and twenty more to the bottom. Round the well, at the water's edge, is a gallery to which a perſon may, on occaſion, be let down. The water is drawn up by means of an engine worked by four horſes, who are relieved every three hours; it is received all day long into huge buckets, each of which contains twelve hundred pounds weight of water, which is diſcharged out of theſe into a leaden baſin, whence it runs into a reſervoir, and is conveyed by means of pipes to all the parts of this vaſt building.

L' Hoſpital de la Pietie, in *St. Victor*'s ſtreet, conſtitutes alſo a part of the *General hoſpital*, and is the place where the governors uſually hold their meetings. Theſe three laſt foundations, together with *L' Hotel Dieu*, have one common fund, amounting to full two millions of livres, or 87,500*l*. ſterling per annum. Its preſent governors are twelve ſubſtantial citizens appointed by the provoſt of the merchants, and by the echevins, but approved by the parliament, before whom they muſt be ſworn. There are alſo ſeven honorary adminiſtrators, or governors: theſe are the archbiſhop of *Paris*, the firſt preſident of the parliament, chamber of accounts, and court of aids, the attorney-general, the lieutenant-general of the police, and the provoſt of the merchants.

Trinity Hoſpital was founded about the year 1202 by two friars for the reception of poor travellers: but it is now uſed for the maintenance and education of poor children of both ſexes born at *Paris* in lawful wedlock. They wear blue gowns, and here are an hundred beds for boys, and thirty-ſix for girls, who have different apartments, in each of which there is an infirmary. The youngeſt are taught to read and write; and when they are ſix or ſeven years old, are inſtructed in ſome trade within the hoſpital. To induce mechanics to ſettle and exerciſe their trades here, in order to teach the children, the parliament has declared, that ſuch journeymen as have taught theſe children ſix years in this hoſpital, ſhall have the freedom of the city without any expence; and that ſuch children as ſhould be arrived at the age of twenty-five, and ſhould have taught others during ſix years, after they were out of their apprenticeſhip, ſhould enjoy the ſame privilege. This wiſe eſtabliſhment has procured the city a vaſt number of ſkilful artificers. This hoſpital is governed by five eminent perſons choſen by the parliament, out of ten preſented to them by the attorney-general.

Among the ſquares in *Paris*, the moſt famous is that called *La Place de Victoires*, or "the ſquare of Victories." In it is a noble ſtatue of *Lewis* XIV. which is one of the beſt pieces of ſtatuary in *Europe*: it is of maſſy braſs, thirty feet high: he is repreſented clad in his robes, with Victory behind him of the ſame magnitude and metal, putting a crown on his head, and poiſed with her foot on a globe. Under her is a three-headed *Cerberus*, to repreſent the triumph of *Lewis* XIV. over the triple alliance, with theſe words under it VIRO IMMORTALI. The whole piece was caſt at once, and weighs above thirty thouſand pounds. The pedeſtal is twenty-two feet high, and upon it are four ſlaves of braſs, with baſſo relievos of the king's battles and conqueſts. Under the pedeſtal is a pavement of marble incloſed within handſome iron rails.

The triumphal arch at *Paris* is ſaid to exceed every thing of the kind in *Europe*, whether ancient or modern; at leaſt ſuch is the opinion of the *French*. The ſtructure is indeed noble, it conſiſting of three faces, of an extraordinary height, with two portals, after the manner of the ancient and modern *Romans*. The orders of the columns are finely deſigned, and the captives and trophies with which this ſtructure is adorned are executed in the moſt admirable manner. On this arch is placed the king's ſtatue on horſeback. The whole was done from the deſign of the famous *Perault*.

The other gates of the city are triumphal arches, which are all pompous pieces of architecture: that of *St. Denis*, leading to the ſquare of the ſame name, is above ſeventy feet high, and as many over, adorned with columns, baſs reliefs, and trophies, with ſome inſcriptions relating to the paſſage of the *French* over the *Rhine*, and their taking of *Maeſtricht*. The gate of *St. Martin* is fifty feet high and as many wide, and has on each ſide an inſcription recording the actions of *Lewis* XIV. The third gate is that of *St. Anthony*, erected in the reign of *Henry* II. but repaired and embelliſhed by the city, with ſome inſcriptions in honour of *Lewis* XIV.

Among the things worthy obſervation at *Paris* is the *Fair* of *St. Germain*, which begins on the third of February, and is held through Lent. The place where it is kept is a large ſquare building; which has ſix or ſeven rows of ſhops, wherein the cuſtomers play at dice when they come to buy goods; for they are firſt cheapened and bought, and then the people play who ſhall pay for them. The greateſt gaming is after candle-light, and ſometimes the king himſelf comes hither to play. Here is a celebrated picture of our *Saviour's* aſcenſion, with *St. Peter*, *St. Paul*, and two angels in the ſame piece, the work of *Antonio Moro*: the frame, which is curiouſly carved and richly gilt, is valued at two hundred piſtoles.

On the river *Seine* are a great number of pleaſure-boats belonging to the king and perſons of quality, in which they ſometimes take the amuſement of ſailing on the water, for the benefit of the air. The water of this river generally looks green and dirty, occaſioned by the river being commonly filled with covered barges full of waſherwomen cleaning their linen; yet it was carried in pails through many of the ſtreets, and ſold as milk is in *London*, and is now conveyed into houſes by means of pipes, which were furniſhed by contract from Mr. *Bolton*'s manufactory, near *Birmingham*. It is a common obſervation, that the *French* women are the worſt laundreſſes in *Europe*: they waſh their linen in cold water in the river, and as to ironing and plaiting, they have not the leaſt notion of it. There are here indeed ſome *Engliſh* women who will finiſh them pretty neatly, but not ſo white as in *England*, which may in a good meaſure be owing to the water.

Many improvements have of late years been made in this metropolis, among which one of the moſt beneficial is that of conveying water into houſes by means of iron pipes. This plan has been executed upon the ſame principle as that of the different water-works, for ſupplying the city of *London*, and all the pipes, as we have obſerved, were made in *England*, ſo much ſuperior are the *Engliſh* to the *French* in the art of manufacturing that metal.

At *Paris* are ſeveral courts poſſeſſing very extenſive juriſdiction. The principal of theſe are *the Parliament*, which is the laſt reſort in all cauſes where the crown does not interpoſe; a general court of the juſtices in eyre; a court of the conſtables and marſhals of *France*; a court of the admiralty; the bailiwic of the palace; the court of the chatelet, or the ordinary court of juſtice for the civil government of the city, of which the provoſt, or mayor, with the four eſchevins, or aldermen, and twenty-ſix counſellors, are judges; a ſalt office; a court of the warren of the *Louvre*, eſtabliſhed for the preſervation of the game ſix leagues round *Paris*, and to prevent people from hunting in thoſe limits without leave; the court of *L' Hôtel de Ville*, or "town-houſe," which takes an account of the city rents, and of the taxes on all proviſions brought into *Paris*; and the court of the conſuls, which takes cognizance of every thing relating to commerce.

This parliament, and thoſe in the ſeveral provinces, have frequently in the preſent and preceding reigns, made great ſcruple to regiſter many of the obnoxious and oppreſſive edicts which have been iſſued by the king, and they lately abſolutely refuſed to give that ſanction to an edict, which levied a ſevere tax upon the people. In conſequence of which inflexibility the *French* monarch, at a bed of juſtice held on the 8th of May 1788, took the bold and deciſive meaſure of depriving his parliaments, throughout the kingdom, of the right of regiſtering the royal edicts, which are preſented in the king's name for the general government of the kingdom at large, and veſted that right in a court formerly known by the name of *La Cour Pleniere*, or, the *Plenary* or *Supreme Court*, which had been long aboliſhed, but is now, for this purpoſe, revived. Who are the perſons who are to compoſe this court is not yet known.

The *French* condemn malefactors to the gallies, to the gibbet, and to what is called being broke alive upon the wheel: the laſt is uſed only in caſe of murder; but if the evidence leaves only ſome room to doubt the guilt of the perſon accuſed, he is, as in many other countries, cruelly put to the torture to obtain a confeſſion: and here it muſt be obſerved, that malefactors in *France* receive their ſentence on their knees; which is no ſooner pronounced than the hangman ties a rope about their necks, and conveys them to priſon, whence, after confeſſion, they are generally dragged immediately to the gallows. The common place of execution is the *Greve*, in which ſquare ſtands the town-houſe. The manner in which criminals are broke, as it is called, on the wheel, we ſhall give from Mr. *Stephens*'s Travels through *France*. "In the middle of the ſquare," ſays he "a ſcaffold was erected; and at half an hour after four the priſoner was brought to it in a cart, attended by the city guard, walking two and two, a prieſt accompanying the dying man. On the ſcaffold was erected a large croſs exactly in the form of that commonly repreſented for *St. Andrew*'s. The executioner and his aſſiſtants placed the priſoner on it, in ſuch a manner, that his arms and legs were extended agreeably to the form of the croſs, and ſtrongly tied down. Under each arm, leg, &c. was cut a notch in the wood, as a mark where the executioner might with the greater facility break the bone. He held in his hand an iron bar, not unlike an iron crow, and with the two firſt ſtrokes broke his arms, then in a moment after both his thighs. It was dreadful to ſee the poor wretch writhe his body with agony, and to obſerve the diſtortions of his face. It was a conſiderable time before he expired, and it would have been longer, had not the executioner given him what is called the *coup de grace*, or merciful ſtroke, on his ſtomach, which at once put an end to his miſery. They then took the dead body from the croſs, and put it on a wheel, fixed to a long pole, where he was expoſed for ſome time; and this part of the ceremony occaſions the common expreſſion of being broke upon the wheel, though it is performed on a croſs."

The trade of *Paris* with the other parts of the kingdom is very extenſive. Their commerce with foreigners is alſo conſiderable; for it is obſerved, that the ſingle branch of the gold, ſilver, and ſilk ſtuffs manufactured at *Paris*, is equal to the whole trade carried on at *Lyons*. Here are likewiſe manufactures of all other ſorts of ſtuffs, and of looking-glaſſes.

In the city are ſix principal companies of tradeſmen, out of which the conſuls, who have the regulation of trade, are choſen; theſe are the drapers, the grocers and apothecaries, the mercers and jewellers, the ſkinners, the hatters, and goldſmiths: beſides which there are the bookſellers, the vintners and wine-merchants; the wool-merchants and timber-merchants; but though theſe are eſteemed inferior to the others, they have the ſame privileges, and are capable of being elected conſuls.

The land in the neighbourhood of this capital is in general flat and level, intermixed, however, with a few eminences. Toward the north of *Paris* the ſoil is fat, and produces a great quantity of very good corn. On the other ſide it is ſandy, marſhy, and wet. The whole is, however, cultivated with great care and induſtry; and the people have carried the art of gardening to ſuch perfection, that in the midſt of winter they raiſe all thoſe ſorts of kitchen-ſtuff which with us are the produce of ſummer only. In the environs of *Paris* they make one year with another about ſixteen thouſand hogſheads of wine, which is all drank at *Paris*, or in its neighbourhood. The wine drank at taverns is generally very indifferent.

This city has undergone the fate of moſt others: it has been ſeveral times beſieged, twice burnt, and once conſiderably damaged by an inundation of the *Seine*. *Henry* VI. of *England*, an infant under a year old, was crowned here, and his court was kept with great ſtate and magnificence at the *Louvre* in 1422, his uncle *John* Duke of *Bedford* being regent. On the twenty-firſt of Auguſt 1572, it was in a moſt deteſtable manner ſtained with the blood of ſix thouſand Proteſtants; the ſignal for which moſt horrible maſſacre was given by the tolling of the great bell, which is ſtill to be ſeen in the tower of the palace where the parliament ſits. In the civil war *Paris* took part with the *Leaguers* againſt the *Proteſtants*, and was in vain beſieged in the years 1589 and 1590 by king *Henry* III. and IV. but in 1594 readily opened its gates to the latter, after his coronation.

In the neighbourhood of *Paris* are ſeveral palaces and little towns included under the ſame government, the principal of which are the following:

The wood of VINCENNES reaches almoſt to the gates of *Paris*, and is incloſed round with a wall. Within this wood, at the diſtance of three miles to the eaſt of *Paris*, is a royal palace, or caſtle, which was conſiderably improved and beautified by *Francis* I. *Henry* II. *Lewis* XIII. and XIV. It is an oblong ſquare building, encompaſſed with dry ditches, which are lined and pretty deep. The caſtle is compoſed of ſeveral ſquare towers, the higheſt of which is called the *Donjon*, and is ſurrounded with a particular ditch, over which there is a drawbridge. The chapel, though in the *Gothic* taſte, is not without beauty, it being adorned with ſeveral pyramids and other ornaments; and the pictures on the windows are highly valued. The rooms within the palace are beautiful and ſtately, and the ceilings adorned with paintings.

The park of *Vincennes* takes up fourteen hundred and ſixty-ſeven acres. The avenue leading to the palace has four rows of elms, planted on a ſpot which has been made level for that purpoſe, they having been obliged to ſupport it in ſeveral places by means of high and thick walls. This palace, or caſtle, has ſometimes ſerved as a priſon for perſons of the higheſt rank, and princes of the blood, when they have incurred the ſovereign's diſpleaſure.

An edict ordering the demolition or ſale of this royal ſeat, together with thoſe of *Blois*, *Madrid*, and *La Muette*, (the latter a royal hunting ſeat at the entrance of the foreſt of *Boulogne*) was regiſtered by the parliament of *Paris* in March 1788, and was publiſhed the ſame month.

About three miles to the weſt of *Paris* is the royal palace of MADRID, in the wood of *Boulogne*. This palace was built by *Francis* I. in 1529, after the model of the palace of *Madrid* in *Spain*. It conſiſts of a ſuite of buildings three ſtories high, beſides the ground floor, and round it is a gallery reaching to the top of the firſt floor, ſupported by columns. The arches have an ornament of a ſingular kind, being incruſted with a ſort of tiles that gliſten very much when the ſun ſhines upon them. By the very recent edict, already mentioned, this palace is ordered to be either ſold or demoliſhed.

RUEL is a ſmall town on the *Seine*, five miles from *Paris*, where is a very handſome church, and ſome elegant gentlemen's houſes; but is principally noted for a ſeat built by cardinal *Richelieu*, which, though not magnificent, is admired for its neatneſs, and for being adorned with very beautiful gardens in the *Italian* taſte, and with curious water-works.

ST. MAUR DE FOSSEZ, on the river *Marne*, over which is a ſtone bridge, is about two leagues to the eaſt of *Paris*. Here is an ancient abbey of *St. Maur*, which was ſecularized in 1535, and afterward changed into a collegiate church of canons. Here is alſo a very fine ſeat, with beautiful gardens, belonging to the duke of *Bourbon*.

CONFLANS is a fine ſeat, thus called from its being near the confluence of the *Seine* and the *Marne*. It owes its beauty both to nature and the elegant taſte of *Francis de Harlay*, archbiſhop of *Paris*: it belongs to that metropolitan's ſee, and is the country ſeat of the archbiſhops. The rooms within are extremely magnificent, eſpecially the gallery, which is adorned with pictures executed by the beſt maſters. The gardens are very beautifully laid out, and are embelliſhed with ſtatues, walks, water-works, groves, and other decorations.

SECT. XXX.

Of the Government *of the* Iſle *of* France; *its Situation, Extent, and Produce; with a particular Deſcription of the Palaces of* Verſailles, Trianon, Marly, Fontainbleau, Mudon, St. Cloud, *and the principal Cities.*

THE government round the *Iſle of France* is bounded on the north by *Picardy*, on the weſt by *Normandy*, on the ſouth by the *Orleannois*, and on the eaſt by that of *Champagne*, extending about ninety miles in length, and as far in breadth.

The air is temperate, and the ſoil fertile; it therefore abounds in corn, wine, and fruit, and is divided into ſeveral ſmall diſtricts.

In deſcribing the places in this government we ſhall begin with the palaces, theſe having a nearer relation to the ſubject of the laſt ſection.

The palace of VERSAILLES, which lies four leagues to the ſouth weſt of *Paris*, ſtands on an artificial eminence, in the midſt of a country well ſuited for hunting, and abounding with game. *Lewis* XIII. built a caſtle here, to ſerve as a hunting ſeat; but *Lewis* XIV. converted the village into a fine town, and the caſtle into the moſt noble palace in the world: for which purpoſe he filled up a ſwampy valley, and formed an extenſive hill. "Had " he," ſays *Voltaire*, " expended upon *Paris* and the " *Louvre*, the fifth part only of what it coſt him to force " nature at *Verſailles*, he would have made it the moſt " magnificent city in the world." *Siecle de Louis, chap.* 26. The ſame writer informs us that the Duke *De Crequi* uſed to call *Verſailles*, "a favourite without merit."

The ſide fronting the ſtables (which are built in the form of a creſcent, ſtand at the diſtance of a quarter of a mile, and are ſufficiently large to receive five hundred horſes) is not anſwerable in magnificence to the reſt; but that facing the gardens is extremely beautiful. Its roof, glittering with gold, affords a noble proſpect at a diſtance, and the gardens, ſtatues, groves, grottos, canals, fountains and other water-works, far ſurpaſs any thing of the kind to be ſeen in *Italy*; and its internal riches and beauty are altogether anſwerable to its exterior.

The avenue leading to the palace divides the town into two parts; that which ſtands on the left hand, in coming from *Paris*, is called *Old Verſailles*, and that on the right *the New Town*. This is the principal avenue, beſides which there is one which ſtrikes off from each ſide of its termination. On the road toward *Paris* is a fine avenue of elms, the viſta in the middle being ſixty feet wide, and thoſe on the ſides thirty each. From the ſtables a parade is firſt paſſed, then three courts, the firſt of which leads, by an eaſy aſcent, to a ſmaller, which opens to the third, which is paved with black and white marble; in its centre is a baſin and fountain. This court is called " the great *royal ſquare*," and is encompaſſed with regular pavilions built by the princes and lords of the court; theſe, with other fine houſes, form the new town.

The new palace preſents a front of more than a mile in extent, and communicates with the old palace by ranges of apartments. The great marble ſtair-caſe by which it is aſcended, is ſaid to ſurpaſs all the productions of antiquity of a ſimilar kind. It is eighty-one feet long, and thirty broad. This is the entrance into two painted halls, the ceiling of one of which is ſupported by eight marble columns of the *Doric* order.

The *grand gallery*, is known by the name of "*Le Brun's* gallery," from the paintings of that artiſt with which the ceiling is adorned, the ſubjects of which conſiſt entirely of the actions of *Lewis* XIV. at the moſt brilliant period of his reign. Theſe oſtentatious pictures were originally explained by inſcriptions ſo arrogant, that *Racine*, and even the "penſioned *Boileau*," thought it neceſſary to make them more ſimple. This vanity was finely ſatiriſed by *Matthew Prior*, when in the year 1698, being ſecretary of the embaſſy to the court of *France*, and ſurveying the apartments of *Verſailles*, he was aſked "whether the King of *England*'s palace had any ſuch decorations," to which he anſwered, with true dignity, "The monuments of *my* maſter's actions are to be ſeen every where but in his own houſe." See Dr. Johnſon's life of *Prior*. This gallery is ſuppoſed to be the fineſt building in *Europe*; it is ſeventy-two yards long, and fourteen broad, with ſeventeen windows, which look on the gardens, and on the oppoſite ſide a looking glaſs is placed to anſwer to each window. The ſpaces between every window are ornamented with ſtatues, ſome of which are antiques. The *marble ſaloon* contains a noble painting by *Le Meine*, of the Apotheoſis of *Hercules*, in which a hundred and forty figures are repreſented: this piece *Voltaire* ſpeaks of as the moſt ſtupendous painting now in Europe, *Siecle de Lewis*, *chap*. 30. The *cabinet of antiquities and jewels* was collected at an immence expence, and is highly valuable. Each apartment in this vaſt building has received a name from the ſubject of the moſt capital picture which adorns the ceiling; ſuch as, the hall of *Plenty*, the hall of *Mars*, hall of *Mercury*, of *Apollo*, hall of war, and of peace; and there is likewiſe a room called "the hall of the *Billiard Table*." A ſuite of rooms are called "The King's apartments," another "the queen's," and a third "the Dauphin's." The chapel is a fine piece of architecture, and embelliſhed in the richeſt manner.

The furniture is anſwerable to the noble ſtyle of the building. Among the reſt is a chandelier of rock-cryſtal, a great many golden candleſticks, and a golden clock, the mechaniſm of which is uncommonly curious; particularly in the manner of ſtriking the hours, previous to which two cocks clap their wings and crow, when immediately two folding doors fly open, a whole length figure repreſenting *Lewis* XIV. comes forward, an angel at the ſame time deſcends and crowns it, then the clock ſtrikes, which is no ſooner finiſhed than the angel reaſcends, with expanded wings, the king retires, and the doors cloſe. All the figures which perform in this automatous exhibition are of ſolid gold. In ſhort, it would fill volume to deſcribe the vaſt variety of paintings and ſtatues with which the apartments of this palace are adorned. Here are ſeveral pictures of the *Holy Virgin*; one in which ſhe holds the infant *Jeſus*, and is ſurrounded with ſeveral pilgrims, done by *N. Pouſſin*; the *Virgin Mary* and *Joſeph* flying into *Egypt*, by *Guido*, &c. The king's bed-chamber is more magnificent than any of the reſt; the carvings are all gilt, on a white ground. The bed is placed in an alcove, where two figures of Fame, who are repreſented ſitting, ſeem to watch for the preſervation of the king. The furniture of the bed is of crimſon velvet, embroidered with gold, and the chamber is adorned with ſeveral fine pictures.

The *gardens* are no leſs magnificent than the palace. In deſcending from the terrace you ſee two baſins which contain ſeveral water-ſpouts, and in the midſt of each, a collection of *jets d'eau* in the form of a wheat-ſheaf, that riſes twenty-nine feet high. The borders of theſe baſins are each adorned with eight groups of brazen figures, repreſenting river gods and nymphs; and four others of the ſame metal repreſenting Cupids, little nymphs, and genii.

There are ſeveral other baſins with jets, and other curious water-works, a particular deſcription of which would carry us too far; we ſhall therefore only mention the famous canal, at one end of which is a baſin of an octagonal figure, four hundred and twenty feet in diameter; four of its ſides are circular, three in ſtraight lines, and the other joins the canal. In two of the angles of this baſin is a ſea-horſe with a *Triton* on his back.

The *baths of Apollo* exhibit incomparable models of modern excellence, and like the other productions of art which *Verſailles* diſplays, mark the vanity of the founder. Here *Lewis* XIV. is repreſented under the character of *Apollo*, aſcending from the bath, attended by ſix of his favourite ladies; the whole ſurrounded by groups of figures moſt exquiſitely ſculptured. *Voltaire*, when ſpeaking of the ſtate of the arts in the time of *Lewis* XIV. ſays, "Should ſome future diſtant period diſcover, buried under heaps of ruins, ſuch maſter pieces of art as the baths of *Apollo*, expoſed to all the injuries of the weather in the groves of *Verſailles*; the tomb of cardinal *Richelieu* in the chapel of the *Sorbonne*, too little known to the public; and ſo many other works of the ſame kind, which are not inferior; theſe productions might perhaps be compared with the moſt finiſhed remains of ancient *Greece*." *Siecle de Lewis*, *chap*. 30.

The great canal is thirty-two fathoms broad, and eight hundred long, including the baſins at each end. It is croſſed by another canal about five hundred and twenty fathoms in length. Upon this noble body of water the king and his court ſometimes take their diverſion in yachts and galleys.

The *Orangery*, or *Green-houſe*, is a maſter-piece of its kind; the architecture of which is of the *Tuſcan* order. It has a ſouthern aſpect, and contains firſt a large gallery, four hundred and eight feet long, with twelve arched windows in the front; and on each ſide are two others, each three hundred and ſixty feet long. Theſe galleries are adorned on the outſide with fine rows of columns. Before this green-houſe is a beautiful parterre, with a fine baſin in the middle, from which a ſpout of water riſes forty feet high. It is embelliſhed with four rows of columns of the *Tuſcan* order, groupes of ſtone figures beautifully carved, vaſes, ſtatues of white marble, &c. In ſummer this parterre ſeems a foreſt of orange and lemon trees, myrtles, &c.

The *Labyrinth* is a fine grove, the ſeveral walks of which are ſo interwoven with each other, that it is very difficult for a perſon who enters it without a guide, to avoid loſing himſelf. At the entrance are two ſtatues, the one of *Æſop*, the other of *Cupid* holding a clue of thread in his hand. At every turning of the alleys you meet with a beautiful fountain, in a baſin of fine ſhell-work, where one of *Æſop*'s fables is very naturally repreſented; the ſubject of which is conveyed in an inſcription.

Here are a great number of other groves, all beautifully adorned, and at one end of the garden is the place where a variety of foreign beaſts and birds are bred.

In the *park* of *Verſailles* is another palace, called *Trianon*, ſituated at one end of the canal which croſſes the large one. The architecture and ornaments are in an exquiſite taſte, and the front about ſixty-four fathoms broad. The court before it is adorned with a fine periſtile, ſupported by marble columns and pilaſters. The two wings are terminated by two pavilions, and over the whole building is a baluſtrade adorned with ſtatues, urns, &c. In the apartments are fine pictures, and the furniture is very ſumptuous. The gardens are here alſo embelliſhed with fine baſins, caſcades and groupes of figures, executed by the beſt maſters.

In a park contiguous to that of *Verſailles* is another royal ſeat, called MARLY, delightfully ſituated in a little valley, with a very fine proſpect of the caſtle of *St. Germain*, and of the neighbouring country. On coming from *St. Germain* to this palace, you enter firſt a round court, three hundred feet in diameter, where ſtands the guard-room, and where terminate the ſeveral courts for ſtables, coach-houſes, &c. The palace conſiſts of a large pavilion, ſtanding detached from any other, as alſo of twelve ſmaller ones, ſix on each ſide; the outſide of the great one is adorned with paintings in freſco. The ſteps are embelliſhed with figures of ſphinxes, groupes of children, vaſes, and the like.

In the great hall are ſixteen pilaſters, fine looking-glaſſes, and pictures; and in the king's apartments, and thoſe of the royal family, are beautiful pieces of painting, repreſenting the ſieges which *Lewis* XIV. carried on in perſon. The ſmall pavilions are joined to each other by arches, through each of which you enter a little arbour. In theſe ſmall pavilions are apartments for perſons of quality.

In the gardens is a large caſcade, which is properly a river falling from an eminence of conſiderable height, and forming very beautiful ſheets of water. At the bottom are ſeveral baſins, adorned with groupes, ſtatues, &c. The ſide of the parterre, fronting the large pavilion, preſents a moſt extenſive and beautiful proſpect. From this parterre you deſcend to another, adorned with marble ſtatues, and a baſin in the middle, which has a number of water-ſpouts, forming a wheatſheaf. Beyond this is a large baſin ſurrounded with walks and graſs-plots. In going ſtill farther down, you meet with two other baſins, embelliſhed with ſhell-work and groupes of figures in white marble. The water falling out of theſe baſins forms ſeveral ſheets, and enters another below. Among the other pieces of water is another caſcade, which falls from a ſteep hill into a large baſin, in the middle of which is a ſmall one of gilt braſs, ſupported by three *Tritons* of the ſame metal.

The hydraulic engine of *Marly*, for raiſing water, ſtands on the river *Seine*, and is compoſed of fourteen wheels turned by the current, which ſet two hundred and twenty-five pumps going at once, throwing up the water into a tower, at the diſtance of ſix hundred and ten fathoms from the river. Thence the water runs into an aqueduct three hundred and thirty fathoms in length, and from thence is conveyed through iron-pipes of eighteen inches bore into the reſervoirs of *Marly*, which are three hundred and fifty fathoms farther, and theſe again ſupply all the water-works of *Marly* and *Verſailles*.

FONTAINEBLEAU is but a mean town, though it has a particular ſub-governor, a royal prevoté, and a foreſt court. It is thirty-five miles ſouth-eaſt of *Paris*, and is ſolely remarkable for its royal palace, in which the *French* kings have taken great delight, it being well ſituated for a hunting-ſeat. It conſiſts of ſeveral ſets of buildings added to one another at different times, without any order or ſymmetry, which conſtitute a confuſed maſs of various kinds of architecture, yet this very confuſion has an air of grandeur, which ſtrikes the eye. Its ſituation is in a bottom, and ſurrounded by a large foreſt; and the neighbouring hills are crowned with bare rocks. As the foreſt abounds with game, the court frequently takes the diverſion of hunting in it.

The largeſt room of this palace is that where plays are acted when the court is here. In this room is a chimney-piece built by *Henry* IV. twenty-three feet high, and twenty wide, adorned with four lofty *Corinthian* columns of ſpotted marble, with the baſes and capitals of white marble. In the midſt of the chimney piece is a table of black marble, on which ſtands the equeſtrian ſtatue of the laſt-mentioned prince; underneath are two *baſſo relievos*, one repreſenting the battle of *Ivry*, and the other the ſurrender of the city of *Mante*. Two marble ſtatues, repreſenting Loyalty and Peace, ſtand on each ſide of this figure, and facing this fire-place is the noble theatre already ſpoken of.

The room in which the king dines in public has a very fine ceiling, and noble pictures repreſenting Fortitude, Temperance, Juſtice, and Prudence, with ſeveral other ſubjects. The other rooms are alſo adorned with paintings.

The galleries of this palace are likewiſe very fine. Among the reſt the ſtag-gallery, along the orangery, is particularly worthy of notice, being adorned with paintings of all the royal palaces, between which are ſtags heads, ſet off with branches of a very uncommon ſize. Under each ſtag's head is an inſcription, ſhewing in what wood, and by what king the ſtag was killed. Thus many of them are introduced ſpeaking, and very politely ſaying, King *Charles*, or *Lewis*, did me the honour of taking me. In the gallery of *Diana* is the picture of *Henry* the *Great* in a hunting-dreſs; and the different kinds of hunting in which he delighted, are repreſented in ſeveral paintings twelve feet high, and twenty broad.

Near this gallery is the *aviary*, which is extremely large and beautiful, being ninety feet in length, and nine in breadth. In the middle is a large dome, under which is an artificial rock, made of ſhell-work, from which iſſue ſeveral ſprings, the water of which runs through many little channels made in the ſtone pavement along the whole aviary.

The gardens are adorned with ſtatues and fountains, the largeſt of which ſtands in the centre, and is called "the fountain of the Tiber," from that river being repreſented in braſs. Beyond it are a grotto and caſcades, and at the entrance of the park is a fine canal ſix hundred fathoms long, and twenty broad; it is entirely lined with ſtone, and has a fountain at each end. Nothing can be more rural and delightful than the alleys of this park, they being all of a vaſt length.

MUDON, in Latin *Moldunum*, a market-town, five miles to the ſouth-eaſt of *Paris*, is remarkable for the royal palace erected there, the favourite reſidence of the only ſon of *Lewis* XIV. It ſtands in the middle of a foreſt, and has a noble avenue leading to it, three quarters of a mile in length, on the right of which is a fine convent belonging to the *Capuchins*, and on the left the vineyards of *Mudon*. At the entrance of the court of the palace is a large pile of buildings on the right, and another on the left, which open in the form of a ſemi-circle; but are disjoined from the body of the houſe. In the middle of the front is a lofty advanced building, entered by three doors: above them runs an order of architecture, conſiſting of arches and columns finely deſigned; over them is another order accompanied with pilaſters; and over all is a fountain containing two ſtatues in a recumbent poſture, admirably well finiſhed. The wings are not ſo high as the principal building, and each of them is terminated by a ſquare pavilion.

The inſide of this palace was adorned with the richeſt furniture, and a fine collection of ſtatues, paintings, medals, and other antiquities. The front toward the garden alſo conſiſts of a lofty advanced building, with wings conſiderably lower, which terminate on the right and left in two pavilions of the ſame height as the body of the building. The gardens are much admired for their fine walks, parterres, and water-works; and adjoining to them is a ſpacious park encompaſſed with a brick-wall, and adorned with woods, baſins, and reſervoirs of water; the woods being cut through, and divided by beautiful avenues, among which is one diſtinguiſhed by the name of the *Dauphin*, which leads to the gates of *Paris*.

Near *Mudon* are ſome excellent ſtone quarries.

ST. CLOUD, a borough, ſeated four miles from *Paris* on an eminence near the *Seine*, and belonging to the archbiſhop of *Paris*. This place is a duchy and peerage, the archbiſhop bearing the title of duke and peer of *St. Cloud*. Here is a collegiate church, one convent, and a fine palace belonging to the duke of *Orleans*, adorned with very beautiful galleries, containing fine paintings and ſculptures, and the garden abounds with fountains, caſcades, delightful parterres, and every thing that can pleaſe the eye. This place is much reſorted to by the inhabitants of *Paris* on account of its extraordinary pleaſantneſs. It has a manufacture of porcelain, and a fine bridge of ſtone over the *Seine*. Here *Henry* III. was murdered in 1589.

SENLIS, a city ſeated on an eminence on the little river *Nonett*, twenty miles to the north-weſt of *Paris*, in a diſtrict called *Valois*. It is the reſidence of a governor, a diſtrict-court, and a ſalt-office. In this city and its three ſuburbs are ſix pariſh churches; among which is the cathedral, which has a ſteeple that is one of the higheſt in *France*, and the Figures which adorn the front of the right wing of this church are very curious. Here are alſo a collegiate church, and a royal chapel. The city has its own laws, and is defended by a wall, a dry moat, and baſtions.

SOISSONS, the capital of a diſtrict called "the *Soiſſonnois*," and of the whole government, is ſeated in a pleaſant

ſant and fruitful valley, on the river *Aiſne*, ſixty miles to the north-eaſt of *Paris*. It is a pretty large well-built town, and gives the title of Count. It is the reſidence of a governor-general, and the ſeat of a generalité, an intendance, a board of the finances, a ſalt-office, a court of juſtice, a foreſt-court, &c. In this city, beſides the cathedral, which has one of the moſt conſiderable chapters in the kingdom, are three collegiate churches, one college of the fathers of the Oratory, ſix abbies, ſeveral convents, a *French* academy, and an ancient caſtle. Its biſhop is ſubject to the archbiſhop of *Rheims*, in whoſe abſence he performs the ceremony of the king's coronation: he has three hundred and ninety-ſeven pariſhes, and twenty-three abbies within his dioceſe. Several councils have been held here.

St. Denis, a town ſeated in a fruitful plain, in the iſle of *France* Proper, five miles to the north-weſt of *Paris*, owes its origin to a celebrated abbey of *Benedictines*, founded there by king *Clotaire*, in honour of *St. Denis*, ſo early as the year 600, but greatly improved by his ſon *Dagobert*. The abbey is now rebuilt with the fineſt free-ſtone, and has a garden laid out in a moſt elegant taſte. The church, though *Gothic*, is a handſome ſtructure, and not only contains a very rich treaſury, in which are kept the crown jewels; but is likewiſe the place of interment for the kings of *France* and their families; but no tombs have been erected here, for *Henry* IV. or any of the ſucceeding kings. The famous marſhal *Turenne* has a noble monument here, erected by the king's order, in a marble chapel built for that purpoſe, where his effigy lies at full length, ſurrounded with laurels and trophies, and a *Roman* eagle retreating backward at the ſight of ſo formidable an enemy. Immortality, with a radiant crown on her head, holds in one hand a crown of laurel, while ſhe ſupports with the other the dying hero. Wiſdom and Valour are alſo repreſented in their proper attitudes: the former ſeems aſtoniſhed at the ſtroke which deprives *France* of that great man, and the latter appears in conſternation. On the altar in this abbey is a croſs, ſaid to be of maſſy gold, ſeven feet high, ſet with diamonds and rich pearls, and by it a table of gold; the altar is plated over with ſilver. After the death of cardinal *de Retz*, its laſt abbot, its income, amounting to 100,000 livres, was given to the houſe of *St. Cyr*. Its preſent revenue is 60,000 livres. Beſides this church here are thirteen others, among which is the collegiate church of *St. Paul*, and five convents.

Noyon, is a very ancient, pretty large, and well-built city, in the diſtrict called *Noyonnois*, on the little river *Verſe*, twenty-two miles to the north-weſt of *Soiſſons*. It is the reſidence of a governor, and has a ſalt-office, a foreſt-court, &c. Beſides its cathedral and a royal chapel, it has ten pariſh-churches, two abbies, two convents, one community, one ſeminary, and two hoſpitals. Its biſhop, who is alſo ſuffragan to the archbiſhop of *Rheims*, is a count and peer of *France*: his dioceſe conſiſts of four hundred and fifty pariſhes, and ſeventeen abbies; and his revenue amounts to twenty-five thouſand livres, out of which he pays three thouſand florins to the court of *Rome*. The principal trade of this city conſiſts in corn. Here the celebrated *Calvin* was born, A. D. 1509. The city has been ſeveral times deſtroyed by fire.

Laon, a city in the diſtrict called "the *Laonnois*," ſtands on a ſteep eminence in the midſt of a large plain, twenty miles to the north-eaſt of *Soiſſons*. It is well-built, and has an old caſtle, and beautiful ſtreets. It has a governor, a ſalt-office, a foreſt-manor, and a court of juſtice. Beſides its cathedral, it has three collegiate churches, five abbies, two convents, a college maintained at the expence of the city, one general hoſpital, and an alms-houſe. Its biſhop, who is ſubject to the archbiſhop of *Rheims*, is the ſecond duke and peer of *France*. Within his dioceſe are three hundred pariſhes, and twenty-four abbies. His revenue amounts to thirty thouſand livres, out of which he pays four thouſand florins to the court of *Rome*. The neighbouring country produces excellent wine.

Beauvais, a city in the diſtrict of *Beauvaiſis*, is ſeated on the river *Teraine*, ſixteen leagues to the north of *Paris*, and is almoſt ſurrounded with hills. *Cæſar* having beſieged and taken this town, is ſaid to have given it the name of *Cæſaromagnus*. Although fortified it is of no great ſtrength, being commanded by the neighbouring mountains. Its cathedral, dedicated to *St. Peter*, is a magnificent building; it has alſo ſix collegiate churches, thirteen pariſh-churches, three abbies, a general hoſpital, and an alms-houſe. It has likewiſe a manor-court, which, together with the foreſt-court, are dependent on the biſhop. The biſhop, who is ſuffragan to the archbiſhop of *Rheims*, is a count and peer of *France*, and has a dioceſe conſiſting of twelve chapters, fourteen abbies, forty-eight priories, four hundred and forty-two pariſhes, and three hundred chapels, with an annual revenue amounting to fifty-five thouſand livres, out of which he pays a taxation of four thouſand ſix hundred florins to the court of *Rome*. In this city is a conſiderable manufacture of tapeſtry, and in it are alſo made great quantities of ſerge and woollen cloth.

The *Engliſh* beſieged this city in vain in 1443, and in 1472 it made a brave defence againſt *Charles* duke of *Burgundy*, when the women ſignalized their courage under the conduct of a brave heroine named *Joan Hatchet*, whoſe picture they preſerve in the town-houſe; and in memory of this action the women are allowed to march firſt in a proceſſion annually obſerved on the tenth of July. The adjacent country abounds in corn, paſture, and fruit, and affords ſome of the beſt mutton in *France*.

St. Germain's, or *St. Germain en Laye*, a well inhabited town, is ſeated on an eminence along the *Seine*, ten miles to the north-weſt of *Paris*, and has very good air and water. The *Engliſh* deſtroyed a palace which ſtood here in 1346; but a new building being raiſed by *Francis* I. it afterward received the name of "the Old Palace," to diſtinguiſh it from one built there by *Henry* IV. which was called "the New." *Lewis* XIII. added ſome conſiderable embelliſhments to it, and *Lewis* XIV. enlarged it by the addition of five ſtately pavilions, whence, though it is no regular building, it makes a grand appearance. The New Palace, as it is called, fronts the Old, and ſtands on the brow of a hill, with a garden of ſix beds of earth ſupported by arches ſloping into the valley. This building is a true image of the tranſitorineſs of all ſublunary things, the galleries in it being turned into granaries, and the paintings ſcarce diſtinguiſhable for filth. The very alcove in which *Lewis* XIV. was born is now a duſt-hole, and the grand ſtair-caſe leading into the garden is wholly in ruins, while the arches for the beds in the garden are in many places ſunk into the ground. The Old Palace was the reſidence of *James* II. after his flight from *England*, and here he died. The ſtreets of the town are well paved, the houſes are lofty and handſome, with ſome large ſquares and hôtels, though it has only one pariſh-church, three convents, and an hoſpital.

St. Cyr, is a convent of nuns of the order of *St. Auguſtine*, founded in 1686 by madame *de Maintenon*, miſtreſs, if not the ſecret conſort, of *Lewis* XIV. of which ſhe herſelf was abbeſs till the fifteenth of April, 1719, when ſhe died. It contains fifty ladies of quality, thirty-ſix lay-ſiſters, and two hundred and fifty pupils; the latter when admitted are required to be between the ages of ſeven and twelve, muſt prove their nobility for four generations, and be diſtinguiſhed for their bodily and mental endowments. Here they continue till they are twenty years of age, when ſuch of them as are diſpoſed to be nuns are diſtributed among the royal abbies, where they are admitted gratis: the others are married to gentlemen, with a portion of four hundred piſtoles, beſides a certainty of preferment to the bridegroom; or elſe they are ſent back to their parents. On the death of any one of the fifty ladies, her place is filled up by election from among the young ladies. The thirty ſix lay-ſiſters inſtruct them in every branch of education becoming their ſex. This foundation has an annual revenue of a hundred and eighty thouſand livres, a hundred thouſand of which ariſe from the extinction of the abbey of St. *Denis*, excluſive of its lands and immoveables. The convent is a very ſpacious and ſplendid ſtructure.

SECT.

SECT. XXXI.

Of the Government of Brittany; *its Situation, Extent, Hiſtory, Produce, and principal Cities, namely* Rennes, Nantz, *St.* Malo's, *and* Breſt. *A deſcription of the iſland of* Belleiſle.

THE province of BRITTANY, called by the *French Bretagne*, is a kind of peninſula ſurrounded on the ſouth and weſt by the *Atlantic* ocean; on the north by the *Britiſh* channel; but toward the eaſt it joins *Normandy*, *Maine*, *Anjou*, and *Poitou*. Its greateſt length from eaſt to weſt is ſixty leagues, and its greateſt breadth forty-five, but in many places it is very narrow. It received its name from the old *Britons*, who being driven out of their country about the middle of the fifth century, by the *Anglo-Saxons*, croſſed the Channel into *Gaul*, and, after wandering about for ſome time, ſettled in this province, to which they at length gave their name. In ſucceeding times the *Britons* were obliged to ſubmit to the kings of the *Franks*. *Charles* the *Great* had a fleet here to act againſt the *Normans*, and under his ſucceſſors, *Numenius*, a chief of the *Britons*, procured himſelf to be elected king: but his ſecond ſucceſſor was taken off by conſpirators, who made themſelves maſters of the country under the title of counts. The *Normans* afterward reduced the country, but were unable to keep poſſeſſion of it: at length *Conan*, count of *Brittany*, married his only daughter *Conſtantia* to *Gottfried*, count of *Anjou*, the ſon of *Henry* II. of *England*, and duke of *Normandy*; and the daughter and heireſs of this *Conſtantia* marrying *Peter* of *Dreux*, *Brittany* fell to the royal family of *France*, *Peter* being a prince of the blood. It was then governed by the dukes of *Brittany*, and at length, by marrying their daughters to the kings of *France*, it became united to the crown in the year 1532.

This province contains ſome very good harbours, but has few navigable rivers, except the *Loire* and *Villaine*. The country is in ſome parts level, and in others mountainous, particularly in *Upper-Brittany*, through which runs a chain of mountains called *Mont Acré*. It produces little corn and wine, but its extenſive and fruitful paſtures enable the inhabitants to carry on a profitable trade in butter. It alſo produces hemp and flax, of which are made great quantities of linen and ſail-cloth. At *Carnot* is a lead mine; but the lead found in it is much inferior to that of *England*. Some places in the dioceſe of *Nantes* alſo yield pit-coal; that alſo is of worſe quality than the *Engliſh*. Horſes likewiſe are another branch of the trade of this country. On the coaſt are taken great numbers of *ſardines* and other fiſh.

The inhabitants on the ſea ſhore are excellent mariners. In *Upper Britanny* they ſpeak *French*; but in *Lower Brittany Welſh*.

This country has its own parliament, which is held at *Rennes*; as alſo its own laws and particular ſtates. The governor is likewiſe admiral of *Brittany*; and under him are two lieutenant-generals, one of whom has the ſuperintendency of eight dioceſes, and the other only of the earldom and biſhopric of *Nantes*. The country is divided according to its nine biſhoprics, five of which belong to *Upper*, and four to *Lower Brittany*. We ſhall begin with the former, the principal places in which are the following:

RENNES, the ancient *Condate*, the capital of the province, is ſeated on the river *Villaine*, about fifty-five miles to the northward of *Nantes*, and forty-five to the ſouth of St. *Malo's*. It is divided by the river into two parts, which have a communication by three bridges. It is pretty large, populous, and the ſee of a biſhop; here is alſo held the parliament of the whole country, an intendancy, a country-court, a foreſt-court, and a conſulate. It contains many well-built houſes; but the ſtreets are narrow, dark, and dirty. Beſides the cathedral, it has eight pariſh churches, and ſeventeen convents: the *Jeſuits* had here a fine college, and the ſtates of the province have erected in this city a noble ſtatue of *Lewis* XV.

The biſhopric of NANTES, or NANTZ, includes the earldom of *Nantois*, which is divided by the *Loire* into two parts. This country is fruitful in wine, corn, good paſtures, and cattle: it likewiſe yields ſalt and pit-coal, and enjoys a flouriſhing trade.

NANTES, or NANTZ, the ancient *Condivonium*, is in rank the ſecond city in *Brittany*. It is ſeated on the *Loire*, according to Dr. *Maſkelyne's* Tables in 47° 13′ N. latitude, and 1° 34′ W. longitude from *Greenwich*, thirty-two miles to the eaſt of the ſea; it is one of the greateſt trading cities in the kingdom, being pretty large, populous, well ſituated, and contains four ſuburbs. It is ſurrounded with ramparts and very deep ditches. Among its other fortifications is an old caſtle, flanked with large round towers toward the city, and with ſome half-moons toward the ſuburbs of St. *Clement*. This was formerly the ſeat of the dukes of *Brittany*, to whoſe eldeſt ſon it gave the title of count. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of *Tours*, and by virtue of his dignity is a counſellor in the parliament of *Rennes*. Here is alſo a chamber of accounts, a board of finances, a mint-office, a country-court, an admiralty, and a foreſt-court. The dioceſe of the biſhop conſiſts of two hundred and twelve pariſhes, beſides chapels of eaſe, and he enjoys a revenue of thirty thouſand livres, out of which he pays two thouſand florins to the court of *Rome*. The cathedral dedicated to St. *Peter* is a large antique ſtructure, adorned with high towers. In it are the tombs of ſeveral dukes of *Brittany*: here is alſo a collegiate church of the *Virgin Mary*, fourteen convents, a college, and an univerſity founded about the year 1460.

Near the city of *Nantz* is a famous hermitage, in which the hermits have hewn with their own hands, a handſome chapel out of the rocks to lodge in, and other conveniencies, to which they have with great labour added a pretty garden; from this retreat they have a fine proſpect of the city, the *Loire*, and the adjacent country.

The trade of this city to the *French Weſt Indies*, and alſo to *Spain* and *Portugal*, is conſiderable, without mentioning other *European* ſhipping which frequent its port; though ſhips of burden can come no farther up the *Loire* than to *Paimboeuf*, a market-town, where the cargoes are put into ſmaller veſſels, and carried up to *Nantes*. An excellent ſort of brandy, commonly diſtinguiſhed by the name of this city, is exported from hence into foreign countries. One of the ſuburbs called "the *Foſſe*" lies near the harbour, and is inhabited by rich merchants. Here is a large quay, along which ſtand very fine houſes, and ſpacious warehouſes.

In this city is a very particular kind of ſociety, which has been eſtabliſhed above a hundred years, between the merchants of *Nantes* and thoſe of *Bilboa* in *Spain*. This ſociety is called "the Contractation," and has in each of theſe cities a reciprocal tribunal in the manner of a conſular juriſdiction: ſo that a merchant of *Nantes*, who happens to be at *Bilboa*, has a right to ſit and vote in that tribunal; and the merchants of *Bilboa* have the ſame privilege when they are at *Nantes*. It is on account of this ſociety that *Spaniſh* wool pays only a ſmall duty at *Nantes*; and that in return, the linens of *Brittany* are upon the ſame footing at *Bilboa*. Theſe two cities had formerly even ſhips in common, which traded for the profit of the partnerſhip. They have eſtabliſhed at *Nantes* a manufacture of cottons, which ſucceeds as well as that which has been long ſince ſet up at *Rouen*, and may in time even exceed it, ſince cotton and indigo are much cheaper at *Nantes* than in the latter city.

Here *Henry* IV. ſurnamed the Great, by the famous edict in 1598, commonly known as the edict of *Nantz*, granted the *Huguenots*, or reformed of *France*, the public exerciſe of their religion throughout the whole kingdom; and though it had been regiſtered in the parliament of *Paris*, and alſo confirmed and ſworn to by his ſucceſſors *Lewis* XIII. and XIV. the latter moſt perfidiouſly revoked it in 1685, cruelly perſecuting his Proteſtant ſubjects, and driving them out of the kingdom. But, notwithſtanding this unjuſt and impolitic conduct, there are ſtill many Proteſtants, particularly in the ſouth of *France*, though they keep themſelves as much concealed as poſſible. Of late they have been treated with rather more lenity, and the king of *France* has taken meaſures to legalize the marriages of his Proteſtant ſubjects, but the oppoſition ſhewn by the clergy, and ſome of the magiſtracy, has hitherto greatly fruſtrated the intention. "Perſecution," ſays Mr. *Swinburne*, "has not had the full effect that was expected, and the milder arts of toleration begin to be put in practice." Travels II. 389. 8vo edition.

St. Malo, or *St. Malo's*, in *Latin Maclovium*, and *Maclopolis*, is a ſmall but populous city, ſeated on a little rocky iſland formerly called St. *Aaron*, in the *Engliſh Channel*, according to Dr. *Maſkelyne's* Tables, in 48° 39′ N. latitude, and in 2° 2′ W. longitude from *Greenwich*; but is joined to the continent by a long mole, not above thirty fathoms broad, at the head of which is a ſtrong caſtle flanked with large towers. The harbour is ſpacious, and one of the beſt on the coaſt, but of difficult entrance, it being ſurrounded with ſeveral rocks, and at tide of ebb left almoſt dry, ſo that it will not admit large veſſels, though it is very eaſy to build or refit ſuch ſhips as can enter it. On the neighbouring rocks are ten different forts: the town is ſurrounded with walls and deep ditches, and is ſecured by a ſtrong garriſon. As ſoon as the gates are ſhut, ſeveral very fierce bull-dogs are let looſe upon the ramparts, whence it is commonly ſaid that St. *Malo* is guarded by dogs, though theſe are only deſigned to prevent the garriſon from being ſurpriſed. This city is alſo ſecured toward the ſea by a ſhoal of ſand that encompaſſes it, and, beſides the rocks, by ſmall iſlands; ſo that the harbour is eſteemed one of the keys of *France*. It is very conſiderable, not only for its ſtrength, but alſo for its trade. The inhabitants, who are ſeafaring people, are famous for their ſkill in maritime affairs, on which account a great number of privateers are fitted out from hence in time of war, which have very much annoyed the trade of the Channel, and made many captures during the reign of king *William*, which cauſed the *Engliſh* to bombard the town, but it received little damage.

In 1758 a ſelect body of above twenty thouſand *Britiſh* troops under the command of the late duke of *Marlborough*, and a powerful ſquadron under commodore *Howe*, having landed at *Cancalle* bay between the ſixth and ſeventh of June, they burnt all the ſhips in the harbour to the number of a hundred, great and ſmall; after which, finding the town inacceſſible, they re-embarked, and arrived ſoon after at *Spithead*, with little or no loſs.

This city is the ſee of a biſhop ſuffragan to the archbiſhop of *Tours*; which biſhop is lord of it. The cathedral of *St. Vincent* is one of the moſt ancient in all *France*: here are alſo ſeveral fine monaſteries, and other conſiderable public buildings.

Brest, in *Latin Breſcia*, a famous ſea-port in the biſhopric of St. *Pol de Leon*, is ſituated on the north ſide of a large and commodious harbour, which opens to the ocean in the weſtern part of the continent of *France*, about fifty miles to the north-weſt of *Belleiſle*, according to Dr. *Maſkelyne's* Tables, in 48° 23′ N. latitude, and 4° 31′ W. longitude from *Greenwich*. It is a ſmall fortified city; the ſtreets are narrow: it is defended by a ſtrong caſtle which ſtands on a rock, very ſteep toward the ſea; and likewiſe by a tower oppoſite to the caſtle, which guards the entrance into the port on that ſide. 'Tis encompaſſed on the land-ſide with a broad ditch, and ſome other works. It has a ſpacious fine road and harbour, and the latter is ſurrounded with very good quays; upon which are built warehouſes filled with naval ſtores of all kinds. The harbour lies between the city and the ſuburb of *Recouvrance*, which is half as big as the city. The road is extremely ſpacious, and might contain five hundred men of war, but the entrance to it on account of its narrowneſs is exceeding difficult, and particularly from the blind rocks which lie under water at high tide. This port is the moſt ſecure retreat for the *French* ſhips of war, and is the beſt which that nation poſſeſſes on this ſide the *Mediterranean*; whence that city is one of the grand magazines of the admiralty of *France*, the other being at *Toulon*; and therefore in this harbour the greateſt number of the *French* navy are fitted out. It is ſaid that naval ſtores and neceſſary proviſions for ſeventy ſail of men of war are conſtantly laid up at *Breſt*, and ſhips of eighty or ninety guns are built here, which renders the place rich and populous. There is always a ſtrong garriſon in the caſtle, commanded by ſtaff-officers. *Lewis* XIV. cauſed an arſenal to be built here, and erected an academy for the marine. There is here a court of admiralty and bailiwic, with only two pariſh-churches, and a convent. The *Jeſuits*, before their expulſion from *France*, had alſo a ſeminary here.

In the year 1694 the *Engliſh* made an attempt upon *Breſt*, but their deſign being known, the avenues were defended by a numerous train of artillery, and an army ſuperior to that of the invaders. General *Talmaſh*, who commanded the *Engliſh*, was mortally wounded in making the deſcent, and the forces were obliged to retire with loſs.

Ouessant, in *Engliſh Uſhant*, is an iſland on the coaſt of *Brittany*, oppoſite the point of *Conquêt*. Dr. *Maſkelyne's* Tables place it in 48° 30′ N. latitude, and in 5° 5′ W. longitude from *Greenwich*. It is eight miles in circumference, and contains a few hamlets. It is defended by a caſtle, and is ſurrounded by ſome ſmall rocky iſlands.

Near this iſland the fleets of *Great Britain* and *France* had a partial engagement on the 27th of July 1778, the one commanded by admiral *Keppel*, the other by *M. D'Orvilliers*. The conduct of the *Britiſh* admiral on that day being arraigned by *Sir Hugh Palliſer*, the ſecond in command, he was tried by a court-martial, but acquitted in the moſt honourable manner. His accuſer was afterwards brought to trial and acquitted, though with ſome degree of cenſure.

Belleisle is an iſland about ſix leagues from the coaſt of *Brittany*, according to Dr. *Maſkelyne's* Tables, in 47° 17′ N. latitude, and in 3° 6′ E. longitude from *Greenwich*. The ancients called it *Coloneſus*, or the *Beautiful Iſland*, which is the ſignification of its preſent name. It is about ſix leagues long, two broad, and confers the title of duke. It is ſurrounded on all ſides with rocks, and has only three landing-places, *Palais*, *Sauzon*, and *Goulſard*; every one of which labours under ſome capital defect, either from being expoſed, being ſhallow, or dangerous at the entrance. It contains only one little city, called *Palais*, three country towns, ſeveral villages, and about five thouſand inhabitants.

Palais, the capital, takes its name from a caſtle in its neighbourhood belonging to the duke of *Belleiſle*, afterward converted into a citadel. This fortification is ſtrong and regular; it fronts the ſea, and is compoſed principally of horn-works and provided with two dry ditches, the one next the counterſcarp, and the other ſo contrived as to ſecure the interior fortifications. The citadel is divided from the largeſt part of the town by an inlet of the ſea, over which is a bridge of communication.

In November 1759 admiral *Hawke*, with a ſquadron of *Engliſh* ſhips, off the ſouth coaſt of this iſland, burnt, ſunk, and deſtroyed moſt of the *French* fleet from *Breſt* under *M. de Conſlans*. Two of the enemy's ſhips were ſunk by broadſides, and all on board periſhed. The ſhattered remains of his fleet, to the number of ſeven ſail, ran up for ſhelter, after throwing their guns overboard, into the river *Villaine* in *Brittany*, and there continued diſabled on account of the ſhallowneſs of the water. The *Engliſh* indeed loſt two of their men of war by their eager purſuit of the enemy; but though the ſhips ran aground, the crews were ſaved, and the loſs on that ſide was otherwiſe inconſiderable.

In April 1761, this iſland was attacked by the *Engliſh*; the fleet commanded by commodore *Keppel*, and the land forces by general *Hodgſon*. The *Engliſh*, after landing the troops and cannon, which was accompliſhed with the greateſt difficulty, by dragging them up the rocks, laid ſiege to the city; and the garriſon being commanded by the chevalier *de St. Croix*, a brave and experienced officer, a long and obſtinate defence was expected. The enemy made ſome ſallies, which only animated the *Engliſh* troops by the difficulties with which they had to contend; and at length a furious attack being made upon the *French* lines which covered the town, they were carried with no great loſs; this was principally owing to the uncommon intrepidity of a body of new raiſed marines. No action of greater ſpirit and gallantry had been performed during the whole war. However, the garriſon held out till the ſeventh of *June*, when they capitulated, and marched out with the honours of war. This iſland was reſtored to *France* by the peace which followed.

SECT. XXXII.

NORMANDY, *and its principal Towns.*

NORMANDY, which derives its name from the ancient *Normans*, is bounded on the eaſt by *Picardy*, and the *Iſle of France*; on the ſouth by *Beauſſe*, *Perche*, and *Maine*; on the weſt by *Brittanny*; and on the north by the *Britiſh* Channel; extending from E. to W. upward of ſixty leagues, and from N. to S. thirty.

This is one of the moſt fruitful provinces in the whole kingdom, and one of the moſt profitable to the king. The ſea ſupplies it with plenty of *fiſh*, and from its water are extracted great quantities of ſalt. The many *iron-works* here are of no ſmall advantage to the country; it has likewiſe ſome mines of *copper*, and is not without mineral waters.

The principal rivers in this province are, the *Eure*, which riſes in this province, and falling into the *Seine*, is of great advantage in conveying to *Paris* wood for firing; the *Rille* or *Riſle*, which riſes here, and falls into the *Seine*, near its mouth; the *Dive*, which riſes here, and after receiving the *Vie*, becomes navigable, and diſcharges itſelf into the *Britiſh* Channel; the *Arques*, or *Betune*, which diſcharges itſelf at *Dieppe*; the *Aurre*, which runs by *Baiaux*; the *Carentone*, which has alſo its ſource in this province, and falls into the *Rille*; the *Orne*, which riſes here, and after receiving many ſmaller rivers, falls into the *Britiſh* Channel; the *Vire*, in the weſtern part of the province; and the *Seine*, which interſects the eaſtern part, and diſcharges itſelf in lat. 49° 28′.

The ancient dukes of this province roſe to great power, both here and in foreign countries, and William, in the year 1066, became king of *England*. In 1135 the male line of this king became extinct in the perſon of *Henry* I. and his daughter *Matilda* marrying *Godfrey* count of *Anjou*, the fruit of this marriage was *Henry* II. king of *England*, duke of *Normandy*, lord of *Guienne*, *Poitou*, and *Saintonge*. He leaving three ſons, *Richard*, *Godfrey*, and *John*, the laſt of them ſeized on the dominions of both his brothers, and even cauſed *Arthur*, the ſon of *Godfrey*, to be taken off; for which he was deprived of moſt of his territories in *France*, and in 1203 *Normandy* was annexed to that crown. *Henry* III. of *England* ceded to *Lewis the Pious* and his ſucceſſors all his claim to this province; which afterward, to the end of the fourteenth century, ſome kings beſtowed on their eldeſt ſons, with the title of duke of *Normandy*, till the province of *Dauphiné* was obtained. At length the animoſities between the houſes of *Orleans* and *Burgundy* afforded the *Engliſh* an opportunity of conquering not only *Normandy*, but a great part of *France*. This province was ſubject to *England* about thirty years, till the *Engliſh* were driven out by *Charles* VII. during the minority of that unhappy prince *Henry* VI.

This country is governed by its own laws, which are called the *Wiſe*, and on this account *Normandy* is ſtyled *La Païs de la Sapience*, or, *The Land of Wiſdom*. *Rouen* has a parliament, on which all the other courts of the province are dependent. The government of *Normandy* is one of the moſt conſiderable in the kingdom. The principal places in this province are the following, beginning with *Upper Normandy*.

CAUDEBEC, in Latin *Calidum Beccum*, that is, the *Hot Bec*, is a ſmall but populous town, the capital of the county of *Caux*, ſeated on the river *Seine*, into which, near this place, falls a rivulet which runs through the town, and gives name to it. It has three ſuburbs, and the ſmall river *Caudebec* being divided into ſeveral canals in the town, turns a conſiderable number of mills, that are very ſerviceable to the tanners and leather-dreſſers ſettled here. Among other manufactures, the inhabitants make hats, which were formerly in great repute, on account of not letting in the rain; but this branch of trade has greatly declined.

DIEPPE, a ſea-port town on the ſhore of the *Britiſh* Channel oppoſite to *Brighthelmſtone*, in *England*, and much reſorted to, particularly by veſſels from *Scotland*. It ſtands thirty miles to the north of *Rouen*, in latitude 49° 55′, and longitude 1° 4′, according to *Dr. Maſkelyne*'s tables, on a level ſpot, between two rocks, or mountains, and the mouth of the river *Betune*, called at this town the river of *Arques*, which falling into the ſea forms the harbour. Its natural ſtrength induced *Henry the Great* to chooſe it for his head-quarters, when oppoſed by the League at his acceſſion to the throne. It has a good harbour, which is long, but narrow, and on this account of difficult acceſs. In time of war it is generally a ſtation for privateers; but has not a ſufficient quantity of water for large ſhips. The town is pretty large and well built; and the pariſh church of *St. James*, is a very fine ſtructure, and has a tower from which, in fine weather, the coaſt of *England* may be ſeen. It contains two ſuburbs, and is chiefly inhabited by ſea-faring people.

This town has been frequently taken and retaken in the wars between *England* and *France*. In 1694 it was almoſt totally deſtroyed by bombs fired into it from the *Engliſh* fleet commanded by lord *Berkeley*; and in the war of queen *Anne* it was alſo roughly treated, after which it was rebuilt in a regular manner.

The chief trade of *Dieppe* conſiſts in *herrings*, with which they furniſh *Paris* and the province of *Normandy*; they alſo fiſh for *whitings*, *mackarel*, and *oyſters*, which they ſell in the neighbouring provinces. Trinkets in ivory and laces are alſo manufactured here, and the ſea-compaſſes made in this town were once much eſteemed: its trade is not now ſo conſiderable as formerly.

ROUEN, the *Rhothomagus* of the ancients, afterward called *Rothomum*, the capital of *Normandy*, is ſeated in a diſtrict called *Le Vexin Normand*, in latitude 49° 27′, and longitude 1° 5′, according to *Dr. Maſkelyne*'s tables. It is environed on three ſides by high hills covered with trees, and on the fourth by the north bank of the *Seine*. It is alſo watered by two little rivers called *Aubette* and *Robec*. The tide flows ſo high up the *Seine*, that veſſels of above two hundred tons burden can come up hither, and load and unload at a large quay, which is built along the city. Its advantageous ſituation cauſes it to be conſidered as the centre of the northern trade of *France*. It had formerly a ſtately ſtone bridge over the *Seine*, of thirteen arches, but it is now ruined; and there is another of boats of a very ſingular ſtructure, built near it, and extending two hundred and ſeventy paces in length; it riſes and falls with the tide, and is paved like the ſtreets. This bridge, however, coſts a great deal of money to keep it in repair; and they are obliged in winter to take it in pieces, leſt the ice ſhould damage it, or carry ſome part of it away. The city has no other fortifications but a wall, with round towers in the antique taſte, and irregular baſtions, except an old caſtle which was begun in the year 1419, as ſoon as *Henry* V. of *England* had made himſelf maſter of *Rouen*, and was finiſhed in the reign of *Henry* VI. in 1443.

Rouen is very populous, for it contains ſeven thouſand two hundred houſes; in which ſixty thouſand perſons are computed to reſide; which is at the rate of eight one third inhabitants to each houſe. [See the population of *England* in the next chap. Sect. II.] but it is not very ſpacious. The ſtreets in general are very cloſe and narrow, and the houſes moſtly of wood and plaiſter; it has ſix large ſuburbs; fifty convents, and four abbies. The archbiſhop ſtyles himſelf primate of *Normandy*, and uſed to depend immediately on the holy ſee. The city is adorned with many ſtately piles of building, among which is the cathedral dedicated to the *Virgin Mary*, the choir of which is lined round with copper. It has three very lofty towers, particularly that of the pyramid, the ſpire of which is only made of wood, and covered with gilded lead; this has two hundred ſteps, and the whole edifice upward of ſix hundred to the top. In this cathedral are to be ſeen the monuments of ſeveral kings, lords, and prelates; and likewiſe the monument of *John* duke of *Bedford*, who was regent of *France* under our *Henry* VI. In the butter tower, as it is called, which is one of the three juſt mentioned, is a great bell, ten feet in height, the ſame in diameter, and weighs thirty-ſix thouſand pounds. On the great gate is a triumphal arch in honour of *Henry the Great*, with emblems of his conqueſt over the League. The body of the church is ſupported by twenty pillars; and, upon the whole, it exceeds in beauty and regularity that of *Notre Dame* at *Paris*. The archbiſhop's palace is alſo a fine building, adorned with elegant paintings and pleaſant gardens. In the veal-market ſtands the image of the celebrated maid of *Orleans*, whom the *Engliſh* had the cruelty to burn as a witch; ſhe is here repreſented kneeling before *Charles* VII. and in the *New-market* is the ſtatue of *Louis* XV. erected in 1721; but this is a very poor piece of workmanſhip.

Here is a Royal Academy of *Sciences*, *Belles Letters*, and *Arts*, inſtituted in the year 1744.

The trade carried on in the city and diſtrict of *Rouen* is very extenſive, conſiſting of woollen and linen cloths, leather, hats, paper, and many other merchandizes; the linen manufactures of various ſorts exported to *Spain* are alſo highly beneficial, and the returns are generally made in caſh.

Rouen has undergone various calamities and viciſſitudes of fortune: it has been almoſt entirely burnt thirteen or fourteen different times. In 841 it was taken by the *Normans*; the *Engliſh* made themſelves maſters of it in 1418, and in 1449 it was ſurrendered to *Charles* VII. the *French* king. It was afterward ſtormed and taken by the *French* Proteſtants, and re-taken and plundered in 1562 under *Charles* IX. *Anthony* of *Bourbon*, king of *Navarre*, received a mortal wound before it; but his ſon *Henry* IV. took it in 1592. In this city died *William* I. king of *England*, commonly ſtyled the *Conqueror*.

A fair is held here annually on the 23d of *October*, when the mayor, aldermen, and commonalty go in proceſſion, the two firſt on horſeback, the reſt on foot, to a field near the town, where the mayor and aldermen diſmount, and the regiſter or town-clerk reads the charter, after which they remount, make the circuit of the field, and return to the town houſe. This proceſſion has been eſtabliſhed ever ſince the reduction of *Rouen* by *Henry* IV. who granted this fair. The field in which it is held is called "the fair and the field of forgiveneſs."

CAEN, in Latin *Cadomus*, is ſituated in a diſtrict of the ſame name, thirty miles to the ſouth of *Havre de Grace*, ſixty-five to the weſt by ſouth of *Rouen*, and a hundred and twenty-five to the weſt of *Paris*, in latitude 49° 11′ N. and 0° 22′ E. longitude, according to *Dr. Maſkelyne*'s tables. It ſtands in a valley, at the confluence of the rivers *Orne* and *Odon*, by the united ſtream of which it is divided into the *Upper* and *Lower Towns*, that have a communication by means of the bridges of St. *James* and St. *Peter*, on the latter of which is erected a ſtately town-houſe, adorned with four large towers. It is a place of good trade, veſſels of burden being able to come up from the ſea to St. *James*'s bridge, and its inhabitants are ſuppoſed to amount to 33,000 ſouls. It is the ſecond town in *Normandy*, has twelve pariſh-churches, one collegiate church, two abbies, fourteen convents, with a houſe which belonged to the Jeſuits until their ſuppreſſion, and two hoſpitals. King *Charles* VII. founded an univerſity here about the year 1430, and likewiſe a mint. An academy of ſciences and *belles lettres* was alſo eſtabliſhed in this city by *Louis* XIV. and in the *Royal* ſquare, ſtands a marble equeſtrian ſtatue of that monarch, ſurrounded with an iron baluſtrade. The principal manufacture of this town and its diſtrict conſiſts in cloth and fine linen.

BAYEUX, the capital of the county of *Beſſin*, is ſeated on the river *Aure*, fifteen miles to the north-weſt of *Caen*, in 49° 16′ N. latitude, and 0° 43′ E. longitude, according to *Dr. Maſkelyne*'s tables. It has ſeventeen pariſh-churches, nine convents, two hoſpitals, and a college and ſeminary, which formerly belonged to the Jeſuits. The cathedral, dedicated to the *Virgin Mary*, is a very ſtately ſtructure, beautified with a tower and two lofty ſpires. The city is divided into *Upper* and *Lower*, and manufactures of cloths, ſerges, and ſtockings, were ſet up here with good ſucceſs, but the high taxes impoſed on them, proved in a good meaſure their deſtruction.

CHERBURG, in Latin *Cæſaris Burgus*, a ſea-port town in the *Engliſh Channel*, oppoſite to *Hampſhire*, in 49° 38′ N. latitude, and 1° 38′ E. longitude from *Greenwich*, fifty miles to the north-weſt of *Caen*, in a diſtrict called the *Coutantin*, and lies between *Cape La Hogue* and *Barfleur*. Here they formerly made very fine glaſs, which, for clearneſs and beauty, even excelled that of *Venice*; but, for certain political reaſons, the work has been removed to *Auxerre* in *Burgundy*. It was rendered very ſtrong from the fortifications that had been erected, before they were deſtroyed, together with the famous baſon, by the *Engliſh*, as will be noticed.

Off this place the *Confederate* fleet, under admiral *Ruſſel*, obtained a ſignal victory over that of the *French*, commanded by *M. de Tourville*, in 1692, and afterward burnt, took, or ſunk about fifteen of their ſhips of war, near *Cape La Hogue*; among which was *le Soleil Royal*, or the *Royal Sun*, the *French* admiral's ſhip.

In the war of 1755, the *Britiſh* forces, under the command of the late duke of *Marlborough* and lord *George Sackville*, afterward lord *Sackville*, landed here, and took the town without the leaſt oppoſition, in *Auguſt*, 1758, together with the ſhips in the baſon, demoliſhed the fortifications, and ruined the other works, particularly the baſon and harbour, with the ſluice and all the forts, carrying away twenty-one pieces of braſs cannon and two mortars, which were brought to *England*.

Cherburg lies at the head of a bay which opens to the north, and is conſequently expoſed to the N. and W. winds, and when either blow ſtrong it drives the waters of the *Atlantic* with great impetuoſity into the bay; the little iſland of *Peleé* ſerves in ſome meaſure to repel their fury, but no ſhips can ride there in ſafety. Since the peace of 1783, a very noble plan has been formed to render this bay ſecure for the largeſt ſhips of war, by means of immenſe moles. Vaſt ſums have already been expended, and ſtupendous caiſſons ſunk to lay a foundation ſufficiently ſolid, and ſo immoveable as to reſiſt the fury of a boiſterous ocean, and ſupport batteries of the heavieſt cannon. Could this be accompliſhed, a great naval arſenal is intended to be formed at this place. The king of *France* was ſo much intereſted in this important object, that he went in perſon to inſpect the works carrying on, and was preſent when the firſt caiſſon was launched, on the 22d *June*, 1786. The outſet of the buſineſs was, however, unſucceſsful, but in its progreſs much has been effected, and it is highly probable that the *French* will in the end acquire a harbour oppoſite the *Engliſh* coaſt, which ſhall vie with *Plymouth* or *Portſmouth*.

The diſtrict of *Havre de Grace* conſtitutes the weſtern part of the country of the *Caux*, in *Upper Normandy*. The principal places it contains are the following:

HAVRE DE GRACE, a ſtrong ſea-port at the mouth of the river *Seine*, forty miles to the weſt of *Rouen*, in latitude 49° 29′ N. and 0° 6′ E. longitude from *Greenwich*, was built by *Francis* I. who alſo called it, after his own name, *Ville François*, whence it has been alſo called *Franciſcopolis*; but this name is now ſuperſeded by the other. It is the capital and ſeat of its little government. Here is a good harbour between the town and citadel, which is ſmall but regularly fortified, and an arſenal. It is a pleaſant well-built town, and a place of good trade, ſeveral merchants reſiding here. In the reign of *Charles* IX. it was ſeized by the Proteſtants, who in 1562 delivered it to queen *Elizabeth*, in conſideration of the aſſiſtance that princeſs had given them; but the following year it was vigorouſly beſieged by the *French*, and with equal courage defended by the *Engliſh*, under the earl of *Warwick*; but a peſtilence, which raged in the town, forced him to ſurrender in *July* 1563. In 1694, this city was almoſt entirely deſtroyed by a bombardment from an *Engliſh* fleet.

HARFLEUR, a ſea-port town, forty miles to the north-weſt of *Rouen*, and about five to the eaſt of *Havre de Grace*, was formerly a conſiderable port; but that of *Havre* being found more convenient, it has been neglected, and is now only capable of receiving ſmall veſſels. It was twice taken by the *Engliſh*, namely, in the years 1415 and 1440.

We ſhall treat of the iſlands on the coaſt of *Normandy*, as *Alderney*, *Guernſey*, *Sark*, and *Jerſey*, which belong to his *Britannic* majeſty, in deſcribing the oppoſite coaſt of *England*.

CHAP. XXIX.

OF GREAT BRITAIN.

SECT. I.

Of GREAT BRITAIN *in general.*

Its Situation, Extent, Climate, and Face of the Country; Rivers, Lakes, Canals; Foreſts, Plants, Fruits, Beaſts, Birds, and Minerals.

GREAT *Britain* is the largeſt iſland in *Europe*, and the moſt populous, rich, and fruitful. It includes *England* and *Scotland*, which were united in 1707; only the latter reſerved its peculiar laws. The whole iſland is of a triangular form, the *Land's-end* to the S. W. the *South Foreland* to the S. E. and *Caithneſs* to the N. ſhooting out into ſo many promontories, and forming the three corners. The ſea, which ſurrounds it, has ſeveral names adapted to the ſeveral coaſts; on the north it is called the *Northern-ſea*; on the eaſt, the *German-ocean*; on the ſouth, the *Britiſh-channel*; and on the weſt, the *Iriſh-ſea*, or *St. George's-channel*. Its latitude at the *Lizard-point* in *Cornwall*, is, according to *Dr. Maſkelyne*, 49° 57′ N. and 5° 15′ W. longitude; and at the *Headland* at *Caithneſs*, or *Dungſbyhead*, in *Scotland*, 58° 40′; ſo that, according to the geometrical meaſure of *Engliſh* ſtatute miles, which is ſixty-nine miles and eight hundred and ſixty-four feet to a degree, the true length of the iſland, meaſured in a ſtraight line, without attending to the hills and windings of the roads, is five hundred and eighty-ſeven miles; and the longitude, from the *Land's-end* in *Cornwall*, to the *South Foreland* in *Kent*, has been calculated to be ſeven degrees thirty minutes: the parallel there, giving thirty-eight miles to a degree of longitude, the true diſtance from eaſt to weſt in a ſtraight line is two hundred and eighty-five miles.

The longeſt day in the parallel of *London* has the ſun above the horizon ſixteen hours, at which time the night is illuminated by an unreceding twilight: the ſhorteſt days are exactly reverſed, the ſun continuing above the horizon only eight hours, and the nights are ſixteen hours long, which dreary ſeaſon is relieved by a ſhort twilight, ſometimes by the *Aurora Borealis*, or northern lights, frequently by the brilliancy of the ſtarry firmament, as well as by the periodical brightneſs of the moon. In the northern parts of *Scotland*, the diſproportion between the length of a ſummer and winter day is conſiderably greater.

The ſea, which ſurrounds *Great Britain*, is not only a ſecurity againſt an enemy, but alſo mitigates the violent cold to which the climate would otherwiſe be expoſed; for its tides and conſtant motion raiſe ſuch a kindly vapour, as qualifies the natural ſharpneſs of the air, even to ſuch a degree, that in ſome parts of *France* and even *Italy* more ſevere weather is felt in winter than in *England*. The climate is indeed greatly preferable to that of any part of the continent near the ſame latitude, the ſummers being neither ſo hot, nor the winters ſo cold. The harbours in *Holland*, *Germany*, and *Denmark*, are blocked up with ice, while thoſe in *Great Britain* under the ſame latitudes are open. If we purſue this obſervation ſtill farther, and conſider the ſame latitudes in *America*, we ſhall find there, that in winter the very ſeas are conſtantly frozen, and that even brandy itſelf will freeze.

The air is generally very good and wholeſome, except in the hundreds of *Eſſex* and *Kent*, the fens in *Lincolnſhire* and *Cambridgeſhire*, and ſome other low marſhes near the ſea, and even theſe have been much meliorated, and rendered leſs unhealthy, by draining the lands and clearing the woods. Though the winters are rainy and ſubject to thick fogs, and the weather to great variations, theſe, however diſagreeable, do not impair the health of the inhabitants; who, being accuſtomed to them, generally live as long as thoſe of other countries, and many die every year at above a hundred years of age. We have inſtances of ſome living even to a much longer period; thus *Thomas Parr*, of *Shropſhire*, who died in 1635, at the age of an hundred and fifty-two, and *Henry Jenkins*, a *Yorkſhireman*, a hundred and ſixty-eight, who died 1670. Though the frequent rains ſometimes damage the hay and corn, yet even theſe rains have their advantages, as they generally cauſe good paſturage throughout the year.

The moſt favourable teſtimony to the climate of *England*, is given by *Sir William Temple*, who relates, that king *Charles* II. in reply to ſome perſons who were reviling the climate, and extolling thoſe of *Italy*, *Spain*, and *France*, ſaid, "he thought that was the beſt climate, where he could be abroad in the open air with pleaſure, or at leaſt without trouble or inconvenience, moſt days in a year, and moſt hours in a day, and this he thought was to be done in *England*, beyond any country he knew of in *Europe*." *Temple's Works, 8vo. Ed. III.* 219. But though many may be inclined to doubt the juſtneſs of this remark, yet it has received very conſiderable confirmation from the concurrent teſtimony of thoſe two judicious travellers, *Mr. Sharp* and *Dr. Moore*; at any rate, however, we muſt ſurely except the dreary and languid months of *November* and *December*, when

> Hung o'er the fartheſt verge of heaven, the ſun
> Scarce ſpreads thro' ether the dejected day.
> Faint are his gleams, and ineffectual ſhoot
> His ſtruggling rays, in horizontal lines,
> Through the thick air; as cloath'd in cloudy ſtorm,
> Weak, wan, and broad, he ſkirts the ſouthern ſky;
> And, ſoon deſcending, to the long dark night,
> Wide ſhading all, the proſtrate land reſigns.

The ſoil, indeed, in a great meaſure owes its fertility to the mild vapours juſt mentioned, which, by mollifying the air, nouriſh the vegetable world, and furniſh gentle ſhowers in their proper ſeaſon. Here are, indeed, as in other countries, ſtorms of thunder, lightning, and tempeſts; but they are leſs frequent and much leſs violent than in hotter climates.

That part of *Great Britain*, which lies toward the *Weſtern Ocean* is mountainous, as *Cornwall*, *Wales*, and many large tracts of *Scotland*; but the inner parts are generally a plain champaign country, intermixed with hills of eaſy aſcent by gentle acclivities. The moſt remarkable mountain, or rather chain of mountains, as it may be termed, is a continual ridge which extends from north to ſouth, dividing as it were the whole iſland eaſtward and weſtward, and is by writers called the *Engliſh Appennines*. The ſouthern and eaſtern parts of the country chiefly conſiſt of little fruitful hills and vallies, champaign fields, incloſed grounds of arable, paſture, and meadow lands, agreeably intermixed with woods, foreſts, parks, and chaces. The higheſt mountains in *England* are the *Wrekin*, in *Shropſhire*, the *Plinlimmon* and *Snowden*, in *Wales*, the *Cheviot* hills on the borders of *Scotland*, thoſe of the *Peak*, in *Derbyſhire*, the *Pendle*, &c. in *Lancaſhire*, the *Wolds* in *Yorkſhire*, *Cotſwold* in *Glouceſterſhire*, the *Chiltern* in *Bucks*, *Malvern* in *Worceſterſhire*, and ſome of the mountains in *Cumberland* and *Weſtmoreland*.

This great iſland is ſurrounded by many ſmaller ones, as the *Iſle of Wight*, *Angleſea*, the *Iſle of Man*, the cluſter of iſlands called the *Caſſiterides*, or *Scilly* iſlands of *Cornwall*, the *Orcades*, the *Shetland* iſlands, and *Hebrides* in *Scotland*.

GREAT BRITAIN has on all ſides very convenient harbours, and abundance of navigable rivers that convey the riches of all the nations in the known world into the very heart of the kingdom: the moſt conſiderable of theſe are the *Thames*, the *Severn*, the *Humber*, the *Medway*, the *Avon*, and the *Trent*, in *England*; the *Clyde*, the *Forth*, the *Tay*, &c. in *Scotland*.

The only conſiderable lakes in *England*, called alſo meres, are in *Cambridgeſhire*, *Cumberland* and *Weſtmoreland*, which will be ſpoken of when deſcribing thoſe reſpective counties. The principal of theſe are *Wittleſea* mere, *Winander* mere, and *Derwent waters*.

The navigable canals which have been undertaken to be cut ſince about the year 1756, have been equally honourable as beneficial to the nation. By them a ready communication has been opened between diſtant places, the advantages derived from which have been particularly experienced in the article of fuel, as a plentiful ſupply of coals is now obtained where they were ever ſcarce and conſequently high priced; hence the comfortable enjoyment of life has been promoted, and artificers in various branches employed. The preſent Duke of *Bridgewater*, ſet a noble example of ſpirit in improving his eſtates, even before he had paſſed his minority, for he then actually undertook the execution of a plan, which embraced ſo many objects, and was conſequently expoſed to ſo many latent difficulties, demanded ſuch vaſt ſums, and required ſuch length of time for its completion, that few minds would have had firmneſs enough to enter upon it, and ſtill fewer would have perſevered to its completion. So great has been the ardour with which that great national object of inland navigation has been purſued, that in the courſe of the laſt twenty-five years, upward of thirty acts of parliament have been obtained for navigable cuts, or canals; of theſe we ſhall ſpeak particularly, in deſcribing the counties through which they are carried.

The country is for the moſt part uncommonly fertile. One favourable year for corn is ſufficient to ſupply three years conſumption for the inhabitants; and even at ſuch times when the ſeaſons prove unfavourable, there is generally a ſufficiency; for after immoderate rains the corn ſown on the hills produces great abundance, and in a time of the greateſt drought the low and fenny parts produce moſt plentiful crops. This has been fully proved by the two laſt years: a drought of ſo long continuance as that in 1788, had not been known in the preſent century, and an equal quantity of rain has not fallen in the ſame ſeaſon as what fell from *April* to *July*, in the year 1789, yet in each of theſe exceſſes of drought and rain the productions of the earth have been abundant.

The exportation of corn, under certain regulations, was firſt permitted by act of parliament, in the reign of *Richard* II. and a bounty on the exportation of malt was granted by parliament in the reign of queen *Anne*. Many acts have been paſſed, in different reigns, reſpecting the exportation of corn, and a bounty has been granted on its exportation when the market price is at a certain low rate; but to obtain this bounty the exportation muſt be made in *Britiſh* built ſhips. The importation of corn is alſo prohibited when its market price is below a certain ſpecified rate, and when it is allowable a ſmall duty is paid. Very conſiderable quantities of corn are exported every year from *England*, and ſome ſmaller quantities imported; in *Scotland* the importation is large, and the exportation inconſiderable. During the five years from 1783 to 1787 incluſively, the ſums paid in bounties at the ports of *England*, amounted to 165,110*l.* the drawbacks (on re-exporting corn which has been imported, and which is required to be done within ſix months,) to 1,013*l.* and the duties paid were 43,336*l.* Theſe exports are chiefly made from the ports of *London*, *Ipſwich*, *Yarmouth*, *Wales*, *Lynn Regis*, *Hull*, *Briſtol*, *Southampton*, *Cowes*, *Chicheſter* and *Shoreham*, and are generally for *Holland*, *Germany*, *Sweden*, *Denmark*, *Portugal*, *France*, or the *Mediterranean*. The ſums brought into the kingdom as the price of this produce of the earth are very conſiderable, and greatly encourage agriculture, give employment to the peaſantry, eſſentially ſerve the landed intereſt of the country, nor has the ſtated price of grain been in conſequence advanced beyond what it was fifty years ago, the regulations reſpecting exportation being calculated to ſend to a foreign market merely the ſuperabundant produce of grain. During the laſt twenty years, the duties paid on imported corn, have, at their higheſt rate, amounted to 17,002*l.* in one year, viz. 1783, and at their loweſt, viz. 1780, to 1067*l.*

Table of the regulations by acts of parliament reſpecting the importation and exportation of corn.

	Imported at or above per Quartern.	Duty on Importation.	Exported at or under per Quartern.	Bounty.
Wheat	48*s.*	6*d.*	44*s.*	5*s.*
Rye Peas and Beans	32*s.*	3*d.*	28*s.*	3*s.*
Barley	24*s.*	2*d.*	22*s.*	2*s.* 6*d.*
Oats	16*s.*	2*d.*	14*s.*	2*s.*

In the year 1781, an inſpector was appointed at the corn market in *London* to report the average price of corn weekly, which report was to regulate the exportation and importation at that port, and all the ports in the counties of *Eſſex*, *Kent*, and *Suſſex*; and by an act paſſed in the ſeſſion of 1789, all the maritime counties of *England* and *Wales* were divided into eleven diſtricts, the juſtices of the peace in each of which were to chooſe a like inſpector, who is to ſettle the average price of grain, and tranſmit an account to the inſpector of the cuſtoms of each port from time to time, for the like purpoſes. A general embargo was laid on the exportation of corn during the months of *Auguſt* and *September* 1789.

This country likewiſe abounds in eſculent vegetables and fruits, both of which are excellent. The kitchen gardens abound with *cauliflowers*, *artichokes*, *aſparagus*, *lettuces* of various ſorts, *cabbages*, *peas* and *beans* of different kinds, *brocoli*, *kidney-beans*, *cucumbers*, *ſpinage*, and pot-herbs of all ſorts; *muſhrooms*, *carrots*, *potatoes*, *turnips*, *onions*, *beets*, &c.

KENT is famous for its orchards of cherries and apples; but none of the counties afford ſuch plenty of apples for cyder as *Herefordſhire* and *Devonſhire*. Beſides apples, pears, and cherries, here is a great variety of excellent fruit, as *quinces*, *peaches*, *apricots*, *nectarines*, *plums*, *grapes*, *ſtrawberries*, *raſpberries*, *currants*, *gooſeberries*, *barberries*, *cranberries*, *bilberries*, *walnuts*, *hazle-nuts*, &c. But it muſt be acknowledged, that ſome of theſe fruits have not that delicious flavour which they attain to in warmer climates. Great quantities of *cyder* and *perry* are made from the apples and pears of *England*. Among its products are excellent *ſaffron*, ſaid to be ſuperior to any in the world; *liquorice*, *woad*, and great plantations of *hops*; but it produces little flax or hemp. Much tobacco might be cultivated with advantage to the landholder, but its growth as well in *Britain* as *Ireland*, is prohibited.

This country was formerly plentifully provided with timber, and particularly with large oaks fit for ſhip-building; but timber now has become ſcarce, and for want of attention to planting during the laſt hundred years great quantities are now obtained from abroad. By the reports of the commiſſioners for examining into the lands and revenues of the crown, it appears, that the judgment of different dealers in timber, in various counties, concurred in declaring a prodigious decreaſe of oak timber; in one county one third of the timber there had been advertiſed for ſale in one year, and in general, throughout the kingdom, the decreaſe had been, in the laſt forty years, from one half to ſeven eighths. By four ſurveys taken of the oak timber in the *New Foreſt*, it appears by the firſt, that in the year 1608 there were 123,927 trees fit for the navy; by the ſecond, in 1707, there were 12,476; by the third, in 1764, there were 19,836, and by the fourth, in 1783, there were 12,447. Of late years a ſpirit of planting timber, particularly oak, has prevailed among many of the nobility and conſiderable land-holders, which has been excited by the premiums offered by the ſociety for the encouragement of arts, &c. for the largeſt plantations of various kinds of timber-trees. The ſame ſociety has likewiſe paid great attention to the cultivation of the *mulberry-tree*, from a perſuaſion that the ſilk-worm might be ſucceſsfully bred in *England*; but the beneficial effects of this patriotic attempt remain to be experienced. The timber growing on this iſland, beſides *oak*, are *aſh*, *elm*, and *beech*; here are alſo *poplar*, *maple*, *walnut-tree*, *ſycamore*, *hornbeam*, *arbeles*, *hazle*, *willow*, *ſallow*, and other ſpecies of wood not diſtinguiſhed with the name of timber, but ornamental and exceedingly uſeful.

The commiſſioners above quoted, recommend the cultivation of the *Larch-tree*, as a uſeful ſubſtitute for oak in ſhip-building.

The royal *foreſts*, *parks* and *chaces*, ſouth of the *Trent*, are ſtated by the commiſſioners appointed by parliament in the year 1786, to enquire into the revenues of the crown lands, in their third report, to be, the *New Foreſt*, *Alice*, *Holt*, and *Woolmer* Foreſt, *Bere* Foreſt, all in *Hampſhire*; *Windſor* Foreſt and *Cranbourne* Chace, *Windſor* great and little Parks, in *Berkſhire*; *Richmond* Park, *Surrey*; St. *James's*, *Hyde*, *Buſhy*, and *Hamptoncourt* Parks in *Middleſex*; the Foreſt of *Dean*, in *Glouceſterſhire*; *Greenwich* Park in *Kent*; *Waltham*, or *Epping* Foreſt in *Eſſex*; *Whittlewood*, *Salcey* and *Rockingham* Foreſts in *Northamptonſhire*;

A TABLE OF THE REAL AND IMAGINARY MONIES OF EUROPE, ASIA, AFRICA, and AMERICA;

With the intrinsic Value of the Coin of each Country, reduced to *English* Money.

Note. * Distinguishes Imaginary Money. = Signifies equal to. n. c. Implies not in Circulation.

⁂ The Figures denote the Parts of a Penny *English*; except in the *West Indies*, where they are the Fractions of Currency. In the *English* Coin are Two Guinea and Five Guinea Pieces; but as these are not now in common Circulation, no Notice is taken of them in this Table. Copper, Silver, and Gold, being the Metals coined into current Money, in the following Table the Pieces are distinguished by the Letter C, S, or G, to denote their Quality.

☞ *Note.*— For all the *Spaniſh*, *Portugueſe*, *Dutch*, and *Daniſh* Settlements, or Colonies, either in ASIA, AFRICA, or the WEST-INDIES, ſee the Monies of the reſpective [illegible] *tonſhire*; and *Whitchwood* Foreſt, in *Oxfordſhire*. On the north of *Trent*, *Sherwood* Foreſt, in *Nottinghamſhire*. *Enfield Chaſe*, in the county of *Middleſex*, which, as a part of the duchy of *Lancaſter*, belonged to the crown, was, by act of parliament, diſchaſed in the year 1779.

The paſtures of *England* are excellent, and conſequently the grazing of this country very conſiderable. Here are bred unparalleled *horned cattle*; the oxen are the largeſt and beſt that are any where to be met with, and the ſmaller ſort bred in *Wales* and *Scotland*, are good for preſent conſumption. The breeding of *ſheep* is a moſt important article; it is computed that there are no leſs than twelve millions of fleeces ſhorn annually; and that the fine *Engliſh* wool, next to that of *Spain* and *Portugal*, is the beſt in the known world; which, with the working of it, amounts to near one-fifth of the revenues of the whole country. King *Edward* IV. received a preſent of three thouſand ſheep from the king of *Spain*, which greatly tended to improve the breed of that animal in *England*. Our ſheep are indeed valued both for their fleeces and their fleſh; thoſe of *Lincolnſhire* are remarkably large; but the fleſh of the ſmall mutton, fed upon open downs, is no leſs admired.

The *horſes* for carriages and the ſaddle are very beautiful, and generally about fifteen hands high, ſwift, and extremely well proportioned. Thoſe on which the cavalry are mounted, are remarkable for their ſize, ſtrength, and ſpirit; and thoſe for draught, either for coaches or waggons, ſcarcely to be paralleled.

This kingdom alſo produces *aſſes*, and ſome *mules*, but moſt of theſe laſt are greatly inferior to thoſe of *Spain* and *Portugal*; here are alſo *goats*, *red* and *fallow deer*, *hares*, *rabbits*, *dogs*, *foxes*, *ſquirrels*, *ferrets*, *otters*, *badgers*, *weazels*, *cats*, *pole-cats*, *moles*, &c.

The tame fowl are *ſwans*, *geeſe*, *turkies*, *peacocks*, common *poultry*, *ducks*, and *pigeons*. The wild are *woodcocks*, *pheaſants*, *partridges*, *plover*, *wigeon*, *teal*, *geeſe*, *ducks*, *buſtards*, *ſnipes*, *wood-pigeons*, *grouſe*, *quails*, *eagles*, *hawks* of various kinds, *blackbirds*, *ſtarlings*, *thruſhes*, *nightingales*, *goldfinches*, *bullfinches*, *linnets*, *larks*, &c.

Here is a great variety of river-fiſh, as, *ſalmon*, *carp*, *tench*, *pike*, *trouts*, *perch*, *bream*, *haddoc*, *dace*, *eels*, *roach*, *barbel*, *flounders*, *plaice*, *ſmelts*, *gudgeons*, &c. The ſeas produce *cod*, *mackarel*, *herrings*, *pilchards*, *john dories*, *lobſters*, *crabs*, *oyſters*, *muſcles*, *cockles*, *ſhrimps*, *prawns*, &c.

In the year 1786, a company was incorporated by act of parliament, by the name of "The *Britiſh* Society for extending the fiſheries, and improving the ſea-coaſts of the kingdom." This company are empowered to raiſe a joint ſtock, not exceeding 150,000*l.* in ſhares of 50*l.* each, and no one perſon to be poſſeſſed of more than ten ſhares; it is enabled to purchaſe lands, and to build on ſuch lands free towns, villages, and fiſhing ſtations, in the highlands and iſlands of *Scotland*. The particular object of this patriotic aſſociation is to bring into its natural channel the herring fiſhery, which is carried on to the north of *Scotland* by the *Dutch*. Attempts have indeed been formerly made to effect the ſame purpoſe, but they have never proved ſucceſsful.

With reſpect to minerals, there are copper-mines in *Cumberland* and *Somerſetſhire*, and very conſiderable ones have lately been diſcovered in the iſland of *Angleſea*: there are iron mines in *Suſſex*, *Surrey*, and ſome other counties. In *Cornwall*, *Wales*, &c. are vaſt tin mines, which have not their equal in any other country. The *lead mines*, particularly thoſe of *Derbyſhire*, are of the higheſt importance, both to the proprietors and to the nation at large. The mountains are found to contain *marble*; and about *Plymouth* marble is dug up that nearly reſembles the *Egyptian* granite. What is called *Portland* ſtone, being extremely weighty, durable, and of an agreeable colour, is admirably ſuited for the building of bridges, churches, and ſtately manſions. Here is alſo *free-ſtone*, *alabaſter*, *fire-ſtone*, *cryſtal*, *allum*, *vitriol*, *black lead*, and *okers*. *Fullers-earth* is of ſingular uſe in the cloathing trade. Among the minerals *coals* muſt not be omitted, ſince the quantity produced in this iſland is greater than in any other country in *Europe*, and the quality much better. *Great Britain* alſo produces very conſiderable quantities of *ſalt*.

SECT. II.

Of the Population of Great Britain; *the Manners and Diſpoſitions of the* ENGLISH. *Of the* ENGLISH *Language. The religious Perſuaſions of the Inhabitants. Of the Church of* ENGLAND; *the Convocation and the Eccleſiaſtical Courts.*

THE population of *Great Britain* has been much ſpeculated upon by political arithmeticians, and very contradictory opinions upon that ſubject have been formed and defended, ſome having maintained that the country, from various cauſes, is decreaſing, and has long decreaſed, in the number of its inhabitants, whilſt others have ſtrenuouſly maintained the contrary. Indeed there is a great want of data on which to reaſon here, and no concluſions can be drawn, which may be called by any other name than hypothetical. That a country muſt, if the common energy of nature is not impeded, increaſe in population, cannot be denied; we muſt therefore aſſign ſome baneful cauſes, which, in their operation, counteract the eſtabliſhed order of things, by decreaſing population; and thoſe which have been aſſigned in this inſtance are, a large emigration from the country, deſtructive wars, an increaſe of luxury and decreaſe in the value of money, large diſtricts of land being in the occupation of wealthy farmers, to the excluſion of the petty tenantry, profligacy of manners, and an immoderate uſe of ſpirituous liquors, moſt of which concur in reducing the order of peaſantry to a ſtate of miſery and deſperation, and all are injurious to population.

Dr. *Price*, who founds his reaſoning upon this ſubject on the returns which have been made by the window-ſurveyors, at different periods of time, concludes that there are not quite a million of houſes in the kingdom, of which 251,261 are cottages, or houſes which do not pay taxes, and as the Doctor conſiders the rating five inhabitants to an houſe as rather too large an allowance, he concludes that the number of inhabitants in *England* and *Wales* muſt be ſhort of five millions, of which 543,420 (one ninth part,) reſide in the city of LONDON, and county of *Middleſex*; this, he ſhews, on the like principle of calculation, is a moſt alarming decreaſe of population ſince the latter part of the laſt century; but if ſuch a decreaſe had actually happened, inſtead of its being merely diſcovered by the operation of figures, the conſequences to the political well-being of the kingdom muſt ſurely have been experienced beyond the power of contradiction. Others, with a leſs laboured deduction of proofs, have ſuppoſed the population of the kingdom, *Scotland* included, to amount to ten millions. The following obſervation, which we owe to Mr. *Eden*, (now Lord *Auckland*) ſeems to elucidate the ſubject without the embarraſſment of calculations, in which much is neceſſarily aſſumed: it has been commonly admitted, that it is certain ruin to a country to employ more than the hundredth part of its people in military ſervice; but the armies and navies of *Great Britain*, in the year 1782, employed in actual ſervice a fiftieth part of all the inhabitants of the two iſlands, taken upon the large computation of ten millions, including *Ireland*. Upon the whole, the manner of rating the number of cottages, and the inhabitants to a houſe, are the nice points on which this important political queſtion ſeems to turn.

The *Engliſh* are diſtinguiſhed for many qualities which dignify human nature: they are frank, ſincere, generous, benevolent, with diſcrimination ſocial, enterprizing, perſevering, ſteady, and brave; tenacious of liberty, attached to ſcience, inveſtigators of moral and religious truths. The influx of wealth and its attendant luxury has indeed evidently produced a conſiderable change in the national character, and if ſome homely weakneſſes have been corrected, defects with a better exterior but more baneful tendency have been ſubſtituted: at preſent there is not a more fatal national evil than that propenſity to gaming which has ſeized all ranks in ſociety. In vain has the moraliſt aſſailed it, the ſtage has in vain attacked it with the keeneſt ſhafts of ſatire, as well as diſplayed its conſequent miſeries in the moſt pathetic ſcenes that the tragic muſe can exhibit, for alas! the influence of government, inſtead of being directed to check this corrupting habit, feeds the peccant humour with annual lotteries, whilſt the public funds become the vortex which draws the raſh and deſperate ſpeculator into rapid ruin.

The *Engliſh* women are lovely in their perſons and amiable in their manners: in no country are inſtances of conjugal happineſs more numerous or more exemplary; an *Engliſh* huſband being equally a ſtranger to that diſguſting jealouſy which prevails in *Spain*, and that diſgraceful indifference which faſhion has preſcribed in modern *Italy*; this confiding conſtant noble nature in the men, has cauſed *England* to be called "the paradiſe of women," who become attached both from ſentiment and principle, are affectionate, domeſtic, endearing, and diſcharge all the relative duties of wives and mothers with a natural propriety. If the records of the courts of law, and the journals of parliament bear continual teſtimonies of conjugal infidelity, they fatally indicate how much the national character is ſunk, and the general voice of hiſtory concurs in proving that the manners of women are formed by the conduct of men. In the early period of the *Roman* ſtate, although the law allowed an huſband to divorce his wife on many pretexts, yet, ſo memorable were thoſe times for conſtancy, that almoſt ſix hundred years elapſed, from the building the city, before one ſingle inſtance of divorce was known! See *Val. Max.* lib. II. c. 1.

The inhabitants of the ſeveral parts are of a different original. Thoſe of *Cornwall* and *Wales* are in general the deſcendants of the ancient *Britons*, who, upon the invaſion of the *Picts* and *Saxons*, retired to thoſe mountainous borders in the weſt of *England*, which they have ever ſince retained. The *Scots* are not without a mixture of the *Picts*, particularly in the Low-Lands, which they poſſeſſed before the former had totally ſubdued them. But the *Highlands*, particularly the weſtern, are ſaid by ſome authors to have been peopled from *Ireland*.

The ancient language of *Great Britain* is generally allowed to have been the ſame with the *Gaulic*, the iſland being probably firſt peopled from *Gallia*, as both *Cæſar* and *Tacitus* affirm, on proofs drawn from their religion, manners, cuſtoms, and the nearneſs of their ſituation; but we have now very ſmall remains of the ancient *Britiſh* tongue, except in *Wales*, *Cornwall*, the iſlands and highlands of *Scotland*. Some time before the birth of our Saviour, *Julius Cæſar* made a deſcent upon *Britain*, though he may be ſaid rather to have diſcovered than conquered it; but about the year of Chriſt 45, in the reign of *Claudius*, *Aulus Plautius* was ſent over with ſome *Roman* forces, by whom *Codigunus* and the brave *Caractacus*, two *Britiſh* kings, being overcome in battle, a *Roman* colony was planted at *Malden*, in *Eſſex*, and the ſouthern parts of the iſland were reduced to the form of a *Roman* province; afterward the iſland was conquered as far north as the firths of *Dumbarton* and *Edinburgh*, by *Agricola*, in the time of *Domitian*; upon which a great number of the *Britons*, retiring from the conquered countries to the mountains of *Wales*, whither the *Romans* had never penetrated, theſe became the depoſitories of the ancient language of the country.

Thus the greateſt part of *Britain* becoming a *Roman* province, the *Roman* legions, who reſided there for above two hundred years, diſſeminated the *Latin* tongue; and the people being governed by laws written in *Latin*, a mixture of languages was neceſſarily introduced. The *Britiſh* tongue thus continued blended with the provincial *Latin*, till the *Roman* legions being called home, the *Scots* and *Picts* ſeized that opportunity to invade and harraſs *England*; upon which king *Vortigern*, about the year 440, called the *Saxons* to his aſſiſtance, who coming over, repulſed the *Scots* and *Picts*, and were rewarded with the iſle of *Thanet*, and the whole county of *Kent*; but growing powerful, they ſubdued the country they had delivered. This occaſioned a farther migration of the *Britons* into *Wales*.

In the beginning of the ninth century the *Danes* invading *England*, got a footing in the northern and eaſtern parts of the country; their power gradually increaſed, and, in about two hundred years, they became ſole maſters of it. By this means the ancient *Britiſh* obtained alſo a tincture of the *Daniſh* language; but their government was of no long continuance; for they being driven out, and the *Saxons* again poſſeſſing the throne and kingdom, no great alteration was made in the *Anglo-Saxon* language; but at the next revolution, which was brought about in the year 1067, by *William* duke of *Normandy*, that conqueror cauſed the *Norman-French* to be the language ſpoken and written in the courts of law; it became likewiſe the language of the court, and being the vernacular tongue of the whole ſwarm of *Normans*, whom he ſettled all over the kingdom, the *Britiſh*, which had already been blended with the *Latin*, *Saxon*, and *Daniſh*, gradually received another foreign auxiliar.

But a change in the language has alſo been effected by two other cauſes: the firſt is that of commerce; for as the inhabitants of *Great Britain* have long applied themſelves to trade, the names of offices, dignities, wares, and terms of traffic, have been introduced and formed according to the genius of our own tongue. The ſecond is that of learning, from which it has received no ſmall improvement; for as to the *Greek* and *Latin*, the learned have, together with the arts and ſciences, introduced almoſt all the terms of art in the mathematics, philoſophy, phyſic, and anatomy; and many more have been adopted from the *French*, &c. ſo that at this day the *Engliſh* language, which about eighteen hundred years ago was the genuine *Britiſh*, is now a mixture of *Saxon*, *Teutonic*, *Dutch*, *Daniſh*, *Norman*, modern *French*, together with the *Greek* and *Latin*: yet this is undoubtedly ſo far from being diſadvantageous as it is now ſpoken, that it has formed it into the moſt copious, expreſſive, and nervous language of modern *Europe*.

In the beginning of the preſent century, when genius ſhone in this country with ſo bright a luſtre, that it has been called "the *Auguſtan* age of *England*," the *Engliſh* language was not only written with great purity, but a deſign was formed to fix a ſtandard for it, in an etymological and claſſical dictionary. To accompliſh this plan *Swift* took uncommon pains, and employed all his intereſt, but without ſucceſs; it has ſince, in a good meaſure, been effected by the labours of the late Dr. *Johnſon*. The *Engliſh* language is at preſent highly eſteemed, and much cultivated on the continent; and is likely to have a wider ſpread than even the language of the *Romans* gained, whenever the vaſt continent of *North America* ſhall be cultivated and inhabited by a civilized race of men.

The Reformation in *England*, begun in the reign of *Henry* VIII. was greatly promoted under his ſon *Edward* VI. It ſuffered all the obſtruction which the ſeverity of perſecution could occaſion, during the reign of queen *Mary*, but revived under the auſpices of *Elizabeth*. This Reformation being ſupported by the biſhops, the eſtabliſhed church of *England* became epiſcopal. *Calvin*, indeed, was ſolicitous to be inſtrumental in this work; but he wiſhing to ſtrip the biſhops of their temporal grandeur, and to aboliſh all external ornaments and pomp from divine worſhip, by introducing the *Geneva* conſtitution, the biſhops declined his offers of aſſiſtance. Many, however, approving of *Calvin*'s doctrine, formed an eccleſiaſtical government on that model. Theſe were afterward termed *Puritans*, from their avowed deſire of freeing the church from the impurities which they conſidered as ſtill adhering to it; and Nonconformiſts, from their not conforming to the rules of the eſtabliſhed church. Many of theſe inſtituted preſbyters without biſhops, from whence they obtained the name of Preſbyterians; they alſo formed a body of church laws among themſelves, and were governed by ſynods compoſed of the miniſters of ſeveral different churches. Others maintaining, that every Chriſtian congregation ought to be free, and ſubject neither to biſhops nor ſynods, theſe were termed Independents.

The *Epiſcopalians* and *Preſbyterians* are the two principal parties: they are at preſent the moſt oppoſite to each other in points of doctrine, and in their notions of religious eſtabliſhments; the firſt form the eſtabliſhed religion of *England* and *Ireland*, and the latter of *Scotland*. The moſt numerous of the other religious ſects are the *Baptiſts*, who hold, that infants are not proper ſubjects of baptiſm, and in the baptiſm of adults practiſe immerſion. It is here proper to obſerve, that the *Engliſh* Preſbyterians differ almoſt as much from the church of *Scotland*, as from the church of *England*; ſynods growing gradually out of uſe, each ſeparate congregation is become in a manner independent of the reſt. They have moſt of them forſaken the opinions of *Calvin*, and believing univerſal redemption, maintain that the Univerſal Parent has excluded none of his offspring from a poſſibility of ſalvation; while the *Independents*, and many congregations of the *Baptiſts*, agree with the church of *Scotland* in the doctrines of particular election and reprobation. It muſt alſo be added, that the Preſbyterians, with the church of *England*, receive the Sacrament of the Lord's Supper at noon, while many congregations of Independents, and the Baptiſts in general, receive it after the concluſion of the afternoon ſervice.

One of the principal of the other ſects is the *Quakers*, who profeſs to be guided by an internal revelation dictated by the Spirit of God; they have no regular miniſters, and neither practiſe baptiſm, nor commemorate the death of Chriſt in the Lord's Supper.

The *Methodiſts* have ariſen within about fifty years, (from 1790) and now form a very numerous body; moſt of them are members of the church of *England*, and profeſs to adhere more cloſely than the other members of that church to the thirty-nine articles, and the greateſt part of them are rigid Calviniſts.

The number of Papiſts, or rather, as they now chooſe to be diſtinguiſhed, *Roman Catholics*, is alſo very conſiderable, and in *Ireland* it even greatly exceeds that of the Proteſtants. Many of the penal laws reſpecting them, moſt of which were paſſed in the reign of *Elizabeth*, in the latter part of the reign of *Charles* II. or after the revolution, are now repealed; and they are tolerated in the public exerciſe of their religion. They are not now, as formerly, abſolutely reſtricted from purchaſing land, but can hold no offices either civil or military, nor can they be elected members to ſerve in parliament; and peers of the realm, profeſſing the religion of the church of *Rome*, are diſqualified from taking their ſeats in the houſe of peers.

Many authors have exclaimed with great heat againſt the numerous ſects in *England*; but it ſhould be conſidered, that civil and religious liberty are cloſely connected, and that it does not become any church, who makes no pretenſions to infallibility, to erect the ſtandard of perſecution. May the minds of *Britons* ever be free, and in affairs which ſolely relate to another life, may they be accountable only to their conſcience and their God! May candour and charity, a love of truth and of liberty, unite thoſe that differ in ſentiment, and then nothing will reſult from diverſity of opinions but peace, order, and harmony!

Several of the reſtrictions upon proteſtant diſſenters from the eſtabliſhed church, which even the act of toleration, paſſed ſoon after the revolution, impoſed, have lately been abrogated by the legiſlature; but thoſe unjuſt and diſgraceful ſtatutes, the corporation and teſt acts, are ſtill in force; and the body of the clergy of the church of *England*, thoſe venerable guardians of public decorum and religious purity, have not yet ſhewn their abhorrence of the vile proſtitution of the ſolemn rite of the Sacrament of the Lord's Supper, to the profligate and irreligious, as an indiſpenſable qualification to hold even the meaneſt appointment in the ſervice of the ſtate!!!

The church of *England* is under the government of two archbiſhops and twenty-five biſhops, who are ſubject to the king, as ſupreme temporal head of the church. The archbiſhop of *Canterbury* is ſtyled the firſt peer and metropolitan of the kingdom; he takes place immediately after the royal family, and conſequently precedes not only all dukes, but likewiſe the great officers of ſtate. In addreſſes to him, he enjoys the title of Your Grace, in common with dukes, and alſo that of Moſt Reverend Father in God. He has the power of holding juridical courts in church affairs, with many other privileges relating to the granting of licences and diſpenſations, in all caſes formerly ſued for at the court of *Rome*, where they are not repugnant to the law of God, or the king's prerogative. He has alſo within his province, by common law, the probat of all wills, where the party dying is worth upwards of five pounds. He has under him twenty-one biſhops, beſides his own particular dioceſe; theſe are the biſhops of *London*, *Wincheſter*, *Ely*, *Lincoln*, *Rocheſter*, *Litchfield* and *Coventry*, *Hereford*, *Worceſter*, *Bath* and *Wells*, *Saliſbury*, *Exeter*, *Chicheſter*, *Norwich*, *Glouceſter*, *Oxford*, *Peterborough*, *Briſtol*; and in *Wales*, *St. David's*, *Landaff*, *St. Aſaph*, and *Bangor*.

The archbiſhop of *York* likewiſe takes the precedence of all dukes who are not of the blood royal; as alſo of all the great officers of ſtate, except the lord chancellor, who is immediately next in rank to the archbiſhop of *Canterbury*. In his dioceſe he is ſtyled "Primate of *England* and Metropolitan;" he alſo enjoys the title of "His Grace," and "Moſt Reverend Father in God." Excluſive of his own dioceſe, in his province are *Durham*, *Carliſle*, *Cheſter*, and *Sodor* and *Man*; but the latter biſhop has no ſeat in the houſe of peers. In the county of *Northumberland*, this archbiſhop has the power of a prince palatine, and juriſdiction in all criminal proceedings.

The twenty-five biſhops are ſtyled Right Reverend, and Your Lordſhip; all theſe, except the biſhop of *Sodor* and *Man*, walk next after the viſcounts, and precede the barons. In parliament they ſit not as biſhops, but on account of the baronies annexed to their biſhopricks; they alſo enjoy many other privileges, as freedom from arreſts, out-lawries, &c. The principal of theſe biſhops is that of *London*, next to him is *Durham*, who being inveſted with a temporal juriſdiction, may be eſteemed a temporal prince. The third is the biſhop of *Wincheſter*, (who is always prelate of the order of the garter) and the reſt take place according to ſeniority of conſecration. The biſhop of *Rocheſter* is likewiſe dean of *Weſtminſter*, and of the order of the *Bath*. Theſe ſeveral biſhops are ſubordinate to their metropolitan, and in ſpiritual affairs ſubject only to his juriſdiction. Each has alſo a kind of juriſdiction in his own dioceſe, but from their courts lies an appeal to their metropolitan; but criminal cauſes do not fall under their cognizance. They live in great ſtate; their revenues are alſo large, as will appear from the following table, but ſeveral of them are accuſtomed to hold ſome other lucrative church preferment, ſuch as a deanery, canonry, prebendary, or a valuable rectory.

The eſtimated revenues of the archbiſhops and biſhops of *England*, as made in the reign of *Henry* VIII. ſoon after the reformation, and ſtill put down in the king's books, and their revenues as formed by recent calculations and documents.

	Eſtimated revenue made in the reign of *Henry* VIII. and which now ſtands in the King's books.	Suppoſed preſent revenue.

Beſides which, the patronage which is annexed to theſe dignities, in the right of preſenting to livings, and appointing to other emoluments of the church, are ſufficient, in many ſees, to confer opulence on a numerous progeny, if the ſee be held for twenty or five and twenty years.

The buſineſs of a biſhop is to examine and ordain prieſts and deacons, to conſecrate churches and burying-places, and to adminiſter the right of confirmation. The juriſdiction of a biſhop relates to the probat of wills; he is to grant adminiſtration of perſonal effects to the lawful heirs of ſuch as die inteſtate; to take care of periſhable goods, when no one will adminiſter; to collate to benefices; to grant inſtitutions to livings; to maintain the rights of the church; and to viſit his own dioceſe once in three years. He has likewiſe the power of ſuſpending clergymen in his dioceſe, from the poſſeſſion of their livings, when they are guilty of flagrant immoralities.

Next to the biſhops are the deans and prebendaries of cathedrals, from among whom the biſhops are generally choſen. After theſe are the archdeacons, of which every dioceſe has one or more, the whole number in the kingdom of *England* amounting to ſixty. Their office is to viſit the churches twice or thrice every year. The archdeacons are followed by the rural deans, who were formerly ſtyled archi-preſbyters, and ſignify the biſhop's pleaſure to his clergy, the lower claſs of which conſiſts of prieſts and deacons.

SCOTLAND is divided into thirteen provincial ſynods, which conſiſt of ſixty-eight preſbyteries, and theſe again of a number of pariſhes.

The principal part of the eccleſiaſtical government was formerly lodged in the convocation, which is a national ſynod of the clergy, aſſembled to conſider of the ſtate of the church, and to call thoſe to an account who have advanced new opinions, inconſiſtent with the doctrines of the church of *England*; but in the late reign, that body being found to proceed with too much heat and ſeverity againſt ſome learned divines, and to be too great a check upon free enquiry, it has not been permitted to ſit for the tranſaction of buſineſs, nor for any long time ſince. However, they are aſſembled at the ſame time with a new parliament, by the authority of the king, and immediately adjourned.

The convocation conſiſts of one proctor, ſent from each cathedral and collegiate church, and two from the body of the inferior clergy of each dioceſe. The upper-houſe in the province of *Canterbury* conſiſts of the archbiſhop, who is preſident, and twenty-two biſhops; and the lower houſe of all the deans, archdeacons, and proctors, in all a hundred and ſixty-ſix. They uſually meet in king *Henry* the ſeventh's chapel, in *Weſtminſter*. The archbiſhop of *York* holds his convocation at the ſame time in the city of *York*. The firſt buſineſs of the lower houſe is to chooſe a prolocutor, who is preſented to the upper houſe by two of the members, one of whom makes a ſpeech in *Latin*, and the prolocutor they have choſen another, to which the archbiſhop returns an anſwer in the ſame language.

The court of arches is the moſt ancient conſiſtory of the province of *Canterbury*, and all appeals in church matters from the judgment of the inferior courts are directed to this.

The prerogative-court is that wherein wills are proved, and adminiſtrations taken out.

The court of delegates receives its name from its conſiſting of commoners delegated or appointed by the royal commiſſion; but it is no ſtanding court.

Every biſhop has alſo a court of his own called the conſiſtory court. Every archdeacon has likewiſe his court, as well as the dean and chapter of every cathedral.

SECT. III.

Of the Learning, Arts, Sciences, Manufactures, Trades, Commerce, and Coin of the ENGLISH.

GREAT *Britain* has produced a number of perſons eminent for their learning and ſkill in the ſciences, philoſophical reſearches, wit and humour, genius, and diſcoveries, as well as many of the moſt able, upright, and pious divines. The ſciences are here highly eſteemed, encouraged, and cultivated. Friar *Bacon* and Lord *Verulam* ſtand in the firſt rank of philoſophers; *Chaucer*, *Donne*, and *Spencer*, are ſtill venerated as poets; *Sir Thomas More*, *Hooker*, and *Sir Philip Sydney*, were ornaments to the age in which they lived. *England* can boaſt having given birth to the great *Newton*, whoſe powerful mind penetrated into the arcana of nature, and revealed to mankind the laws by which the univerſe is governed. Indeed this country has produced eminent men in every branch of ſcience and walk of literature; in proof of which we refer our readers to that very valuable work the *Biographia Britannica*, in the enlargement and improvement of which the learned, judicious, candid, and aſſiduous Dr. *Kippis* has been long engaged. *Locke* diſſected the human mind as accurately as a ſkilful anatomiſt traces out the different parts of the body. In polite literature, wit, and humour, *Addiſon*, *Arbuthnot*, *Swift*, *Sterne*, Lords *Shafteſbury*, *Bolingbroke*, and *Cheſterfield*, may be ſelected; in poetry, *Sir John Denham*, *Cowley*, *Milton*, *Waller*, *Dryden*, *Butler*, *Pope*, *Gay*, *Garth*, *Prior*, *Young*, *Thomſon*, *Armſtrong*, *Akenſide*, *Shenſtone*, Lord *Lyttelton*, *Soame Jenyns*, *Green*, *Goldſmith*, *Churchill*, and *Gray*; as dramatic writers, *Shakeſpeare*, *Ben Jonſon*, *Otway*, *Rowe*, *Congreve*, *Steele*, *Cibber*, *Vanburgh*, *Farquhar*, Mrs. *Centlivre*, *Hoadly*, and *Garrick*; as divines and polemic or moral writers, *Cudworth*, *Barrow*, *Tillotſon*, *Sherlock*, *Cumberland*, *Hoadly*, *Potter*, *Atterbury*, *Secker*, *Clarke*, *Jortin*, *Warburton*, *Bentley*, *Butler*, *Lowth*, in the church of *England*; whilſt among the Diſſenters appear, *Watts*, *Doddridge*, *Lardner*, *Lowman*, *Benſon*, *Taylor*; among the modern lawyers, the names of *Hardwicke*, *Mansfield*, and *Blackſtone*, are conſpicuous; as a moraliſt, a critic, and a poet, Dr. *Johnſon* ſtands very high. From the living literati we ſhall ſelect *Prieſtley*, *Gibbon*, *Burke*, *Melmoth*, *Murphy*, *Colman*, *Cumberland*, *Sheridan*, *Cowper*, *Hayley*, *Maſon*, *Hurd*, and *Douglas*; nor ought the ladies to be omitted, ſince we can boaſt a *Carter*, a *Montagu*, a *Macaulay Graham*, and a *Barbauld*. *Scotland* can likewiſe claim many eminent men; ſuch as *Buchanan* in former times; *Maclaurin*, *Hume*, and *Smollet* lately; and *Robinſon*, *Read*, *Blair*, and *Beattie* now living. Indeed *Thomſon*, *Arbuthnot*, and *Armſtrong*, were natives of *Scotland*, and received their education there, but came to *England* in their early manhood, and reſided there during the reſt of their lives. The ſeminaries of learning in *England* are, the two univerſities of *Oxford* and *Cambridge*; there are generally more than two thouſand ſtudents in the firſt, and fifteen hundred in the latter. As theſe univerſities are entirely of the eſtabliſhed church, the Diſſenters have inſtituted ſeveral academies, where the ſtudents go through a courſe of ſtudies, to prepare them for the miniſtry. In *Scotland* there are four univerſities, thoſe of *Edinburgh*, *Glaſgow*, *St. Andrew*, and *Aberdeen*; and there is ſcarce a great town in *England* where there is not a free-ſchool founded for the inſtruction of the ſons of the citizens, or burgeſſes, in the learned languages.

That excellence in the polite arts which diſtinguiſhed *France* during the reign of *Louis* XIV. may now be claimed by *England*. In painting, engraving, and ſtatuary, it can boaſt of living artiſts, whoſe profeſſional merits would loſe nothing by a compariſon with their contemporaries on any part of the continent. The reputation of Sir *Joſhua Reynolds* is unrivalled all over *Europe*, both as an hiſtorical and a portrait painter; the lamented *Gainſborough* did honour to his country, and *Opie*, *Northcote*, *Peters*, *Barry* and others, are ſtill going on in the career of reputation. Several foreign artiſts have likewiſe made this country their reſidence; the paintings of a *Fuſeli* will be admired ſo long as correct and maſterly drawing, bold conceptions, juſtneſs and dignity of character continue to pleaſe. The art of engraving is now brought to great perfection in *England*, and the country can boaſt more than one eminent ſtatuary. In muſic there is great excellence; but it is rather parcelled out to many than engroſſed by one. The preſent prevailing taſte in civil architecture is founded upon the trueſt principles of ſimplicity and beauty, being formed on the *Grecian* model.

The great excellence which has been attained to in the polite arts of late years, may be in a great meaſure attributed to that noble inſtitution, the Royal Academy of painting and ſculpture, which was formed under the patronage of his preſent majeſty: the legiſlature likewiſe has, in ſeveral inſtances, become the patron of genius, by giving to artiſts, particularly in the branch of engraving, an excluſive right, for a term of years, to the works which they execute; but no one ſubject in the kingdom has been ſo effectually the encourager of the arts of painting and engraving, as Mr. Alderman *Boydell*, and it is much to be wiſhed that his exertions may meet the ample recompence they merit.

In ſhip-building the *Engliſh* are ſuperior to every nation upon earth. In other elegant and uſeful arts *England* has alſo produced many able maſters. As it has given birth to the greateſt philoſophers, ſo the ſeveral arts dependent on the ſciences have here been greatly improved; the orrery, the air-pump, the powers acquired by the ſteam engine, (which has been particularly uſeful in raiſing a perfect river of water from the bottom of coal-pits), the vaſt improvement made in the engines formed for extinguiſhing fires, were all invented by the *Engliſh*; and, to meet the wiſhes, and receive the liberality of the *Britiſh* legiſlature, the late ingenious Mr. *Harriſon* invented a time-keeper, which has been found of great uſe in aſcertaining the longitude at ſea; for which important piece of mechaniſm, he received the reward offered by parliament of twenty thouſand pounds, for the diſcovery of a method to find the longitude at ſea. Mr. *Arnold* has ſince made ſome improvements on time-keepers.

The *Engliſh*, ſays Dr. *Buſching*, were the firſt who ſet on foot that noble manufacture of ſilk and woollen tapeſtry, in which life and nature are imitated with admirable ſkill. Their broad cloths are the fineſt and moſt beautiful in the world, and are admired and purchaſed in every quarter of the globe; indeed the woollen manufacture is in ſo flouriſhing a condition, that the value of cloths and ſtuffs annually exported amounts to two millions ſterling. The manufactures of flowered ſilks have been greatly improved, and in the beauty of the patterns they excel thoſe of *France* or any other country. There has been lately invented a method of printing on plain ſilk, figures in gold. The printers of linen too greatly excel thoſe of other nations, from the ſuperior ſkill of the pattern-drawers.

In ſhort, there is ſcarce a manufacture in *Europe* which is not brought to great perfection in *England*; in the manufacture of iron the *Engliſh* have no competitors; locks, edge-tools, guns, ſwords, and other arms, are ſaid to exceed any thing of the kind in the reſt of *Europe*; houſhold utenſils of braſs, iron, and pewter, are important articles of manufacture; and ſuch clocks and watches as bear a price are very much eſteemed; though the miſerable cheap work bought up and ſent abroad has diſhonoured the nation. Great improvement has of late been made in *England* in the manufacture of writing and printing paper; but the *French* paper for copper-plate prints ſtill maintains the ſuperiority.

Great Britain enjoys a fine ſituation with reſpect to commerce, and is ſurrounded with excellent harbours. Its trade and navigation may be ſaid to have begun in the reign of queen *Elizabeth*, and to have made a gradual advancement through two centuries.

The exports to *France*, are *tin*, *lead*, *horn-plates*, *Birmingham* wares of all kinds, and, when permitted, corn; from thence are imported *brandy*, *wines*, *lace*, *linen*, *cambrics*, and *lawns*.

The commercial treaty with *France*, concluded in 1786, has opened a new market for *Engliſh* manufactures in that country, and cauſed the balance of trade between the two countries greatly to preponderate on the ſide of *Great Britain*; whilſt, by lowering the port duties, and by allowing the importation of ſuch articles as were before contraband, the ſmuggling trade has been effectually ſuppreſſed.

To *Holland* are ſent almoſt all ſorts of commodities and manufactured goods, either of our own produce or imported from abroad, with large quantities of pit-coal; and from thence are received *ſpices*, *drugs* for dying, *fine linen*, *tapes*, *whale-fins*, and *toys*.

The diſtracted ſtate of the ſeven united provinces, torn by inteſtine commotions, without political ſtrength or ſtability; led by ſordid ſelfiſhneſs to purſue a narrow ſyſtem of politics, ſubverſive of its independence, has of late, thrown into the hands of the *Engliſh*, much of that carrying trade which has long been ſo beneficial to the *Dutch*.

To *Flanders* are ſent *tin*, *lead*, *hard-ware*, *ſugar*, *flannels*, a few *ſtuffs*, and *ſerges*, with manufactured cotton goods; for which we receive *fine laces*, *linen*, *cambrics*, *tapes*, and other goods.

To *Germany*, by the ports of *Hamburg*, and *Emden*, are ſent *woollen manufactures* of every kind, *Eaſt India* goods, *tin*, *lead*, *ginger*, and *ſugar*. The imports from thence are *linen*, *thread*, *goat ſkins*, and many other commodities. In many places, however, ſeveral of the *Engliſh* manufactures are prohibited; and yet it is thought that the balance of trade in general is conſiderably in favour of *England*.

Little trade is carried on with *Denmark* and *Norway*, except for a few coarſe woollen goods and tobacco; but from thoſe countries are received *timber*, *fir-planks*, *deer-ſkins*, and many other articles of commerce, the greateſt part of which is paid in money. The *Swedes* alſo buy little, and ſell *copper*, *iron*, *deals*, *timber*, and *naval ſtores*.

To *Ruſſia* and *Dantzick* are ſent *tin*, *lead*, *worſted ſtuffs*, *cottons*, *fuſtians*, *lace*, *thread*, *alum*, *copper*, *cabinet work*, and a great quantity of *tobacco*. From thence are imported *pot-aſhes*, *hemp*, *flax*, *coarſe linen*, *cable-yarn*, *bees-wax*, *iſing-glaſs*, *hides* of ſeveral ſorts, and *leather*; with *linſeed*, *train-oil*, *flax*, and *hemp-ſeed*, *hog's briſtles*, *caviare*, *tallow*, *&c.*

To *Italy* are ſent various kinds of *Eaſt India* goods, *broad cloth*, *long ells*, *bays*, *druggets*, *camblets*, *leather*, *tin*, *lead*, *pilchards*, *herrings*, *ſalmon*, *cod*, and various other articles. From thence are imported *wine*, *oil*, *ſoap*, *olives*, *dying drugs*, *anchovies*, and raw, thrown, and wrought *ſilk*. From the king of *Sardinia's* dominions is obtained the fine ſilk called *organzine*, which is thrown here by an engine, of which a very curious one has been many years at *Derby*, and others for ſome time in two or three towns in *Cheſhire*.

The trade from *England* to the *Levant* and *Turkey* was formerly very conſiderable; in the reign of queen *Elizabeth* an excluſive charter was granted to a company of merchants, and ſo lately as the year 1730, ten thouſand pieces of broad cloth were ſhipped by the *Turkey* company; but that trade is now inconſiderable, the *French* having the double advantage of proximity of ſituation, and cheapneſs of manufacture: a thin kind of woollen cloth being made in *Provence* and *Languedoc*, and ſhipped at the port of *Marſeilles*, which better ſuits the warm climate to which it is exported than the *Engliſh* broad cloth, or the *Yorkſhire* woollens. The *Levant* company have, for ſeveral years, received annual grants from parliament, amounting from three thouſand to ten thouſand pounds.

To *Spain* are ſent nearly the ſame commodities as to *Italy*, many of which are exported from thence to their *American* dominions. In return they give *wine*, *oil*, *fruit*, particularly *oranges*, *lemons*, and *raiſins*, *wool*, *indigo*, *cochineal*, and other *drugs*, with *gold* and *ſilver* in ſpecie or bullion.

The export trade to *Portugal* was ſeveral years ago more conſiderable than it has been of late, or is at preſent; the commodities ſent thither conſiſt of many articles of wearing apparel, and a numerous aſſortment of goods for the *Braſils*; in return for which large quantities of wines are imported, and much fruit: the balance of the trade, which is ſtill conſiderable in favour of the *Engliſh*, is paid in gold coin, although by the laws of *Portugal* the exportation of ſpecie is prohibited.

The curious inventions of *Sir Richard Arkwright* to conſtruct machines for the purpoſe of manufacturing cotton, has given to *England* that very important branch of buſineſs excluſively. The cheapneſs with which thoſe goods are now fabricated cauſes all *Europe* to be ſupplied with them from this country, and the vaſt demand provides employment for a much greater number of poor than had ever been employed in that article before the uſe of machines. Hence the importation of cotton is made in very great quantities, not only from the places where it is cultivated, but from *Marſeilles*, *Bourdeaux*, *Liſbon*, and various other ports; this, when manufactured, is re-exported.

The *African* trade chiefly conſiſts in that inhuman traffic, the purchaſe of ſlaves; which are carried from that coaſt to the *Weſt India* iſlands, and the *American* continent. The humanity of the *Britiſh* legiſlature has lately ſubjected the mode of carrying on this trade to many ſalutary regulations and reſtrictions, whilſt its total abolition was ſtrenuouſly urged by ſome very reſpectable members of the houſe of commons. By the peace of *Verſailles*, in the year 1783, the *Engliſh* poſſeſſions on the *African* coaſt were much curtailed, and conſequently the other branches of commerce with that coaſt is now rendered leſs conſiderable than it became after the conqueſts in 1758; the articles obtained are, *gold-duſt*, *gum ſeneca*, *elephant's teeth*, *red-wood*, *gum arabic*, and *ambergris*.

The territorial poſſeſſions acquired by the *Engliſh* in the *Eaſt Indies*, conſiſting of a conſiderable part of a country, which, in its full extent, has been computed to contain one hundred millions of inhabitants, were conſidered as the grand reſource amidſt the extremities into which the late war had brought *Great Britain*, and eſſentially ſerviceable in enabling her to bear up under her enormous weight of debt; but many wiſe men and true patriots, alike lament the means of relief, and the ſituation which required them, as neither tending to permanency of empire, nor the advancement of public virtue. The exports to *Bengal*, and the coaſts of *Coromandel* and *Malabar*, are woollen cloths, lead, and a variety of *Engliſh* manufactures; and the imports conſiſt of raw and wrought ſilks, callicoes, chintzes, ſalt-petre, (of which the company is bound by its charter to deliver to government a certain quantity annually at a ſettled price) and many other articles; but all the wrought ſilks, callicoes, and chintzes, are required by law to be re-exported, thoſe articles being contraband for home conſumption, as they materially interfere with the manufactures of the country.

The *Eaſt India Company* is now become ſo important a commercial body, that we ſhall here ſtop to ſpeak of its origin, eſtabliſhment, and hiſtory. The firſt knowledge which the *Engliſh* gained of the nature and importance of the trade to the *Eaſt Indies*, we are told by *Camden*, in his life of queen *Elizabeth*, was in conſequence of a capture which *Sir Francis Drake* made of two *Portugueſe* ſhips, on their outward-bound paſſage thither, in the year 1587; and before the death of that queen, a charter was granted to *George* earl of *Cumberland*, and two hundred and fifteen knights, aldermen, and merchants, to trade to the *Eaſt Indies*, and they raiſed a capital of 72,000*l.* but not on one joint ſtock, as afterward, but by uniting ſundry copartnerſhips and ſmaller ſtocks. The firſt voyage was undertaken in the year 1601, by captain *James Lancaſter*, with five ſhips; it proved very proſperous, and he returned home in 1603, having on his homeward voyage taken poſſeſſion of the iſland of *St. Helena*. *Surat*, on the coaſt of *Malabar*, was the firſt ſettlement made by the *Engliſh*, no permanent eſtabliſhment being formed in any other part of the country to which they traded. This company ſubſiſted, through many viciſſitudes, until the beginning of the preſent century. The commerce which the *Engliſh* carried on in *India* ſoon becoming conſiderable, king *James* I. appointed Sir *Thomas Rowe* his and the company's ambaſſador to the emperor of *Hindoſtan*, commonly called the *Great Mogul*, and, in the record preſerved by *Rymer*, (Fœdera XVI. 775) "the *Great Magoar*." The expence of this embaſſy was defrayed by the company, who about the ſame time firſt formed one common ſtock. A few years after, the *Engliſh* obtained leave of the king of *Golconda* to ſettle at *Madras-patan*, on the *Coromandel* coaſt, where they built a fort, which they named *St. George*, from the tutelar Saint of their country. Before the commencement of the civil wars, in the reign of *Charles* I. this company is ſaid to have employed 15,000 tons of ſhipping, but afterward their trade greatly declined, and from the year 1653 to 1657 a kind of open trade was carried on from *England* to the eaſt, by which the intereſts of the company were greatly affected. After the Reſtoration, the monopoly, having obtained the protection of government, revived. About the time of the Revolution, the *Engliſh* company erected *Fort William* at *Calcutta*; they had long been ſettled in the kingdom of *Bengal*, but this was the firſt place of ſtrength they provided in thoſe parts; ſoon after which the *Dutch* eſtabliſhed themſelves at *Hoogley*, a town which the *Engliſh* had abandoned for *Calcutta*; they are both ſituated on the river *Hoogley*, but on oppoſite ſides, and are diſtant about twenty-ſix miles. In the reign of king *William* III. the capital ſtock of the company amounted to 744,000*l.* In the year 1695, in conſequence of an offer made by many opulent merchants, to lend two millions to the public, a new *Eaſt India* company was eſtabliſhed by act of parliament; but the intereſts of the old company, and this new eſtabliſhment, were found to claſh ſo deſtructively to each, that in the year 1700 an act paſſed empowering the two companies to adjuſt their concerns by arbitration, and for that purpoſe the earl of *Godolphin* and Mr. *Harley*, afterward earl of *Oxford*, were appointed for the old company, and the earl of *Halifax* for the new. By the able conduct of theſe arbitrators, the two companies became conſolidated, or rather, the old company was abſorbed in the new. The title then aſſumed was "The United Company of Merchants trading to the *Eaſt Indies*," and under this denomination it has continued ever ſince, by virtue of ſeveral renewals of its charter, for certain terms of years. At the time of the Union, the *Scotch* were extremely ſolicitous to obtain a participation of this trade, but it was inflexibly denied them; and government has thought proper to confine the monopoly to the port of *London*. The capital of the company was, in 1789, 4,000,000*l.* but in that year an act was obtained to enable the company to borrow another million, at the rate of 170*l.* for every hundred pounds of ſtock, amounting in the whole to 1,700,000*l.* The dividends made to the proprietors have varied conſiderably, they have been ſix per cent. per annum, and as high as twelve and an half; but government has now reſtricted the directors to a dividend not exceeding eight per cent. (at which rate it now is.) But if the profits of the company ſhall leave a ſurplus, after paying eight per cent. the public are to receive three-fourths of ſuch profit, and the other fourth is to be divided among the proprietors. The company is likewiſe reſtricted in the amount of its bond debt to a million and half.

In the year 1767, the company agreed to pay, for the uſe of the public, 400,000*l.* per annum, for a limited time, in conſideration of retaining their territorial acquiſitions and revenues. In the year 1781 their charter was renewed for ten years, and then terminable in three years, on notice given by the ſpeaker of the houſe of commons, in writing, by order of the houſe, and repayment of 4,200,000*l.* by the public. In the year 1784, a board of control was eſtabliſhed by act of parliament, compoſed of ſix commiſſioners to be appointed by the crown, and removeable at the pleaſure of the crown: the object of which eſtabliſhment is to ſuperintend, direct, and control all acts and proceedings, which in any reſpect relate to the civil or military government or revenues, of the *Britiſh* territorial poſſeſſions in *India*: the court of directors are likewiſe required to deliver to this board, all minutes, orders, and reſolutions made by themſelves, or by the proprietors in a general court, with many other regulations unneceſſary to enumerate here.

The trade to *China* has long drained *Europe* of that ſilver which the mines of *South America* pour forth. That trade may be now conſidered as in a manner engroſſed by the *Engliſh*, ſince the lowering the duties upon teas has left no incentive to the ſmuggling of that commodity: hence the *Danes* and *Swedes*, who uſed to ſend ſhips to that diſtant part of the world, do ſo no longer; the *Dutch* likewiſe were much concerned in this contraband trade.

The *Hudſon's-bay* company export *woollen goods*, *haberdaſhery wares*, *hatchets*, *arms*, and other hard-ware; and import great quantities of *ſkins* and *furs* of different kinds.

The trade to *Canada* is increaſing every year in importance, and the flouriſhing ſtate of the colony of *Nova Scotia* and *New Brunſwick* affords the proſpect of many commercial advantages.

Since the concluſion of the peace with the *United States* of *America*, no commercial treaty has been concluded between that country and *Great Britain*. The chief articles imported are, *tobacco* from *Virginia* and *Maryland*, rice, peltry, pitch, and tar from *Carolina*; for which various articles of *Engliſh* manufacture, particularly *hardware*, are exported, a great preference being ſtill given to *Britiſh* goods before thoſe of *France*.

To the *Weſt India Iſlands* are exported all kinds of wearing apparel, both woollen and linen, houſhold furniture, and hardware; from thence receiving, excluſively, their produce, which conſiſts in ſugars, ginger, indigo, rum, coffee, cocoa-nuts, pimento, and ſweetmeats of various kinds; molaſſes and rum are permitted to be ſent to the *American* ports, in exchange for *lumber*. The *Weſt India* ſhips likewiſe bring abundance of turtle.

The *whale fiſheries* are very extenſive and important objects: beſides that fiſhery which is carried on northward, the ſouthern ocean, as far as *Faulkland*'s iſlands, is reſorted to for the purpoſe of catching whales, which there abound, and are caught in ſuch numbers as to render that very diſtant voyage advantageous.

The fiſheries on the coaſt of *Newfoundland*, although, by the laſt treaty of peace, the *French* are admitted to a larger participation of them, yet they are ſtill principally carried on by the ſubjects of *Great Britain*.

The exports to *Ireland* conſiſt chiefly of *broad-cloth*, *ſilk*, *ribbons*, *gold* and *ſilver lace*, *hard-ware*, *pewter*, *hops*, *coals*, *tobacco*, *ſugar*, and a few *Eaſt India* goods; the imports from thence conſiſt of *linen-yarn*, *wool*, *tallow*, *butter*, but more eſpecially *linens*, of which important branch of trade, particular notice will be taken, when we deſcribe the north of *Ireland*. At the ports of *Cork*, *Kinſale*, and ſome others, both merchant-ſhips and thoſe of the royal navy, take in their ſea ſtores of beef and pork, when proceeding weſtward.

The annual exports of *Great Britain* have conſiderably declined ſince the commencement of the *American* war; and, though they have ſomewhat revived ſince its termination, yet they at preſent fall very ſhort of former periods, particularly from the year 1770 to 1774, when the exports were ſtated to be, on an average, very near ſixteen millions a year, and their exceſs, compared with the imports, was 3,194,434*l*. In the year 1778, the exports were 11,507,525*l*. and the balance of foreign trade in favour of the country only 420,989*l*. But its foreign trade does not amount to one ſixth part of the annual products and manufactures of *England*. It is ſuppoſed that two-thirds of all the foreign traffic of *England* is carried on in the port of *London*.

In *Great Britain* money is computed by pounds, ſhillings, and pence, twelve pence making a ſhilling, and twenty ſhillings, an imaginary coin called a pound. The gold pieces conſiſt at preſent of only guineas and half guineas, quarter guineas being no longer in circulation: the ſilver coin conſiſts of crowns, half-crowns, ſhillings, and ſix-pences; ſilver groats, three-pences, two-pences, and pennies are become ſcarce, and are only uſed as preſents to children: the copper money conſiſts of halfpence and farthings. Great national benefit has accrued by the regulations reſpecting the gold coin; but both the ſilver and copper money in circulation is in general of a very debaſed or ſpurious quality, by which the trading part of the community being much injured, many repreſentations have been made to government for redreſs.

SECT. IV.

The Titles of the King of Great Britain, *his* Arms, *and* Forces *by Sea and Land. Of the Civil Government of the* King's Court, *the great* Officers of State, *the Orders of* Nobility *and of* Knighthood.

THE titles of the king of *Great Britain* are, *George* III. by the grace of God of *Great Britain*, *France*, and *Ireland*, king, defender of the faith, arch-treaſurer and elector of the holy *Roman* empire, &c. In addreſſing him, he is ſtyled Your Majeſty, or Sire. The eldeſt ſon is from his birth ſtyled duke of *Cornwall*; but receives the title of prince of *Wales* by creation; and in both thoſe provinces certain revenues are annexed to theſe titles. All the king's children are ſtyled "their royal highneſſes."

The arms of *Great Britain* are, in the firſt grand quarter gules, three lions paſſant guardant in pale or; the imperial enſigns of *England*, impaled with the royal arms of *Scotland*, which are or, a lion rampant with a double treſſure flowered and counter-flowered, with fleurs-de-lis gules. The ſecond quarter is the royal arms of *France* azure, three fleurs-de-lis or. The third, the enſign of *Ireland*, which is azure, a harp or, ſtringed argent. The fourth grand quarter is his preſent majeſty's own coat gules, two lions paſſant guardant or, for *Brunſwic*, impaled with *Lunenburg*, which is, or ſemee of hearts, proper, a lion rampant azure, having ancient *Saxony*, *viz.* gules, a horſe current argent, grafted in baſe, and in a ſhield ſur tout gules, the diadem or crown of *Charlemagne*. The whole within a garter, as ſovereign of that moſt noble order of knighthood, inſcribed with the motto HONI SOIT QUI MAL Y PENSE, that is, "Evil be to him that evil thinks," given by *Edward* III. the founder of the order. The creſt is a helmet full faced and grated, mantled with cloth of gold, double ermine, and ſurmounted by an imperial crown, on the top of which is a lion paſſant guardant or, crowned. The ſupporter on the dexter ſide is a lion guardant or, crowned, the proper ſupporter of the *Engliſh* enſign; on the ſiniſter, an unicorn argent, horned and hoofed or, gorged with a collar of croſſes, pattee, and fleur-de-lis, a gold-chain fixed to it; both ſtanding on a compartment, from whence iſſue from one ſtem the two royal badges of his majeſty's chief dominions, namely, on the right a roſe party per pale, argent and gules, ſtalked and leafed vert, for *England*; and on the left a thiſtle for *Scotland*, being ſo adorned by *James* I. whoſe ſupporters, as king of *Scotland*, were two unicorns; and *England* being under him united to that nation, gave occaſion to one of them being placed on the ſiniſter ſide; and in 1614, as king of *Ireland*, he cauſed the harp to be marſhalled with the arms of *Great Britain*. The motto in a ſcroll is, DIEU ET MON DROIT; that is, "God and my right," which was firſt adopted by *Richard* I. afterward laid aſide, re-aſſumed by *Edward* III. when he laid claim to the crown of *France*, but not uniformly uſed by his ſucceſſors.

The land forces of the kingdom, ſince the Revolution, have been annually voted by parliament, in order to guard againſt the dangerous conſequences of a ſtanding army, to the liberties of the people, if rendered independent of the civil authority: in time of peace thoſe for garriſons, the iſlands of *Guernſey*, *Jerſey*, &c. generally amount to upward of 17,000 men; beſide which, proviſion is made for garriſons in the plantations and *Gibraltar*; the number of men employed in which, is not regularly laid before parliament, though always producible when called for; but the charges attending thoſe military ſervices are about a third of the former amount. In ſome periods of the late war there were conſiderably more than one hundred thouſand men in arms, including the embodied militia, but excluſive of foreign troops in *Britiſh* pay.

The number of ſeamen are annually voted in like manner: in times of peace they uſed to be 16,000 men, ſuch being the number voted in the years 1767, 1768, 1769, and 1770; for the years 1785, 1786, 1787, they were 18,000, and in 1789, 20,000. For the year 1779, 70,000 ſeamen, including marines, were voted, and the number increaſed progreſſively each year, until, in 1783, it amounted to 110,000 ſeamen, including 25,291 marines. The regiſtered militia conſiſt of near 200,000 men, a certain number of which are every year drawn out for a ſhort time.

The navy of *Great Britain* roſe to an aſtoniſhing magnitude in the laſt war, as will appear by the following account of ſhips in commiſſion in the year 1783, the preſent number of ſhips in commiſſion will properly accompany it.

Navy of *Great Britain*, in commiſſion 1783 and 1789.

	1783	1789
Firſt Rate	3	0
Second Rate	13	2
Third Rate	93	15
Fourth Rate	23	5
Fifth Rate	65	16
Sixth Rate	47	18
Sloops	84	49
Total	328	105

The ſhips out of commiſſion in the year 1789, including ſloops, amounted to 271.

The firſt naval officer is ſtyled vice-admiral of *England*, the next to him is the rear-admiral; there is likewiſe a vice-admiral of *Scotland*; the admiral of the fleet is a poſt more of rank and emolument than of truſt and importance. The other admirals are diſtinguiſhed by their differently coloured flags; the firſt in rank are admirals of the white, the ſecond of the blue; then follow the vice-admirals of the red, white, and blue, next to them the rear-admirals in the ſame order.

The marine department was formerly committed to a lord high admiral, which poſt was held by prince *Rupert*, the lord chancellor, lord treaſurer, and lord privy ſeal in ſome part of the reign of *Charles* II; and by prince *George* of *Denmark*, aſſiſted by a council, from the acceſſion of queen *Anne* to the time of his death in 1708; the earl of *Pembroke*, who filled it at king *William*'s death, was then reinſtated, but he held it not quite a twelvemonth, and it has ever ſince been entruſted to commiſſioners, who for a long time have been ſeven in number:

they are ſtyled lords from their office, but the firſt lord is the preſiding and efficient agent, being conſidered as the reſponſible man to the nation. This poſt is always given to a perſon of high rank; in time of war it is a department of the higheſt conſequence, and requires the fulleſt knowledge and experience in naval affairs for the due diſcharge of it.

The civil government of the court is committed to the *lord chamberlain*, who preſides over all the affairs belonging to the king's chamber, and all above ſtairs, except the precinct of the king's bed-chamber, which is wholly under the groom of the ſtole. He has alſo the overſight of the ſerjeant at arms; of the chaplains, though he himſelf is a layman; of the phyſicians, ſurgeons, barbers, *&c.*; of the wardrobe, the beds, muſic, comedians, hunting, meſſengers, handicrafts, and artizans, retained in the king's ſervice. By an act paſſed ſoon after the acceſſion of the preſent royal family to the crown, the lord chamberlain is appointed licencer of all dramatic pieces which are brought out on the theatres, and has a controling power over thoſe places of public entertainment.

The maſter of the great wardrobe was an officer of conſiderable dignity, but it was aboliſhed, with many others, in the year 1782.

The *lord ſteward* of the houſehold has authority over all the officers and ſervants of the palace, except thoſe of the king's chapel, chambers, and ſtables. He attends the king when he goes to the houſe of lords, adminiſters the oaths of allegiance and ſupremacy to the members of the houſe of commons when a new parliament is choſen, &c. In the king's preſence he carries a white wand, as does alſo the lord chamberlain.

The maſter of the horſe has the management of the king's ſtables and breed of horſes, and preſides over the equerries, pages, footmen, grooms, farriers, ſmiths, coachmen, ſadlers, and other trades working for the king's ſtables. He has alſo the care of the lands and revenues appointed for the king's breed of horſes, litters, coaches, chairs, *&c.* The maſter of the horſe has the peculiar privilege of making uſe of the king's coaches, horſes, pages, and footmen, when he goes abroad; and upon any ſolemn cavalcade he rides next the king.

There are alſo ſixteen lords of the king's bed-chamber, including the groom of the ſtole.

Moſt of the other officers and ſervants are now under the above three principal officers of his majeſty's houſhold.

The great officers of the crown were originally nine, namely, the *lord high ſteward*, *lord chancellor*, *lord high treaſurer*, *lord preſident of the council*, *lord privy-ſeal*, *lord great chamberlain*, *lord high conſtable*, and *lord high admiral*. But theſe have been greatly mutilated and changed, as will appear from the following account.

I. The lord high ſteward is appointed by the king as judge, when a peer is to be tried for high treaſon. This office was anciently the higheſt in the government, and its power ſo extenſive, that it was thought unſafe to truſt it any longer in the hands of a ſubject. The laſt who enjoyed this office by inheritance was *Henry* of *Bolingbroke*, afterward king of *England*. Since his time it has been revived only upon particular occaſions; as at the king's coronation, or the arraignment of a peer; after which he publickly breaks the white ſtaff, which he bears in his hand as a badge of his office, to ſhew that it is expired.

II. The lord high chancellor, or keeper of the great ſeal, takes place immediately after the archbiſhop of *Canterbury*; and, by virtue of his office, is a member of the privy-council. He keeps the great ſeal, and cauſes are referred to him from the other courts, he having the power of judging according to equity, and of moderating the rigour of the common law. His decrees can only be reverſed by the houſe of Lords. This great officer is commonly appointed to the poſt of lord high ſteward.

III. The lord high treaſurer was formerly an officer of great power and authority; but ever ſince the Revolution it has been under the direction of five commiſſioners, ſtyled "lords of the treaſury." The firſt lord of the treaſury is generally likewiſe chancellor of the exchequer, and looked upon as the prime miniſter of the country.

IV. The lord preſident of the privy-council lays before that body ſuch buſineſs as is to be tranſacted there, and, if the king be abſent, makes a report to his majeſty of what has paſſed in council.

V. The lord privy-ſeal, through whoſe hands all grants, charters, and pardons, ſigned by the king, paſs, before they come to the great ſeal; together with bounties and ſuch other things as do not require the great ſeal. He is, by virtue of his office, a privy-counſellor.

VI. The lord high chamberlain of *England*, whoſe office is to carry the king's coif and gloves at his coronation, with the ſword, ſcabbard, *&c.* to dreſs the king that day in his royal robes, to ſerve him with water to waſh his hands, and to undreſs him. To him belongs the care of providing every thing neceſſary in the houſe of Lords during the ſeſſion of parliament. When the king goes to the houſe, he gives the ſword of ſtate to whatever lord he pleaſes; walks on the right hand of it, next the king's perſon; has under his direction the gentleman uſher of the black rod, with the yeoman uſher and doorkeeper; and upon ſolemn occaſions, when he enters *Weſtminſter-hall*, has the keys of that hall and the ſeveral courts in it delivered to him. This office was hereditarily held by the dukes of *Ancaſter*; but, on the death of the fourth duke, in the year 1779, it devolved to his elder ſiſter, lady *Priſcilla Barbara Elizabeth Bertie*; and is now held by Sir *Peter Burrel*, the huſband of that lady, in right of his wife.

VII. The lord high conſtable had ſuch an extenſive power, that it has been long aboliſhed, except at coronations, when an officer is created to aſſiſt at the ceremony, and his power ends with it.

VIII. The earl marſhal on particular occaſions takes cognizance of affairs relative to war, regulates ceremonies, and preſides over the heralds office. This poſt has long been hereditary in the family of the dukes of *Norfolk*.

IX. The lord high admiral had formerly the ſuperintendence of all maritime affairs; but the office is at preſent, as we have already obſerved, executed by commiſſion, the directors of which are ſtyled "the lords of the admiralty."

The chief officers of the receipt of his majeſty's *Exchequer*, the chancellor excepted, derive from thoſe appointments, inſtead of honorary diſtinctions, the moſt ſubſtantial emoluments. Here the chancellor preſides in his financial capacity, whilſt in the *court* of *exchequer* he ſeldom appears. The chief offices are five in number: viz. the auditor of the receipts, the clerk of the pells, the tellers (four in number) chamberlains (two) and uſher. They hold their places for life. In the ſixth report of the "commiſſioners appointed to examine, take, and ſtate the public accounts of the kingdom," it is ſtated that theſe places produced, in the year 1780, to the ſeveral poſſeſſors, the following ſums.

The auditor (held by the Duke of *Newcaſtle*)		£.
Total of ſums received in the office - - - -		21,272
Groſs receipts on account of the auditor - -		16,880
Payments in taxes, to clerks, and incidents - -		2,864
Nett income of the auditor - -		14,026
Of which was paid by the public - - -	13,708	
out of the civil liſt -	1,116	
by individuals - - -	6,448	
The clerk of the pells (then held by Sir *Edward Walpole*, now by the Right Hon. *Iſaac Barré*.)		
Groſs recipts - - - - - - - - - - - - -		10,269
Payments in taxes, to clerks, and incidents - -		2,682
Nett income - -		7,587
The groſs receipts in the office of the four tellers were		41,772
Payments in taxes, to clerks, and incidents - - -		3,434
		38,338
The nett income of the firſt teller (Earl of *Hardwicke*) - -		6,740
ſecond ditto (Marquis of *Buckingham*)		6,677
third ditto (Viſcount *Baybam*) - - -		9,153
fourth ditto (now Lord *Thurlow*) - -		6,740
The two chamberlains of the exchequer, who are the principal officers in the tally-court, have much ſmaller emoluments, their nett receipts together being under a thouſand pounds; but the groſs charge of the tally office, in all its diviſions, was found to be - - - - - - - -		3,064
The uſher of the exchequer, (the Hon. *Horace Walpole*) had groſs receipts to the amount of - - - - - -		5,293
Deductions - -		1,093
Nett receipt - -		4,200

The groſs expences attending the receiving and iſſuing public money, in the receipt of his majeſty's exchequer, in the year 1780, was found to be 86,555*l.* the nett ſum 75,865*l.*; of which 51,751*l.* was paid by the public, 8,008*l.* out of the civil liſt, 22,929*l.* by individuals, and 3,867*l.* in taxes; but, as the ſums iſſued from the exchequer during that year, greatly exceeded all former periods, being 30,384,838*l.* (on near ſixteen millions of which a poundage was paid out, amounting to 62,225*l.* that being the moſt fruitful ſource of fees) it may be preſumed that the emoluments to the above officers were, in that year, particularly large, the total of which to the ineffective officers amounted to 45,332*l.* but of this circumſtance the commiſſioners take no notice in their report.

Beſide theſe officers there are two principal *Secretaries of State*, which uſed to be diſtinguiſhed as taking the northern and ſouthern departments, but they are now ſtyled for "the home department," and "the foreign department." In the year 1768, a third ſecretary was appointed to the *American* department, which office ſubſiſted till the year 1782, when it was aboliſhed by act of parliament, together with the board of trade, or "commiſſioners of trade and plantations," and many other offices.

The peerage of *England* is at preſent as follows:

		Of whom have been created in the preſent reign.
Princes of the blood	5	5
Dukes	21	2
Marquiſes	6	6
Earls	86	22
Viſcounts	13	7
Barons or Lords	81	51

The only hereditary honour in *England*, below the peerage, is that of *baronet*, being uſually deſcendible to the iſſue male, and ſometimes to a collateral branch, according to the limitation in the patent. This dignity was firſt conferred by king *James* I. in the year 1611, being an expedient ſuggeſted by his miniſter and favourite the earl of *Saliſbury*, to ſupply the exhauſted royal treaſury. The title was then ſold for a thouſand pounds, and conferred on two hundred purchaſers: at preſent there are twenty-two deſcendants from this original creation who enjoy the dignity; of whom is Sir *Edmund Bacon*, of *Raveningham* in *Norfolk*, whoſe anceſtor, Sir *Nicholas Bacon*, of *Redgrave* in *Suffolk*, was ſo created 22d of *May* 1611, and was premier baronet. As the pretended application of this money was for the reduction of the province of *Ulſter* in *Ireland*, all the baronets have the arms of *Ulſter* ſuperadded to their family coat. The preſent number of *Engliſh* baronets is 454, of which 134 have been created in the preſent reign.

The orders of knighthood in *Great Britain* are three, two *Engliſh* and one *Scotch*; of theſe the king is grand maſter. The order of the Garter, or St. *George*, was inſtituted in 1350, by *Edward* III. and is conferred on twenty-ſix knights, including the king. Its inſignia or badge is St. *George* on horſeback, with a dragon of enamelled gold, bearing the motto, HONI SOIT QUI MAL Y PENSE. This *George* is worn at a blue ribbon, and the motto is embroidered with gold on a blue garter worn on the left leg.

The order of the *Bath* was inſtituted by *Henry* IV. and revived with ſome improvements in 1725, by *George* I. It derives its name from a very ancient cuſtom of inſtituting knights by bathing. This order conſiſts of thirty-five knights, excluſive of the ſovereign. Its enſigns are three crowns in a field or, with this inſcription, TRIA JUNCTA IN UNO; that is, Three joined in one; and is worn pendant at a red ribbon.

The order of the *Thiſtle*, inſtituted in *Scotland*, was revived in 1703, by queen *Anne*, and its ſtatutes were enlarged in 1725, by *George* I. The knights of this order are but twelve in number, beſides the ſovereign, who preſides as grand maſter. Its enſigns are the image of St. *Andrew*, worn pendant to a green ribbon, and the motto NEMO ME IMPUNE LACESSIT. The collar is compoſed of thiſtles, interwoven with ſprigs and leaves of rue, which are all of gold.

Whilſt feudal tenures ſubſiſted in *England*, every one who held land of a certain yearly value, was required to do ſuit and ſervice to the king, and to attend him in his wars, forty days in each year, after they had received knighthood from his hands. In the reign of *Henry* II. every one who held land to the amount of 20*l.* a year was deemed a knight. Theſe feudatory knights were ſtyled in *Latin*, *equites aurati*, becauſe they always ſerved on horſeback, and wore ſpurs gilded with gold; the law term given to them was *milites*, becauſe of their profeſſion of arms. In the reigns of the *Norman* kings there were 60,000 of theſe knights in the kingdom. In proceſs of time, military ſervice was frequently commuted for a fine, and the exaction of ſuch a fine, which was called "a knight's fee," was one of the many fatal expedients to raiſe money without the help of parliament reſorted to by *Charles* I. however, in the 16th year of that reign knight's fees were aboliſhed by act of parliament, as were, at the reſtoration, all the other military ſuits and ſervices annexed to feudal tenures, conſequently this kind of military knighthood fell into diſuſe. At preſent, knighthood is conferred as a mark of perſonal regard from the ſovereign, and does not deſcend: the ceremony is performed by the king laying a ſword upon the ſhoulder of the perſon to be knighted, who reſts on one knee, and pronouncing theſe words, "riſe up Sir A. B." The wife of a knight is ſtyled lady, or "your ladyſhip."

The title of *Eſquire* properly belongs to ſuch as hold places or poſts under the king, on which account a juſtice of the peace or a commiſſioner of the land tax are, by virtue of their offices, entitled to it. The qualifications laid down by Sir *Edward Coke*, *Camden*, and Sir *Henry Spelman*, are now entirely obſolete, and three hundred pounds a year in land is that kind and degree of property which entitles to it; but vanity and injudicious complaiſance frequently cauſe it to be aſſumed and conferred without diſcrimination. The ſons of peers being ſtyled "honourable," and privy-counſellors "right honourable," the addition of eſquire is not properly given to ſuch.

SECT. V.

Of both Houſes of Parliament; the civil Liberties of the People, the Courts of Juſtice, and the Manner in which the Laws are executed.

THE legiſlative power in *Great Britain* is formed by the king, lords, and commons. Before the Union the houſe of Lords conſiſted only of the ſpiritual and temporal peers of *England*, and the houſe of Commons of five hundred and thirteen knights, burgeſſes, and citizens: but at the Union ſixteen peers of *Scotland* were added to the houſe of Lords, and forty-five *Scots* commoners to the houſe of Commons, making in all 558. The firſt of theſe are choſen before the ſitting of every new parliament by the peers of *Scotland* out of their own body.

The purpoſe of parliaments is to maintain the conſtitution, and keep inviolable the privileges of the people; they alſo raiſe ſubſidies, make laws, and redreſs grievances. The power of calling a parliament, and of adjourning and proroguing it, is veſted in the ſovereign; who has likewiſe the privilege of fixing the place of its meeting. Many parliaments, in the reign of *Charles* I. were held at *Oxford*, but ſince the revolution they have conſtantly been held at *Weſtminſter*; the houſe of Commons ſitting in St. *Stephen*'s chapel, adjoining to *Weſtminſter* Hall, and the houſe of Lords in a contiguous undetached building.

The ſitting of the parliament is appointed by the king's proclamation, with the advice of the privy-council, and in chooſing a new one writs are iſſued out by the lord chancellor to the Lords, to appear at the time and place appointed. Writs are alſo ſent to the ſheriffs of every county, commanding them to ſummon the electors to chooſe as many knights, citizens, and burgeſſes in their reſpective counties, as are to ſit in the houſe of Commons. The writs for *Scotland* are directed to the Privy-Council for ſummoning the ſixteen peers, and for electing the forty-five members. No judge, ſheriff, or clergyman can be elected; neither an alien or a minor.

The qualifications for voting for members of parliament are various in different parts of the kingdom: every freeholder, poſſeſſing land of the yearly value of forty ſhillings, has a right to vote for the knight returnable for the county where his land lies; the repreſentatives of the city of *London* are choſen by the livery of the city; thoſe for *Weſtminſter*, by every houſe-keeper paying taxes; the city of *Briſtol* and town of *Malden* have the peculiar privilege of giving to every man who marries the daughter of a freeman, a right of voting; and in ſome places there are not more than ſix or ſeven electors to return two members to parliament.

By a late act of parliament, all perſons holding any place in the cuſtoms or exciſe, are diſqualified from voting for members of parliament.

The qualification neceſſary for a knight of a ſhire, is ſix hundred pounds a year in freehold or copyhold land; that of a burgeſs, or citizen, three hundred pounds a year. The acceptance of an office under the crown vacates a ſeat in parliament, and cauſes a new election.

No act is valid without the concurrence of a majority in both houſes, and the king's approbation. The right which the king claims of putting a negative upon a bill which has paſſed both houſes of parliament, has not been exerciſed ſince the reign of *Charles* II. who choſe to exert it for the purpoſe of rejecting a bill, which reſtored to the earl of *Derby* vaſt eſtates, of which he had been deprived by the parliament during the time of the commonwealth, for his attachment to the cauſe of that very king and his father; the reaſon aſſigned for this ſiniſter requital of ſervices was, that the poſſeſſions which would have been thus given, were much too conſiderable to be held by any ſubject in the kingdom. The diſuſe into which this royal prerogative has fallen, led ſome members of each houſe of parliament to contend, not many years ſince, that the king of *England*, at preſent, has no ſuch right of rejecting bills. Any bill for making a new law, or altering an old one, may be brought firſt into the houſe of Peers, except a money bill; but no bill relating to the revenues or public taxes can be brought into the houſe of Peers firſt, or altered when it is carried up from the Commons, though it may be totally rejected by the Lords. Thus, where the Lords might be tempted to purſue their own intereſt to the prejudice of the public, and might receive the greateſt pecuniary advantages from being corrupt, in granting ſupplies, they have only the power of refuſing, while the Commons alone have that of framing.

It is laid down by Sir *William Blackſtone*, that every member, though choſen for a particular diſtrict, when elected, and returned, ſerves for the whole realm; the end of his coming thither not being particular but general, and therefore he is not bound to conſult with, or take the advice of his conſtituents upon any particular point, unleſs he himſelf thinks it proper ſo to do. *Commentaries, book* I. *chap*. 2. But this doctrine, though ſupported by ſo great an authority, has been much controverted, ſo far as it reſpects the right of conſtituents to inſtruct their repreſentatives.

The conſtitution of *England* adopts two ſalutary fictions: the one, that the king can do no wrong; the other, that the king never dies. The firſt means, that whatever mal-adminiſtration prevails in government, is to be charged upon the king's miniſters, and not upon the king: it likewiſe implies, that the prerogatives which the crown poſſeſſes, do not extend to the doing of injury; thoſe prerogatives being created, or rather delegated, for the benefit of the people, not to be exerciſed to their hurt or detriment. Again, the king never dies; for immediately upon the diſſolution of the reigning prince, the regal dignity veſts, in conſequence, without any previous form or act, in his heir, who is inſtantly, and to all intents and purpoſes, king; on which account, the perſonal defunction of the ſovereign is called, "his demiſe," not his death.

The king of *Great Britain* poſſeſſes very extenſive power; he appoints all the great officers of ſtate, is the fountain of honour, fills vacant biſhopricks, nominates to all offices in the revenue, and to all military poſts, and can remove and diſmiſs from them at pleaſure: he has the power of declaring war and concluding peace, but can obtain no ſupply of money without the concurrence of both houſes of parliament; neither can any miniſter continue long in office, however ſupported by the crown, unleſs he is likewiſe acceptable to the other branches of the legiſlation. Theſe prerogatives have been deemed neceſſary for the ſovereign to poſſeſs, in order to give efficiency to the executive government, and that the neceſſary operations may be conducted with ſecrecy and diſpatch.

The king's revenues, in modern times, have been divided into ordinary and extraordinary: in ancient times they were of no other kind than what are now called ordinary, and conſiſted of numerous oppreſſive but productive claims made upon the ſubject, but now, either entirely done away, or poſſeſſed as manor rights, or in other ways, by the ſubject. The ordinary revenue of the crown, ſince the revolution, has conſiſted almoſt entirely in its demeſne lands, which, formerly, were very large, and capable of being increaſed to a magnitude truly formidable, "for," ſays Sir *William Blackſtone*, "there are very few eſtates in the kingdom that have not at ſome period or other, ſince the *Norman* conqueſt, been veſted in the hands of the king, by forfeiture, eſcheat, or otherwiſe; fortunately for the liberty of the ſubject, the hereditary landed revenues of the crown, by a ſeries of improvident management, are almoſt all granted away to private ſubjects, and are ſunk nearly to nothing." *Commentaries, book I. chap*. 8. The extraordinary revenues conſiſt of the taxes, whether annual or perpetual, which are raiſed upon the ſubject. The annual taxes are thoſe upon land and malt, the perpetual taxes are the cuſtoms, exciſe, duties upon ſalt, poſt-office, ſtamp duties, duties upon houſes and windows, tenths and firſt fruits, licences to hackney coaches, and to hawkers and pedlars, duty upon poſt horſes and chaiſes, on ſervants, &c. &c. The clear nett produce of theſe ſeveral branches of the revenue, after all charges of collecting and management are paid, is in the firſt inſtance applied to the payment of the intereſt of the national debt; next, to ſupply a million a year for its reduction, and to furniſh an annual ſum for the maintenance of the king's houſhold, and other purpoſes of the civil liſt. The ſurplus was, by act of parliament, in 1716, formed into a ſinking fund, which was to be applied to the gradual payment of the national debt; its produce of late years has been ſeldom much below three millions annually, but the neceſſities of the ſtate now require it to be applied to make good the yearly expences, and it was, from its firſt eſtabliſhment then, ſeldom made uſe of for the purpoſe for which it was originally aſſigned.

	£.
The annual revenue of queen *Elizabeth* amounted to no more than - - - - -	600,000
That of *Charles* I. to - - - - - -	800,000
The revenue voted by parliament to *Charles* II. was - - - - - - - - - - - - - -	1,200,000

Under which ſums were included all manner of public expences, and the charges of the navy and land forces.

	£.
The whole of the annual revenue of *James* II. amounted to - - - - - - - - -	1,900,000

Out of which his fleet and army were maintained, at the yearly expence of 1,100,000*l*. (In the year 1786, the expences of the navy and army were voted to be four millions and three quarters, and theſe voted ſums are never any thing adequate to the ſervice.)

After the Revolution, when the parliament took into its own hands the annual ſupport of all the forces by ſea and land, a civil liſt was ſettled on the new king and queen, amounting, with the hereditary duties, to 700,000*l*. *per annum*, and the like ſum was continued to queen *Anne* and king *George* I. In the next reign, the produce of certain branches of exciſe and cuſtoms, the poſt-office, the duty on wine licences, the revenues of the remaining crown lands, the profits ariſing from courts of juſtice, which articles included all the hereditary revenues of the crown, and alſo a clear annuity of 120,000*l*. in money, were ſettled on the king for life, for the ſupport of his houſhold, and the honour and dignity of the crown. Parliament at the ſame time ſtood engaged, if theſe did not produce annually 800,000*l*. to make up the deficiency; but they are ſuppoſed always to have exceeded that ſum. At the acceſſion of his preſent majeſty, parliament granted the ſum of 800,000*l*. a year for the ſupport of the civil liſt, in lieu of the hereditary revenues, and the money ſettled on his grandfather. This revenue was charged with three life annuities; to the princeſs dowager of *Wales*, the duke of *Cumberland*, and the princeſs *Amelia*, amounting together to 77,000*l*. In the year 1777, another hundred thouſand pounds a year was added to the civil liſt, which brought it to nine hundred thouſand pounds *per annum*.

Beſides which, it was ſtated in the year 1777, that the crown then enjoyed a farther yearly revenue of half a million, of which parliament had no right to take cognizance, ariſing from the electorate of *Hanover*, the kingdom of *Ireland*, the principality of *Wales*, the dutchy of *Lancaſter*, county of *Cornwall*, intereſt of debts due to the late king, &c.

The expences defrayed by the civil liſt are, ſuch as relate in any manner to civil government; theſe include the houſhold, all ſalaries to officers of ſtate, to the judges, and all the king's ſervants, the appointments to foreign ambaſſadors, the maintenance of the queen and the royal family, the king's private expences or privy purſe, penſions, and other bounties.

Theſe, in the year 1776, were particularized as follows:

	£.
The Queen	50,000
Duke of *Glouceſter*	12,000
—— *Cumberland*	12,000
Princeſs *Amelia*	12,000
The ſervants of the late King, Princeſs of *Wales*, Queen of *Denmark*, &c.	8,000
Cofferer of the houſhold (now aboliſhed)	109,600
Treaſurer of the chamber (now aboliſhed)	60,200
Great wardrobe (now aboliſhed)	36,400
Maſter of the robes	8,800
——— horſe	26,000
Paymaſter of the works	76,500
Miniſters to foreign courts, conſuls, &c.	98,600
Great officers, judge's fees, ſalaries, &c.	130,000
Penſions and annuities	127,000
Royal bounties	11,500
Gentlemen penſioners	6,000
Preſents to foreign miniſters	3,000
Secret ſervice	86,000
His Majeſty's privy purſe	48,000
Goldſmith	2,500
Law charges	60,000
Total	984,100

Toward the concluſion of the reign of *George* I. in the year 1724, application was made to parliament, by the miniſtry, to diſcharge the debts contracted on the civil liſt, when a million was granted for that purpoſe. No other ſuch application was made until the year 1769, when the miniſter delivered a meſſage from his majeſty to the houſe of Commons, acquainting them that the expence of his civil government had exceeded the revenue allotted by parliament, and he had been obliged to incur a debt of more than half a million, in conſequence of which the ſum of 513,511*l.* was voted. Eight years afterwards (viz. in 1777) a like application was made, and the ſum of 618,340*l.* was granted.

In the year 1782, a freſh debt was contracted, amounting to 295,817*l.* which, on being ſignified to the houſe of Commons, an act was paſſed for raiſing 300,000*l.* on exchequer bills, to be paid out of the hereditary and temporary revenues, commonly called the aggregate fund, at the rate of 12,500*l.* a quarter, to commence on the 10th of *October* in that year, and to be deducted from the 900,000*l.* a year granted for the civil liſt; and to provide the means for theſe payments, many offices in the palace were aboliſhed, and a variety of ſavings were made, beſides certain regulations to prevent the civil liſt being again encumbered with a debt.

The grand bulwarks of the liberties of *Engliſhmen* are, the trial by jury, and the *habeas corpus* act. The firſt has been in uſe in this kingdom time immemorial, and was probably co-eval with its firſt civil government. By the ſtatute 16 *Charles* I. c. 10. it is enacted, that "if any perſon be reſtrained of his liberty by order or decree of any illegal court, or by command of the king's majeſty in perſon, or by warrant of the council-board, or of any of the privy council, he ſhall, upon demand of his counſel, have a writ of *habeas corpus*, to bring his body before the court of King's Bench, or Common Pleas, who ſhall determine whether the cauſe of his impriſonment be juſt, and thereupon do as juſtice ſhall appertain." And by 31ſt *Charles* II. *cap.* 2. commonly called "the *habeas corpus act*;" the methods of obtaining this writ are ſo plainly pointed out and enforced, that, ſo long as this ſtatute remains unimpeached, no ſubject in *England* can be long detained in priſon, except in ſuch caſes where the law requires, and juſtifies the detainer; and exceſſive bail is forbidden by 1ſt of *William* and *Mary*, ſtatute II. cap. 2.

Though the execution of the laws is always entruſted to the care of the king, yet he cannot ſeize the property of the moſt inconſiderable man in his domnions, except it be forfeited by law: the ſubject may, without the leaſt danger, ſue his ſovereign, or thoſe who act in his name, and under his authority; he may do this in open court, where the king may be caſt, and obliged to pay damages to his ſubject. He cannot take away the liberty of the leaſt individual, unleſs ſuch an one has, by ſome illegal act, forfeited his right of liberty, or except when the ſtate is in danger, and the repreſentatives of the people think the public ſafety makes it neceſſary that he ſhould have the power of confining perſons and ſeizing their papers on a ſuſpicion of guilt; and this power is never given but for a limited time, by the ſuſpenſion of the *habeas corpus* act.

The king may pardon, but neither he, nor the judges to whom he delegates his authority, can condemn a man as a criminal, except he be firſt found guilty by twelve men, who muſt be his peers or equals. No perſon can be deprived of his liberty even for the higheſt crime, till ſome preſumptive proof be given upon oath before a magiſtrate. If a perſon be charged with a capital offence, he muſt not undergo the ignominy of being tried for his life, till the evidences of his guilt are laid before the grand jury of the town or county in which the fact is alleged to be committed, and not without twelve of them agree to find a bill of indictment againſt him. If they do this, he is to ſtand a ſecond trial before twelve other men; and he is furniſhed with a pannel or liſt of the jury, who are his true and proper judges, that he may learn their characters, and diſcover whether they are deficient either in abilities or integrity, or have received unfavourable impreſſions concerning him. He may in open court object to twenty of the number, and to as many more as he can ſhew any cauſe why they ſhould not be admitted as his judges, till at laſt twelve unexceptionable men are ſworn to give a true verdict, according to the evidence produced in court. Theſe only are the judges from whoſe ſentence the priſoner is to expect life or death; and as from their judgment there lies no appeal, they are to be all of one mind, and after they have fully heard the evidence, are confined without meat, drink, or candle, till they are unanimous in acquitting or condemning the priſoner. Indeed juries have always been conſidered as giving the moſt effectual check to tyranny; for where a king can do nothing againſt law, he cannot, by a bad adminiſtration, make the laws the inſtruments of cruelty and oppreſſion.

But as the nobility are always expoſed to popular envy, were they to be judged by the people, they might be in the greateſt danger from their judges, and would want the privilege of being tried by their peers, or *pares*, a privilege enjoyed by the meaneſt ſubject; they are therefore not to be tried by the ordinary courts of judicature, but by that part of the legiſlature of which each is a member.

On the other hand, the houſe of Commons can enquire into the conduct of the higheſt peer in the realm, and in the name of the people impeach the favourite or miniſter of the king. They can call the judges to an account for mal-adminiſtration of their office. Thus the Commons are the grand jury of the nation; but as it would be improper that thoſe who are impeached in ſo high a court ſhould be tried by a lower, which might be overawed by the power of the houſe of Commons, therefore, to preſerve the dignity of the peers, and the ſecurity of the ſubject, thoſe whom they impeach are tried by the Lords, whoſe ſuperior dignity ought to ſet them above all influence, and who are actuated neither by the ſame intereſts, nor moved by the ſame paſſions.

The courts of juſtice ſitting at *Weſtminſter* are open four times a year; that is, at *Eaſter*, *Trinity*, *Michaelmas*, and *Hillary* terms. There are four courts, the court of chancery, the king's bench, common pleas, and the court of exchequer; beſides that of the duchy of *Lancaſter*, which takes cognizance of all the cauſes relating to the revenue of that duchy, which has been long annexed to the crown; the chief judge of that court is called the chancellor of the duchy of *Lancaſter*.

The *Judges* are, by the conſtitution, to declare the law, and to proceed in their judicial capacities according to its plain and obvious meaning, but a ſtrong guard has been ſet, to prevent a judge from perverting law, or ſubſtituting his own opinion in the place of law, and to render them independent of the ſovereign or the miniſter, they are not removeable from their ſtations but by an addreſs of both houſes of parliament to the king. The two grand principles of juriſprudence are the Common and Statute law of the land; the firſt is that unwritten law delivered from age to age, merely by cuſtom and tradition; the other, the laws which have been enacted by the three branches of the legiſlature.

The *Court* of *Chancery*, which is a court of equity, is next in dignity to the high court of parliament, and is deſigned to relieve the ſubject againſt frauds, breaches of truſt, and other oppreſſions; and to moderate the rigour of the law. The chief judge is the lord chancellor, or lord keeper; and the form of proceeding is by bills, anſwers, and decrees, the witneſſes being examined in private: however, the decrees of this court are only binding to the perſons of thoſe concerned in them, for they do not affect their lands and goods; and conſequently, if a man refuſes to comply with the terms, they can do nothing more than ſend him to the priſon of the *Fleet*.

The lord chancellor has twelve aſſiſtants, called *maſters* in *chancery*, who take depoſitions upon oath, for which they have an office appointed: they alſo examine accompts depending in that court, and decide diſputes referred to them by the lord chancellor, in their ſeparate offices. Beſides theſe, there are ſeveral maſters extraordinary to take affidavits in different parts of the kingdom.

The principal of the twelve is the *maſter* of the *rolls*, who has the cuſtody of all charters, cuſtoms, commiſſions, deeds, and recognizances; which being made on rolls of parchment, gave occaſion to his name. In his office are kept all the rolls ſince the beginning of the reign of *Richard* III. This officer uſually hears cauſes in chancery in the abſence of the chancellor, and in his court hears and determines the cauſes brought before him; he has the gift of the offices of the ſix clerks, who enrol all patents, commiſſions, licences, pardons, and other inſtruments that paſs the great ſeal. Under the ſix clerks there were formerly ſixty, but now there are ninety, and theſe, with their under clerks, perform the buſineſs of their office.

The *court* of *king's bench* is the higheſt court in England at common law, except the houſe of Lords; it takes cognizance of treaſon, felony, breaches of the peace, oppreſſion, *&c.* and can examine and correct the judgments and proceedings of all the inferior courts, except that of the exchequer, not only in pleas of the crown, but in thoſe that are perſonal; errors committed by juſtices of the peace come alſo under its cognizance. In this court are four judges, who hold their places for life; the principal of whom is ſtyled "the lord chief juſtice of the "king's bench." His juriſdiction is very extenſive, and his warrant is of force in any part of the kingdom. This court grants prohibitions to other courts, both eccleſiaſtical and civil, when they exceed the bounds of their juriſdiction.

The *court* of *common pleas* is ſo called, becauſe the pleas uſually here debated are between ſubject and ſubject. Here all civil cauſes are tried, and real actions are pleadable in no other court. There are four judges belonging to it, the firſt of whom is called "lord chief juſtice of the com-"mon-pleas." None but ſerjeants at law can plead in this court, and all facts are tried by a jury.

The *court* of *exchequer* formerly received its name from a ſtriped or chequered cloth ſpread over the table; it conſiſts of two courts, one of which tries cauſes according to law, and the other according to equity. The court of equity is held in the exchequer-chamber before the lord treaſurer, the chancellor of the exchequer, the lord chief baron, and the three barons of the exchequer, beſides a curſitor baron; but the two firſt ſit very ſeldom, and the four laſt almoſt always. Here are tried all cauſes relating to the king's revenue. All judicial proceedings according to the law are tried only before the barons.

The *foreſt courts* were inſtituted by the *Norman* Kings for the government of the royal foreſts, in different parts of the kingdom, and for the puniſhment of all injuries done to the king's deer, or veniſon. There were four courts formerly inſtituted for theſe purpoſes, the principal of which is "the court of juſtice-ſeat," which is held by the chief juſtice in eyre, or chief itinerant judge (for ſo the name ſignifies,) or his deputy, to hear and determine all treſpaſſes within the foreſt, and all claims of franchiſes, liberties, and privileges. It may be held every three years, at which time the rolls of the three inferior courts are preſented to the chief juſtice. It is a court of record, and a cauſe tried in it may be removed, by a writ of error, into the court of king's bench. Theſe juſtices in eyre were inſtituted by king *Henry* II. A. D. 1184, and their courts were formerly very regularly held; but the laſt juſtice-court, of any note, was holden in the reign of *Charles* I. before the earl of *Holland*, and the proceedings were extremely rigorous. After the reſtoration another was held merely for form, before the earl of *Oxford*; but ſince the revolution the foreſt laws have fallen into total diſuſe. Indeed the *Charta de Foreſta* was as warmly contended for by the barons, and extorted from king *John* with as much difficulty as that of *Magna Charta* itſelf. By this charter, confirmed by parliament, many foreſts were diſafforeſted, or ſtripped of their oppreſſive privileges, and regulations were made in the laws reſpecting ſuch as remained, particularly killing the king's deer, inſtead of continuing to be a capital offence, was puniſhed by fine, impriſonment, or adjuration of the realm: and by a variety of ſubſequent ſtatutes, together with the long ſuſpenſion of the operation of the foreſt laws by the crown lawyers, this prerogative is become obſolete, and no longer felt as an actual grievance to the ſubject.

In the different counties in *England*, aſſizes and ſeſſions are held twice a year for the more regular diſtribution of juſtice; and for this purpoſe the twelve judges are commiſſioned by the king to go the circuits. At theſe aſſizes all civil and criminal cauſes are determined. The firſt is called *Lent* aſſizes, and begins ſoon after *Hillary* term; and the other, called the *Summer* aſſizes, after *Trinity* term. There are ſix of theſe circuits, beſides thoſe in *Wales*, in which principality two diſtinct judges are appointed; and both in *England* and *Wales* all cauſes are determined by a jury.

The firſt is called "the *Home* circuit," and comprehends the Counties of *Eſſex*, *Hertford*, *Kent*, *Surry* and *Suſſex*. The ſecond "the *Norfolk* circuit," comprehending *Buckinghamſhire*, *Bedfordſhire*, *Huntingdonſhire*, *Cambridgeſhire*, *Suffolk*, and *Norfolk*. The third, "The *Oxford* circuit," comprizing *Oxfordſhire*, *Berkſhire*, *Glouceſterſhire*, *Worceſterſhire*, *Monmouthſhire*, *Herefordſhire*, *Salop*, and *Staffordſhire*. The fourth, "The Midland," comprehending *Warwickſhire*, *Leiceſterſhire*, *Derbyſhire*, *Nottinghamſhire*, *Lincolnſhire*, *Rutlandſhire*, and *Northamptonſhire*. The fifth, "The Weſtern," including *Hampſhire*, *Wiltſhire*, *Dorſetſhire*, *Somerſetſhire*, *Devonſhire*, and *Cornwall*. The ſixth, "The Northern," which, in the lent aſſizes, extends only to *York* and *Lancaſter*, in the ſummer aſſize it takes in *Durham*, *Northumberland*, *Weſtmoreland*, and *Cumberland*, which is called "the long circuit." *Cheſhire*, being a county palatine, has its own law courts and judges, and is governed by municipal laws, by which both civil and criminal ſuits are determined. *Middleſex*, being the county in which the capital and courts of law are ſituated, has eight ſeſſions of Oyer and Terminer to try criminal offences. *Wales* has four circuits: North Eaſt, conſiſting of *Flint*, *Denbigh*, and *Montgomeryſhires*; North Weſt, *Angleſea*, *Caernarvon*, *Merioneth*; South Eaſt, *Radnor*, *Brecon*, and *Glamorganſhires*; South Weſt, *Pembroke*, *Cardigan*, and *Caermarthenſhires*.

Lord Lieutenants of counties were firſt introduced about the reign of *Henry* VIII. They were conſidered as ſtanding repreſentatives of the crown, to keep the county in military order. At preſent, a lord lieutenant is an appointment highly honourable, conferred by the crown. The buſineſs of that officer is to appoint juſtices of the peace, and to call forth the militia of the county. The office of *cuſtos rotulorum*, or keeper of the records of the county, is frequently held by the ſame perſon.

The *Sheriff*, (who is called in Latin *vice-comes*, being in ancient times deputy to the earl, or *comes*, to whom the cuſtody of the ſhire is ſaid to have been committed, at the firſt diviſion of the kingdom into counties) is the officer of the county upon whom the civil adminiſtration devolves, and is of great antiquity in this kingdom. The inhabitants of the counties formerly elected their ſheriff; and in ſome counties the ſhrievalty was hereditary, and ſtill is in *Weſtmoreland*; the city of *London* alſo has the inheritance of the ſhrievaltry of *Middleſex* veſted in its body by charter, and two ſheriffs are annually elected by the livery of *London*. The popular election of ſheriffs was aboliſhed by ſtatute 9 *Edward* II; and, ever ſince the reign of *Henry* VI. it has been cuſtomary for all the judges, with the other great officers, to meet in the *Exchequer* chamber, on the morrow of All Souls, (*November* 3) but now, on the morrow of St. *Martin* (12th *November*) and there propoſe three perſons to the king for each county, who appoints one of them to be ſheriff. This officer, as keeper of the king's peace, both by common law and ſpecial commiſſion, during his office, is the firſt man in the county, and ſuperior in rank to any nobleman in it. His office and duty is to execute the king's mandate, and all writs are directed to him, which are iſſued out of the king's courts of juſtice. He impannels juries to try cauſes at niſi prius, and criminal offences; he is to ſee the ſentence of the law executed. When the aſſize is held he attends the judges, and eſcorts them out of the county. He is likewiſe to determine the due election of knights of the ſhire, ſubject to the future control of the houſe of Commons; he is to collect all fines, diſtreſſes, and amerciaments, and bring them to the receipt of his majeſty's exchequer. He is to defend his county againſt any of the king's enemies, and againſt thoſe who break the peace of it, for which purpoſes he may command all the people to attend him, which is called "the *poſſe comitatus*," or power of the county, and is compoſed of every perſon above fifteen years of age, under the degree of a peer.

The office of *coroner* is likewiſe very ancient; in the old law language he is ſtyled *coronator*, becauſe his buſineſs chiefly relates to pleas of the crown, or ſuch wherein the king is more immediately concerned; and in this view *Sir William Blackſtone* conſiders the chief juſtice of the king's-bench as the principal coroner in the kingdom, who may, if he thinks fit, exerciſe the juriſdiction of a coroner in any part of the realm. Particular coroners are appointed for every county in *England*, uſually four in a county, ſometimes ſix, and in ſome two. A coroner is ſtill choſen by all the freeholders of the county; he holds his office for life, but may be removed by being appointed ſheriff, or by being choſen verderor; he is alſo removeable by the king's writ. His office and power conſiſts in enquiring, when any perſon is ſlain or dies ſuddenly, or in priſon, concerning the manner of the death; and this enquiry muſt be made upon inſpection of the body; it muſt alſo be held at the very place where the death happened, and in the preſence of a jury of neighbours; and if, upon this inquiſition being taken, any one is found guilty of murder, (which ſtrong ſuſpicions alone, in this inſtance, will warrant the finding) the offender may be immediately ſeized and committed to priſon, to be tried for the offence. Another branch of the coroner's office is, to enquire concerning *ſhipwrecks* and *treaſure-trove*. In certain caſes he may be called forth to act as the ſheriff's ſubſtitute.

There are many *juſtices* of the *peace* in every county, and ſuch in whom the king is ſuppoſed to have a greater confidence are ſtyled juſtices of the quorum, becauſe in their dedimus there are theſe words, *quorum* A. B. *unum eſſe volumus*; which ſignifies, that no buſineſs of conſequence muſt be tranſacted unleſs with the concurrence of one of theſe. Their office is to call before them, examine, and commit to priſon all murderers, thieves, vagabonds, and all diſturbers of the peace. When aſſembled at a quarter ſeſſion they grant licences to publicans. They affix the quantum of penalty to be paid by offenders againſt particular ſtatutes. In caſe of riots, a juſtice of peace muſt attend, and read a proclamation contained in the act of parliament, commonly called "the riot act," before the military can legally interpoſe. For the apprehending and ſecuring of offenders, the conſtable is the officer appointed.

Every city and corporation in *England* chooſes their own magiſtrates, who regulate all affairs belonging to their reſpective corporations, and try perſons ſuppoſed guilty of ſmall crimes; but cannot exerciſe their power out of their own liberties.

Beſides the above courts, there are court leets and court barons, which properly belong to the lords of the manor, who appoint ſtewards to hold them in their name.

A court baron is held in every manor, though the other is not, and is thus called from the lord of the manor, who was anciently ſtyled baron. All tenants belonging to the manor are ſummoned to this court, part of whom are ſworn for a jury, and the ſteward ſits as judge. The jury is directed to enquire after the deceaſe of copyholders, and to bring in their next heir; who, on admiſſion to his copyhold, is to pay a fine to the lord, which varies in different manors according to the cuſtoms which have been introduced; but if a manor has no particular cuſtom, the lord may levy a fine at diſcretion, but the courts of law have determined that whatever fine exceeds two year's rent is exorbitant and illegal. In all copyhold tenures, where no cuſtom prevails to the contrary, the lord is entitled to one third of the timber trees growing on the eſtate, or their value when felled; and to cut down and remove timber, without notice given to the ſteward, in ſtrictneſs of law, incurs a forfeiture of the land to the lord; or a failure of paying the admiſſion-fine, on the third manor-court held after the inheritance has devolved, cauſes an eſcheat to the lord. Such are the remains of ancient villeinage in *England*.

There are alſo *ſheriff-courts*, and *hundred courts*, held at ſhort intervals of time in all parts of *England*, where ſmall debts are recoverable.

The laws of *England* are eſteemed more merciful with reſpect to offenders, than thoſe which at preſent ſubſiſt in any other part of the known world. However, the puniſhment of ſuch who at their trial refuſe to plead guilty or not guilty, was till lately very cruel. In this caſe the priſoner uſed to be laid upon his back, and, his arms and legs being extended with cords, and a conſiderable weight laid upon his breaſt, he was allowed only three morſels of barley-bread, which, being given him the next day without drink, he was afterward allowed nothing but foul water till he expired. This puniſhment, however, was never inflicted; but ſome offenders have choſen it, in order to preſerve their eſtates for their children. Thoſe who refuſed to plead were not ſuffered to undergo ſuch a length of torture; but had ſo great a weight placed on them, that they ſoon expired. By an act 12th *Geo.* III. the law, in ſuch a caſe as a priſoner refuſing to plead to his indictment, has undergone a conſiderable alteration, and he is now conſidered as guilty of the crime with which he is charged, and is rendered liable to the ſame puniſhment as if he was convicted on a ſolemn trial being had.

The merciful ſpirit with which the criminal laws are carried into effect againſt offenders, affords very frequent opportunities for the guilty to eſcape puniſhment, by pleading ſome trifling irregularity in the proceedings, or ſome other evaſive quibble; notwithſtanding which, ſuch has been the encreaſing profligacy and deſperation among the lower order of people, that the number of criminals tried at every ſeſſion in *London*, and in the circuits throughout *England*, have never been known, for a continuance of time, to have been ſo many as within the laſt ſeven years; and, though vaſt numbers are tranſported to foreign parts, yet dreadful ſacrifices are continually made to public juſtice of the lives of vaſt numbers of hardened villains. Whilſt ſharpers and cheats practiſe every ſpecies of fraud with unparalleled addreſs and effrontery.

All capital crimes are in *England* included under high treaſon, petty treaſon, and felony; the firſt conſiſts in plotting, conſpiring, or riſing up in arms againſt the ſovereign, or in counterfeiting the coin. The traitor is puniſhed by being drawn on a ſledge to the place of execution, when, after being hanged on a gallows for ſome minutes, the body is cut down, the heart taken out and expoſed to public view, and the entrails burnt: the head is then cut off, and the body quartered, after which the head is uſually fixed on ſome conſpicuous place. All the criminal's lands and goods are forfeited, his wife loſes her dowry, and his children both their eſtates and nobility. But, though the ſentence paſſed upon all traitors is the ſame, yet, with reſpect to perſons of quality, it is generally changed into beheading. Though coining of money is adjudged high treaſon, the criminal is only drawn upon a ſledge to the place of execution, and there hanged.

Petty treaſon, which includes a child's killing his father, a wife her huſband, a clergyman his biſhop, or a ſervant his maſter or miſtreſs, is puniſhed by being drawn on a ſledge to the place of execution, and there hanged. Women guilty either of this crime or of high treaſon, are ſentenced to be burnt alive: but, inſtead of ſuffering the full rigour of the law, they are ſtrangled at the ſtake before the fire takes hold of them.

Formerly, in ſeveral parts of *England*, ſcolding women were ſet in a vehicle called a ducking-ſtool, where they were placed on high, and drawn through the town to ſome deep water, into which they were three times plunged, and then again carried about and expoſed to the deriſion of the populace.

Of the courts of juſtice and the puniſhments of *Scotland*, we ſhall give an account when we come to treat of that country; and ſhall conclude this ſection with the diviſions of the whole iſland, and the repreſentatives they ſend to parliament.

In *England* there are forty counties, which ſend to parliament eighty knights.

Twenty-five cities, of which *London* ſends four and *Ely* none—fifty citizens.

A hundred and ſixty-ſeven boroughs, who ſend two each—three hundred and thirty-four burgeſſes.

Five boroughs, which are *Abingdon*, *Banbury*, *Bewdley*, *Higham Ferrers*, and *Monmouth*, one each—five burgeſſes.

Two Univerſities, who ſend four repreſentatives.

Eight Cinque-ports, as *Haſtings*, *Dover*, *Sandwich*, *Romney*, *Hythe*, and their three dependents, *Rye*, *Winchelſea*, and *Seaford*, two each—ſixteen barons.

In *Wales* are twelve counties, which ſend twelve knights.

Twelve boroughs, which ſend twelve burgeſſes.

In *Scotland*, thirty ſhires, which ſend thirty knights.

And fifteen boroughs, which ſend fifteen burgeſſes.

In all five hundred and fifty-eight repreſentatives.

SECT. VI.

A ſhort View of the Engliſh *Conſtitution, and of the Riſe, Progreſs, and Preſent State of the National Debt.*

THE hiſtory of this iſland is pre-eminently eventful and important. The limits of this work will not permit us to give even a ſummary view of a ſeries of tranſactions which extend through eighteen centuries; and indeed it is no leſs unneceſſary than impracticable, for the means of acquiring this information are in every one's power, and none who pay the ſlighteſt attention to reading can have failed, in ſome meaſure, to avail themſelves of the facility with which this knowledge may be acquired; we ſhall therefore, in this ſection, purſue a leſs beaten track, by conſidering the variations which have, at different periods of time, ariſen in the political conſtitution and form of government of this country.

At the time when *Julius Cæſar* obtruded himſelf into it, impelled by that thirſt of domination which had long raged in the *Roman* republic, the ancient *Britons* appear to have been one of the moſt reſpectable of the barbarous nations of the earth; and the myſterious religious rites which the *Druids* exerciſed, excite the curioſity; whilſt the venerable character of the *Britiſh bards* are contemplated with admiration, in an age when ſuperſtition and deluſion are held in contempt. Nor was the condition of the common people abject or enſlaved, though all the fierceneſs and cruelty of diſpoſition, which generally prevails in ſavage life, ſtrongly marked the character of the higher ranks.

When the iſland became ſubject to the rule of the *Saxons*, a degree of freedom was enjoyed ſimilar to that which was poſſeſſed by the reſt of the nations who yielded to the force of northern invaders. The *Norman* conqueſt, for a time, cauſed the people to feel the iron hand of oppreſſion, altho' *William*, commonly, and too juſtly, called "the conqueror," by his coronation oath, ſwore "that he would govern the nation with equity, enact juſt laws, and forbid all rapines and unjuſt judgments." The deſcendants of the *Norman* chiefs, however, who had been put into poſſeſſion of the lands of the *Anglo Saxons*, galled by the ſhackles in which they were held, became refractory in the ſucceeding reigns, and, in the beginning of the 12th century, procured for themſelves, and their immediate dependents, very conſiderable immunities. Foreign conqueſts, and the civil wars between the houſes of *York* and *Lancaſter*, which were the principal events of almoſt three centuries, tended very much to advance the conſequence of the great lords, and to render them alike formidable to the ſovereign and oppreſſive to the commonalty: the wiſe policy of *Henry* VII. led him to take the moſt effectual means of ſapping this towering greatneſs, by procuring a law permitting the alienation of landed inheritances.

During the reigns of the *Tudors*, (a memorable æra in *Engliſh* hiſtory, and not leſs important in the general hiſtory of *Europe)* the inherent conſtitutional rights of *Engliſhmen* were ſet at nought by regal power: the will of the reigning prince dictated law to both houſes of parliament, and the bold ſpirits of thoſe times were compelled ſilently to brood over their wrongs. The firſt prince of the *Stuart* line, whilſt he maintained the divine indefeaſible right of kings, by acting beneath the dignity of a man, ſubverted the doctrine he ſo zealouſly inculcated. The plaything of profligate and profuſe minions was held up to a reſtleſs and daring people, not long emancipated from papal thraldom, as the vicegerent of Heaven, though without dignity to awe, or bravery to animate, or virtues to endear; a prince, who affecting to be a wit ſunk into a punſter, whoſe learning was pedantry, and whoſe life a blank.

His unfortunate ſon, with much more perſonal merit, was equally a ſtranger to the art of government. His own irreſolution and duplicity co-operating with the religious and political enthuſiaſm of the times, ſubjected him to an unprecedented fate, which was followed by the moſt daring violences on the conſtitution. After a ſhort ſuſpenſion, regal power regained the aſcendency, but the prince who governed, had neither the wiſdom nor the virtues which adorn a throne. A love of pleaſure, and averſion to buſineſs, led him to treat the moſt important concerns of the nation with levity and indifference; notwithſtanding which, ſuch was the temper of the times, that ſome of the moſt beneficial laws were paſſed in this reign, to ſecure the perſonal liberty of the ſubject, at the time when the prince himſelf, deluded by the artifices of the *French* monarch, imagined that thus aided, he ſhould render himſelf independent both of parliament and people. To ſell his country for foreign gold is treaſon in a ſubject, how much more atrocious is the crime in the prince! If the general ſenſe of wrong which a degraded and abuſed people feel, was equally ſtimulative with the phrenzy of demagogues and zealots, the ſecond *Charles* would not have eſcaped the vengeance due to his miſrule. The blind bigotry of his brother at length rouſed the moſt ſupine. The whole nation, as one man, was kindled into reſentment. Never was oppoſition to a reigning prince more general, or leſs excited by a ſeditious ſpirit; it was cool, rational, and reluctant: it was the innate principle of ſelf-love, which compelled even the adherents to the doctrine of paſſive-obedience to reject their political creed.

When hereditary right was rendered ſubſervient to parliamentary appointment, the people became jealous of the ſmalleſt infringement of their natural rights, and, keeping a watchful eye on the prerogatives of the crown, were anxious to reduce that aſcendency which it poſſeſſed. The ſovereign then found it neceſſary to rule by making conceſſions, and the royal prerogative ſoon appeared to be beſt ſupported by the nobility of the realm. Then it was that the body of the people took the alarm at a coalition of intereſts, which ſeemed to gain over the hereditary legiſlative body to the views of the ſovereign. Thoſe jealouſies, which ſince the days of *Henry* VII. had been confined to monarchy, were now extended to the higheſt orders of men in the ſtate. When the deſpotiſm of one man was aboliſhed, not only by law but by cuſtom, the fears of the people ſuggeſted to them, that they ſhould now be enſlaved by the authority of a powerful ariſtocracy. What the crown loſt in nominal power it gained in ſubſtantial influence. As the conſtitution had veſted in the king a right of nominating to all offices of the revenue as well as the ſtate, every new impoſt became an acceſſion of ſtrength to the crown, which ſerved to bind the great more cloſely to the intereſts of the reigning prince. The repreſentatives of the people, alſo, like *Perſian* devotees, by feeling the benign warmth of this political ſun, were gradually led to worſhip and deify its ſplendor. The people at large obtained a right to clamour, and the crown by ſtealth gained the art to tax. The expences of government became enormous, but an account of the diſburſements was annually made public, and the nation availed itſelf of its privilege to rail. At length, like a peeviſh child, it lulled itſelf aſleep by its own wailings.

The preſent reign commenced with all the advantages which hereditary right had formerly conferred; the ſovereign, therefore, was ſoon taught to view with diſguſt the aſcendency which a few great families had acquired, and to reſcue the king from a ſuppoſed ſtate of tharldom, was the firſt object attempted; *mettre le roy hors de page*, being the avowed aim of a favourite, and panegyrized by his minions, a phraſe borrowed from the *French*, in the laſt century, when their king was in a very ſimilar ſituation. The conſequences of this experiment are too well known to be ſpoken of here.

In a courſe of time too, thoſe party names which might owe their origin to ſome whimſical conceit, became the common appellatives for thoſe different and diſtinct intereſts which aroſe in the nation. Toryiſm might be obſerved more generally to prevail among the landed intereſt in England; the conſequences of a ſtretch of the royal prerogative being leaſt alarming to ſuch. The commercial intereſts, which rapidly advanced into importance, ſerved to foſter the principles of Whigiſm. With commerce, arts and knowledge became generally diffuſed: thoſe doctrines which had been implicitly believed through a long ſucceſſion of ages, were at length examined freely and cloſely, and were either ſubmitted to or exploded according to the rationality of the principles on which they were founded. Theſe two intereſts, which ſpring from the very nature of the country, and the purſuits of the people, and which in their oppoſition tend to poiſe the conſtitution, and promote the opulence and dignity of the nation, have been unhappily drawn forth into all the bitterneſs of civil diſſention, in order to eſtabliſh an uniformity in religious opinions! for, though none but well-diſpoſed minds can feel the force of religious truth, yet every man with a heated imagination, and ſtrong paſſions or prepoſſeſſions, is capable of attaching himſelf zealouſly to an hierarchy or a ſect; thereby making religion, which is in itſelf pure and peaceable, the cauſe of ſtrife, contention, and every evil work. But altho', as a late learned and acute dignitary of the church, (*Biſhop Warburton*) very frankly remarked, "the divine right of kings and divine right of tythes went out of faſhion much about the ſame time," yet the parliamentary right, which has been ſubſtituted for the divine, is not only a much more rational, but as firm and ſecure a tenure to each.

Thoſe leading principles which diſtinguiſhed the *Tories* and *Whigs*, from the time of the Reſtoration to about the middle of the preſent century, are now almoſt entirely loſt; the right of the king to exerciſe a diſpenſing power over the laws, to levy money without the conſent of parliament, or to exerciſe the various obſolete acts of prerogative, which were ſo well known to the two *Charles*'s, have now no ſupporters; on the contrary, moderate Whigiſm ſeems to have ſo far ſwallowed up every other party diſtinction, as to become the ſtandard of political conduct; for, ſince the landed and commercial intereſts have ceaſed to be in oppoſition, and have been found mutually to benefit each other, their political principles have gradually aſſimilated; notwithſtanding which, the ſpirit of party was never more active and influential than at preſent, though it has entirely changed both its object and its mode of operation. Some years ſince, when the prevailing ſentiment of the nation oppoſed that which was adopted by the majority of the houſe of commons, it was warmly contended, whether that houſe had a right to act independently of the body of the people who created them; or, whether the voice of the nation, when it could be taken in a deciſive manner, ought to be acquieſced in by their repreſentatives in parliament, or was only to be heard through the commons of *Great Britain*. Thus have the jealouſies, which the people formerly confined to the crown and its miniſters, been extended to the conduct of their repreſentatives. At length the pleaſing deluſion, which had ſoothed the nation, from one generation to another, and conſiſted in a belief that the oppoſers of the miniſtry were true patriots, counteracting the ſpells and miſchievous incantations of thoſe in office (who were neceſſarily knaves, enemies to their country, and its betrayers) ceaſed to operate, when thoſe who profeſſed themſelves the warmeſt partiſans of the people united their intereſts with the very miniſter whom they had execrated with all the pathos of language, at the very time too when his meaſures had precipitated the country from the heighth of grandeur to the verge of bankruptcy and perdition. This unqualified defection was perpetrated for the purpoſe of gaining by the union ſuch an intereſt in parliament, and ſupport from the ariſtocratic body, as might render the junto independent of the public opinion; but the whole nation, incenſed at the indignity, ſoon made it appear, that the plan was as futile as it was frontleſs. Since that time, the ſpirit of party has appeared rather in the ſupport of different ſtateſmen, whoſe birth, connections, and ſuperior talents, entitle them to aſpire to the great offices in the ſtate, than in any contrariety of opinion on principles of government; to one or other of theſe, the great families have imparted the weight of their intereſt, and the diſtinctions of *Whig* and *Tory* ſeem now to be changed to the adherents to the man in power, and the man who is a candidate for power. But although that party diſtinction, which was known by the appellation of "High-flying Tory," or "Jacobite," ſcarcely exiſts at all; yet the principles which operated in the oppoſite extreme, or thoſe of republican Whigiſm, are ſtill alive, though, perhaps, no longer abſolutely republican. The averſion which was formerly expreſſed to monarchical and prelatical power, being now chiefly ſhewn againſt the hierarchy, yet nothing can be more oppoſite to the religious opinions of the *Puritans* of the laſt century, than thoſe in the preſent age, who retain much the ſame political principles, being agreed in nothing elſe than deriving their religion from the ſacred Scriptures; in explaining which, they form notions eſſentially different from their predeceſſors, both reſpecting the nature of God, and the nature of man; and, whilſt the *Puritans* received with firm belief certain myſteries, which they conſidered as eſſential parts of revelation, theſe reject every thing that bears the ſemblance of myſtery, and aſſume the appellation of "rational Chriſtians." Such are chiefly to be found among the Proteſtant Diſſenters; but they by no means characteriſe that body, the political principles of which have no tendency to introduce innovations either in the church or ſtate.

Beſide the landed and commercial intereſts in this kingdom, there has ariſen another, which the craft of ſtateſmen firſt created, and their profuſion has gradually ſtrengthened, which is what is called the monied intereſt, ariſing from a parliamentary debt. This modern refinement in politics, can only be practiſed to effect, in a government which poſſeſſes general confidence, founded on its inviolate faith and ample reſources; but, where practicable, its energy is aſtoniſhing, giving a degree of power and an aſcendency to a country, which ſurpaſſes that derived from a larger population and more extended territory.—A funded national debt is defenſible in a variety of views. It attracts the wealth of foreigners to the ſtate, and allures the monied men of every nation to ſettle in a country where they depoſit their capital. By filling the coffers of the ſtate, munificent rewards are held forth to ſtimulate the brave, the enterpriſing, and ingenious, to ſerve their country to the full extent of their powers. It gives an appearance of wealth and conſequence to a nation beyond what it really poſſeſſes; for, whilſt the expences of government enrich individuals, the public creditor may maintain a ſtyle of living even beyond what the actual poſſeſſion of his capital would enable him to do; for the rate of intereſt would greatly ſink if no loans were made to the ſtate. A national debt tends to multiply, to a prodigious degree, that claſs of citizens, who, though below ſplendor, are raiſed above want. True indeed, mankind, when not employed in active purſuits, frequently ſink into frivolous and uſeleſs habits, which render them no otherwiſe diſtinguiſhable as members of the community, than as conſumers of the produce of the ſoil; but it is from their conſumption that the ſtate accounts even theſe uſeful ſubjects;

and among this rank in ſociety the human mind frequently receives its beſt cultivation: thoſe men, who are neither engaged in manufactures, commerce, nor tillage, are left at full leiſure to cultivate the arts which delight, adorn, and invigorate life. A national debt likewiſe binds the wealthy part of the community to the reigning government, and gives it ſtability and firmneſs. On the contrary, the evil tendency of ſuch means being reſorted to for ſupplying the exigencies of the ſtate, is no leſs conſpicuous and influential. The immenſe wealth which is tendered to a miniſter, at the head of a government in which an unbounded confidence is placed, prompts to profuſion, and a waſteful diſtribution of the public money. It tends no leſs to involve a nation in foreign wars on ſlight and unwarrantable grounds; by which the borrowed capital is laviſhed away in ſubſidies to foreign princes, to ſupport foreign mercenaries, or to maintain diſtant and exhauſting expectations. It oppreſſes the inferior orders of men in the nation with burdenſome taxes, to diſcharge the accumulating intereſt: in this latter view, the ſcience of finance is a refinement on political evil, and in its nature worſe, although in its appearance better, than the arbitrary exactions of a tyrant. Farther, whenever the neceſſities of a ſtate call for larger ſupplies than the ſurplus of unemployed wealth in the nation can furniſh, then manufactures and commerce are eſſentially injured, and the very being of a commercial people is endangered, in which embarraſſment the landed intereſt muſt participate. Another conſequence is, that it deſtroys the morals of a people, by furniſhing the means which enable the crafty to dupe the honeſt and unſuſpecting, and holding out to mankind the proſpect of acquiring wealth by a ſhorter road than induſtry and the exerciſe of talents provide; but this laſt conſideration the ſtateſman is leaſt of all diſpoſed to attend to, and it is ſeen and felt without being regarded.

The debt contracted in the reign of king *William* was perhaps unavoidable; that in the reign of queen *Anne* was prodigally ſwelled; the management of the funded debt during *Walpole*'s pacific adminiſtration cauſed that to become a diſeaſe which was before only a ſymptom; the vaſt augmentation which it received afterward, in the reign of *George* II. was much beyond what a well-regulated ſtate of finance would have required; but it procured to the country ſuch power and dignity as ſpread a radiance over the dying head of that mild monarch. More recent times have ſubjected the kingdom to a larger ſhare of incumbrance without the beneficial concomitants of former periods. Upon the whole, a politician, freed from the influence of party-ſpirit, and taking a comprehenſive view of the ſubject, will be ready to pronounce, that every national evil felt or feared, may be charged on a *Walpole*, a *Holles*, and a *North*.

In fine, public credit, when uſed for beneficial purpoſes, in a diſcreet manner, is like the *Nemæan* lion's ſkin, which ſupplied *Hercules* with his ſhield or covering, and defended him through all his labours; but when abuſed and miſapplied, it is like the poiſoned garment that polluted the hero's vitals, and precipitated his death.

The following view of the progreſſive increaſe of the National Debt ſince the Revolution, will ſhew the laviſh profuſion of public money, which has overwhelmed the country with taxes, and muſt tend greatly to reduce its future conſequence.

	£.
Amount of the National Debt, at the Revolution,	1,054,925
- - at the demiſe of king *William* III.	14,000,000
- - at the demiſe of queen *Anne*	50,000,000
- - at the end of the year 1731	48,985,438

In the year 1717 the intereſt paid on the public debts was reduced from £. 6 to £. 5 per cent. In the year 1727, it was again reduced to £. 4 per cent, which increaſed the amount of the ſinking fund to a million per annum. In the year 1750, under the adminiſtration of *Mr. Pelham*, it was again reduced to three and an half per cent, for ſeven years, and then to three per cent; which reduction that miniſter was enabled to effect, in conſequence of the high price to which the public funds had ariſen.

The progreſs of the National Debt, from the year 1739 to 1783, is thus ſtated by *Dr. Price*.

	Principal.	Intereſt & annual charges.
	£.	£.
Amount of the NATIONAL DEBT before the war which began in 1740	46,382,650	1,903,961
Amount in 1749, at the concluſion of the war	78,166,906	2,765,608
31,784,256 Principal 861,747 Intereſt } Increaſed by the war.		
3,089,641 Principal 111,590 Intereſt } Diminiſhed by the Peace from 1748 to 1755.		
Amount at the commencement of the war in 1755	75,077,264	2,654,018
Amount at the end of the war in 1763	146,582,844	4,840,822
71,506,580 Principal 2,186,803 Intereſt } Increaſed by the war of 1755		
Amount at midſummer 1775	135,943,051	4,440,822
Another Calculation makes the Debt at this period about ſix millions leſs.		
10,639,793 Principal 400,000 Intereſt } Diminiſhed by the peace in 12 years, from 1763 to 1775.		-
Amount at January 1783	215,717,709	7,513,852
79,774,758 Principal 2,747,765 Intereſt & charges } Increaſed from midſummer 1775 to January 1783.		
36,867,277 Unfunded Debt created in that time, as ſtated by *Dr. Price*.		
1,464,000 { Intereſt and Charges thereon, eſtimated at,		

The money actually received on this increaſed debt of very near eighty millions, was only fifty ſeven millions and an half.

Since that time the following additions have been made to the funded debt.

		£.
In the year 1783		12,000,000
1784		6,000,000
1785		1,000,000
1789	By a Tontine and ſhort annuities	1,437,000

On the 5th of January 1786, the NATIONAL DEBT was as follows.

	National Debt.	Intereſt
	£.	£.
Bank Stock	11,642,406	698,544
Five per cent Navy Annuities	17,869,993	893,499
Four per cent Conſols	32,750,100	1,310,000
Three per cent Conſols	107,401,696	322,050
Three per cent reduced	37,340,073	1,120,202
Three per cent 1726	1,000,000	30,000
Long Annuities 680,375*l.* per Annum, calculated at 21 years purchaſe	14,287,875	680,378
Short Annuities 1777 - - £. 25,000 Ditto - - - 1778 and 1779 - - 412,500 437,500, calculated at 14 years purchaſe	6,125,000	437,500
South Sea Stock	3,662,784	128,197
Three per cent Old South Sea Annuities	11,937,470	357,224
Three per cent New South Sea Annuities	8,494,830	254,844
Three per cent 1751	1,919,600	57,588
India Stock	3,200,000	256,000
Three per cent India Annuities	3,000,000	90,000
£. 54,900 Exchequer Annuities, of which 5 years were unexpired in January 1786 £. 76,302 Exchequer Annuities, 19 years unexpired in January 1786 Annuities for lives, with benefit of ſurvivorſhip, granted 5th George III. Eſtimated value in January 1786	1,000,000	136,992
Total £.	261,631,821	9,673,015

Note. The capitals of the *Bank* and *Eaſt India* companies, called *Bank* ſtock and *India* ſtock, do not properly conſtitute a part of the Public funded Debts, they being ſubſcribed by the proprietors on the ſecurity of the trade carried on by each chartered company; and the parliament has only permitted ſo much money to be borrowed, not become ſecurity either for its redemption, or the payment of the Intereſt. Of the proper National Debt, more than twenty-one millions will terminate without being redeemed, ſome by deaths, but the greateſt part at certain ſtipulated periods of time.

In the year 1786, the houſe of commons choſe a ſelect committee, to take into conſideration certain papers and accounts relative to the public income and expenditure, which had been preſented in that ſeſſion, and to examine, and report to the houſe, what might be expected to be the future annual amount of the national income and expenditure. It appeared, on their report, which was very cautiouſly and guardedly made, that the total income, from the 5th of *January* 1785, to the 5th of *January* 1786, was £. 15,397,472; that the intereſt and charges of the public debts were £. 9,275,769; and that the whole annual expenditure, including the above intereſt and charges, and the civil liſt, with every contingent charge, amounted to £. 14,478,181; which left a ſurplus of more than nine hundred thouſand pounds. In conſequence of this report, Mr. *Pitt* propoſed to the houſe the raiſing, by certain new taxes, a ſum equal to one hundred thouſand pounds per annum, to make a million of ſurplus revenue, which ſhould be veſted in commiſſioners to be named, and who ſhould have full powers to employ it in the purchaſe of ſtock for the public, which ſtock ſhould ſtand in their names. This annual million to be paid by equal quarterly payments out of the exchequer, before any other money, except the intereſt of the national debt itſelf. The commiſſioners appointed to diſcharge this important truſt are the *Speaker* of the houſe of commons, the *Chancellor* of the *Exchequer*, the *Maſter* of the *Rolls*, the *governour* and *deputy governour* of the *Bank* of *England*, and the *accomptant-general* of the court of *Chancery*, for the time being.

When Mr. *Pitt* laid before the houſe of commons the ſtate of the national finances for the year 1789, he ſaid, that from the year 1786 to that time, without having had recourſe to loans, a ſum of about three millions and an half had been iſſued for the reduction of the national debt, with which money between four and five millions of ſtock had been purchaſed, altho' the unforeſeen expences which had ariſen during thoſe three years had exceeded, by a million and a half, what had been fixed as the peace eſtabliſhment. But notwithſtanding theſe facts are indubitable, yet it has been ſtrongly contended that no actual reduction has been made in the general debts of the nation, as thoſe which are unfunded are ſaid at preſent to exceed their amount in 1786, at leaſt in an equal degree to the reduction which has been made in the funded debts.

We ſhall now proceed to give a deſcription of the counties of *England*, beginning at the ſouth-eaſt.

SECT. VII.

Of the County of KENT.

AS this part of the iſland lies neareſt the continent, it was firſt invaded by the *Romans* from thence, when it was called by *Cæſar*, *Cantium*, which it is thought they derived from the *Britiſh* word *Caine*, a green leaf, to expreſs the verdure of the woods, or to ſhew the ſituation of the country, which projects into a point eaſtward. The county of KENT is bounded on the north by the river *Thames*, which divides it from *Eſſex* and a ſmall part of *Middleſex*; on the eaſt by the ſea, there called the *Downs*; on the ſouth-eaſt by the *Engliſh Channel*; on the ſouth by *Suſſex*; and on the weſt by *Surry*. Its extent, from the utmoſt point in the eaſt to its weſtern extremity, is ſixty miles, its breadth from *Rye*, in *Suſſex*, to the mouth of the *Thames*, is thirty-ſix, and it is a hundred and ſixty-ſix miles in circumference.

In this large ſpace there is a conſiderable diverſity of ſoils, and face of country. The banks of the *Thames* are low and marſhy, but backed by a range of chalky eminences, ſometimes riſing to a moderate height. This kind of hard chalky ſoil, inclining to barrenneſs, extends to the north-eaſtern extremity of the county, and thence round to *Dover* and *Folkſtone*, exhibiting its nature in the lofty white cliffs, which there bound the iſland, and produce that ſtriking appearance from ſea, which gave it the ancient name of "*Albion.*" *Dr. Aikin's England delineated, p.* 258.

The air of the lower part of this county is unhealthy; but the higher part enjoys a very healthful air, with a ſoil not ſo rich as the lower. As the county lies much upon the ſea, the air, though generally thick and foggy, is warm, and often purified by ſouth and ſouth-weſt winds. The whole ſhore, from *Woolwich* to *Graveſend*, is low, and ſpread with marſhes and unhealthy grounds, except ſome places where the chalk-hills almoſt join the river.

The county in general abounds with plantations of hops, fields of corn, paſtures, fine orchards of cherries and pippins; woods of oak, beech, and cheſnut; and in ſeveral places are woods of birch. Here are mines of iron, pits of marl and chalk, and the cattle here are larger than in the neighbouring counties. Here are ſeveral parks of fallow deer, and warrens of grey rabbits. The chief commodities are *corn*, *fruit*, particularly *pippins* and *cherries*, *woad* and *madder* for dying, *hops*, *flax*, *ſaintfoin*, *ſamphire*, *cattle*, *fowl*, and *fiſh*, eſpecially trout, for which the town of *Fordwich* on the river *Medway* is famous.

The ſouthern part of *Kent*, called "the *Weald*," is a flat woody tract, of a clayey ſoil; fruitful, but unwholeſome, on account of its moiſture. It terminates in the great marſh of *Romney*. It is in this part particularly that the opulence of the farmers has given the proverbial appellation of "the wealthy *Kentiſh* yeomen." The midland and weſtern diſtricts are a happy mixture of hill and vale, arable and paſture, equal in pleaſantneſs and variety of products to any part of *England*. *Aikin*, 259.

The chief river of *Kent* is the MEDWAY, which riſes in the weald of *Suſſex*, and enters *Kent* near *Penſhurſt*, running chiefly to the north-eaſt by *Tunbridge*, *Maidſtone*, and *Rocheſter*, below which, being of proper breadth and depth, it forms the noble dock of *Chatham*, where it is navigable for the largeſt men of war, and then falls into the mouth of the *Thames*. In this county are alſo the famous medicinal ſprings of *Tunbridge*.

The inhabitants juſtly value themſelves on their courage and reſolution in defending their liberties againſt the ſeveral invaders of *Britain*. Tradition relates, that the *Kentiſh* men, each carrying a bough of a tree, in order to conceal the ſmallneſs of their number, met *William* the Conqueror, at *Swaneſcombe*, near *Graveſend*, and there offered him battle, unleſs he would conſent to confirm their rights and privileges, but on that condition they proffered him ſubmiſſion; which terms he accepted. The principal of theſe rights and privileges are, that of gavelkind, which is ſuppoſed to be of *Britiſh* origin, and conſiſts in the following particulars: 1. The heirs-male ſhare all the lands equally. 2. The heir at fifteen is at full age to ſell or alienate. 3. When a man is convicted of treaſon, his ſon cannot on that account be deprived of his birth-right. And 4. The lands of a brother, if he has no iſſue, ſhall be ſhared by all the ſurviving brethren.

This county contains a hundred and ſixty-three vicarages, four hundred and eight pariſhes, and eleven hundred and ſeventy villages, two cities, and twenty-nine market towns. It is divided into five lathes, under each of which are ſeveral hundreds, in which are ſaid to be about forty thouſand houſes, and two hundred thouſand inhabitants. It ſends eighteen members to parliament; two knights for the ſhire, and two for each of the following cities and boroughs, *Canterbury*, *Rocheſter*, *Maidſtone*, *Queenborough*, *Dover*, *Romney*, *Hythe*, and *Sandwich*. The principal places in this county are the following.

CANTERBURY, the *Metropolitan* ſee of all *England*, ſituated fifty-ſix miles to the ſouth-eaſt of *London*, and fifteen to the north-weſt by weſt of *Dover*. It was probably a place of ſome note at the landing of *Julius Cæſar*, as there are ſtill ſeveral remains of antiquity of about that time. After the *Romans* left *Britain*, *Vortigern*, king of the *Britons*, reſided here till he ſurrendered it up to the *Saxons*, who made it the capital of the kingdom of *Kent*, in the *Saxon* heptarchy. In this condition it was when *St. Auguſtine*, a monk, being ſent from *Rome*, firſt preached the Chriſtian faith to the *Engliſh*, about the end of the 6th century. It was then made an archiepiſcopal ſee, and flouriſhed greatly, from its being the ſource from whence the doctrines of the church of *Rome* were ſpread to the reſt of the *Saxon* kingdoms.

This city is a county of itſelf, and the corporation conſiſts of a mayor, a recorder, twelve aldermen, a ſheriff, twenty-four common-council-men, a mace-bearer, a ſword-bearer, and four ſerjeants at mace. A court is held every *Monday* in the guild-hall for civil and criminal cauſes, and every other *Tueſday* for the government of this city.

The cathedral has been twice burnt down; the preſent ſtructure, which was begun in the reign of king *Stephen*, and finiſhed in that of *Henry* V. is a noble Gothic pile, five hundred and fourteen feet in length, ſeventy-four in breadth, and eighty in height, from the nave to the roof: its middle tower, which may be ſeen at a great diſtance, is two hundred and thirty-five feet in height. In this church are interred the bodies of ſeven kings and ſeven archbiſhops of *Canterbury*, including *Auguſtine*, whom theſe prelates immediately ſucceeded, and who lie buried in one vault. The wealth offered by votaries and pilgrims from all parts for ſeveral ages to *Becket*'s ſhrine was ſo great, that, according to *Eraſmus*, his chapel ſhone with the richeſt jewels, and gold was one of the meaneſt things that adorned his ſhrine. King *Henry* VIII. ſeized all this wealth, with the lands and revenues both of the monaſtery and church, except thoſe he annexed for the maintenance of a dean, an archdeacon, twelve prebendaries, and ſix preachers, whom he placed in it on his turning out the monks.

Under the cathedral is a large church given by queen *Elizabeth* to the *Walloons*, who fled hither from the *Netherlands* on the perſecution raiſed againſt them by the duke of *Alva*, and their congregation has been ſince much increaſed by the Proteſtants, who fled from *France* in the reign of *Lewis* XIV. on the revocation of the edict of *Nantz*, and brought with them the ſilk manufacture; ſo that it is computed that here are no leſs than two or three thouſand *French* Proteſtants. The houſes of the prebendaries, with many other good buildings, ſtand in a very ſpacious cloſe, where are ſeveral ruins of religious houſes.

This city has undergone many changes, both by war and fire: it had ſtrong walls, built chiefly of flint, with many towers, a deep ditch, and a great rampart. The caſtle, whoſe decayed bulwarks appear on the ſouth-ſide of the city, is ſuppoſed to have been built by the *Saxons*. The two gates of *St. Auguſtine*'s monaſtery that were next the town are remaining, and are both very ſtately. The ſite of this monaſtery, which took up a great compaſs of ground, is encompaſſed with a very high wall.

The city has ſix wards, denominated from its ſix gates, and, beſides the cathedral, has fifteen pariſh-churches, two charity-ſchools, and ſeven hoſpitals, with a jail for criminals. Here is alſo a ſumptuous conduit, that is of great benefit to the inhabitants. Though this city appears round at a diſtance, it is an exact croſs, and conſiſts of four ſtreets, which centre at *St. Andrew*'s church, which ſtands in the middle. The city is about three miles in circumference, including the gardens and cathedral. Its buildings are not very grand; but there is a good market-houſe, over which are rooms where the mayor, aldermen, &c. tranſact the affairs of the corporation. What has added moſt to the advantage of the city are the hop-grounds round it, which cover ſeveral thouſand acres; ſo that till it was equalled by *Farnham*, it was eſteemed the only great plantation of hops in the whole iſland. This city and *Shrewſbury* are the two moſt noted places in *England* for collars of brawn.

ROCHESTER, an ancient city, ſtands in a valley on the banks of the river *Medway*, which waſhes its weſt ſide, twenty-ſeven miles to the north-weſt by weſt of *Canterbury*, and thirty to the ſouth-eaſt by eaſt of *London*. It is the ſee of the moſt ancient biſhopric of *England*, next to *Canterbury*; and to its cathedral belong a dean and ſix prebendaries. The city is governed by a mayor, a recorder, and eleven aldermen, twelve common councilmen, a town-clerk, three ſerjeants at mace, and a water-bailiff. Here is a fine ſtone bridge over the *Medway*, which has ſtrong iron-work on the copings; it was built by Sir *John Cobham* and Sir *Robert Knowles*, who employed the rich ſpoils they had acquired by their valour in *France* in this noble work. It has only three pariſh-churches, beſides the cathedral; the town-houſe and charity-ſchool are two of the beſt buildings: in the town is alſo a mathematical ſchool, founded by Sir *Joſeph Williamſon*, and an alms-houſe, founded by Sir *Richard Watts*, for the relief of ſix poor travellers, who are ſupplied with a ſupper, a bed, and breakfaſt, with four-pence to carry them forward on their journey; but from a peculiarity in the donor, lawyers are excluded from this relief. The ancient military-way, called the *Watling-ſtreet*, runs directly through this town to *Dover*.

In ſeveral of the creeks and branches of the *Medway*, within the juriſdiction of this city, there is an oyſter-fiſhery, which is free to every one who has ſerved ſeven years apprenticeſhip to any fiſherman, or dredger, that is free of that fiſhery, at which courts they appoint when oyſters ſhall and ſhall not be dredged and taken, which they term *opening and ſhutting the grounds*. Perſons who dredge for oyſters without being free of the fiſhery are called cablehangers, and are tried and puniſhed by that court.

CHATHAM may be conſidered as a ſuburb to *Rocheſter*, and one of the greateſt naval arſenals in the kingdom. The dock was begun by queen *Elizabeth*, and improved by her ſucceſſors, who have added new docks, maſt-houſes, boat-houſes, and ſeveral ſtore-houſes, one of which is ſix hundred and ſixty feet in length, boat-yards, anchor-yards, forges, foundries, canals, and ditches for preſerving the maſts and yards in the water; ſo that there is not a more complete arſenal: and the ware-houſes and ſtore-houſes are formed into ſtreets of great length. Here are two commiſſioners, with other officers, to take care of the navy, the ſtore-houſes, rope-yards, &c. and all the places ſet apart for the works belonging to the ſhipping reſemble a well-ordered city; ſo that with all the appearance of hurry there is not the leaſt confuſion. The private buildings, as, the houſes of the ſea-officers, directors, inſpectors, and workmen of the royal navy, are well built, and ſome of them very ſtately. This place gives the title of Earl to the heir male of that great miniſter Mr. *Pitt*. The cheſt of *Chatham* is ſupplied by a portion of each man's pay in the navy, which furniſhes a fund, out of which ſuch diſabled ſeamen as receive no benefit from *Greenwich* hoſpital have a ſmall annual annuity. An hoſpital has been alſo erected here for the relief of ten or more aged and maimed mariners or ſhipwrights.

The entrance into the river *Medway* is defended by *Sheerneſs*, and other forts, on the northern point of the iſland of *Shepey*. In the year 1757, by direction of the late duke of *Cumberland*, ſeveral additional fortifications were begun at *Chatham*; ſo that now the ſhips are in no danger of an inſult either by land or water. This town has a church, a chapel of eaſe, and a ſhip uſed as a church for the ſailors. The houſes, which are moſtly low, amount to only about five hundred. The ſtreets are narrow and paved, and it contains about three thouſand inhabitants.

Until of late *Sheerneſs* was very ill ſupplied with water, moſt of the ſprings on the iſle of *Shepey* being brackiſh, but now a very fine ſpring has been diſcovered of excellent ſoft and well-taſted water, ſufficient for the ſupply of all the inhabitants.

MAIDSTONE received its name from the river *Medway*, which is navigable hither by large barges and hoys of about fifty or ſixty tons burden, and is a large, populous, and neat town, twenty-four miles to the weſt of *Canterbury*, and thirty-ſix ſouth-eaſt by eaſt of *London*. From its ſituation in the centre of *Kent*, it is very proper for the county buſineſs, which is all tranſacted here. It ſends two members to parliament, and is governed by a mayor, twelve aſſiſtants called jurats, and twenty-four commoners. Its chief trade is in linen-thread, and in hops, of which there are large plantations about the town, as well as orchards of cherries. It gives the title of viſcount to the earl of *Winchelſea* and *Nottingham*, who is lord of the manor. It has a fine ſtone-bridge, and four charity-ſchools. The adjacent country produces ſuch abundance of proviſions, that *London* is ſupplied from hence with more commodities than from any ſingle market-town in *England*, particularly with large *Kentiſh* bullocks, wheat, great quantities of hops, apples, and cherries, timber, a ſort of paving-ſtone about eight or ten inches ſquare, and the fine white ſand for glaſs-houſes and ſtationers.

Near this city are the two greateſt manufactures for writing-paper in the kingdom, the one carried on by Mr. *Whatman*, the other by Mr. *Taylor*; where are likewiſe made conſiderable quantities of the beſt kinds of paper uſed for copperplate-prints and maps.

TUNBRIDGE received its name from the ſtone bridges over the five branches of the *Medway*, of which the *Tun* is one, and is ſeated thirty miles ſouth-eaſt by ſouth of *London*. This place is remarkable for its chalybeate ſprings, which are four or five miles ſouth of the town, but in the ſame pariſh, and are reſorted to by the nobility and gentry in *June*, *July*, and *Auguſt*. They are ſituated for the moſt part in the pariſh of *Tunbridge*, between two hills, named *Mount Sinai* and *Mount Ephraim*, both covered with good houſes, and gardens abounding in fruit. *Tunbridge* is likewiſe famous for its beautiful turnery ware.

The air is here excellent, and proviſions of all ſorts very reaſonable. There is plenty of *wild-fowl*, as *pheaſants*, *partridges*, *woodcocks*, *ſnipes*, *quails*, and particularly the little delicious bird called the *wheat-ear*; and here is excellent fiſh of almoſt every kind.

Near this town is the ancient and delightful manſion called **Penshurst**, from its ſituation in a woody country, being in the extremity of the weald of *Kent*, its founder probably bearing the name of *Pen*. In the reign of *Edward* VI. it was forfeited to the crown, and granted by that king to Sir *William Sidney*, who was lord chamberlain of his houſhold. It was the birth-place of Sir *Philip Sidney*, and probably of the patriot *Algernon*, and Lady *Dorothy*, afterward counteſs of *Sunderland*, whom *Waller* has immortalized under the name of *Sachariſſa*. This ſeat has been celebrated by the muſe of *Ben Jonſon*, *Waller*, and the more modern, but truly elegant Mr. *Coventry*. An oak which was planted in the park, on the day Sir *Philip Sidney* was born, (29th *November*, 1554) was reported to have been cut down in the year 1768, by *Algernon Sidney*, eſq; then poſſeſſor of the eſtate, and who died in that year.

About eight miles to the N. W. of *Penſhurſt*, in the pariſh of *Sevenoaks* is **Knoll**, the magnificent ſeat of the duke of *Dorſet*. It formerly belonged to archbiſhop *Cranmer*, who reſided there, but he exchanged it with the crown for other lands. In the year 1566 queen *Elizabeth* gave it to *Thomas Sackville*, lord *Buckhurſt*, afterward earl of *Dorſet*, in which noble family it ſtill continues. It is celebrated for containing ſuch a noble collection of pictures, as can only be equalled in this country by thoſe at *Burleigh* and *Luton*, or the royal collections.

Eight miles to the S. W. of *Sevenoaks* is *Weſterham*, or *Weſtram*, a neat market town, which we are led to mention here, on account of its having been the birthplace of Dr. *Hoadley*, Biſhop of *Wincheſter*, and general *Wolfe*, the remains of the latter of whom are depoſited in the pariſh church, and a monument erected with the following inſcription:

James,
Son of Colonel *Edward Wolfe* and
Henrietta his wife,
Was born in this pariſh, *January* 2nd, 1727,
And died in *America*, *Sept.* 13th, 1759,
Conqueror of *Quebec*.

Dover, which is ſituated fifteen miles to the ſouth-eaſt of *Canterbury*, and ſeventy-one from *London*, has for many ages been the ſtation of the *French* and *Flemiſh* packets, the ſtraits which divide it from the continent being only twenty-three miles broad. It was anciently rendered a place of great importance by a ſtrong caſtle built on the high cliff, ſaid to be begun by *Julius Cæſar*, and completed by *Arviragus*, a *Britiſh* king, in the reign of the emperor *Claudius*. The additions made to this fortreſs were ſo remarkable, and its ſituation ſo ſecure by nature, that before the Conqueſt it was eſteemed the bulwark and key to the whole iſland. When this place was at the height of its magnificence it had ſeven churches, which are now reduced to two, and twenty-one wards, each of which furniſhed a ſhip of war, and maintained it forty days at its own expence. In conſideration of this ſervice, each ward had a licenſed packet-boat to *France*, and the fare, according to the *Tower* records, was ſettled in the reign of *Edward* II. for a ſingle perſon in ſummer ſix-pence, in winter one ſhilling; for a horſe in ſummer eight-pence, and in winter two ſhillings. *Dover* is likewiſe famous as a cinque-port, in which the buſineſs of the other four, and their dependencies, is tranſacted: their privileges are very extenſive, and were granted them in conſideration of the ſhips of war they were obliged to furniſh.

The wardenſhip of the *Cinque Ports*, a poſt of conſiderable emolument, has been enjoyed by lord *North* ever ſince the year 1778. *Dover* now gives the title of baron to Sir *Joſeph York*, K. B. third ſon of the late earl of *Hardwicke*, who was a native of the place. The harbour is formed by a chaſm in the cliffs, which tower to a ſtupendous height. The other cinque-ports are *Haſtings*, *Hythe*, *Romney*, and *Sandwich*; to which have ſince been added, as dependencies, *Rye*, *Winchelſea*, and *Seaford*. Among other privileges the burgeſſes of the cinque-ports are ſtyled barons; they carry the canopy at the coronation, which they afterward take for their fee; and at the feaſt have a table at the king's right hand. The ſmall town of *Sandwich* gives the title of earl to the noble family of *Montague*.

Dover conſiſts of one ſtreet a mile long. One of the other ſtreets is called *Snare-gate*, from the dreadful rocks of chalk which hang over it. A well in the caſtle is ſixty fathoms deep, and is round, large, and lined to the bottom with free-ſtone. The remains of the royal palace, the chapel, ſtables, and offices, ſhew the whole to have been very magnificent. Here is a braſs gun of excellent workmanſhip, ſaid to be the longeſt in the world, its length being no leſs than twenty-two feet. It was preſented by the eſtates of *Utrecht* to queen *Elizabeth*, and is called her pocket-piſtol; its proper charge is fifteen pounds of powder, and the people here ſay it will carry a ball ſeven miles.

The much-admired deſcription which *Shakeſpear* gives of this cliff, though drawn with great power of imagination, cannot be conſidered as an exact repreſentation, but, on the contrary, as greatly ſurpaſſing its natural appearance.

How fearful
And dizzy 'tis to caſt one's eyes ſo low!
The crows and choughs, that wing the midway air,
Shew ſcarce as big as beetles. Half way down
Hangs one that gathers ſamphire, dreadful trade!
The fiſhermen that walk upon the beach
Appear like mice; and yon tall anchoring bark
Seems leſſen'd to her cock, her cock a buoy
Almoſt too ſmall for ſight. The murm'ring ſurge
Cannot be heard ſo high. I'll look no more,
Leſt my brain turn, and the diſorder make me
Tumble down headlong.

Folkſtone, eight miles S. W. of *Dover*, once a flouriſhing town, of large extent, now inhabited by fiſhermen. From hence to the extreme ſouthern point, called *Dunge-neſs*, is *Romney Marſh*, on which vaſt labour and immenſe ſums have been beſtowed in draining and embanking, and it is now an extenſive tract of rich land, in which innumerable herds of cattle are fattened.

Deal, called *Dola* by *Julius Cæſar*, who landed here in his ſecond deſcent upon *Britain*, is a handſome large town, ſeated near the ſea, and a member of the cinque-port of *Sandwich*, from which it is ſeven miles diſtant, and ſeventy-five to the eaſt-by-ſouth of *London*. Here almoſt all ſhips bound from foreign parts to *London*, or from thence to foreign parts, by way of the *Channel*, generally ſtop. The town carries on ſome foreign trade, and is defended by two caſtles; that of *Sandown* on the north is compoſed of four lunettes of very thick arched work of ſtone, with many port-holes for great guns. In the middle is a great round tower, with a ciſtern at the top, and underneath it an arched cavern bomb-proof. It has a church, a chapel, and about a thouſand houſes, which are moſtly low, and built with brick; theſe form three long but narrow ſtreets, and the inhabitants amount to about four thouſand five hundred.

Between the *North* and *South-Forelands*, a wide bay is formed, which is called "the *Downs*," where is excellent anchorage, and ſhelter from the north and weſt winds, which cauſe ſhips to ſtop here, whether outward-bound, through the *Channel*, or returning from thence to the port of *London*. Off at ſea are thoſe dangerous banks called the *Goodwin ſands*, ſaid to have been, in former times, a large tract of land, belonging to the great *Goodwin*, or *Godwin*, earl of *Kent*, *Suſſex*, and *Surrey*, which tract was ſwallowed up by the ſea in the 11th century.

The Iſle of **Thanet** is on the north and eaſt bounded by the ſea, and on the ſouth and weſt by a branch of the *Stour*,

Stour, which in many parts is no wider than an ordinary ditch. It is eight miles in length and four in breadth. The ſoil is chalk about a foot and a half below the ſurface, over which is a rich earth, which produces abundant crops of corn and graſs. This ſpot gives the title of earl to the Right Hon. *Sackville Tufton*. It contains ſeveral villages, with the ſea-port towns of *Margate* and *Ramſgate*, which are greatly reſorted to, particularly the former, for the purpoſe of ſea-bathing. Large ſums have been voted by parliament, for the conſtruction of a pier at *Ramſgate*, for the purpoſe of affording a ſecure harbour to ſhipping, but the ſand has been found to accumulate at its mouth, by the tide, ſo conſiderably, as to render the deſign in a great meaſure abortive. On the north-eaſt point of this iſland is the promontory of the *North Foreland*, which, by a line drawn north-weſtward to the *Naeſe* in *Eſſex*, near *Harwich*, makes the mouth of the river *Thames*; and all the towns and harbours weſtward, whether on the *Kentiſh* or *Eſſex* ſhore, are called members of the port of *London*.

Cloſe to the *North Foreland*, is a delightful ſeat built by the firſt lord *Holland*, and called *Kingſgate*, from a gate formed for a landing-place, over which is the following inſcription:

OLIM PORTA FUI PATRONI BARTHOLOMÆI
NUNC REGIS IUSSU REGIA PORTA VOCOR.
HIC, EXSCENDERUNT CA: II. R.
ET JA: DUX EBOR. 30 JUN: 1683.

Arx Ruochim
(Secundum Rev^{m} admodum ornatum
Et eruditum virum Cornelium Willes)
Tempore Principis Vortigern
Annum circiter CCCCXLIII^{m}
Ædificata.

A pillar is erected near the houſe, with a Latin inſcription, to commemorate a battle fought near that ſpot, between the *Anglo-Saxons* and an army of *Daniſh* invaders, about the year 850, the event of which is unknown.

GRAVESEND, a town twenty-two miles to the eaſt of *London*, is ſituated on the *Thames*, oppoſite to *Tilbury-fort*, ſeven miles to the eaſt of *Dartford*, and about the ſame diſtance from *Rocheſter*. In the reign of *Richard* II. the *French* and *Spaniards* ſailed up the *Thames* to this town, and having plundered and burnt it, carried away moſt of the inhabitants. In conſideration of which injury, the natives of *Graveſend* and *Milton* were allowed the ſole privilege of carrying paſſengers by water from hence to *London*, at two-pence per head, or four ſhillings the whole fare; but the fare is now raiſed to nine pence *per* head in the tilt-boat, and one ſhilling in the wherry. The former muſt not take in above forty paſſengers, and the latter more than ten. The waterman's company of *London* are obliged to provide officers at *Billingſgate* and *Graveſend*, who at every time of high water, by night and day, are, at their reſpective places, to ring publicly a bell ſet up for that purpoſe, during fifteen minutes, to give notice to the tilt-boats and wherries to put off. King *Henry* VIII. raiſed a platform here and at *Milton*; and theſe towns were incorporated by queen *Elizabeth*, by the name of the portreve, the jurats, and inhabitants of *Graveſend* and *Milton*; but the name of portreve has been changed to that of mayor. The whole town being burnt down in 1727, the parliament granted five thouſand pounds for rebuilding its church. This pariſh, with that of *Milton*, contains above ſeven hundred houſes, which are moſtly ſmall, and built with brick; the ſtreets are alſo narrow, but paved with flints, and it has a great number of houſes of entertainment. Here is a handſome charitable foundation, Mr. *Henry Pinnock* having, in 1624, given twenty-one dwelling-houſes, and a houſe for a maſter-weaver to employ the poor, and a good eſtate is alſo ſettled for the repairs.

Great improvements have been made in the lands near this town, by turning them into kitchen-gardens, with the produce of which *Graveſend* not only ſupplies the neighbouring places for ſeveral miles round, but alſo ſends great quantities to the *London* markets, particularly of aſparagus. As all outward-bound ſhips are obliged to anchor in this road till they have been viſited by the cuſtom-houſe officers, and as they generally ſtay here to take in proviſions, the town is full of ſeamen, and in a conſtant hurry.

WOOLWICH, a town ſituated on the *Thames*, nine miles to the eaſt of *London*, is famous for its fine docks and yards, where men of war are built, and the largeſt have ſufficient depth of water at all times to ride in ſafety, as alſo for its vaſt magazines of great guns, mortars, bombs, cannon-balls, powder, and other warlike ſtores. In the lower part of the town is the warren, where between ſeven and eight thouſand pieces of ordnance have been laid up at one time for ſhips and batteries; beſide innumerable mortars and bomb-ſhells. Here is alſo the houſe where the fire-men and engineers prepare their fire-works, charge bombs, carcaſſes, and grenades for the public ſervice. The town has been of late years much beautified and enlarged with fine docks, rope-yards, and ſpacious magazines. It has a royal military academy where the mathematics are taught, and young officers, called cadets, are inſtructed in the arts of gunnery and fortification. The pariſh church has been rebuilt in a handſome manner, as one of the fifty new churches erected in purſuance of the bounty of queen *Anne* for that purpoſe.

For ſome years paſt a number of convicted felons, ſometimes amounting to four hundred, have been employed in heaving ballaſt from the bed of the river off *Woolwich*, with which the marſhes at and about the *warren* have been very advantageouſly filled up; at preſent they are employed in digging a maſt-pond, which employment converts them, in ſome degree, from peſts to ſociety, into uſeful ſervants to it.

GREENWICH, a very pleaſant town, is ſituated on the *Thames*, five miles from *London*, and has been the birthplace of ſeveral of our monarchs, particularly queen *Mary* and queen *Elizabeth*, and here king *Edward* VI. died. Their palace was firſt erected by *Humphry* duke of *Glouceſter*, who named it *Placentia*: this palace was enlarged by *Henry* VII. and completed by *Henry* VIII. but was afterward pulled down by *Charles* II. who began another, a moſt magnificent edifice, and lived to ſee its firſt wing finiſhed. This palace now makes a part of the hoſpital. The ſame prince alſo enlarged the park, walled it round, planted it, and cauſed a royal obſervatory to be erected on the top of a ſteep hill. This ſtructure was erected for the uſe of the celebrated Mr. *Flamſtead*, and ſtill bears the name of *Flamſtead* houſe. It is the reſidence of the aſtronomer royal, which poſt has long been held by the able Dr. *Neville Maſkelyne*, and from hence the longitude has of late years been reckoned by *Britiſh* navigators and geographers. King *Charles* alſo furniſhed it with mathematical inſtruments for aſtronomical obſervations, and a deep dry well for obſerving the ſtars in the day-time. That which is at preſent called the palace, is an edifice of no great extent, and is now converted into apartments for the governor of the royal hoſpital, and the ranger of the park. The park is well ſtocked with deer, and affords a noble view of the fine hoſpital, the river *Thames*, and the city of *London*.

Greenwich is ſaid to contain one thouſand three hundred and fifty houſes; and its pariſh church, which was rebuilt by the commiſſioners for erecting the fifty new churches, is a very handſome ſtructure dedicated to St. *Alphage*: at the end of the town is a college fronting the *Thames*, for the maintenance of twenty decayed houſe-keepers, twelve out of *Greenwich*, and eight who are to be alternately choſen from *Snettiſham* and *Caſtle-Riſing* in *Norfolk*. It is called the duke of *Norfolk*'s college, though founded and endowed by *Henry* earl of *Northampton*, the duke of *Norfolk*'s brother, and by him committed to the care of the Mercer's company. Here is alſo an hoſpital called queen *Elizabeth*'s college, which was built and founded by Mr. *Lambard*: and in this pariſh are two charity-ſchools, one founded by Sir *William Boreman*, knt. and the other by Mr. *John Roan*.

The firſt wing of the noble and ſuperb edifice called *Greenwich* hoſpital was, as hath been obſerved, erected by king *Charles* II. for a palace, and indeed the whole can ſcarcely be taken for any thing leſs than the palace of a great monarch; hence it has been remarked by a very original writer, who has gained leſs celebrity than his few excellent productions merit, (Mr. *Bramſton*)

> To lofty *Chelſea*, or to *Greenwich*, dome;
> Soldiers and ſailors all are welcom'd home.
> Her poor to palaces *Britannia* brings,
> St. *James*'s hoſpital may ſerve for kings.

King *William* III. from a deſire to promote the trade, navigation, and naval ſtrength of the kingdom, gave this noble ſtructure, and ſeveral others, with a conſiderable ſpot of ground, for the uſe of thoſe *Engliſh* ſeamen and their children, who by age, wounds, or other accidents, ſhould be diſabled from farther ſervice at ſea, and for the widows and children of ſuch as were ſlain in fighting at ſea againſt the enemies of their country. The ſame prince alſo appointed commiſſioners for carrying on his noble views, and deſired the aſſiſtance of his good ſubjects to enable him to complete them. In conformity to this requeſt, many benefactions were made to this noble charity, which, according to the tables hung up at the entrance of the hall, amount to fifty-eight thouſand two hundred and nine pounds, and afterward the eſtates of the earl of *Derwentwater*, who bore a principal part in the rebellion in 1715, amounting at preſent to ſixteen thouſand pounds *per annum*, were given by parliament to this hoſpital; theſe eſtates were reſtored to the heir of the attainted earl, by act of parliament, in the year 1788, charged with the payment of that annual ſum for ever; the firſt range had coſt king *Charles* II. thirty-ſix thouſand pounds, and another was ordered to be built on the ſame model oppoſite to it: this has been completed with equal magnificence.

The front facing the *Thames* conſiſts of theſe two ranges of ſtone buildings, with the governor's houſe in the back part in the centre, behind which the park, well planted with trees, riſes with a noble aſcent. Theſe buildings, between which is a large area, perfectly correſpond with each other, and each range is terminated by a very noble dome.

Theſe domes, which are one hundred and twenty feet high, are ſupported on coupled columns, as are the porticos below, and under one of theſe is the chapel, which is adorned on the inſide with the greateſt elegance and beauty. In the centre of the area is a ſtatue of his late majeſty *George* II. fixed on a pedeſtal; and on the ſides of the gate, which opens to theſe buildings from the park, are placed a large celeſtial and terreſtrial globe, on the former of which the ſtars are gilt.

The hall of this hoſpital, which ſupports the other dome, is finely painted by Sir *James Thornhill*, particularly the ceiling and upper end; on the latter are repreſented, in an alcove, the late princeſs *Sophia*, king *George* I. king *George* II. queen *Caroline*, the queen dowager of *Pruſſia*, *Frederic* prince of *Wales*, the duke of *Cumberland*, and the five daughters of his late majeſty. On the ceiling of the alcove are king *William* and queen *Mary*, with ſeveral fine emblematical figures. All ſtrangers who ſee this fine hall pay two-pence each, and this income is applied to the ſupport of the mathematical ſchool for the ſons of ſailors.

For the better ſupport of this hoſpital, every ſeaman, both in the royal navy and in the merchant's ſervice, pays ſix-pence *per* month out of his pay. There are at preſent near two thouſand old or diſabled ſeamen maintained here, and an hundred boys, the ſons of ſeamen, inſtructed in navigation, and bred up for the ſervice of the royal navy; but there are no out-penſioners as at *Chelſea*. The tobacco money of the boatſwains is two ſhillings and ſixpence a week each; that of their mates eighteen-pence, and that of other officers in proportion to their rank. Beſides which, each common penſioner receives once in two years a ſuit of blue clothes, a hat, three pair of ſtockings, two pair of ſhoes, and five neckcloths. The hoſpital has about one hundred governors, compoſed of the nobility and great officers of ſtate.

The management of this moſt magnificent public charity is lodged in twenty-four directors, the firſt of whom is conſidered as governor, and is ſtyled "maſter;" there is likewiſe a lieutenant governor, a treaſurer, ſecretary, and ſurveyor. Four captains and eight lieutenants are appointed to this foundation, with very handſome ſalaries; the deſign of which was to provide an honourable and beneficial retreat, after long and important profeſſional ſervices to the country.

On the ſecond day of *January* 1779, at ſix o'clock in the morning, a fire broke out in this noble edifice, which in a few hours burnt down the chapel, and the dome on the ſouth-eaſt quarter, together with the wards, called, the *King's*, *Queen's*, *Prince of Wales's*, *Duke of York's*, and *Anſon's*; it alſo damaged ſome others. They have ſince been rebuilt, and the expence voted by parliament, out of the public money, amounting to upwards of eighty thouſand pounds. The chapel was opened for divine ſervice in *November* 1789.

BLACKHEATH is a large elevated plain to the ſouth of *Greenwich*, on or adjoining to which ſtand many beautiful buildings, particularly the villas of the duke of *Montagu*, earls of *Cheſterfield* and *Dartmouth*, *Lord Falkland*, &c.; and on its ſouthern extremity ſtood the noble ſeat of the late Sir *Gregory Page*, which has very lately been taken down, and the materials ſold, like thoſe of *Cannons*, in various lots, by public auction.

DEPTFORD, anciently called *Weſt-Greenwich*, is ſaid to have derived its name from its having a deep ford over the little river *Ravenſborne*, near its influx into the *Thames*, where it has now a bridge. It is a large and populous town, four miles eaſt of *London*, and is divided into *Upper* and *Lower Deptford*, which together contain two churches, ſeveral meeting-houſes, and about one thouſand nine hundred dwelling-houſes. It is remarkable for its noble dock, where moſt of the royal navy were formerly built and repaired, but at preſent *Woolwich*, *Chatham*, and *Portſmouth* take the greateſt ſhare in that kind of buſineſs, on account of having a greater depth of water: yet the yard is enlarged to more than double its former dimenſions, and a great number of men are conſtantly employed. It has a wet dock of two acres extent, for ſhips, and another of an acre and an half; with vaſt quantities of timber and other ſtores. There are alſo extenſive buildings, as ſtore-houſes and offices, beſides dwelling-houſes for thoſe officers who are obliged to live upon the ſpot, in order to ſuperintend the works. It had a victualling houſe built in 1745, which in 1749 was burnt down, with great quantities of proviſions and naval ſtores. The royal yachts are generally kept here; and near the dock is the ſeat of Sir *John Evelyn*, called *Say's Court*, where *Peter the Great*, *Czar* of *Muſcovy*, reſided for ſome time, and in this yard completed his knowledge in the practical part of naval architecture.

In this town are two hoſpitals, one of which was incorporated by king *Henry* VIII. for the benefit of ſeamen, and is called *Trinity-Houſe*. This contains twenty-one houſes, and is ſeated near the church. The other, called *Trinity-Hoſpital*, has thirty-eight houſes fronting the ſtreet. This is a very handſome edifice, and has large gardens belonging to it. Though this laſt is the fineſt ſtructure, yet the other has the preference on account of its antiquity; and becauſe the brethren of the *Trinity* hold their corporation by that houſe, they are obliged at certain times to meet there for buſineſs. Both theſe houſes are for decayed pilots, or maſters of ſhips, or their widows, the men being allowed twenty ſhillings, and the women ſixteen ſhillings *per* month.

SECT. VIII.

Of the County of SUSSEX.

THIS county is bounded on the N. by *Surry*, on the N. E. and E. by *Kent*, on the S. by the *Engliſh* channel, and on the W. by *Hampſhire*. It is about ſeventy miles in length, twenty-eight in breadth, where broadeſt, and about one hundred and ninety in circumference.

The air of this county is very various: along the ſea-ſhore it is thought agueiſh; but it has a much greater effect on ſtrangers than on the natives, who are generally very healthful. In the *Weald*, which is a rich deep ſoil, it is apt to be foggy, yet not unwholeſome; but upon the *Downs* the air is extremely ſweet and healthy. The ſoil is likewiſe various; that of the *Downs*, and from them to the ſea, is very fertile, both in corn and graſs, the latter feeding ſheep whoſe wool is remarkably fine; the middle of the county abounds with meadows and rich arable ground, and the north ſide is ſhaded with extenſive woods, that uſed to ſupply fuel for the iron-works when they were in a flouriſhing ſtate. This plentiful county, therefore, ſupplies numerous commodities, the chief of which are *corn*, *malt*, *cattle*, *wool*, *wood*, *iron*, *chalk*, *glaſs*, *fiſh*, and *fowl*. It is particularly famous for its *wheatears*, a ſmall delicious bird, of the ſize of a lark, not much inferior to an ortolane, which is taken on the ſouth-eaſt downs in the following manner: a turf is cut up, about a foot long and half a foot broad; in the cavity is placed a ſnare of horſe-hair, and the turf turned with the graſs downward to cover the greateſt part of the hole. Theſe birds are naturally ſo timorous, that the ſhadow of a cloud, or any thing that moves on the ground, makes them fly into theſe little pits for ſhelter, where they are taken. The ſeaſon for them is when the wheat ripens; but they are ſo very fat that they cannot be carried many miles without being tainted, and even in plucking them great care muſt be taken to handle them as gently as poſſible.

The chief manufactures of this country uſed to be great guns, and ſeveral ſorts of work made in caſt or wrought iron; the beſt gunpowder is at preſent made at *Battel*.

This county has few ports, on account of its rocky ſhore, and its ſhelves and ſand-banks, which the ſouth-weſt winds, ſo common upon this coaſt in winter, are continually augmenting.

It is divided into ſix rapes, each of which has its particular caſtle, river, and foreſt; and is ſubdivided into ſixty-five hundreds, in which are computed one city, ſixteen market-towns, two ancient boroughs that have no market, one hundred and twenty-three vicarages, three hundred and forty-two pariſhes, one thouſand and ſixty villages, hamlets, and chapelries. The county, city, and towns ſend twenty-eight members to parliament.

The principal rivers are the *Arun*, the *Adur*, the *Ouſe*, and the *Rother*. The *Arun* riſes in *St. Leonard*'s foreſt, not far from *Horſham*, in the north edge of the county, and, after running a little way to the weſtward, turns due ſouth, paſſing by *Arundel*, about three miles below which it falls into the ſea. This river has lately had a new outlet cut for it, in order to improve its navigation, which carries barges above *Pulborough*, and ſhips of a hundred tons as high as *Arundel*. Here are caught the mullets ſo much eſteemed; they come from the ſea in the ſummer ſeaſon in vaſt ſhoals, and feeding upon a particular weed in this river, acquire that high luſcious taſte which renders them ſo great a dainty. The *Adur*, alſo called the *Beeding*, has likewiſe its ſource in St. *Leonard*'s foreſt, forming its courſe on the ſame points of the compaſs as the *Arun*; but on its approaching the ſea, turns four or five miles to the eaſt, and then forms the harbour of *New Shoreham*. The *Ouſe* riſes from two branches, one of which has its ſpring in St. *Leonard*'s foreſt, near the ſource of the *Arun*, the other in the foreſt of *Worth*, but they ſoon unite to the ſouthward, by *Lewes*, and run to the ſea, forming the harbour called *New-Haven*. The *Rother* riſes near *Rotherfield*, and runs moſtly eaſtward; but about ſix miles to the north of *Rye*, makes an angle to the ſouthward, and falling into the ſea, forms *Rye-Haven*. There is not, however, a harbour in the county that will admit a veſſel of five hundred tons burden. The principal places in this county are the following:

CHICHESTER, by the ancient *Britons* called *Caercei*, and by the *Saxons*, *Ciſſanceaſter*, or the city of *Ciſſa*, is ſeated in a plain on a little rivulet called *Lavant*, ſixty-three miles to the ſouth-weſt of *London*. It is a compact neat town, encompaſſed by a ſtone wall, the four gates anſwering to the four cardinal points, from whence the ſtreets have their names, and meet in the centre of the city, where is the market-place, which affords a view of the four gates. The cathedral is adorned on one ſide with pictures of all the kings and queens from *Ciſſa*, the ſon of *Ella*, the firſt king of the *South Saxons*, to the preſent time; and on the other are placed the portraits of all the biſhops. The ſpire is deſervedly admired for its workmanſhip, and, ſome years ago, afforded a convincing proof of the ſkill of the architect; for a flaſh of lightning ſtriking upon it, about forty-five feet from the top, made a very large breach, by driving out the ſtones, and carrying ſeveral of them, which were even of a ton weight, to a conſiderable diſtance; but, notwithſtanding this ſhock, the ſpire ſtood firm, which ſaved the body of the church; and it is now well repaired. Beſides the cathedral there are ſeven ſmall churches, built with flint ſtone. What is now called the *Friars*, was formerly a convent of *Franciſcans*, but was originally a caſtle and ſeat belonging to the earls of *Arundel*. *Chicheſter* is a city and county of itſelf, and the corporation conſiſts of a mayor, recorder, fourteen aldermen, ſix bailiffs, twenty-ſeven common-council-men, and a portreve; four juſtices of the peace are choſen out of the aldermen, and the mayor is annually elected by ballot of the aldermen and common-council. The market-place is adorned with a ſtately croſs, and the market on *Saturdays* is well ſupplied with all kinds of proviſions, eſpecially fiſh and great quantities of corn. Every *Wedneſday* fortnight here is alſo one of the greateſt markets for cattle in *England*. This city, as well as *Southampton*, gave title of earl to the duke of *Cleveland*, which titles became extinct in the year 1774, on the death of *William Fitzroy*, the third duke. It has two charity-ſchools. Its chief traffic conſiſts in the exportation of corn and malt; and its only manufacture is needles; very fine lobſters are caught here. There are ſeveral houſes of the nobility near this city, which have a delightful proſpect of the ſea; among theſe, the moſt conſiderable is the duke of *Richmond*'s ſeat at *Goodwood*.

LEWES, a town ſaid to receive its name from the *Saxon* word *Leſwa*, or *Paſture*, is a place of great antiquity, as appears from king *Athelſtan*'s having appointed his royal mint to be kept here. It is pleaſantly ſituated, fifty miles to the ſouth of *London*, at the edge of the ſouth *Downs*, on one of the moſt delightful ſpots that *England* affords, and contains ſix pariſh-churches, built with flint-ſtone, and about ſix thouſand two hundred inhabitants. It is adorned with the ſeats of the *Pelhams*, the *Gages*, the *Shelleys*, and other perſons of rank and fortune, whoſe gardens join to each other, though for the moſt part up and down hill. Near it are the remains of its ancient caſtle. The ſtreets are handſome, and it has two ſuburbs. It is conſidered as the county town, and the aſſizes are held here. A little river runs through the midſt of it, bringing goods in boats and barges from a port eight miles diſtant. On this river were ſeveral iron-works, where cannon were founded for merchant-ſhips; but this kind of manufacture has removed northward, ſince the method of ſmelting iron with pit-coal has been uſed inſtead of charcoal. Here is a race-ground, where a king's plate is run for every ſummer. *Lewes* is governed by two conſtables; it ſends two members to parliament, and has a good market on *Saturdays*.

In the year 1264, a bloody battle was fought between *Henry* III. and his barons, in this neighbourhood, when the latter proving victorious, and having made the king their priſoner, entered and plundered the town.

From a windmill near the town is a proſpect of the ſea for thirty miles weſt, and an uninterrupted view of *Banſted-Downs*, which is full forty miles.

Eight miles from *Lewes*, and fifty-eight from *London*, along *Pevenſey level*, is BRIGHTHELMSTONE, much reſorted to at the latter part of the ſummer and beginning of autumn for ſea-bathing; ſmall veſſels alſo convey paſſengers from hence to *Dieppe* in *Normandy*. The *herring* and *mackarel* fiſheries are carried on from hence. The town, which was formerly a mean place, is now well built, and very handſome; adjoining to it is a delightful walk, on a level ſpot near the ſea, called "the *Steyn*." EAST BOURN, about twenty miles to the eaſtward, round *Beachy-head*, is likewiſe become a faſhionable bathing-place.

BEACHY-HEAD, the moſt ſouthern point of land in the county, is a high promontory, and a well-known land-mark, off which an engagement was fought, in *June* 1690, between the combined fleets of *England* and *Holland*, commanded by lord *Torrington* and admiral *Evertzen*, and the *French* fleet commanded by the count *de Tourville*, which proved unfavourable to the allies.

ARUNDEL, a town eight miles to the eaſt of *Chicheſter*, and fifty-five S. W. by S. of *London*, ſeems to derive its name from the river *Arun*, on which it is ſeated; and is famous for *mullets*. It is pleaſantly ſituated on the ſide of a hill, and has a ſtately wooden bridge over the river. It gives title of earl to the duke of *Norfolk*, and is governed by a mayor, twelve burgeſſes, a ſteward, and other officers, and ſends two members to parliament. The ancient caſtle is ſeated on the river *Tame*, and is ſaid to be a mile in compaſs.

HORSHAM, a town about three miles out of the main road to *Arundel*, has its name from *Horſa*, brother to *Hengiſt* the *Saxon*, and is one of the largeſt towns in the county: it has ſent members to parliament ever ſince the thirtieth of *Edward* I. and is the place where the county jail ſtands, and ſometimes the aſſizes are held here. A great number of poultry are brought to its market on *Saturdays*, moſt of which are ſent to *London*. Here is a quarry of very good ſtone.

RYE, an appendage to the *Cinque-ports*, is a pretty populous ſea-port town, ſeated on the ſide of a hill, ſixty-four miles to the S. E. by S. of *London*, and has a delightful proſpect of the ſea. It was walled round in the reign of *Edward* III. and well fortified by *William d'Ypres*, earl of *Kent*; a tower called by his name is the priſon of the town. It has one of the largeſt pariſh-churches in *England*, and enjoys the ſame privileges as the other cinque-ports; but the port is ſo choaked up with ſand, that it hardly affords entrance for the ſmalleſt veſſels. The corporation conſiſts of a mayor and jurats, and the town ſends two members to parliament. It is a place of conſiderable trade, particularly in *hops*, *wool*, and *timber*. In the reign of *Richard* II. the *French* landed and burnt this town; but the people of *Rye* ſoon fitted out ſome ſhips, and, in conjunction with thoſe from other ports, took ſeven of the enemy's veſſels richly laden.

WINCHELSEA, another appendage to the *cinque-ports*, was once a conſiderable town, built in the time of king *Edward* I. after a more ancient town of the ſame name, that ſtood at two or three miles diſtance, and had eighteen pariſhes, but was ſwallowed up by the ſea in a terrible tempeſt. *New Winchelſea* was never equal to the old; it was encompaſſed with a rampart, and afterwards with a wall; but no ſooner began to flouriſh, than it was ſacked by the *French* and *Spaniards*, and, being abandoned by the ſea, which retired a mile diſtant, ſuddenly fell to decay. This borough is incorporated by the name of the mayor, jurats, and commonalty; and, though there are only a few houſes remaining in the upper part of the town, it ſends two members to parliament, and gives the title of earl to the noble family of *Finch*. Some years ſince a manufacture of cambrick was eſtabliſhed here, but the attempt not ſucceeding it has been laid aſide.

HASTINGS, ſeven miles S. E. of *Battel*, and ſixty-two from *London*, is the firſt in rank of the cinque-ports, it ſends two members to parliament, has two weekly markets, and three annual fairs. Near this town was fought the memorable and deciſive battle, *October* 14, 1066, between *William* duke of *Normandy*, and *Harold*, who then wore the crown of *England*, and on that day loſt his kingdom and life. The abbey of *Battel* was founded by the Conqueror, to commemorate this ſignal event.

SECT. IX.

Of the County of SURRY.

THIS county is bounded on the E. by *Kent*; on the S. by *Suſſex*; on the W. by *Hampſhire* and *Berkſhire*; and on the N. by the river *Thames*, which divides it from *Middleſex*. The county, which is almoſt ſquare, though much indented to the W. and N. by the windings of the *Thames*, is thirty-ſeven miles in length, twenty-ſeven in breadth, and a hundred and thirty in circumference, containing about thirty-five thouſand houſes, a hundred and forty pariſhes, eleven market towns, including *Southwark*, thirty-five vicarages, four hundred and fifty villages and hamlets, and a hundred and ſeventy-one thouſand inhabitants.

It is a healthy pleaſant county, on which account many of the nobility and gentry have their ſeats here; and the value of eſtates in this county has advanced of late years beyond any other part of *England*. The ſoil is very different in the extreme parts from that in the middle, whence it has been compared to a coarſe cloth with a fine border: for the edge of the county on all ſides has a rich ſoil, extremely fruitful in corn and graſs, particularly on the N. and W. toward the *Thames*; but it is far otherwiſe in the heart of the county, where are wide tracts of ſandy ground and barren heath, and in ſome places are long ridges of hills, with warrens of rabbits and parks for deer. However, we meet here and there with ſome delightful ſpots interſperſed in the middle of *Surry*, and it is not to be doubted that a great deal of the waſte ground might, by proper management, be greatly improved. This county produces *corn*, *box-wood*, *walnuts*, *hops*, and *fuller's-earth*; and near *Darking* grows a wild black cherry, of which a very pleaſant wine is made, little inferior to *French* claret. It has been obſerved of this part of *Surry*, that the natives are generally of a pale complexion, reſembling the people of *Picardy* in *France*; and that even the cattle are of a lighter colour than is uſual in other parts of *England*.

The rivers in this county, beſides the *Thames*, are the *Molſey*, the *Wey*, and the *Wandle*. The *Molſey*, or *Mole*, riſes in the ſouthern border of SURRY, and forms a courſe moſtly S. E. and S. till it reaches the *Thames* at *Molſey*. It is remarkable of this river, that at the foot of *Box-hill*, near a village called *Mickleham*, it works its way under ground like a mole, riſing again at or near the town of *Leatherhead*, where its ſtreams form a pretty large river running under *Leatherhead* bridge, and thus purſues its courſe to the *Thames*, which it joins at *Molſey*; and from this circumſtance it obtained the name of the *Mole*; and hence it is deſcribed by *Pope*, as

> The ſullen *Mole* that hides his diving flood.

The *Wey* riſes in *Hampſhire*, and enters this county near *Farnham*, winding very much till it has paſſed *Godalming*, when it begins to run moſtly ſouthward. The ſame poet characteriſes this river, as

> The chalky *Wey*, that rolls a milky wave.

It has been made navigable to *Guilford*, by which means all the neighbouring parts are plentifully ſupplied with commodities from *London*, particularly coals, which have been much wanted here. The *Wandle* is a ſmall clear ſtream famous for its trout; it riſes near *Carſhalton*, and runs ſouthward to the *Thames*, into which it diſcharges itſelf at *Wandſworth*. The principal places in this county are the following:

GUILFORD, or GUILDFORD, is a conſiderable market-town, thirty miles to the S. W. of *London*, where the ſummer aſſizes are ſometimes held, but *Croydon* generally has them in turn; the elections for county members are however always held here, the town itſelf returning two. The river *Wey* being made navigable to this town, as hath already been obſerved, adds greatly to its trade; and a conſiderable quantity of timber being brought hither from the woody parts of *Suſſex* and *Hampſhire* by land-carriage, is conveyed from thence by this river to *London*. It has three pariſh-churches: that which is called the *Upper Church*, by the fall of the ſteeple, had its roof beat in, on the twenty-third of *April*, 1740; the ſteeple had been repaired not long before; but a farther decay being diſcovered, the workmen had begun to take it down; the roof was ſtruck in with ſuch impetuoſity, that by the ſudden preſſure of the air all the glaſs windows were blown out, as if it had been done by a blaſt of gunpowder. Here is a ſchool, founded by *Edward* VI. and an alms-houſe by *George Abbot*, archbiſhop of *Canterbury*. There are here alſo two charity-ſchools, the ruins of an old caſtle, and ſome remains of a palace of great extent, which appears from good authorities to have been the reſidence of *Ethelwald*, one of the *Saxon* kings. Here were formerly two or three convents, one of which was not long ago the ſeat of *Daniel Coſwell*, Eſq; and had a delightful park adjoining to it. Here is a fine circular courſe for horſe-races, which begin when the *Newmarket* races are ended. *Guildford* had formerly a conſiderable manufacture of cloth, of which there are ſtill ſome remains.

The road from hence to *Farnham*, which extends nine miles, is very remarkable, running along the ridge of a high chalky hill no wider than the road itſelf, and the declivity begins on either hand at the edge that bounds the highway, and is very ſteep and high. From this hill is a ſurpriſing proſpect to the N. and N. W. over *Bagſhot-heath*; to the S. E. into *Suſſex*; and to the W. it is ſo unbounded, that the view is only terminated by the horizon. On this hill, which is called St. *Catherine*'s, ſtands the gallows, in ſuch a poſition, that the inhabitants of *Guilford* may, from the *High-ſtreet*, ſit at their ſhop-doors and ſee the criminals executed.

FARNHAM, a large populous market-town, ſeated on the river *Wye*, on the weſtern extremity of *Surry*, and thirty-nine miles to the weſt ſouth-weſt of *London*, was once the greateſt corn-market in *England*, except *Hempſtead* and *London*, particularly for wheat, of which vaſt quantities uſed to be brought here every market-day; but though its corn-market is dwindled, its plantations of hops are ſo much improved, that its trade in that article is ſuperior to that of *Canterbury*, *Maidſtone*, and many of the places in *Kent*; and the hops here being of ſuperior goodneſs, yield a better price than any other in *England*: indeed all the country about *Farnham* may be conſidered as one general hop-ground. At this town is a caſtle built by a biſhop of *Wincheſter*, which is ſaid to have been poſſeſſed in a conſtant ſucceſſion by the biſhops of that dioceſe, ever ſince the reign of king *Stephen*. This palace is a magnificent ſtructure in the *Gothic* taſte, deeply moated, and ſtrongly walled in, with towers at proper diſtances. It ſtands upon the edge of a hill, and has a fine park ſtocked with about ſeven hundred head of deer, the property of the biſhop.

About two miles from *Farnham*, is MORE-PARK, formerly the ſeat of Sir *William Temple*, who in his laſt will ordered his heart to be put into a china-baſon, and buried under a ſun-dial in the garden, which was accordingly performed. Here *Swift* paſſed many of the early years of his life. This houſe is ſituated in a valley, ſurrounded on every ſide with hills, and a running ſtream flows through the gardens. Going from this ſeat, on the left-hand, under a high cliff, is a famous natural grotto, which they call *Mother Ludloe*'s *Hole*, through which runs a ſtrong rill of water. The grotto is large; but diminiſhes and winds away as the ſpring ſeems to have directed. The ſtream of water glides through marble troughs one below another, till it is conveyed out of the grotto, and there murmuring down a conſiderable declivity, over many artificial ſteps, falls into the river on the right hand. From this grotto is a fine proſpect of the meadows and woods, which lie below and over-againſt it, and theſe are again bounded by hills, which render the whole ſcene beautifully romantic.

COBHAM is a ſmall town ſituated on the river *Mole*, ſix miles from *Epſom*, and eight to the S. W. of *Kingſton*, in the road from *Guilford* to *London*. Near this town are ſeveral fine ſeats, particularly one belonging to lord *Ligonier*; and another the ſeat of *Bond Hopkins*, Eſq; called *Painſhill*, the former of which is built in a ſingular taſte, ſomewhat after the manner of an *Italian* villa, though very plain on the outſide. The principal rooms are richly ornamented; the cielings are gilt; and the offices below are contrived with great judgment. The houſe being ſituated on an eminence, commands a view of the adjacent country. The river *Mole* glides along the ſides of the gardens, and, being here extended to four times its natural breadth has a fine effect.

DARKING, or DORKING, a town twelve miles to the E. of *Guilford*, and twenty-four to the S. W. of *London*, is famous for its meal-trade and its market for poultry, particularly for the fatteſt geeſe and largeſt capons, which are brought hither from as far as *Horſham* in *Suſſex*, it being the buſineſs of all the country on that ſide, for many miles, to breed and fatten them; and ſome are ſo large as to be little inferior to turkies. The town ſtands on a rock of ſoft ſandy ſtone, in which are dug convenient cellars. The great *Roman* highway, called *Stony-ſtreet*, paſſes through the church-yard, and is plainly traced two miles to the ſouth of *Okely*, and appears to be made of flint and pebbles. This is a prodigious work, it being from ſeven to ten yards broad, and near a yard and a half deep, which is the more remarkable, as in ſome places there is not a flint ſtone to be ſeen within a great diſtance.

A mile from hence is DENBIGHS, the reſidence of the late *Jonathan Tyers*, Eſquire, proprietor of *Vauxhall* gardens, who laid out the grounds in a very ſingular and ſombre ſtyle, particularly what he called "the valley of the ſhadow of death."

In the neighbourhood of *Darking* is a hill which affords a moſt enchanting proſpect; it is called *Box-hill*, from the abundance of trees, arbours, and labyrinths of box upon it, eſpecially to the ſouth, though on the north ſide it is almoſt covered with yew-trees: it was firſt planted with box-trees by that famous antiquary *Thomas* earl of *Arundel*.

About ſix miles from *Box-hill*, and five miles to the N. of *Darking*, is *Leith-hill*, which projects about two miles beyond a range of hills that terminates the *North Downs* to the *South*. "When I ſaw," ſays a late writer, "from one of thoſe hills, at about two miles diſtance, that ſide of *Leith-hill* which faces the *Northern Downs*, it appeared the moſt beautiful proſpect I had ever beheld; but after we conquered the hill itſelf, I ſaw a ſight that would tranſport a ſtoic: a ſight that looked like enchantment and viſion. Beneath us lay open to our view all the wilds of *Surry* and *Suſſex*, and a great part of thoſe of *Kent*, admirably diverſified with woods and fields of corn and paſture, being every where adorned with ſtately rows of trees. This beautiful vale is about thirty miles in breadth, and about ſixty in length, and is terminated to the ſouth by the majeſtic range of the ſouthern hills: and it is no eaſy matter to decide, whether theſe hills, which appear at thirty, forty, and fifty miles diſtance, ſhew more awful and venerable, or the delicious vale between more inviting. About noon, in a ſerene day, the ſea may be ſeen at thirty miles diſtance, through a chaſm of the mountains. And that which above all makes it a moſt noble proſpect, is, that at the ſame time, to the ſouth, the moſt delightful rural landſcape in the world preſents itſelf; and, by a litttle turn of the head toward the north, you look full over *Box-hill*, and ſee the country beyond it; and between that and *Londor*, and over the very ſtomacher of it, ſee St. *Paul's* at twenty-five miles diſtance, and *London* beneath it, with *Highgate* and *Hampſtead* beyond it."

The vale beneath *Box-hill* is, for many miles to the eaſt and weſt, called *Holmeſdale*, which is now chiefly overgrown with furze; but was famous for producing ſuch quantities of *ſtrawberries*, that they were carried by horſe-loads to market.

KINGSTON, alſo called KINGSTON UPON THAMES, to diſtinguiſh it from ſeveral other towns of the ſame name, is thus called from its having been the reſidence of ſeveral of our *Saxon* kings, ſome of whom were crowned on a ſtage in the market-place. It is a populous and well-built town, and, in the reigns of *Edward* II. and III. ſent members to parliament. It has a ſpacious church with eight bells, and in it are the pictures of the *Saxon* kings who were crowned here, and alſo that of king *John*, who gave the inhabitants of this town their firſt charter. Here is alſo a wooden bridge, of twenty arches, over the *Thames*; a free-ſchool, erected and endowed by queen *Elizabeth*; and an alms-houſe, built in 1670 by alderman *Clive*. The lent aſſizes for this county are generally held here. Beſides the above bridge, there is another of brick, over a ſtream that flows from a ſpring, which riſes four miles above the town, and, within the diſtance of a bow-ſhot from its ſource, forms a brook, and turns two mills. On the top of a hill is a gallery that overlooks the town. A houſe in this town, called *Kircomb's Place*, was the ſeat of the famous earl of *Warwick*, ſtyled *The Setter-up and Puller-down of Kings*. Here is a good market for corn, and the town carries on a conſiderable trade.

ESHER, a village ſituated near *Walton upon Thames*, and affording a fine proſpect of *Hampton-court*, and other parts of *Middleſex*, is famous for the noble ſeats in and near it, particularly ESHER PLACE, which was the ſeat of the late *Henry Pelham*, Eſq. brother to the late duke of *Newcaſtle*, and is now poſſeſſed by his daughter Miſs *Pelham*. The houſe is a *Gothic* ſtructure of browniſh red brick, with ſtone facings to the doors and windows. This houſe was originally one of thoſe built by cardinal *Wolſey*, but the late Mr. *Pelham* rebuilt the whole, except the two towers in the body of the houſe, which are the ſame that belonged to the old building; and the whole is rebuilt in the ſame ſtile of architecture. There is a fine ſummer-houſe erected upon a hill on the left hand of the entrance, which commands a view of the houſe, park, and country round, on both ſides the *Thames*, for many miles. In one part of the park is a wilderneſs laid out in walks, and planted with a variety of evergreen trees and plants, where is a grotto, and ſeats are diſpoſed in different places. Theſe gardens were laid out by that original genius in gardening *Kent*, and are thus ſpoken of by the bard of *Twickenham*.

> ———In *Eſher*'s peaceful grove,
> Where *Kent* and nature vie for *Pelham*'s love.

In the ſame pariſh is CLAREMONT, a ſeat of the late duke of *Newcaſtle*, and after his death ſold to the late lord *Clive*, who cauſed the houſe to be pulled down, and erected an elegant villa on a better ſite. It has ſince been transferred to different proprietors.

A few miles to the weſt of *Claremont* is OATLANDS, lately the ſeat of the preſent duke of *Newcaſtle*, but purchaſed from him by his royal highneſs the duke of *York*. It is ſituated on an eminence in the centre of a park about four miles in circumference, and is ſkirted to the weſt by the *Thames*.

RICHMOND, diſtant ten miles from *London*, is eſteemed the fineſt village in the *Britiſh* dominions, and hence has been termed *The Freſcati of England*. It was anciently the ſeat of our monarchs, and the palace, for its ſplendor, was called *Shene*, which in the *Saxon* tongue ſignifies *reſplendent*. Here king *Edward* III. died of grief for the loſs of his brave ſon *Edward* the *Black Prince*; and here died *Anne* the wife of *Richard* II. who firſt taught the *Engliſh* ladies the uſe of the ſide-ſaddle; for before her time they rode aſtride. *Richard* was ſo afflicted at his loſs, that he conceived a diſlike to the place, and defaced it; but it was afterward repaired and beautified by *Henry* V. In 1497 this palace was deſtroyed by fire, when king *Henry* VII. was there; but in 1501 that prince cauſed it to be rebuilt, and commanded that the village ſhould from thenceforward be called *Richmond*, from his having borne the title of earl of *Richmond*, before he obtained the crown. That prince died here, as did alſo his grand-daughter, queen *Elizabeth*.

The preſent palace, which is finely ſituated, is a plain edifice erected by the duke of *Ormond*, who obtained a grant of a conſiderable ſpace of land about *Richmond* from king *William* III. as a reward for his military ſervices; but it devolved to the crown on that duke's attainder, in the beginning of the reign of king *George* I. *George* prince of *Wales*, his ſucceſſor, took great delight in it, and made ſeveral improvements in the palace; while his conſort, queen *Caroline*, amuſed herſelf at her royal dairy, *Merlin*'s cave, the hermitage, and other additions which ſhe made in the park and gardens of this delightful retreat. Though the palace is unſuitable to the dignity of a king of *England*, the gardens are extremely fine, without offering a violence to nature, and almoſt every thing here has an agreeable wildneſs, and a pleaſing irregularity.

At the extremity of the garden on the north-eaſt, is another houſe that belonged to queen *Caroline*, and near it the houſe of her ſon *Frederick* prince of *Wales*, which is on the inſide adorned with ſtucco. Oppoſite to the prince's houſe is that of the late princeſs *Amelia*, built by a *Dutch* architect, the outſide of which is painted. To the weſt of the gardens is ſeen the fine houſes of ſeveral of the nobility and gentry, and on the other ſide of the *Thames* appears the village of *Iſleworth*.

To return to the village of *Richmond*. The green is extremely pleaſant, it being ſurrounded with lofty elms, and adorned on each ſide with a noble aſſemblage of houſes, the reſidence of perſons of diſtinction. On the ſide of this green has alſo been erected a theatre, in which plays are acted during the ſummer ſeaſon. An handſome ſtone bridge is here thrown over the *Thames*.

The village runs up the hill to the *Great-Park*, and with the royal gardens ſlopes toward the *Thames*. There is here an alms-houſe, built by Dr. *Duppa*, biſhop of *Wincheſter*, in the reign of *Charles* II. in purſuance of a vow made by that prelate, during that prince's exile. There is another alms-houſe endowed with above 100 l. a year, which, ſince its foundation, has been conſiderably encreaſed by *John Mitchell*, Eſq. Here are alſo two charity-ſchools.

On the aſcent of the hill are *wells*, of a purging mineral water, reſorted to during the ſummer by much good company. On the top is a moſt extenſive and beautiful proſpect of the country, interſperſed with villages and incloſures. The *Thames* is ſeen running beneath, and the landſcape is improved by the many fine ſeats ſcattered along its banks.

NEW-PARK or, as it is more commonly called, RICHMOND GREAT-PARK, is ſituated between *Kingſton* and *Richmond*, and was formed in the reign of *Charles* I. It is the largeſt of any in the vicinity of *London*, except that of *Windſor*; for it is ſaid to be eleven miles in compaſs; it is encloſed with a brick wall. In this park is a ſmall artificial hill, called *King Henry's Mount*, from which is a proſpect of ſix counties, with a diſtant view of the city of *London* and of *Windſor* caſtle. The new lodge erected by the firſt earl of *Orford*, is an elegant ſtructure built of ſtone, in a ſquare form, with wings on each ſide of brick. It ſtands on a riſing ground, and affords a good proſpect of the park, eſpecially of a fine piece of water that is in it. Though this park has little more than a wild variety of natural beauties, yet theſe are ſuch as cannot fail of pleaſing thoſe who are as much delighted with views in their rudeſt appearance, as with all the elegance of art and deſign.

KEW, a hamlet in *Surry*, on the banks of the *Thames*, oppoſite *Old Brentford*, to which a communication is had by a bridge. Here an houſe was built by Mr. *Molyneux*, ſecretary to *George* II. when prince of *Wales*, on a ſpot of ground which had been granted by queen *Anne*. It was purchaſed by *Frederick* prince of *Wales*, and was for ſeveral years after his death the chief reſidence of his relict, the princeſs dowager, and it is now a royal palace. The gardens have been long appropriated to botanical purpoſes, and now contain the greateſt variety of curious plants of any ſpot of ground in the kingdom, or in *Europe*.

To the weſt of the *New-Park*, and ſouth of *Richmond hill*, is *Peterſham*, where is a villa erected by the late earl of *Harrington*, on the ſpot where ſtood a beautiful ſeat, built by the earl of *Rocheſter*, ſon of lord chancellor *Hyde*, and uncle to queen *Anne*, which was ſuddenly burnt to the ground in the year 1720.

HAM HOUSE, in its vicinity, the ſeat of the earl of *Dyſart*, is ſituated on the banks of the *Thames*, and is ſurrounded by thoſe beautiful walks called "*Ham* walks." The luxuriant and enchanting views which here preſent themſelves are admirably drawn in the following paſſage:

> See where enthron'd in adamantine ſtate,
> Proud of her bards, imperial *Windſor* ſits;
> There chooſe thy ſeat, in ſome aſpiring grove,
> Faſt by the ſlowly-winding *Thames*; or where
> Broader ſhe laves fair *Richmond*'s green retreats;
> *Richmond*, that ſees an hundred villas riſe
> Rural or gay. O! from the ſummer's rage,
> O! wrap me in the friendly gloom that hides
> Umbrageous *Ham*.
>
> *Armſtrong*.

WALTON, a village ſituated on the *Thames*, eight miles to the weſt of *Kingſton*, and oppoſite to *Shepperton* in *Middleſex*. It is ſaid that the laſt-mentioned county was joined to this town, till about three hundred years ago, when the old current of the *Thames* was changed by an inundation, and a church deſtroyed by the waves. Here a very curious bridge was erected in 1750, conſiſting of four ſtone piers, which ſupported a beautiful wooden ſtructure, conſiſting of a timber parapet with wide lattice-work, a large central arch, and a ſmaller one on each ſide. This bridge has ſince been taken down, and a new one erected on the ſame ſpot.

From the weſtern border of the county to *Epſom* and *Croydon*, lie BANSTEAD DOWNS, which furniſh excellent feed for ſheep, the mutton being remarkably ſweet and well-flavoured. Hence the poet, when deſcribing the beſt ſituations for feeding ſheep, ſays,

> Such are the downs of *Banſtead*, edg'd with woods
> And tow'ry villas;———
> Whoſe flocks innum'rous whiten all the land:
> Such thoſe ſlow-climbing wilds, that lead the ſtep
> Inſenſibly to *Dover*'s windy cliff,
> Tremendous height!
>
> *Dyer's Fleece*.

EPSOM, a handſome well-built town, ſixteen miles from *London*, abounds with genteel houſes, which are the retreats of merchants and citizens of *London*, as well as the reſidence of many gentry of the county; it lies open to *Banſtead Downs*. The town extends about a mile and a half in a ſemicircle, from the church to lord *Guildford*'s fine ſeat at *Durdan*'s. Its mineral purgative waters, which iſſue from a riſing ground nearer *Aſhſted* than *Epſom*, were diſcovered in 1618, and ſoon became very famous; but though they have not loſt their virtue, they are far from being in the ſame repute as formerly; however, the ſalt made of them is valued all over *Europe*. *Magneſia* is likewiſe prepared from the earth found here, which has obtained great reputation. The hall, galleries, and other public apartments near the ſprings are now fallen to decay. On the neighbouring downs is a race ground, on a part called the *Warren*. There are many fine ſeats in this neighbourhood, as the earl of *Berkſhire*'s, the late lord *Baltimore*'s, lady *Fielding*'s, &c.

CROYDON, a pleaſant town on the edge of *Banſtead Downs*, ten miles to the ſouth of *London*, is pretty large, and inhabited by many opulent citizens and country gentlemen. Among the other buildings is the ancient palace of the archbiſhops of *Canterbury*, ſeveral of whom have been interred in the church, particularly archbiſhops *Whitgift*, *Sheldon*, and *Potter*; the former of whom built and endowed an hoſpital and ſchool here. In the year 1780 an act of parliament paſſed, directing this palace to be ſold, and the money to be applied to building another palace in a more eligible ſpot, and that ſame year it was purchaſed by *Sir Abraham Pitches* for 2520 l. This town has a great corn-market on *Saturdays*, chiefly for oats and oatmeal, for the conſumption of *London*. The ſituation of this village is particularly inviting to rural ſports, and many packs of hounds are kept in the neighbourhood, ſo that here packs of hounds go out almoſt daily throughout the ſeaſon.

DULWICH, a very pleaſant village in *Surry*, five miles from *London*, where is a ſpring of medicinal water. Its rural ſimplicity is thus deſcribed by *Dr. Armſtrong*.

> Or loſe the world amid the ſylvan wilds
> Of *Dulwich*, yet by barbarous arts unſpoil'd.

Dulwich is moſt diſtinguiſhed for its college, founded and endowed in the year 1619, by Mr. *William Alleyn*, who named it *The College of God's Gift*. The humane founder was a comedian, and a principal actor in many of *Shakeſpeare*'s plays, and was in habits of the ſtricteſt intimacy with that prodigy of man. He founded this college for a maſter and warden, who were always to be of the name of *Alleyn*, or *Allen*; with four fellows, three of whom were to be divines, and the fourth an organiſt; and for ſix poor men, as many poor women, and twelve poor boys, to be educated in the college by one of the fellows as ſchoolmaſter, and by another as uſher. To this college belongs a chapel, in which the founder himſelf, who was ſeveral years maſter, lies interred. The maſter of this college is lord of the manor for a conſiderable extent of ground, and enjoys all the luxurious affluence and eaſe of the prior of a monaſtery. Both he and the warden muſt be unmarried, and are for ever debarred the privilege of entering that ſtate, on pain of being excluded the college; but as the warden always ſucceeds upon the death of the maſter, great intereſt is conſtantly made by the unmarried men of the name of *Allen*, to obtain the poſt of warden.

What remains of the original edifice is in the old ſtyle of building; but part of it has been lately rebuilt with greater elegance, out of what has been ſaved from the produce of the eſtate. The maſter's apartments are very richly adorned with noble old furniture, which he is obliged to purchaſe on his entering into that ſtation; and for his uſe there is a library, to which every maſter generally adds a number of books. The college is alſo accommodated with a very pleaſant garden, adorned with walks, and a great profuſion of fruit-trees and flowers.

LAMBETH, a village ſeated on the *Thames*, ſouth-eaſt of *Weſtminſter-bridge*; in which has ſtood, for ſeveral centuries, the palace of the archbiſhop of *Canterbury*. This ſtructure was firſt erected by *Baldwin*, archbiſhop of that ſee in 1188, and was rebuilt by archbiſhop *Boniface* in 1250; but ſeveral of the ſucceeding prelates have added additional buildings. Hence, as the preſent ſtructure has been erected at different periods, it is not at all ſurpriſing that it has but little appearance of uniformity. The edifice, though old, has ſuſtained little injury from time; the corners are faced with ruſtic, and the top ſurrounded with battlements: the principal apartments are well proportioned, and well enlightened. This palace has a fine library, and a ſpacious garden.

VAUXHALL, a hamlet in the pariſh of *Lambeth*, is particularly famous for the beauty of the gardens, that have for more than a century been converted, during the ſummer ſeaſon, into a place of genteel public entertainment. In theſe gardens is a ſuperb orcheſtra, containing a fine organ; the band of muſic always conſiſts of the beſt muſicians, and the entertainment is heightened by capital vocal performers of both ſexes. There are here ſeveral ſtatues, particularly a fine one in marble by *Roubiliac*, of *Handel*, in the character of *Orpheus*, playing on a lyre. The gardens, pavilions, and great rooms may probably occupy ſeven or eight acres of ground; the cluſters of tall trees diſpoſed in the moſt happy combination of natural and artificial beauty, the pavilions, the orcheſtra, forming a grand central object, the brilliancy of a profuſion of lamps, the walks, the muſic, and the company, all combined, faſcinate the ſenſes as if by the powers of enchantment, and lead the beholder to conſider himſelf as conveyed to Elyſium, or at leaſt as traverſing a terreſtrial paradiſe. Many attempts have been made to imitate this kind of public amuſement, but without attaining to any thing like a competition. A little way out of *Birmingham* there are public gardens to which the ſame name is given: in the vicinity of *Paris* a like attempt has been made, but without ſucceſs.

From *Vauxhall* quite to the *Borough* of *Southwark*, which includes an extenſive ſpot of ground called *St. George's fields*, a prodigious number of houſes have been lately erected, forming a lively and agreeable appendage to *London*, and by cauſing a conſiderable intercourſe from the cities of *London* and *Weſtminſter* with the *Surry* ſide of the *Thames*, the noble appearance of the river, and the charming diverſity of the adjoining country, on paſſing the bridges, exhibit the beautiful ſituation of the capital of *Great Britain* to great advantage.

SOUTHWARK, ſituated on the north-eaſtern point of the county of *Surry*, oppoſite to the city of *London*, from which it is ſeparated by the river *Thames*, but a communication is formed by a ſtone bridge; on each ſide of which, about forty years ago, ſtood houſes and ſhops. Although *Southwark* is a ſuburb of *London*, yet it contains ſix pariſhes, ſends two members to parliament, and for extent, populouſneſs, trade, and wealth, is inferior to few cities in *England*. Its principal ſtreet, which runs from *London* bridge to *St. George's* church, is called "the *Borough*." It is deſcribed to have been a diſtinct corporation, and governed by its own bailiff, in the year 1053, which independence it retained until the year 1327, when it was granted to the city of *London*, whoſe lord mayor was to be its bailiff, and to govern it by his deputy, and this grant was confirmed by *Edward* VI. The alderman of *Bridge-ward without* is its proper magiſtrate, but the *clink*, or manor of *Southwark*, is under the juriſdiction of the biſhop of *Wincheſter*. Here are two very noble hoſpitals; the one called *St. Thomas*'s, founded by *Edward* VI. and very amply endowed; the other *Guy*'s, from the name of its founder *Thomas Guy*, a ſtationer, who amaſſed a vaſt fortune, by adhering to extreme parſimony for a long courſe of years; the principal part of his wealth he appropriated by his will to this extenſive public charity; of which foundation we ſhall ſpeak more particularly in deſcribing the city of *London*, in ſect. xxii. A fair uſed annually to be held on *St. Margaret's hill*, in the month of *September*, but being removed to what was thought a more convenient ſpot, the magiſtrates, glad to put an end to a miſchievous cuſtom, productive of drunkenneſs, riot and debauchery, conſidered the right to hold a fair as forfeited by this removal, and on that ground ſuppreſſed it in the year 1763. Here is the county gaol for felons, called "the new gaol," the *Marſhalſea* priſon for debtors, and the *Admiralty* gaol for pirates. The priſon of the court of *King's bench* is likewiſe in its vicinity, the rules of which extend over a conſiderable part of *St. George's fields.* Near to this priſon the county *Bridewell* has been erected a few years ſince.

On the weſt ſide of the ſpacious road which leads from *Blackfriars bridge* to the centre of *St. George's fields*, ſtands a noble *Muſeum*, conſiſting of the moſt curious ſpecimens in every branch of natural hiſtory, collected by *Mr. Lever*, afterward *Sir Aſhton Lever*, and brought by him from his reſidence in *Lancaſhire*. The late owner having obtained an act of parliament empowering him to diſpoſe of this valuable property by a lottery, to conſiſt of thirty-ſix thouſand tickets, at a guinea each, found ſo little avidity in the public to adventure, that he had ſold no more than ſeven thouſand tickets when the appointed time of drawing arrived; the event of which proved very unfortunate to him, for to one of the tickets which had been diſpoſed of the important prize happened to fall. It is now the property of *Mr. Parkinſon*, and is called "the LEVERIAN MUSEUM." *Sir Aſhton* ſurvived this transfer but a ſhort time, being carried off by an apoplectic fit.

Here is likewiſe the MAGDALEN HOSPITAL, a charity inſtituted in the year 1758, for the relief and aſſiſtance of penitent proſtitutes, of which her majeſty became patroneſs ſeven years afterward, and the contributions were ſo conſiderable, that the governors were enabled to erect a ſpacious building on this ſpot, in the year 1769. Another charity which has likewiſe received, and ſtill receives, great patronage is, the ASYLUM, ſituated near *Weſtminſter bridge*, for the reception, education, and ſettlement of female orphans.

At the foot of *Blackfriars bridge*, on the *Surry* ſide eaſtward, has lately been erected a very capacious ſquare building called the ALBION MILLS, for the purpoſe of grinding corn by means of ſteam engines, invented and worked, under the protection of letters patent, by *Mr. Watts*, or ſuch as are appointed by him. For the carrying on the buſineſs of theſe mills, a capital of 60,000 l. has been ſubſcribed; the powers of the ſteam engine being found to exceed thoſe obtained either by wind or water; but the conſumption of coal is ſaid to be equal to a chaldron a day. They profeſs to be able to furniſh flour from their mills ſufficient for the whole conſumption of *London* and *Weſtminſter*. This great undertaking has almoſt entirely deprived the mills up the weſtern country as far as *Reading* of their wonted employment; probably without rendering any benefit to the proprietory, or advantage to the public by lowering the price of bread. Weſtward of the ſame road and bridge, is a *plate glaſs manufactory*, incorporated in the year 1773, the glaſs being principally manufactured near *Wigan* in *Lancaſhire*, and conveyed to this warehouſe. Here are produced thoſe very large plate glaſſes which, for many years, could only be obtained from *France*.

More to the weſtward, on the banks of the river, at *Cuper's bridge*, is erected a ſquare tower, of conſiderable heighth, for the purpoſe of making ſhot of a ſuperior quality (from their more perfect roundneſs) than that produced by the ordinary mode of manufacture. This is likewiſe carried on, excluſively, by the proprietor, under letters patent.

SECT. X.

Of HAMPSHIRE, HANTS, *or* SOUTHAMPTON; *the Iſles of* WIGHT, JERSEY, GUERNSEY, ALDERNEY *and* SARK.

THIS county, though called *Hampſhire*, or *Hants*, is properly the county of *Southampton*, and is bounded on the eaſt by *Surry* and *Suſſex*, on the ſouth by the *Britiſh* channel, on the weſt by *Wiltſhire* and *Dorſetſhire*, and on the north by *Berkſhire*. It extends, excluſive of the iſle of *Wight*, forty-two miles in length from north to ſouth, thirty-eight from eaſt to weſt, and is about one hundred and fifty miles in circumference. It is divided into thirty-nine hundreds, and contains nine foreſts, twenty-nine parks, one city, twenty market-towns, 253 pariſhes, above 36,000 houſes, and by the moſt moderate computation 180,000 inhabitants, who elect twenty-ſix members of parliament, two for the county, two for the city of *Wincheſter*, and two for each of the following towns, *Southampton*, *Portſmouth*, *Petersfield*, *Yarmouth*, *Newport*, *Stockbridge*, *Andover*, *Whitchurch*, *Lymington*, *Chriſt-church*, and *Newton*.

The air is mild and wholeſome; except a ſmall part, conſiſting of low grounds next the ſea, which are viſited by the ſea-vapours; but without the bad effects uſually experienced by a moiſt air in other counties. The ſoil is generally rich, and the county affords plenty of *corn*, *cattle*, *wool*, *bacon*, *wood*, *iron*, and *honey*. The ſheep are remarkably good, but ſmall, and valued both for their fleſh and wool. The *bacon* of this county is eſteemed the beſt in *England*, and its *honey*, except that gathered on the heaths, bears a high price; and of this the inhabitants make moſt excellent mead and metheglin. The excellency of the *Hampſhire* bacon is attributed to the ſwine being ſupplied with plenty of acorns from the *New Foreſt* and other woods, in which they are ſuffered to run at large. The ſea-coaſt here furniſhes *oyſters*, *lobſters*, and other ſea-fiſh, and its rivers abound in freſh fiſh, eſpecially *trouts*. There is no county in *England* ſo well wooded as this; and though the vaſt conſumption of timber at *Portſmouth*, *Southampton*, *Redbridge*, and other places, ſince the Revolution, in building men of war and ſmaller veſſels, has conſumed great quantities, yet there is ſtill a conſiderable growth of timber remaining; and with proper attention a ſucceſſion of oaks might be ſecured for future generations, although the laſt war made great havock among them. In *New Foreſt* there are oaks of ſeveral hundred years growth.

The rivers of this county are the *Avon*, which enters it at *Charford*, and running ſouthward diſcharges itſelf into the ſea below *Chriſtchurch*: the *Teſe*, which riſes in the north-weſtern part of *Hampſhire*, and running alſo ſouthward forms ſeveral iſlands at *Stockbridge*, and falls into an arm of the ſea called *Southampton-water*: the other rivers are the *Stowre*, and the *Itching*, or *Itchen*.

The gentry here delight much in fox-hunting, the woods and downs being proper for breeding and hunting theſe animals; and the beſt fox-hounds are ſaid to be bred in this county. *Kerſeys* and woollen cloth are made here, though not in ſuch plenty as in the neighbouring counties of *Wiltſhire*, *Somerſetſhire*, and *Glouceſterſhire*. The convenient ports and harbours in this county have procured it a good foreign trade. The principal places in it are the following:

WINCHESTER, or WINTON, a very ancient city, called by the *Britons*, *Caer Gwent*, which ſignifies the *White Town*, from the chalky hills near it; and by the *Saxons*, *Wintanceſter*. It is pleaſantly ſituated in a valley between hills, on the river *Itching*, which is navigable for barges ſixty-ſix miles to the ſouth-weſt of *London*. This city at a diſtance has a venerable appearance, and yet has many modern buildings, ſome of them very handſome ſtructures, as the college-ſchools, with the epiſcopal palace, built by biſhop *Morley*, A. D. 1662. It has one ſpacious ſtreet; but the reſt are moſtly narrow, and the walls greatly decayed. The town-hall is built like an old chapel, ſupported by pillars, and in it are two ailes. Over the court of *Niſi Prius*, above the judge's ſeat, is fixed againſt the wall the pretended round table of king *Arthur*, with the names of the knights upon it, in ſuch *Saxon* characters as no man can read. This is ſaid to be a piece of antiquity of twelve hundred years ſtanding; but *Camden* and other antiquaries, imagine it to be of a much later date. In former times there were in this city no leſs than thirty-two pariſh-churches, which are at preſent reduced to five, excluſive of the cathedral; and even theſe are more than are filled. This city was as much diſtinguiſhed, and as highly honoured, in ancient times, as any place in the kingdom; it was long the reſidence of king *John*, and was alſo the birth-place of his ſon, afterward *Henry* III. here too *Arthur*, ſon of *Henry* VII. was born.

On entering at the weſt-door of the cathedral, it preſents a venerable and majeſtic appearance; the vaulting of the roof is beautiful; but the pillars on each ſide are much too thick for the ſpaces of the arches. The entrance into the choir is by a noble and very broad flight of ſteps;

and the ſcreen, which was deſigned by *Inigo Jones*, is a fine piece of architecture of the *Compoſite* order. The ſtalls in the choir are of fine *Gothic* workmanſhip, to which the biſhop's throne, erected at the expence of biſhop *Mew*, A. D. 1684, would have been a great additional ornament, had it been *Gothic*, and of a piece with the reſt. The ſtone ſcreen, where the high altar is placed, is a fine piece of *Gothic* work; but the angles of the niches, where formerly were images, being chipped away, in order to make room for a number of urns, diſgrace this fine piece.

In this cathedral are many objects worthy of attention. It was for ſome ages the burying-place of the *Saxon*, *Norman*, and *Engliſh* kings: the relics of ſome of theſe were collected by biſhop *Fox*, about A. D. 1500, and being put together into ſix large wooden cheſts, lined with lead, were placed on the great wall in the choir, three on one ſide, and three on the other, with an account of whoſe bones are in each cheſt, namely, thoſe of *Egbert*, *Adulphus*, *Edredus*, *Edmundus*, *Canutus*, and queen *Emma*. The tomb-ſtone of *William Rufus* is in the midſt of the choir. The tomb of *William* of *Wickham*, who built the cathedral, and who died A. D. 1404, is very ſpacious, lofty, and magnificent; as is alſo the tomb of cardinal *Beaufort*, his ſucceſſor in the ſee, brother to king *Henry* IV. with ſeveral others.

Beſide the two ancient biſhops above mentioned, the ſee of *Wincheſter* was filled by cardinal *Wolſey*, in 1529, who was ſucceeded in 1531 by *Stephen Gardener*; and it was held from 1734 to 1761 by Dr. *Benjamin Hoadley*.

In the ſouth ſuburb ſtands the college, erected by *William* of *Wickham*, which is a noble foundation. The building conſiſts of two large courts, in which are lodgings for the maſters and ſeventy ſcholars, and in the centre is a very elegant chapel. In the ſecond court are the ſchools, with a large cloiſter beyond them, and ſome incloſures laid open for the diverſion of the ſcholars. There is alſo a great hall, where they dine, and in the middle of the cloiſters is a library. The ſcholars, after ſtaying here a certain time, may remove to *New College*, *Oxford*, which was built by the ſame prelate. Not far from hence is St. *Croſſe's*, an hoſpital for thirteen brothers, with a daily allowance of bread and beer for poor travellers. There is here alſo an infirmary for the reception of ſick and lame, which is a very handſome modern ſtructure, built of red brick, and ſupported by voluntary ſubſcription.

In the place where the ancient caſtle ſtood, which was at the ſouth ſide of the weſt gate, upon an eminence commanding the town, king *Charles* II. employed Sir *Chriſtopher Wren* to build a ſtately palace, upon which he had expended twenty-five thouſand pounds, when his death put a ſtop to the deſign. King *George* I. made a preſent to the duke of *Bolton* of the fine columns of *Italian* marble, which were to have ſupported the grand ſtaircaſe, and were ſaid to have been a preſent from the great duke of *Tuſcany*. This ſtructure was fitted up for the *French* priſoners taken during the war of 1755.

Wincheſter is about a mile and a half within the walls. Although the river is here navigable for barges, yet it has no trade, except what is cauſed by the inhabitants of the city and the neighbourhood. Here is a great deal of good company, and the many gentry in the neighbourhood add to the ſociableneſs of the place: the clergy are alſo numerous, and in general rich.

The city is governed by a mayor, a recorder, ſeveral aldermen, ſix of whom are always juſtices, with a ſheriff, two bailiffs, and four conſtables. On St. *Giles's-hill*, near this city, is held, on the 12th of *September*, one of the greateſt fairs in *England* for horſes, cheeſe, and leather; and another on *Magdalen-hill*, *Auguſt* the ſecond, for the ſame purpoſes.

ANDOVER, a large borough, ſixty-two miles to the weſt-by-ſouth of *London*, is a great thorough-fare on the direct weſtern road, as well from *Newbury* to *Saliſbury*, as from *London* to *Taunton*, and all the manufacturing towns in *Somerſetſhire*, by which means it is greatly enriched. It is very healthy, and pleaſantly ſituated on the borders of the downs, commonly called *Saliſbury-plain*, and is a thriving, handſome, well-built, and populous town, with a manufacture of *ſhalloons*, and a great *malting* trade.

Near this town is the village called WEY-HILL, where the open down-country begins, and where is held the greateſt fair for ſheep in this nation, principally of ewes for ſtore-ſheep; great quantities of leather, hops, and cheeſe, are alſo ſold at this fair, which is held on the tenth of *October*.

BASINGSTOKE, a great thoroughfare town on the weſtern road, where is a weekly market, on *Wedneſdays*, for corn, and two fairs annually, ſome woollen manufactures are likewiſe carried on here; a little to the north of which is *Baſing-houſe*, which in the civil war was the ſeat of the marquis of *Wincheſter*, who adhering to the cauſe of the king, ſuſtained there a long ſiege, againſt the whole of the parliament army, which at length retired from before it; it was however afterward attacked by *Cromwell*, who took it by ſtorm.

SOUTHAMPTON, the county town, is ſituated ſeventy-ſix miles to the weſt-ſouth-weſt of *London*, between two rivers, the *Itching* on the eaſt, and the *Teſe*, or *Anton*, on the weſt, which falls into an arm of the ſea called the *Southampton-water*, or *Teſſanton-bay*, which is very deep, ſo that ſhips of five hundred tons have been built here. The town has quays for the loading and unloading of merchandize, which renders it a place of good trade, and it is well inhabited by merchants and ſhop-keepers. It is ſurrounded with ſtrong walls and a double ditch, with ſeven gates, and ſeveral watch-towers: it had alſo a ſtrong caſtle to defend the harbour, placed on a high mount; but it is now in ruins. Here is ſaid to be one of the broadeſt ſtreets in *England*, three quarters of a mile long, well paved and flagged on each ſide, terminating in the fine quay. It contains five pariſh-churches, with one for the *French* refugees; and an hoſpital called *God's-houſe*; alſo a free-ſchool founded by king *Edward* VI. and a charity-ſchool ſupported by ſubſcription. In the town are four public conduits, to which water is conveyed from the neighbourhood by leaden pipes. Formerly all the canary wine brought into the kingdom was obliged to be firſt landed here; till the *London* merchants, finding this an inconvenience, purchaſed that privilege of the corporation, and had their wines afterward brought directly to *London*. Some merchants trade in *Port* and *French* wines; but their greateſt dealings are with *Jerſey* and *Guernſey*, and to *Newfoundland* for fiſh. The town is governed by a mayor, and the aſſizes are uſually kept in the town-hall. This place is memorable for the expedient taken by king *Canute* to ſilence the flattery of his courtiers: for which purpoſe he ſeated himſelf on the bank of the river, dreſſed in all his regal ornaments, and commanded the tide not to approach his footſtool; but it ſoon wetting his feet, he very pointedly cenſured their impiety and ſervility.

RUMSEY, about ſix miles W. N. W. from *Southampton*, has a large manufacture of *ſhalloons*, called *rattinets*, and has three annual fairs. It is likewiſe famous for its *brewery*.

PORTSMOUTH, a ſtrong ſea-port town, ſeventy-three miles to the ſouth-weſt of *London*; the key of *England* on that ſide, and a regular fortification, at the entrance of a creek in *Portſey* iſland, which is about fourteen miles in circuit, and ſurrounded at high tides by the ſea-water, of which ſalt is here made: it is alſo joined to the continent by a draw-bridge, where was anciently a ſmall caſtle and town called *Port Perus*, or *Port Cheſter*, at which *Veſpaſian* landed: this town and caſtle ſtood at the upper end of the creek; but upon the retiring of the ſea, the inhabitants followed it, and this gave riſe to the building of the preſent town. *Portſmouth* is one of the principal ports for building and laying up the royal navy, it being furniſhed with wet and dry docks, and vaſt magazines of naval and military ſtores: the rope-houſe in particular is one continued room eight hundred and ſeventy feet, or about a ſixth part of a mile in length.

In *Portſmouth-haven* a thouſand ſail of the largeſt ſhips may ride at anchor. The mouth, which is not much broader than the *Thames* at *Weſtminſter-bridge*, is ſecured on the *Goſport* ſide by four forts; on the other ſide by *South-ſea-caſtle*; and a number of additional works have been lately raiſed, ſo as to render the place impregnable. The harbour is ſo ſecured from winds, that they cannot blow from any point of the compaſs to the detriment of the ſhips at anchor in it; and is ſo deep, that a firſt-rate man of war can ride at the loweſt ebb without touching the ground; on the other hand, there is a boom, or chain, at its entrance, that in caſe of danger can be raiſed and faſtened immediately on both ſides, ſo as to ſtop any naval force; and if attacked by ſea, the enemies ſhips muſt come directly under *South-ſea-caſtle*, and afterward be expoſed to a long train of cannon from the town and the block-houſe, which cannot fail to rake them fore and aft, for a mile together, before they reach the haven's mouth.

A capital convenience to the harbour of *Portſmouth* is the ſafe and ſpacious road of *Spithead*, which lies between the continent of *Hampſhire* and the *Iſle of Wight*, and is about twenty miles in length, and in ſome places no leſs than three in breadth. It is defended from all winds blowing from the weſt to the ſouth-eaſt by the high lands of the *Iſle of Wight*, and from the winds of the oppoſite quarter by the mainland of *Hampſhire*, the town of *Portſmouth* fronting the middle of the road.

The town is ſtrong on the land ſide, it being encompaſſed by a wall, and the many additional works that have been lately made. The men continually employed in the dock-yard amount to at leaſt a thouſand, and their number is greatly increaſed in time of war. The docks and yards are a kind of marine corporation within themſelves.

The ſituation of *Portſmouth* is low, and ſo full of water and ditches, as to be eſteemed agueiſh. The ſtreets are dirty, and have conſequently a diſagreeable ſmell; but the continual reſort of ſeamen and ſoldiers renders it always full of people, eſpecially in time of war. The place is in want of freſh water; and, though ſeated in a plentiful country, the great conſumption makes all ſorts of proviſion dear; as are alſo lodgings and fuel. Here is a garriſon and deputy-governor; the church is a large and handſome ſtructure, and from the watch-tower to the top of the ſteeple is a fine proſpect of the harbour, as well as of *Spithead*. It has a fine new quay for laying up cannon; and alſo a ſchool founded by government, for the inſtruction of youth in the mathematics and navigation, to qualify them for the ſea-ſervice.

On the adjoining heath a ſuburb has been built, which, for number of inhabitants, and beauty of the houſes, is likely to exceed the town itſelf. It has a church, a chapel, and ſeveral meeting-houſes.

The government of *Portſmouth* is by a mayor and aldermen. On the third of *July*, 1760, a dreadful fire broke out at twelve in the morning in the dock-yard, in a fine pile of building, the flames raged with ſuch fury, that the whole was deſtroyed. In the warehouſes that were conſumed were depoſited a thouſand and fifty tons of hemp, five hundred tons of cordage, and about ſeven hundred ſails, beſides many hundred barrels of tar and oil; yet with all this devaſtation, ſuch was the diligence exerted, and ſuch the quantity of ſtores at *Chatham*, and in other magazines, that the loſs was ſoon ſupplied without much affecting the operations of the war which was then carrying on. Another fire happened here in the year 1770, and on the ſeventeenth of *December* 1776, the rope-houſe was maliciouſly ſet on fire, when great quantities of naval ſtores were conſumed. The perpetrator of this atrocious crime was afterward diſcovered, and being convicted thereof, was executed. This man's real name was *James Aitkin*, but he was commonly called *John the Painter*.

In *June* 1773, his majeſty viſited this town, ſurveyed the dock-yards with great attention, and reviewed a grand fleet of men of war aſſembled here for the purpoſe: during his ſtay, he ſlept four nights at the commiſſioner's houſe.

GOSPORT is parted from *Portſmouth* by a narrow arm of the ſea; it is a pretty large town, and has a good trade in time of war; it has lately been improved by ſome additional fortifications.

At *Haſlar*, near *Goſport*, a noble *hoſpital* for ſick and wounded ſeamen was begun to be built, ſoon after the breaking out of the war of 1755, and completed in the year 1762, at an expence of upward of ten thouſand pounds, which was voted by parliament.

NEW FOREST, ſituated in that part of *Hampſhire* which is bounded on the eaſt by *Southampton-water*, and on the ſouth by the *Britiſh Channel*, poſſeſſes advantages of ſituation with reſpect to conveyance by water-carriage and vicinage to the dock-yards, ſuperior to every other foreſt, having in its neighbourhood ſeveral ports and places for ſhipping timber, among which *Lymington* is at the diſtance of only two miles, *Bewley* about half a mile, and *Redbridge* three or four miles from the foreſt; and the navigation to *Portſmouth*, the moſt conſiderable dock-yard in this kingdom, is only about thirty miles from the neareſt of thoſe places. *Fifth Report of Commiſſioners to examine into the Crown Lands*, &c.

Domeſday book contains a full account of every field, farm, or eſtate afforeſted, in hides, carucates, or veigates, by which the extent of land was then computed; together with the names of the hundreds, villages, and former proprietors, who were for the moſt part *Saxon*, the rent, or yearly value of each poſſeſſion, and the tax which had been paid for it to the crown, during the reign of *Edward* the Confeſſor, before the inhabitants were expelled, and that part of the country laid waſte by order of *William* the Conqueror; which cruel act has been ſuppoſed to be avenged by the caſual death of his two ſons, *Richard* and *William Rufus*, and his grandſon *Henry* in that very foreſt.

> Stretch'd on the lawn his ſecond hope ſurvey,
> At once the chaſer, and at once the prey.
> Lo *Rufus*, tugging at the deadly dart,
> Bleeds in the foreſt like a wounded hart. POPE.

According to the perambulation made, and plan taken in the reign of *Charles* II. the foreſt extends from *Godſhell* on the N. W. to the ſea on the S. E. about twenty miles, and from *Hardley* on the E. to *Ringwood* on the W. about fifteen miles; and contains within theſe limits, about 92,365 ſtatute acres; all of which is not however foreſt-land, or, at preſent, the property of the crown; for within thoſe limits are manors, and other conſiderable freehold lands belonging to individuals; there are likewiſe copyhold, or cuſtomary lands belonging to the king's manor of *Lyndhurſt*, ſo that about 63,845 acres are the woods and waſte lands of the foreſt, which are divided into nine bailiwicks, and theſe are ſubdivided into fifteen walks. The officers are, a lord-warden, lieutenant, riding foreſter, two rangers, woodward, under-woodward, four verderers, ſteward, under-ſteward, nine foreſters, twelve regarders, and thirteen under-foreſters. The preſent eſtabliſhment is attended with an expence of 3,400*l. per annum*.

By the report above quoted, it appears, that the foreſt, although particularly favourable to the growth of timber, yet is much perverted from that great public object. It is ſo much overſtocked with deer, that many die of want every year; in the winter of 1787, not leſs than three hundred died in one walk; great waſte and deſtruction is made of the hollies and thorns, which afford the beſt nurſery and protection for young trees; incloſures favourable to the growth of timber are converted into rabbit warrens, and many of the keepers deal largely in ſwine. The commiſſioners therefore recommend, that the deer be given up, the rabbits exterminated, the breed of ſwine be regulated, and the incloſures be carefully kept up. It is ſtated, that in the year 1783 only a fifteenth part of the timber was growing in the foreſt, which was found there in 1608; but it will ſtill yield a ſupply of a thouſand load a year, and it may be expected, if ſuch a plan of management is adopted as ſhall make the increaſe and preſervation of the timber its ſole object, the foreſt may be brought to produce at leaſt as much as it did formerly. Although the annual demand for rough timber for the king's dock-yards, is, one year with another, 25,000 loads, yet many ſhips of war being built in private dock-yards, by contract with the navy-board, the whole quantity conſumed in ſupport of the navy, from *October* 1760, to the end of the year 1788, was 1,285,306 loads, or 45,904 loads yearly on an average. *Report*, *p.* 37.

The ISLE OF WIGHT, is generally included under *Hampſhire*. The form of this iſland has been aptly compared to a bird with expanded wings. *Aiken*, *p.* 298. It is twenty-one miles broad from E. to W. thirteen from N. to S. in the middle where longeſt, an ſixty in circumference. The moſt eaſterly point of the iſland lies oppoſite to *Portſmouth*, and the moſt weſterly oppoſite to *Chriſtchurch*. It is encompaſſed with rocks, eſpecially toward *France*, of which the moſt noted are the *Shingles* and the *Needles* in the weſtern point; in other parts it is protected by cliffs of chalk and free-ſtone. Theſe render it in moſt places inacceſſible; and where the ſhore is almoſt level, and lies expoſed, as it does toward the S. E. it is fortified by caſtles forts, and block-houſes.

The air is very healthy, the proſpects rich, extenſive, and moſt pleaſingly variegated, and the ſoil uncommonly fruitful, it producing corn enough in one year to ſerve the inhabitants ſeven; and this enables them to export great quantities, particularly of *barley*, to *England* and elſewhere. There is every where plenty of hares, rabbits, partridges, pheaſants, lapwings, and variety of wild-fowl; it has two parks ſtocked with deer; but only one ſmall foreſt, ſo that the inhabitants are obliged to fetch their wood from the neighbouring coaſts. Through the middle of the iſland runs a long ridge of hills from E. to W. which afford paſture for ſheep, whoſe wool is remarkably fine. In the north part is very good paſturage and meadow-ground. The ſouthern is in a manner all a corn country, incloſed with hedges and ditches. Here is found the beſt tobacco-pipe clay, and fine white cryſtalline ſand, of which great quantities are uſed in the manufacture of glaſs. The inhabitants have alſo abundance of ſea-fiſh.

The natives are generally long-lived, vigorous, and able to undergo much labour. The iſland contains four market-towns, of which three ſend members to parliament; namely, *Newport*, *Newton*, and *Yarmouth*; four caſtles, fifty-two pariſhes, above three thouſand houſes, and near twenty-ſeven thouſand ſouls, of which it is ſaid five thouſand are fit to bear arms. The militia are ſo well diſciplined by their officers, that they are reckoned as good ſoldiers as any in the kingdom. There are ſeveral beacons in the iſland, at which continual watch is kept to give notice of the approach of an enemy.

The government of the iſland, is a poſt of great truſt. In eccleſiaſtical affairs it is ſubject to the biſhop of *Wincheſter*, and in civil affairs to the county of *Southampton*.

The river *Cowes*, which runs from ſouth to north, falls into the ſea near the town and caſtle of *Cowes*. Veſſels of ſmall burden come up to the quays, but the larger ſhips are unloaded, and the merchandize brought up hither in barges.

The other places of moſt importance are two pretty towns, both named COWES, one on the eaſt and the other on the weſt ſide of the river of the ſame name. WEST COWES is the moſt flouriſhing town in the iſland; it has a caſtle, built by *Henry* VIII. Several merchants live here, and have handſome houſes; but the town lying low is not eſteemed very healthy. This is a place of general rendezvous for merchant-ſhips that wait for convoys.

There are many antiquities on this iſland, among which Sir *Richard Worſley* mentions the *convent*, or *oratory* of the Holy Trinity of *Burton* or *Barton*, founded in the year 1282, but diſſolved long before the general ſuppreſſion of monaſtic foundations, having been ſurrendered, in the year 1439, into the hands of the biſhop, and granted to the college of *Wincheſter*: it is ſtill held by the wardens and fellows of *Wincheſter* college. *Cariſbrooke Priory* is likewiſe of great antiquity, there being grants now exiſting which were made in the reigns of *Stephen* and *John*.

CARISBROOKE CASTLE was built by *William Fitz-oſborne*, earl of *Hereford*, the firſt lord of the iſle, ſoon after the *Norman* conqueſt, and all lands on the iſland were held of the lord by the ſervice of defending this caſtle againſt an enemy; whence it was called "the honour of *Cariſbrooke*." The *caſtle* ſtands on a riſing ground, about a mile S. W. of *Newport*. There are outworks about three quarters of a mile in circuit, encloſed by a deep ditch; theſe were added by queen *Elizabeth*, and are ſaid to have been conſtructed on the ſame plan as thoſe at *Antwerp*. There is a well here ſuppoſed to have been three hundred feet deep, but it has been partly filled up; and there is another in the caſtle yard more than two hundred feet deep, from whence the water for the uſe of the garriſon was drawn, by means of a large wheel, turned by an aſs, which duty was for forty years performed by the ſame animal, which died about ten years ago (from 1790). Down this well it is uſual to drop a pin, which, after a lapſe of about three ſeconds of time, produces a greater ſound than can well be conceived by thoſe who have not heard it. *Sir Richard Worſley's hiſtory, &c.* The lords of the iſland, and the governors ſince their time, have made this caſtle their place of reſidence, which has likewiſe been rendered remarkable by being the place of confinement of *Charles* I. during ten months.

In the *Engliſh Channel* are four other iſlands oppoſite to *Dorſetſhire*, and ſubject to *England*; theſe are *Jerſey*, *Guernſey*, *Alderney*, and *Sark*; which, though they lie much nearer to the coaſt of *Normandy* than to that of *England*, are within the dioceſe of *Wincheſter*. Theſe iſlands are all that remain of the poſſeſſions held by the ancient dukes of *Normandy*, who became kings of *England*, and, as they have never been wreſted from the *Engliſh*, have now been held by the crown more than ſeven hundred years. They lie in a cluſter in *Mount St. Michael's Bay*, between *Cape La Hogue* in *Normandy*, and *Cape Frebelle* in *Brittany*. The computed diſtance between *Jerſey* and *Sark* is four leagues, between that and *Guernſey* ſeven leagues, and between the ſame and *Alderney* nine leagues.

JERSEY, the largeſt of theſe iſlands, lies fartheſt within the bay, in 49° 11′ N. latitude, and in 2° 10′ W. longitude from *Greenwich*, eighteen miles to the weſt of *Normandy*, and eighty-four to the ſouth of *Portland* in *Dorſetſhire*. In the time of the *Romans* it was called *Cæſarea*. It is not above twelve miles in length, nor much above ſix where broadeſt, which is at the two extremities. It is defended by rocks and dangerous quickſands. On the north ſide, the cliffs riſe forty or fifty fathoms high, which render it inacceſſible on that ſide; but on the ſouth the ſhore is almoſt level with the water. In the weſt part of the iſland is a large tract of land once cultivated and very fertile, but now a barren deſart, cauſed by the weſt winds throwing up ſand from the bottom to the top of the higheſt cliffs. The higher lands are diverſified by gritty, gravelly, ſtony, and fine mould; the lower by a deep, rich, and heavy ſoil. The middle part of the iſland is ſomewhat mountainous, and ſo thick planted with trees, that at a diſtance it reſembles one entire foreſt; though in walking through it, there is hardly a thicket or any thing to be ſeen but hedge-rows and orchards of apple-trees. The valleys under the hills are finely watered with brooks, and have plenty of cattle and ſmall ſheep, with very fine wool; theſe furniſh very ſweet meat, which is aſcribed to the ſhortneſs of the graſs. The horſes are good for draught; but few fit for the ſaddle. The iſland produces variety of trees, roots, and herbs; but not corn enough for the inhabitants, who therefore ſend for it to *England* and *France*, and ſometimes to *Dantzic*. The fields are incloſed by great mounds of earth, raiſed from ſix to eight or ten feet high, proportionably thick and ſolid, planted with quickſets and trees.

There is no place in the world of the ſame extent that produces ſo much cyder, it being computed that in ſome years they have made twenty-four thouſand hogſheads. Though the whole iſland is in a manner one entire rock, there is ſcarce a houſe, even on the higheſt hill, but has ſome ſpring near it.

Here are abundance of hares and rabbits; the country alſo abounds with ſea-fowl, and the common ſorts of land-fowl, both tame and wild, eſpecially barnacles, or *Soland* geeſe, which come only in very cold weather. The partridges of this iſland have red feet and eyes, like a pheaſant, and feathers of various colours. This is indeed a beautiful bird; but the fleſh is not more delicate than that of the grey partridges in *England*. They have alſo a great variety of ſea-fiſh, ſome kinds of which are ſeldom ſeen on our coaſts.

As the air of this iſland is very healthy, thoſe of the inhabitants who are temperate live to a great age; but the coaſt is very ſubject to ſtorms by weſterly winds, from which they have no land to ſhelter them, the expanſe of the *Atlantic Ocean* lying between them and *North America*; and there is a vaſt chain of rocks about the iſland, among which the tides and currents are ſo ſtrong and rapid, that the navigation is extremely dangerous to thoſe who are not perfectly acquainted with the coaſt.

The inhabitants, who are computed to amount to above twenty thouſand, have a mixture of *Engliſh* and *French*; but *French* is moſt generally the language both of the pulpit and the bar.

The buildings of this iſland are generally of rag-ſtone; but ſome of the wealthy inhabitants have their houſes fronted with a reddiſh white ſtone, capable of being poliſhed like marble, and of which there is a rich quarry on a hill called *Montmado*. Their churches and ſome of their edifices are covered with blue ſlate; but the ordinary dwellings are thatched.

The ſtaple manufacture here is knit ſtockings and caps, many thouſand pairs of which are weekly ſold at *St. Helier* to the merchants. Their principal foreign trade is to *Newfoundland*.

The chief officer is the governor, who has the cuſtody of his majeſty's caſtles, with the command of the garriſons and the militia of the country, which conſiſts of two troops of horſe-guards, and five regiments of foot, in which are included all the men in the iſland. The civil government is adminiſtered by a bailey, aſſiſted by twelve jurats. They have here alſo what they call an aſſembly of the ſtates, which reſembles in miniature the parliament of *Great Britain*.

The iſland is divided into twelve pariſhes, which are ſo laid out that each has a communication with the ſea; theſe are ſubdivided into fifty-two vintaines, ſo called from the number of twenty houſes, which each is ſuppoſed to have formerly contained, juſt as in *England* ten houſes anciently made a tything. The principal places in the iſland are,

ST. HELIER, the capital, is ſeated in the bay of *St. Aubin*, where it has a harbour and a ſtone pier, having the ſea on the S. W. and hills on the N. that ſhelter it from the cold; another large hill projects in a manner over the town, and has an agreeable walk affording an extenſive proſpect. The town conſiſts of above four hundred houſes, and the ſtreets are wide and well paved. It is chiefly inhabited by ſhop-keepers, artificers, and retailers of liquor, ſo that nothing either neceſſary or convenient is wanting here. The number of inhabitants is computed to amount to at leaſt two thouſand. In the church, prayers are read alternately in *Engliſh* and *French*.

ST. AUBIN, another town on this iſland, has a good port, which is much frequented.

On the 1ſt of *May*, 1779, a body of *French* troops being embarked on board ſmall craft, and being ſupported by five frigates, ſailed from *St. Maloes*, and attempted to make a deſcent on this iſland; but by the vigilance of the lieutenant-governor, and the bravery and ſpirit of the garriſon, they were obliged to retire.

In the year 1781, the Baron *de Rullecourt*, at the head of 2000 men, ſailed from *Granville* for the ſame purpoſe, but being overtaken by a ſtorm, half his force was driven back to *France*, yet with the remainder he landed, about three miles from *St. Helier*, but the weather continued ſo tempeſtuous that 200 of his men, with a privateer and four ſmall veſſels were loſt among the rocks. Here he ſurprized the watch, which was compoſed of militia, and entering the town of *St. Helier*, took priſoner the lieutenant-governor, whom he compelled to ſign a capitulation for the iſland. *Elizabeth's-caſtle* however ſtood out, and the force upon the iſland being haſtily drawn together, by major *Pierſon*, of the 95th regiment, he proceeded to a very judicious attack upon the town. The Baron *de Rullecourt* in the conflict received a mortal wound, and his troops, ſenſible of the hopeleſſneſs of their ſituation, ſurrendered to the captive governor; but alas! the hero who atchieved this deliverance, and who had probably never been before engaged in actual ſervice, being only twenty-five years of age, received a ſhot through the heart at the moment when his triumph was complete.

GUERNSEY extends from E. to W. in the form of a harp, and is thirteen miles and a half from the S. W. to N. E. and twelve and a half, where broadeſt, from E. to W. The air is very healthful, and the ſoil naturally more rich and fertile than that of *Jerſey*; but the inhabitants neglect the cultivation of the land, for the ſake of commerce: they are, however, ſufficiently ſupplied with corn and cattle, both for their internal conſumption and their ſhipping.

The iſland is well fortified by nature with a ridge of rocks, one of which abounds with emery, uſed by lapidaries in the poliſhing of ſtones, and by various other artificers. Here is a better harbour than any in *Jerſey*, which occaſions its being more reſorted to by merchants; and on the ſouth-ſide the ſhore bends in the form of a creſcent, encloſing a bay capable of receiving very large ſhips. The iſland is famous for a beautiful flower called *lilium ſarnienſe*, the leaves of which are covered with ſpangles reſembling gold duſt. It is full of gardens and orchards, whence cyder is ſo plentiful, that the common people uſe it inſtead of ſmall beer, and the more wealthy drink *French* wine.

The only harbour is at *St. Peter le Port*, a little market-town on the ſouth-eaſt ſide of the iſland, which has only one long and narrow ſtreet. The mouth of the harbour is well ſecured by rocks, and on each ſide defended by a caſtle. At this town generally reſides the governor of the iſland, who has the command of the garriſon in this and all the other caſtles. The pier is a noble work, formed of vaſt ſtones, joined together with great art and regularity: it is not only a ſecurity to the ſhips, but, being contiguous to the town, is handſomely paved at the top with large ſmooth flag-ſtones, guarded with parapets, and being of a great length and breadth, forms a pleaſant walk, it affording a free proſpect of the ſea and the neighbouring iſlands.

ALDERNEY is about eight miles in compaſs, and is by much the neareſt of all theſe iſlands to *Normandy*, from which it is ſeparated by a narrow ſtreight called *the Race of Alderney*, which is a dangerous paſſage in ſtormy weather, when the two currents meet, otherwiſe it is ſafe, and has depth of water for the largeſt ſhips. This narrow channel ſerved to favour the retreat of the *French* fleet after the memorable battle off *La Hogue*, in the year 1692. This iſland produces that breed of cattle without horns, the females of which have of late been imported into *England* on account of their milk.

The iſland is healthy, and fruitful both in corn and paſture; but has only one church and one town, in which are about two hundred houſes, and a thouſand inhabitants. The iſland is a dependency on *Guernſey*, and has but one harbour to the ſouth, called *Crabbie*, which is at a conſiderable diſtance from the town, and capable of receiving only ſmall veſſels. From hence to the weſt is a range of rocks extending three leagues, which, having ſeveral eddies, are dreadful to mariners, who call them all by the name of the *Caſquets*, from the principal rock at the head of the reſt.

SARKE, or SERKE, is another ſmall iſland dependant on *Guernſey*, and in the middle of all the reſt. The air is ſerene, and generally free from fogs and clouds; and though they have no phyſicians in the iſland, it is common to meet men of upwards of fourſcore years of age. It contains ſix fine ſprings, and the ſoil, though for the moſt part hot and ſandy, is ſo fruitful as to afford all neceſſaries for its inhabitants, and particularly bears all kinds of roots, and is well ſtocked with apple-trees, of which is made excellent cyder; it alſo produces moſt kinds of grain; but not in any extraordinary quantity. Their paſture is ſhort, though exceeding ſweet, and therefore they have fine mutton; but no more cows than are ſufficient to ſupply them with milk and butter; for they have generally their cheeſe from *England*. The iſland alſo abounds in *ducks*, *mallard*, *woodcocks*, *teal*, and other wild fowl; and the *cliff-pigeons*, at ſome ſeaſons, almoſt cover the whole iſland. Of *rabbits* they have great plenty, and alſo a variety of ſea-fiſh.

The trade here extends no farther than to *Briſtol*, and ſome of the weſtern ports, and the chief, if not the only manufacture in the iſland is knitting of ſtockings, gloves, and waiſtcoats, in which the men, women, and children are employed.

SECT. XI.

Of BERKSHIRE.

BERKSHIRE is bounded on the N. by *Buckinghamſhire* and *Oxfordſhire*, the *Thames* running in that direction, and nearly forming the boundary; on the E. by *Surry*; on the S. by *Hampſhire*; and on the W. by *Wiltſhire* and a point of *Glouceſterſhire*. It is of an irregular ſhape, the northern ſide being much indented by the winding courſe of the *Thames*. Its greateſt extent from the N. W. point, where it joins *Glouceſterſhire*, to its eaſtern extremity, near *Windſor*, where it meets in a point the counties of *Bucks*, *Middleſex*, and *Surry*, exceeds fifty miles; its longeſt part from N. to S. including on the N. a peninſula which runs into *Oxfordſhire*, toward *Woodſtock*, and on the S. where the counties of *Hampſhire* and *Wiltſhire* join, is about twenty-five miles: its circumference may be about an hundred and twenty miles. It contains about ſeventeen thouſand houſes, eighty-five thouſand inhabitants, ſixty-two vicarages, a hundred and forty pariſhes, ſix hundred and ſeventy-one villages, and twelve market-towns.

The whole county is divided into twenty hundreds, and ſends nine members to parliament, namely, two for the county, two for *New Windſor*, two for *Reading*, two for *Wallingford*, and one for *Abingdon*.

The air is generally exceeding healthy, the ſoil very fertile, where cultivated, and the whole county, which is one of the moſt pleaſant in *England*, is well ſtocked with cattle and timber; particularly with oak and beech in the weſtern parts, and in *Windſor Foreſt*; which alſo abound with wild-fowl and other game. The weſtern part is the moſt fruitful, eſpecially what is called *the Vale of White-horſe*, ſo named from the bare ſide of a chalky hill, which is formed to repreſent that animal, and, leſt its ſhape ſhould be impaired, the neighbouring inhabitants once a year beſtow ſome pains in trimming it, and then conclude the day with merriment.

The chief produce of the county is corn, particularly barley, great crops growing in the above vale, of which are made conſiderable quantities of malt. The rivers *Thames* and *Kennet*, the one on the north and the other on the ſouth ſide of the county, ſupply it with fiſh, eſpecially fine large trout and cray-fiſh. Its principal manufactures conſiſt of *woollen cloth*, *ſail-cloth*, and *malt*.

The rivers of *Berkſhire* are the *Thames*, which is of great ſervice in conveying its produce to *London*. The *Kennet*, which at *Reading* receives barges of a hundred and ten tons burden, and is navigable as high as *Newbury*; and the *Lamburn*, which indeed is very ſmall, but, contrary to the other rivers of this iſland, is always higheſt in ſummer, and gradually decreaſes as the winter approaches, till at laſt it is entirely dry. Beſides theſe rivers there are the *Ocke*, and the *Lodden*. Two of theſe rivers are thus deſcribed in *Pope's Windſor Foreſt*.

> The *Kennet* ſwift, for ſilver eels renown'd,
> The *Lodden* ſlow, with verdant alders crown'd.

The principal places in this county are the following.

WINDSOR, whoſe delightful ſituation on the winding ſhore of the *Thames* occaſions its name, is a well inhabited borough, twenty-two miles to the weſt of *London*, ſeated on the S. bank of that river, in the midſt of delightful valleys. Its church is a ſpacious ancient building, which ſtands in the high ſtreet of the town, in which is alſo the town-houſe, a neat regular edifice ſupported with columns and arches of *Portland* ſtone, having at the N. end a nich in which is the ſtatue of queen *Anne*, and on the S. the ſtatue of prince *George* of *Denmark*, her majeſty's conſort. In the area underneath the town-hall the market is kept every Saturday, and is plentifully ſupplied with corn, meat, fiſh, and all other proviſions.

Many of the nobility and gentry reſide in the town and its neighbourhood. At the S. ſide of the town is the houſe of the late honourable Sir *Edward Walpole*, K. B. ſecond ſon of Sir *Robert Walpole*, a neat regular ſtructure, with large and beautiful gardens; and here marſhal *Belleiſle* reſided while priſoner in *England*. This town has lately been much improved, by the ſtreets being paved with hearth ſtones brought from the foreſt, and a foot pavement of flag ſtones: it is now likewiſe well lighted.

WINDSOR CASTLE, the delightful palace of the *Engliſh* monarchs, was firſt built, for a hunting-ſeat, by *William the Conqueror*, ſoon after his eſtabliſhment on the throne. It was greatly improved by *Henry* I. who added many additional buildings. Our ſucceeding ſovereigns reſided in this ſtructure till king *Edward* III. employed *William of Wickham*, afterward biſhop of *Wincheſter*, to rebuild the whole, which he accompliſhed, and encloſed it with a ſtrong wall. Great additions were, however, made to the caſtle by ſeveral of our monarchs, particularly by *Edward* IV. *Henry* VII. and VIII. *Elizabeth*, and *Charles* II. This laſt prince entirely repaired the caſtle, and, as he kept his court there during the ſummer ſeaſon, he ſpared no expence in rendering it worthy the royal reſidence. It was the occaſional reſidence of queen *Anne*. Many alterations and improvements have been made by his preſent majeſty, ſince he has made it his favourite reſidence.

This venerable caſtle is divided into two courts, or wards, with a large round tower between them. The whole occupies above twelve acres of ground, and has many towers and batteries for its defence. It is ſituated upon a high hill, which riſes by a gentle aſcent, and enjoys a moſt delightful proſpect: in the front is a wide and extenſive vale, adorned with meadows and corn-fields, with groves on each ſide, and the *Thames* winding through it; and behind are every where hills covered with woods, affording a retreat for beaſts of the chace. On the declivity of the hill is a fine terrace, faced with a rampart of free-ſtone eighteen hundred and ſeventy feet in length, which is one of the nobleſt walks in *Europe*, both with reſpect to its ſtrength, its grandeur, and the fine and extenſive proſpect over the *Thames* of the adjacent country on every ſide, where, from the variety of fine villas ſcattered about, nature and art ſeem to vie with each other in producing a captivating effect. From this terrace you enter a fine park, which ſurrounds the palace, and is called *the little park*, to diſtinguiſh it from another much larger. This little park is four miles in circumference, and ſurrounded by a brick wall. It is well ſtocked with deer and other game, and the lodge at the farther end is a delightful habitation.

Adjoining to the park, and oppoſite the S. E. ſide of the caſtle, is a neat ſtone building, called "the *Queen's lodge*;" it ſtands on a riſing ground, and commands a rich proſpect. The gardens and houſe of the late duke of *St. Albans* were purchaſed by his majeſty, to be uſed in addition to this ſtructure and gardens; theſe are now the royal reſidence.

To return to the caſtle. In the upper court is a ſpacious and regular ſquare, containing on the north ſide the royal apartments and *St. George's Chapel* and *Hall*; on the ſouth and eaſt ſides are the royal apartments, thoſe of the prince of *Wales*, and the great officers of ſtate; and in the centre of the area is an equeſtrian ſtatue in copper of king *Charles* II. in the habit of one of the *Cæſars*, ſtanding on a marble pedeſtal. The round tower, which forms the weſt ſide of this upper court, contains the governor's apartments, which are ſpacious and noble, and among the reſt is a guard-room, or magazine of arms; where are ſhewn the coats of mail of *John* king of *France*, and *David* king of *Scotland*, who were both priſoners here at the ſame time. This tower ſtands on the higheſt part of the mount; and its ſummit commands a moſt luxuriant and extenſive view. Thoſe whoſe office it is to conduct company thro' this ſumptuous building, ſay that twelve counties may be viewed from hence. Which muſt take in *Wiltſhire*, *Suſſex*, *Kent*, *Eſſex*, and *Bedfordſhire*, beſide the ſeven counties which lie contiguous.

The lower court is larger than the other, and is in a manner divided into two parts by *St. George's Chapel*, which ſtands in the centre. On the north or inner ſide are the houſes and apartments of the dean and canons of that chapel, with thoſe of the minor canons, clerks, and other officers; and on the ſouth and weſt ſides of the outer part are the houſes of the poor knights of *Windſor*.

The royal apartments in the upper court are uſually termed the ſtar-buildings, from a ſtar and garter in gold in the middle of the ſtructure, on the outſide next the terrace.

The limits of this work will not permit us to give a circumſtantial account of the various ſumptuous apartments which compoſe this royal palace; it muſt ſuffice to ſay, that they conſiſt of the *Queen's* guard chamber, preſence chamber, audience chamber, ball room, drawing room, bed chamber, the room of beauties, ſo named from the portraits of fourteen of the moſt celebrated beauties in the reign of *Charles* II. painted by *Sir Peter Lely*, which adorn it; the *Queen*'s dreſſing room, and in a cloſet adjoining to it, is placed the banner of *France*, which is annually delivered, on the ſecond of *Auguſt*, by the duke of *Marlborough*, being the tenure by which he holds *Blenheim* houſe and *Woodſtock* park; queen *Elizabeth*'s, or the picture gallery, and queen *Caroline*'s china cloſet. From theſe, company are conducted to the *King*'s cloſet, dreſſing room, bed chamber, drawing room, public dining room, audience chamber, preſence chamber, guard chamber; and *St. George*'s hall, which is one hundred and eight feet long, and one of the nobleſt rooms in *Europe*, at the lower end of which is a muſic gallery, ſupported by gigantic figures of ſlaves. Both the ceiling and walls of this magnificent room are adorned with a profuſion of paintings, all from the hand of *Verrio*. Beſide theſe there are many other ſtate apartments, to which company are not conducted when viewing this palace; theſe being only opened when the court reſides here. All the apartments are adorned with a profuſion of maſterly paintings, and the ceilings are every where overſpread with the fineſt productions of the pencil. The artiſts, who here live in their works, are *Michael Angelo*, *Belcamp*, *Bomboccio*, *Baſſano*, *Brueghel*, *Carlo Cignani*, *Dahl*, *De Bray*, *Carlo Dolci*, *Danekerts*, *Guido*, *Genario*, *Honthorſt*, *Hanneman*, *Holbein*, *Houſeman*, *Sir Godfrey Kneller*, *Le Seur*, *Sir Peter Lely*, *Sir Anthony More*, *Mabuſe*, *Murelli*, *Mytens*, *Nicholas Pouſſin*, *Parmegiano*, *Penni*, *Peſſaro*, young *Palmer*, *Romanelli*, *Raphael*, *Rembrandt*, *Ruſſel*, *Rubens*, *Spagnolet*, *Schiavoni*, *Snyders*, *Steenwyck*, *Titian*, *Teniers*, *Verrio*, *Leonardi da Vinci*, *Vanuden*, *Paul Veroneſe*, *Van Somer*, *Vandyck*, *Vandervelde*, *Wiſſing*, *Woſterman*, *Wauvermans*, *Wyck*; to which muſt be added the much admired picture of the two uſurers by the blackſmith of *Antwerp*, and of late many pieces, executed by *Zuccarelli* and *Weſt*, have been placed here. Three of the *Cartoons* of *Raphael*, which were formerly at *Hampton-court* palace, but were removed from thence to the *Queen*'s palace, *St. James*'s park, are now placed in the *Queen*'s lodge. Many of the ſtate rooms are hung with beautiful tapeſtry of various manufactures; here are two ſtate beds, and two elegant amber cabinets, one preſented to queen *Anne*, by *Dr. Robinſon*, biſhop of *London*, the other to queen *Caroline*, by *Frederick* II. king of *Pruſſia*. *St. George*'s chapel, built by *Edward* III. ſoon after his inſtituting the order of the garter, but enlarged and greatly improved by *Edward* IV. is a gothic building, where are depoſited the bodies of *Henry* VI. and VIII. and *Jane Seymour*, *Charles* I. and a daughter of queen *Anne*; here are likewiſe ſeveral noble monuments of great perſonages who lived in or before the reigns of the ſovereigns of the houſe of *Tudor*, and very lately was accidentally found the body of *Edward* IV. in a coffin, on which was an inſcription, but placed in an obſcure corner, where it had lain unnoticed more than three hundred years.

Windsor Great-park, and the **Forest** likewiſe, merit particular notice: the former lies on the ſouth ſide of the town, and opens by a noble road in a direct line to the top of a delightful hill at near three miles diſtance. This road leads through a double plantation of trees on each ſide to the ranger's lodge, the reſidence of the late duke of *Cumberland*, who greatly improved the natural beauties of the park, and by large plantations, extenſive lawns, and new canals, rendered this villa an habitation worthy of a prince. The park is fourteen miles in circumference, well ſtocked with deer and other game; alſo foreign beaſts and birds. The building on *Shrub's Hill* is adorned beneath with a beautiful rural landſcape; a noble piece of water, produced at a great expence from a ſmall ſtream, and made capable of carrying barges and pleaſure-boats, terminates in a grotto and large caſcade; over this water his royal highneſs erected a noble bridge, conſiſting of one arch, a hundred and ſixty-five feet wide.

The duke alſo greatly improved *Windſor Foreſt*, which joins to the park, and has been rendered famous by the muſe of *Pope*. It is indeed generally barren and uncultivated, yet is finely diverſified with hills and vales, woods and lawns, interſperſed with pleaſant villas, towns, and villages.

We ſhall now proceed to the principal towns in *Berkſhire*, and ſhall begin with

Maidenhead, an ancient town, twelve miles from *Reading*, and twenty-ſix from *London*, under the government of a high-ſteward, a mayor, and ten aldermen; out of whom they uſed annually to elect two bridge-maſters, to look after a large timber bridge which here croſſed the *Thames*, for the repair of which the town had three trees annually allowed them out of *Windſor Foreſt*; but a ſtone bridge is now erected. *Maidenhead* is ſaid to be ſo called from one of the eleven thouſand virgins which the legend tells us were martyred with *St. Urſula*. The town is a great thorough-fare, and has many good inns, with a weekly market on Wedneſdays.

Reading, which is ſo called from the *Britiſh* word *Rhedim*, that is *Fern*; which formerly grew in great quantities there. This is a very large and wealthy town, ſeated on the river *Kennet*, thirty-nine miles W. of *London*, and ſeventy-five E. of *Briſtol*; but is ſo near the *Thames*, that the largeſt barges which are uſed may come up to the town-bridge, where they have wharfs to load and unload them. The inhabitants carry on a very great trade, which chiefly conſiſts in this water-navigation to and from *London*; and they have neceſſarily a great trade into the country for the conſumption of the goods brought by their barges from *London*, particularly *coals*, *ſalt*, *grocery-wares*, *oils*, and all heavy goods. By theſe barges they ſend from thence to *London* great quantities of *malt*, *meal*, and *timber*. There are here three churches, built of flint and ſquare ſtones in the quincunx faſhion, with tall towers of the ſame materials. Here are alſo two large meeting-houſes, beſides that of the Quakers. *Reading* contains about eight thouſand people, including a little hamlet at the bridge over the *Thames*.

This town had formerly a famous abbey, in which the parliament of *England* has been ſometimes held; it ſtood in a fine ſituation, and large ruins of it are ſtill viſible, built of flint: the walls which remain are about eight feet thick, though the ſtone that faced them is gone. There are many remnants of arched vaults, and the abbey gate is yet pretty entire. This ſtructure was built by *Henry* I. on an old abbey formerly erected by a *Saxon* lady: that prince was buried in it, with his queen, but their monuments are not now to be found. The town is governed by a mayor, twelve aldermen, twelve burgeſſes, and other officers.

Newbury is ſituated fifty-five miles from *London*, in a moſt fruitful plain, watered by the river *Kennet*, which is made navigable up to the town. The ſtreets are ſpacious, and the market-place large, it being a great market for corn; it contains a hall, in which the buſineſs of the corporation is tranſacted, and is governed by a mayor, high-ſteward, aldermen, and burgeſſes. It is noted for good trout and cray-fiſh: all ſorts of proviſions are here likewiſe very reaſonable. Part of *Newbury* is known by the name of *Speenham-land*, it riſing out of the ruins of an old town called *Spine*, the remains of which join to *Newbury*, hence it was called *New Borough*, and by contraction *Newbury*. This town was anciently very famous for making woollen cloth, and the people now are generally employed in making *ſhalloons*.

Here lived the famous *Jack* of *Newbury*, the greateſt clothier in *England*, he having a hundred looms at work in his own houſe. He flouriſhed in the reign of *Henry* VIII. and marched at the head of a hundred of his own men, all cloathed in one uniform, and maintained at his own expence, to the battle of *Flodden-field*, where he behaved with great bravery.

Near this town were fought two bloody battles between the army of *Charles* I. and the parliament's forces, the king himſelf being preſent at both.

Wallingford is an ancient, large, and well-built town, forty-ſix miles W. of *London*: in the town-hall the aſſizes are ſometimes held, and the quarter-ſeſſions for the borough always. It is ſeated on the *Thames*, over which is a ſtone-bridge of nineteen arches, and four draw-bridges. It has been ſurrounded with a wall a mile and a half in circumference, and had a ſtrong caſtle which is now demoliſhed. It had likewiſe four pariſh-churches, but two of them were deſtroyed during the civil wars. It has a free-ſchool, and a handſome market-houſe, in which the magiſtrates keep the ſeſſions, it being governed by a mayor, burgeſſes, &c.

ABINGDON, a handſome well-built town corporate, where the aſſizes, ſeſſions, and other public meetings of the county are generally held. It has a ſtately market-houſe built on high pillars, over which is a large hall for the aſſizes. Here are alſo two churches, and the town conſiſts of ſeveral well-built ſtreets, which centre in a ſpacious corn-market. The inhabitants make great quantities of *malt*, which they ſend in barges to *London*. This place was famed for religious houſes in the time of the ancient *Britons*. It gives the title of earl to the noble family of *Bertie*; the preſent earl is high ſteward of this town and of *Wallingford*.

SECT. XII.

WILTSHIRE, *or* WILTS.

WILTSHIRE receives its name from *Wilton*, once its capital, which was ſo called from its ſituation on the river *Willy*, it being from *Willy-town* contracted to *Wilton*. It is bounded on the N. E. and E. by *Berkſhire*, laſt deſcribed; on the E. by *Hampſhire*; on the W. by *Somerſetſhire*; on the S. by *Dorſetſhire*, and part of *Hampſhire*; and on the N. W. and N. by *Glouceſterſhire*. Its length from N. to S. is near fifty-four miles, its breadth from E. to W. thirty-eight, and it is about a hundred and forty-two miles in circumference. Its ſhape approaches near to a ſquare, except the northern part, which would form a kind of triangle, if the county was interſected from E. to W. about the middle.

The air is ſweet and healthy, though ſomething ſharp on the hills in winter; but it is mild during that ſeaſon in the vales. The land in the northern parts is generally hilly and woody, but very fertile; here being made that kind of cheeſe which is much eſteemed, and known as north *Wiltſhire*; in the ſouthern it is rich and fertile; in the middle it chiefly conſiſts of downs, that afford the beſt paſture for ſheep; and in the valleys, which divide the downs, are abundance of corn-fields and rich meadows. In ſome places is found knot-graſs near twenty feet in length, with which hogs are fed, eſpecially about *Market Lavington*. Its chief commodities are *ſheep*, *wool*, *wood*, and *ſtone*; of this laſt there are excellent quarries at *Chilmark*, on the banks of the river *Nadder*, where ſome of the ſtones are twenty yards in length, and four in thickneſs, without a flaw. The chief manufactures are the different branches of the *cloathing trade*.

The principal rivers in *Wiltſhire* are the *Upper* and *Lower Avon*, the *Nadder*, the *Willy*, the *Bourne*, and the *Kennet*. The *Upper Avon* riſes near the centre of the county, and running ſouthward enters *Hampſhire*, and diſcharges itſelf in the *Britiſh channel*. The *Lower Avon* riſes in the northern edge of *Wiltſhire*, paſſes by *Malmſbury*, and at length enters *Somerſetſhire*, and flows to *Briſtol*. The *Nadder* riſes in the S. W. part of the county, and flowing eaſtward to *Saliſbury*, there joins the *Avon*. The *Willy* has its ſource on the weſtern ſide of *Wiltſhire*, and running toward the S. E. falls into the *Nadder* near *Saliſbury*. The *Bourne* has its ſpring in the eaſtern limits of *Wiltſhire*, and, running to the ſouthward, joins the *Avon* a little below *Saliſbury*; the *Kennet* has its ſource near the middle of the county, and, running eaſtward, enters *Berkſhire*, where it joins the *Thames*. Thus is all *Wiltſhire* ſupplied with rivers, and its ſtreams flow to the ſouthern, eaſtern, and weſtern extremities of the kingdom; theſe not only afford great plenty of fiſh, but add to the beauty and fertility of the country in their ſeveral courſes between the hills and downs.

This county, which lies in the dioceſe of *Saliſbury*, contains twenty-four market-towns, a hundred and ſeven vicarages, three hundred and four pariſhes, and nine hundred and fifty villages. It is divided into twenty-nine hundreds, which contain near twenty-eight thouſand houſes, and a hundred and ſixty-eight thouſand inhabitants. It ſends thirty-four members to parliament, namely, two knights for the ſhire, and two burgeſſes for each of the following boroughs: *New Sarum*, *Wilton*, *Marlborough*, *Old Sarum*, *Wooton-Baſſet*, *Luggerſhall*, *Great Bedwin*, *Cricklade*, *Malmſbury*, *Chippenham*, *Devizes*, *Calne*, *Weſtbury*, *Heyteſbury*, *Hinton*, and *Downton*. The principal places in this county are the following:

SALISBURY, or NEW SARUM, pleaſantly ſeated at the confluence of the rivers *Avon* and *Willey*, eighty-one miles from *London*; it roſe out of the ruins of *Old Sarum*, which ſtands on a hill a little to the north, now reduced to a ſingle farm houſe, yet retaining its privilege of ſending two members to parliament! *New Sarum*, is large, well built, and very pleaſant; but as the old city was in great want of water, this has an exceſs, the water running through the middle of every ſtreet in channels lined with brick. The cathedral is famous for the height of its ſpire, which is ſaid to be the moſt lofty in *England*, it being four hundred and ten feet from the ground; and yet the walls are ſo exceeding thin at the upper part of the ſpire, that, upon a view taken by Sir *Chriſtopher Wren*, they were found to be leſs than five inches thick; on which that great architect cauſed it to be ſtrengthened with bands of iron plates, which have ſo effectually ſecured it, that it is ſaid, by the beſt architects, to be ſtronger now than when firſt built. In the year 1759, the vane on the top of this ſpire, which had been placed there in the year 1673, was blown down; it was made of oak, and was three feet ſix inches long, and two feet three inches broad. This cathedral is in the form of a croſs, and coſt an immenſe ſum; but the work on the inſide is not anſwerable to the numerous decorations without. The painting in the choir is mean, it being probably performed when that art was but in its infancy in this kingdom; but the carving is well executed. The following lines ſhew the number of its windows, pillars, and gates.

> As many days as in one year there be,
> So many windows in one church we ſee;
> As many marble pillars there appear,
> As there are hours throughout the fleeting year;
> As many gates as moons one year do view:
> Strange tale to tell, yet not more ſtrange than true!

There are ſome very fine monuments in this church; particularly in what is called *The Virgin Mary's Chapel*, is a noble one of the laſt duke and ducheſs of *Somerſet*. The cloyſter is a hundred and ſixty feet ſquare, and the inner cloyſter thirty feet wide. Over the eaſt part of the cloyſter is a ſpacious library. The cathedral, with the cloſe adjoining, where the prebendaries live, make a noble appearance. The chapter-houſe is an octogon no leſs than a hundred and fifty feet in circumference, yet the roof has no other ſupport in the centre than a ſmall marble pillar. The corporation conſiſts of a mayor, recorder, aldermen, &c. and the town-houſe, which is a handſome building, is adorned with a very fine original picture of queen *Anne*, done by *Dahl*. In this city is a manufacture of flannels and linſeys, and another of hard-ware and cutlery. It gives title of earl to the noble family of *Cecil*, lineally deſcended from the ſecond ſon of lord treaſurer *Burleigh*, the preſent poſſeſſor of the title, who is the ſixth earl, was, in 1789, created marquis of *Saliſbury*.

WILTON, an ancient borough town, once ſo conſiderable that it gave name to the county, ſtands near the junction of the *Nadder* with the *Willy*, three miles W. of *Saliſbury*, and eighty-four from *London*. It is governed by a mayor, recorder, five aldermen, three capital burgeſſes, eleven common-councilmen; ſends two members to parliament, and is the place where the knights of the ſhire are choſen. It has a manufacture of carpets, which is carried to great perfection, they being very beautiful, and ſold at a high price. The excellence to which this manufacture is arrived, has cauſed theſe carpets to be introduced into the moſt elegantly furniſhed apartments inſtead of *Turkey* carpets, which were formerly imported into this kingdom in great quantities, and ſold for treble the price of the *Wilton*.

Wilton-houſe is ſituated in a pleaſant vale, with the town of *Wilton* on one ſide, and a ſpacious park on the other. The canal before the houſe lies parallel with the river,

Engraved for Payne's New System of Geography. Vol. II. Page 522.

The North East side of Stone-henge.

river, and on entering the court-yard, a ſtately column of porphyry appears, on the top of which is a fine marble ſtatue of *Venus*, of excellent workmanſhip. The houſe is a noble pile of building, which was firſt begun in the reign of *Henry* VIII. the great quadrangle was finiſhed in the next reign, and the porch was deſigned by *Hans Holbein*; the other parts were rebuilt by *Philip*, fourth earl of *Pembroke*, and firſt earl of *Montgomery*, from deſigns by *Inigo Jones*, who finiſhed the building in the year 1640. The rooms are adorned with the moſt beautiful ſtatues and paintings. The great geometrical ſtair-caſe is highly admired, it being the firſt of the kind in *England*; and the grand apartments are ſuperb pieces of architecture, particularly the ſaloon, which is ſixty feet long, thirty high, and thirty broad. "When you have entered theſe grand apartments," ſays a late writer, "ſuch varieties ſtrike upon you every way, that you ſcarce know on which hand to turn: on one ſide you ſee ſeveral rooms adorned with paintings, ſo curious and various, that you leave them with reluctance; and looking another way, you are called off by a vaſt collection of buſts, and pieces of the greateſt antiquity, both *Greek* and *Roman*. At one end of the grand room is the celebrated family picture, by *Vandyke*, twenty feet long, and twelve feet high, containing thirteen figures as big as the life." This room is alſo adorned with a great number of family pictures.

Thomas, eighth earl of *Pembroke*, who held the important poſt of lord high admiral of *Great-Britain* and *Ireland* in the reigns of *William* III. and *Anne*, brought to this ſeat a valuable collection of ancient marbles, whilſt his knowledge and love of antiquity cauſed him to adorn it in other reſpects with great taſte; at his death, his collection here conſiſted of one hundred and thirty-three buſts, thirty-ſix ſtatues, fifteen bas reliefs, and ten miſcellaneous pieces of art: he alſo expended large ſums in procuring a numerous collection of coins and medals.

In moſt of the apartments the marble chimney-pieces are of the moſt exquiſite workmanſhip, all carved in *Italy*, with many curious ſtatues, baſſo relievos, and pictures, by the greateſt maſters. The loggia in the bowling-green is ſupported by beautiful pillars, and adorned with niches and ſtatues. The grotto has its front curiouſly carved, and all the inſide is caſed with marble; it has black columns of the *Ionic* order, with capitals of white marble, and four fine baſſo relievos from *Florence*.

The front of the houſe next the gardens is eſteemed one of the beſt pieces of the celebrated *Inigo Jones*, and is a hundred and ninety-four feet in length. The gardens are on the ſouth ſide of the houſe, and extend beyond the river, a branch of which runs through a part of them. To the ſouth of the gardens is the great park, which reaches beyond the vale, and the view opens into

Saliſbury-plain, which is very delightful, as well as extenſive, the numerous flocks of ſheep feeding in every direction, adding great beauty to the ſcene; it is not uncommon for theſe flocks to contain from three to five thouſand, all the property of one man. *Dyer*, in his poem of the *Fleece*, when deſcribing the paſtures fit for ſheep, gives a very pictureſque idea of this ſpot.

———— Such the ſpacious plain
Of *Sarum*, ſpread like ocean's boundleſs round;
Where ſolitary *Stonehenge*, grey with moſs,
Ruin of ages, nods.

On this plain are a great number of barrows or little hills, thrown up over graves; alſo the remains of temples, and the traces of many old *Britiſh*, *Roman*, *Saxon*, and *Daniſh* camps and fortifications. But the greateſt curioſity in this county is that noble monument of antiquity called *Stone-henge*, which *Inigo Jones* conſidered as the remains of a temple of the *Tuſcan* order, built by the *Romans* to the god *Cœlum*, or *Terminus*; but the learned Dr. *Stukeley* has taken great pains to ſhew that it was a temple built by the ancient *Britons*. It received its name from the *Saxon Rode-hengenne*, or hanging-rocks; and in *Yorkſhire* hanging rocks are ſtill called henges.

Stone-henge is ſituated in *Saliſbury-plain*, ſix miles to the north of *Saliſbury*. It has the river *Avon* to the eaſt, and a brook that runs into the *Willy* on the weſt, which ſtreams encompaſs it half round, at the diſtance of two miles, forming as it were a circular area of four or five miles diameter, encompaſſed by gentle acclivities. This rude collection of vaſt ſtones ſtands on the ſummit of a hill, which riſes with a very gentle aſcent.

At the diſtance of about half a mile it has a ſtately and auguſt appearance, and on advancing nearer, eſpecially up the avenue on the north-eaſt ſide, where the remains of this wonderful ſtructure are moſt perfect, they impreſs the mind in an aſtoniſhing manner. It is encompaſſed with a circular ditch, from which the diſtance is a hundred and eight feet to the work itſelf, which is a hundred and eight feet in diameter. "When we enter the building," ſays Dr. *Stukeley*, "whether on foot or on horſeback, and caſt our eyes on the yawning ruins, we are ſtruck with an ecſtatic reverie, which none can deſcribe, and they only can be ſenſible of that feel it. When we advance farther, the dark part of the ponderous impoſts over our heads, the chaſm of ſky between the jambs of the cell, the odd conſtruction of the whole, and the greatneſs of every part, ſurpriſe. If you look upon the perfect part, you fancy entire quarries mounted up into the air: if upon the rude havock below, you ſee, as it were, the bowels of a mountain turned inſide outward."

The ſtones are ſuppoſed to have been brought from the *Grey Wethers*, upon *Marlborough-downs*, which is ſixteen miles diſtant from the place; but the difficulty in bringing them hither muſt appear inconceivable. The ſtone at the upper end of the cell, which is fallen down and broken in half, is, according to Dr. *Hales*, twenty-five feet in length, ſeven in breadth, and at a medium, three and an half in thickneſs, and amounts to ſix hundred and twelve cubic feet. Rude as the work ſeems, there is not a ſtone that has not in ſome degree received the chiſſel. The upright ſtones are made to diminiſh a little every way, by which means the impoſts project two feet ſeven inches. On the top of each of the upright ſtones is a tenon, ten inches and a half in diameter, and made exactly to fit the mortiſes made in the impoſts. On the outſide the impoſts are ſomewhat rounded, but within they are ſtraight, and make a polygon of thirty ſides, which, without injuring the beauty of the work, adds to its ſtrength. The height of the uprights and impoſts is ten cubits and an half, the uprights being nine cubits, and the impoſts one and a half.

Of this outer circle, which in its perfection conſiſted of ſixty ſtones, thirty uprights, and thirty impoſts, there are ſeventeen uprights left ſtanding, eleven of which remain contiguous by the grand entrance, which is ſomewhat wider than the reſt, with five impoſts upon them. One upright at the back of the temple leans upon a ſtone of the inner circle, and ſix others lie upon the ground whole or in pieces. Somewhat more than eight feet from the inſide of this exterior circle is another of forty ſmaller ſtones, without any impoſts, which, with the outer circle, form as it were a circular portico. Theſe are a cubit thick, and four cubits and a half in height, being every way half of the outer uprights. Of theſe nineteen are left; of which eleven are only ſtanding. But beſides this outer portico, which is three hundred feet in circumference, there is an inner one, which originally compoſed about two-thirds of an oval: the outer part of this is formed of certain compages of ſtones, which Dr. *Stukeley* calls *trillithons*, becauſe each of theſe compages is formed of two upright ſtones, with an impoſt on the top. The ſtones of which theſe *trillithons* are compoſed are really ſtupendous, and cannot fail of filling the beholder with ſurpriſe. Theſe ſtones diminiſh very much toward the top, probably to take off from their weight, and they riſe in height and beauty of the ſtones from the lower end on each ſide next the principal entrance to the upper end, and are, upon a medium, twenty feet high; but the impoſts on the top are all of the ſame ſize.

On the inſide of the oval is a leſſer oval of nineteen ſtones, ſomewhat of a pyramidical form; theſe are two feet ſix inches in breadth, one foot and an half thick, and upon a medium eight feet high; riſing in height as they approach the upper end of this encloſure. The ſpace within it has been called *the adytum*, or *the holy of holies*, it being ſuppoſed that none entered it but the druids, or *Britiſh* prieſts, who offered their ſacrifices on the altar at the upper end. This altar is compoſed of a kind of blue coarſe marble, twenty inches thick, four feet broad, and, according to Mr. *Webb*, ſixteen feet in length. All the ſtones added together, with which this whole temple was built, make juſt a hundred and forty. This is the ſolution of the mighty problem that has much perplexed the vulgar.

"As the moſt early method of building temples," ſays our author, "was to make them open at the top, this is a proof of the prodigious antiquity of this fabric. It muſt be owned, that they who had a notion that it was degrading the Deity to pretend to confine him within a limited ſpace, could not eaſily form a more grand deſign for ſacred purpoſes. Here ſpace indeed is marked out and defined, but with the utmoſt freedom. Here the preſence of the Deity is intimated, but not bounded."

On the downs, about two or three miles from *Marlborough*, are abundance of looſe ſtones, lying ſcattered about the plain, of the ſame kind with thoſe of *Stonehenge*, and ſome larger: they are called by the country people the *Grey Wethers*, from appearing at a diſtance not unlike ſheep ſtraggling upon the downs. They are found to be a ſort of white marble, and lie upon the ſurface of the earth in prodigious numbers, and of all dimenſions. Theſe are looſe and detached from any rock, and Dr. *Stukeley* imagines that they have lain there ever ſince the creation.

MARLBOROUGH, ſo called from its hills of chalk, which chalk was anciently called *Marl*, is ſeated on the river *Kennet*, ſeventy-ſix miles W. of *London*, and contains two pariſh-churches, and about five hundred houſes. The ſtreets are broad and paved, and it is governed by a mayor, aldermen, and burgeſſes. It gave the titles of earl and duke to the great general *Churchill*, which are now poſſeſſed by his deſcendants in the female line, in the family of *Spencer*. It ſends two members to parliament. It had formerly a caſtle at *Marlborough-Mount*; this *Mount* was the key of the caſtle, and is now converted into an agreeable ſpiral walk, on the top of which is an octogonal ſummer-houſe, affording an extenſive view over the town and country. Near *Marlborough* are the remains of ſeveral religious houſes, particularly of a priory, the gate-houſe of which is ſtill ſtanding.

Between *Marlborough* and *Newbury* is SAVERNACK FOREST, which is about twelve miles in circumference, well ſtocked with deer, and rendered delightful by the many viſtas cut through the woods and coppices with which it abounds. Eight of theſe viſtas meet like ſo many rays of a ſtar in a point near the middle of the foreſt, where the late earl of *Aileſbury*, to whom it belonged, prepared the ground for erecting an octogon tower, whoſe ſides were to correſpond with the viſtas; through one of which is a view of the ſeat at about two miles diſtance, called *Tottenham*, from a park of that name, in which it is ſituated, contiguous to the foreſt. This is a ſtately edifice, erected after the model, and under the direction of the modern *Vitruvius*, the earl of *Burlington*, who, to the ſtrength and convenience of the *Engliſh* architecture, added the elegance of the *Italian*. The houſe has four towers and four fronts, each differently beautified; to which are now added four wings. Several large canals complete the beauty of this reſidence.

DEVIZES, ſeated on an elevated ſpot, yet ſcreened from the eaſt wind by riſing hills on that ſide, is eighty-eight miles W. of *London*. It is a large town, conſiſting chiefly of two long parallel ſtreets, the houſes chiefly timber, but well built. Here is great ſcarcity of water. It has two churches, beſide a chapel and a diſſenting meeting-houſe. The corporation conſiſts of a mayor, a recorder, eleven maſters, and thirty-ſix common council. On the utmoſt part of the *Rundway-hill*, which overlooks the town, is a ſquare ſingle-trenched camp; and there have been diſcovered in its neighbourhood, ſeveral hundred pieces of ancient *Roman* coin, of different emperors; in 1714 was dug up a large urn with *Roman* coins, and a number of little braſs ſtatues of ſeveral of the heathen gods and goddeſſes. The inhabitants make great quantites of malt; their principal manufactures are ſerges and woollen cloth, eſpecially druggets, and the market is much frequented for all ſorts of cattle, wool, and horſes. It ſends two members to parliament.

BRADFORD, on the *Lower Avon*, one hundred and one miles W. of *London*, is the centre of the greateſt fabric of ſuperfine cloths in *England*; which it ſhares with the ſurrounding towns of *Trowbridge*, *Corſham*, *Calne*, and *Chippenham*. The material is chiefly *Spaniſh* wool, imported at *Briſtol*, or *London*. This trade is very briſk, being leſs affected by the rivalry of *Yorkſhire* than the other branches of the woollen manufacture. *Aikin*, *p.* 288.

SECT. XIII.

DORSETSHIRE, *and the Peninſulas of* PORTLAND *and* PURBECK.

THIS county was called *Durotriges* by the *Romans*, and by the *Britons Dwn Gwyer*, both of which ſignify *dwellers by the water ſide*. It is bounded on the N. by *Somerſetſhire* and *Wiltſhire*; on the E. by *Hampſhire*; on the S. by the *Britiſh Channel*; and on the W. by *Devonſhire* and part of *Somerſetſhire*, extending about fifty miles in length from E. to W. and from N. to S. where broadeſt, about thirty-eight, and is about an hundred and fifty miles in circumference. Its form is extremely irregular, having a broad projection toward the N. between the counties of *Somerſet* and *Wilts*, whilſt toward the ſea on the S. it runs out into peninſulas and head-lands.

The air is for the moſt part very good and wholeſome. On the hills it is ſomewhat bleak and ſharp, but it is very mild and pleaſant near the coaſt.

The ſoil is generally rich and fertile, though in ſome parts exceeding ſandy; the northern part, which is divided by a range of chalk hills from the ſouthern, was anciently overſpread with foreſts, but now affords good paſture for cattle; while the ſouthern part chiefly conſiſts of fine downs, and feeds incredible numbers of ſheep. The chalk-hills, which run through every county from the S. E. part of the kingdom thus far, terminate at the farther extremity of this; but on the coaſt, chalk cliffs extend beyond it into *Devonſhire*, about ten miles W. of *Lyme*. From the *Hampſhire* border to the neighbourhood of *Blandford*, a heathy common extends, which cauſes an exception to the general character of fertility which this county merits; but the rich vales to the S. W. make ample amends for ſuch partial barrenneſs. The inhabitants have not forgot what king *Charles* ſaid of *Dorſetſhire*, "that he never ſaw a finer country either in *England* or out of it." Indeed, the downs and hills are covered with great flocks of ſheep, whoſe fleſh is ſweet and delicate, and wool ſo fine, that great quantities are conſumed by the clothiers, and the valleys abound with other cattle. The huſbandman reaps an ample return for his toil and labour, his grounds generally producing a profuſion of corn, or flax and hemp, which laſt is allowed to be the beſt that grows in all *England*. Here are alſo plenty of fowl, as *poultry* of all ſorts, *ſwans*, *woodcocks*, *pheaſants*, *partridges*, *field-fares*, &c. The chief commodities are *corn*, *cattle*, *wool*, *fiſh*, *fowl*, *hemp*, fine *Portland* ſtone, and ſome *marble*. The iſle, or rather peninſula of *Purbeck*, alſo furniſhes a particular kind of ſtone, called by its name, and *tobacco-pipe clay*. This county is diſtinguiſhed for its woollen manufactures, and its fine ale and beer.

Its principal rivers are the *Stour*, which riſes in *Somerſetſhire*, but ſoon enters this county, running ſouth to *Sturminſter*, where, making an angle, it forms a courſe nearly W. S. W. and leaving *Dorſetſhire* about five miles below *Winborn*, in *Hampſhire*, ſoon after falls into the ſea. The *Froom* riſes in the weſtern part of the county, and running eaſtward, falls into the bay which forms the harbour of *Pool*. Both theſe rivers afford plenty of fiſh; but the tench and eels of the *Stour* are particularly admired.

The coaſt of *Dorſetſhire* is very diſſimilar, it being in ſome places bounded with high lands and cliffs, and in others with only a beach of pebbles; the cliffs are in ſome parts compoſed of ſand, earth, and loamy clay; in others they conſiſt of chalk, but very few of ſtone, except in the peninſulas of *Portland* and *Purbeck*.

This county lies in the dioceſe of *Briſtol*, and contains ſixty-eight vicarages, two hundred and forty-eight pariſhes, upward of twenty-one thouſand nine hundred houſes, and about one hundred and nine thouſand ſeven hundred inhabitants. It is divided into twenty-eight hundreds, and ſends twenty members to parliament, of which two are knights of the ſhire, and two for each of the following towns, *Dorcheſter*, *Poole*, *Lime*, *Bridport*, *Shafteſbury*, *Wareham*, *Corfe-Caſtle*, *Weymouth*, and *Melcomb-Regis*; for though theſe two laſt are united, each ſends two. It gives the titles of earl and duke to the noble family of *Sackville*. The principal places in this county are the following:

Dorchester, the county town, is clean, and regularly built, and is ſituated one hundred and twenty-three miles S. W. of *London*, is encompaſſed by the foundations of an ancient *Roman* wall; but to the eaſtward a ſtreet is built upon it, and the ditch filled up; for on that ſide the town is ſwelled out into a conſiderable ſuburb or village, named *Fordington* or *Farington*, which has a church. There are three other churches in the town, and the ſtreets are wide and handſome. On the S. and W. ſides, without the walls, is planted an agreeable walk of ſycamores. The banks of the river are here ſteep, and the town ſtands on high ground. At a ſmall diſtance is the noble *Roman* amphitheatre, called by the vulgar *Maumbury*, and the terrace on the top is a common place of rendezvous, it affording an agreeable circular walk, commanding a rich and extenſive proſpect. This town gives the title of baron to lieutenant-general Sir *Guy Carleton*.

Weymouth is a clean town, cloſe to the ſea. It is ſituated eight miles S. of *Dorcheſter*, and one hundred and thirty-one to the W. S. W. of *London*. It is well built, and has an excellent harbour, defended by two forts. Some merchants reſide here, who trade, not only to *France*, but to *Portugal* and *Spain*. Here is a cuſtom-houſe, and a good quay. It appears, by the 14th report of the commiſſioners of public accounts, that the cuſtoms collected at this port, in the year 1781, amounted to 3,303*l.* but the ſalaries and incidents amounting to more than two thouſand pounds, the net produce of revenue from thence was only 1,206*l.* Without the harbour ſtands *Sandfoot-caſtle*, and oppoſite to it is *Portland-caſtle*, ſeated in the iſle, or rather peninſula, of that name. It is joined to *Melcomb-Regis* by a wooden bridge over the little river *Wey*. The united towns have a church, and about four hundred houſes. In *Weymouth* is a chapel upon a ſteep rock, with ſixty ſteps to aſcend it. The towns are governed by a mayor, ſeveral aldermen, and a recorder, and each ſends two members to parliament. *Weymouth* gives title of viſcount to the noble family of *Thynne*, now marquis of *Bath*. Of late years it has become a faſhionable bathing place for the nobility and gentry, and it was honoured with a viſit by their majeſties in 1789.

Portland, which was formerly an iſland, is now joined to the continent by a bank of ſand, thrown up by the ſea. It is about ten miles in circumference, and thinly inhabited, yet affords plenty of corn, and paſture for ſheep; but wood and coal are ſo ſcarce, that the inhabitants are generally obliged to make uſe of cow-dung dried in the ſun for fuel. The natives are for the moſt part ſtone-cutters, for from this peninſula is obtained the beſt and whiteſt free-ſtone, with which the cathedral of *St. Paul*, and all the moſt magnificent edifices in the city of *London*, are principally built. Indeed the whole iſland is little more than one continued rock of free-ſtone, and riſing to a conſiderable height commands an extenſive ſea view; the diſtance from hence to *Cape la Hogue*, in *Normandy*, is not more than ſixteen leagues, and the iſland of *Alderney* is ſomewhat nearer. This peninſula gives the titles of duke and earl to the noble family of *Bentinck*.

To prevent any ſhips being embayed to the weſt of *Portland*, and driven aſhore on *Portland Race*, which extends to the main land, a light-houſe is erected on each of the two points of the peninſula. Not far from theſe light-houſes, on the ſouth ſide of the iſland, is a very remarkable hole, wide at the top, narrowing about ſeven or eight feet downward, and then opening into a large ſubterranean cavern, into which the ſea flows; the ſight and ſound of which, in boiſterous weather, fill the mind with terror: ſo large is this cave, that ſome ſmall craft, with their ſails up, have been driven into it.

To the E. of *Portland* lies the iſland of **Purbeck**, though only in part inſulated by the ſea and rivers. Its form approaches to a ſquare, though much indented; the four corners of which correſpond with the cardinal points of the compaſs. It may be about twelve miles over, both in length and breadth. It was formerly full of heaths, woods, and foreſts, well ſtocked with fallow deer; but there are at preſent good lands toward the ſouthern part of it, and below the ſurface are veins of marble and different kinds of ſtone. The quarries produce the flag-ſtone, with which the foot paths in *London* and *Weſtminſter* are paved, and ſeveral other ſorts, the fineſt of which take a poliſh, and are ranked in the claſs of marbles; they are dark vein'd, and are uſed for chimney pieces; the other kinds of ſtone obtained here are converted to grave-ſtones, fire hearths, and other purpoſes. Tobaccopipe-clay is dug up in ſeveral parts of this diſtrict, great quantities of which are exported coaſtways to the *Staffordſhire* potteries, particularly from about *Corf-Caſtle*, which is the only town here of any conſequence; it having a corporation, and ſending two members to parliament.

Poole, the moſt conſiderable ſea-port in all this part of *England*, is ſeated one hundred and thirteen miles W. by S. of *London*, and twenty-four E. of *Dorcheſter*, at the bottom of a great bay or inlet of the ſea, which entering at a narrow mouth, opens to a great breadth, and comes up to the very ſhore of the town. This inlet alſo runs almoſt W. to *Wareham*, a little below which it receives the *Froom* and *Peddle*. At the entrance of this large bay is an iſland called *Brankſey*, which lying in the very mouth of the paſſage, divides it in two, and has an old caſtle built to defend the entrance. The town conſiſts of a church, and about four hundred houſes, diſpoſed into broad paved ſtreets, and has a handſome town-hall built of ſtone, a cuſtom-houſe and quay. The principal branch of commerce carried on here is the *Newfoundland* fiſhery. Many veſſels are annually ſent from this port freighted with merchandize, which take in cargoes of fiſh there, which they carry to *Spain*, *Portugal*, and the ports of *Italy*. This town ſuffered greatly by the capture of its veſſels at the breaking out of the *American* troubles, but it has now regained a flouriſhing condition. In the year 1781 the receipt of its cuſtoms amounted to 5,763*l.* debentures and bounties paid to 800*l.* the ſalaries and incidents to 2,853*l.* the net produce to the revenue being 2,107*l.* It is a county of itſelf, and ſends two members to parliament. This place is famous for the beſt and largeſt oyſters in all the weſt of *England*, which the people of *Poole* pickle, and, barrelling them up, ſend them not only to *London*, but to *Spain*, *Italy*, and even to the *Weſt-Indies*. The town is governed by a mayor, aldermen, a recorder, four ſheriffs, a town-clerk, coroner, bailiffs and common-councilmen, and has the power of trying malefactors within its juriſdiction.

Wareham, a town ſeated between the rivers *Froom* and *Peddle*, where they fall into the *Luckford* lake, one hundred and ſixteen miles from *London*, and twelve miles S. of *Dorcheſter*. It was once a very large place, and had ſeveral churches, which are now reduced to three. It was alſo walled round, and had a caſtle, but it has ſuffered ſo much by various turns of fortune, and particularly by having its harbour choaked up, that it is now become inconſiderable. In the year 1763, an act of parliament paſſed for rebuilding this town.

Lyme, alſo called **Lyme Regis**, is a ſea-port town, one hundred and forty-four miles from *London*, and twenty-three miles from *Dorcheſter*, ſituated near the ſea-ſhore; has a good harbour; but it is ſuch a one as is not to be found perhaps in any other part of the world, being formed by a maſſy pile of building, conſiſting of high and thick walls of ſtone, raiſed at firſt with great art, and maintained with very little trouble or expence. Theſe walls are raiſed in the main ſea, at a good diſtance from the ſhore. There is one ſolid wall of ſtone large enough for carts and carriages to paſs on the top, and to admit houſes and warehouſes to be built on it, it being as broad as a ſtreet: oppoſite to this, but farther in the ſea, is another wall of the ſame workmanſhip, which croſſes the end of the firſt, and after winding, runs parallel to it. The entrance into the port is between the point of the firſt wall and the ſecond, or oppoſite wall, which breaks the violence of the ſea. This work is called the *Cobb*, and the cuſtom-houſe officers have a lodge and warehouſe upon it.

It appears that the receipts at the cuſtom houſe here in the year 1781, amounted to 667*l.* but the debentures, bounties, ſalaries, and incidents amounting very high, cauſed the payments to exceed the receipts by 246*l.* It is under the government of a mayor and aldermen; and ſends two members to parliament.

In 1685 the duke of *Monmouth* landed here with a handful of men, which was ſoon increaſed to ſix thouſand, and he was proclaimed king; but being defeated by king *James*'s army, he was taken priſoner, and ſuffered death, as did great numbers of his adherents, who were purſued with the vindictive fury of a *Jefferies* and a *Kirk*.

BRIDPORT, altho' deprived of an harbour, by the accumulation of ſand at its mouth, is a large and flouriſhing town from the manufactures which it carries on of ſail-cloth, ſacking, cables, ropes, nets, and cod-lines for the *Newfoundland* fiſhery. It is a town corporate; and ſends two members to parliament.

SHERBORNE, one hundred and ſixteen miles S. W. of *London*, on the borders of *Somerſetſhire*, and near to *Milborn Port*, is a large, populous and thriving town, having a woollen manufacture: here is alſo a ſilk-mill, which provides employment for many of different ſexes and ages. The manor and caſtle of *Sherborne*, were granted to Sir *Walter Raleigh*, by queen *Elizabeth*, but he was ſtripped of all by the caprice of *James* I. who beſtowed them on his favourite, *Robert Carr*.

SHAFTESBURY, one hundred miles from *London*, on the borders of *Wiltſhire*, is now much reduced from its former conſequence; it is a town corporate, and has a good weekly market. Here are made *ſhirt buttons*, and ſome worſted ſtockings. It ſends two members to parliament, and gives the title of earl to the ancient family of *Aſhley Cooper*.

BLANDFORD, a large manufacturing town, ſituated on the river *Store*, in the centre of the county. Its chief trade conſiſts in the making of *ſhirt buttons*, of which no place in *England* furniſhes ſo large a quantity. It gave the title of marquis to the great duke of *Marlborough*, which is now held, together with the ducal title, by the noble family of *Spencer*, being deſcendents from his ſecond daughter.

SECT. XIV.

SOMERSETSHIRE.

THIS county probably takes its name from *Somerton*, once the capital, but now obſcured by *Bath*, *Wells*, *&c.* It is bounded on the N. by *Glouceſterſhire* and the mouth of the *Severn* (the river *Avon* dividing the two counties, from the weſtward of *Bath* to its diſcharge into the head of *Briſtol Channel*) and to the N. W. it forms a large and wide bay on the S. ſide of the *Briſtol Channel*; on the E. by *Wiltſhire* and part of *Dorſetſhire*; on the W. and S. W. by *Devonſhire*; and to the S. and S. E. by *Dorſetſhire*. It is computed to be forty-five miles in length from N. to S. ſixty-five in breadth from E. to W. and two hundred and four in circumference.

SOMERSETSHIRE, which is ſituated in the dioceſes of *Briſtol*, and of *Bath* and *Wells*, is divided into forty-two hundreds, and contains about one hundred and thirty-two vicarages, three hundred and eighty-five pariſhes, three cities, thirty-one market towns, fifty-ſix thouſand houſes, three hundred thouſand inhabitants, and ſends eighteen members to parliament, namely, two knights of the ſhire, and two burgeſſes for the following towns, *Briſtol*, *Bath*, *Wells*, *Taunton*, *Bridgewater*, *Minehead*, *Ivelcheſter*, and *Milborn Port*.

The air of *Somerſetſhire* is, in the lower grounds, univerſally mild, and generally wholeſome. The ſoil is various; the vallies, except where it is boggy, as toward the centre, where its principal rivers unite, yield great quantities of corn and graſs; the hilly parts toward the W. (where is the ridge of *Quantock hills*) are leſs fertile, yet in many places, by the help of art and induſtry, good crops of corn are raiſed, and where they are moſt barren they afford paſture for ſheep, though where there are mines the graſs is diſcoloured, and the ſheep that feed upon it are ſmall and big-bellied. The ſouthern part of the county, about *Taunton*, the ſpot called *Taunton Dean*, is high, but exceeding rich, and affords the greateſt plenty of corn, graſs, and various fruits for cyder and perry. Within the mountains are mines of *lead* and *lapis calaminaris*. The commodities produced by this county are *corn*, *cattle*, *lead*, *woad* for dying, and *Chedder* cheeſe. It is alſo one of the greateſt cloathing-counties in *England*: the manufactures are chiefly *broad cloths*, *druggets*, *duroys*, *ſhaloons*, *ſerges*, *cantaloons*, *knit ſtockings*, *&c.* in which vaſt numbers of poor are employed.

In deſcribing this county it will be proper to take notice of its mountains, mines, and caverns.

The ridges of *Mendip hills* run confuſedly, but moſtly extend E. and W. and are of a very unequal height. The ſoil is barren, and the air cold, moiſt, and foggy. The ſurface is in a great meaſure covered with heath, fern, and furze, and conſequently affords but little food for the cattle, which are for the moſt part ſheep. Theſe mountains furniſh great quantities of *coal*, *lead*, and *calamine*; beſides which *copper*, *manganeſe*, *bole*, and red *oker* are produced.

About two miles from *Wells*, on the S. ſide of this ridge of mountains, is a famous grotto called *Wokey*, or *Okey-hole*. The mouth of the cave is fifteen or twenty feet high, and opens into a ſpacious cavern, reſembling the body of a cathedral, the roof of which is compoſed of pendant rocks, from whence a clear water, of a petrifying quality, continually drops; from this grotto a narrow paſſage deſcends to another of leſs height, and beyond a ſecond narrow paſſage is a third grotto.

About five miles to the N. W. of *Okey-hole* lies *Chedder*, a village famous for its *cheeſe*, which excels, in delicate flavour all other cheeſes in *England*. This village is famous for the ſtupendous chaſm, or cleft, through the body of *Mendip-hills* near this place. It ſeems as if the hills had been ſplit aſunder by the ſhock of an earthquake: the impending tremendous rocks on either ſide are very aſtoniſhing; ſome ſtanding on the bottom, reach near the height of the cliff, and yet are entirely ſevered from the body of the rock. The paſſage between, although narrow, is the road from this part of the country to *Briſtol*. At the entrance of the cleſt is a moſt remarkable ſpring of water, riſing as it were upright out of the rocky baſis of the hill, with ſo large and rapid a ſtream, that it drives a mill within a few yards. This ſtream, and that of the cavern juſt mentioned, are the ſources of a river named *Ax*.

At a little diſtance from *Chedder* is another cavern, but ſmaller than that we have deſcribed: Mr. *Beaumont*, however, mentions a ſtill more extraordinary cavern than any of thoſe yet ſpoken of, and of which he has given an account in the *Philoſophical Tranſactions*. It is on a hill called *Lamb*. This cavern is about twenty fathoms in height, fifteen in length, and ſixty in circumference. To the W. about ten fathoms, is another about one hundred fathoms in length, and eight or ten in height. The frequency of caverns on theſe hills, the ſame author adds, may be inferred by the number of ſwallow pits, which are made by the falling in of their roofs. Some of theſe pits are of a large extent, and very deep. Sometimes miners, ſinking in the bottom of theſe ſwallows, have found oaks, fifteen fathoms deep in the earth.

There are ſeveral other hills in this county beſide thoſe of *Mendip*. On each ſide of the river *Avon* the hills form a moſt beautiful proſpect; but they are neither fertile in herbage, nor timber, being in general rocky, and covered with fern and furze.

The chief rivers belonging to this county, beſides the mouth of the *Severn*, commonly called *Briſtol Channel*, are the *Avon*, the *Brent*, and the *Parret*. The *Avon* enters this county about five miles S. E. of *Bath*, and dividing *Briſtol*, diſcharges itſelf at the influx of the *Severn* with the *Briſtol Channel*. About two miles from the *Hot Wells*, near *Briſtol*, this river is encloſed on each ſide with high, rough, and craggy rocks, the cliffs of which are in ſome places above two hundred feet perpendicular, hanging over in an aſtoniſhing manner; and many of theſe being covered with turfs of graſs, ſmall ſhrubs, tall plants, and clumps of ſhort trees, ſeem to form little hanging woods, and afford a moſt ſtriking and romantic proſpect. The *Brent*, or *Brue*, riſes in the eaſtern edge of the county, in *Selwood* foreſt, and runs to the weſtward by *Glaſtonbury*, below which it forms a large lake, and then uniting its ſtreams with the river *Parret*, falls into the *Briſtol Channel* near *Bridgewater*. The *Parret* riſes in the S. edge of *Somerſetſhire*, and running to the northward, receives in its courſe the *Yeovil*, the *Thone* and the *Brent*, then paſſing by *Bridgewater*, falls into the *Briſtol Channel*. This county is alſo watered by abundance of ſmaller ſtreams, which furniſh it with plenty of all ſorts of fiſh; but one particular ſpecies in the river *Avon* deſerves our notice: they are called *elvers*, and reſemble a diminutive eel or grig: in the ſpring the river is in ſome places covered with them, and even looks black with prodigious multitudes of them on the ſurface of the water, they being in ſize about the thickneſs of a gooſe-quill. When taken they are made, by a particular management, to caſt their ſkins, and then appear very white; after which they are kneaded into a kind of cake, and then fried.

The principal towns in this county are the following:

BATH, an ancient and renowned city, ſeated in a plain of moderate extent, ſurrounded with hills, which form a kind of amphitheatre, from whence flow the ſprings that render this city ſo famous. It is ſituated a hundred and eight miles W. of *London*, nineteen N. E. of *Wells*, and twelve S. E. of *Briſtol*. It roſe into conſequence from its ſprings, which in the time of the *Romans* were known to poſſeſs very ſalubrious qualities, and their reputation is ſtill higher than that of any other ſprings in *England*, and inferior to few in *Europe*. The hot ſprings are peculiarly beneficial to the paralytic, the gouty, and the bilious, but many other diſorders are relieved by them, on bathing, or receiving them on the part affected from a pump; they are chiefly uſed in the ſpring and autumn. Their waters are likewiſe drank medicinally.

The city being on all ſides ſheltered by high hills, the air remarkably mild and ſalubrious, the adjacent country delightfully diverſified and romantic; proviſions of all kinds very abundant and cheap, with fiſh in a copious variety, many perſons of rank and fortune, by chooſing it or its vicinity, for their ſtated reſidence, have contributed to form it into the moſt gay and agreeable ſpot in the kingdom, and in this reſpect, a rival even to the metropolis; as it is likewiſe continually viſited, except at a very ſhort interval in the height of ſummer, by the nobility and gentry of the kingdom, with their neceſſary attendants, gameſters, adventurers, and fortune hunters. This faſhionable reſort has cauſed new buildings to be carried on, of late years, over a vaſt extent of ground, and the rage for building has at leaſt kept pace with the demand for houſes; but a great inducement to ſuch undertakings is the abundance of fine white ſtone which the quarries in the neighbourhood of the city ſupply. The buildings are magnificent, and many of them in a grand taſte; the ſtreets are large, well paved, and clean; the market-place ſpacious, open, and ſupplied with the beſt meat, fiſh, vegetables, fruit, *&c.* The grove, the ſquares, and parades, attract notice; the circus and creſcent are magnificent ranges of building, and grandeur is advancing indefinitely.

Here is a neat *Theatre*, which was erected, under the authority of an act of parliament, in the year 1768, which has poſſeſſed ſome of the moſt celebrated actors, particularly the laſt great actor which trod the ſtage, *Henderſon*, and that captivating tragedian, Mrs. *Siddons*, who were long detained here, before a *London* audience was made acquainted with their excellencies; here too the muſical band was for ſome time led by Dr. *Herſchel*, until that wonderful man renounced his muſical profeſſion to become the greateſt aſtronomer in the world.

In ſome places the hot and cold ſprings riſe very near each other, and in one place within two yards. The hot ſprings exhale a thin kind of miſt, and ſomething of an ill ſmell, proceeding from the ſulphureous particles mixed with the water. Theſe hot ſprings are always the ſame, for the longeſt and heavieſt rains do not cauſe them to diſcharge more water, nor the drieſt ſeaſons occaſion them to diſcharge leſs.

Of theſe ſprings, that called the *Croſs-bath*, from a croſs formerly erected in the middle of it, is of a moderate warmth, and a perſon may ſtay much longer in it than in any of the other baths. It is encloſed with a wall, on the ſides of which are ſeats, and at the ends galleries for the muſic and ſpectators, under which are ranges of ſmall dreſſing-rooms; one of which ranges is for the gentlemen, and the other for the ladies, who being dreſſed in linen habits go both together into the water, the men keeping on one ſide and the women on the other.

The *Hot-bath*, ſo called from its being much hotter than the *Croſs-bath*, is fifty-eight feet and a half diſtant from it. This bath has a well, the water of which not only ſupplies its own pump, but is conveyed by pipes to the pump in the *Croſs-bath*.

The *King's-bath* has a ſpring ſo hot that it is neceſſary to temper it by admitting cold water into it; but the heat of the hotteſt ſpring is not ſufficient to harden an egg.

The *Queen's-bath* has no ſpring of its own, but is ſupplied by water conveyed from the *King's*.

There is likewiſe a *bath* for *lepers*, into which none go but ſuch as the phyſicians ſuppoſe to have the leproſy, or ſome other diſeaſe of the ſame kind: this is made by the overflowing of the *Croſs-bath*. The poor who bathe in it have an allowance for their ſupport from the town; but are chiefly relieved by the generous contributions of the gentlemen and ladies who come to enjoy the benefit of the other baths.

In this city there are ſpacious and lofty rooms for balls and aſſemblies; the ſtudious have here an eaſy ſupply of all kinds of books. There are two large ſtone bridges built over the river. The ſtone with which the fine buildings in this city are erected is dug out of the quarries upon *Charlton-down*, and brought from thence down a ſteep hill, by a four-wheeled carriage of a particular form and ſtructure; the wheels are of caſt iron, broad and low, with a groove in the perimeter to keep them on the pieces of wood on which the carriage moves down hill with four or five ton weight of ſtone, very eaſily without the help of horſes, the motion being moderated by means of a friction lever bearing more or leſs on their hinder wheel, as occaſion requires.

The walls of *Bath* are almoſt entire; the ſmall circuit of ground encompaſſed by theſe walls is in the form of a pentagon, with four gates, beſides a poſtern. Without the walls is a handſome ſquare, in the centre of which is an obeliſk ſeventy feet high. The market-houſe is a large ſtone building, ſupported by thirty-one ſtone pillars, and over it is the town-hall. Here is a general hoſpital for the reception of the ſick and lame poor from all parts of the kingdom, erected in 1738, by the contributions of the nobility and gentry, and is capable of containing a hundred and fifty patients. Another new ſquare has been built in the gardens adjacent to the public walks, on the S. ſide of the city, by the *Avon*, where is a noble room for balls and public aſſemblies. *Bath* is the ſee of a biſhop, who is alſo prelate of *Wells*. *St. Peter's* cathedral is a lofty venerable pile, with a handſome tower in the middle, and a good ring of eight bells; there are likewiſe three other churches, with ſeveral ſchools. Near the *Croſs-bath* is *St. John's* hoſpital for poor ſick people, which has a chapel of white free-ſtone. There are alſo two other hoſpitals and an alms-houſe. In this city is a manufacture of cloth; and it is under the government of a mayor, aldermen, and common-council. In the year 1789, the lord viſcount *Weymouth* was created marquis of *Bath*.

WELLS is ſituated at the foot of *Mendip-hills*, a hundred and twenty miles W. of *London*, and twenty S. W. of *Briſtol*, and has its name from the wells and ſprings about the city. It is but of ſmall extent, though well inhabited. The public and private buildings are very neat, and the cathedral one of the handſomeſt in *England*. The cloſe, which contains the biſhop's palace, and the houſes of the dignified clergy, is walled in like a fortification, and encompaſſed by a moat. The prebendaries and canons have very agreeable dwellings. The city is governed by a mayor, a recorder, ſeven aldermen, and ſixteen common-councilmen. Its chief manufactures are making of bone-lace, and knitting of hoſe.

BRISTOL, called by the *Saxons Brightſtow*, is ſituated in 51° 21′ N. latitude, and in 2° 54′ W. longitude from *Greenwich*, and one hundred and ſeventeen miles from *London*; partly in *Somerſetſhire*, and partly in *Glouceſterſhire*; but being a county of itſelf, is independent of them both. It is divided by the river *Avon* which runs through it, and ſeparates the two counties; but that part which is on the *Glouceſterſhire* ſide is the largeſt and moſt populous; according to a ſurvey made in the year 1736, the circumference on the *Glouceſterſhire* ſide was four miles and a half, and on the *Somerſetſhire* ſide two miles and a half. This city has a ſtone bridge of four broad arches over the *Avon*; and here is one of the moſt commodious quays in *England* for ſhipping and landing merchandize, which lies along the river *Froome*, and is half a mile in length, from a bridge on the *Glouceſterſhire* ſide of the city, to the place where that river falls into the *Avon*. This is the ſecond city, though, ſome contend, the third port, in *Great Britain* for trade, wealth, and number of inhabitants; *Liverpool* having equalled if not ſurpaſſed it in commerce, although the cuſtom-houſe receipts for *Briſtol*, in the year 1781, exceeded thoſe at *Liverpool*, by 3,523*l.* and its nett produce to the revenue, by 43,284*l.* yet the cuſtom-houſe receipts at *Briſtol* are but little more than the eleventh part of thoſe of *London*. The trade of many nations is drawn hither by the convenience of the harbour, which receives veſſels under ſail into the heart of the city. The *Avon* ſwells ſo high by the coming in of the tide, that ſhips upon the ſhallows are borne up eleven or twelve fathoms. Here is an Exchange; but it was formerly a cuſtom with the merchants to meet, walk, and tranſact mercantile affairs in the open ſtreet, and pay their money on large braſs baſons on the tops of poſts, in that part of the ſtreet called the *Tolzey*.

The merchants of *Briſtol* were the firſt adventurers to the *Weſt Indies*, in which trade between ſeventy and eighty ſhips are conſtantly employed, which carry out every article neceſſary for the clothing and maintenance of the white and black inhabitants of the iſlands; as alſo materials for building, and in particular great quantities of lime, burned at *St. Vincent*'s rocks. Theſe ſhips bring back *ſugar*, *rum*, *cotton*, and all the other products of thoſe countries. The ſugar is a very great article; and its refinery is one of the capital manufactures of *Briſtol*, ſerving for the ſupply of all the weſtern counties of *England*, and all *South Wales*. The *African* trade is much leſs connected with the *Weſt Indian* here than at *Liverpool*. With the N. and S. of *Europe*, *Briſtol* has a general trade, of which that with *Spain* is the moſt important. A quantity of *wool*, conſiſting of from four to ſix thouſand bags, being annually imported from that country, for the uſe of the weſtern clothing manufactures. The return is in a variety of goods, particularly *tin*, *lead*, and *copper*. The traffick with *Portugal* from this port is likewiſe conſiderable. *Briſtol* has alſo a ſhare in the trade to the continent of *America* and *Newfoundland*, and an extenſive commerce with *Ireland*. *Dr. Aikin's England delineated, p.* 322.

By means of the *Severn* and the *Wey* the inhabitants of this city poſſeſs, in a manner, the whole trade of *South Wales*; and by land-carriage they ſend goods to *Exeter*, *Bath*, *Wells*, *Froome*, and all the principal towns from *Southampton* to the banks of the *Trent*. Here were conſiderable manufactures of woollen ſtuffs, particularly *cantaloons*, carried on chiefly by *French* refugees, but they are now diſcontinued; and here are no leſs than fifteen glaſs-houſes, which are ſupplied with coals from *Kingſwood* and *Mendip-hills*; ſome are for glaſſes, others for crown-glaſs, and others for bottles, for which there is a great demand at the hot well in its neighbourhood, which lies about a mile and half from the city down the *Avon*, and alſo at *Bath*, for exporting their mineral waters.

The glaſs-making, in its ſeveral articles of crown, flint, and bottle glaſs, is very conſiderable, and on the increaſe. *Ireland* and *America* take off great quantities of theſe goods, eſpecially bottles, of which nearly half the number are ſent out filled with beer, cyder, perry, and *Briſtol* water. The copper and braſs manufactures were of capital importance, but are now much declined, in conſequence of a monopoly. Hard white *ſoap* of the beſt quality is made here in great quantities; much of which is ſent to *London*, as well as to foreign parts. *Hats*, *leather*, both tanned and dreſſed in oil, *ſadlery* and *ſhoes*, white *lead*, *gun-powder*, and *earthen wares*, are all conſiderable articles of domeſtic and foreign traffic. The city likewiſe poſſeſſes works for ſmelting lead, and making lead-ſhot, iron foundries, rolling and ſlitting mills, and tin-works, all which furniſh very valuable commodities for exportation. Its former *woollen manufactures* are at an end. Some of the principal commodities of the ſurrounding country are, *cheeſe*, *cyder*, and *beer*, a few *coals*, *herrings* taken in the channel, *ſalt* from *Droitwich*, coarſe *woollens* and *ſtockings*, hardware from *Birmingham*, *Wolverhampton*, and *earthen-ware* from *Staffordſhire*. In the exportation of theſe laſt articles, however, *Liverpool* has greatly gained upon *Briſtol*, chiefly on account of the ſuperiority of the canal navigations to that town, above the difficult and uncertain navigation of the *Severn*. *Dr. Aikin's England delineated, p.* 324.

This city with its ſuburbs is very compact, being almoſt as broad as it is long, and is now extending itſelf into its ſuburbs by new and more airy ſtreets. Beſide the cathedral there are eighteen churches, and ſeven or eight meeting-houſes for Proteſtant Diſſenters: and, according to Mr. *Whatley*, there are eighteen hoſpitals, beſides charity-ſchools, a guildhall, and a very large council-houſe; and its cuſtom-houſe ſtands on the ſide of *Queen's-ſquare*, which is adorned with rows of trees that lead to a curious equeſtrian ſtatue of king *William* III. On the north-weſt ſide of the city is *Brandon-hill*, under which is *Jacob's-well*, where plays are acted almoſt every night in the ſummer ſeaſon by a company of comedians. The *College-green* is juſtly admired for its ſituation, as it commands a moſt delightful proſpect over the whole city and harbour; and here ſtands the cathedral, with a ſtately croſs, which is a fine *Gothic* ſtructure, ſurrounded with the effigies of ſeveral kings of *England*. It is remarkable, that though the city carries on ſuch a prodigious trade, no carts are admitted into it, leſt they ſhould damage the arches of the vaults and common ſewers formed for conveying the ſoil into the river; ſo that the goods being conſtantly drawn through the ſtreets upon ſledges, the pavement is neceſſarily rendered exceedingly ſlippery.

BRIDGEWATER is ſeated about twelve miles from the *Start-point*, where the *Parret* runs into the *Briſtol Channel*, a hundred and forty-one miles from *London*. The ſpring-tide here flows twenty-two feet at leaſt at the quay, and comes in with ſuch an impetuous torrent, and ſuch a noiſe, that it is called *The raging Bear*. Ships of two hundred tons come up to its quay, and from its convenient ſituation for commerce the inhabitants have a good coaſting trade to *Briſtol*, and carry coals to *Wales*, and ſlate, *&c.* to *Cornwall*; twenty ſhips at leaſt being conſtantly employed. Its foreign trade is principally to *Newfoundland*. It is governed by a mayor, a recorder, two aldermen, who are juſtices of the peace, twenty-four common-councilmen, a town-clerk, a clerk of the market, a water-bailiff, and two ſerjeants at mace. It is a large well-frequented place, has ſeveral good inns, and the market is well ſupplied with corn, cattle, hogs, and ſheep, alſo with excellent cheeſe.

SOMERTON, once the moſt celebrated town in the county, and that from whence it took its name, is now but a poor place, a hundred and twenty-ſeven miles W. of *London*, but has a conſiderable market for corn, proviſions, and cattle.

GLASTONBURY is ſeated one hundred and twenty-ſix miles from *London*, and is famous for its abbey, ſome magnificent ruins of which are ſtill remaining, but are daily diminiſhed for the ſake of the ſtones: however, the curious ſtructure called *The Abbot's Kitchen*, is ſtill pretty entire, and of a very unuſual contrivance. It is pretended that the bodies of *Joſeph* of *Arimathea*, of king *Arthur*, and *Edward the Confeſſor*, were buried here. The town is pretty large and well-built; near it, on a high ſteep hill, named the *Tor*, is placed a tower that commands an extenſive proſpect, and ſerves as a land-mark to ſeamen. The laſt abbot of this place was hanged on the top of the *Tor*, by order of king *Henry* VIII. for not acknowledging his ſupremacy. The holy thorn, or hawthorn, in the church-yard upon the hill, ſaid to have taken root from a ſtaff ſtuck in the ground by *Joſeph* of *Arimathea*, and to bloſſom only on old *Chriſtmas-day*, has brought a vaſt number of people to viſit this town, though it is very dubious whether *Joſeph* was ever in *Britain*. Biſhop *Gibſon* ſays it has been cut down for many years, yet there are ſtill ſome growing in the county from branches of it, particularly in the garden of Mr. *Stroud*, the poſſeſſor of the ground where the other ſtood; and another in the garden now belonging to an inn there. Theſe branches, however, do not always bloſſom on *Chriſtmas-day*; for they ſometimes begin to bloſſom three or four days after, and ſeldom ſo ſoon as *Chriſtmas-day*, except the weather be extremely mild. *Glaſtonbury*, was for ſome time famous for its mineral waters, but for want of proper caution they proved fatal to ſeveral who drank them, but have been found ſerviceable in the aſthma, dropſy, ſcorbutic diſorders, ulcers, and even cancers.

Taunton, a handſome, neat, well-built town, a hundred and forty-five miles S. W. of *London*, received its name from being ſeated on the river *Thone*, or *Tone*. The ſtreets are ſpacious, and it has two pariſh-churches, beſides ſeveral meeting-houſes of Proteſtant Diſſenters, and it is ſurrounded by delightful meadows, orchards, and gardens. This town is very populous, and ſome thouſands are employed in the manufacture of *ſerges*, *duroys*, *ſagathies*, *ſhalloons*, *&c.* for weaving of which eleven hundred looms have been employed at a time. The river is navigable for barges within three miles of the town, where there is a handſome bridge, and it once had a caſtle.

Among the hiſtorical events of this county may be mentioned, two great battles fought near *Pen*, below *Selwood-foreſt*; in one of which the *Britons* were entirely defeated by the *Weſt Saxons*; and in the other, the *Danes* were completely overthrown by king *Edmund Ironſide*. A little iſland called *Athelney*, formed by the conflux of the rivers *Thone* and *Parret*, is memorable for having given ſhelter amidſt its inacceſſible moraſſes, to the great *Alfred*, after a defeat he ſuſtained from the *Danes*. At *Lanſdown*, near *Bath*, a pitched battle was fought in 1643, between the forces of *Charles* I. and the parliament; in which the victory was undecided. *Aikin*. This place now gives the title of Marquis to the earl of *Shelburne* in *Ireland*, and earl of *Wycombe* in *England*.

SECT. XV.

DEVONSHIRE.

DEVONSHIRE is bounded on the N. and N. W. by the *Briſtol Channel*; on the E. by *Somerſetſhire*, and a ſmall part of *Dorſetſhire*; on the S. S. E. and S. W. by the *Engliſh Channel*; and on the W. by *Cornwall*: it has the title of a duchy. In ſize it is the ſecond county in *England*, extending ſixty-nine miles in length from N. to S. ſixty-four in breadth from E. to W. and is ſaid to contain fifty-ſix thouſand three hundred and ten houſes, three hundred and thirty-ſeven thouſand eight hundred and ſixty inhabitants, three hundred and ninety-four pariſhes, one city, thirty-ſeven market towns, and about ſeventeen hundred and thirty villages. This county, which is ſub-divided into thirty-three hundreds, ſends twenty-ſix members to parliament, *viz.* two knights for the ſhire, and two members for each of the following places; *Exeter*, *Plymouth*, *Totneſs*, *Plymton*, *Okehampton*, *Honiton*, *Barnſtaple*, *Taviſtock*, *Aſhburton*, *Tiverton*, *Bearalſton*, and *Dartmouth*.

From *Exeter*, acroſs the county to the edge of *Cornwall*, is the wide barren tract of *Dartmoor*, a ruſhy naked moraſs, bounded on the N. by bleak hills. This ſort of country, clayey, wet, and ſteril, extends northward quite through the centre of the county, and on the *Corniſh* border to the ſea. Many ſheep are bred here, but of a ſmall kind, and ſubject to the rot. The chief riches of the inhabitants are their black cattle, which thrive well on the coarſe ſour herbage; and after being fattened in better paſtures, are driven to the metropolis. *Tin* was formerly procured in great quantities on the weſtern border of the county, but that article of trade is now in a manner engroſſed by the adjoining county of *Cornwall*. The N. E. part, by *Exmoor* in *Somerſetſhire*, is, in general, a dry heathy ſoil, with mines of *copper*, *lead*, and other minerals. *Aikin*, 330.

The air of this county is very mild and healthful in the valleys; ſuch is its mildneſs, that the myrtle grows unſheltered on the ſea-coaſt, whence *Dyer*'s deſcription, but exceſſively cold and bleak upon the mountains. The ſoil is various, for the lower grounds are naturally fruitful, and yet are made much more ſo by the art and induſtry of thoſe who poſſeſs the lands; but the hills are very barren. In the eaſtern parts there is plenty not only of good corn, but of fine paſturage for ſheep, where the grounds are dry and chalky. The ſouthern part of the county is remarkably fertile, and is as juſtly called *The Garden of Devonſhire*, as *Italy*, *The Garden of the World*. The trees are in as great variety here as in any other part of the kingdom; and fruit-trees are particularly plentiful, eſpecially apples, with which they make a great quantity of cyder. The merchants who go long voyages to ſea, find this a very ſerviceable drink on board their ſhips, and therefore lay in great ſtores of it; for it is ſaid one ton of cyder will go as far as three of beer, and it is found by experience to be much more wholeſome in hot climates.

On the coaſt in this county is found plenty of a peculiar rich ſand, which proves of ſingular ſervice to the huſbandmen, as thoſe who live at a diſtance from the ſea purchaſe it in order to improve their poor lands, for it renders the moſt barren ſoil fruitful, and, as it were, impregnates the glebe. Thoſe huſbandmen who live at too great a diſtance from the ſea-ſhore to purchaſe a ſufficient quantity of this valuable manure, uſe marl, lime, and the turf of the ground pared off and burnt to aſhes.

The inhabitants have abundance of *horſes*, *kine*, *hogs*, *goats*, *ſheep*, *rabbits*, and *fowl*. In the weſtern parts of *Devonſhire* are great quantities of game, eſpecially *hares*, and *pheaſants*, which, with *woodcocks*, are in ſuch abundance as to render them very cheap; and in that part of the county is a bird ſo very ſmall, that it is reputed a humming-bird, and, like that, conſtructs its neſt on the extreme branches of trees. The inhabitants aſſert, that no venomous creature, of what nature or ſpecies ſoever, will live among them.

In the S. W. parts of *Devonſhire* are great quantities of marble, and in many places marble rocks are found to be the baſis of the high road. This marble, when poliſhed, is little inferior to ſome which is procured from foreign parts, and accordingly is much uſed by the gentry in and about this county.

There are a greater variety of rivers than any other county can boaſt; ſome of which diſcharge themſelves into the *Briſtol*, and ſome into the *Engliſh* channel, yet there are only two, namely the *Tamar* and the *Ex*, that are conſiderable enough for particular notice. The former, which ſeparates this county from *Cornwall*, has its ſource in the hills near *Welcomb*, and runs nearly from N. to S. till it reaches the *Engliſh Channel* at *Plymouth*. This river is particularly remarkable for the good quality of the *ſalmon* caught in it. The *Ex*, which riſes at *Exmoor* in *Somerſetſhire*, forms a courſe upon the ſame points, and, paſſing by *Exeter*, alſo falls into the *Channel*, widening at *Topſham* into an arm of the ſea which extends to *Exmouth*. Great plenty of ſalmon is caught in this river alſo, where they come up in great quantities in the ſpawning ſeaſon. The *Teign*, has two branches, which uniting, flow to the ſea at *Teignmouth*. The *Dart* iſſues from ſome hills near *Dartmoor*, and proceeds, with a rapid courſe to the S. and forms *Dartmouth haven*. From theſe rivers the county is ſtocked with a great variety of fiſh; but the moſt beneficial fiſheries are thoſe of herrings and pilchards in the channel; for by them, the trade carried on in all ſorts of commodities from the adjacent counties and foreign nations is obtained.

In ſeveral places in *Devonſhire* are mineral waters, that have been of ſingular ſervice in dangerous epileptic diſeaſes.

Among the curioſities of this county is *Lay-well*, which ebbs and flows near eleven times every hour.

The river *Tamar*, juſt mentioned, receives into it a ſmall river called the *Lid*, which is peculiarly remarkable for being pent up with rocks at the bridge, and running ſo far below it, that the water is ſcarcely to be ſeen, or the murmurs of it to be heard, to the aſtoniſhment of all ſtrangers who have the curioſity to attend to theſe uncommon circumſtances; for the bridge is level with the road, and the water runs near ſeventy feet below it.

Within a mile of this place is a cataract, where the water

—— *Devon's myrtle vales,*
That drink clear rivers near the glaſſy-ſea. *Fleece.*

water falls above an hundred feet; it comes from a mill at ſome diſtance, and after a courſe upon a deſcent of near an hundred feet from the level of the mill, it arrives at the brink of the precipice, from whence it falls in a beautiful manner, and ſtriking upon a part of the cliff, ruſhes from thence in a wider cataract to the bottom, where falling with great violence, it makes a deep and foaming baſon in the ground. This wonderful fall of water cauſes the ſurrounding air at the bottom to be ſo impregnated with aqueous particles, that a perſon approaching it finds himſelf in a miſt. The principal places in this county are the following:

Exeter, thus called by contraction from *Exceſter*, a caſtle on the river *Ex*, was the *Auguſta* of the *Romans*; it is ſituated a hundred and ſeventy miles from *London*, on the top of an eaſy aſcent on the eaſtern bank of that river. The walls are in pretty good repair, and form an agreeable walk round the city, from whence appears, a fine country; hills covered with trees, fields, orchards, villages, and gentlemen's ſeats. The principal part of the city conſiſts of four ſtreets centering at a handſome conduit. The high-ſtreet particularly, makes a noble appearance, it being broad and ſtraight; and the houſes are of a very old but good model, ſpacious, commodious, and not inelegant. The ſtreet is full of ſhops well furniſhed, and all trades are briſkly carried on. In the northern angle of the city, and on the higheſt ground, ſtands *Rugemont-caſtle*, once the reſidence of the *Weſt Saxon* monarchs, and afterward of the earls of *Cornwall*. It is of a ſquare figure, not very large, but environed with a high wall and a deep ditch. It has a rampart of earth parallel to the top of the wall, and forming a terrace that overlooks the city and country. In this caſtle the aſſizes are held: it alſo contains a chapel. The bridge over the *Ex* is of great length, and has houſes on both ſides, with a conſiderable vacancy in the middle.

The cathedral is ſaid to have been about four hundred years in building, and is notwithſtanding very remarkable for the uniformity with which it was carried on; for the whole ſeems the workmanſhip of the ſame architect. The altar-piece, which was finiſhed a hundred years ago, is the repreſentation of the church in perſpective, a very fine piece of painting. The fine painted glaſs, of which there is a great deal, was much damaged during the time of the civil wars, in the reign of *Charles* I. and the carved figures of the patriarchs and prophets were greatly defaced. In one of the towers of this church is a very large bell, of about three ton weight, and in the other a fine ring of ten large ones. In the year 1763, on taking up the old floor of the choir, a leaden coffin was found, of an ancient form, in which was a ſkeleton, pretty entire; on the right ſide a ſmall ſilver chalice, covered with the paten; a gold ring with a large ſapphire; on the left ſide, a wooden croſier. The remains were ſuppoſed to be thoſe of *Thomas de Bitton*, biſhop of *Exeter*, who died about the year 1306.

The other buildings of a public nature are the chapter-houſe and cloiſters, the biſhop's palace, the houſes belonging to the dean, the chancellor, treaſurer, and other dignitaries of the church, the guild-hall, with the hoſpital of *St. John the Baptiſt*. There are within the city and liberties twenty pariſh-churches; to which may be added ſome chapels and alms-houſes; with the ruins of ſeveral others. There are likewiſe three or four meeting-houſes, a quay for landing goods, and a cuſtom-houſe. The receipts at the cuſtom-houſe in the year 1781 amounted to 17,438 *l.* and the nett produce, after deducting all expences was 12,838 *l.* Its export trade conſiſts of woollen goods manufactured in the adjacent counties, the annual value of which has been computed at upwards of 700,000 *l.* It imports wine, fruit, and dying drugs from *Spain* and the *Levant*; *hemp*, *iron*, *timber*, and *tallow* from the *Baltic*. Its merchants likewiſe engage in the whale and great cod fiſheries.

The city is governed by a mayor, twenty-four aldermen and common-council, a recorder, a ſheriff, four ſtewards, a chamberlain, and town-clerk, who are attended by a ſword-bearer, who wears the cap, and carries the ſword given by king *Henry* VII. before them in all public proceſſions. There are alſo in this city twelve incorporated trades, who on public occaſions walk in the mayor's train, dreſſed in gowns, each company having a beadle in a laced coat bearing the enſigns of their ſeveral profeſſions.

Plymouth is laid down by Dr. *Maſkelyne*, in 50° 22′ N. latitude, and in 4° 16′ W. longitude, from *Greenwich*, two hundred and fourteen miles from *London*, between two very large inlets of the ſea, in the bottom of a ſpacious ſound, or bay, encompaſſed on every ſide with hills; the ſhore is generally ſteep and rocky, though the anchorage is good, and it is ſafe riding. About ſixteen miles out at ſea, to the S. of *Plymouth*, is a large and dangerous rock, which at high water is covered, but at low tide lies bare. Upon this rock, which is called the *Eddyſtone*, the ingenious Mr. *Winſtanley* firſt built a light-houſe to direct the navigation into the harbour: this erection, notwithſtanding its height and magnitude, withſtood the fury of many dreadful ſtorms. Mr. *Winſtanley*, who often viſited it, ſtrengthened the building by new works, and was ſo confident of its ſtability, that he uſually ſaid to thoſe who doubted its ſtanding in hard weather, that he only deſired to be in it when a ſtorm ſhould happen; but in the dreadful tempeſt of *November* 27, 1703, when he happened to be ſo unhappy as to have his wiſh, he in vain made ſignals for help; but no boats dared to go off to him; and in the morning after the ſtorm, nothing was to be ſeen but the bare rock, the light-houſe being gone, in which the architect and all that were with him periſhed; but a very ſtately light-houſe has ſince been built on the ſame rock, and finiſhed in 1759 by Mr. *Smeaton*. The town is defended by a caſtle, ſeated on an iſland named *St. Nicholas*, and by a citadel in the town oppoſite to the iſland. A long ſtate of imaginary ſecurity had cauſed the fortifications to be ſo much neglected, that when the combined fleets of *France* and *Spain* entered the channel, and appeared off this place, in the year 1780, it was found incapable of repelling an enemy, and would have become an eaſy conqueſt if attacked. The town ſtands above the citadel upon the ſame rock, ſloping on the ſide of it toward the E. The inlet of the ſea, called *Catwater*, forms a harbour capable of receiving any number of ſhips, and of any ſize; it waſhes the eaſtern ſhore of the town, where they have a kind of natural mole, with a quay, and all other conveniences for loading and unloading of veſſels. On the other ſide of the town is another inlet of the ſea, called *Hamoaze*; this is the mouth of the river *Tamar*, where is a wet dock, with yards, dry docks, launches, and conveniences of all kinds for building and repairing of ſhips. Theſe wet and dry docks exceed every thing of the kind, being hewn out of a mine of ſlate, and lined with *Portland-ſtone*. The dry dock is large enough for a firſt-rate man of war, and the wet dock will contain five of the ſame ſize. Here are alſo ſtore-houſes for rigging, and for the naval and military ſtores of ſuch ſhips as may be appointed to be laid up there; with very handſome houſes for the commiſſioner, clerks, and officers of all kinds, uſual in the king's yards. In ſhort, it is now become as complete a yard as any belonging to the government, though not ſo large. A noble hoſpital has been built here, for the reception of ſick and wounded ſeamen, which was completed in the year 1763, at an expence of more than 20,000 *l.* The town is ſupplied with water from a ſtream which flows at the diſtance of twenty miles, and which is reported to have been conveyed thither in the year 1581, by Sir *Francis Drake*, who was born here. The cuſtom-houſe receipts here in the year 1781, were ſtated by the commiſſioners for examining the public accounts to be 80,056 *l.* and the nett revenue to the public, after all ſalaries and expences were deducted, 66,385 *l.* Here are two fine churches, and two or three meeting-houſes for Proteſtant Diſſenters and *French* Refugees; alſo a free-ſchool, and an hoſpital for blue-coat boys. It gives title of earl to the noble family of *Hickman*.

From *Plymouth*, the coaſt ſtretches out to the S. E. and forming a point at the S. trends to the N. E. Somewhat to the eaſtward of its ſouthern extremity is the *Start point*, a remarkable promontory, which Dr. *Maſkelyne* lays down to be in 50° 9′ N. latitude, and 3° 51′ W. longitude from *Greenwich*. Off this point the *Engliſh* fleet, commanded by lord *Effingham*, Sir *Francis Drake*, admiral *Hawkins*, and captain *Frobiſher*, began an attack upon the rear of the *Spaniſh Armada*, *July* 21ſt 1588, when one of their richeſt galeaſes was taken by Sir *Francis Drake*; and the *Spaniſh* vice admiral narrowly eſcaped the ſame fate from lord *Effingham*. Fourteen miles due N. is

DARTMOUTH, a ſea-port town ſeated on the declivity of a hill at the mouth of the river *Dart*, where it empties itſelf into the ſea, two hundred and one miles from *London*, and thirty-one from *Exeter*. The opening into the harbour is not broad; but the channel is deep enough for the largeſt ſhips in the royal navy. The ſides of the entrance are defended by rocks, and at the firſt narrowing of the paſſage is a ſtrong fort, and a platform of guns which commands the harbour. The narrow entrance extends about half a mile, and then opening forms a haven, in which five hundred ſail of ſhips may ride with the greateſt ſafety, and the entrance may, upon occaſion, be chained up.

Dartmouth is ſituated on the W. ſide of this baſon, or harbour, in a kind of ſemicircle, on the aſcent of a ſteep hill; but though large and populous, it is but meanly built, yet the quay is ſpacious, as is alſo the ſtreet before it. Its cuſtom-houſe receipts, in the year 1781, were 7,858*l*. and their nett produce 4,870*l*. It has three churches, and a very large meeting-houſe; but the ſtreets are narrow and bad, though they are all paved. It is governed by a mayor, a recorder, twelve maſters, or magiſtrates, a town-clerk, and a high-ſteward.

This town was burnt by the *French* in the reign of *Richard* I. Some time after they again laid ſiege to it; but were bravely repulſed, particularly by the women, when the enemy being routed, general *Caſtel*, with three lords, and twenty-three knights, were made priſoners. This town gives the title of earl to the noble family of *Legge*.

TORBAY, to the N. N. E. of *Dartmouth*, is a capacious and ſafe harbour, open toward the eaſt, and ſheltered from every other wind, formed by two capes, and of great accommodation to the *Britiſh* navy in time of war. This place will ever be memorable in the *Engliſh* hiſtory, from having been the landing-place of *William* prince of *Orange*, on the 5th of *November* 1688, when he came to reſtore and amend the conſtitution, which had been outrageouſly violated, and was threatened with ſubverſion by a bigoted tyrant.

At AXMINSTER, near the borders of *Dorſetſhire*, is a flouriſhing carpet manufacture, which, as well as others of late years eſtabliſhed, has been much aſſiſted by the premiums offered from the ſociety for the encouragement of arts, manufactures and commerce, for making carpets on the principle of thoſe of *Turkey*. *Honiton*, to the W. is famous for making great quantities of the broadeſt laces in the kingdom. TIVERTON, more to the N. W. manufactures a great deal of woollen cloth. It is ſituated on the river *Ex*, and is the ſecond inland town in the county.

On the north weſtern coaſt of *Devonſhire*, which forms one ſide of that vaſt bay called "the *Briſtol Channel*," is HARTLAND POINT, remarkable for the reſort of *herrings*, which are caught off here in great ſhoals. To the W. are the towns of *Biddeford* and *Barnſtable*, the latter of which gives its name to a bay, not more than twenty miles to the N. W. of which, at the entrance of the *Briſtol Channel*, is the ſmall iſland of LUNDY, which is five miles long, and two broad. It is ſo encompaſſed with inacceſſible rocks that it has but one entrance, and that too narrow for more than two men to go abreaſt. The S. part of this iſland enjoys a pretty good ſoil; but the N. part is in a great meaſure barren, and has a remarkable high pyramidical rock called the *Conſtable*, which ſerves as a uſeful land-mark to ſhips ſailing into this *Channel*.

SECT. XVI.

CORNWALL *and the* SCILLY ISLANDS.

THE preſent name of this county is differently accounted for; but the moſt probable derivation ſeems to be that which brings it from the promontories projecting into the ſea like horns, called in the *Britiſh* language *Kernaw*, with the *Saxon* addition of *Waules*, to denote the people who fled thither. This county, which forms the S. W. extremity of *Great Britain*, and is ſomewhat of an angular figure; is ſurrounded by the ſea on all ſides, except to the E. where it is parted from *Devonſhire* by the river *Tamar*; the N. W. coaſt is waſhed by *St. George's Channel*; and the S. by the *Britiſh* ſea. Its greateſt length from E. to W. is ninety miles, its breadth next to *Devonſhire*, where it is broadeſt, is above fifty; but it ſoon contracts, and in the narroweſt part, at *St. Ives*, it does not exceed five, yet its circumference, from its unequal ſhores, meaſures upward of two hundred and thirty-three miles. Both to the S. and S. W. it runs into a point, one of which is called "the *Lizard*," latitude 49° 57′ N. longitude 5° 15′ W. from *Greenwich*, and the other, "the *Land's end*."

CORNWALL is a part of the dioceſe of *Exeter*, and contains about twenty-ſeven thouſand ſix hundred and twenty houſes, a hundred and ſixty-five thouſand inhabitants, a hundred and ſixty-one pariſhes, twenty-ſeven market towns; and twelve hundred and thirty villages: it is divided into nine hundreds, and ſends no leſs than forty-four members to parliament; being two knights of the ſhire, and as many members for each of the following towns: *Camelford*, *Bodmin*, *Boſſiney*, *Weſt-Loo*, *Launceſton*, *Eaſt-Loo*, *Fowey*, *Helſton*, *Grampont*, *St. Maws*, *Leſkard*, *Kellington*, *St. Ives*, *St. Germans*, *Truro*, *St. Michael*, *Tregony*, *Newport*, *Penryn*, *Saltaſh*, and *Leſtwithiel*.

The air is ſharp and healthful to the natives, yet the vicinity of the ſea, on three of its ſides, exempts this county from hard froſts, and the ſnow never lies long on the ground here. The ſame reaſon may be aſſigned for the frequent guſts of wind, which are very boiſterous, and ſometimes pernicious; the hills which riſe in the centre of the county, by attracting the clouds and vapours, create abundance of rainy and foggy weather; but the inhabitants are ſeldom troubled with infectious diſeaſes. The ſeaſons are ſomewhat different from thoſe in other parts, the ſummer being more temperate; and as the autumnal fruits are later, their harveſt is ſeldom ſufficiently ripe for laying up till near *Michaelmas*.

The ſoil, as it is very ſhallow, cannot be extraordinarily fruitful, eſpecially on the hilly parts. The vallies yield plenty of graſs, and the lands near the ſea, by being manured with orewood, a kind of ſea-weed, and fat ſea-ſand, produce corn. The fruits and herbs of this county are much the ſame with thoſe of others, though not ſo plentiful, nor do they ripen ſo kindly. It has beſides ſome plants which are either uncommon, or have never been found in other counties: among theſe is a ſort of grain ſown plentifully toward the farther end of the county, which is naked oats, called pill-corn, from its being naturally ſtripped of the huſk, with which the common oat is covered, for which reaſon it is much eſteemed. They have alſo plenty of ſea-herbs, as *camphire*, *eringo*, *ros ſolis*, and what is peculiar to this county, the *ſweet-briar* grows naturally here.

No county in *England* is ſo advantageouſly ſituated for carrying on fiſheries, and the inhabitants avail themſelves fully of their local advantages. It however derives its chief importance from the different minerals, which the bowels of the earth contain; theſe conſiſt of two ſorts, one of *tin*, the other of *copper*; thoſe of tin are very numerous, and are in general very large and rich in ore: theſe have rendered this county famous in all ages. There have alſo been ſometimes found a ſmall quantity of gold and ſilver, but not worthy of notice. With the metalline ores are intermixed large quantities of *mundic* and *arſenic*. Many ſorts of *ſtones* are alſo found here, particularly the *moor-ſtone*, which is uſed both in buildings and for mill-ſtones. Its natural compoſition is very beautiful, conſiſting for the greateſt part of a whitiſh granulated marble, variegated with a ſort of black and yellow matter reſembling tinſel and tin-glaſs, ſhining and glittering very agreeably in the ſun-beams. This ſtone, therefore, while new, gives a glaring aſpect to buildings; but though prodigiouſly hard at firſt, it ſoon changes its colour and conſiſtence. When poliſhed, it appears much more ſplendid and beautiful than any of the marble kind, and makes the richeſt furniture, as tables, chimney-pieces, *&c.* but being exceedingly hard, the poliſhing is very expenſive.

The tin works are of different ſorts, on account of the different forms in which the tin appears, for in many places its ore ſo nearly reſembles common ſtones, that it can only be diſtinguiſhed from them by its ſuperior weight. The ſecond form in which tin appears, is that of tin and earth, compounded and concreted into a ſubſtance almoſt as hard as ſtone, of a bluiſh or greyiſh colour, and often the mundic gives it a yellowiſh caſt. This ore is always found in a continued ſtratum or bed, which the tinners call the load; and this, for the moſt part, is found running through the ſolid ſubſtance of the hardeſt rocks, beginning in ſmall veins near the ſurface, perhaps not above half an inch or an inch wide, and increaſing as they proceed into large dimenſions, branching out into ſeveral ſtrata, and proceeding downward in a direction that is in general nearly E. and W. Theſe loads are ſometimes white, very wide, and ſo thick, that large lumps of the ore are frequently drawn up of more than twenty pounds value. The loads of tin-ore are not always contiguous; but ſometimes break off ſo entirely, that they ſeem to terminate; but the ſagacious tinner knows by experience, that by digging a ſmall diſtance on one ſide, he ſhall meet with a ſeparated part of the load appearing to tally with the other end, as nicely as if it had been broken off by ſome ſudden ſhock of the rock.

The miners of this county follow the load in all its rich and meandering windings in the bowels of the rocky earth. Sometimes the waters are drained from theſe mines by ſubterraneous paſſages, formed from the body of the mountain to the level country; theſe, which are called adits, ſometimes prove the labour of many years, but when effected, they ſave the conſtant expence of large water-works and fire-engines. From the ſurface of the earth they ſink a paſſage to the mine, which they call a ſhaft, and over it place a large winch; but in greater works a wheel and axle, by which means they draw up large quantities of ore at a time, in veſſels called *kibbuls*. This ore is thrown into heaps, which great numbers of poor people are employed in breaking to pieces and fitting the ore for the ſtamping mills.

The third form in which tin appears is that of cryſtals; for tin being a ſalt, will, under ſome circumſtances, readily cryſtalize: and therefore in many parts of the mineral rocks are found the moſt perfect tranſparent and beautiful cryſtals of pure tin.

The copper mines of this county are very numerous, and ſome of them large and rich in ore. It is remarkable, that in ſome parts of *Cornwall* the earth has produced ſuch an exuberance of this metal, as to afford it in large maſſy lumps of malleable copper, ſeveral pieces of which they ſhew in very curious vegetable forms. The mundic, which we have obſerved is found in the loads of tin, was for many ages conſidered as of no other uſe but to nouriſh tin while in the mine. However, in the reign of queen *Elizabeth*, a laudable curioſity prompted ſome private perſons to examine into its nature; but the deſign miſcarried, and the mundic was thrown as uſeleſs into the old pits with other rubbiſh; but about an hundred years ago, Sir *Gilbert Clark* began to work upon the mundic, and others following his example, have by degrees effected their purpoſe, and the copper extracted from this ore, once eſteemed uſeleſs, now brings in above one hundred and fifty thouſand pounds a year, and equals in goodneſs the beſt *Swediſh* copper, yielding a proportionable quantity of *lapis calaminaris* for making braſs.

In many of the cavernous parts of the rocks are found thoſe tranſparent cryſtals called *Corniſh-diamonds*, they being extremely brilliant when well poliſhed. Their form is that of a ſix-ſided priſm pointed on the top, and they are ſometimes four or five inches in length.

All the parts of *Cornwall* on this ſide *St. Auſtle*'s, *St. Michael*'s, and *St. Agnes*, have little or no mineral ores, but moſtly abound with rocks of blue ſlate, eſpecially toward the S. where are many large quarries of that uſeful foſſil. In *Mount's Bay*, near *Penzance*, the ſhore is as it were paved with rocky ſtone, of ſo fine a grain that it equals any hone in giving an edge to a razor.

Among the curioſities obſervable in this county, it is worthy of notice that the *Land's-end* conſiſts of very ſteep rocks, projecting into the ſea, into which the water ruſhes with great rapidity, violence, and noiſe.

Among the rude relics of nature in this county, we ought not to paſs by the *logan* or *rocking-ſtone*. In the pariſh of *St. Levin* is a promontory called *Caſtle-Treryn*, which conſiſts of three diſtinct groups of rocks, and on the top of the middle group is the moſt wonderful of theſe ſtones perhaps in the world. It is computed that its ſolid contents amount to about ninety-five tons; the two inclined ſides ſomewhat reſemble the roof of a houſe, meeting in a ſort of obtuſe ridge upon the top. The lower part is a large plain baſe, near the middle of which projects a ſmall part on which it reſts, not more than eighteen or twenty inches in diameter. This prodigious ſtone is eaſily moveable upon the large ſtone below, the power of one man being ſufficient to make it vibrate up and down. This monument of antiquity was doubtleſs formed by the ancient *Britons*, and in this county there are many others of different kinds, as well as evident marks which ſhew, that the *Romans* were ſettled here.

With reſpect to the cattle of this county, it has all the ſeveral kinds found in the others; but it is remarkable that ſheep, which, when it lay open and uncultivated, were ſmall, and their wool ſo coarſe that it was uſually called *Corniſh-hair*, have, ſince the land has been well manured, equalled the ſheep of other counties in ſize, and in the fineneſs of their wool. The cows and oxen are ſmall, but their fleſh ſweet and juicy. They uſe oxen chiefly in ploughing. Their horſes are hardy, and fed coarſely; but though they are ſmall, they travel well, and are very ſerviceable in this mountainous country; mules are alſo much uſed. The parks are well ſtocked with fallow deer; but they have no red deer except what ſtray thither out of *Devonſhire*. Many foxes, otters, badgers, and martins harbour in the cliffs near the ſea-ſide.

The fowl of this county are generally ſuch as are found in others. Wild fowl are very plentiful in the parts adjoining to *Devonſhire*. The birds called the *choughs*, which are in a manner peculiar to it, are found in great plenty, and ſomewhat reſemble the pied or grey crow; they are nearly of the ſize of the jack-daw, have their beak and legs red, and have the character of being a very thieviſh bird. The moſt remarkable among the water-fowl is one about the ſize of a ſea-gull, which has a ſingular method of taking its prey; for it riſes high in the air, and from thence falls as if dead, and by the velocity of the fall, is enabled to penetrate below the ſurface of the water, and ſuddenly to ſeize the fiſh it ſtrikes at. Theſe are ſeen in very great numbers in *Mount's Bay*, and other parts of the ſea-coaſt.

The rivers and ſeas afford great plenty of fiſh, but moſtly ſuch as are common to other counties; but the prodigious ſhoals of *pilchards* enable them to carry on a very great trade in that fiſh. On the S. coaſt are found large quantities of thoſe ſmall ſhell-fiſh which affords that beautiful tint, called the *Tyrian-dye*; this matter is contained in a ſmall ciſtus or bag, and when taken out appears of a greeniſh yellow. If this be ſpread upon a piece of fine linen, it will in a day or two appear of a pale reddiſh colour, the linen being waſhed the firſt time it is heightened into a paliſh purple, and every future waſhing renders the colour ſtill more ſtrong and vivid, nor is it ſubject to fade.

The chief rivers are the *Tamar*, the *Camel*, and the *Fale*. The *Tamar* runs a long courſe from N. to S. and is the boundary between the two counties of *Cornwall* and *Devonſhire*, emptying itſelf into *Plymouth Sound*. The *Camel* runs from S. to N. and forms *Padſtowe* haven in the *Briſtol Channel*. The *Fale* runs from N. to S. and diſcharges itſelf into *St. George*'s *Channel*, forming the haven of *Falmouth*.

The *Corniſh* language long continued to be a dialect of the ancient *Britiſh*, in conſequence of the natives of the county being deſcended from thoſe aborigines of the ſouthern part of the iſland, and bore a cloſe reſemblance to the *Welſh*, but when a more general communication was opened, not only with *Engliſhmen* from other counties, but with foreigners, this language gradually fell into diſuſe; for near three centuries paſt it has ceaſed to be the language in common uſe in the county, and is now univerſally renounced; the names of places being the principal indication, now ſubſiſting, of the former peculiarity of language in this county.

The natives are diſtinguiſhed by their plainneſs and ſimplicity of manners; they ſeem abſolutely unacquainted with fraud, diſſimulation, and flattery, and are of a free, facetious, and generous temper; they are curious, inquiſitive, unaſſuming, and hoſpitable to ſtrangers; fond of the arts and ſciences, and excel in mechanics.

The firſt creation of a duke in *England* was by a charter of *Edward* III. in favour of his eldeſt ſon *Edward*, ſurnamed the Black Prince, whom he raiſed to the dignity of duke of *Cornwall*, to hold to himſelf and his heirs, kings of *England*, and to their firſt-born ſons. By virtue of which charter, the eldeſt ſon of the king of *England* is by law acknowledged duke of *Cornwall* the inſtant he is born. To this title, which merges in the crown, was at the ſame time annexed a grant of lands, ſituated chiefly in the county, and the *Stannaries*, with the coinage of tin, and the iſſues and profits that might ariſe from thence.

The STANNARY COURTS, in *Devonſhire* and *Cornwall*, are of ſuch remote antiquity, that their firſt inſtitution cannot be traced, but theſe, together with the privileges enjoyed by the tinners, were confirmed by charter, in the reign of *Edward* I. They are courts of record. The laws of the Stannaries were enacted for the adminiſtration of juſtice among the tinners, the courts are held by the lord-warden of the Stannaries, and his ſubſtitutes, and here only can the workers in the tin mines ſue and be ſued; the deſign of which was to prevent their being drawn away from their buſineſs, by attending law-ſuits in other courts, nor does any writ of error lie from hence to any court in *Weſtminſter-hall*; but an appeal lies, from the ſteward of the court, to the under-warden, and from him to the lord-warden, and thence to the privy-council of the prince of *Wales*, as duke of *Cornwall*, and from thence, in the laſt reſort, to the king himſelf.

The principal places in this county are the following:

LAUNCESTON, ſituated on the eaſtern edge of the county, near the banks of the *Tamar*, is conſidered as the county-town, and here the lent aſſizes are commonly held, and the election of knights of the ſhire. It is a populous town, ſituated on the top of a ſmall hill, and was formerly defended by a caſtle.

Boſſiney, about ſixteen miles to the W. is ſaid to have been the birth-place of the great *Arthur*.

LESKARD is a conſiderable town, two hundred and nineteen miles to the S. W. of *London*, and had anciently a good caſtle and a palace, in which the dukes of *Cornwall* kept their court, particularly *Edward* the *Black Prince*, who reſided here as prince of *Wales* and duke of *Cornwall*. Its town-hall has a turret and a fine clock. There is here an ancient large church, dedicated to *St. Martin*, a ſpacious meeting-houſe for the diſſenters, a good free-ſchool, and a fine conduit in the market-place. It has a very great trade in all manufactures of leather, ſuch as *boots*, *ſhoes*, *gloves*, *purſes*, *breeches*, *&c.*

BODMIN, once a town of conſiderable conſequence, when it had the privilege of the coinage of tin, but now fallen to decay, is ſeated in the centre of the county, and here the ſummer aſſizes are held.

FALMOUTH, a ſea-port town, and by much the richeſt and beſt trading town in the county, is ſituated in 50° 8′ N. latitude, and in 5° 2′ W. longitude, two hundred and ninety-eight miles from *London*. The harbour is ſo large, that one hundred ſail may ſafely ride at anchor at the ſame time, and thoſe of the greateſt burden may come up to the quay. The entrance into the harbour is defended by *St. Mawes* and *Pendennis* caſtles, both of which are very ſtrong, and have governors and garriſons. *St. Mawes*, alſo called *St. Mary's*, has a little town annexed to the caſtle; but it has neither church nor market.

Falmouth is well built, and has abundance of ſhips belonging to it. It is full of merchants, and its trade has greatly increaſed ſince the eſtabliſhment of the *Engliſh* packets between this town, *Spain*, *Portugal*, the *Weſt-Indies*, and *America*, the packets from *Portugal* bringing over not only vaſt quantities of gold for the *London* merchants, but for thoſe of *Falmouth*, who trade with the *Portugueſe* in their own ſhips, and have a great ſhare in the profitable pilchard fiſhery. Here is the cuſtom-houſe for moſt of the towns in the county, and a head collector lives at *Falmouth*. This town gives title of viſcount to the noble family of *Boſcawen*.

TRURO, one of the chief towns in the county, is ſeated two hundred and ſeventy-ſix miles from *London*, on a branch of *Falmouth* haven, which is here divided into two ſtreams, and almoſt ſurrounds the town. It is a large, handſome, and well-inhabited place, that takes its name from its three ſtreets, which in the *Corniſh* tongue are expreſſed by the word *Truru*. It is governed by a mayor and aldermen. Its chief buſineſs conſiſts in ſhipping tin and copper ore, which are procured in great quantities from the hills which run from hence to *St. Michael*, a town about five miles to the N.

PENRYN is upon the ſame branch of the haven as *Falmouth*, but ſtands four miles to the W. It is a pleaſant agreeable town, and being full of orchards, looks like a town in a wood. The ſtreets are broad and paved. It is governed by a mayor, four aldermen, and a town-clerk. Here is a manufacture of *ſerges*.

PENZANCE, a town ſeated on *Mount's Bay*, within about ten miles of the promontory called the *Land's-end*, and two hundred and eighty-eight to the S. W. of *London*, is a market-town, well built and populous; has many ſhips belonging to it, and here a conſiderable number of families of rank reſide. It is governed by a mayor, a recorder, fourteen aldermen, and twenty-four common-councilmen. It is remarkable, that veins of lead, tin, and copper-ore are to be ſeen even to the utmoſt extent of land at low-water mark, and in the very ſea. For the account of the revenue ariſing from the cuſtoms in the ſeveral ports of this county, ſee the general account which is given with the cuſtoms of *London*.

The rocks of SCILLY, called by the *Greeks Caſſiterides*, and by the *Dutch* ſeamen, *Sorlings*, are about one hundred and forty ſmall iſlands and rocks thirty miles from the *Land's-end*, of which *St. Mary's* is the largeſt, and moſt fruitful, though but nine miles in circumference. It has a good harbour, defended by a caſtle. The iſle of *Scilly* was once eſteemed the moſt conſiderable; that and ſome others ſtand very high; but many of the reſt are overflowed by ſpring tides. Some of them bear good corn, and moſt of them paſture. They abound with rabbits, cranes, herons, ſwans, and other water-fowl. Theſe iſlands, being ſituated near the mouth of the *Engliſh Channel*, have proved the deſtruction of many ſhips; for, notwithſtanding light-houſes, and the beſt maritime ſkill, they are very dangerous in the night, and in ſtormy weather: Sir *Cloudeſley Shovel*, in the admiral-ſhip, with three other men of war, unhappily ran upon theſe rocks, on the twenty-ſecond of *October*, 1707, and every ſoul on board periſhed. *Dr. Maſkelyne* makes the lights here to be in 49° 56′ N. latitude, and 6° 46′ W. longitude from *Greenwich*.

We have now deſcribed all the counties of *England* to the ſouth of the *Thames* and *Briſtol Channel*, and ſhall therefore proceed more northwardly, beginning with

SECT. XVII.

MONMOUTHSHIRE.

THIS county was formerly a part of *Wales*, and as ſuch is deſcribed by *Camden*, and other authors; but as all the later writers have placed it in *England*, we ſhall follow their example, though there ſeems to be no better reaſon for it, than the *Oxford* circuit being extended through it ever ſince the reign of *Charles* II.

Monmouthſhire receives its name from *Monmouth*, its county-town, and is bounded on the N. by *Herefordſhire*; on the E. by *Glouceſterſhire*; on the S. E. by the river *Severn*, at its mouth, and on the W. and N. W. by the *Welſh* counties of *Brecknock* and *Glamorgan*. Its extent from N. to S. is about twenty-four miles, from E. to W. twenty, and in circumference eighty-four. It is ſubdivided into ſix hundreds, and contains ſeven market-towns, one hundred and twenty-ſeven pariſhes, about ſix thouſand four hundred and ninety-four houſes, thirty-eight thouſand nine hundred inhabitants; but ſends only three members to parliament, that is, one for *Monmouth*, and two for the county.

The air is temperate and healthy, and the ſoil fruitful, though mountainous and woody. The hills feed ſheep, goats, and horned cattle, and the valleys produce plenty of graſs and corn, eſpecially of the latter, as good wheat being grown here as in any part of the kingdom.

This county is extremely well watered by ſeveral fine rivers; for, beſides the *Wye*, which parts it from *Glouceſterſhire*, the *Minow*, which runs between it and *Herefordſhire*, and the *Rumney*, which divides it from *Glamorganſhire*, it has peculiar to itſelf the *Uſk*, which enters this county a little above *Abergavenny*, runs moſtly ſouthward, and falls into the *Severn* by the mouth of the *Ebwith*; which laſt river runs from N. to S. in the weſtern ſide of the county. All theſe rivers, eſpecially the *Wye* and *Uſk*, abound with fiſh, particularly ſalmon and trout.

Mr. Dyer deſcribes this county and the contiguous parts of *Herefordſhire* and *Glouceſterſhire*, which lie W. of the *Severn*, by its ancient name of *Siluria*, with great poetical beauty.

> ——— Land of various views,
> *Hills*, rivers, woods, and lawns, and purple groves
> Pomaceous, mingling with the curling growth
> Of tendril hops, that flaunt upon their poles,
> More airy wild than vines.

The gentlemen here generally ſpeak *Engliſh*, though the common people uſe the *Welſh* language. The manufacture of the county is flannels.

The principal towns in this county are the following:

MONMOUTH, or MYNWY, is ſeated at the mouth of the river *Monow*, between that river and the *Wye*, over each of which it has a bridge. The town is in a manner ſurrounded with water, there being another river called the *Trothy*, over which it has alſo a bridge. It is a populous, handſome, well-built town, and has a ſtately church, the eaſt end of which is much ornamented. It has been a place of great ſtrength. The caſtle, though now in a ruinous condition, was formerly a ſtately edifice. The market is very conſiderable for corn and all ſorts of proviſions. The government is under a mayor, two bailiffs, fifteen common-council-men, a town-clerk, *&c.*

CHEPSTOW is ſeated on the ſide of a hill, fourteen miles to the S. of *Monmouth*, and a hundred and thirty-one to the W. of *London*, near the mouth of the *Wye*, over which it has a fine bridge: it was formerly much reſorted to, and is ſtill a large, well-built, and populous town. It was anciently walled round, and defended by a caſtle; among the other public buildings it had a monaſtery, the remaining part of which is converted into a pariſh-church. This is the port for all the towns that ſtand on the rivers *Wye* and *Lug*; ſhips of good burden come up to it, for the tide commonly riſes here ſix fathoms, or ſix and a half at the bridge, which is of timber, and no leſs than ſeventy feet high from the ſurface of the water when the tide is out. The trade carried on here cannot be conſiderable; as, in the year 1781, the total receipts of the cuſtoms, amounted to no more than 32*l.* whilſt the ſalaries and incidents carried off 175*l.* In the year 1689 was diſcovered in this town a *Roman* pavement, which, when entire, was very beautiful, repreſenting men, beaſts, birds, trees, *&c.*

ABERGAVENNY has its name from the river *Gavenny*, which falls below it into the *Uſk*. It is a handſome well-built town, fifteen miles to the W. of *Monmouth*, and a hundred and forty-four of *London*. This town is encompaſſed by a wall, and defended by a ſtrong caſtle. It is a great thoroughfare from the weſt parts of *Wales* to *Briſtol* and *Bath*, and alſo from *Monmouth* to *Glouceſter*; and the inhabitants carry on a great trade in flannel. It gives the title of earl to the ancient and noble family of *Neville*.

SECT. XVIII.

GLOUCESTERSHIRE.

THIS county takes its name from the city of *Glouceſter*, which was called by the *Saxons Gleauceſter*; and is bounded on the N. by *Herefordſhire*, *Worceſterſhire*, and a part of *Warwickſhire*; on the eaſt by *Warwickſhire*, *Oxfordſhire*, and a very ſmall part of *Berkſhire*; on the S. by *Wiltſhire*, and *Somerſetſhire*; and on the W. by *Herefordſhire*, and *Monmouthſhire*. Its extent from N. E. to S. W. is ſixty-five miles in length, and twenty-ſix in breadth from E. to W. It contains twenty-ſeven market-towns, two hundred and eighty pariſhes, one caſtle, two foreſts, nineteen parks, twenty-ſix thouſand ſeven hundred and ſixty houſes, and a hundred and ſixty-two thouſand five hundred and ſixty inhabitants: it is ſubdivided into thirteen hundreds, but ſends only eight members to parliament, that is, two for the county, two for the city of *Glouceſter*, and two each for *Cirenceſter* and *Tewkſbury*.

The air here is healthy throughout its whole extent; but its ſoil and appearance are different in different parts of it: in the E. it is hilly, in the W. woody, and in the middle is enriched with a fruitful vale. The E. part, called *Coteſwould*, or *Cotſwold*, has a ſharp air; and, though the lands are not very fertile in corn, they feed a great number of ſheep.

> High *Cotſwold* alſo 'mong the ſhepherd ſwains
> Is oft remember'd, though the greedy plough
> Preys on its carpet. *Dyer.*

The old poet *Drayton* likewiſe made the beauties of *Cotſwold* a ſubject of poetic deſcription. The *Vale* includes both ſides of the river *Severn*, and is very fertile, eſpecially in rich paſtures.

> The vale of *Severn*, nature's garden wide,
> By the blue ſteeps of diſtant *Malvern* wall'd,
> Solemnly vaſt. *Dyer.*

Here is made the cheeſe which, next to that of *Cheſhire*, is highly eſteemed all over *England*; and a great deal of this cheeſe is alſo made in *Wiltſhire*. In this *Vale* the air is ſo mild, even in winter, that it ſeems to enjoy a different climate from that of *Coteſwould*. The *Foreſt of Dean*, which borders upon *Herefordſhire* and *Monmouthſhire*, is fertile both in paſture and tillage; it bears very fine oaks, and has rich mines of iron and valuable coal-pits. In general this county may be juſtly ſaid to abound with all the neceſſaries of life in the greateſt perfection, as *corn*, *wool*, *iron*, *timber*, *bacon*, *cyder*, and *fiſh*, particularly *ſalmon*. The chief manufacture carried on by the inhabitants is *clothing*, which, in former times, before the *French* obtained the *Levant* trade, has been known to return five hundred thouſand pounds *per annum*.

Its principal river is the *Severn*, which riſes in *Montgomeryſhire*, and, entering this county a little above *Tewkſbury*, runs near S. W. by *Glouceſter*, diſcharging itſelf into the *Briſtol Channel*. The tide flows as high as *Tewkſbury*, which, following the courſe of the river, is near ſeventy miles. A little below *Newnham* it reſembles a ſea, and the tide of flood ruſhes on with ſuch impetuoſity, that it comes in a roll often near four feet high, carrying every thing before it. This is called *The Boar*. But what is ſtill more remarkable is, that the tides are higheſt one year at the full moon, and the next at the change; and one year the night tides are higheſt, and the next the day-tides. In this river are taken plenty of excellent *ſalmon*, *lamprey*, and *conger eels*.

The principal places in *Glouceſterſhire* are the following:

GLOUCESTER, by the *Britons* called *Caer-Glow*, which ſignifies *fine city*, and by the *Romans Glevum*, is ſeated on the E. ſide of the river *Severn*, a hundred and four miles from *London*. It abounds much with croſſes and ſtatues of the kings of *England*, and has a handſome proſpect of ſteeples, ſome without a church. Theſe, and the religious foundations formerly in every part of the city, gave riſe to the old proverb, "As ſure as God is at "*Glouceſter*."

“ *Glouceſter*.” The cathedral is a venerable pile with a handſome tower, and a finely vaulted choir. On the N. ſide lies the unfortunate king *Edward* II. and before the high altar, in the middle of the church, lies the equally unfortunate prince *Robert*, the eldeſt ſon of *William the Conqueror*, who, after being impriſoned twenty-ſix years by his younger brother *Rufus*, died and was interred here. In this cathedral is a whiſpering-place, which formerly paſſed among the vulgar as ſomewhat almoſt miraculous, till they were told that there is a whiſpering-gallery in *St. Paul*'s cathedral. This city was anciently fortified, but after the Reſtoration was diſmantled by act of parliament, on account of the reſiſtance it made againſt the forces of *Charles* I. The old houſes projecting into the ſtreets, and its croſs, were pulled down by act of parliament in 1750, and inſtead of the latter is a ſtatue of colonel *Selwyn*, their member, who at his own expence made a very large reſervoir, about half a mile from thence, and cauſed the water to be conveyed into a ſquare baſon at the foot of this ſtatue, from whence it runs into four canals, which flow through the four great ſtreets that meet in the centre of the city. There are here large remains of abbies and convents, both of black and white friars. In this city are manufactures of pins, and ſome glaſs-houſes. It gives the title of duke to prince *William Henry*, third ſon of the late prince of *Wales*, and eldeſt ſurviving brother of his preſent majeſty.

Glouceſter has a large quay, wharf, and cuſtom-houſe on the river. The receipts at the cuſtom-houſe of this city, in the year 1781, amounted to no more than 253*l.* whilſt the ſalaries and incidents were 275*l.* In the city are twelve companies, the maſters of which attend the mayor on all public occaſions in their gowns, and with ſtreamers. Great proviſion is here made for the poor, particularly *Bartholomew*'s hoſpital for fifty-four men and women; a blue-coat hoſpital for educating twenty boys, and for maintaining and annually cloathing ten men and women; there are alſo three others, with ſeveral benefactions for encouraging young tradeſmen, and putting out boys apprentice, and an infirmary has been erected here. The city is governed by a mayor, twelve aldermen, and common-council, who are never fewer than twenty-ſix, nor above thirty-nine, a town-clerk, and ſword-bearer. It was made the ſee of a biſhop by king *Henry* VIII. who converted the abbey-church into a cathedral, with a dean and ſix prebendaries. Its police reflects great honour on the magiſtracy: here neither beggars, vagabonds, nor proſtitutes are ſuffered to infeſt the ſtreets. Here too originated that benevolent and ſalutary ſcheme, the eſtabliſhment of Sunday-ſchools, calculated to amend the morals of the riſing generation of the lower claſs of people, to habituate them to order and decorum, and to inſtruct them in the elementary parts of knowledge, ſuch as reading, writing, and the firſt rules of arithmetic: for this uſeful plan, which has been pretty widely adopted, the nation is indebted to the exertions of Mr. *Raikes* of this city.

The foreſt of *Dean* lies in that part of *Glouceſterſhire* S. of the city, of which the *Severn* forms the eaſtern boundary. It contains twenty-three pariſhes and four market-towns. By the third report of the commiſſioners appointed to enquire into the royal foreſts, &c. it appears that this foreſt is divided into ſix walks, which are under the care of ſix keepers, each of whom has a lodge. The total of the lands belonging to the crown, in the foreſt, amounts to 23,015 acres; beſide which there are lands claimed as freeholds, amounting to 1,185 acres, and 1,358 acres have been encroached; on all theſe lands there are 578 cottages erected. The timber felled for the uſe of the navy, within the foreſt of *Dean*, from the year 1761 to 1786 was,

		£.
16,573 load of oak	value	30,814
871 load of beech		908
22,430 cords of cordwood		6,953
ſtakes		72
1,510 tons of bark		2,650
	Total	41,337
The expences and charges on which amounted to		13,619

There are now growing on the foreſt 24,000 oaks, and the commiſſioners eſtimate that 1,500 load may be annually cut down. They likewiſe recommend the planting 18,000 acres with acorns, and give a very circumſtantial account of the probable expences, revenue, and quantity of timber which would be incurred, and might be annually obtained, throughout a period of an hundred years.

CIRENCESTER, ſo called from the river *Churn*, on which it ſtands, and *Ceſtre*, a caſtle, is a populous, rich, and trading town, full of clothiers; it ſtands eighteen miles to the S. E. of *Glouceſter*, and eighty-five to the N. W. of *London*, and carries on a great trade in wool, which is brought from the inland counties of *Leiceſter*, *Northampton*, and *Lincoln*, and bought up here by the clothiers of *Wiltſhire* and *Glouceſterſhire*, for the ſupply of the great clothing trade. Here is a large beautiful church, with two iſles, ſupported by ſtrong pillars. The chancel is handſomely decorated, and the tower is very neat and lofty; the windows ſhew ſome beautiful remains of painted glaſs: and there are five chapels adjoining it. In this town is a free-ſchool, a charity-ſchool, and ſeveral hoſpitals and alms-houſes.

Many antiquities have been found here. The town is governed by two high-conſtables, and has two weekly m[redacted]n *Monday* for corn, cattle, and proviſions; another on *Friday* for wool. In [redacted] of this town earl *Bathurſt* has an elegant ſeat, park, and gardens.

FAIRFORD, a ſmall market-town, ſituated on the river *Coln*, twenty-two miles S. E. of *Glouceſter*, is remarkable for the many medals and urns that have been dug up here, and alſo for the fine painted windows of the church, from deſigns of *Albert Durer*. Theſe were captured on board a ſhip bound to *Rome*, in the reign of *Henry* VII. Mr. *John Tame*, a merchant of *London*, who by this means became poſſeſſed of them, built the church in order to place theſe paintings in the windows, which are twenty-eight in number, and are glazed with this invaluable prize, which ſtill remain entire; for in the civil wars the glaſs was taken out and concealed. The founder of this ſtructure, who died in 1500, lies buried on the N. ſide of the church, under a marble monument.

TEWKSBURY is ſeated at the confluence of the rivers *Severn* and *Avon*, ninety-ſeven miles W. N. W. of *London*, and contains above five hundred houſes. Its church is a noble ſtructure, and one of the largeſt in *England* that is not collegiate or a cathedral, it has likewiſe the remains of a venerable monaſtery. The town is governed by two bailiffs and twenty-four burgeſſes, and its neighbourhood to *Coteſwould* makes the clothing trade flouriſh here. It has likewiſe a manufacture of cotton.

This place is rendered famous for the deciſive battle which was fought in a park adjoining to it, on the 3d of *May*, 1471, between the *Yorkiſts*, commanded by *Edward* IV. and *Lancaſtrians*, led by the duke of *Somerſet*, at which queen *Margaret*, and her ſon prince *Edward* were preſent: the event proved fatal to the latter, in conſequence of the intemperate valour of the duke of *Somerſet*. The duke, the queen, and young prince were made priſoners. *Somerſet* was beheaded; the queen confined four years in the Tower of *London*, and then ranſomed by her father, the duke of *Anjou*, for fifty thouſand crowns; but the young prince, then eighteen years of age, was inhumanly butchered by the king's brothers, and buried, without any marks of diſtinction, in the church of the Black friars at *Tewkſbury*. Twenty noblemen of the firſt diſtinction, adherents to the queen and her ſon, either periſhed in the field, or, falling into the hands of the conqueror, were put to death; three thouſand of their men were ſlain, whoſe bones are ſtill ſhewn in the charnel-houſe of the church. This was the twelfth battle fought in the civil contentions of the two houſes, and happened eighteen days after that of *Barnet*, in which the famous earl of *Warwick* was ſlain. The next battle was that of *Boſworth*, on the 22d of *Auguſt*, 1485, which was equally deciſive in favour of the houſe of *Lancaſter*. *Tewkſbury* adhered to the fortunes of *Charles* I. in that more recent civil broil.

CHELTENHAM, eight miles to the S. E. of *Tewkſbury*, and eighty-nine from *London*, is celebrated for its mineral ſpring, which is a purgative chalybeate, like that at *Scarborough*,

borough. This town was rapidly advancing into conſequence, from having received a viſit from their majeſties in the year 1788; but the medical properties of its ſpring have ſunk in reputation by the caprice of public opinion.

The chief manufacturing towns in this county are, *Hampton*, in the N.; *Painſwick*, in the centre; *Durſley* and *Wooten*, more to the ſouthward. In theſe places are manufactured white cloths for the uſe of the army, and the *India* company: the *Turkey* trade in this article, which uſed to be very conſiderable, is now much declined.

STROUD, a few miles S. of *Painſwick*, ſtands on the ſide of a ſmall ſtream, which riſing from ſome hills midway between this place and *Cirenceſter*, runs into the *Severn* below *Glouceſter*; the waters of this rivulet are reputed to poſſeſs a peculiar property favourable to the dying of ſcarlet, on which account much of that branch of buſineſs is carried on upon its banks. A navigable canal has been carried along this narrow ſtream, from the *Severn* to within about two miles of *Cirenceſter*; from thence it is conveyed, by a tunnel, or archway, the height of which is fifteen feet from the ſurface of the water, through *Saperton Hill*, two miles and three furlongs in extent, for the purpoſe of communicating with the *Thames* at *Lechlade*. In November 1789 this navigation was completed.

To the N. of *Durſley* is *Berkley-caſtle*, [redacted] where that unfortunate prince *Edward* II. was long held in confinement, ſuffering the moſt ignominious treatment, and was at length barbarouſly murdered, A. D. 1327. That greateſt of modern poets, *Gray*, repreſents a *Welſh* bard, with a prophetic ſpirit addreſſing *Edward* I. and predicting the miſeries which ſhould befal his offspring, in conſequence of a cruel policy, which led him to cauſe all the *Welſh* bards to be inhumanly maſſacred in cold blood.

> Mark the year, and mark the night,
> When *Severn* ſhall re-echo with affright
> The ſhrieks of death, thro' *Berkley*'s roofs that ring;
> Shrieks of an agonizing king!

The city of *Briſtol* has been already deſcribed in treating of *Somerſetſhire*; and, as we then obſerved that a conſiderable part of that city ſtands in *Glouceſterſhire*, we omitted taking notice of *St. Vincent*'s rocks, and the *Hot Well*, diſtant about two miles from *Briſtol*. *St. Vincent*'s rocks are a vaſt and irregular heap of ſtones, intermixed with minerals; but the principal ſubſtance of the rocks is a very hard lime-ſtone. The rock out of which iſſues the famous water called that of the *Hot Well*, or *Briſtol* water, ſtands on the N. ſide of the river *Avon*, and affords a romantic and beautiful proſpect. This water, when drank at the ſpring head, has a fine gentle warmth and a delicate ſoft milky taſte; it is very grateful to the ſtomach, and is allowed to be cooling, cleanſing, and balſamic; but one of its great qualities is its aſtringency: this renders it uſeful in the diabetes; and, in conſequence of its other qualities, it is drank with great ſucceſs in obſtructions in the urinal paſſages from gravel, as alſo in conſumptive caſes.

Thoſe native cryſtals, called *Briſtol-ſtones*, are found in vaſt quantities in the cracks of rocks and cavities of ſtones; but chiefly in the cavities of iron ore. They riſe in a great variety of forms in different places, and the cluſters of them are yet more various in their appearance; they generally adhere to the rock or ore at one end, and terminate in a point at the other.

SECT. XIX.

HEREFORDSHIRE.

THIS county is bounded on the N. by *Shropſhire*; on the E. by *Worceſterſhire* and *Glouceſterſhire*; on the S. by *Monmouthſhire* and part of *Glouceſterſhire*; and on the W. by *Radnorſhire* and part of *Brecknockſhire*, in *Wales*; it extends thirty-five miles from N. to S. thirty-ſeven from E. to W. and is a hundred and thirty in circumference. Its form is ſomewhat circular, but indented toward the S. and extending into points in many directions.

This county lies in the dioceſe of *Hereford*, and contains eight market-towns, eighty-ſeven vicarages, a hundred and ſeventy-ſix pariſhes, and three hundred and ninety-one villages, fifteen thouſand houſes, and ninety-five thouſand ſix hundred inhabitants. It is divided into eleven hundreds, and ſends eight members to parliament, namely, two knights for the ſhire, and two for each of the following towns, *Hereford*, *Lempſter* or *Leominſter*, and *Weobly*.

The air of this county is healthy and delightful, whence the inhabitants generally live to a great age. As an inſtance of which, it is ſaid, that a morris-dance was performed before *James* I. by ten men and women, whoſe ages together made a thouſand years. The ſoil is exceedingly rich, producing excellent *corn*, *wool*, and *fruit*, as is evident from the *Lempſter* bread, *Weobly* ale, and *Herefordſhire* cyder; the laſt of which is ſent to all parts of *England*. The apples producing the cyder grow in greater abundance here, than in any other county, being plentiful even in the hedge-rows. Of theſe are various kinds, yielding liquors of different ſtrength and qualities. The moſt celebrated is the *red-ſtreak*, which is ſaid to be peculiar to this county. The *Styer* cyder is remarkable for a ſuperior ſtrength and body, and for keeping very well. *Aikin, p.* 101. It alſo abounds with *wood* and *fiſh*.

The ſheep of *Herefordſhire* are ſmall, affording a fine ſilky wool, in quality approaching to the *Spaniſh*. *Dyer* enumerates more places in this county, than in any other, as favourable for breeding of ſheep. His lines are equally juſt and poetical.

> ——— Such the leas
> And ruddy tilth which ſpiry *Roſs* beholds,
> From a green hillock, o'er her lofty elms;
> And *Lemſter*'s brooky tract, and airy *Croft*,
> And ſuch *Harleian Eywood*'s ſwelling turf,
> Wav'd as the billows of a rolling ſea;
> And *Shobden*, for his lofty terrace fam'd,
> Which from a mountain's ridge, elate o'er woods,
> And girt with all *Siluria*, ſees around
> Regions on regions blended in the clouds.

Eywood is a ſeat of the earl of *Oxford*, who has another at *Brampton-Bryan* in this county; *Shobden* is the ſeat of lord *Bateman*.

Herefordſhire is plentifully watered with ſeveral rivers, the chief of which are the *Wye*, the *Mynnow*, and the *Lug*; all which are well ſtored with fiſh. The ſalmon of this county are very remarkable; for in other parts of *England* they are ſo far out of ſeaſon, after ſpawning, as to be unwholeſome food, till they have been again at ſea to recover themſelves; but here they are always ſound, fat, and fit for the table.—The principal places in this county are the following:

HEREFORD, the metropolis, and only city of the county, received its name from the *Saxons*, it ſignifying the ford of the army, and being the head-quarters of the *Saxons*; it is ſeated on the banks of the *Wye*, a hundred and thirty-two miles from *London*, and twenty-ſix from *Glouceſter*. It has a good ſtone bridge of eight arches over the *Wye*, and is ſurrounded with rivers on all ſides except the E. This city, though large, is not populous: as it lies low the ſtreets are often overflowed, ſo that they are very dirty. It originally owed its flouriſhing ſtate to the martyrdom of *Ethelbert*, king of the *Eaſt Angles*, who was baſely murdered by king *Offa*, and had a church built here to his memory, which was ſoon erected into an epiſcopal ſee. This is a ſtately fabric; the choir, though plain, is neat, and has a good organ; and the ſpire is handſome, but not very lofty.

The city is governed by a mayor, and has diſtinct privileges for its ſeveral companies, who have their reſpective halls. In the time of the civil wars, this city, being very ſtrong and well defended, ſupported a very ſevere ſiege againſt the parliament forces, and even the *Scottiſh* army, four thouſand of the latter having been ſlain before it; but at length it ſurrendered. Of its ſix pariſh-churches two were demoliſhed by the ſiege; but in 1738 the *Gothic* chapel belonging to the biſhop's palace was pulled down, in order to erect another for the public ſervice. Without the walls of *Hereford* city are the ruins of *Black-friars* monaſtery, and a ſtone croſs entire, round which were the cloiſters, and now the cloiſters of the cathedral incloſe juſt ſuch another. Theſe croſſes ſerved as a kind of pulpit, whence a monk uſed to preach to the people in the open air. It has an hoſpital, liberally endowed, for twelve poor perſons, with two charity-ſchools. Its weekly markets are on *Wedneſday*, *Friday*, and *Saturday*; and it gives title of firſt viſcount of *England* to a branch of the *Devereux* family.

The walls may be traced all round the city, though in ſome places overgrown with trees, ſhrubs, graſs, and hedges. Toward the N. it is ſheltered by a high mountain of ſteep aſcent, with a vaſt camp at the top, from which is a proſpect as far as *St. Michael's Mount* in *Monmouthſhire*, and on the other ſide is a lofty bleak mountain that ſeparates *Brecknockſhire* from this county.

LEMPSTER, or LEOMINSTER, is a large borough on the river *Lug*, over which are ſeveral bridges, fifteen miles N. from *Hereford*, and a hundred and thirty-four from *London*. The church, which is very large, having been in a manner rebuilt, is a very beautiful ſtructure. On the north ſide of it was a conſiderable priory, two ailes of which now belong to the church, and two others of lighter workmanſhip have been added. There are ſome poor remains of the priory, particularly a little chapel which probably belonged to the prior's family, and underneath it runs a rivulet, which ſerved to grind his corn, but now turns a fulling-mill; and near it are very large ponds for fiſh, which uſed to furniſh the monks on days of faſting. This town is noted for its fine wool, as well as the beſt wheat and barley, conſequently for the fineſt bread: it has alſo a briſk trade in hat-making. Three rivulets that have a ſwift current run through the town, and there are others very near it; the inhabitants make uſe of theſe to work their mills and other machinery in the various branches of their manufacture.

ROSS, a neat, pleaſant, and populous town, ſituated on the river *Wye*, thirteen miles S. E. of *Hereford*, and one hundred and nineteen N. W. of *London*. The benevolent diſpoſition and uſeful life of a native of this place, *John Kyrle*, eſq. (who died in the year 1724, at the age of ninety) not only contributed to the happineſs of the inhabitants of the diſtrict whilſt he lived, but has rendered the place itſelf univerſally known, by the manner in which this character has been celebrated by *Pope*, (in his third moral epiſtle addreſſed to lord *Bathurſt*, on the uſe of riches) under the title of "the Man of *Roſs*." The poet records this philanthropiſt as having erected a church there; built and endowed ſome alms-houſes; conveyed a ſtream of water into the town; and for being the aſſiduous friend, guide, and comforter, of all who wanted relief, direction, or ſolace; adminiſtering medicines to the ſick, and pacifying the contentious; giving marriage portions to virgins, and apprenticing orphans, all which he was enabled to effect with a fortune of five hundred pounds a year! He lies interred in the chancel of the church, without even his name inſcribed on a ſtone.

> Who builds a church to GOD, and not to fame,
> Will never mark the marble with his name.

SECT. XX.

OXFORDSHIRE.

THIS county takes its name from the city of *Oxford*, and is bounded on the N. by *Warwickſhire* and *Northamptonſhire*, between which counties it runs for a few miles due N.; on the E. by *Buckinghamſhire*; on the S. and S. E. by *Berkſhire*; and on the W. by *Glouceſterſhire*. It extends forty-eight miles from N. to S. through its narrow ſouth-eaſtern tract; twenty-ſix from E. to W. in its broadeſt part by *Woodſtock*; and a hundred and thirty-eight in circumference.

The irregularity of this county baffles all attempts to deſcribe its figure, but with the two contiguous and equally irregular counties of *Bucks* and *Berks*, it produces a compact form, approaching to a ſquare, but for want of a due number of angles, equally deſcribing a circle, though with a few diſcordant projections.

It ſends nine members to parliament, namely, two knights for the ſhire, two repreſentatives of the univerſity, two for the city of *Oxford*, two burgeſſes for *Woodſtock*, and one for *Banbury*. It is divided into fourteen hundreds, and contains ſixty-two vicarages, two hundred and eighty pariſhes, twelve market-towns, four hundred and fifty-one villages, nineteen thouſand houſes, and a hundred and fourteen thouſand inhabitants.

The air of this county is equal in goodneſs to any other; for the ſoil being naturally dry, and at the ſame time plentifully watered with limpid ſtreams, the air is conſequently rendered ſweet and wholeſome.

The moſt conſiderable foreſt now ſtanding in the county, is that of *Witchwood*, between *Burford* and *Charlbury*. The want of fuel has been much felt in this county ever ſince wood has become ſcarce; to remedy this inconvenience, a navigable canal has been continued from *Birmingham* to paſs through *Oxfordſhire*, the final deſtination of which is to form a junction with the *Thames*, and it is now advanced ſo far in the county as to ſupply it pretty generally with coal, at a moderate price.

The ſoil in general is very fruitful, both in corn and graſs; but there is a great variety in it, and conſequently ſeveral degrees of fertility. The huſbandmen know well how to diſtinguiſh and manage accordingly, both as to the tillage and the different kinds of grain ſown here, there being no leſs than five ſorts of wheat, adapted to as many kinds of ſoil. The meadows are covered with rich graſs, and are extremely profitable to the farmer. The chief commodities are *corn*, *malt*, *cattle*, *fruit*, *free-ſtone*, ſeveral ſorts of earth uſeful in medicine, dying, and ſcouring. *Whitney* in this county is famous for its manufacture of blankets.

The principal rivers are the *Thames*, which forms the boundary of the county on the S.; *Cherwell*, *Windruſh*, and *Evenlode*, affording plenty of fiſh, which are remarkably good. The principal places are the following:

OXFORD, a noble, populous, and fine city, ſeated in a delightful plain on the banks of the *Thames* and *Cherwell*, fifty-three miles from *London*. It is pretended by ſome authors, that it was built a thouſand years before the birth of our Saviour; but this is juſtly controverted by others; however, it is allowed by all to have been a place of note before the coming of the *Saxons*. The whole city, with its ſuburbs, is of a circular form, three miles in circumference. The ſtreets are ſpacious, neat, and generally ſtraight; the mayor and aldermen govern the corporation, but in ſubjection to the chancellor and vice-chancellor of the univerſity, to whom both they and the ſheriff of *Oxfordſhire* ſwear to maintain the rights and privileges of the univerſity. On *St. Scholaſtica*'s day, which is on the tenth of *February*, ſixty-two of the principal citizens pay an acknowledgment of one penny each, inſtead of a heavy fine laid on the city, for an outrage committed againſt the univerſity in the reign of *Edward* III. when ſixty-two ſtudents were barbarouſly murdered by the citizens.

King *John*, compelled by his barons, ſummoned a parliament to meet here, in the year 1258, the proceedings of which were ſo diſorderly, that it was generally known afterward by the name of "the mad parliament." When *Henry* VIII. ſuppreſſed the monaſteries, among the new biſhopricks which he then erected was that of *Oxford*, which has ſubſiſted ever ſince. *Charles* I. aſſembled a parliament in this city, in the year 1625, in conſequence of the plague then raging in *London*; and in the year 1644 he ſummoned ſuch of the members of both houſes as were devoted to his intereſts; theſe were ſeceders from the parliament then ſitting at *Weſtminſter*, and which firſt introduced exciſe laws into *England*. This city was remarkably diſtinguiſhed for attachment to the unfortunate *Charles* I. who here held his court during the whole civil war, and, it being the head quarters of the royal army, many ſkirmiſhes took place in the neighbouring country, in one of which, at *Chalgrave-field*, near *Watlington*, fourteen miles S. E. of *Oxford*, in the year 1643, *John Hambden*, the brave and inflexible patriot, loſt his life.

THE UNIVERSITY has been ſaid to have been founded by the great *Alfred*, but is generally ſuppoſed to have been a ſeminary of learning before his time, although it owed its revival and conſequence to his liberal patronage, receiving from him grants of many privileges and large revenues. About the middle of the twelfth century, public lectures on the civil law were read here, not more than ten years after a copy of *Juſtinian's Inſtitutes* had been found in *Italy*. In the reign of *Henry* III. there were ſaid to be fifteen thouſand ſcholars, if they deſerve that name, the ſole object with many being only to read and write, whilſt the greateſt number attained to neither, and the moſt learned acquired only bad *Latin*, and worſe logic.

At preſent the univerſity, conſidered as a body corporate, conſiſts of the officers of the univerſity in general, and of the ſeveral colleges. The governors of this great univerſity, which, for the number of its colleges, and the fineneſs of its buildings, has not its equal, are the following: I. The chancellor, who is choſen by the ſtudents in convocation, and whoſe office is to inſpect the government of the univerſity, to protect its privileges, and call aſſemblies. The choice generally falls on ſome nobleman of high rank, and his office is for life. II. The high ſteward, who is nominated by the chancellor, and accepted of by the univerſity: his office is for life, and his employment to aſſiſt the chancellor and proctors in the execution of their offices, and to ſit as judge in capital cauſes, when required by the chancellor. III. The vice-chancellor, who is annually nominated by the chancellor as his deputy, and is elected in convocation. He is always the head of ſome college, and is in orders; he on all occaſions repreſents the chancellor in his abſence. IV. The proctors, who are two in number, and are annually choſen out of the ſeveral colleges by turns. Their duty is to inſpect the public exerciſes, to ſee diſcipline preſerved, and all diſorders prevented or puniſhed. After theſe are the keeper of the records, the regiſter, ſix beadles, and a verger.

There are likewiſe twenty-ſix profeſſors, namely;

Regius profeſſor of Divinity.
——————— Civil Law.
——————— Phyſic.
——————— Hebrew.
——————— Greek.
——————— Modern Hiſtory.
Margaret profeſſor of Divinity.
Savilean profeſſor in Aſtronomy.
Profeſſor of Geometry.
———— Natural Philoſophy.
———— Moral Philoſophy.
Cambden profeſſor of Hiſtory.
Archbiſhop *Laud*'s profeſſor of *Arabic.*
Lord Almoner's profeſſor of *Arabic.*
Reader in Anatomy.
Vinerian profeſſor of the Laws of *England*, (firſt held by Sir *William Blackſtone.*)
Univerſity Orator.
Keeper of *Bodleian* Library.
———— the Archives.
———— *Aſhmolean* Muſeum.
———— *Radcliffe* Library.
Lord *Litchfield*'s Clinical profeſſor.
Reader in Chemiſtry.
Profeſſor of Botany.
———— Poetry.
———— Muſic.

For ſome years paſt a courſe of eight ſermons have been preached every year in *St. Mary*'s church, in confirmation and eſtabliſhment of the Chriſtian faith, and upon other religious ſubjects, called "the *Bampton* lectures," on a very liberal endowment, (ſaid to be 160*l.* per annum) made by the laſt will of *Mr. John Bampton*, canon of *Saliſbury*.

The preſent number of ſtudents, including ſuch as merely attend in term time to keep commons, is ſuppoſed to exceed three thouſand.

The colleges are places provided with ſufficient revenues for the maintenance of a maſter, profeſſors, and ſtudents: the halls are houſes where the ſtudents live, either wholly or in part, at their own expence. Of the firſt ſort there are twenty, and of the latter five. In each of theſe are private lectures and diſputations in the liberal ſciences, to prepare the ſtudents for public exerciſes. They are ranked in the following order:

I. *Univerſity-College*, founded before the year 872, but how much earlier is not certain; after the *Daniſh* devaſtations it was reſtored by *William* of *Durham*, in the year 1332. It has one maſter, twelve fellows, ſeventeen ſcholars, with many other ſtudents, amounting in the whole to about ninety. Before the noble benefaction of Dr. *Radcliffe*, it had one large beautiful quadrangle, the ſouth ſide of which is divided into a handſome hall and chapel, and on the north ſide are now erected noble apartments for the maſter and two phyſicians, who travel for five years on a handſome allowance provided by Dr. *Radcliffe*, and may reſide here five other years. In a niche before this quadrangle is a ſtatue of the late queen *Anne*, and in a niche on the inſide of a new quadrangle is that of Dr. *Radcliffe*, who left forty thouſand pounds to this college for the above purpoſes, and for building a public library, which is a noble ſtructure.

II. *Baliol-College*, founded by *John Baliol*, whoſe ſon was king of *Scotland*. It maintains a maſter, twelve fellows, eighteen ſcholars, and eighteen exhibitioners, the whole number of the ſociety being about ninety. It has a library furniſhed with a noble collection of books.

III. *Merton-College* takes its name from its founder, *Walter* of *Merton*, biſhop of *Rocheſter*, and chancellor of *England*, about the year 1272. It has a warden, twenty-four fellows, fourteen portioniſts, and two clerks; the number of members amount to about a hundred.

IV. *Exeter-College*, founded in 1316, by *Walter Stapleton*, biſhop of *Exeter*, and lord-treaſurer of *England*. It maintains a rector, twenty-three fellows, one bible-clerk, and three exhibitioners; the ſtudents of every ſort amount to about fifty. It has one large quadrangle, which has a very noble front, and over the gate is a ſplendid tower.

V. *Oriel-College*, at firſt named *St. Mary*'s and *King's-College*. It was founded by *Adam de Brome*, almoner to *Edward* II. in 1324; and his ſon *Edward* III. adding to the revenue a rich meſſuage called *L'Oriel*, it thence took the name of *Oriel-College*. It conſiſts of one handſome regular quadrangle, and has a provoſt, and about ninety ſtudents.

VI. *Queen's-College*, founded in 1340 by *Eglesfield*, chaplain or confeſſor to *Philippa*, conſort to *Edward* III. in honour of whom he called it *Queen's-College*. It maintains in all about 180 ſtudents. It has had ſome noble benefactors, who have erected extenſive and handſome buildings. The college is a beautiful piece of modern architecture. Her late majeſty queen *Caroline*'s ſtatue is erected in this college under a kind of temple ſupported by pillars, ſhe having give one thouſand pounds toward completing the new building. On the 18th day of *December*, 1778, the weſt wing of this beautiful ſtructure was conſumed by fire.

VII. *New-College*, founded in 1386, by *William* of *Wickham*, biſhop of *Wincheſter*, lord high chancellor, and firſt prelate of the order of the garter, under the name of the college of the *Bleſſed Virgin Mary*. It has a warden, ſeventy fellows, ten chaplains, three clerks, ſixteen choriſters, and many gentlemen commoners. Great additions have been made to the beauty of the buildings, which have been alſo enlarged toward the garden with two ſtately and uniform wings. The chapel is a magnificent ſtructure, with a very lofty tower, and a fine ring of bells. The library is well furniſhed with books and manuſcripts.

VIII. *Lincoln-College*, founded in 1427, by *Richard Flemming*, biſhop of *Lincoln*; but finiſhed by *Thomas De-Rotherham*, biſhop of *Lincoln*, afterward lord high chancellor, and archbiſhop of *York*, in 1475. It has a rector, twelve fellows, nine ſcholars, twenty exhibitioners, two chaplains, *&c.*

IX. *All-Souls-College*, founded by *Henry Chichely*, archbiſhop of *Canterbury*, for offering up prayers for the ſouls of all who fell in the wars of *Henry* V. in *France*. Colonel *Codrington* bequeathed 10,000*l.* to this college for building a library, and furniſhing it with books. This library is two hundred feet long within the walls, and thirty-two feet and a half broad: it has eleven large windows to the ſouth, with a window of ſeventeen feet in width at each end. It is a fine *Gothic* ſtructure, and is thus built in conformity to the chapel.

X. *Magdalen-College*, founded in 1458, by *William Patten*, otherwiſe *Wainfleet*, biſhop of *Wincheſter*, and lord high chancellor. The chapel and hall are magnificent, and the walks highly pleaſant.

XI. *Brazen-Noſe-College*, founded in 1509, by *William Smith*, biſhop of *Lincoln*, conſiſts of two quadrangles, in the leſſer of which are the chapel and library, and under them a wide and pleaſant cloiſter, elegantly built.

XII. *Corpus-Chriſti-College*, founded in 1516, by *Richard Fox*, biſhop of *Wincheſter*, contains ſome very noble buildings, and its library has a valuable collection of books and manuſcripts.

XIII. *Chriſt-Church-College* was begun in the year 1515, by Cardinal *Wolſey*; but upon his diſgrace it fell into the king's hands, who joined it to *Canterbury-College*, and *Peckwater-Inn*. It has a dean, eight canons, one hundred and one ſtudents, eight chaplains, eight ſinging men, eight choriſters, and a teacher of muſic, a ſchool-maſter, uſher, forty grammar-ſcholars, &c. In the ſtately tower in the front of the gate, hangs the great bell called *Tom*, which was removed thither out of the ſteeple of the cathedral, and is ſeven feet one inch in diameter, weighing ſeventeen thouſand pounds weight. This bell is tolled every night, at nine o'clock, one hundred and one ſtrokes; agreeable to the number of ſtudents in the college, to give warning for ſhutting up the gates of the colleges and halls. The buildings of this college are very large and ſplendid. The great quadrangle has a wide and handſome terrace round it, and a fountain in the middle. *Peckwater* quadrangle is finely built, and there are alſo two other ſquares. The cathedral is lofty, the hall and library are high and ſpacious, and the latter contains a noble collection of books. In a word, this college is a univerſity of itſelf.

XIV. *Trinity-College* was originally a religious houſe, called *Durham-College*, for the monks of *Durham* cathedral ſeated in the N. ſuburb; but upon the diſſolution of monaſteries, Sir *Thomas Pope* purchaſed it of thoſe to whom it had been granted by the crown, and converted it into a college. The chapel, which has been rebuilt, is an elegant ſtructure, and the roof is enriched with fret-work, and an admirable painting repreſenting our Saviour's aſcenſion. The gardens on the eaſt ſide of the college are large and well laid out.

XV. *St. John Baptiſt's-College*, founded in 1555, by Sir *Thomas White*, merchant taylor, and lord mayor of *London*. It has a preſident, fifty fellows, eleven ſcholars, &c. and the number of ſtudents amount to about ſeventy, forty-ſix of which belong to merchant-taylor's ſchool in *London*, from whence ſcholars are yearly choſen.

XVI. *Jeſus-College*, begun in 1571, by *Hugh Price*, prebendary of *Rocheſter*, and appropriated to the benefit of the *Welſh*; it has received benefactions, and queen *Elizabeth* furniſhed timber for building it out of two adjacent foreſts.

XVII. *Wadham-College* received its name from its founder *Nicholas Wadham*, of *Somerſetſhire*, Eſq. It was begun in 1609, and finiſhed after his death by his lady, in 1613. It conſiſts of one noble quadrangle, beſides the library and chapel, the windows of which are beautifully painted, and it has a handſome garden.

XVIII. *Pembroke-College* was formerly called *Broad-gate-hall*, but was erected into a college by *Thomas Teſdale*, Eſq. and *Richard Wrighwicke*, B. D. in 1624, who gave it the preſent name in honour of the earl of *Pembroke*, then chancellor of the univerſity. It is an elegant edifice of the *Ionic* order, and has a pleaſant garden.

XIX. *Worceſter-College* was erected into a college by Sir *Thomas Cookſes*, of *Aſtley*, in *Worceſterſhire*, Bart. who bequeathed 15,000*l.* to it. It has lately been adorned with new buildings, which make a ſtately and ſplendid appearance.

XX. *Hertford-College* was originally called *Hart-hall*; but was erected into a college in 1740, by charter of *George* II. by which it is to conſiſt of a principal, with four ſenior and eight junior fellows.

Beſide theſe twenty colleges there are five halls, which are places unendowed, though not without exhibitions; the ſtudents in theſe ſubſiſt at their own expence, are under the government of a principal and vice principal, and pay the former for their lodgings. Theſe five halls are *Alban-Hall*, *Edmund-Hall*, *St. Mary's-Hall*, *New-Inn-Hall*, and *St. Mary Magdalen-Hall*.

The *theatre* is likewiſe a magnificent ſtructure raiſed by the munificence of Dr. *Gilbert Sheldon*, archbiſhop of *Canterbury*, in 1669, and built by Sir *Chriſtopher Wren*. The roof, which is ſupported without pillars, is finely painted. There is here alſo the noble *Bodleian* library, *Dr. Radcliffe's* library, and the libraries of *Mr. Aſhmole*, *Sir William Dugdale*, *Antony Wood*, and *Sir Harry Savile*; and the *Aſhmolean Muſeum*, one of the richeſt repoſitories of natural curioſities in the world; the *Clarendon* printing-houſe, &c.

Near the *Radcliffe* infirmary, on a ſpacious piece of ground, containing ten acres, which was given by the duke of *Marlborough* for the purpoſe, ſtands an *Obſervatory*; 175 feet in front, and 88 feet in elevation. The firſt ſtone of this building was laid in the year 1772, and the four truſtees to the will of Dr. *Radcliffe* furniſhed it with a complete ſet of aſtronomical inſtruments.

WOODSTOCK, a borough ſeven miles N. of *Oxford*, is pleaſantly ſeated on a riſing ground, and was formerly celebrated for the labyrinth in which fair *Roſamond* was concealed by *Henry* II. and who was there murdered by his queen. Some years ago a ſmall part of the old palace and of this labyrinth were remaining; but not the leaſt veſtige of them is now left. About half a mile from the town is *Blenheim-houſe*, a magnificent pile of building, erected to perpetuate the memory of the ſignal victory obtained by the allies over the *French* and *Bavarians* near the village of *Blenheim*, on the banks of the *Danube*, in *Auguſt* 1704. This noble ſeat, with the manor of *Woodſtock*, was ſettled by the *Britiſh* parliament on *John Churchill*, duke of *Marlborough*, and his heirs, as a grateful acknowledgment for his bravery and conduct on that occaſion. The roof is adorned with a ſtone baluſtrade; but there are ſeveral towers on the top of the wings, that have a very heavy aſpect. The lofty hall was painted by Sir *James Thornhill*, and the ceiling by *La Guerre*; the rooms are finely enriched with marble chimney-pieces, beautiful furniture, incomparable hangings, and paintings repreſenting the principal exploits of the duke of *Marlborough*. Among the pictures are many of *Rubens'* beſt and largeſt pieces, and the famous loves of the gods by *Titian*; a preſent from the king of *Sardinia*. The gallery is ſupported by marble columns and pilaſters. Over a pediment in the front of the houſe, facing the gardens, is a fine buſt of *Louis* XIV. larger than life, taken from the gate of *Tournay*. The chapel is very beautiful, and the garden is a large plot of ground taken out of the park, and well laid out. In the park is a lofty bridge, conſiſting of one arch above one hundred and ninety feet wide, and a vaſt obeliſk, on which is inſcribed a comprehenſive ſummary of the duke's actions and character.

BANBURY is a large well built market-town, ſeated on the *Cherwell*, ſeventy-five miles to the N. W. of *London*. It contains ſeveral good inns, and its markets are well ſupplied with proviſions. This is eſteemed the ſecond town in the county for beauty; the houſes are generally built with ſtone, and the church is a large handſome ſtructure. This town has long been famous both for its cakes and its ale. It has a manufacture of worſted ſhags. Near this place, in the year 1469, the famous earl of *Warwick* defeated *Edward* IV. and made him priſoner.

SECT. XXI.

Of BUCKINGHAMSHIRE.

THIS county probably derived its name from the *Saxon* word *Buc*, it formerly abounding more in deer than any other county. It is bounded on the N. by *Northamptonſhire*; on the E. by *Bedfordſhire*, *Hertfordſhire*, and *Middleſex*; on the S. by *Berkſhire*, and a point of *Surry* not more than two miles in breadth; and on the W. by *Oxfordſhire*. Its length from N. to S. E. is about thirty-nine miles, its breadth where broadeſt is about eighteen, and it is one hundred and thirty-eight miles in compaſs.

This county, which lies in the dioceſe of *Lincoln*, and in the *Norfolk* circuit, is divided into eight hundreds, and contains fourteen market-towns, ſeventy-three vicarages, one hundred and eighty-five pariſhes, ſix hundred and fifteen villages, eighteen thouſand three hundred and ninety houſes, and about one hundred and eleven thouſand three hundred and forty inhabitants. It ſends fourteen members to parliament, namely, two for the county, two for *Buckingham*, two for *Chipping-Wycomb*, two for *Ayleſbury*, two for *Great-Marlow*, two for *Wendover*, and two for *Agmondeſham*.

The air of *Buckinghamſhire* is generally eſteemed good, eſpecially in the higher parts. The ſoil is for the moſt part chalk, or marl, and very rich, particularly in the uplands, ſo that the corn and cattle of this county are excellent. The chief commodities are timber, conſiſting principally of beech and fir-wood; the chief manufacture is bone-lace, which is here made in great perfection, particularly in the northern parts, about *Newport-Pagnel* and *Stoney Stratford*; *ſtraw-hats* are alſo made here, and many *paper-mills* are diſperſed over the county where there are ſtreams of water.

The rivers of this county are but ſmall, except the *Thames*, the others are the *Colne* and the *Ouſe*. Of the latter of which rivers *Mr. Cowper* thus ſpeaks.

> The *Ouſe*, ſlow winding through a level plain
> Of ſpacious meads, with cattle ſprinkled o'er,
> Conducts the eye along his ſinuous courſe
> Delighted. *Taſk, book 1.*

The principal places in this county are the following:

BUCKINGHAM, which is ſeated on the *Ouſe*, which ſurrounds it on every ſide except the N. and is fifty-ſeven miles N. W. of *London*. It ſtands on a low ground, and has three bridges over the river. A caſtle was formerly ſeated in the middle of the town, but ſcarce any of its ruins now remain. It has a town-hall, a church, and a chapel, erected by archbiſhop, commonly called *Thomas à Becket*, now uſed as a free-ſchool, and ſeveral meeting-houſes. Although this town gives its name to the county, yet it does not now enjoy the advantage and honour of having the aſſizes held at it; and the place is in a ſtate of decay. It gives the title of marquis to earl *Temple*.

Two miles diſtant from this town is STOW, a village rendered remarkable on account of the noble gardens which were laid out by the late lord viſcount *Cobham*, and are now poſſeſſed by the marquis of *Buckingham*, his lordſhip's great nephew. On entering the garden on the S. ſide, the grandeur and variety of the objects that preſent themſelves to view fill the beholder with aſtoniſhment. In the middle of a large octagon piece of water is an obeliſk near ſeventy feet high, to the top of which riſes a ſtream of water. At a good diſtance are two beautiful rivers, which join, and enter the octagon in one ſtream, and over one of them is a *Palladian-bridge*. At a diſtance, on a hill, to the right hand, is a *Gothic* ſtructure dedicated to Liberty, and on the left, an *Egyptian* pyramid ſixty feet high.

From the octagon building falls a natural caſcade, in three different ſheets of water. From hence a pathway conducts to an hermitage, which is agreeably ſituated in a wood; in this direction is likewiſe placed a neat ſtructure called the *Veneris Hortus*, before which are the ſtatues of *Cain* and *Abel*. Each way from the entrance of the room is a handſome colonade leading to ſome pavilions, where are four antique buſts of *Veſpaſian*, *Cleopatra*, *Nero*, and *Fauſtina*.

On the top of a mount is the *Belvedere*, a building which affords a delightful proſpect. In the garden is alſo the temple of *Friendſhip*, a lofty ſquare building of the *Doric* order, with three noble porticos on the ſides. The cieling is painted, and in the room are ten pedeſtals, on which are the buſts of his lordſhip, and nine of his friends, his late royal highneſs the prince of *Wales*, the earl of *Cheſterfield*, Mr. *Pitt*, &c. There are alſo in the garden *St. Auguſtine*'s cave, which is formed of roots of trees and moſs; the *Temple* of *Bacchus*; a *Saxon* temple, ſtanding in a ſolemn grove, and containing the ſeven *Saxon* deities preſiding over the ſeveral days of the week; and in the middle an altar for ſacrifice; a *Corinthian* column, on which is placed the ſtatue of king *George* I; *Dido*'s cave, ſeated in a wood; a rotunda, the dome of which is ſupported by ten *Doric* columns, and in the centre is a circular pedeſtal, on which is placed a *Venus de Medici*; the ſtatue of her late majeſty queen *Caroline*, erected on four *Ionic* columns placed on a large pedeſtal; the ſleeping parlour, a ſquare picture placed in a wood in the centre of ſix walks; the temple of ancient Virtue, which is a rotunda of the *Doric* order, and in four niches are the ſtatues of *Epaminondas*, *Lycurgus*, *Socrates*, and *Homer*. The *Elyſian-fields* form a moſt delightful ſpot, in which are a grotto adorned with ſhells, pebbles and minerals; a ſhell pavilion, the dome of which is ſupported by ſix wreathed columns; the *Chineſe-houſe*; the monuments of *Britiſh* worthies, theſe are Mr. *Pope*, Sir *Thomas Greſham*, *Shakeſpeare*, Sir *Iſaac Newton*, Sir *Francis Bacon*, king *Alfred*, *Edward the Black Prince*, queen *Elizabeth*, king *William* III. Sir *Walter Raleigh*, Sir *Francis Drake*, *John Hampden*, Sir *John Barnard*, &c. Theſe delightful grounds are conſidered as forming one of the firſt gardens in this kingdom, where the ſcience of gardening has been carried to its greateſt perfection; they have been compared to a terreſtrial paradiſe. The following lines were an effuſion poured out on ſeeing them.

> It puzzles much the ſage's brains,
> Where *Eden* ſtood of yore;
> Some place it in *Arabia*'s plains;
> Some ſay it is no more.
>
> But *Cobham* can theſe tales confute,
> As all the curious know;
> For he has prov'd beyond diſpute
> That Paradiſe is *Stow*.

AYLESBURY, the largeſt and beſt town in the county, is ſeated on a hill, forty-one miles N. W. of *London*; the country round it is one of the moſt fertile tracts in the kingdom, and called "the *Vale of Ayleſbury*." In this part of the county flouriſhed for many ages the ancient and reſpectable family of *Hampden*, who poſſeſſed large eſtates there, which were held by the great patriot of that name. The town conſiſts of ſeveral broad ſtreets, and has a large market-houſe. It has alſo a town-houſe, where the aſſizes, the ſeſſions, and other meetings of the county are held, and under it is the gaol. Many of the poor are employed in making bone-lace. This town is governed by a bailiff, ten aldermen, and twelve capital burgeſſes. It gives the title of earl to the noble family of *Bruce*.

ETON, a town ſeated on the *Thames*, oppoſite to *Windſor*, is celebrated for its college, which has produced a great many learned and eminent men. This building, except the great ſchool-room, is in the *Gothic* ſtyle, and, together with the chapel, were founded by *Henry* VI. A. D. 1440, for the ſupport of a provoſt and ſeven fellows, one of whom has the title of vice-provoſt, and for the education of ſeventy king's ſcholars, as thoſe are called who are on the foundation. The revenue of the college is about five thouſand pounds a year. Theſe ſcholars, when properly qualified, are elected, on the firſt *Tueſday* in *Auguſt*, to *King's College*, *Cambridge*. Beſides thoſe on the foundation, there are ſeldom leſs than three hundred ſcholars. The ſchool is divided into upper and lower, and each of theſe into three claſſes. To each ſchool there is a maſter, and four aſſiſtants. Here is a noble library. In the great court is a fine ſtatue of the founder, erected at the expence of Dr. *Godolphin*, dean of *St. Paul*'s, who was provoſt.

In this county are alſo *Newport Pagnel*, *Stoney Stratford*, and a number of fine ſeats.

SECT. XXII.

MIDDLESEX.

THIS county received its name from its ſituation; it being ſurrounded by the *Eaſt*, *Weſt*, and *South Saxons*. It is bounded on the N. by *Hertfordſhire*; on the E. by *Eſſex*, from which it is divided by the river *Lea*; on the S. by the *Thames*, which ſeparates it from *Surry*, and a ſmall part of *Kent*; and on the W. by *Buckinghamſhire*, and a part of *Surry*, from the former of which it is ſeparated by the river *Coln*. Its figure is an oblong ſquare, with a broad projection on the N. E. which ſoon winds round due W. On the S. W. is a ſtill broader projection, which runs due S. It is the ſmalleſt county in *England*, except *Huntingdon* and *Rutland*, being from E. to W. only twenty-two miles, and from N. to S. nineteen. Its circumference is about ninety miles.

This county, which lies in the dioceſe of *London*, is divided into ſix hundreds and two liberties; and, beſide the cities of *London* and *Weſtminſter*, contains five market-towns, thirty-one vicarages, and ſeventy-three pariſhes. Although one of the leaſt counties, it is by far the richeſt, and moſt populous; paying more taxes to government than any ten beſide; yet ſends only eight members to parliament, two for the county, four for *London*, and two for *Weſtminſter*.

The air muſt be extremely wholeſome, ſince not even the great number of people in *London* can affect it ſo much as to render it more ſubject to epidemical diſeaſes than other great cities uſually are; but, at a very ſmall diſtance from the ſmoke of this immenſely populous city, the air is not only healthful, but exceeding pure; to this the ſoil, which generally conſiſts of gravel, greatly contributes.

But from this general characteriſtic of ſoil muſt be excepted, all the land near the banks of the *Thames*, extending from the ſouthern extremity of *Weſtminſter* to *Brentford*, which has a luxuriant richneſs, and is therefore almoſt univerſally employed, where no buildings or pleaſure-grounds intervene, in producing roots and vegetables for the markets of the metropolis.

The THAMES, though running through various counties, ſeems properly to belong to *Middleſex*; it being here of the greateſt importance to the kingdom. It may therefore be proper to take notice here, that though it is the current opinion that the *Thames* had its name from the conjunction of the *Thame* and *Iſis*, yet it is always called *Thames* before it comes near the *Thame*. This the annotator on *Camden* proves from ancient records, and adds, "it may be ſafely affirmed, that it does not occur under the name of *Iſis* in any charter or authentic hiſtory; and that the name is no where heard of, except among ſcholars; the common people all along, from the ſpring-head to *Oxford*, calling it by no other name but that of the *Thames*." See *Gibſon*'s *Camden*, Vol. i. page 99.

The *Thames*, if conſidered with reſpect to its courſe and navigation, is not to be equalled by any river in the known world. It riſes from a ſmall ſpring a little to the S. W. of *Cirenceſter*, in *Glouceſterſhire*; and, taking its courſe eaſtward, becomes navigable at *Lechlade* for veſſels of fifty tons, and there receives the river *Colne*, about one hundred and thirty-eight miles from *London*. From *Lechlade* it continues its courſe N. E. to *Oxford*, where it receives the *Charwell*; after which it runs S. W. to *Abingdon*, and from thence to *Dorcheſter*, where it receives the *Thame*, and continuing its courſe S. E. flows from the borders of *Berkſhire*, *Buckinghamſhire*, *Surry*, *Middleſex*, *Eſſex*, and *Kent*, and paſſing by a number of towns and fine villages, proceeds by *Weſtminſter* and *London*, to *Deptford*, *Greenwich*, *Woolwich*, *Graveſend*, and ſo on to the ſea. It is impoſſible to repreſent the beauties with which the banks of this noble river are embelliſhed from *Windſor* to *London*; beſide numerous villages, they are adorned with the magnificent houſes and fine gardens of the nobility and gentry. The tide flows as high as *Richmond* in *Surry*, which, following the winding courſe of the river, is ſeventy miles from the ſea. At *London* the depth is ſufficient for the navigation of large ſhips, which renders it the greateſt port for trade in the univerſe. The water is juſtly eſteemed exceeding wholeſome, and fit for uſe in very long voyages, during which it will work itſelf perfectly fine. It likewiſe abounds with a great variety of fiſh.

The Deſcription of this renowned River, written by Sir *John Denham*, has been much admired. We ſhall extract a part.

Thames, *the moſt lov'd of all the Ocean's ſons*
By his old Sire, to his embraces runs;
Haſting to pay his tribute to the Sea,
Like mortal life to meet eternity.
Nor are his bleſſings to his banks confin'd,
But free and common as the ſea or wind;
Where he to boaſt or to diſperſe his ſtores,
Full of the tribute of his grateful ſhores,
Viſits the world, and in his flying tow'rs
Brings home to us, and makes both Indies *ours;*
So that to us no thing, no place is ſtrange,
While his fair boſom is the world's Exchange.
O could I flow like thee, and make thy ſtream
My great example, as it is my theme!
Tho' deep, yet clear; tho' gentle, yet not dull;
Strong without rage, without o'erflowing full.

The Cities of LONDON and WESTMINSTER.

LONDON, the metropolis of *Great Britain*, and the largeſt as well as the richeſt city upon earth, is ſituated in 51° 31′ N. latitude; reckoning from *St. Paul's*, cathedral it is 0° 5′ 37″ W. from *Greenwich*; but, placing the firſt meridian at the iſle of *Ferro*, its longitude E. from thence is 17° 40′ 13″.

London is ſituated in a very extenſive plain, through the middle of which the *Thames* flows; and at the diſtance of a few miles, in every direction except toward the E. which includes a part of *Eſſex*, is ſurrounded by hills, which terminate the view to great advantage, forming a vaſt natural amphitheatre.

This city was neither built by *Brute*, nor king *Lud*, as ſome romantic and fanciful authors pretend; yet it probably exiſted in the time of the ancient *Britons*, before the art of writing was brought into *England*, and when there were no other monuments of ancient facts than what were found in the ſongs of the bards, which were preſerved only by memory. *London*, however, had no buildings, either of brick or ſtone, till it was inhabited by the *Romans*; for the dwellings of the *Britons* were only huts formed of twigs wattled together; however, *Tacitus* obſerves, that in the year 26 it was very famous for the multitude of its merchants, and the greatneſs of its traffic: but, ſoon after, *Suetonius* abandoning the city to the fury of *Boadicea*, it being too large to be defended by his little army of ten thouſand *Romans*, (which is doubtleſs a proof of its being, even then, of conſiderable extent), that injured princeſs burnt the city, and in the cruelty excited by revenge, put the inhabitants to the ſword.

The limits of this work will not permit us to relate the revolutions that have happened in this metropolis; it will be ſufficient, therefore, to deſcribe its preſent ſtate. The two laſt great calamities this city has ſuffered were the plague in 1665, which ſwept away ſixty-five thouſand five hundred and ninety-ſix perſons, at a time when the buildings of the city and its inhabitants did not amount to half the number they do at preſent; and the fire in 1666, which burnt down thirteen thouſand two hundred dwelling-houſes, four hundred ſtreets and lanes, the cathedral of *St. Paul*, eighty-ſix pariſh churches, ſix chapels, the *Royal Exchange*, with many other public ſtructures, and fifty-two of the companies halls. In memory of this laſt deſtruction, a monument, built by Sir *Chriſtopher Wren*, ſtands near the place where the fire began, which is a magnificent column two hundred and two feet in height, and on the baſe is an allegorical repreſentation, in *baſſo relievo*, of the reſtoration of the city after this dreadful conflagration, executed by the famous ſtatuary *Cibber*.

London is ſeated on the banks of the *Thames*, to the N. of that river; and, including the buildings which generally go under that name, extends above ſeven miles in length, but its breadth is in ſome places only three, in others two miles. A perſon unaccuſtomed to the ſight, cannot behold without ſurprize the vaſt number of barges and boats, both of pleaſure and burthen, above *London-bridge*, continually paſſing and repaſſing, for the convenience and ſupply of this city, and the towns on the banks of the *Thames*; nor is it poſſible to obſerve without aſtoniſhment the vaſt aſſemblage of merchant ſhips which are moored below that bridge; theſe convey to foreign parts the manufactures of *Britain*, and bring back the produce of the whole earth.

The population of *London* and *Weſtminſter* has been computed at a million, but Dr. *Price*'s calculations reduced it to 651,000, and he has ſince ſuppoſed even theſe to have exceeded the real amount, allowing ſix inhabitants to an houſe. Like all other *European* capitals, *Naples* alone excepted, its population is kept up by continual recruits from the country. The ſame political writer ſuppoſes the metropolis to contain a ninth part of the inhabitants of *England*; whilſt *Paris*, he ſays, does not contain more than a fiftieth part of the inhabitants of *France*; and that it conſumes annually about 7,000 perſons, who remove into it every year, but without increaſing its population.

The chriſtenings and burials in the cities of *London* and *Weſtminſter*, and their contiguous pariſhes, at the following periods, were

		Chriſtenings.	Total.		Burials.	Total.
In the year 1760,	Males	7,778	14,951	Males	9,935	19,820
	Females	7,173		Females	9,885	
1770,	Males	8,761	17,109	Males	11,210	22,434
	Females	8,348		Females	11,224	
1780,	Males	8,581	16,634	Males	10,206	20,517
	Females	8,053		Females	10,311	
1789,	Males	9,341	18,163	Males	10,611	20,749
	Females	8,822		Females	10,138	

The increaſe of buildings in *London* and its environs is a fact which ſtrikes every one with aſtoniſhment, but it has been aſſerted that theſe originate entirely from the increaſe of luxury, and prove no increaſe of people; yet it is certain, that no place on the globe poſſeſſes more attractions than the capital of *Great Britain*, not only to the inhabitants of the iſland, but to foreigners. The unprovided repair there to be employed in commercial houſes, in retail ſhops, or in the numerous manufactures which are carried on: the artiſt finds it to be the ſpot where the exertions of genius meet the fulleſt encouragement; it invites men of letters, whether they ſeek to gain ſubſiſtence by their talents, or, poſſeſſing affluence, wiſh to enjoy "the feaſt of reaſon and the flow of ſoul;" for here are to be found men of eminent attainments in every branch of knowledge, and acceſs may be obtained to the beſt companies, where all the elegancies which taſte and wealth can provide, ſpread a luſtre over learning and parts; and the moſt valuable connections may be formed. Here too the gay, the faſhionable, and the diſſipated may be relieved by a variety of public amuſements, and an unceaſing round of private parties, in which cards, or a box and dice, are ſubſtituted for wit, ſenſe, and animated converſation.

The vicinity of *London*, in every direction, preſents to the view numerous nurſery gardens, with large green-houſes and hot-houſes, in which exotics, roots, and flowers, are cultivated in great abundance. Theſe furniſh the houſes ſituated in the cloſeſt receſſes of the city with agreeable verdure during the dreary months of winter, and have been found a very lucrative branch of cultivation to thoſe concerned. This diſpoſition to poſſeſs the choice productions of nature, beſpeaks eaſe and competence, domeſtic ſatisfaction, and good taſte.

In no part of the world are more laborious trades and manufactures carried on, or more employments engaged in which require great exertions of bodily ſtrength than in *London*, where ſurpriſing inſtances of athletic powers and perſevering labour are to be met with; indeed, ſo extenſive are the objects which wealth, directed by enterprize and induſtry, embraces, that there are few manufactures carried on in any part of the kingdom, of which ſomething of the kind is not tranſacted here, the clothing, linen, and cotton branches, with ſome others which depend on local accommodations, ſuch as the making of ſalt, &c. excepted. The following branches of manufacture are carried on to a conſiderable extent in or near *London*.

Foundries for caſting iron, and for braſs
Manufactures of wrought iron
Flatting mills
Oil mills
Corn mills
White lead mills
Tobacco and ſnuff manufactures
Sail makers
Shot manufactures
Tin manufactures
Letter foundries
Printing, both with letter-preſs and from copper-plate
Glaſs-making
Glaſs-grinding
Tanners
Leather-dreſſers and curriers
Cutlery, and the fineſt works in poliſhed ſteel
Gun-ſmiths
Sword-cutlers
Coach-making
Wheel-wrights
Cabinet work of all kinds, and in the higheſt perfection
China manufactures
Carpet and floor-cloth manufactures
Paper-hanging manufactures
Hat manufactures
Callico printers
Silk weavers in a variety of branches
Manufacture of *Genoa* velvet
Gauze manufactures
Hoſiery
Manufacture of pins
——————— needles
——————— muſical inſtruments
Mathematical inſtruments
Watch-making
Jewellery
Wrought ſilver-plate, and ſilver-plating
Refiners of metals, or ſmelters
Gold-beaters
Wedgewood's vaſt variety of uſeful and ornamental *Etrurian* and other wares
Potteries of various kinds
Dyers
Turpentine works
Starch manufactures
Soap ditto
Candles
Cooperages
Sugar bakers
——— refiners
Brewers
Diſtillers
Sweets and vinegar works
Bricks and tiles

The conſtruction of *mathematical inſtruments* is brought to ſuch perfection in *London*, that no place in *Europe* can come in competition with it in that nice and curious art; *watch-making* too is brought to a degree of excellence here at preſent, which it never reached before the time of *Harriſon* and *Arnold*. *Printing* is likewiſe carried on to an aſtoniſhing extent, and ſuch is the univerſal rage for News-paper reading, that about a dozen different papers are publiſhed every morning; ſeven or eight evening papers appear three times a week; and about half a dozen weekly papers, excluſive of the *London Gazette* publiſhed by authority twice a week. The whole weekly conſumption of news-papers printed in *London* cannot be leſs than two hundred thouſand, and the revenue drawn by government, from ſtamps and advertiſements, is not leſs than 2,10[illegible] *l.* every week.

The preſent ſtate of the polite arts has been already ſpoken of, page 500, in the general deſcription there given of *Great Britain*, but the metropolis is the place where theſe flouriſh.

The city of *London* was formerly ſurrounded with walls, and till lately had ſeven gates; theſe were *Ludgate*, *Alderſgate*, *Aldgate*, *Cripplegate*, *Newgate*, *Moorgate*, and *Biſhopſgate*; the three firſt of which were taken down in 1760, and all the reſt, except *Newgate*, before the end of the following year, and that laſt was taken down in 1778. On the weſt ſide a handſome gate, called *Temple-bar*, ſtill remains.

Without the gates, to the eaſtward, is the *Tower of London*, a very ancient ſtructure, in which is the *White Tower*, ſaid to be founded by *William the Conqueror*. It is ſurrounded by a wall and deep ditch, which incloſe ſeveral ſtreets, beſides the building properly called the *Tower*: here are ſome artillery, a magazine of ſmall arms for ſixty thouſand men, ranged in the moſt beautiful order, and a horſe armoury, in which are fifteen figures of kings on horſeback. Here are likewiſe the crown and other regalia, the mint for coining money, and the menagerie for lions and other beaſts, with ſeveral foreign birds. The circumference of the whole is about a mile. It contains one pariſh-church, and is under the command of a conſtable and lieutenant governor, and has conſtantly one or more battalions of one of the three regiments of foot-guards on duty there.

In *Thames-ſtreet*, near the *Tower*, is the *Cuſtom-houſe*, with the front facing the river. This is a large and ſtately ſtructure, where the cuſtoms on merchandize imported and exported are received.

By the fourteenth report of the commiſſioners appointed to examine into the public accounts, it appears that the receipts of the cuſtoms at the port of *London*, in the year 1781, were —		£. 2,884,660
The charges attending the cuſtoms there, in ſalaries and incidents, were — —		865,147
The total receipts in money and bond, in all the ports of *England* and *Wales*, amounted, that ſame year, to		4,031,986
Salaries and incidental charges amount to the prodigious ſum of — —		1,198,044
Nett produce of the cuſtoms throughout *England* and *Wales* — —		2,833,942
Of the out ports there are twenty-three, whoſe receipts amount to	£. 11,073	
Salaries and incidents to —	20,539	
Conſequently their expences exceed the produce, by — — — — —		9,466
Clear revenue drawn from the cuſtoms in the year 1781 — — — —		£. 2,824,476

This branch of the national revenue having never been made public, and being highly intereſting, as it gives a comparative view of the commerce carried on by every port in *England*, we ſhall lay it before our readers in detail.

Amount of the Cuſtoms received at all the ports of *England* and *Wales*, in the year 1781.

A little to the W. is *London-bridge*, which was formerly remarkable for having houſes on each ſide; but they being found diſadvantageous, by blocking up and narrowing the paſſage, they have been taken down; and a handſome ſtone baluſtrade is now fixed on each ſide, and the paſſage rendered as commodious, and at the ſame time as beautiful as it was capable of being, without entirely rebuilding the bridge. This bridge is 946 feet in length. Each arch is encompaſſed with a broad ſtarling, above which the tide flows many feet; theſe, by impeding the progreſs of the tide when at ebb, cauſes a larger body of water to be retained a conſiderable way up the river, than could be gained by any other expedient.

In the year 1760, the firſt ſtone of another bridge acroſs the *Thames*, (due W. of *London Bridge*) from *Blackfriars* to the *Surry* bank, was laid, which was to be built according to a plan delivered in to a committee of the corporation of *London* by Mr. *Mylne*. It was completed in ten years and three quarters, and coſt 152,840 *l.*; toward defraying which, a toll on foot paſſengers, as well as for horſes and carriages, was for ſeveral years collected, which brought in a clear receipt of more than 5000 *l. per* annum, after all contingent expences were defrayed. The bridge is built of *Portland* ſtone, but of a very inferior quality, which has cauſed this noble ſtructure to be already much impaired. It conſiſts only of nine elliptical arches, of which the central arch is one hundred feet in diameter. The centre arch, and that on either ſide, are each of them wider than the arch of the famous *Rialto* at *Venice*. It has a ſtone baluſtrade at the top, and over every pier is a receſs for foot paſſengers, on either ſide, ſupported by two *Ionic* columns. The length of the bridge is 995 feet. The cities of *London* and *Weſtminſter*, the river *Thames*, and adjacent country, are viewed from no other ſpot with ſo much advantage as from this bridge, which is many feet higher than the higheſt ground in *London*. The avenue to it is through a ſpacious new ſtreet, which terminates near its foot, in an elegant ſquare, called *Chatham Place*.

The *Royal Exchange* in *Cornhill* is generally allowed to be one of the beſt ſtructures of the kind in the world. It was built by Sir *Thomas Greſham*, who was ſtyled "the queen's merchant," in 1566, and 1567; queen *Elizabeth* named it "the *Royal Exchange*," and, upon its being finiſhed, ſhe went in perſon, and cauſed it to be ſo proclaimed by the heralds at arms. But being burnt down in 1666, it was rebuilt in a grander ſtyle, the principal part of *Portland* ſtone, and coſt eight thouſand pounds. In each of the principal fronts, which are to the N. and S. is a piazza, and in the centre an area; above, on each ſide, is a niche with the figures of *Charles* I. and II. in *Roman* habits. The height of the building is fifty-ſix feet, and from the centre of the S. ſide riſes a lantern and turret a hundred and ſeventy-eight feet high, on the top of which is a vane in the form of a *graſshopper*, of poliſhed braſs. The inſide of the area, which is a hundred and forty four feet long, and a hundred and ſeventeen broad, is ſurrounded with piazzas, forming ambulatories for the merchants to ſhelter themſelves from the weather. Above the arches of theſe piazzas is an entablature extending round, and a compaſs pediment in the middle of each of the four ſides. Under that on the N. are the king's arms, on the S. thoſe of the city, on the E. thoſe of Sir *Thomas Greſham*, and on the W. thoſe of the Mercers company. In theſe intercolumniations are twenty-four niches, twenty of which are filled with the ſtatues of the kings and queens of *England*. In the centre of the area is another ſtatue of *Charles* II. in a *Roman* habit, encompaſſed with iron rails. In this area merchants meet every day. Theſe merchants are diſpoſed in ſeparate claſſes, each of which has their particular ſtation, called their walk.

"When I have been upon the *Change*," ſays *Addiſon*, "I have often fancied one of our old kings ſtanding in perſon, where he is repreſented in effigy, and looking down upon the wealthy concourſe of people with which that place is every day filled. In this caſe, how would he be ſurpriſed to hear all the languages of *Europe* ſpoken in this little ſpot of his former dominions, and to ſee ſo many private men, who, in his time, would have been the vaſſals of ſome powerful baron, negociating, like princes, for greater ſums of money than were formerly to be met with in the Royal Treaſury!" *Spectator*, Nº 69.

This public-ſpirited merchant likewiſe erected, in the year 1581, a college which bore his name, in which were apartments for ſeven profeſſors, *viz.* in divinity, civil law, aſtronomy, geometry, rhetoric, phyſic, and muſic, with a ſalary to each of fifty pounds a year, (which was at that time an handſome appointment, being equal to 250 *l.* at preſent), for reading courſes of lectures, on their reſpective ſciences, in a lecture-room in the college, during term time. The ſite of this college being conſidered as convenient for a new exciſe-office, in the year 1768 an act of parliament paſſed for that purpoſe, and it was agreed to allow to each profeſſor an additional fifty pounds *per annum* for ever, in lieu of his apartments; and the lectures are now read, (ſeldom to more than one or two hearers) in the *Greſham* lecture-room, over the *Royal Exchange*. A ſpacious building, forming the office of exciſe, now ſtands on the extenſive ſpot where the college formerly ſtood, which was a low quadrangular building, the interior part encloſing a ſpacious court, with piazzas on the four ſides.

The *Bank of England* began to be erected in 1732; this is a very noble ſtructure, to which very large and expenſive additions have been lately made, under the ſuperintendence of the late Sir *Robert Taylor*; and a grand paſſage opened to it from *Cornhill*.

The plan of the *Bank of England* was formed in the year 1693, by a merchant named *William Paterſon*, but was brought to effect by Mr. *Michael Godfrey* and others, being incorporated by act of parliament that year, by the name of "the Governor and Company of the Bank of *England*," and its capital ſettled at a million and half. The dealings of the company were confined by the act to the diſcount of bills of exchange, buying and ſelling bullion, whether gold or ſilver, and the ſale of ſuch merchandize as might be pledged, and remain unredeemed at the time agreed upon for its redemption, or three months after. The company was reſtrained from lending any money to government by way of loan or anticipation, or on any branch of the revenue, unleſs empowered by parliament. In the year 1708 an act paſſed for ſecuring the credit of the Bank of *England*, by prohibiting any perſons united in partnerſhip, exceeding the number of ſix in *England* (the bank of *Scotland* having been eſtabliſhed by law in the year 1695) to borrow or take up ſums of money on their bills or notes, payable on demand, or in leſs time than ſix months; which reſtriction was principally meant to affect the mine-adventurer's company, who had eſtabliſhed a bank. That ſame year, a general alarm being ſpread through the nation, in conſequence of the meaſures taken by *France* to reſtore the pretender, a very ſudden and general demand was made upon the bank; but the ſupport it received from the lord treaſurer *Godolphin*, and the dukes of *Marlborough*, *Newcaſtle*, and *Somerſet*, with many other opulent perſons, and a call of twenty *per cent.* on the proprietory, enabled the directors to weather the ſtorm. In the next year an act of parliament paſſed empowering the governor and company to double their capital, which was farther enlarged by act of parliament in 1715. In the year 1743 its charter was extended to the year 1764, before the arrival of which time it was renewed for twenty-one years, on payment to government of 140,000 *l.* and lending a million for a twelvemonth, on exchequer bills, at 3 *per cent.* In the year 1782 it was renewed for twenty-one years, from the termination of the ſubſiſting term, on a loan being made to government of two millions, at 3 *per cent. per annum*, for two years. Its capital in the year 1744 was 10,700,000 *l.* its preſent capital is 11,642,406 *l.* The amount of bank notes in conſtant circulation may be about fourteen millions; though the great number of country banks, which have been of late eſtabliſhed in moſt of the conſiderable towns in *England*, muſt in ſome meaſure affect the paper iſſued at the bank.

The *South-ſea-houſe* is a noble building, with two ſpacious rooms for tranſacting the buſineſs of the South-ſea annuities, the upper room, more particularly, being a lofty, ſpacious, and peculiarly grand, although unadorned, piece of architecture, vaſtly ſurpaſſing any piece of building in the bank of *England*.

The *Eaſt-India houſe* is an elegant ſtone building, with a great variety of rooms and offices ſuited for the tranſacting the complicated buſineſs of that great commercial body. For the hiſtory of this company, ſee p. 502.

The *Manſion-houſe* is a ſtately ſtone ſtructure; but too heavy and too large for the uſe for which it was deſigned. It ſtands on a ſpot where *Stocks-market* formerly ſtood; was built after a plan laid down by Mr. *Dance*, then city ſurveyor; the firſt ſtone was laid in the year 1739; the expence of building it was 42,638 *l.* and the ſum voted for furniſhing it, in the year 1752, was 4000 *l.* It is built of *Portland* ſtone, and has a portico of ſix lofty fluted columns of the *Corinthian* order in the front, the ſame order being continued in pilaſters, both under the pediment and on each ſide. The baſement ſtory is very maſſy, and built in ruſtic, and on each ſide riſes a flight of ſteps of very conſiderable height, leading up to the portico, in the middle of which is the door which leads to the apartments and offices. The columns ſupport a large angular pediment, adorned with a very noble piece in *baſſo relievo*, repreſenting the dignity and opulence of the city of *London*, executed by Sir *Robert Taylor*. Beneath this portico are two ſeries of windows, which extend along the whole front; and above this is an *Attic* ſtory, with ſquare windows crowned with a baluſtrade. This building has an area in the middle, and the apartments are extremely noble.

Guildhall is the town-hall of the city, and is an old *Gothic* ſtructure, in which the courts of juſtice are held: the great hall is a hundred and fifty-three feet long, fifty broad, and fifty-eight high; in which are placed two monſtrous wooden giants, the pictures of ſeveral of the kings and queens of *England*, with whole lengths of their preſent majeſties, painted by *Ramſey*, and of eighteen judges who diſtinguiſhed themſelves in determining the differences between landlords and tenants on rebuilding the city after the fire. Here is likewiſe a fine picture of lord chief juſtice *Pratt*, now earl *Camden*. In this hall is a marble whole-length ſtatue of Mr. *Beckford*, who was twice lord mayor, and died 21ſt of *June*, 1770, in his ſecond mayoralty; and another more magnificent cenotaph, to the memory of the late earl of *Chatham*, both executed by *Bacon*. This *Guildhall* is now new fronted, in the *Gothic* ſtyle, from a plan and under the direction of Mr. *Dance*, ſon of the former city ſurveyor.

In *Warwick-lane* is the royal college of phyſicians. The ſtructure is very fine; but its ſituation is extremely unfavourable.

Sion College, founded in the year 1603, by the will of *Thomas White*, S. T. P. and incorporated in 1630, by letters patent, and confirmed by *Charles* II. in the year 1664, is appropriated to the uſe of the clergy of the dioceſe of *London*, of which the archbiſhop of *Canterbury* is preſident. It has a valuable library, the acceſs to which is not difficult. A building in *Red Croſs Street*, was likewiſe bequeathed by the late Dr. *Williams*, for the uſe of proteſtant diſſenting miniſters, together with a large library, and an handſome endowment. Acceſs may be daily had to this library under certain regulations.

The *Charter-houſe*, which was built in the year 1349, but founded by *Thomas Sutton*, Eſq. in the year 1611, is a ſcholaſtic ſeminary for the education of forty-four ſcholars, who are educated, boarded, and lodged; proviſion is likewiſe made for the ſupport of twenty-nine ſtudents at the univerſity; others of the ſcholars are apprenticed, for which a fee of 40*l.* is appropriated; beſide which, there are eighty old penſioners, who are provided with apartments, board, a gown, and ſeven pounds in money yearly. There are likewiſe nine eccleſiaſtical preferments in the gift of the governors. The revenues appropriated for theſe purpoſes are very ample. The gardens to the houſe are ſpacious. There are two other public ſchools in *London*, one under the direction of the maſter, wardens, and aſſiſtants of the company of Merchant Taylors, founded in 1561; where one hundred boys are inſtructed in claſſical learning gratis, and vacant fellowſhips in *St. John*'s college *Oxford* are filled up from hence; the other called "*St. Paul's School*," founded by Dean *Colet*, A.D. 1510, for 153 ſcholars.

Chriſt's Hoſpital was formerly a houſe of *Grey-friars*, and was given to the city by *Edward* VI. for the ſupport and education of the children of citizens of both ſexes. Here is a writing-ſchool, drawing-ſchool, grammar-ſchool, and another for teaching the mathematics. The boys educated, maintained, and cloathed gratis in this ſchool are ſomewhat more than eight hundred; the girls, are about ſeventy in number.

It appears from a pamphlet publiſhed by Mr. *Wales*, the mathematical maſter of this ſchool, that for thirty years before the year 1770, the number of children who died annually in this hoſpital was at the rate of one out of ſeventy, but from the year 1770 to 1780, the annual number of deaths was not more than one in an hundred, a circumſtance from which the writer juſtly infers the greater healthineſs of *London* now than formerly. *Enquiry into the State of Population, p.* 33.

St. Paul's Cathedral, which is ſeated on the higheſt ground in the city, is deſervedly eſteemed the ſecond in *Europe*, not for magnitude only, but for the magnificence and grandeur of the building. Among the proteſtant cathedrals it is unqueſtionably the firſt. Its general form is that of a long croſs: the walls are wrought in ruſtic, and ſtrengthened as well as adorned by two rows of coupled pilaſters, one over the other; the lower *Corinthian*, and the other *Compoſite*. The ſpaces between the arches of the windows, and the architrave of the lower order, are filled with a great variety of curious enrichments, as are thoſe above. The weſt front has a moſt magnificent portico, a noble pediment, in which is repreſented the converſion of *St. Paul* in *baſſo relievo*, and two ſtately turrets. At this end is a grand flight of ſteps of black marble, that extend the whole length of the portico, which conſiſt of twelve lofty *Corinthian* columns below, and eight of the *Compoſite* order above, ſupporting the above pediment. Theſe are all coupled and fluted. The magnificent ſtatue of *St. Paul* on the apex of the pediment, with *St. Peter* on his right, and *St. James* on his left, have a fine effect. The Four Evangeliſts, with their proper emblems, on the front of the towers, are alſo well executed. The other ſides of the church are beautifully ornamented, and each has a different front. The dome, which riſes in the centre of the whole, appears extremely grand: twenty feet above the roof of the church is a circular range of thirty-two columns terminated by their entablatures, theſe ſupport a handſome ſtone gallery, adorned with a baluſtrade. Above theſe columns is a range of pilaſters with windows between; and from the entablature of theſe the diameter increaſes conſiderably. On the ſummit of the dome is an elegant balcony, and from its centre riſes the lantern, adorned with *Corinthian* columns; and the whole is terminated by a ball, from which riſes a croſs, both elegantly gilt.

This vaſt and noble fabric, which is two thouſand two hundred and ninety-two feet in circumference, and three hundred and forty in height to the top of the croſs, is ſurrounded at a proper diſtance by a dwarf ſtone wall, on which is placed a baluſtrade of caſt iron. In the area of the grand weſt front ſtands a ſtatue of queen *Anne*, of white marble. Four ſtatues ſitting at the baſe, repreſenting *Britannia* with the ſpear; *Gallia*, or *France*, with a crown in her lap; *Hibernia*, with her harp; and *America*, with her bow.

At the entrance into the choir the organ gallery is ſupported by eight *Corinthian* columns of blue and white marble; and the choir has on each ſide thirty ſtalls, beſide the biſhop's throne on the S. ſide, and the lord mayor's on the N. The carving of this beautiful range of ſtalls, as well as that of the organ, is much admired. The reader's deſk, which is at ſome diſtance from the pulpit, is an incloſure of very fine braſs rails gilt, in which is a gilt braſs pillar, ſupporting an eagle of braſs gilt, on whoſe back and expanded wings the book is placed. The altar-piece is adorned with four noble fluted pilaſters painted, and veined with gold, in imitation of *lapis lazuli*, and their capitals are double gilt. In the intercolumniations are twenty-one pannels of figured crimſon velvet, and above them ſix windows in two ſeries. The floor of the choir, and indeed of the whole church, is paved with marble; but within the rails of the altar with porphyry. In the large croſs aile between the N. and S. porticos, and at a ſmall diſtance from the choir, riſes the cupola, and preſents a view of the whiſpering gallery, the paintings above it, and the concave at the top, which fills the mind with ſurpriſe and pleaſure. At its centre is fixed in the floor a braſs plate, round which the pavement is beautifully variegated. Sir *Chriſtopher Wren*, the architect of this ſtupendous fabric, and who died in the year 1723, at the age of ninety-one years, lies buried in its vault.

The other churches moſt worthy notice in the city are, *St. Stephen's*, *Walbrook*, built by Sir *Chriſtopher Wren*; which is juſtly admired for the inſide, which is covered with a ſpacious and noble dome, finely proportioned to the church, and divided with ſmall compartments decorated with great elegance, and crowned with a lantern, while the roof, which is alſo divided into compartments, is ſupported by very noble *Corinthian* columns, raiſed at their pedeſtals. *Bow-church*, in *Cheapſide*, *St. Dunſtan's in the Eaſt*, both built by Sir *Chriſtopher Wren*; and that of *St. Bride*, are rendered very famous by the extraordinary elegance and lightneſs of their ſteeples.

The *Temple-church* is one of the moſt beautiful *Gothic* ſtructures in *England*: it was founded by the *Knights Templars*, whoſe houſe is converted into two inns of court, called the *Inner* and *Middle Temple*, that conſiſt of handſome buildings adorned with gardens.

Lincoln's Inn is a very opulent and reſpectable law ſociety, on a part of which has lately been erected a very extenſive and noble building for the ſix clerks, and ſixty clerks in chancery, and for other law offices. The other ſocieties which form Inns of Court, are *New Inn*, *Lyon's Inn*, *Clement's*, *Clifford's*, and *Serjeant's Inns*, *Gray's Inn*, *Staples Inn*, and *Furnival's Inn*. The principal garden belonging to the Temple has been much enlarged and improved by an embankment on the river. *Lincoln's Inn* gardens, and thoſe of *Gray's Inn*, are likewiſe extenſive and pleaſant.

Among the numerous hoſpitals in this city, are *St. Bartholomew*'s, near *Smithfield*, a very magnificent ſtructure, of *Portland-ſtone*, conſiſting of four ſides, which form a ſpacious ſquare. This is deſigned for the relief of ſick and lame; as is alſo the *London-Hoſpital*, at *Mile End*. *Bedlam*, or *Bethlem-Hoſpital*, is a magnificent building for the reception of lunatics, and *St. Luke's Hoſpital*, a very ſtately and capacious modern ſtructure in *Old Street Road*, appropriated to the ſame purpoſe. *Bridewell-Hoſpital*, endowed at the ſame time with *Bethlem*, is under the ſame governors. What are called the four royal hoſpitals are *St. Bartholomew*'s, founded by *Henry* VIII. in the year 1539, *Chriſt's-Hoſpital*, by *Edward* VI. 1552, *Bridewell* and *Bethlem*, by the ſame prince, in 1553, and *St. Thomas*'s, in the ſame year. Some few years ſince, the corporation of *London* claimed a right to the government of theſe royal hoſpitals, but the matter was compromiſed, and a ſelection being made of forty common-council-men, ten were appointed governors of each hoſpital, in addition to thoſe who then held that office. The *Magdalen Hoſpital*, (noticed in *Surry*, page 523) and the *Small-pox Hoſpital* near *Pancras*, are alſo noble foundation.

There is likewiſe a charity for delivering married pregnant women at their own habitations. Of late years a number of *Diſpenſaries*, for the relief of the poor, have been eſtabliſhed by voluntary contributions, at different parts of the town, for the purpoſe of diſpenſing medicines to the ſick, under the direction of a phyſician choſen for each, and proper aſſiſtants.

The borough of *Southwark* (already mentioned, page 522) forms a conſiderable part of the metropolis: it is ſeated on the S. ſide of the *Thames*, and conſiſts of the pariſhes of *St. Olave*, *St. John*, *St. Saviour*, *St. George*, *St. Thomas*, *Chriſt-Church*, and *Bermondſey*. For its extent, and number of inhabitants, it is perhaps inferior to few cities in *England*. Though in the county of *Surry* it makes a part of *London*, being in ſome meaſure ſubject to the lord-mayor, who has under him a ſteward and bailiff, the former of whom holds a court of record every *Monday* at *St. Margaret's Hill*, for all debts, damages, and treſpaſſes within his limits. But though this is conſidered as one of the city wards, and an alderman is appointed for the government of it, yet it has its own magiſtrates, diſtinct from thoſe of the city.

The moſt remarkable ſtructures in *Southwark* are the two noble hoſpitals for the ſick and wounded, called *St. Thomas*'s, and *Guy*'s. The former conſiſts of three fine ſquares encompaſſed with buildings, and adorned with the ſtatues of king *Edward* VI. and Sir *Robert Clayton*. Its annual diſburſements amount to eight thouſand pounds: there are four hundred and ſeventy-four beds, which are conſtantly kept filled; and they have always a conſiderable number of out-patients. Its revenues are continually improving by the expiration of building leaſes.

Guy's Hoſpital is alſo a noble ſtructure, in one of the ſquares of which is a fine braſen ſtatue of Mr. *Guy*. This hoſpital is ſeated near the former, and contains four hundred and thirty-five beds. See p. 522.

The city of *London* is divided into twenty-ſix diſtricts, called wards, each of which is governed by its reſpective alderman, who is elected by the houſekeepers.

Out of this body the lord-mayor, or principal magiſtrate is annually choſen on *Michaelmas-day*, and enters upon his office on the ninth of *November*. He is alſo conſervator of the river *Thames*, from the bridge at *Staines* to the river *Medway*. When the lord-mayor appears abroad as a magiſtrate, it is in a coach of ſtate; he then wears a purple or ſcarlet robe, and has a gold chain, with a rich jewel to it, round his neck, and is attended by ſeveral officers walking before and on each ſide of him.

The next in power and dignity are the twenty-ſix aldermen, each of whom nominates one of the common-councilmen of his ward for his deputy: theſe common-councilmen, in number 236, are choſen by the inhabitants of the ward, who are freemen of the city. The mayor and aldermen chooſe the recorder, who is their ſpeaker and counſellor with reſpect to the laws and cuſtoms of the city. There is likewiſe a town-clerk, and a remembrancer.

The two ſheriffs have the power to impanel juries, and in their courts cauſes are tried on actions of debt, treſpaſs, breach of covenants, &c. The execution of the laws is intruſted to them. They are annually choſen on *Midſummer-day* by the liverymen.

The chamberlain of *London* is an officer of great truſt, he having the charge of the city caſh, and was uſually general receiver of the land-tax for the city of *London*, and county of *Middleſex*; but of late the two places have been ſeparated. He has alſo juriſdiction over the apprentices of the city; for in his court he decides cauſes between them and their maſters, and admits them to the freedom of the city.

The liverymen of the city are ſuch as have not only taken up the freedom of the city, but alſo the livery or gown of their reſpective companies. Theſe companies amount to ninety-two in number. What are commonly called the twelve companies are, the *mercers*, *grocers*, *drapers*, *fiſhmongers*, *goldſmiths*, *ſkinners*, *merchant-taylors*, *haberdaſhers*, *ſalters*, *ironmongers*, *vintners*, and *clothworkers*. Each of theſe companies have a barge, as have likewiſe the *apothecaries* and the *ſtationers*, in which they attend the lord-mayor to *Weſtminſter-hall*, when he is ſworn into his office before the lord-chancellor. The two laſt are conſiderable trading companies; the firſt retailing at their hall drugs, as well as chemical and galenical preparations; the chief branch of trade with the *ſtationers* company is the ſale of almanacs; but they have likewiſe many editions of ſchool books. By the act of parliament which ſecures to authors the excluſive right to their works, they are directed to depoſit nine copies with the treaſurer of this company, who tranſmits a copy to each of the following public libraries; viz. The *Britiſh Muſeum*, *Sion College*, the univerſities of *Oxford* and *Cambridge*, *Edinburgh*, *St. Andrews*, faculty of advocates at *Edinburgh*, *Aberdeen*, and *Glaſgow*. Moſt of the ninety-two companies have halls, ſeveral of which are magnificent ſtructures. The government of each company is lodged in a maſter, wardens, and aſſiſtants, who are choſen out of the ſenior liverymen. The poor freemen, or their widows, are relieved by penſions, paid quarterly from theſe companies, in a greater or leſs amount, according to the opulence which the company poſſeſſes; and it has been computed that above twenty-ſix thouſand pounds is diſtributed annually by theſe companies in charitable uſes: many of them have very noble alms houſes in the neighbourhood of the city, where their old and decayed members are lodged, maintained, and clothed.

Beſides theſe there are a conſiderable number of companies for inſuring ſhips at ſea, and houſes from fire; theſe latter keep fire-engines and a ſet of men in pay, who are ready at all hours to give their aſſiſtance in caſe of fire; and are on all occaſions extremely bold, dexterous, and diligent.

WESTMINSTER is generally included under the name of *London*, and is only diſtinguiſhed from its being neither incorporated nor under the government of the ſame magiſtrates. It received its name from its abbey, or minſter, being ſeated to the weſt of *St. Paul*'s, and was once a mile diſtant from *London*; but its ſuburbs extending to that city, have completely united them.

Here are the palace of the king of *Great Britain*, the law-courts, and the two houſes in which the parliament aſſemble; it therefore abounds with elegant dwellings of the nobility and gentry, forming ſpacious ſtreets, and noble ſquares. The city of *Weſtminſter* conſiſts but of two pariſhes, *St. Margaret*'s, and *St. John the Evangeliſt*; but the liberties contain ten pariſhes, namely, *St. Martin's in the Fields*, *St. James*'s, *St. Anne*'s, *St. George*'s *Bloomſbury*, *St. George*'s *Hanover-ſquare*, *St. George*'s *Queen-ſquare*, *St. Paul*'s *Covent-garden*, *St. Mary le Strand*, and *St. Clement Danes*; to which may be added the precinct of the *Savoy*. There are alſo many chapels of eaſe, and their number has greatly increaſed with the increaſe of buildings.

The abbey-church of *St. Peter*'s, *Weſtminſter*, is a venerable pile of building, in the *Gothic* taſte, where moſt of our monarchs have been crowned, and many of them are interred, which led the alluſive *Waller* to remark,

> It gives them crowns, and does their aſhes keep;
> There made like gods, like mortals there they ſleep:
> Making the circle of their reign complete,
> Thoſe ſuns of empire, where they riſe they ſet.

The preſent fabric was in part erected by *Henry* III. and finiſhed after his death. The extent of the building is very conſiderable; for its length is three hundred and ſixty feet within the walls, at the nave it is ſeventy-two broad, and at the croſs a hundred and ninety-five. The *Gothic* arches and ſide ailes are ſupported by forty-eight pillars of grey marble, each compoſed of cluſters of very ſlender ones, and covered with ornaments. This ſtructure is adorned with a prodigious number of monuments of kings, admirals, heroes, ſtateſmen, generals, poets, and perſons diſtinguiſhed by their learning and genius; many of which monuments are extremely beautiful, being adorned with admirable ſtatues of white marble, baſſo relievos, the moſt beautiful kind of granite, porphyry, and other rich ſpecies of marble, finely poliſhed, and accompanied with elegant inſcriptions. It is particularly diſtinguiſhed by ſome exquiſite pieces of art, produced by that great ſtatuary *Roubilliac*.

Henry the Seventh's Chapel joins to the abbey, and is ſtyled by *Leland*, "*The Wonder of the World.*" It is, indeed, one of the moſt expenſive remains of the ancient *Engliſh* taſte and magnificence, and was founded by *Henry* VII. in 1502. The ceiling is wrought with ſuch an aſtoniſhing variety of figures, that it is impoſſible to be deſcribed. The ſtalls on each ſide are of oak, with *Gothic* canopies moſt beautifully carved, as are alſo the ſeats; and the pavement is of black and white marble. In the middle of the eaſt end of the nave is the magnificent tomb of *Henry* VII. incloſed with a ſcreen of caſt braſs, moſt admirably executed, and ornamented with ſtatues. In this chapel are the tombs of *George Villers*, duke of *Buckingham*, and ſeveral other perſons of high rank.

Weſtminſter-ſchool, adjoining, is of great antiquity, and high reputation; it is ſaid to have been firſt founded in the year 1070, but was rendered a reſpectable ſcholaſtic ſeminary by queen *Elizabeth*; who, in 1560, cauſed it to be called "Queen's College of *Weſtminſter*;" and amply endowed it, for the education of forty boys, called "The Queen's Scholars;" beſide whom, there are generally above three hundred youth who receive their education here, many of which are of the moſt reſpectable families in the kingdom. Such is its celebrity, that there are at preſent an archbiſhop, and two biſhops who were maſters of this ſchool.

Weſtminſter-hall, near the abbey, is one of the largeſt rooms in *Europe*, yet its roof is not ſupported by any pillars. Here the courts of law are held, and adjoining to it are the Houſes of the Lords and Commons.

Weſtminſter-bridge, is univerſally allowed to be one of the fineſt in the world. It was built by *M. Labelie*, a *Swiſs* architect. The firſt ſtone was laid on the twenty-ninth of *January* 1738-9, and the bridge was opened on the 17th of *November* 1750, having been eleven years and nine months in building; the completion being retarded by a pier ſinking. It coſt the ſum of 389,500*l.* The architect aſſerted, that the quantity of ſtone materials in this bridge were near double the quantity of thoſe in *St. Paul's* cathedral; although it has a very light and pleaſing appearance. This bridge has now ſtood half a century without having received the ſmalleſt injury from time. It is adorned and ſecured on each ſide with a lofty and noble baluſtrade, and is twelve hundred and twenty-three feet in length. The piers, which are fourteen in number, form thirteen large and two ſmall arches, all ſemicircular. The centre arch is ſeventy-ſix feet wide, and each of the other arches decreaſe in width four feet on either ſide. The utility of ſuch a bridge muſt have been unqueſtionable, at the time when the deſign of building it was formed; yet ſuch was the narrow policy which then actuated the city of *London*, that a petition was preſented to parliament from the corporation againſt the undertaking, whilſt the bill for building it was depending in the houſe of commons.

The banqueting-houſe at *Whitehall*, ſo called from there being originally in this place an edifice in which the kings of *England* had public entertainments. This ſtructure was erected by *Inigo Jones*, and was intended to form a part of a ſuperb palace, of which that great architect had drawn the plan. The outſide of this ſtructure has been always eſteemed a moſt admirable work; and the cieling is painted by *Rubens*. This great apartment has been many years converted into a chapel. The preachers of which (who were firſt appointed in the year 1724) receive a ſmall ſalary, but the appointment is conſidered as highly honourable, and the ſureſt road to church preferment. Twelve of theſe preachers are ſelected from the univerſity of *Oxford*, and the like number from *Cambridge*, and one of each officiates during a month.

The apartments for the officers and privates of the horſe-guards, a troop of which conſtantly do duty there, is oppoſite the banqueting-houſe. Theſe were rebuilt in the year 1754, in a very light and elegant taſte of architecture. Through the gateway of this building is an entrance into *St. James's Park*, cloſe to the parade, where the foot-guards on duty are muſtered, and exerciſed every morning, accompanied with the muſic of the regimental band.

A little to the S. of this building is the *Treaſury*, which internally is a gloomy and maſſy building, of a quadrangular form, but its outward appearance is elegant. What is called "the Cockpit," makes a part of it, and is now the common council-chamber for the cabinet miniſters.

The *Admiralty* is a noble building, which has lately been enlarged by the addition of a houſe built for the reſidence of the firſt lord; the expence of purchaſing the ground, and the former houſe which ſtood upon it, and erecting the preſent building, was voted by parliament.

The architecture of ſeveral churches of *Weſtminſter* and its liberties have been greatly admired, particularly that of *St. Martin's in the Fields*, and *St. Paul's*, *Covent Garden*. The latter built by *Inigo Jones*.

The *Britiſh Muſeum* was founded by the parliament of *Great Britain*, in the year 1753, in conſequence of a purchaſe made of the valuable collection of curioſities and books which belonged to Sir *Hans Sloane*, who died the beginning of that year, and directed by his will, that his executors ſhould make an offer of his muſeum, for the ſum of 20,000*l.* which was accepted, and the noble building called *Montague-houſe*, was purchaſed for their reception, which belonged to the duke of *Montague*, who dying ſuddenly in the year 1749, without male heirs, the title became extinct. At the ſame time were purchaſed, the MSS. collected by the late earl of *Oxford*, for the ſum of 10,000*l.* Here is likewiſe the collections made by Sir *Robert* and Sir *John Cotton*; and large ſums have ſince been voted, as occaſion required, to augment this noble repoſitory, which has received other conſiderable additions. His late majeſty king *George* II. preſented to it the royal libraries of the kings of *England*, from the reign of *Henry* VII. and his preſent majeſty an intereſting collection of the tracts which were publiſhed in the reigns of *Charles* I. and II. Antiquities brought from *Italy* were purchaſed by parliament, for 8,410*l.* in the year 1762.—This incomparable collection was at firſt placed under the management of twenty-ſix truſtees; but the number has ſince been encreaſed to forty-two, among whom are the archbiſhop of *Canterbury*, the lord chancellor, and other great officers of ſtate; ſome of the deſcendents of the *Sloane*, *Oxford*, and *Cotton* families, to make the number twenty-ſeven, and theſe chooſe fifteen other truſtees.

Another *Muſeum*, conſiſting of anatomical preparations, and natural curioſities collected by the late Dr. *William Hunter*, who built a very ſpacious houſe for their reception, is now acceſſible to the public, and is to continue ſo for thirty years from the time of his death. Of the *Leverian Muſeum* we have already ſpoken, p. 523. in deſcribing the county of *Surry*.

St. James's Palace occupies an extenſive ſpot of ground, and contains a vaſt number of apartments for the officers of the court; it has likewiſe a magnificent ſuite of ſtate rooms, but its irregularity cauſes it to preſent an external appearance not ſufficiently dignified. In very ancient times, an hoſpital for lepers, called "*St. James's houſe*," ſtood on this ſpot, and the chapel which belonged to the hoſpital is the very ſame which now belongs to the palace, and is a royal peculiar, exempt from all epiſcopal juriſdiction. The palace was built by *Henry* VIII. who likewiſe laid out a large piece of ground adjoining into a park, formed a canal, and walks, calling it, in conformity to the former name of the contiguous building, *St. James's Park*: *Charles* II. enlarged and improved this ſpot, adorning it with plantations of trees; the circumference which it then had and now retains is near a mile and half. This is at length rendered one of the moſt delightful ſpots in the kingdom, by the genius of the late Mr. *Brown*, that diſtinguiſhed pupil of the great *Kent*, who, in the moſt happy manner, adopted and improved thoſe principles of gardening which were laid down by his predeceſſor. The canal now extends nearly the whole length of the park, which is ſupplied by means of pipes from the *Chelſea* water-works. This fine piece of water is no leſs uſeful than ornamental, as it forms a reſervoir from whence the houſes in the ſouthern parts of *Weſtminſter* are ſupplied. Contiguous to this park is another of leſs extent, called "The Green Park," adjoining to which earl *Spencer* has a noble manſion, built of ſtone. Here too is a piece of water, which is recruited every tide from the *Thames*, by means of the works at *Chelſea*, and forms a reſervoir for the ſupply of the houſes in the contiguous diſtrict.

In the moſt favourable ſituation which *St. James's Park* could furniſh, ſtands a ſuperb building erected by *Sheffield*, duke of *Buckingham*, in the beginning of the preſent century, and called, from its founder, "*Buckingham-houſe*," until it was purchaſed, in the year 1761, for the purpoſe of making it the royal reſidence; when it acquired the name of "The Queen's Palace." In the year 1775, the parliament of *Great Britain* ſettled this houſe upon the queen, in caſe ſhe ſhould ſurvive his preſent majeſty, in lieu of *Somerſet-houſe*, which had formerly been ſettled on queen *Caroline*, in caſe of ſurvivorſhip, and was in like manner ſettled on the preſent queen, ſoon after her marriage. From that time *Buckingham-houſe* has been the town reſidence of their majeſties, *St. James's* palace being only uſed by them for the purpoſe of receiving the nobility and gentry on public days, for which it is well adapted.

Carlton houſe, the reſidence of his royal highneſs the prince of *Wales*, the gardens extending to *St. James's* park, is a ſtately building, on which vaſt ſums have for ſome years been expended. The portico to the grand front toward *Pall Mall* is truly elegant.

Between the treaſury and the horſe-guards, on the E. ſide of *St. James's* park, is *York-houſe*, ſo named ſince it became the property and reſidence of his royal highneſs the duke of *York*. This houſe has lately been totally transformed, and is now caſed with ſtone, which gives it an agreeable appearance toward the park; whilſt the front toward *Whitehall* is overcharged, and produces an unpleaſing effect.

The duke of *Marlborough* has a noble reſidence on the N. ſide of this park, between *St. James's palace* and *Carlton-houſe*.

Hyde Park, another royal demeſne, lies to the N. W. of the Green Park: it has a grand piece of water called "The Serpentine River," which, aided by its irregularities of ground, diverſified plantations of various kinds of trees, together with its elevated ſituation, commanding rich and extenſive views, form ſuch an aſſemblage of captivating natural beauties as very few ſpots can boaſt. Hence it is the place of faſhionable morning reſort, both in carriages and on horſeback. On the eaſtern edge of this park is a baſon of water, ſupplied from the *Chelſea* works, from whence the houſes in *Groſvenor-ſquare*, and in that direction, are provided. Adjoining to this park earl *Bathurſt* has built a noble manſion.

The delightful ſituation which the parks afford for the town reſidences of the nobility and gentry, is perhaps excelled by that on the banks of the *Thames*: the moſt conſiderable buildings which enjoy that advantage are the manſion-houſes of the dukes of *Richmond* and *Montague*; the earls of *Pembroke*, *Fife*, and *Groſvenor*. The other moſt capital reſidences of the nobility, which for their grandeur and magnificence may be ſtyled palaces, are the houſes known by the names of *Northumberland*, *Shelburne*, *Devonſhire*, *Burlington*, *Portland*, *Foley*, *Maccleſfield*, and *Cheſterfield*; thoſe of the dukes of *Argyle* and *Norfolk*, the earls of *Uxbridge* and *Hopetoun*, the dukes of *Bolton* and *Bedford*; the latter of which, for ſituation, is not equalled by any of theſe, but the building poſſeſſes nothing of a conſequence correſponding with the rank and wealth of the poſſeſſor. *Leiceſter-houſe*, which was the reſidence of the late princeſs dowager of *Wales*, and ſince that time the depoſitory of Sir *Aſhton Lever's* curioſities, is now deſtined for demolition, and an *opera-houſe* is to be erected on the ſpot.

The new buildings in the liberty of *Weſtminſter* are daily increaſing in an aſtoniſhing manner. The principal ſquares are thoſe of *Hanover*, *Groſvenor*, *Berkley*, *Cavendiſh*, *St. James's*, *Soho*, *Leiceſter*, *Golden*, *Queen's*, *Red Lyon*, *Bloomſbury*, and *Lincoln's-Inn Fields*. To which have been added, *Portman*, *Mancheſter*, and *Bedford-ſquares*; but the houſes in *Portland-place* are in the higheſt ſtyle of magnificence.

A conſiderable modern improvement which the city of *Weſtminſter* has received, is the extenſive buildings bearing the general name of "The *Adelphi*," undertaken and completed by the Meſſrs. *Adams*, and ſo called to commemorate this band of brothers. The houſes here ſtand on immenſe piles of brick, but which admit a ſpacious arched communication between the wharfs and the public ſtreets. To complete this ſtupendous undertaking, it became neceſſary to make a conſiderable embankment on the river, for which an act of parliament was obtained in the year 1771, although in every ſtage of its progreſs it met with the moſt ſtrenuous oppoſition from the city of *London*, who claimed a property in the ſoil and bed of the river. The terrace here commands a delightful view of the river *Thames*, and the *Surry hills*. In a ſtreet of the *Adelphi*, is the houſe of the ſociety for the encouragement of arts, manufactures, and commerce, the firſt ſtone of which building was laid by lord *Romney*, the preſident, in the year 1772. The walls of the great room, in which are held the general meetings of the ſociety, are adorned with a ſeries of paintings by Mr. *Barry*, which do great honour to the artiſt, by diſplaying perſevering application and cultivated genius.

One of the moſt beautiful remains of the architecture of the ſixteenth century was *Somerſet-houſe*, built by the lord-protector, in the reign of *Edward* VI. but this building has been demoliſhed to make way for the expanded grandeur of *Somerſet-place*; which magnificent ſtructure was begun to be built, according to the plan and under the direction of Sir *William Chambers*, when the nation was engaged in the moſt ruinous of wars with *America*, *France*, and *Spain*: it has already coſt 334,703*l.* and remains in an unfiniſhed ſtate; the eſtimate of the expence of completing it, as delivered to the Houſe of Commons, by Sir *William Chambers*, in *February* 1790, was 33,500*l.* The deſign in erecting this ſtupendous fabric was not to provide a gorgeous palace for the reſidence of the monarchs of *Great Britain*, but to bring together the moſt conſiderable public offices for the different branches of the revenue; here are therefore the following offices: *ſtamp*, *navy*, *navy pay*, *victualling*, *ſick* and *hurt*, *hawkers*, *hackney-coach*, *pipe*, *lord treaſurer's*, *remembrancer's*, *ſurveyor* of the *crown lands*, *tax*, apartments for the *ſecretary* of the *navy*, and *ſurveyor* of the *works*. The king's barges are to be laid up here, and apartments aſſigned for the *barge-maſter*. The *treaſurer*, *pay-maſter*, and ſix commiſſioners of the *navy* have each ſeparate houſes; alſo three commiſſioners of the victualling-office; the ſecretary and a commiſſioner of the ſtamps. The building is quadrangular, encloſing a ſpacious area; on each ſide, to the E. and W. a ſtreet is to be formed, beyond which the wings are to be carried. The terrace, at the river ſide, before the S. front, is a noble elevated walk, only ſurpaſſed by that of *Windſor*. In the N. front, toward the *Strand*, are apartments for the *Royal* and *Antiquarian* ſocieties, on the left of the entrance, oppoſite to which are ſpacious and commodious rooms, which extend over the gateway, for the *Royal Academy*, which ſociety was incorporated in the year 1765, by the title of "The Society of Artiſts of *Great Britain*." It became a royal academy of arts, under the patronage of his majeſty, in the year 1768, the direction of which was given to forty artiſts, nine of the moſt able academicians to be elected annually from the forty; alſo a profeſſor of painting, architecture, anatomy, and perſpective, who are annually to read a certain number of lectures in the ſchools. The principal object of this inſtitution was to eſtabliſh well regulated ſchools of deſign, the admiſſion to which was rendered free to all ſtudents. A library of books of architecture, ſculpture, painting, and all the relative ſciences is provided, and models in great variety. The profeſſors, academicians, and all the officers receive ſalaries from the crown. A part of the plan of this inſtitution is to open an annual exhibition of paintings, ſculptures, and deſigns, to furniſh all artiſts of merit with an opportunity of bringing forward their works to public view. His majeſty has likewiſe allotted a conſiderable ſum, to be diſtributed annually, for the relief of indigent artiſts, and their diſtreſſed families.

The public diverſions in this metropolis are, an *opera-houſe*, for the exhibition of the drama, muſic and dances of

of *Italy:* various rooms for public concerts: two *royal theatres*, for the performance of comedies, tragedies, farces, and pantomimes: the *Haymarket theatre*, for dramatic exhibitions in the ſummer months, when the two theatres are ſhut; for the erection of which latter theatre, the late Mr. *Foote*, of comic memory, obtained a patent, which, in the year 1777, he transferred, with the building and all the property it contained, to Mr. *Colman*, on condition of receiving a clear annuity of 1,600 *l. per annum: Foote* lived only nine months after he had made this conveyance: the *Pantheon*, a ſpacious building, opened in the year 1772, conſiſting of a ſuite of fourteen rooms, and calculated for aſſemblies, concerts, and balls; here, in the winter ſeaſon, that exotic entertainment in this country, a maſquerade, is occaſionally held. *Sadler's Wells* exhibits a motley ſpecies of entertainment, more attractive to the lower claſs of people than to poliſhed life: here are likewiſe, two places of public reſort, where the principal entertainment conſiſts in equeſtrian feats of ſkill and agility: in the ſummer, *Vauxhall Gardens*, already ſpoken of p. 522, and *Ranelagh*, are much reſorted to, and, as places of public amuſement, are not to be equalled in *Europe*.

For the accommodation of the public, a thouſand hackney coaches are licenſed; theſe are diſperſed in different parts, and ready at call: the weekly tax which the owners of theſe carriages pay for their licence, produces to the revenue more than twenty thouſand pounds *per annum.* A certain number of ſedan chairs are likewiſe licenſed, in which individuals are conveyed.

The public markets of *London* and *Weſtminſter* are for *corn*, *flour*, *coals*, *fiſh*, *live cattle*, *vegetables*, *herbs*, *roots*, *&c. hay*, and *ſtraw:* thoſe for butchers meat, poultry, butter, cheeſe, *&c.* are very numerous in both cities.

The abundant ſupply of water contributes eſſentially to the cleanlineſs, healthineſs, and ſecurity of the metropolis. It is obtained from the river *Thames*, by means of waterworks at *London-bridge*, *Shadwell*, *York-buildings*, and *Chelſea:* water is likewiſe conveyed from *Hampſtead* to ſome parts; but the moſt noble undertaking for the purpoſe of ſupplying the metropolis with that neceſſary of life is by means of the *New River*, which is conducted in an artificial canal extending through a winding courſe of thirty-eight miles three quarters and ſixteen poles, from the ſprings of *Chadwell*, and *Amwell*, near *Ware*, in *Hertfordſhire*. It was undertaken in the year 1606, by Mr. *Hugh Middleton*, citizen and goldſmith of *London*, who was afterward knighted, and at length created a baronet; but the title is now extinct. In about five years he had brought the water as far as *Enfield*, but having met with great difficulties and ſtrong oppoſition, he found himſelf extremely impoveriſhed by the undertaking, and applied to the lord mayor and corporation of *London* for aſſiſtance, but they refuſing to be concerned, he made a more ſucceſsful application to *James* I. who, in the year 1612, engaged to bear half the expence of the concern on becoming a half partner in it; but the king was excluded from interfering at all in its management. The ſums paid out of the Exchequer, at various times, from *Eaſter* 1612, to *September* 1614, in conſequence of this covenant were 6,347 *l.* In the following year water was brought into the baſon called "The New River Head," at *Iſlington*. It was then thought to be an object worthy of attention, and Sir *Hugh Middleton* dividing his moiety into thirty-ſix ſhares, ſold twenty-nine of them. It was not however until the year 1633 that any dividend of profit was made, and Sir *Hugh* died in the year 1631; the proportion to each twenty-ninth ſhare then was 11 *l.* 19 *s.* 1 *d.* the ſecond dividend was only 3 *l.* 4 *s.* 2 *d.* and inſtead of a third, a call upon the partners was expected to be made. *Charles* I. ſuppoſing little advantage would accrue from the undertaking, re-conveyed to Sir *Hugh Middleton*, in his lifetime, the royal moiety, on condition of having ſecured to him and his ſucceſſors a fee-farm-rent of 500 *l.* per annum. This moiety was likewiſe divided into thirty-ſix ſhares, which were called "The King's Shares," the other twenty-nine "The adventurers;" which latter had been incorporated by letters patent, in the year 1619, by the name of "The *New River Company*;" and the government of the company's affairs was lodged in theſe twenty-nine proprietors. In the year 1766, one of the King's ſhares was ſold by public auction for 4,400 *l.* and in 1770, another King's ſhare, or one ſeventy-ſecond part of the whole, was purchaſed at a public auction for 6,700 *l.* This corporation conſiſts of a governor, deputy-governor, treaſurer, and twenty-ſix directors, a collector and his aſſiſtant, a ſurveyor and his deputy, collectors, and workmen. The canal called "The New River," is carried over two vales, in wooden frames or troughs lined with lead; in its courſe are forty-three ſluices; and over it are two hundred and fifteen bridges. In ſome parts it is conveyed through ſubterranean paſſages. In the year 1770, the firſt ſtone of a new office for this company was laid, on the banks of the *Thames*, the ſite of which building is that of the play-houſe where *Shakeſpeare* acted. Sir *Hugh Middleton* left, by his will, ſome of his ſhares to the *Goldſmith*'s company, to be divided among its poor members.

There are in *Weſtminſter*, as well as in the city of *London*, a great number of charitable foundations, among which we may reckon the noble infirmaries at *Hyde-park Corner*, the *Middleſex-hoſpital*, and that called *Weſtminſter-infirmary*, *Emanuel-hoſpital* for the blind, the *Foundling-hoſpital* for expoſed and deſerted young children, the *Aſylum*, ſeveral hoſpitals for lying-in-women, and many others, beſide diſpenſaries.

The civil and eccleſiaſtical government of this city were veſted in the dean and chapter of *Weſtminſter*; but ſince the Reformation the civil part has been committed to laymen. The high ſteward, who is uſually a nobleman of the firſt rank, is choſen by the dean and chapter, and has an under ſteward who officiates for him, and muſt therefore be verſed in the law; but his choice muſt be confirmed by the dean and chapter. The under-ſteward, with other magiſtrates, keep the court-leet, which tries all petty offences, and is commonly a chairman of the quarter-ſeſſion.

Next to the under-ſteward is the high-bailiff, who is alſo choſen by the dean and chapter. His power reſembles that of a ſheriff, for by him juries are ſummoned; all the bailiffs of *Weſtminſter* are ſubordinate to him, and he makes the return at the election of members of parliament. As all fines and forfeitures are his, his place is very profitable.

There is alſo a high conſtable choſen by the court-leet, to whom all the other conſtables are ſubject. Here are likewiſe fourteen burgeſſes, or magiſtrates, ſeven for the city and ſeven for the liberties, each having an aſſiſtant. Their office is much like that of an alderman of *London*, each having a proper ward: out of theſe are elected two head-burgeſſes, one for the city, and one for the liberties.

Ranelagh-gardens are ſo called from having formerly belonged to the earl of *Ranelagh*. Though the gardens are beautiful, being ſituated on the N. bank of the *Thames*, this place is moſt admired for its amphitheatre, which ſtands in the midſt of it. This is a circular building, one hundred and eighty-five feet in its external diameter. Round the whole is an arcade, and over that a gallery with a baluſtrade, to admit the company into the upper boxes, except where the entrances break the continuity; over this are the windows, and it is terminated by the roof, which is nearly flat, but ſomewhat raiſed in the centre. The internal diameter is one hundred and fifty feet. In the middle of the area, where the orcheſtra was at firſt deſigned, is a chimney that has four faces; this renders it warm and comfortable in cold weather. The orcheſtra fills up one of the entrances. The entertainment conſiſts of a fine band of muſic, with an organ, accompanied by the beſt voices. The regale is tea and coffee.

CHELSEA, in which are the above gardens, is a large and populous village, two miles from *London*, pleaſantly ſituated on the bank of the *Thames*, over which a wooden bridge is erected. Here is a phyſic-garden belonging to the company of apothecaries of *London*, given to them by Sir *Hans Sloane*; ſeveral private buildings worthy of the curioſity of the public; *Saltero*'s coffee-houſe, well known for the great number of curioſities to be ſeen there; and a noble edifice erected for the reception and ſupport of wounded and diſabled ſoldiers, called *Chelſea-hoſpital*, which *Charles* II. began to erect, was carried on by *James* II. and completed by *William* III. It was entirely built under the direction of Sir *Chriſtopher Wren*, and conſiſts of a vaſt range of buildings. The front toward the N. opens into a piece of ground laid out in walks for the penſioners; and that facing the S. into a garden which extends to the *Thames*, and is kept in good order. This ſide not only affords a view of that fine river, but of the county of *Surry* beyond it. In the centre of this edifice is a pediment ſupported by four columns, over which is a handſome turret, and in this part is an opening which leads through the building. On one ſide of this entrance is the chapel, the altar-piece of which is adorned with the reſurrection, painted by *Ricci*; and on the other the hall, where is the picture of *Charles* II. on horſeback, and ſeveral other pieces as large as life, and in this room all the penſioners dine. The wings join the chapel and hall to the N. and are open toward the *Thames* on the S.: theſe are three hundred and ſixty feet in length, and about eighty in breadth; they are three ſtories high. On the front of this ſquare is a colonade, extending along the ſide of the hall and chapel; and in the midſt of the quadrangle is the ſtatue of king *Charles* II. in a *Roman* dreſs, ſtanding on a marble pedeſtal. There are ſeveral other buildings adjoining, that form two other large ſquares, and conſiſt of apartments for the officers and ſervants of the houſe; for old maimed officers of horſe and foot, and the infirmary for the ſick. The expence of erecting them amounted to about one hundred and fifty thouſand pounds, and the extent of the ground is above forty acres.

In the wings are ſixteen wards, in which are accommodations for above four hundred men; and in the other buildings are a conſiderable number of apartments for officers and ſervants. Theſe penſioners conſiſt of ſuperannuated ſoldiers who have been at leaſt twenty years in the army, or thoſe ſoldiers who are diſabled in the ſervice of the crown. They wear red coats lined with blue, and are provided with all other clothes, diet, waſhing, and lodging. As the houſe is called a garriſon, all the members are obliged to do duty in turn; and they have prayers twice a day in the chapel, performed by two chaplains. There are likewiſe a conſiderable number of out-penſioners, each of whom has 8*l.* 12*s.* 6*d.* a year.

Theſe great expences are ſupported by a poundage deducted out of the pay of the army, with one day's pay once a year from each officer and common ſoldier; and the deficiency is ſupplied by a ſum annually voted by parliament. In the year 1761, the ſum voted was, 18,360*l.* But from the year 1764, when it was 103,794*l.* it gradually advanced to 122,982*l.* which it was in 1774; in 1788 it was 173,833*l.*

KENSINGTON is a large and populous village, about two miles from *Hyde-Park-Corner*. The PALACE, which was the ſeat of the lord-chancellor *Finch*, afterward earl of *Nottingham*, was purchaſed by *William* III. who greatly enlarged it; as queen *Mary* did the gardens; which were farther improved by queen *Anne*, and queen *Caroline* completed the deſign by extending them much farther, and they are at preſent three miles and a half in compaſs. They were laid out partly by *Wiſe* and partly by *Kent*, but have been much improved ſince the time of the latter. In the noble greenhouſe queen *Anne*, and her conſort prince *George* of *Denmark*, frequently ſupped in the ſummer ſeaſon. As none of the royal family reſide in this palace, free admiſſion is given into the gardens, which are much reſorted to by company. The palace is an irregular building, but contains many grand apartments, which are adorned with a great variety of valuable paintings, by *Raſſan*, *Annibal Caracci*, *Dominichino*, (a great number by) *Hans Holbein*, Sir *Godfrey Kneller*, *Kent*, (who not only excelled in gardening but in painting) Sir *Peter Lely*, *Palma* the elder, *Giacomo da Puntormo*, *Raphael*, *Guido Reni*, *Rubent*, *Riley*, *Julio Romano*, *Andrea Sciavoni*, *Tintoret*, *Titian*, *Vandyke*, *Paul Veroneſe*, and *Verrio*; but many of the beſt pictures are now removed to *Hampton-Court*. There are likewiſe ſome buſts by *Ryſbrack*, and fine tapeſtry by *Vanderbank*. In the ſtate dreſſing-room, are hangings of needle-work, a preſent from the queen of *Pruſſia*; here is alſo an amber cabinet, and a beautiful orrery.

HAMPTON-COURT is delightfully ſeated near the N. bank of the *Thames*, twelve miles to the S. W. of *London*, at a ſmall diſtance from the village of *Hampton*. This palace was originally built by cardinal *Wolſey*, and furniſhed in a ſtyle of great magnificence; but the building, with its coſtly furniture, was preſented by him as a peace-offering to *Henry* VIII. The park and gardens, with the ground on which the palace now ſtands, are about three miles in circumference. On a pediment at the front of the palace on this ſide is a baſs relief of the triumphs of *Hercules* over *Envy*, and facing it is a large oval baſon, anſwering to the form of this part of the garden, which is a large oval divided into gravel-walks and parterres. At the entrance of the grand walk are two large marble vaſes of exquiſite workmanſhip, one ſaid to be performed by *Cibber* the ſtatuary, father of the poet-laureat; and the other by a foreigner: theſe pieces are reported to be done as a trial of ſkill; but it is difficult to determine which is the fineſt performance. They are beautifully adorned with *baſſo relievoes*, that on the right hand repreſenting the triumphs of *Bacchus*, and the other on the left *Amphitrite* and the *Nereids*. At the bottom of this walk, facing a canal which runs into the park, are two other large vaſes, the baſs relief on one repreſenting the Judgment of *Paris*, and that of the other, *Meleager* hunting the wild boar. In four of the parterres are four fine braſs ſtatues, all after fine originals.

The whole palace conſiſts of three quadrangles; the firſt and ſecond are *Gothic*; but in the latter is a moſt beautiful colonade of the *Ionic* order, the columns in couplets, erected by Sir *Chriſtopher Wren*, and over the portal is a beautiful aſtronomical clock, made by *Tompion*. Through this is the paſſage into the third court or quadrangle, in which are the royal apartments, which were magnificently built of brick and ſtone by *William* III. and on the farther ſide of them are the gardens, with the ſuperb front of ſtone facing them. Both the ceiling and ſides of the great ſtair-caſe are painted by *Verrio*. This leads to the guard chamber, which is upward of ſixty feet long, and forty wide. This room contains arms for a thouſand men, placed in various forms. In this chamber are the portraits of eighteen *Britiſh* admirals, painted by *Bockman*, *Dahl*, and Sir *Godfrey Kneller*.

The rooms through which company is conducted, in this palace, are, the *guard room*, the king's firſt and ſecond *preſence chambers*, his *audience chamber*, *drawing room*, *ſtate bed chamber*, *dreſſing room*, *writing cloſet*, queen *Mary's cloſet*, the *Queen's gallery*, her *ſtate bed chamber*, *drawing room*, *ſtate audience room*, Prince of *Wales's preſence chamber*, his *drawing room* and *bed chamber*, the *private dining room*, *chapel*, the *king's private dreſſing room*, his *private bed chamber*, *council chamber*, formerly the *cartoon gallery*, and the *public dining room*. The painters who have contributed to adorn this paragon of palaces are chiefly of the *Flemiſh* ſchool, and are, *Leandro* and *Batiſta Baſſano*, *Baptiſte*, *Bogdatel*, *Bellini*, *Blenburg*, *Belcamp*, *Brueghel*, *Bochman*, *Corregio*, *Calvert*, *Dahl*, *Deneef*, *Gerard Douw*, *Dietrice*, *Domenico Fetti*, *Ferrato*, *Doſſo de Ferrara*, *Cito Ferri*, *Orazio* and *Artemiſia Gentileſchi*, *Guercino*, *Mark Gerards*, *Hans Holbein*, *Honthorſt*, *Lucas de Heere*, *Hemſkirk*, *Jannet*, Sir *Godfrey Kneller*, *Kent*, Sir *Peter Lely*, *Longepier*, *Mytens*, *Mieris*, *Carlo Maratti*, *Vincentio Malo*, *Moreelze*, *Andrea Manregna*, *Mirevelt*, *Old Stone*, *Old Palma*, *Piombo*, *Pouſſin*, *Paurbus*, *Pantoga*, *Poelemburg*, *Quare*, *Rubens*, *Rembrant*, *Romanelli*, *Ruſſel*, *Rouſſeau*, *Marco* and *Sebaſtian Ricci*, *Schiavone*, *Schidoni*, *Steenwyck*, *Tintoret*, *Teniers*, Sir *James Thornhill*, *Paul Veroneſe*, *Leonardi da Vinci*, *Verrio*, *Van Somer*, *Vandyke*, *Van Aelſt*, *Adrian Vanderwerf*, *Vandervelde*, *Verelſt*, *Vick*, *Wourvermans*, *Withoos*, *Zuchero*, and *Zuccarelli*. Among theſe is a fine picture of *William* III. on horſeback, by Sir *Godfrey Kneller*, which is eighteen feet by fifteen, and is placed in the king's firſt preſence chamber. The landſcapes by *Zuccarelli* were purchaſed, ſome years ago, for the ſum of 20,000*l.* Several very capital paintings at *Kenſington-palace* were, in the year 1764, removed hither, and there is abundance of old but very rich tapeſtry; in the king's dreſſing room, which is hung with *India* damaſk, is a curious clock, by *Tomkin*, which goes a year and a day without winding up. The room called "*Queen Mary's cloſet*" is hung with exquiſite needle-work, ſaid to have been wrought by herſelf and her maids of honour. The queen's gallery is hung with ſeven beautiful pieces of tapeſtry, executed from the paintings of *Le Brun*. Here are two models of palaces, the one intended to have been erected at *Richmond*, the other in

Hyde-Park, the latter model is ſaid to have coſt five hundred guineas.

Buſhy-Park, in the vicinity of *Hampton-court*, belongs to the crown, is well ſtocked with deer, and has a commodious lodge. The right of paſſing through this park had for ſome years been refuſed to the public, until by proceſs of law, and a verdict given, ſuch right was fully eſtabliſhed in the year 1752. The right honourable Lady *North* was appointed keeper of this park in the year 1771, which office ſhe ſtill retains.

Enfield-Chaſe, in this county, as already obſerved, p. 497, was diſchaſed in the year 1779. By a ſurvey made, it appeared, that the chaſe contained 8349 acres; of which 1732 acres, from the N. part, were allotted to the pariſh of *Enfield*; by act of parliament 200 acres were veſted in the churchwardens of *Enfield*, for the right of common; other parts to the pariſhes of *South Mims*, *Hadley*, and *Old Ford*, and for the remainder the crown was empowered to grant leaſes, or to alienate 250 acres.

Middeſex is adorned with many ſeats of the nobility and gentry.

CHISWICK is ſeated on the *Thames*, on the S. W. ſide of *Hammerſmith*. This village is adorned with ſeveral elegant ſeats, but the moſt remarkable is that built by the late earl of *Burlington*, and now belonging to the duke of *Devonſhire*, which was a plain commodious building; but a part of it being deſtroyed by fire, his lordſhip erected near it a beautiful villa, which for elegance of taſte equals any thing of its kind in *England*. The aſcent to the houſe is by a noble flight of ſteps, on one ſide of which is the ſtatue of *Palladio*, and on the other that of *Inigo Jones*. The portico is ſupported by ſix fine fluted columns of the *Corinthian* order, with a very elegant pediment, and rich cornice, frieze, and architrave. The other front toward the garden is in a plainer ſtyle, but bold and maſterly, and has at the ſame time a pleaſing ſimplicity, as hath alſo the ſide-front toward the ſerpentine river, which differs from the two others. The octagonal ſaloon in the centre of the building, terminating at top with a dome, through which it is enlightened, is alſo very elegant. The inſide of this ſtructure is nobly adorned, the ceilings are gilt and painted, and the rooms ornamented with ſome of the beſt pictures in *Europe*.

The gardens are very beautiful, and laid out in the fineſt taſte. On one ſide of the houſe is an open grove of foreſt trees, affording a view of the orangery; and on the other is an eaſy ſlope, which is terminated by a ſerpentine river, on the ſide of which are clumps of evergreens; and at the farther end is an opening into an incloſure, where are a *Roman* temple and an obeliſk, and in the centre a circular piece of water. Beyond this is a wilderneſs, through which are three ſtraight avenues, terminated by three different edifices; and in the ſides are ſerpentine walks. On either ſide of the ſerpentine river are alſo verdant walks, which accompany the river in all its meanderings. Here is a building that is the exact model of the portico of *Covent-garden* church; and a *Palladian* wooden bridge thrown over the river. With the earth dug from the bed of this river is raiſed a terrace that affords a proſpect of the adjacent country and the river *Thames*.

Of this building a ſelf-important critic gives his opinion in the following manner, "that it is pretty and full of contrivance, is indiſputable; but what hindered its being habitable alſo? At preſent it is but a pavilion for a ſolſtitial gala; it might, with no diminution in the diſplay of architecture, have been a dwelling houſe fitted for all ſeaſons." The force of this criticiſm will, in a great meaſure, be repelled, by conſidering the purpoſe the building was deſigned to anſwer, namely, to provide an occaſional elegant retreat, not a ſtated reſidence. Of the taſte of the founder *Pope* ſpeaks in very different terms.

> You too proceed! make falling Arts your care,
> Erect new wonders, and the old repair;
> *Jones* and *Palladio* to themſelves reſtore,
> And be whate'er *Vitruvius* was before:
> Till kings call forth th' ideas of your mind,
> Proud to accompliſh what ſuch hands deſign'd.

SION HOUSE, a ſeat of the duke of *Northumberland*, near the banks of the *Thames*, oppoſite to *Richmond gardens*, was formerly a very rich monaſtery, and on that account was one of the firſt which felt the rapacious graſp of *Henry* VIII. Its delightful ſituation cauſed it to be retained by the king; whoſe ſon, *Edward* VI. gave it to his uncle the duke of *Somerſet*, who in part built the preſent houſe, on the ſpot where the monaſtery ſtood. It forms a very large and magnificent quadrangle; is built of white ſtone, and encloſes a ſpacious area. It contains three ſtories, and is covered with a flat roof; both the external and internal fronts terminate at top with indented battlements; on each of the four outward angles of the roof, a ſquare tower riſes; the E. front toward the *Thames* is ſupported by arches forming a fine piazza. Many parts of the building were finiſhed, and others much improved, by *Inigo Jones*. The duke's attainder and execution followed within five years of the grant made to him of this eſtate, after which it was transferred to ſeveral families, until it veſted, by marriage, in the late duke of *Northumland*, who cauſed very eſſential improvements to be made in the gardens and grounds, and added a fine piece of water, which communicates with the *Thames*.

STRAWBERRY HILL, the ſeat of the honourable *Horace Walpole*, is ſituated upon the banks of the *Thames*, near *Twickenham*. It is built in the gothic ſtyle, in the form of an ancient abbey, to which the apartments correſpond, and preſerve the noble ſimplicity of thoſe ages. The furniture is elegant, and in equal ſingularity of taſte. Here is a noble library, and a printing-preſs, furniſhed with every requiſite in that art, and from hence the erudite owner has iſſued elegant editions of his own curious pieces. Adjoining to the houſe is a chapel, in imitation of the church of *Santa Maria* at *Rome*, which was built in 1256.

RUNNY-MEAD, a meadow on the banks of the *Thames*, near *Staines*, is renowned for being the ſpot where king *John* ſigned *Magna Charta*, and the *Charta de Foreſta*, in the year 1215.

> Here was that charter ſeal'd, wherein the crown
> All marks of arbitrary power laid down:
> Tyrant and Slave, thoſe names of hate and fear,
> The happier ſtyle of prince and ſubject bear;
> Happy, when both to the ſame centre move,
> When kings give liberty and ſubjects love. Sir *John Denham*.

It was lately much urged to erect a pillar here to commemorate this intereſting event, but the deſign ſeems to be laid aſide; however an inſcription for ſuch a memorial has long been provided.

> Thou, who the verdant plain doſt traverſe here,
> While *Thames* among his willows from thy view
> Retires; O ſtranger ſtay thee, and the ſcene
> Around contemplate well. This is the place
> Where *England*'s ancient Barons, clad in arms,
> And ſtern with conqueſt, from their tyrant king,
> Then render'd tame, did challenge and ſecure
> The charter of thy freedom. * * *
> * * * * * *
> *Akenſide*.

SECT. XXIII.

ESSEX.

ESSEX, which took its name from its being the country of the *Eaſt Saxons*, is bounded on the N. by the river *Stour*, which ſeparates it from *Suffolk*, and by a part of *Cambridgeſhire*; on the E. by the *German* ſea; on the W. by *Hertfordſhire* and *Middleſex*; and on the S. by the river *Thames*. It extends fifty-four miles in length from E. to W. and about forty-eight in breadth from N. to S. This county, which is in the dioceſe of *London*, is divided into eighteen hundreds, and contains twenty-four market-towns, four hundred and fifteen pariſhes, a hundred and twenty-five vicarages, and eleven hundred villages, with about thirty-four thouſand eight hundred houſes, and two hundred and eight thouſand eight hundred inhabitants. It ſends eight members to parliament, namely, two for the county, and two for *Colcheſter*, *Harwich*, and *Malden*.

The royal foreſt of *Epping* or *Waltham* extends along the weſtern ſide of this county, for more than twenty miles from N. to S.

The air in the inland parts is healthy; but in the marſhes near the ſea it produces agues, particularly in the part called the *Hundreds*, which is however now rendered much more healthful, by clearing the woods, and draining the ſtagnant waters, and there the fertility of the land is very great; the higher grounds of this county alſo are very fruitful. At *Saffron Walden*, and the adjacent country, vaſt quantities of *ſaffron* are cultivated, that plant now being cauſed to grow in ſcarce any other parts of the kingdom;

here it is ſaid the earth, after bearing ſaffron three years, will produce good barley for eighteen years ſucceſſively, without any manure. The produce of the ground, beſide ſaffron, conſiſts of corn, and paſtures for cattle; a great deal of poultry are bred here, and abundance of calves for the *London* market. *Fiſh* are procured from the rivers; on the banks of the ſea toward the mouth of the river *Coln*, and in other parts of the coaſt, thoſe kinds of oyſters are bred which are called, "the *Colcheſter* and *Walfleet*," and are highly eſteemed all over the kingdom. The chief manufactures of this county are ſtuffs, and baize; the manufacture of the latter was formerly very flouriſhing, particularly at *Colcheſter*, *Cogſhall* or *Coggleſhall*, *Braintree*, and *Bocking*, but of late has much declined.

The principal rivers, beſide the *Thames*, are the *Stour*, which falls into the *German* ocean at *Harwich*; the *Lea*, its weſtern boundary, falls into the *Thames* at *Bow*; the *Blackwater* ariſes at *Bocking*, and runs through the heart of the county; it joins the *Chalmer* below *Malden*, and ſoon after forms the bay of *Blackwater*. The *Coln* runs by *Halſted* to *Colcheſter*, and ſo into the ſea. All theſe rivers abound in various ſorts of fiſh.

The principal places in this county are the following:

CHELMSFORD, on the road to *Harwich*, thus called from the ford over the river *Chelmer*, is ſeated between that river and the *Blackwater*, over which there are bridges, twenty-nine miles E. N. E. of *London*. It is a handſome town, governed by a chief conſtable, has one church, and three meeting-houſes. In this town is an excellent conduit, which has ſuch a ſupply of water, that it is ſaid to run above a hogſhead and an half in a minute. Here the members for the county are choſen, and the aſſizes held, as well as the four quarterly ſeſſions. As it is ſeated nearly in the centre of the county, it is much frequented by travellers and is the reſort of the neighbouring gentry.

COLCHESTER is a place of great antiquity, twenty-two miles to the E. N. E. of *Chelmsford*, and fifty-one from *London*. It is pleaſantly and commodiouſly ſeated on the S. of the river *Coln*, which runs through the town, and incloſes it on the N. and E.: over which are three bridges. At a part called "the *Hythe*," is a long quay. A few years ſince an act of parliament was obtained for making the river *Coln* navigable thus far, which has been accompliſhed, and ſhips of burden now come up here, to the great loſs of *Wivenhoe*, a ſmall town three miles lower, which uſed to be the reſort of ſhipping. The cuſtoms paid here, in the year 1781, amounted to 8276 *l.* The trade principally conſiſts in making baize and ſerges, which are ſent to *Spain*, and from thence to the *Spaniſh Weſt-Indies*, but it has of late much declined. In the civil wars, during the reign of *Charles* I. it ſuſtained a ſevere ſiege, which was turned into a blockade, in which the garriſon and inhabitants ſuffered the utmoſt extremity of hunger, and were at laſt obliged to ſurrender at diſcretion, when their two principal officers, Sir *Charles Lucas* and Sir *George Liſle*, were ſhot under the caſtle-wall, to the indelible diſgrace of *Fairfax*, the general of the parliament's forces. It was ſurrounded with a wall, which had ſix gates and three poſterns, beſide nine watch-towers; but theſe are in a great meaſure demoliſhed. It has ſixteen pariſh churches; but now only twelve are uſed, which are not very large, and moſt of them were damaged in *Cromwell*'s time. There are here alſo five meeting-houſes. The town conſiſts of about three thouſand dwelling-houſes, moſt of them ancient buildings; but there are among them many good houſes. In the year 1763, the charter of this town, of which it had been deprived many years, was reſtored to it, and it is now governed by a mayor, aldermen, and burgeſſes. The town is famous for oyſters and eringo-root. Here are imported wine, brandy, coals, deals, &c. Toward the E. are the ruins of a very ancient caſtle, with a fence round it, about two miles in circumference. *Colcheſter* is ſaid to have been the birth-place of *St. Helena*, mother of *Conſtantine the great*.

HARWICH, a ſea-port town, ſeventy-two miles to the E. N. E. of *London*, is ſurrounded on three parts by the ſea and the river *Stour*. The harbour is one of the fineſt in *England*, for in it four hundred ſhips may ride in ſafety; and oppoſite to the town is *Languard-fort*, which has a good battery of cannon. Here the packet-boats are ſtationed that paſs to and from *Holland*; and here alſo is a good dock-yard, in which many ſhips of war are built. The town is governed by a mayor, eight aldermen, a recorder, and twenty-four capital burgeſſes; but it has only a chapel of eaſe, and ſeveral meeting-houſes, the mother church being at *Dover-court*, two miles diſtant. The market is kept on *Tueſdays* and *Fridays*.

TILBURY-FORT, oppoſite *Graveſend*, commands the entrance of the river *Thames*. Here is a mineral ſpring the water of which is put into bottles, and drank medicinally.

DUNMOW, a market-town, forty-two miles from *London*, in which the manufacture of baize uſed to flouriſh, is particularly remarkable ſince *Henry* III.'s time for the cuſtom of giving a flitch of bacon to any married couple who will ſwear, kneeling on two peaked ſtones in the church-yard, that for a year and a day after their marriage they never repented of their choice, nor quarrelled in all that time; and this appears upon record to have been ſeveral times actually claimed and delivered.

MALDEN, or MALDON, a flouriſhing town, thirty-eight miles from *London*, carries on a conſiderable malting trade, and has ſome ſhipping; its cuſtom-houſe receipts, in the year 1781, were 5,982 *l.* In this county are likewiſe the towns of *Brentwood*, and *Romford*; the latter of which has a great weekly market on *Wedneſdays* for corn, cattle, and poultry.

SECT. XXIV.

SUFFOLK.

SUFFOLK, was thus called by the *Saxons*, to denote the ſouthern people, in oppoſition to thoſe of *Norfolk*, or *Northfolk*; and is bounded on the N. by the rivers *Waveney*, and the *Leſſer Ouſe*, which part it from *Norfolk*; on the E. by the *German* ocean; on the S. by the river *Stour*, which divides it from *Eſſex*, laſt deſcribed; and on the W. by *Cambridgeſhire*. It extends about fifty-eight miles from E. to W. and twenty-eight from N. to S. and is divided into twenty-two hundreds, in which are twenty-eight market-towns, ninety-five vicarages, five hundred and twenty-three pariſhes, thirty-four thouſand four hundred and twenty houſes, and two hundred and ſix thouſand inhabitants. It ſends ſixteen members to parliament, namely, two knights for the ſhire, and two burgeſſes for each of the following boroughs: *Ipſwich*, *Dunwich*, *Orford*, *Aldborough*, *Sudbury*, *Eye*, and *St. Edmondſbury*. It lies in the dioceſe of *Norwich*.

The air is very clear and healthy, even near the ſea-coaſt; the beach being generally ſandy and ſhelly, which either abſorbs or ſhoots off the ſea-water, and keeps it from ſtagnating or forming a noiſome and ſtinking mud, whence the phyſicians eſteem the air as good as any in *England*.

The ſoil is of various qualities, but the country in general level; that near the ſhore is ſandy and full of heaths, yet abounds in rye, peas, turnips, carrots, and hemp, with numerous flocks of ſheep. Copious beds of petrified ſhells, called *Shell-marl*, which are found in various parts between *Woodbridge* and *Orford*, have for the laſt forty years been made uſe of for improving light land, and have liberally rewarded the agricultural labours in thoſe parts. *High Suffolk*, or the *Wood-lands*, which is in the inland part of the county, has a rich deep clay and marl, that yields good paſture-grounds, on which feed abundance of cattle. That part which lies on the confines of *Eſſex*, and *Cambridgeſhire*, alſo affords excellent paſture; and about *Bury St. Edmund's*, and to the N. and N. W. it is fruitful in corn, except toward *Newmarket*. The feeding of cattle and ſheep on turnips is ſaid to have been an improvement firſt ſet on foot in this county. Its principal produce is butter and cheeſe, the latter of which is frequently in this county very much the worſe on account of the goodneſs of the former, and has the character of being the worſt in *England*.

This county is generally divided into two parts, namely, the Franchiſe or Liberty of *St. Edmund*, which contains the W. part of the county; and the *Geldable*, which is the eaſtern: each of theſe furniſhes a diſtinct grand jury at the aſſizes.

The principal rivers are the *Waveney*, the *Deben*, the *Orwell*, by ſome called the *Gipping*, and the *Stour*. The *Waveney* riſes in the northern edge of the county, and running to the N. E. after it has paſſed *Beccles*, forms two branches, one of which runs to the E. almoſt to *Leoſtoff*, where it ſtops ſhort, without reaching the ſea; the other makes an angle to the N. and falls into the *Yare* a little above *Yarmouth*. The *Deben* riſes a little to the W. of *Debenham*, and running eaſtward to *Wickham*, winds round that town, and runs S. S. E. to the *German* ocean. The *Orwell* riſes near *Wulpit*, and runs eaſtward to the ſame ſea. The *Stour* riſes in the edge of *Cambridgeſhire*, and running moſtly eaſtward, falls into the *German* ocean with the *Orwell* at *Harwich*. The poor throughout the county are employed in making worſted yarn.

The principal places in this county are the following:

Ipswich, a place of great antiquity, and the county town, is ſeated on the river *Orwell*, eighteen miles to the N. E. of *Colcheſter*, and ſixty-nine to the N. E. of *London*. It was once ſurrounded with a wall, the traces of which are ſtill to be ſeen. The town forms a half moon upon the bank of the river, and it is remarkable, that though ſhips of five hundred tons may, upon a ſpring-tide, come up near the town, yet the river is ſcarce navigable above the town even for the ſmalleſt boats; nor does the tide, which ſometimes riſes thirteen or fourteen feet, and gives there twenty-four feet water, flow much farther up the river. Here is a cuſtom-houſe, and a good quay; the duties paid in the year 1781 were 7,446 *l.* and the net receipts 6,667 *l.* A great deal of malt is made here, which, as well as corn, is ſhipped coaſtways. Broad cloth and canvas were formerly manufactured here, but with their failure the conſequence of the town has declined.

Woodbridge, ſeven miles to the E. of *Ipſwich*, is a ſmall ſea port. The chief employments here are making ſalt, and burning foſſil ſea-ſhells into lime. *Orford*, *Aldborough*, *Southwold*, and *Leoſtoff*, are inconſiderable ſea-ports, chiefly concerned in the coaſting trade. Near *Orford* is a decoy for wild ducks. The receipts of the cuſtoms at *Aldborough*, or *Aldeburgh*, in the year 1781, were 705 *l.* whilſt the ſalaries and incidents were 930 *l.* *Southwold* then produced 1,991 *l.* whilſt its ſalaries and incidents were 408 *l.* *Orford* and *Leoſtoff* are not noticed in the general account of the cuſtoms; the latter ſtands on a cliff cloſe to the ſea, at the moſt eaſterly point of land in *Great Britain*: the town chiefly ſubſiſts by fiſhing. *Solebay*, off *Southwold*, is famous for a ſea-fight, on the 28th of *May*, 1672, between the *Engliſh*, commanded by the duke of *York*, and the *Dutch*, by *De Ruyter*, in which the earl of *Sandwich* bravely loſt his life. The action, though not deciſive, was the moſt obſtinate and bloody of any one which had been fought in thoſe fierce wars.

Bury St. Edmund's, or **St. Emundsbury**, ſo called from *Edmund*, king of the *Eaſt Angles*, who was murdered in 870, and buried here, is delightfully ſituated upon an eminence, on the W. ſide of the river *Lark*, or *Bourne*, ſeventy-two miles to the N. E. of *London*. It is regularly built, the ſtreets croſſing each other almoſt at right angles, and is governed by an alderman, a recorder, twelve capital burgeſſes, and twenty-four common burgeſſes. It was formerly famed for its abbey, which was ſaid to be the fineſt and richeſt in *England*, and ſtood between the two churches, which were both very large, and ſtanding in one church-yard. In *St. Mary's*, one of theſe churches, lies *Mary* queen of *France*, who was married to *Thomas* duke of *Norfolk*. Beſide theſe churches, it has one Preſbyterian, one Independent, and one Quaker's meeting. Here are held the aſſizes for the county, and a great annual fair on the 21ſt of *September*, which continues three weeks.

Sudbury, a town ſeated on the river *Stour*, fifty-four miles from *London*, became the reſidence of the *Flemings*, whom *Edward* III. induced to ſettle in *England*, for the purpoſe of eſtabliſhing the woollen manufacture, which rendered the town very populous and flouriſhing; but this branch of induſtry has long ſince been transferred to other places. At preſent ſeveral kinds of thin ſtuffs are made here, particularly *ſays*, *bunting* for naval colours and burial crapes. *Aikin*, *p.* 226.

SECT. XXV.

Cambridgeshire.

CAMBRIDGESHIRE, which receives its name from *Cambridge*, ſo called from its bridge over the river *Cam*, is bounded on the N. W. by *Lincolnſhire*; and on the N. E. by *Norfolk*; on the E. by *Suffolk*; on the S. by *Eſſex* and *Hertfordſhire*; and on the W. by *Huntingdonſhire*, *Bedfordſhire*, and a ſlip of *Northamptonſhire*. It is about fifty miles in length, from N. to S. about twenty-five in breadth, from E. to W. and near a hundred and thirty in circumference; it lies partly in the dioceſe of *Ely*, partly in that of *Norwich*. It is divided into ſeventeen hundreds, and contains eight market-towns, eighty-three vicarages, a hundred and ſixty-three pariſhes, two hundred and ſeventy-nine villages, with about ſeventeen thouſand houſes, and eighty-ſix thouſand ſeven hundred inhabitants. It ſends only ſix members to parliament, namely, two for the county, two for the town of *Cambridge*, and two for the univerſity.

The air and ſoil of this county vary extremely; ſome parts, eſpecially the ſouthern and eaſtern, are pleaſant and healthy; but the northern, or fenny-country, is low and watery, from the confluence of many rivers, and conſequently not very healthful. All the waters of the middle part of *England*, which do not run into the *Thames* or the *Trent*, fall into theſe fens, and in the latter part of the year, when they are overflowed with water, they appear covered with fogs; ſo that while the higher grounds of the adjacent country glitter with the beams of the ſun, the *Iſle of Ely* appears wrapt in a miſt. To clear theſe fens a number of drains has been made at a very great expence, by which a great deal of ground has been rendered fertile, and the air much improved. Great attention has been paid to draining theſe fens, the moſt ſkilful men have been employed, and all the powers which art and nature furniſh have been exerted in raiſing vaſt banks to withſtand the force of the inundations, and in forming channels to carry off the accumulating floods, for which purpoſe two drains, which run parallel to each other, through a courſe of twenty miles, have been formed, called the "*Old* and *New Bedford* river," from the moſt eaſtern projection of *Huntingdonſhire*, quite acroſs this county, in a N. E. direction, to *Norfolk*; and convey the waters into the *Ouſe*, where that river ceaſes to be the boundary of thoſe two counties, about twelve miles from its mouth, at the great bay called "the *Waſh*." The people who are uſed to live in this watery country are as healthy as thoſe who enjoy a clearer air, except being ſubject to agues, which they little regard.

In theſe fens are abundance of thoſe ingenious contrivances called decoys, for the ſpecies of wild fowl which migrate hither during the ſeverity of winter, from the colder climates of the north; and it is incredible what quantities are caught of ducks, mallards, teal, wigeons, *&c.* It is ſaid that the net profits of a decoy near *Ely* amount to near five hundred pounds a year; there being generally ſent to *London*, during the ſeaſon, from that decoy, three thouſand couple a week.

Cambridgeſhire is almoſt wholly a corn country, producing the beſt oats in the kingdom, and very good barley; the latter is chiefly ſold at *Ware*, *Royſton*, and other great malting towns in *Hertfordſhire*.

The principal river in this county is the *Ouſe*, which runs from the W. to the N. E. and receives the *Cam* near *Thetford*.

The chief places in this county are the following:

Cambridge, the capital of the county, and a celebrated univerſity, ſtands in a ſpacious, delightful, and fertile plain, fifty-one miles N. of *London*, and eighty N. E. of *Oxford*. The river *Cam* divides it into two unequal parts. The ſtreets are generally narrow, though pretty well paved; yet, as they lie low, they are in winter very dirty. In the midſt of the market-place is a very good conduit, continually running. There is alſo a town-hall, a county-hall, and two charity-ſchools. The town conſiſts of fourteen pariſhes, and is governed by a mayor, a recorder, twelve aldermen, and twenty-four common-council. The mayor, when he enters upon his office, takes an oath to maintain the privileges, liberties, and cuſtoms of the univerſity, to which he is ſubſervient.

The glory of this town is its univerſity, which is under the government of the chancellor, who is always a nobleman of high rank, and may be elected every three years, or is continued by the tacit conſent of the univerſity. The other officers of the univerſity are, II. The vice-chancellor, who is annually choſen on the fourth of *November*, by the body of the univerſity, out of two perſons nominated by the heads of colleges. III. A commiſſary, who holds a court of record of civil cauſes for all privileged perſons and ſcholars under the degree of maſter of arts. IV. A high ſteward, choſen by the ſenate, and holding by patent from the Univerſity. V. Two proctors, who are annually choſen; as are alſo two taxers, who, with the proctors, have the cognizance of weights and meaſures, as clerks of the market. The univerſity has alſo a librarian, a regiſter, and other officers.

There are likewiſe the following profeſſorſhips in this univerſity; viz.

Regius profeſſor of divinity
———————— law
———————— phyſic
Caſuiſtical profeſſor
Hebrew ————
Greek ————
Mathematical ————
Arabic ————
Plumian, for experimental philoſophy
Profeſſor of aſtronomy, *Lowndes*'s
———— anatomy
———— modern hiſtory (royal, founded 1724)
———— chemiſtry
Norriſian profeſſor (inſtituted A. D. 1768)
Profeſſor of muſic
Jackſonian profeſſor
Woodwardian lecturer
Lady Margaret's preacher
Public orator

The vice-chancellor ſometimes viſits the taverns and other public-houſes in perſon; but it is more frequently done by the proctors, who have power to puniſh offending ſcholars, and to fine the public-houſes who entertain them after eight at night in the winter, or nine in ſummer.

The origin of this univerſity is concealed by the obſcurity of antiquity; it is ſaid to have been reſtored by *Sebert*, king of the *Eaſt Angles*, in the year 630, it was afterward long neglected and overthrown in the wars with the *Danes*; but at length revived under the *Norman* government. It has at preſent ſixteen colleges and halls, which here differ only in name, they being equally endowed, and poſſeſſing equal privileges. In theſe are ſixteen maſters, four hundred and ſix fellowſhips, about ſix hundred and ſixty-two ſcholarſhips, two hundred and thirty-ſix exhibitioners; and the whole number of maſters, fellows, ſcholars, exhibitioners, and other ſtudents, amount to about fifteen hundred. We ſhall enumerate the colleges and halls according to the dates of their reſpective foundations.

I. *Peter-houſe*, which perhaps took its name from *St. Peter*'s church in its neighbourhood, was founded by *Hugh Balſham*, biſhop of *Ely*, in the year 1257. It was endowed for a maſter, fourteen fellows, *&c.* which number might be encreaſed or diminiſhed according to the improvement or diminution of their revenues, and has at preſent twenty-two fellows and forty-two ſcholars.

II. *Clare-hall* was founded, in 1340, by *Richard Badew*, chancellor of the univerſity, with the aſſiſtance of the lady *Elizabeth Clare*, counteſs of *Ulſter*. This hall has been rebuilt with free-ſtone, and is one of the neateſt and moſt uniform ſtructures in the univerſity. It enjoys a moſt delightful ſituation, being ſeated on the banks of the river, which here forms a kind of natural canal. It maintains eighteen fellows, and ſixty-three ſcholars.

III. *Pembroke-hall* was founded ſeven years after *Clare-hall*, by *Mary St. Paul*, counteſs of *Pembroke*, and maintains five fellows and thirteen ſcholars.

IV. *Bennet*'s, or *Corpus Chriſti College*, was founded about the ſame time, by the united guilds or fraternities of *Corpus Chriſti* and the *Bleſſed Virgin*. It takes its name from the adjoining church of *St. Benedict*. Among its modern benefactors, the moſt conſiderable is Dr. *Matthew Parker*, archbiſhop of *Canterbury*, who bequeathed a curious library, chiefly conſiſting of ſcarce manuſcripts; he alſo founded two fellowſhips, and five ſcholarſhips.

V. *Trinity-hall* was founded by *William Bateman*, biſhop of *Norwich*, about the year 1348; two fellows and three ſcholars are required to ſtudy the civil and canon law. It has twelve fellows and fourteen ſcholars.

VI. *Gonvil* and *Caius-College*. Partly founded in 1348, by *Edmund de Gonvil*, rector of *Terrington*, in *Norfolk*, but enlarged and farther endowed in 1607, by *John Caius*, M. D.; and it has of late years received conſiderable embelliſhments. It now maintains twenty-ſix fellows, and ſeventy-four ſcholars.

VII. *King's-College* was founded in 1451, by king *Henry* VI. and afterward enlarged by *Henry* VII. and his ſon *Henry* VIII. The model firſt laid down was never completed; the magnificent plan being executed only in part: the chapel is conſidered as one of the fineſt buildings of its kind in the world. It is three hundred and four feet in length, ſeventy-three in breadth, and ninety-one high to the battlements, and, like *Weſtminſter-hall*, has not a pillar to ſupport it. It has twelve large windows on each ſide, finely painted, and the carvings and other workmanſhip of the numerous ſtalls is finely executed. It conſtitutes one ſide of a large ſquare; for the royal founder deſigned that the college ſhould be a quadrangle, and every ſide of equal beauty; but the civil wars prevented his accompliſhing it; however, what has been lately added is not only an ornament to the college, but to the whole univerſity, and is built with great regularity and beauty. It maintains ſeventy fellows and ſcholars.

VIII. *Queen's College* was founded in 1448, by queen *Margaret* of *Anjou*, the wife of *Henry* VI. but finiſhed by *Elizabeth*, the conſort of *Edward* IV. It now maintains a maſter, nineteen fellows, twelve bible-clerks, four *Greek* ſcholars, forty other ſcholars, beſides lecturers of *Hebrew*, geometry, and arithmetic.

IX. *Catharine-hall* owes its foundation to *Richard Woodlarke*, the third provoſt of *King's-College*. A great part of it has been lately rebuilt. It is a neat and elegant ſtructure, in which are maintained ſix fellows and thirty ſcholars.

X. *Jeſus-College* was begun by *John Alcock*, biſhop of *Ely*, in 1497, who having obtained of *Henry* VII. and pope *Julius* II. the revenues of a monaſtery of nuns, which had been ſuppreſſed on account of their ſcandalous incontinence, endowed and dedicated it to *Jeſus*, the *Bleſſed Virgin*, and *St. Radegund*, patroneſs of the nunnery. It has now ſixteen fellowſhips, and thirty-one ſcholars.

XI. *Chriſt's-College* was founded by the lady *Margaret*, counteſs of *Richmond*, mother of *Henry* VII. for a maſter and twelve fellows; which number agreeing with our Saviour and his twelve apoſtles, was complained of in *Edward the Sixth's* reign as ſuperſtitious; on which the king added another fellowſhip and ſome ſcholarſhips. A noble building has been lately added to the old houſe, and the number of ſcholars amount to fifty-ſix.

XII. *St. John's College* was begun by the ſame lady, about nineteen years after *Chriſt's College*, and was finiſhed by her executors. This college, which in the beginning of the reign of *James* I. was greatly enlarged with new buildings, is pleaſantly ſituated near the river, and is no leſs remarkable for the number of its ſtudents and its beautiful groves and gardens, than for its ſtrict and regular diſcipline. It has a fine ſtone bridge over the river, and the library is copious and curious. The number of ſtudents amount to one hundred, and its fellows to fifty-four.

XIII. *Magdalen-College* was originally a hall for monks to prepare them for academical exerciſes; but at the diſſolution of the monaſteries by *Henry* VIII. a new college was founded here by *Thomas Audley*, baron of *Walden*,

Walden, and it was afterward enlarged and endowed by Sir *Chriſtopher Wray*, lord chief juſtice of *England*. This college ſtands by itſelf on the N. W. ſide of the river, and has been improved and adorned by handſome buildings. It maintains a maſter, thirteen fellows, and thirty ſcholars.

XIV. *Trinity College* was founded by *Henry* VIII. who converted three ſmall houſes into one college, made a conſiderable addition to their former endowments, and dedicated this houſe to the *Holy* and *Undivided Trinity*. His daughter, queen *Mary*, added largely to the endowment, and by ſubſequent benefactions it is enabled to maintain ſixty-five fellows, and ninety-one ſcholars. Its library, which many learned men have contributed to enrich, is very valuable; the chapels, buildings, *&c.* juſtly place this in the firſt rank of colleges, and render it ſuperior to ſome foreign univerſities.

XV. *Emanuel-College* was founded by Sir *Walter Mildmay*, Chancellor of the Exchequer, in 1584, on the ſame ſpot where the *Dominican* friars had formerly a houſe. It has a very neat chapel, built by the bounty of Dr. *William Sancroft*, archbiſhop of *Canterbury*, and others, who likewiſe made a fine addition to the library, by bequeathing to it his choice collection of books. It maintains a maſter, fourteen fellows, and ſixty ſcholars.

XVI. *Sidney Suſſex College* was founded by virtue of the will of the lady *Frances Sidney*, counteſs of *Suſſex*, who died in 1589, and for this purpoſe left five hundred pounds. Afterward Sir *Francis Charke*, and after him Sir *John Brereton*, not only erected a ſet of new buildings, but augmented the ſcholarſhips and fellowſhips; ſo that it is now enabled to maintain a maſter, twelve fellows, and twenty-eight ſcholars.

Among the other buildings in *Cambridge* is the *ſenate-houſe*, which is a fine edifice, and, with the ſchools, the univerſity-library, and other buildings, form a noble ſquare.

The *univerſity-library* was firſt built by *Rotheram*, archbiſhop of *York*, who with *Tonſtal*, biſhop of *Durham*, furniſhed it with choice books; after which his majeſty *George* I. purchaſed the library of Dr. *John Moore*, biſhop of *Ely*, which coſt him ſix thouſand guineas, and beſtowed it upon this univerſity. Soon after the late lord viſcount *Townſhend* erected a fine marble ſtatue of his majeſty in the ſenate-houſe of *King's College*. We have already enumerated the profeſſors in this univerſity, but muſt here add, that king *George* I. appointed two perſons, both in the univerſity of *Oxford* and *Cambridge*, well ſkilled in modern hiſtory, and in the knowledge of modern languages, to be nominated king's profeſſors of modern hiſtory, one of whom in each univerſity is required to read lectures in the public ſchools at particular times; each of theſe profeſſors to have a ſalary of four hundred pounds *per annum*, out of which each profeſſor is to maintain, with ſufficient ſalaries, two perſons at leaſt, well qualified to teach and inſtruct in writing and ſpeaking thoſe languages gratis, twenty ſcholars of each univerſity, to be nominated by the king, each of which is to learn at leaſt two of thoſe languages.

Stourbridge, a field near *Cambridge*, is known for its great fair, which annually commences on the ſeventh of *September*, and continues a fortnight. This is eſteemed one of the moſt conſiderable fairs in *England*, many tradeſmen going thither from *London* and other parts to keep ſhops. The trade chiefly conſiſts of woollen cloth, hops, iron, wool, leather, cheeſe, horſes; but includes many other things.

The city of Ely is ſeated on an iſland of the ſame name, ſeventeen miles to the N. of *Cambridge*, and ſixty-eight N. of *London*. It ſtands on a hill ſeated in the middle of a fenny plain, which renders it unhealthy. The ſoil is exceeding rich, and the city is encompaſſed with gardens, which ſupply the country for twenty miles round with vegetables. Great quantities of ſtrawberries are cultivated here, particularly of the white ſort. The city conſiſts of about ſix hundred good houſes, and has but one good ſtreet well paved, the reſt being extremely dirty. The biſhop has the ſame power as in a county palatine, or as the biſhop of *Durham* in his dioceſe, for he appoints a judge, holds the aſſizes, jail-delivery, and quarter-ſeſſion of the peace for the liberty. The aſſizes are held here every twelve months. The cathedral is a ſtately ſtructure, which has a lantern of curious architecture.

Newmarket, nine miles to the E. of *Cambridge*, and ſixty to the N. E. of *London*, is ſituated partly in *Cambridgeſhire* and partly in *Suffolk*; it conſiſts of one well-built ſtreet, and abounds with inns; has two pariſhes, each of which is in a different county. The fine heath in the neighbourhood of this town, is the moſt celebrated race-ground in *England*, and conſequently in the world.

SECT. XXVI.

HARTFORDSHIRE.

HARTFORDSHIRE, or Hertfordſhire, derives its name from *Hartford*, or *Hertford*, the county town, and is bounded on the N. by *Cambridgeſhire*, on the E. by *Eſſex*, from which county it is ſeparated by the river *Lea*; on the N. W. by *Bedfordſhire* and *Buckinghamſhire*, and on the S. by *Middleſex*. It is thirty-ſix miles in length, from N. to S. twenty-eight in breadth from E. to W. and about a hundred and thirty in circumference. This county, which lies partly in the dioceſe of *London*, and partly in that of *Lincoln*, is divided into eight hundreds, which contain nineteen market-towns, fifty-four vicarages, a hundred and twenty pariſhes, and near nine hundred and fifty villages, with about ſixteen thouſand five hundred houſes, and eighty-two thouſand eight hundred inhabitants; and ſends ſix members to parliament, two knights for the ſhire, with two burgeſſes for *St. Alban's*, and as many for *Hertford*.

The air is very clear and ſalutary, whence it is frequently recommended by phyſicians as highly conducive to health, and the people have a ſaying, that whoever buys a houſe or land in *Hertfordſhire*, pays two years purchaſe extraordinary for the goodneſs of the air. The ſoil is generally rich, and in the northern parts has a marle mixed with it, that makes it produce excellent wheat; but the meadows and paſtures are indifferent. The chief commodities are *wheat*, *barley*, *malt*, and *wood*. It is the greateſt malting county in the kingdom.

This county is well watered with ſmall rivers, the chief of which are the *Lea* and the *Coln*. The principal towns in *Hertfordſhire* are the following:

Hertford, the county town, is ſeated on the river *Lea*, two miles to the weſt of *Ware*, and twenty-three N. of *London*, and was formerly much more conſiderable than it is at preſent. It is a town corporate, and is built in the form of a Y, with a caſtle in the middle of the two horns, in which was the county-gaol: it contains ſeveral ſtreets and lanes, and had formerly five pariſh churches; but they are now reduced to two. Here are ſeveral meeting-houſes of the Diſſenters. A new gaol was erected in 1778, at one end of the town, in the road to *Ware*. The chief commodities of its markets are *wool*, *wheat*, and *malt*, and it is ſaid to ſend five thouſand quarters of malt weekly to *London*, by the river *Lea*. Here is a free-ſchool for the children belonging to the town; three charity-ſchools, and alſo a ſchool belonging to *Chriſt's Hoſpital* in *London*: this is a handſome ſtructure, erected by the governors, for ſuch children as either want health, or are too young for that hoſpital. This town gives the title of earl to the family of *Conway*.

Ware is ſeated on the river *Lea*, twenty-one miles from *London*. This town, which lies low, amidſt much water, was inundated in the year 1408, by floods from the uplands; to preſerve it from the like calamity in future times, ſluices and weirs were made in its river, from whence *Camden* ſuppoſes it acquired the name of *Ware*. The town conſiſts of one ſtreet, which is about a mile long, and ſeveral ſmaller ſtreets and lanes. The plenty of water about this town gave riſe to that admirable project, of cutting a channel from thence, and thus forming a new river for ſupplying *London* with water, of which we have given a particular account in deſcribing *Middleſex*. This town has been famous for its great bed, which is much viſited by travellers, it being twelve feet ſquare, and is ſaid to hold twenty people. The malting buſineſs is principally carried on at *Royſton*, *Baldock*, *Hitchen*, and in this town.

St. Alban's, a large and ancient town, twenty-one miles from *London*, received its name from *St. Alban*, who ſuffered in the perſecution under *Diocleſian*, and being afterward canonized, and interred on a hill in the neighbourhood of the town, a monaſtery was erected to him by king *Offa*, to atone for his guilt, in cauſing him to be murdered. *Edward* I. erected here a magnificent croſs, in memory of queen *Eleanor*; and *Edward* VI. incorporated the town by a charter. Here are three churches, beſides the ancient church called *St. Alban's*, belonging to the monaſtery, which is now a pariſh church. In this ancient ſtructure is a funeral monument, and the effigy of king *Offa*, its founder, who is ſeated on his throne. On the eaſt ſide ſtood the ſhrine of *St. Alban*, and in the ſouth aile is the monument of duke *Humphry*, brother to king *Henry* V. commonly diſtinguiſhed by the title of the Good duke of *Glouceſter*. It is adorned with a ducal coronet, and the arms of *France* and *England* quartered. In niches on one ſide are ſeventeen kings, but in the niches on the other ſide there are no ſtatues remaining.

Several years ago, in digging a grave, a pair of ſtairs was diſcovered that led down into a vault, where a leaden coffin was found, in which the duke of *Glouceſter*'s body was preſerved entire, by a kind of pickle in which it lay, only the fleſh was waſted from the legs, the pickle at that end being dried up. Many curious medals and coins are to be ſeen in the church, that have been dug out of the ruins of *Old Verulam*, which ſtood on the other ſide of the river *Ver*, or *Moore*, which runs S. W. of the town.

St. Alban's is the largeſt town in the county, and, beſides its four churches, has ſeveral meeting-houſes, two charity-ſchools, and three fairs, and has on *Saturdays* one of the beſt markets for wheat in *England*. It gives the title of duke to the noble family of *Beauclerc*. The great *John* duke of *Marlborough* erected a ſeat here, called *Holloway-houſe*, which is now the reſidence of the counteſs dowager *Spencer*, and ſeveral neat alms-houſes were built here by him and his ducheſs. Near *St. Alban's* is a fort, at a place called by the common people the *Oyſter-hills*, which is ſuppoſed to have been the camp of *Oſtorius*, the *Roman* Proprætor.

At this place the firſt battle was fought between the houſes of *York* and *Lancaſter*, on the 22d of *May* 1455, which proved very fatal to the *Lancaſtrians*; *Henry* VI. being made priſoner, and the duke of *Somerſet*, the earls of *Northumberland* and *Stafford*, lord *Clifford*, with many other perſons of diſtinction, and five thouſand men, were ſlain; a ſecond battle was fought at *Bernard's* heath, in its neighbourhood, *February* 17, 1461, in which the *Yorkiſts*, commanded by the earl of *Warwick* were defeated by queen *Margaret*, and the king, whom they held a priſoner, reſcued from their hands; in this action 2,300 *Yorkiſts* are ſaid to have periſhed.

Theobalds, ten miles from *London*, was the favourite hunting palace of "that Nimrod *James* I." as Mr. *Pennant* calls him. The building was erected by lord treaſurer *Burleigh*, from whom it deſcended to his ſecond ſon Sir *Robert Cecil*, afterward earl of *Saliſbury*. King *James* being much enamoured with the ſituation, gave him the manor of *Biſhop's Hatfield*, in the ſame county, for the houſe and eſtate at *Theobalds*. This manſion he encloſed with a park ten miles in circuit. From hence he enjoyed the ſports of the field in *Enfield Chaſe* and *Epping Foreſt*, and here he reſigned his breath. From this palace *Charles* I. ſet out to erect his ſtandard, at the breaking out of the civil wars. The building has, not many years ſince, been pulled down, the greateſt part of the park converted into farms, and many elegant ſeats erected on various ſpots.

At the ſouthern point of *Hertfordſhire* is *Barnet*, a market-town, ſome part of which is in *Middleſex*. It is a thoroughfare town to the N. of *England*. A little beyond it the great N. road divides, running weſtward to *Cheſter* and *Liverpool*, and in an eaſtern direction to *York*. At the forking off of theſe roads, a column is erected, on which is inſcribed an account of a battle fought on that ſpot, on the 14th of *April*, (*Eaſter-day*) 1471, between the armies of *York* and *Lancaſter*; the event of which day fixed the crown on the head of *Edward* IV. The battle began at four o'clock in the morning, and was maintained with great bravery and fierceneſs, amidſt a very thick fog, until ten o'clock, when the *Lancaſtrians* were routed, merely by one part of their army miſtaking the badges worn by their friends under the command of *Vere* earl of *Oxford*, for thoſe worn by the *Yorkiſts*, which led them to fall furiouſly upon them; whilſt thoſe attacked, imputing this conduct to treaſon, fled, and by their defection gave a decided ſuperiority to the *Yorkiſts*. The earl of *Warwick*, attempting to eſcape, was overtaken and ſlain: about 4,000 men fell on both ſides, who were in general interred upon the ſpot.

SECT. XXVII.

BEDFORDSHIRE.

THIS county derives its name from its chief town; it is bounded on the N. W. by *Northamptonſhire*, on the N. E. by *Huntingdonſhire*; on the E. by *Cambridgeſhire*; on the S. W. by *Buckinghamſhire*; and on the S. E. by *Hertfordſhire*. Its form is extremely irregular, and it runs out into narrow points in various directions. Including the indentations, the county may extend from N. to S. about thirty miles, and from E. to W. about twenty. This county is divided into nine hundreds, in which are ten market-towns, fifty-eight vicarages, one hundred and ſixteen pariſhes, five hundred and fifty villages, with about twelve thouſand one hundred and ſeventy houſes, and upward of ſixty thouſand inhabitants. This county ſends only four members to parliament, two of which are for the county, and the other two for the county town.

The air is temperate, clear, and conſequently healthy. The ſoil is a deep clay, and in the northern parts abounds in corn and paſture; but is ſandy in the middle, with a ridge of chalk-hills to the S. Its commodities are chiefly *fuller's earth*, which is of the utmoſt conſequence to the clothing trade; it alſo affords *cattle*, *veniſon*, *fowl*, *timber*, *wood*, *wheat*, and *barley* in great plenty, and remarkably good. The chief manufactures here are *bone-lace* and *ſtraw-hats*.

The chief river in this county is the *Ouſe*, (a name given to many rivers in this kingdom) the navigation of which is of great ſervice in the corn-trade. It divides the county into two unequal parts, forming the moſt beautiful meanders; for in the diſtance of twenty miles it runs over a tract of ſeventy.

The principal places in this county are the following:

Bedford, a populous and well-built town, forty-ſeven miles to the N. W. of *London*, ſeated on the banks of the river *Ouſe*, which divides it into two parts. Here are five pariſh churches, the principal of which is *St. Paul's*, and alſo ſeveral meeting-houſes of the Diſſenters; a handſome ſtone-bridge, with a gate at each end, to ſtop the paſſage occaſionally; and its high-ſtreet is in particular very handſome and well-built, as is alſo the market-place, which is much improved with new buildings. It is the only market-town on the *Ouſe*, which river has been made navigable to it; vaſt quantities of corn, when the ports are open for exportation, particularly barley, being carried from hence down the river to *Lynn*, and there ſhipped for *Holland*. The town is governed by a mayor, twelve aldermen, a recorder, two bailiffs, a town-clerk, and two ſerjeants at mace.

The ſoil in the neighbourhood of *Bedford* is extremely rich, and produces great quantities of the beſt wheat. This town gives the title of duke to the noble family of *Ruſſel*.

Dunstable, a market-town, ſeated on a dry chalk-hill, ſixteen miles S. of *Bedford*, and thirty-three from *London*. Here no ſprings are to be found, unleſs by digging very deep; but there are large ponds in the town, filled with rain-water, which are never dry. The church is the remainder of a priory; and oppoſite to it is a farm-houſe, which was once a royal palace. The chalk-hills near this town are remarkable for the reſort of vaſt flights of larks, which are caught in great abundance.

Woburn, a market-town, ſeated on a riſing ground, on the high road from *London* to *Northampton*. It was burnt down in 1724, but is rebuilt, and has a handſome market-place, with a free-ſchool and a charity-ſchool, founded by the duke of *Bedford*, who alſo erected the market-houſe.

Near to the town are *Woburn Sands*, which lie on the extremity of the range of hills which traverſes the E. end of *Buckinghamſhire*. Here are the immenſe pits of *fuller's earth*, which is ſuppoſed to give that ſuperiority to the *Engliſh* cloth which it holds over that manufactured in other countries; and concerning which Mr. *Pennant* ſpeaks as follows:—"The beds over this important marl, are firſt, ſeveral layers of reddiſh ſand, to the thickneſs of ſix yards; then ſucceeds a ſtratum of ſand ſtone of the ſame colour; beneath which, for ſeven or eight yards more, the ſand is again continued to the *fuller's earth*, the upper part of which being impure, or mixed with ſand, is flung aſide, the reſt taken up for uſe. The earth runs in layers; under which is a bed of rough white free ſtone, about two feet thick, and under that, ſand, beyond which the labourers have never penetrated. The great uſe of this earth is cleanſing the cloth, by imbibing the tar, greaſe, and tallow, which are ſo frequently employed by the ſhepherds in healing the external diſeaſes to which ſheep are liable; neither can the wool be worked, ſpun, or woven, unleſs it be well greaſed, and all this greaſe muſt be diſcharged before the cloths are fit to wear. Other countries either want this ſpecies of earth, or have it in leſs perfection: the *Britiſh* legiſlature, therefore, have, from the days of *Charles* I. reſtricted the exportation of this earth under ſevere penalties." *Tour from Cheſter*, p. 343.

This town was formerly famous for its abbey, which now belongs to the duke of *Bedford*, and is his ſeat. The laſt abbot, *Robert Hobbs*, was hanged at *Woburn*, in *March* 1537, for not acknowledging the king's ſupremacy; ten years after which, the monaſtery and its revenues were granted by *Edward* VI. to lord *Ruſſel*, whom the king ſoon after created earl of *Bedford*. No one profited ſo greatly by the plunder of the church as this family: the preſent fortune of which is principally derived from ſuch gifts. Beſide *Woburn*, the Abbey of *Melchburn* increaſed the family poſſeſſions both in *Bedfordſhire* and in *Buckinghamſhire*; the grant of the rich abbey of *Taviſtocke*, with that of *Dunkeſwell*, gave it vaſt property and conſequence in *Devonſhire*; by the grant of *Thorney* abbey extenſive tracts of fens were gained in *Cambridgeſhire*; the priory of *Caſtle Hymel* gave this earl a footing in *Northamptonſhire*: and he came in for parcels of the appurtenance of *St. Alban's* and *Mountgrace*, in *Yorkſhire*; beſide the houſe of the friar's preachers in *Exeter*, with the revenues belonging to the foundation; and, finally, the eſtate about *Covent Garden*, appurtenances to the convent of *Weſtminſter*, which conſiſted of a garden belonging to the abbot, with a field adjoining, called "the Seven Acres," on which Long Acre is built. *Pennant's Tour from Cheſter*, p. 346.

Woburn Abbey has many noble rooms, particularly a fine library well furniſhed with books, and fitted up in an elegant taſte; alſo a long gallery adorned with a collection of fine paintings. Before the houſe is a large baſon of water, ſurrounded with a noble gravel-walk. In this baſon is a beautiful yacht, of between thirty and forty tons burden, elegantly carved and gilt, completely rigged, and mounting ten guns, which are fired on occaſion of entertainments given on board. There are alſo a handſome pleaſure-boat, a wherry, and a ſkiff.

The park is nine miles round, and encompaſſed with a brick-wall ten feet high. It has lofty woods, ſome of them of fir-trees, and other ever-greens; particularly on the N. ſide of the park is a plantation near two miles long, with a fine road through it. A noble piece of water at the end of this plantation, has an iſland in the middle, upon which is a Chineſe building.

LUTON is a market-town on the ſouthern border of the county, twenty-nine miles from *London*. A little to the S. E. of which is *Luton Ho*, the elegant ſeat built by the earl of *Bute*, which is adorned with a rich aſſemblage of capital pictures, and a vaſt collection of the moſt rare and valuable productions in nature; but the noble owner, with a faſtidious reſerve, ſubjects them to the inſpection of only a choſen few.

SECT. XXVIII.

HUNTINGDONSHIRE.

HUNTINGDONSHIRE, or *Huntingtonſhire*, received its name from the *Saxons*, who, from its being a ſporting country, called it *Huntedunſcire*. It is bounded on the N. and W. by *Northamptonſhire*; on the E. by *Cambridgeſhire*; and on the S. and S. E. by *Bedfordſhire*; extending twenty-five miles in length from N. to S. twenty in breadth from E. to W. and near ſixty-ſeven in circumference; of which extent *Bedfordſhire* does not bound more than ten miles, all the reſt of the county being incloſed by *Northamptonſhire* or *Cambridgeſhire*.

This county, which is in the dioceſe of *Lincoln*, is divided into four hundreds, and contains ſix market-towns, twenty-nine vicarages, ſeventy-nine pariſhes, two hundred and twenty-nine villages, about eight thouſand two hundred and twenty houſes, and upward of forty-one thouſand inhabitants; it ſends only four members to parliament, namely, two knights of the ſhire, and two members for *Huntingdon*.

The air of *Huntingdonſhire* is good, except in the fenny parts, which are ſubject to damps and unwholeſome fogs. The ſoil is very fruitful; in the dry lands it yields good crops of corn, and in the lower grounds the meadows and paſtures are exceeding rich, fattening fine horned cattle. Hence its chief commodities are corn, cattle, excellent cheeſe made at or near *Stilton*, and called the *Parmeſan of England*; fowl, but very little fiſh.

There is ſomething particular in the civil government of this county; for as *Cambridgeſhire* and *Ely* are under the ſame adminiſtration with it, the ſheriff is choſen by turns out of theſe ſeveral places.

The principal rivers are the *Nen* and the *Ouſe*. The *Nen*, after it has paſſed Oundle, in *Northamptonſhire*, winds round the N. W. and N. bounds of this county. The *Ouſe* enters it at *St. Neot's*, and running to the N. E. paſſes *Huntingdon*, and then leaves the county at *Erith*.

In the N. E. part of the county, four miles S. of *Peterborough* is a piece of water called *Wittleſey-Meer* or *Lake*, ſeveral miles long, and, in ſome parts, as many broad; the water is clear, but in the calmeſt weather is ſubject to be agitated, as if by a tempeſt. The air of this lake is thick and foggy. It is ſcarcely ever known to be frozen over; but in the winter of 1788, ſuch was the ſeverity of the ſeaſon, that it was for a conſiderable time in that ſtate, and was reſorted to from an hundred miles round, for the diverſion of ſkaiting upon it. This is the only conſiderable lake in the ſouthern part of the kingdom. It abounds with fiſh, and its banks are remarkably fertile.

The chief places in this county are the following:

HUNTINGDON, called by the *Saxons Hunter's Down*, pleaſantly ſeated on a riſing ground, by the river *Ouſe*, over which it has a handſome ſtone bridge; this town is fifty-ſeven miles N. by W. of *London*. It was once much larger than at preſent, having fifteen pariſh-churches, which are now reduced to two, with ſeveral meeting-houſes. In this place the aſſizes are held, and as it is a great thoroughfare, it is well furniſhed with inns. It is governed by a mayor, and confers the title of earl on the family of *Haſtings*: which title was ſuppoſed to be extinct on the death of the tenth earl, in the year 1789, until the dignity was claimed by a collateral branch of the family, and the claim, as is ſuppoſed, will be admitted; but the large eſtates which uſed to grace this peerage are now tranſferred to others. In this town *Oliver Cromwell* was born.

Near the weſt ſide of the town is HINCHINBROKE, which gives the title of viſcount to the eldeſt ſon of the earl of *Sandwich*, where that nobleman has a ſeat called *Hinchinbroke-houſe*, the gardens of which are very fine.

St. Neot's is a well-built town, fifty-ſix miles to the N. N. W. of *London*, ſeated on the river *Ouſe*, over which there is a ſtone-bridge: it has a handſome church, with a fine ſteeple.

St. Ives is an ancient, large, and handſome place, fifty-ſeven miles N. W. of *London*, and is ſeated on the river *Ouſe*, over which it has a handſome ſtone bridge. Here was a priory, which is now in ruins. It has one large church, two Diſſenting meetings, and a Popiſh chapel.

SECT. XXIX.

NORTHAMPTONSHIRE.

This county takes its name from the town of *Northampton*, which ſome ſay was ſo called from its ſituation on the N. ſide of the river *Anſona* or *Nen*, while others maintain that it was thus named from its ſituation with reſpect to *Southampton*. It is ſeated in the middle of *England*, and as it extends in a narrow tract toward the N. E. borders upon more counties than any other in *England*; for on the N. and N. W. it is bounded by *Lincolnſhire*, *Rutlandſhire*, and *Leiceſterſhire*; on the E. by *Cambridgeſhire*, *Huntingdonſhire*, and *Bedfordſhire*; on the W. by *Warwickſhire*, and *Oxfordſhire*; and on the S. by *Buckinghamſhire*. It extends in length from the S. W. to the S. E. near fifty-five miles, in the broadeſt part from E. to W. it is twenty miles, and a hundred and twenty-five in circumference. It is in the dioceſe of *Peterborough*, and is divided into twenty hundreds, containing one city, eleven market-towns, eighty-five vicarages, and about five hundred and thirty villages, with about twenty-four thouſand eight hundred houſes, and a hundred and twenty-nine thouſand inhabitants. *Northamptonſhire* ſends nine members to parliament, two for the county, two each for *Northampton*, the city of *Peterborough*, and *Brackly*, and one for *Higham Ferrers*.

The air of this county is very healthy, and, except the little corner of *Peterborough* hundred, is entirely free from bogs and fens: hence it abounds with the ſeats of the nobility and gentry. The ſoil is very fertile, both for tillage and paſturage, and is deficient in nothing but fuel, which is in moſt parts very ſcarce; nor can this ſcarcity be remedied, as they have no coal-pits, nor any navigable rivers to admit of their being ſupplied by water carriage. It is obſervable, that here is but one barren heath, and that the reſt of the county is as fruitful in corn and graſs as any part of *England*. In it are three royal foreſts, namely, *Whittlewood*, or *Whittlebury*, *Salcy*, and *Rockingham*: in the firſt of which, according to Mr. *Pennant*, that fierce animal the wild cat ſtill exiſts. The commodities produced by this county are *horned cattle*, *ſheep*, *horſes*, and *corn*. The principal manufactures in which the people are employed are *ſerges*, *tammies*, *ſhalloons*, *boots*, and *ſhoes*.

The principal rivers of *Northamptonſhire* are the *Nen*, or *Nine*, and the *Welland*; beſides which it is partly watered by the *Ouſe*, the *Leam*, and the *Charwell*. Three of theſe, namely, the *Nen*, the *Leam*, and the *Charwell*, riſe within a ſmall diſtance of each other, near *Daventry*, and there form very different courſes; the *Leam* running weſtward, the *Charwell* ſouthward, and the *Nen* eaſtward, till it falls into the *German* ocean. This latter river was made navigable from *Northampton* in the year 1761. The *Welland* riſes in the N. W. ſide of the county, and divides it from *Leiceſterſhire*, *Rutlandſhire*, and *Lincolnſhire*, paſſing through a part of the latter till it falls into the ſea. The *Ouſe* alſo riſes in the S. part of this county, near *Stoney Stratford*, but ſoon enters *Buckinghamſhire*. Theſe rivers are of great ſervice in furniſhing this inland county with fiſh.

The principal towns are the following:

Northampton, an ancient borough town, incorporated by *Henry* II. and confirmed by *James* I. is ſeated on the river *Nen*, ſixty-ſeven miles N. W. by N. of *London*. It had walls, which are now demoliſhed, and likewiſe a large caſtle, which is in ruins; and here ſeveral parliaments have been held. It is at preſent eſteemed the handſomeſt town in all this part of *England*; but its beauty is owing to a dreadful diſaſter; for it was ſo effectually burnt down on the twentieth of September, 1675, that very few houſes were left ſtanding: but now it is handſomely rebuilt with brick and ſtone, and the ſtreets are wide and ſpacious. It has two bridges over the river: the hall for the aſſizes is adorned with columns of the *Corinthian* order, and the market-place is ſquare and ſpacious. It had ſeven churches, which are now reduced to four, *All Saints*, *St. Giles*'s, *St. Sepulchre*'s, and *St. Peter*'s. The firſt ſtands in the centre of the town, where four ſpacious ſtreets terminate, and conſequently is ſeen to the utmoſt advantage. Here are alſo ſeveral meeting-houſes of Proteſtant Diſſenters. The public buildings are in general extremely handſome: this town is governed by a mayor, two bailiffs, a recorder, four aldermen, forty-eight common-councilmen, and a town-clerk.

Near this town a battle was fought on the 10th of July 1460, between the *Yorkiſts*, commanded by the earl of *Warwick*, and the *Lancaſtrians*, in which the former were victorious; *Henry* VI. was a ſecond time taken priſoner, and the duke of *Buckingham*, the earl of *Shrewſbury*, the lords *Beaumont* and *Egremont*, and Sir *William Lucie* were ſlain, on the ſide of the king.

Twelve miles N. of *Northampton*, on the borders of *Leiceſterſhire*, near the village of *Naſeby*, was fought, on the 14th of *June* 1645, a deciſive battle between the royaliſts and parliamentarians, in which the force of both parties, led on by their moſt able generals, was engaged, and was nearly equal as to numbers; the king commanded the centre, and was oppoſed by *Fairfax*; prince *Rupert* was oppoſed to *Ireton*, and Sir *Marmaduke Langdale* to *Cromwell*. The conflict was doubtful in the centre, where the king fought with diſtinguiſhed bravery and conduct. Prince *Rupert* gained an advantage with the right wing, which he failed to improve; and the cavalry which he had led on, having exhauſted all that impetuous ardour with which they began the conflict, ignominiouſly declined renewing the action, although victory would probably have crowned their exertions. *Cromwell* was equally ſucceſsful in his wing, and improving by his generalſhip what he had gained by his valour, decided the fortune of the day. A thouſand men were ſlain of the parliament army, and of the king's eight hundred; but all the royal artillery fell into the hands of the conquerors, who made 500 officers and 4000 private men priſoners. The king's cabinet, which contained his moſt ſecret papers and correſpondence, was likewiſe taken; this ſerved principally to produce the cataſtrophe which followed.

Peterborough, a city of great antiquity, is ſeated on the river *Nen*, over which there is a bridge that leads into *Huntingdonſhire*, and is in the eaſtern angle of *Northamptonſhire*, eighty-two miles N. by W. of *London*. This is the leaſt city in *England*; for *Wells*, *Ely*, and *Carliſle*, are much larger. Here are, however, many good houſes; for the ſtreets are handſome and well-built, and the market-place ſomewhat ſpacious. It has, however, but one *Gothic* church beſides the cathedral, which is one of the fineſt buildings in *England*: the weſt end is ſupported by three noble arches, very curiouſly embelliſhed; and the windows are finely painted with the hiſtories of the *Old* and *New Teſtament*, and the whole ſtructure is adorned with various productions of art. In this church was buried *Mary* queen of *Scots*; but her body was afterward removed by her ſon *James* I. to king *Henry the Seventh's Chapel*, in *Weſtminſter-abbey*. Here alſo lies interred queen *Catharine*, the divorced wife of king *Henry* VIII. who has a monument erected to her memory. The city is governed by a mayor, aldermen, and a recorder, and gives the title of earl to the family of *Mordaunt*.

Wellingborough is pleaſantly ſeated on the aſcent of a hill, on the banks of the river *Nen*, ſixty-five miles from *London*, and is a large, well built, and well inhabited town, with a handſome church, and a free ſchool. A dreadful fire happened here in July 1738, which in ſix hours time conſumed above eight hundred dwelling-houſes, moſtly in the S. and E. parts of the town; but it has ſince been rebuilt in a more handſome manner. The chief trade of this town, as well as of many others in the county, is the making of boots and ſhoes.

FOTHERINGHAY CASTLE, about twenty-ſix miles N. E. of *Northampton*, was long the place of confinement for *Mary* queen of *Scots*; and here ſhe ſuffered death on the 8th of *February* 1586. This ancient building has lately been demoliſhed; but to perpetuate the memory of this tragical event, Sir *John Hinde Cotton*, the proprietor of the eſtate, has cauſed ſome of the pillars which made a part of the edifice to be removed to his ſeat in *Cambridgeſhire*, where he has introduced them into an additional building.

SECT. XXX.

WARWICKSHIRE.

THIS county derives its name from the *Saxons*, who called it *Weringſcire*, which ſignifies a ſtation of ſoldiers. It is bounded at its northern extremity by a point of *Derbyſhire*, on the N. W. by *Staffordſhire*, on the N. E. by *Leiceſterſhire*, on the W. by *Worceſterſhire*, on the E. by *Northamptonſhire*, to the S. W. by *Glouceſterſhire*, to the S. E. by *Oxfordſhire*. Its extent from N. to S. is about forty-ſeven miles, and about thirty in breadth from E. to W. It is the moſt central county in the kingdom, and ſomewhat of an oval form. It lies partly in the dioceſe of *Litchfield* and *Coventry*, and partly in that of *Worceſter*, is divided into four hundreds and one liberty, and contains one city and twelve market-towns, eighty-ſeven vicarages, a hundred and fifty-eight pariſhes, ſeven hundred and eighty villages, about twenty-two thouſand houſes, and two hundred thouſand inhabitants. It ſends ſix members to parliament, namely, two knights of the ſhire, two members for *Warwick*, and two for the city of *Coventry*.

The air is held to be very mild, pleaſant, and healthy, and more ſo ſince the woodlands have been thinned and laid more open than formerly, by the great conſumption of wood, till of late, in the iron works; the woodlands being now converted to tillage and paſture. The northern part of the county, called the *Woodlands*, is divided from the S. called the *Feldon*, by the river *Avon*; but the ſoil of both is rich, and produces excellent corn and cheeſe, the chief commodities of the county are *corn*, *malt*, *wood*, *wool*, and *cheeſe*. This county alſo abounds in *coals*, and has *limeſtone*.

The principal rivers are the *Avon*, which riſes near *Rugby*, running chiefly S. W. it paſſes by *Warwick*, *Stratford*, and *Bitford*, below which it enters *Worceſterſhire*. The *Tame*, which riſes in *Staffordſhire*, and entering this county, runs eaſtward, till it has received the *Blythe*, and then, turning to the N. re-enters *Staffordſhire*. The *Arrow* riſes in *Worceſterſhire*, and croſſing the W. S. W. border of this county, joins the *Avon* a little below *Bitford*. The principal towns in *Warwickſhire* are the following:

WARWICK, ſeated on a rock near the *Avon*, ninety-three miles to the N. W. of *London*. All the paſſages to it are cut through the rock; and it has no way of acceſs but over water. It was anciently fortified with a wall, which is now in ruins; but has ſtill a ſtrong and ſtately caſtle, which is the ſeat of the lord *Brooke*. It is a large and handſome town, in which are two pariſh-churches, with ſeveral meeting-houſes of the Diſſenters. It principally conſiſts of one regular built-ſtreet, at each end of which is an ancient gate, and over the river is a ſtone-bridge of twelve arches. It is governed by a bailiff and twelve burgeſſes, and has a handſome town-houſe built of free-ſtone, and ſupported on ſtone pillars. It has likewiſe a good free-ſchool, and an hoſpital called *St. James*'s, for twelve decayed gentlemen, who have each twenty pounds a-year, and the chaplain fifty.

This town was wholly reduced to a heap of ruins by a terrible fire on the fifth of September, 1694; but was rebuilt by act of parliament in ſo noble and beautiful a manner, that few towns in *England* make ſo fine an appearance. It is famous for being the reſidence of the celebrated *Guy* earl of *Warwick*, of whom ſo many fabulous and romantic accounts have been given, that it is perhaps impoſſible to diſtinguiſh his real actions from thoſe that are fabulous. He flouriſhed in the reign of *Athelſtan*, and decided the fate of the kingdom by ſingle combat with *Colbrond*, the *Dane*, a man of gigantic ſtature, whom he ſlew, and afterward led an hermit's life till his own death. They ſhew here his helmet and ſword.

The caſtle, already mentioned, ſtands upon the river *Avon*, on a ſolid rock. The terrace, which is above fifty feet perpendicular height, like that of *Windſor*, overlooks a beautiful country, with the *Avon* flowing at the foot. The building is old, but has often been repaired and beautified, and is now a very agreeable ſtructure, both within and without. The apartments are well contrived, and the communication between the remoteſt parts of the building is well preſerved by galleries, and the great hall, which is very magnificent. There are in the caſtle many portraits by *Vandyke*, and other artiſts, of kings, queens, and noble perſonages.

A mile out of town on the ſide of a hill, is a cell called *Guy-Cliff*, and in a kind of old chapel is a ſtatue of *Guy* earl of *Warwick*, eight feet high. The fence of the court is of ſolid rock, in which are cut ſtables and out-houſes. Here they ſhew the cave where he died after he became an hermit.

COVENTRY is a city and county of itſelf, containing under its juriſdiction nineteen villages and hamlets; it was incorporated in 1348, and erected into a county in 1451. It is ſituated ninety-one miles to the N. W. of *London*, and ten to the N. E. of *Warwick*. It ſtands on the little river or brook *Sherburn*, and is of great extent; but the houſes being moſtly very old, and chiefly built of wood and plaiſter, with ſtories projecting over each other, make but a very indifferent appearance; but it is continually improving by the old houſes being pulled down, and modern buildings erected. This is the ſiſter city to *Litchfield*, and is joined in the title of the ſee, which was for ſome time ſeated here. It was walled and incorporated by *Edward* II. afterward its charter was confirmed by *Henry* VI. and augmented with ſeveral privileges by *James* I. Its walls were demoliſhed by order of *Charles* II. in the year 1662, and only the gates left ſtanding, from which the beauty and ſtrength of the walls, which were three miles in compaſs, may be plainly inferred.

This city is governed by a mayor, two bailiffs, two ſheriffs, ten aldermen, a town-clerk, and other officers, who hold pleas for all actions, and it has a jail for felons, as well as debtors. It is divided into ten wards, and has three pariſh-churches, with ſeveral meeting-houſes, but no cathedral. The church of *St. Michael* is a fine ſtructure of *Gothic* architecture, and has a curious piece of painting for the altar-piece. *Philemon Holland*, the unwearied tranſlator of the Latin claſſics, who lived in the reigns of *Elizabeth* and *James* I. and was a native of this city, lies buried in *Trinity* church here; he died, A. D. 1636, aged 85. The ſpire of the great church, which is very beautiful, is three hundred feet high, and there are two churches in the ſame yard, where they ſeem to rival each other. At the ſouth end of the town alſo ſtands a tall ſpire by itſelf, this being what is left of the *Grey Friar*'s conventual church. In the market-place ſtood the moſt ſtately croſs in *England*; it being ſixty-ſix feet high, and adorned with the ſtatues of ſeveral of the *Engliſh* kings, and a variety of curious *Gothic* ſculpture; but it is now taken down; for which "*Gothic* act," Mr. *Pennant* expreſſes his indignation againſt the corporation. *Journey from Cheſter to London*, p. 157. The inhabitants have alſo lately obtained an act for paving, lighting, and cleanſing the ſtreets; and the gaol was rebuilt about twenty years ago. The town-houſe is worth ſeeing, the windows being of painted glaſs, repreſenting ſome of the old kings, earls, *&c.* who have been benefactors to the city.

The ſtory of the lady *Godiva*, who rode naked through the high ſtreet of the city to purchaſe its exemption from oppreſſive taxes, is here ſo firmly believed, that they will not ſuffer the truth of it to be queſtioned. This remarkable tradition has the following foundation:—*Leland* ſays, a convent, founded by *Canute*, ſtood in this city; and *John Rous* aſſerts, that it was burnt in the year 1016: on the ruins of which *Leofric*, fifth earl of *Mercia*, and his counteſs *Godiva*, founded a monaſtery; but it is ſaid, that the inhabitants groaned under great oppreſſions from this their feudal lord, to relieve them from which his counteſs ſolicited in vain. At length, the earl, to ſilence her importunities, declared that he would grant her requeſts, if ſhe would ride naked through the town, and on no other terms. *Godiva*, having a vaſt luxuriance of hair, embraced the condition, and rode decently covered to her very feet with her flowing treſſes. Mr. *Pennant* ſays, (*Journey from Cheſter*, p. 139), the hiſtory was preſerved in a picture about the time of *Richard* II. in which were pourtrayed the earl and counteſs; he holding a charter of freedom in his hand, and thus addreſſing the Lady—

I *Luricke* (*Leofric*) for love of thee,
Do make *Coventrie* toll free.

The legend ſays, that orders were iſſued for all the inhabitants, on pain of death, to ſhut themſelves up during this progreſs; but that the curioſity of a taylor, ſurmounting fear, led him to take a peep. Certain it is, that this circumſtance, whether real or imaginary, is commemorated to this day, by a figure looking out of a wall, which is placed in the high ſtreet; and the love of *Godiva* to the city is yet annually celebrated by a proceſſion, in which a woman, or the repreſentative of one, ſtill rides (not literally naked, like the benign counteſs), but in a fleſh-coloured ſilk, cloſely fitted to her limbs. This city gives the title of earl to the noble family of *Coventry*. The repreſentatives are choſen by the citizens who pay ſcot and lot. Two parliaments have been held in this city; the firſt in 1404, the other in 1459; each of which have been diſtinguiſhed by reproachful epithets.

By *Bradford*'s ſurvey of *Coventry*, made in 1748 and 1749, there appear to have been 2,065 houſes, and 12,117 inhabitants. Mr. *Pennant*'s enquiries led him to conclude, that when he wrote its population was about 25,000.

The chief manufacture of this city is *ribbon-weaving*, which is carried on here to a greater extent than in any other part of the kingdom; the other manufactures are of *gauze* and *camelots* or *camlets*.

To the W. of the city is the head of the great canal, which paſſing cloſe to the neighbouring collieries at *Hawkeſbury*, is to extend to *Brinklow*, *Hill Morton*, and *Braunſton* in *Northamptonſhire*; return into *Warwickſhire*, and, after paſſing by *Banbury*, terminate at *Oxford*. The whole extent of which will be eighty-two miles, and its fall from the level on which it is formed will, in the courſe of its progreſs, be 204 feet. By another branch likewiſe begun near *Coventry*, it is to paſs by *Atherſtone* and *Tamworth*, to unite with the great *Staffordſhire* canal on *Fradley-heath*, three miles N. E. of *Litchfield*, forming a courſe of about 36 miles; in which progreſs ſeveral branches are extended to coal mines. Theſe, by means of the *Stour-port* canal, will unite the *Thames*, the *Severn*, and the *Trent*; but the latter canal is far from completed.

BIRMINGHAM is a very large town, ſeventeen miles to the N. W. of *Coventry*, and one hundred and ſixteen to the N. W. of *London*; it ſtands on the ſide of a hill, forming nearly a half-moon. The lower part is filled with work-ſhops and ware-houſes of the manufacturers, and conſiſts chiefly of old buildings; but the upper part contains a number of new and regular ſtreets. It has no corporation, being governed only by two conſtables and two bailiffs, and is therefore free for any perſon to ſettle there, which has greatly contributed both to the increaſe of the buildings, and the trade, which is the moſt flouriſhing of any in *England* for all ſorts of iron-work and hardware. It has two churches, in the lower part of the town, one of which is an ancient building with a very tall ſpire; the other is a very grand modern ſtructure, having a ſquare ſtone tower, with a dome and turret above it. In this town is a fine peal of ten bells, and a ſet of muſical chimes, which play ſeven different tunes, one for each day of the week. It has alſo two chapels, and ſeveral meeting-houſes for every denomination of Diſſenters.

The manufactures and trade of this town are thus deſcribed by an elegant and well-informed writer:—“For a conſiderable period its hardware manufactures have been noted; but of late years, by great additions to its trade, from a vaſt variety of uſeful and ornamental articles, ſuch as metal buttons, buckles, plated goods of all kinds, japanned and paper-ware, &c. it has riſen to be ſuperior in populouſneſs to any of the other modern trading towns in England, and has filled the ſurrounding country with induſtrious inhabitants. It is plentifully ſupplied with that important article coals, by means of a canal to *Wedneſbury*, in *Staffordſhire*; and it has a communication with the great trunk from the *Trent* to the *Severn*, by means of a branch paſſing by *Wolverhampton*. The *Birmingham* goods are diſperſed about the kingdom, but chiefly ſent to *London* by land carriage. They are exported in great quantities to foreign countries, where, in point of cheapneſs and ſhow united, they are unrivalled; ſo that *Birmingham* is become, according to the emphatical expreſſion of a great orator, “the toy-ſhop of *Europe*.” *Dr. Aikin's England Delineated*.

STRATFORD UPON AVON, a town corporate, governed by a Mayor, Alderman, and burgeſſes, ſituated on the N. ſide of the *Avon*, ninety-four miles from *London*, is celebrated for having been the birth-place of *Shakeſpeare*, and the place where he ended his days in a calm retirement. He lies buried in the chancel of the church, adjoining to which is a charnel-houſe, containing vaſt quantities of human bones heaped together, but tradition has not tranſmitted on what account they were collected; only it is ſuppoſed that they were formed from the ſlain in ſome battle which was fought in very remote times. In this town a jubilee was held in the year 1769, in honour of *Shakeſpeare*, at the inſtance, and under the direction of the late Mr. *Garrick*. At either end of the town-hall is a whole length picture, the one of that moſt original and powerful of dramatic poets, the other of that inimitable actor who moſt ably perſonified a variety of characters drawn by the poet, and who thus celebrated his memory in his native place, 153 years after his death.

At *Edgehill*, near *Kineton*, in the S. E. part of this county, bordering on *Oxfordſhire*, was fought the firſt battle in the civil war between *Charles* I. and his parliament, on the 23d of October 1642, in which 5000 men were ſlain, and nothing deciſive effected.

SECT. XXXI.

WORCESTERSHIRE.

IT derives its name from its capital, called by the *Saxons* *Waegorceſter*, which at length became changed to *Worceſter*. This county is bounded on the N. by *Shropſhire* and *Staffordſhire*; in its extreme northern, and on the E. point by *Warwickſhire*; on the S. W. by *Herefordſhire*; and on the S. by *Glouceſterſhire*; extending about thirty miles in length from N. to S. and twenty in breadth from E. to W.

It is divided into ſeven hundreds, and contains one city and ten market-towns, fifty-five vicarages, one hundred and fifty-two pariſhes, five hundred villages, about twenty thouſand ſix hundred houſes, and one hundred and twenty-three thouſand ſeven hundred inhabitants. It is in the dioceſe of *Worceſter*, and ſends nine members to parliament; namely, two for the county, two for each of the following places, *Worceſter*, *Droitwich*, and *Eveſham*, and one for the borough of *Bewdley*.

The air of *Worceſterſhire* is very healthy, and the ſoil in the vales and meadows very rich, producing corn and paſture, particularly the rich vale of *Eveſham*, which is juſtly ſtyled the granary of theſe parts. The hills have generally an eaſy aſcent, except the *Malvern-hills* in the S. W. part of the county, and feed large flocks of ſheep. The other hills are the *Licky*, near *Bromſgrove*, toward the N. and the *Bredon-hills*, toward the S. E. This county had formerly two large foreſts, but the iron and ſalt-works have in a manner deſtroyed them; and therefore theſe works are now chiefly carried on with coal, with which this county abounds. A number of rivers and rivulets water the fine meadows, and give them a richneſs that is imparted to the butter and cheeſe.—Here is plenty of fruits of moſt ſorts, eſpecially *pears*, which are in many places found growing in the hedges. The chief commodities are *coals*, *corn*, *hops*, *cloth*, *cheeſe*, *cyder*, *perry*, and *ſalt*.

The principal rivers with which this county is watered are the *Severn*, which enters *Worceſterſhire* on the N. W. edge of the county, and running ſouthward by *Worceſter*, receives firſt the *Stour* from *Staffordſhire*, then the *Salwarp*, and at length the *Temd*, when, paſſing by *Upton*, it enters *Glouceſterſhire*. The *Temd* enters *Worceſterſhire* on the W. border, and runs to the S. E. The *Avon* enters the E. ſide of *Worceſterſhire*, and running through the vale of *Eveſham*, leaves this county at the S. to join the *Severn* at *Tewekſbury*. All theſe rivers abound with the uſual ſorts of fiſh; but the *Severn* has *lampreys* almoſt peculiar to itſelf: they reſemble an eel in ſhape, but inſtead of gills, have nine holes on each ſide of the neck: they are in ſeaſon in the ſpring of the year, when they have a delicious taſte, which abates as the ſummer advances. The principal towns of this county are the following:

WORCESTER, pleaſantly ſituated on the eaſtern bank of the river *Severn*, one hundred and eight miles to the W. N. W. of *London*. This is a large, well built, and populous city. It has a handſome ſtone-bridge over the *Severn*, and from hence riſes a gentle aſcent, ſo high as to afford a pleaſant proſpect over the vale beneath. The public buildings make a noble appearance, particularly the *Guildhall*. The cathedral is only remarkable for its antiquity. In it lies buried king *John*, not where his monument now ſtands, but under a little ſtone before the altar of the eaſternmoſt wall of the church. On each ſide of him, on the ground, lie the effigies of two biſhops. On the S. ſide of the high altar, is a large handſome chapel, the choir of which is of exquiſite workmanſhip. Here is the monument of prince *Arthur*, the eldeſt ſon of king *Henry* VII. who died at *Ludlow* in 1502; and among other monuments is one of the famous counteſs of *Saliſbury*, who, as is ſaid, dancing before *Edward* III. in his great hall at *Windſor*, dropped her garter, which the king took up, and from that accident inſtituted the order of the Garter; but this ſtory is generally ſuppoſed to be fabulous. The monument is very fine; and it is remarkable, that there are ſeveral angels cut in ſtone ſtrewing garters over the tomb. Beſides the cathedral and *St. Michael*'s church, which is without the liberty of the city, it contains nine pariſh-churches, and a palace for the biſhop. It is governed by a mayor, ſix aldermen, a recorder, two coroners, a ſheriff, a ſword-bearer, and five ſerjeants at mace; and is inhabited by many gentry. The clothing trade is carried on here, and many hands are employed in the city and the adjoining villages in carding, ſpinning, weaving, and fulling. One part of the city is wholly poſſeſſed by the *Welſh*, who ſpeak their own language, and are employed in this manufacture. There is here alſo a manufacture of porcelain, which is carried to a conſiderable degree of perfection. The making of gloves alſo employs great numbers.

In the year 1651, *Cromwell*, with an army of 30,000 men, attacked this city, where *Charles* II. with the *Scotch* army had arrived. He made himſelf maſter of it, and compelled the king to a precipitate flight, who, after ſuffering ſevere hardſhips, and experiencing hair-breadth eſcapes, was conveyed out of the kingdom.

DROITWICH is ſeated on the river *Salwarp*, ſix miles N. of *Worceſter*; it is a corporate and borough town, remarkable for its excellent brine ſprings, of which is made fine white ſalt; the inhabitants have alſo a manufacture of linen cloth and hats.

KIDDERMINSTER, a town ſeated under a hill, by the river *Stour*, one hundred and twenty-five miles to the N. W. of *London*, was particularly famous for its woollen manufacture, called *Kidderminſter* ſtuffs, but now much declined from the general uſe of cotton goods. Here are flouriſhing manufactures of blankets and carpets, the latter of which rival thoſe of *Turkey*, and the inhabitants are ſaid to have no leſs than one thouſand looms conſtantly employed. "This town," ſays Dr. *Aikin*, "is the firſt market in *England* for *pile* or *pluſh carpets*, which, for beauty of colour and patterns, exceed any other. Theſe are frequently called *Wilton*, from having been firſt made at that town; but at preſent by much the greater part are made at *Kidderminſter*. The worſted ſhag trade has alſo been introduced here, and employs many looms. The goods go chiefly to *Portugal*, and their carriage has been much facilitated by the late canal communications." *England Delineated*, p. 167.

At *Stour-port*, near *Kidderminſter*, the *Staffordſhire* and *Worceſterſhire* canal join the *Severn*. It is become a thriving place in conſequence of being thus the centre of inland water carriage. *Idem.*—The town is governed by a bailiff, twelve capital burgeſſes, and twenty-five common council-men.

STOURBRIDGE, or STURBRIDGE, on the borders of *Staffordſhire*, is ſeated on the river *Stour*, over which it has a bridge on the borders of *Staffordſhire*, from whence it has its name. Here is a conſiderable manufacture of glaſs of all ſorts, and alſo iron-works. Here are alſo made fine ſtone pots for glaſs-makers to melt their metal in, and likewiſe crucibles, the clay of which theſe are made being almoſt peculiar to this place.

SECT. XXXII.

SHROPSHIRE.

SHROPSHIRE obtained its name from that given by the *Saxons* to *Shrewſbury*, which they called *Scrobbeſberig*, which ſignifies a town built on a woody hill; it is alſo called the county of *Salop*, and is bounded on the N. by *Cheſhire*, and a detached part of *Flintſhire*; on the E. by *Staffordſhire*; on the S. E. by *Worceſterſhire*; on the S. by *Herefordſhire*; on the S. W. by *Radnorſhire* in *Wales*; and on the W. by the *Welſh* counties of *Montgomeryſhire* and *Denbighſhire*. Its form approaches to that of a ſquare, which is indented by *Montgomeryſhire*; and on the E. the county makes ſome waving projections into *Staffordſhire*; toward *Cheſhire* there is likewiſe a conſiderable projection. It extends about fifty miles in length from N. to S. about forty in breadth from E. to W. and is about a hundred and ten in circumference. About nine miles to the S. E. of *Shrewſbury* is the famous hill called "The *Wrekin*," which is 1398 feet in height.

This county lies partly in the dioceſe of *Litchfield* and *Coventry*, and partly in that of *Hereford*; and is divided into fourteen hundreds, in which are contained ſixteen market-towns, fifty-two vicarages, a hundred and ſeventy pariſhes, ſix hundred and fifteen villages, with about twenty-two thouſand three hundred and eighty houſes, and a hundred and thirteen thouſand ſix hundred and eighty inhabitants. It ſends twelve members to parliament; that is, two for the county, and two for each of the following towns: *Shrewſbury*, *Ludlow*, *Bridgenorth*, *Wenlock*, and *Biſhop's Caſtle*.

The air of *Shropſhire* is ſalubrious, and not very ſharp, except on the hills. The ſoil is generally fruitful, eſpecially in the northern and eaſtern parts, which produce plenty of wheat and barley; but the ſouthern and weſtern, being mountainous, are leſs fertile, yet yield ſufficient paſture for ſheep and cattle. Under the ſurface are mines of *lead*, *copper*, *iron*, *limeſtone*, *freeſtone*, *pipe-clay*, and inexhauſtible *coal-pits*. Over moſt of the coal-pits lies a ſtratum of a blackiſh, hard, porous ſubſtance, containing great quantities of bitumen, which being ground to powder in horſe-mills, and boiled in coppers of water, a bituminous matter ſwims on the ſurface, which, by evaporation is brought to the conſiſtence of pitch; or, by the help of an oil diſtilled from the ſame ſubſtance, and mixed with it, may be thinned to a ſort of tar: both theſe ſubſtances ſerve particularly for caulking of ſhips, as well, if not better than pitch and tar, it being leſs liable to crack. The wool of many parts of this county is remarkably fine.

Many authors mention a remarkable phenomenon at

Broſeley, about ſix miles N. of *Bridgenorth*, and two S. from *Colebrook-dale*. This is a well that exhales a ſulphureous vapour, which when contracted to one vent, by means of an iron cover with a ſemicircular hole, and fired, by applying a lighted candle to it, will continue burning with great violence, ſo as to boil a large piece of meat in a ſhort time; but what is ſtill more extraordinary, a piece of meat broiled in this flame has not the leaſt ill taſte from the ſulphur. This, however, is not the only phenomenon of the kind, there being another burning well of much the ſame natare in *Lancaſhire*.

The chief rivers of this county are the *Severn* and the *Temd*. Both theſe rivers receive ſeveral ſmaller ones, and all of them are ſtocked with a variety of fiſh, as *ſalmon*, *trout*, *pike*, *carp*, *lampreys*, *eels*, &c. As the *Severn*, which riſes in *Montgomeryſhire*, is navigable before it leaves it, that river is of vaſt advantage to this county, not only for the communication it affords, but for the commerce it maintains with *Worceſterſhire*, *Glouceſterſhire*, and *Briſtol*.

The principal places in *Shropſhire* are the following:

SHREWSBURY, a large, pleaſant, populous, and rich town, a hundred and fifty-five miles to the N. W. of *London*, is ſuppoſed to have been built out of the ruins of the ancient *Uriconium*. In the reign of *William the Conqueror*, *Roger* earl of *Montgomery* built a caſtle on the N. ſide, and a ſtately abbey called *St. Giles*'s, or the *Holy Croſs*, at the E. end, famous for being the repoſitory of *St. Winifred*'s body; but only ſome ruins of it are now to be ſeen.

Shrewſbury is ſeated on the *Severn*, which in part ſurrounds the town, in the form of a horſe-ſhoe, and over it are two ſtone-bridges, upon one of which is built a very noble gate that has over the arch the ſtatue of the great *Llewellin*, whoſe memory is dear to the *Welſh*, he being their laſt prince of *Wales*. The town is near two miles long, and the ſtreets moſtly broad and paved. Here are five churches, and two of them have lofty ſpires: *St. Chad*'s and *St. Mary*'s are ſaid to have been anciently collegiate; and all the churches, except the laſt, which is a royal peculiar, are in the dioceſe of *Litchfield* and *Coventry*. There are here a great number of gentry, and this is a place of polite amuſement, ſomething like *Bury* in *Suffolk*, or *Durham* in the north; but is much larger than either of them.

Here is a large market, ſupplying the greateſt plenty of good proviſions, at the cheapeſt rates. Over the market-place is kept a kind of hall for the reception of the thin woollen cloths called *Welſh webbs*, which are manufactured in *Montgomeryſhire*, and dreſſed here. A great deal of *Welſh flannel* is likewiſe brought here for exportation. All the inhabitants ſpeak *Engliſh*; but on a market-day, the *Welſh* reſort in ſuch numbers, that a ſtranger would imagine himſelf in *Wales*. This town is famous for its *brawn* and its *cakes*.

Here is the moſt conſiderable free-ſchool in this part of *England*, founded by king *Edward* VI. and endowed by queen *Elizabeth*, with a ſufficient maintenance for a head-maſter and three under-maſters. The buildings, which are of ſtone, are very ſpacious, particularly the library, which contains a great many books. The ſchoolmaſters have alſo very handſome dwelling-houſes; ſo that the whole has the appearance of a college. The town was incorporated by *Henry* I. and is under the government of a mayor, a recorder, a ſteward, twenty-four aldermen, and forty-eight common councilmen.

Near this place was fought the bloody battle between *Henry Percy*, ſurnamed *Hotſpur*, and *Henry* IV. king of *England*, in the year 1400, in which the former was killed, and his army entirely defeated; the place is ſtill called *Battle-field*. This town is alſo famous for the reception it gave to *Charles* I. but the fate of the war afterward turning againſt the king, the town was almoſt ruined; but it has now fully recovered from this diſaſter: the walls and gates are ſtill ſtanding, but uſeleſs, and the old caſtle is gone to ruins. This town gives title of earl to the noble family of *Talbot*, premier earl of *England*.

About twelve miles S. E. of *Shrewſbury*, and near four in the ſame direction from the *Wreckin-hill*, is *Colebrook-dale*, ſituated between two towering and variegated hills, covered with wood, on the banks of the *Severn*, where the largeſt iron works in the kingdom are now carrying on; the advantages which this ſpot furniſhes being peculiarly great, for the ore is obtained from the adjacent hills, coal in the vale, and abundance of limeſtone from the quarries in the neighbourhood. The romantic ſcenery which nature here exhibits, and the works which are carrying on, ſeem to realiſe the ancient fable of the *Cyclops*. Mr. *Young* ſpeaks of this ſcene in the following manner:—"The noiſe of the forges, mills, &c. with all their vaſt machinery; the flames burſting from the furnaces, with the burning of coal, and the ſmoke of the lime-kilns, are altogether horridly ſublime." To complete the peculiarities of this ſpot, a bridge, entirely conſtructed of iron, is here thrown over the *Severn*. In one place it has parted, and a chaſm is formed; but ſuch is its firm baſis, that this fiſſure has neither injured its ſtrength or utility.

BRIDGENORTH is pleaſantly ſituated, twenty-one miles to the S. E. of *Shrewſbury*, and a hundred and thirty-nine to the N. W. of *London*. The air is healthy, the proſpect delightful, and it has a pretty good trade. It conſiſts of two towns, the *High* and the *Low*, which are ſeparated by the *Severn*; but united by a ſtone-bridge of ſeven arches, which has a gate and gate-houſe. It has been fortified with walls, and a caſtle now in ruins. In *Cowgate-ſtreet* a rock riſes perpendicularly, where are ſeveral tenements that have an agreeable, though a groteſque appearance. There is a hollow way cut through the rock, leading from the *High Town* to the bridge, in ſome parts of the depth of twenty feet, and likewiſe many vaults and dwellings hewn out of the rock. The town is famous for gunſmiths, and the manufacture of ſtockings.

Hales Owen is a ſmall market-town in the county of *Salop*, but ſurrounded by *Worceſterſhire* and *Staffordſhire*; and is ten miles from the borders of *Shropſhire*. In its pariſh is ſituated the *Leaſowes*, which was the paternal eſtate of the late Mr. *Shenſtone*, whoſe character was ſtrongly marked by the love of elegant ſimplicity, exhibited in his writings, as much as in the form and appearance which he gave to his lands; converting them into what the *French* call *ferme orneé*. What was the extent of this eſtate we are not told; but it may be infered from the dull and unſatisfactory account of it which is given in his works, that it might comprize, at leaſt, five hundred acres. He improved the natural beauties of the place by artificial eminences judiciouſly diſpoſed; ſtudying the beſt ſituations for planting trees and underwood, and introducing a variety of murmuring ſtreams, or long continued caſcades, one of theſe falls being 150 yards in continuity. The moſt picturesque ſcenes of the country were alſo introduced at ſituations which gave them their fulleſt effect. Since his death, which happened in the year 1763, this eſtate has had different poſſeſſors.

LUDLOW is ſeated twenty-nine miles to the S. of *Shrewſbury*, and one hundred thirty-eight to the N. W. of *London*. It was formerly defended by a caſtle, which, now in its decay, gives ſome idea of the beauty it poſſeſſed when in its flouriſhing ſtate. This was the palace of the prince of *Wales*, in right of his principality. It enjoys a fine ſituation; the country round it is exceedingly pleaſant and fertile, and nothing can be added by nature to render it a fit ſpot for a royal reſidence. It is built upon a rock, in the N. W. angle of the town, and on the W. is ſhaded by a lofty hill, and waſhed by the river. All the fine courts, royal apartments, halls, and rooms of ſtate, lie open, abandoned, and ſome of them falling down.

The town of *Ludlow* is likewiſe fortified with walls, which have ſeven gates. It is well built, and is a place of good trade. On the S. ſide of the town runs the *Temd*, over which is a good bridge. This river has ſeveral dams acroſs it, on which are placed abundance of mills. *Ludlow* has a very good church, dedicated to *St. Laurence*, the windows of which are full of painted glaſs, pretty entire; the tower is handſome, and has a pleaſant ring of ſix bells. This town has the privilege of trying and executing criminals.

SECT. XXXII.

STAFFORDSHIRE.

THIS county, as likewiſe *Cheſhire*, was the ſeat of the *Cornavii*, and was, in the times of the *Saxons*, part of the kingdom of *Mercia*; its inhabitants being what *Bede* calls "the middle *Engliſhmen*." It obtained its name from *Stafford*, the county town, and is bounded on the N. E. by *Derbyſhire*; on the S. by *Worceſterſhire*, and the detached part of *Shropſhire*; on the W. by *Shropſhire*; on the N. W. by *Cheſhire*; and on the S. E. by *Warwickſhire*. It extends forty-eight miles in length from N. to S. thirty in breadth from E. to W. and two hundred and twenty in circumference. Its form has been compared to that of a lozenge, being pointed at both ends, and broadeſt in the middle. This county, which lies in the dioceſe of *Litchfield* and *Coventry*, is divided into five hundreds, and contains one city and ſeventeen market-towns, thirty-nine vicarages, a hundred and thirty pariſhes, and ſix hundred and ſeventy villages. It ſends ten members to parliament, two for the county, two for the city of *Litchfield*, and two for each of the following towns: *Stafford*, *Newcaſtle under Lyne*, and *Tamworth*.

The air of this county is generally very good, though ſharp, eſpecially on the hilly part, which lies between *Trentham* and *Beach*. The moor-lands which are mountainous, and therefore reckoned the moſt barren, produce a ſhort, but ſweet graſs, and feed as large cattle as thoſe of *Lancaſhire*. The banks of the *Dove*, in particular, maintain the great dairies which ſupply *Uttoxeter-market* with ſuch ſtore of butter and cheeſe. Great numbers of ſheep are fed both in the northern and ſouthern parts; but they are ſmall, and their wool coarſer than that of ſeveral other counties: a great deal of it is manufactured in the cloathing and felting buſineſs. The arable grounds are no leſs fruitful than the paſtures, and even the moor-lands, when manured with marl and lime, mixed with turf-aſhes, produce good oats and barley. The ſouthern parts, and ſome of the northern, yield *wheat*, *rye*, *barley*, *pulſe*, *flax*, and *hemp*. The moor-lands and wood-lands yield *copper*, *lead*, *iron*, *marble*, *alabaſter*, *mill-ſtones*, excellent *coal*, *ſalt*, *&c.* In the more fruitful parts are ſeveral *marls* which are uſed with great ſucceſs in manuring the lands. Here is likewiſe brick-earth for red bricks, and others that burn blue; *fuller's earth*, *potter's clay*, particularly a ſort uſed in the glaſs-houſes; *red ochre*, and *tobacco-pipe clay*. It likewiſe yields *fire-ſtone*, rocks of *limeſtone*, a kind of *iron-ſtone* called *muſh*, as big as the crown of a hat, and containing about a pint of a cold, ſharp, pleaſant liquor, which the workmen are fond of; the beſt ſort of iron-wares are made of this ſtone; alſo *hæmatites*, or *blood-ſtone*.

At *Ecton-hill*, cloſe by the river *Dove*, a very valuable copper mine was diſcovered about fifty years ago, (from 1790.) Some adventurers obtained from the duke of *Devonſhire*, to whom the eſtate belongs, a leaſe for twenty five years, impowering them to ſearch for copper; and they expended 13,000l. before any returns were made: but at length, at about 200 yards deep, vaſt quantities of copper ore were found, which increaſed as the deſcent was continued, and very conſiderable fortunes were acquired before the expiration of the leaſe; ſince which time the whole undertaking has veſted in the duke, and the mine has continued to be worked to great advantage, clearing annually from eight to ten thouſand pounds. In its poſition, ſituation, and inclination, it is different from any mine yet diſcovered in *Europe*, *Aſia*, *Africa*, or *America*; the wonderful maſs of copper ore with which it is impregnated not running in regular veins or courſes, but ſinking perpendicularly down, widening and ſwelling out at the bottom in form of a bell. The works are 150 yards below the bed of the river *Dove*, being the deepeſt mine in *Great Britain*. On the oppoſite ſide of *Ecton-hill* is a valuable *lead mine*; the veins of which ore approach very near to the copper.

The principal rivers in this county are the *Trent*, the third river in *England*, which riſes among the moor-lands in the N. W. ſide of the county, and has its waters increaſed by ſeveral rivulets, with the *Sow*, *Churnet*, *Eccleſhell-water*, and other ſtreams, and then runs to the eaſtward. It becomes navigable at *Burton upon Trent*, where it leaves this county, and flowing through the counties of *Derby*, *Nottingham*, and *Lincoln*, diſcharges itſelf into the *Humber*, that great receptacle of the northern rivers. Poets have derived the name of this river from thirty kinds of fiſh which are found in it, and from thirty ſtreams which flow into it.

> The bounteous *Trent*, that in himſelf enſeams
> Both thirty ſorts of fiſh, and thirty ſundry ſtreams.

But this ought only to be conſidered as a poetical fiction. Mr. *Pennant* determines the name to be *Saxon*, and ſays it is derived from its riſing from three heads. The *Dove* riſes in the moſt northern point of *Staffordſhire*, forming the boundary between it and *Derbyſhire*, and joins the *Trent* a little below *Burton*. The *Sow* riſes a few miles to the W. of *Newcaſtle under Lyne*, and running to the S. E. falls into the *Trent*. They are all well ſtocked with fiſh, eſpecially the *Trent*.

Beſide theſe, *Staffordſhire* has plenty of water from its ſmall lakes, as *Ladford-pool*, *Cock-meer*, *Eccleſhal-caſtle-pool*, *New* and *Mare-pools*, *&c.* moſt of which have rivulets paſſing through them, or are fed with ſprings, and abound in fiſh.

Of that noble modern improvement in this country, *navigable canals*, this county may be conſidered as the centre. The canal, which forms a junction between the eaſtern and weſtern oceans, was begun in the year 1766, by him whom the early heathens would have deified as the God of Canals, Mr. *James Brindley*, who was a ſtriking inſtance of the attainments which genius is capable of making, even without the aids of education. The length of this canal is ninety-three miles; namely, thirty-one miles ſix furlongs on the N. ſide, from *Harecaſtle-hill*, where it was begun, to the duke of *Bridgewater*'s canal at *Preſton on the Hill* in *Cheſhire*, and ſixty-one miles two furlongs from the S. ſide of the hill to *Wildon-ferry*, in the county of *Derby*, where it communicates with the *Trent*. To effect this work forty locks were conſtructed on the S. ſide, there being three hundred and ſixteen feet fall. On the N. ſide there is only one lock, which is near *Middlewich*, and is fourteen feet wide. The canal, in its common dimenſions, is twenty-nine feet broad at the top, ſixteen at the bottom, and the depth four feet and an half. It is carried over the river *Dove*, in an aqueduct ſupported by twenty-three arches, and the ground is raiſed to a very conſiderable height, through an extent of a mile and two furlongs; it is alſo carried over the river *Trent* by an aqueduct ſupported by ſix arches of twenty-one feet ſpan each. Over this canal are thrown two hundred bridges, 189 of which admit carts, and 11 are only for foot-paſſengers. The mountains, hills, or rocks, that obſtructed its progreſs are penetrated, particularly at *Harecaſtle-hill*, it is conveyed under ground the length of two thouſand eight hundred and eighty yards, or a mile and half; at *Barnton* in *Cheſhire*, a ſubterraneous paſſage is effected of five hundred and ſixty yards in extent; and in the ſame neighbourhood, another of three hundred and fifty: at *Preſton on the Hill*, where it joins the duke's canal, it paſſes underground twelve hundred and forty-one yards. "In other countries," ſays Mr. *Pennant*, "the nature of the land admits a ready execution of ſuch deſigns. *Egypt* and *Holland* are levelled to the workmen's hands. Our aſpiring genius ſcoffs at obſtructions, and difficulties ſerve but to whet our ardour: our aqueducts paſs over our once admired rivers, now deſpiſed for the purpoſes of navigation: we fill vallies, we penetrate mountains! How would the prophet have been treated, who, forty years ago, ſhould have predicted, that a veſſel of twenty-five tons would be ſeen ſailing over *Stonefield*? Yet ſuch is the caſe at preſent." *Tour from Cheſter to London*, p. 50.—The boats uſed on this navigation, which, as already ſaid, will carry twenty-five tons, are drawn by one horſe: they convey goods at the rate of three halfpence a ton for every mile. From the neighbourhood of *Stafford* a branch is made from this canal to run near *Wolverhampton*, and to join the *Severn* near *Kidderminſter*: from this again two other branches are carried, one to *Birmingham*, the other to *Worceſterſhire*.

The principal places in this county are the following:

LITCHFIELD, a neat well built city, and county of itſelf, is ſeated in a pleaſant champaign country, a hundred and nineteen miles to the N. W. of *London*; and, according to Mr. *Pennant*, containing little more than three thouſand inhabitants. It has a conſiderable manufacture of ſail-cloth, and a ſmall one of ſaddle-cloths and tammies. A brook, which glides ſlowly through it, divides the city into two parts, one of which is called the *Town*, and the other the *Cloſe*. In the firſt is a very handſome hoſpital which is dedicated to *St. John*, and well endowed: this part is the largeſt and moſt populous; but the *Cloſe* has the beſt buildings, and among the reſt the cathedral, with the houſes of the reſidentiary clergy, and many other good buildings. The cathedral is eſteemed one of the moſt elegant *Gothic* ſtructures in *England*; it was founded in the year 666, but ſuffering much by various ſieges, was reſtored to its preſent ſtate by Biſhop *Hacket* in 1661; it is built of a reddiſh ſtone, and the W. end was till lately adorned with the ſtatues of all the kings who reigned in *Jeruſalem*, from *David* to the captivity. The great window over the middle door is very large, and beautifully adorned. The ſee is very ancient, having been once archiepiſcopal, with juriſdiction over the kingdoms of the *Mercians* and *Eaſt Angles*. Beſide the cathedral, here are three pariſh-churches, a free-ſchool, and two hoſpitals. The juriſdiction of the city, which has power of life and death, extends in a circle near ten miles in compaſs, and is annually rode round by the ſheriff on the eighth of September. The corporation conſiſts of a recorder, who is a nobleman of high rank, high ſteward, two bailiffs, a ſheriff, town-clerk, coroner, and twenty-four burgeſſes. One of the bailiffs is elected by the biſhop, all the other officers are annually choſen by the corporation. This town gives the title of earl to the family of *Lee*.

STAFFORD, the county town, is ſeated on the river *Sow*, which waſhes it on the the S. and W. over which is a ſtone bridge. It ſtands ſixteen miles to the N. W. of *Litchfield*, and a hundred and thirty-four to the N. W. of *London*. It is a neat and well built town, ſeated on a plain, encompaſſed by riſing grounds at a ſmall diſtance, and contains about five thouſand inhabitants; the ſtreets are large, and many of the houſes handſomely built. It has a fine ſquare market-place, in which is the county-hall, which is a very handſome ſtructure, and under it is the market-houſe. This town conſiſts of but one pariſh, but has two churches and a free-ſchool. It is governed by a mayor, a recorder, ten aldermen, and other inferior officers, and here the aſſizes and ſeſſions are held. *Stafford* is much increaſed and grown rich by the cloathing trade, and it is remarkable that it ſtill retains the ancient cuſtom of *Borough Engliſh*, which is, that the youngeſt ſons inherit the lands of their fathers within the town. This town gives the title of marquis to the family of *Gower*. The county infirmary ſtands at a ſmall diſtance from the town; it was finiſhed in the year 1772, and is ſupported by liberal annual ſubſcriptions.

NEWCASTLE UNDER LYNE is ſeated on a branch of the *Trent*, fifteen miles to the N. of *Stafford*, and a hundred and forty nine to the N. N. W. of *London*. It is a large place, with broad paved ſtreets; but the caſtle, from whence it received its name, is quite demoliſhed. It is governed by a mayor, two juſtices, two bailiffs, and a common-council; and had formerly four churches, which are now reduced to one. The principal manufacture of the town is *hat-making*, there being here an incorporated company by the name of *felt-makers*.

Near this town is carried on thoſe extenſive potteries, the principal of which belong to the ingenious Mr. *Wedgewood*, whoſe aſſiduities and abilities have brought them to the perfection they have now attained. Great numbers of poor are employed in theſe works, whoſe ſmall dwellings extend near ten miles; one village has received the name of *Etruria*, from the reſemblance which the clay there dug up bears to the ancient *Etruſcan* earth. The country here furniſhes coal, and coarſe clay for moulds, in great abundance; but much of the fineſt clays are brought from *Dorſetſhire*, and flints, (which are ground down very fine and incorporated with them, forming a kind of factitious ſtone, when hardened by fire,) are procured from various parts; ſome from *Wales*, others from the chalk pits near *Graveſend*. The canals which extend in ſo many different directions are extremely beneficial in facilitating the carriage of theſe goods both to the capital, and other ſea-ports, from whence a large exportation is made to the continent.

The adjacent parts yield pit-coal, which ſhining with a variety of colours, is therefore called *peacock coal*.

About three miles S. E. of *Newcaſtle* is the little town of **TRENTHAM**, ſo called from the river *Trent*, which riſes there, where is the noble ſeat of the marquis of *Stafford*.

WOLVERHAMPTON, or **WOOLVERHAMPTON**, a very ancient, large, and flouriſhing town, a hundred and thirty-one miles to the N. W. of *London*, is pleaſantly ſeated on a hill. The houſes are pretty well built, and the ſtreets are for the moſt part broad and well paved. It has an old collegiate church annexed to the deanery of *Windſor*, in which are ſeveral ancient monuments, and a very handſome chapel; alſo a *Preſbyterian*, a *Roman Catholic*, and a *Quakers* meeting-houſe. Here the trade of lock-making is carried on to great perfection, as alſo are the making of moſt other utenſils in braſs and iron, which are ſent from hence and exported all over *Europe*. A market for iron-work is held weekly, ſome of which is made in the town; but the principal part is brought to the market by the farmers for ſeveral miles round, where every farm has one forge or more; ſo that the farmers work at their forges as ſmiths, when they are not employed in the fields, and what they bring to market is bought up by the great tradeſmen, who ſend it to *London*. The towns of *Dudley* and *Walſall* are employed in the ſame manufactures.

Burton upon Trent is remarkable for a peculiar kind of ſtrong-ale which is brewed there in great quantities, and conveyed to *London*, by means of the *Trent*, as far as *Hull*, and from thence coaſtways.

SECT. XXXIV.

LEICESTERSHIRE.

THIS county takes its name from *Leiceſter*, its capital, which is obtained from its ſituation on the river *Leire*, now called the *Soar*, and is bounded on the N. by *Nottinghamſhire*; on the N. W. by *Derbyſhire*; on the E. by *Lincolnſhire*, and *Rutlandſhire*; on the S. E. by *Northamptonſhire*; and on the S. W. by *Warwickſhire*. It extends about thirty-five miles from E. to W. thirty from N. to S. and about ninety-ſix in circumference.

It lies in the dioceſe of *Lincoln*, and is divided into ſix hundreds, contains thirteen market-towns, eighty-one vicarages, a hundred and ninety-two pariſhes, ten parks, five hundred and fifty villages, and about a hundred and twelve thouſand two hundred inhabitants; but ſends only four members to parliament, namely, two for the county, and the like number for the town of *Leiceſter*.

The air of this county is very healthful; but the ſoil is different in different parts: in the S. W. it is rich and fruitful both for corn and paſture; but ſo deſtitute of fuel, that the inhabitants burn dried cow-dung. In this part there are, however, fine meadows on the banks of the *Avon*. The N. E. part, eſpecially about the river *Wreke*, is chiefly barren, mountainous, and rocky, here being the lofty *Bardon-hills*, and *Chaenwood*, or *Charley-foreſt*; but it affords much wood and pit-coal, and feeds vaſt numbers of ſheep, which here, and in *Lincolnſhire*, are the largeſt mutton with which the *London* markets are ſupplied, and have the greateſt fleeces of wool of any in *England*, but no horns; nor is the wool leſs fine on account of its quantity, and, ſome few places excepted, is the longeſt ſtaple in the whole iſland. The ſheep-breeding country reaches from the river *Anker*, on the confines of *Warwickſhire*, to the *Humber*, at the fartheſt end of *Lincolnſhire*, which is near a hundred miles in length; and from the banks of the *Trent*, in *Lincolnſhire* and *Leiceſterſhire*, to thoſe of the *Ouſe*, which is above ſixty miles in breadth.

The horſes fed here are alſo the largeſt in *England*, they being generally the great black coach and dray-horſes, of which ſuch numbers are continually ſent up to *London*. This county produces *wheat*, *barley*, *peas*, and *oats*; but its moſt natural and plentiful crops are of *beans*.

Its principal rivers, the *Avon*, the *Soar*, anciently called the *Leire*, the *Anker*, and the *Welland*, which riſes in the W. part of this county, form four different courſes; for the *Avon* ſoon leaves this county, and runs to *Warwick*. The *Soar*, the principal river, firſt runs N. E. by *Leiceſter*, till having received the *Wreke*, it turns to the N. W. and falls into the *Trent*, where the three counties, *Leiceſterſhire*, *Derbyſhire*, and *Nottinghamſhire*, meet. The *Anker* runs N. W. to *Atherſton*, on the edge of *Warwickſhire*. The *Welland* runs N. E. by *Harborough* to *Stamford*. The *Wreke* riſes in a part of the county called the *Wold*, and runs weſtward till it falls into the *Soar*.

We ſhall now ſpeak of the principal places of this county.

LEICESTER, the county town, is ſeated on the river *Soar*, by which it is half ſurrounded, and is ninety-nine miles from *London*. It is a very ancient place, was once the ſee of a biſhop, and is ſaid to have had thirty-two pariſh-churches, which are now reduced to five, with ſeveral meeting-houſes. It has a very ſpacious market-place, and the ſtreets are paved, but have many old buildings. It is governed by a mayor, *&c.* and the freemen of *Leiceſter* are, by their charter, exempted from paying toll in all the fairs and markets in *England*.

Before the caſtle was diſmantled it was a vaſt building, in which the great *Henry*, duke of *Lancaſter*, kept his court; the hall and kitchen ſtill remain entire, the former of which is very lofty and ſpacious; here the courts of juſtice are held at the aſſizes. The principal buſineſs of the town is ſtocking-weaving.

Many curious relics have been found in this town. At the abbey of *St. Mary de Pree*, or *Leiceſter Abbey*, now in ruins, cardinal *Wolſey* died (28th November 1530) in his way from *York* to *London*, whilſt in the cuſtody of the keeper of the *Tower*.

The firſt law for burning heretics, by which lord *Cobham* and others ſuffered death, was made in a parliament held here, in the reign of *Henry* V. declaring the favourers of *Wickliff's* doctrine heretics and traitors. In the laſt civil wars *Leiceſter* was beſieged by *Charles* I. and taken by ſtorm, on the thirty-firſt of May, 1645, when the garriſon received no quarter. Some of the committee were hanged, and the inhabitants in general plundered; but Sir *Thomas Fairfax* ſoon after advancing with the parliament's forces, again beſieged it, and obliged the royaliſts to ſurrender upon terms. It gives title of earl to the family of *Townſhend*, lord de *Ferrars*.

About eleven miles W. of *Leiceſter*, near *Market Boſworth*, is the field in which the deciſive battle was fought, 22d Auguſt 1485, between *Richard* III. and the earl of *Richmond*, afterward *Henry* VII. in which Richard was ſlain, with about four thouſand of his men, among whom were the duke of *Norfolk*, lord *Ferrars* of *Chartley*, Sir *Richard Ratcliffe*, Sir *Robert Piercy*, and Sir *Robert Brackenbury*. Sir *William Cateſby* was made priſoner, and beheaded at *Leiceſter*, with ſome other adherents to the tyrant. The body of *Richard* was interred in the church of the *Grayfriars* at *Leiceſter*.

LOUGHBOROUGH is pleaſantly ſeated among fertile meadows, near the foreſt of *Charwood*, one hundred and ten miles from *London*, on the river *Soar*, over which it has a bridge, and is a handſome town, with one ſpacious church. The manufacture of ſtockings is in a thriving ſtate in this town, which is greatly ſerved by a canal, communicating with the *Trent*. It gives title of baron to the lord chief juſtice of the court of Common Pleas.

ASHBY DE LA ZOUCHE is a very conſiderable market-town, which took its name from the *Zouches*, its lords; it is ſeated between *Preſton-Park*, and the great park on the ſkirts of *Derbyſhire*, about a hundred miles from *London*. It has a large handſome church, near which ſtand the ruins of the earl of *Huntingdon*'s caſtle, deſtroyed in 1648. There is a free-ſchool here endowed by the earl of *Huntingdon*, to whom the manor belongs. The town is noted for its large manufacture of hats, in which ſome hundreds are employed.

SECT. XXXV.

RUTLANDSHIRE.

THIS, the leaſt of all the counties in *England*, is bounded on the N. and N. E. by *Lincolnſhire*; on the S. and S. E. by *Northamptonſhire*; and on the W. and N. W. by *Leiceſterſhire*; extending from N. to S. about fifteen miles, from E. to W. ten, and about forty in circumference. This county is divided into five hundreds, in which are only two market-towns, ten vicarages, forty-eight pariſhes, one hundred and eleven villages, about three thouſand two hundred and ſixty houſes, and ſixteen thouſand three hundred inhabitants. It lies in the dioceſe of *Peterborough*, and ſends only two members to parliament, which are the two knights for the ſhire.

The air is ſweet and ſalubrious, it being quite clear from fogs and miſts. *Rutlandſhire* is extremely well watered, for, beſides the *Welland*, which laves the S. and S. E. borders, and the *Guaſh* or *Waſh*, which interſects the country from E. to W. quite through the middle of it, there are abundance of ſmall rivers and brooks which fall into them on all ſides. They all afford plenty of excellent fiſh, which makes ſome amends for the want of ſea-fiſh, from which the inhabitants are in a great meaſure debarred by their inland ſituation.

The ſoil is very fruitful in corn and paſture, which feeds great numbers of cattle, eſpecially ſheep. The vale of *Catmoſe*, in which *Okeham* ſtands, is not inferior in point of fertility, to the vales of *White-horſe* and *Belvoir*. This county gives the title of duke to the noble family of *Manners*. The towns it contains are, *Okeham* and *Uppingham*.

OKEHAM, the county town, ninety-four miles from *London*. It is pretty well built, has a church dedicated to *All Saints*, which is a handſome ſtructure, with a lofty ſpire, a free-ſchool, and an hoſpital. It has likewiſe an ancient caſtle, in which the aſſizes are held.

SECT. XXXVI.

LINCOLNSHIRE.

THIS county takes its name from the city of *Lincoln*, which by the ancient *Britons* was called *Lindcoit*, and by the *Saxons Lincollſcire*; it is bounded on the N. by the *Humber*, which ſeparates it from *Yorkſhire*; on the E. by the *German* ocean, the arm of the ſea called the *Waſh*, and a ſmall part of *Norfolk*; on the S. by *Cambridgeſhire* and *Northamptonſhire*; on the S. W. by *Rutlandſhire* and *Leiceſterſhire*; on the W. by *Nottinghamſhire*; and on the N. W. by a ſmall part of *Yorkſhire*.

It is ſeventy-ſeven miles from N. to S. and in the middle, where wideſt, forty-five. It is generally divided into three parts, namely, *Holland* on the S. E. ſide, *Keſteven* on the S. W. and *Lindſay* on the N. which laſt diviſion is the largeſt, for it includes all that lies N. of *Lincoln* city, and the *Foſſe-dyke*, which *Henry* I. cut between the *Witham* and the *Trent*. This county is ſubdivided into three provinces, and thirty hundreds, contains one city, five parliamentary boroughs, thirty-five market-towns, two hundred and fifty-ſix vicarages, one thouſand five hundred houſes, and about two hundred thouſand nine hundred inhabitants. It is in the dioceſe of *Lincoln*, and ſends twelve members to parliament, two for the county, and two for each of the following places: *Lincoln*, *Stamford*, *Grantham*, *Boſton*, and *Grimſby*.

This county is well watered with rivers, the principal of which are the *Trent*, which waſhes the weſtern edge of the county, and falls into the *Humber*, the northern boundary; the *Witham*, which riſing in the S. W. part of the county, runs northward, till it receives the *Foſſe-dyke* at *Lincoln*, where it turns to the S. E. and at length falls into the *German* ocean below *Boſton*; this river abounds with pike: the *Welland* parts this county from *Northamptonſhire*, running through *Holland* diviſion into the *German* ocean; the waters likewiſe nouriſh vaſt quantities of *reeds*, which are annually cut, and uſed for the purpoſe of thatching.

The air of this county is various in its three grand diviſions: that of *Holland*, a name aptly given it from its natural reſemblance to the province of the *United Netherlands* ſo called, as it is partly under water, and the reſt of it moiſt and fenny, is unwholeſome, and vaſt ſwarms of inſects infeſt the inhabitants in the ſummer ſeaſon; *Keſteven* is more ſalubrious, it being leſs affected with the fogs from the fen country, and its ſoil more fruitful; *Lindſay* is generally eſteemed healthy, eſpecially on the weſtern ſide. The ſoil is in moſt places very rich, the inland part producing corn in great plenty, and the fens cole-ſeed, and very rich paſtures; whence their breed of cattle is larger than that of any other county in *England*, except *Somerſetſhire*; their horſes are alſo excellent, and very large: the hunting hounds and hares are particularly noted for their extreme ſwiftneſs. Here are all the common fruits, and they are ſaid to have better *pippins* than thoſe of *Kent*, eſpecially ſuch as grow in the diviſion of *Holland*, and about *Kirton*, both of which ſorts are very wholeſome and delicious; yet, being grafted on their own ſtock, are much improved, and are then called *rennets*.

The churches of this county are ſaid to be its chief ornaments, it being commonly obſerved, that no county has better churches and worſe houſes.

The principal places in *Lincolnſhire* are the following:

LINCOLN, a city one hundred and thirty-five miles N. of *London*; it was anciently a *Roman* colony called, *Lindum Colonia*, and is pleaſantly ſituated on the top, ſide, and foot of a hill. The river *Witham* here divides into ſeveral ſtreams, and waters the lower part of the city, over which are ſeveral bridges. It had formerly fifty churches, which are now reduced to thirteen, beſides the cathedral or minſter, and meeting-houſes of every denomination of Diſſenters. The cathedral is one of the moſt ſuperb ſtructures of the kind in *England*, and, from its ſituation on the top of a hill, may be ſeen from five or ſix counties. It has a double croſs or tranſept, with two ſpires or towers, and many bells, particularly in the N. tower, which has the fineſt great bell in *England*, called *Tom of Lincoln*: it weighs four tons eighteen hundred and ninety-four pounds, and is twenty-two feet eight inches in circumference. A model of this great bell has been made, and put up in an antique building, on the N. E. corner of the caſtle-hill, for the gratification of curious ſtrangers. The middle of the *Round tower* is the higheſt in the kingdom, and when the ſpire was ſtanding, it muſt, in proportion to the height of the tower, have exceeded that of *Old St. Paul's*, which was five hundred and twenty feet. The monks were ſo proud of this ſtructure, that they would have it the devil looked upon it with an envious eye, whence the proverb, "He "looks as the devil does over *Lincoln*." Now there are only four very ordinary pinnacles, one at each corner. It has two large gates on the W.: the cloiſters and library are fine, and the latter well furniſhed with printed books and manuſcripts. Two catharine-wheel windows at the ends of the larger tranſept are remarkably beautiful, and adorned with painted glaſs.

To the S. of the cathedral, upon the very brow of the hill, is the biſhop's palace. Though this is the largeſt dioceſe in *England*, the revenue of the biſhoprick is not in proportion; but was formerly immenſely great. In this dioceſe are contained the counties of *Lincoln*, *Leiceſter*, *Huntingdon*, *Bedford*, *Bucks*, and part of *Hertfordſhire*; and in them twelve hundred and fifty-five pariſhes, of which five hundred and ſeventy-ſeven are impropriations.

In the upper town are good buildings inhabited by gentry; there are likewiſe the houſes of the prebendaries and other clergy. The communication between the upper and lower town is very troubleſome; but in the ſteepeſt part is the briſkeſt trade, and here the ſhops are well furniſhed with commodities; but the buildings are generally old, eſpecially in the lower part. This is a city and county of itſelf: it is governed by a mayor, twelve aldermen, two ſheriffs, &c. whoſe juriſdiction extends twenty miles in circumference. It has given the title of earl to the noble family of *Clinton* ever ſince the reign of queen *Elizabeth*. Here are four charity ſchools, in each of which thirty poor children are taught by clergymen's widows.

STAMFORD, ſeated on the *Welland*, eighty-nine miles from *London*, is a large and populous borough in the ſubdiviſion of *Keſteven*. It ſtands on the ſlope of a hill, and has a ſtone bridge of five arches over the river, on the confines of *Northamptonſhire* and *Rutlandſhire*. The river is navigable by barges up to the town. Here is a handſome town-hall and ſix pariſh-churches, with ſeveral good ſtreets and fine ſtructures. It is an ancient town, being known in the time of the *Romans*, and had in former times a college, whoſe ſtudents removed to *Brazen-Noſe-College*, in *Oxford*; but though its trade is not very conſiderable, the inhabitants are numerous and rich.

The bridge forms a communication with a part of *Stamford* called ST. MARTIN'S, or *Stamford Baron*, which is ſituated in *Northamptonſhire*, and has a pariſh church. It conſiſts of one pretty long ſtreet. Near to it is *Burleigh*, the noble and venerable ſeat of the *Exeter* family, built by the lord-treaſurer, in the reign of queen *Elizabeth*, and now the reſidence of the earl of *Exeter*, who takes his barony from hence, and here poſſeſſes one of the fineſt collections of pictures which the kingdom can boaſt. *Stamford* gives title of earl to the family of *Grey*.

BOSTON, a large, populous, and well built ſea-port town, in the ſub-diviſion called *Holland*, twenty-ſix miles S. E. of *Lincoln*, and a hundred and twenty N. of *London*, is built on both ſides of the river *Witham*, at its mouth. It has a commodious harbour on the *German* ocean, is full of merchants, and enjoys a good trade. In the year 1781 the Cuſtom-houſe receipts at this port amounted to 6,066 l. the amount of ſalaries and incidents was 1,854 l. and the nett produce to the revenue 4,212 l. The town is ſupplied with water by pipes from a reſervoir made by act of parliament, in the *Weſt Fen*. The church is without croſs ailes, and is ſaid to be the largeſt pariſh-church in the world; and its tower, which is two hundred and eighty feet from the ground, ſerves as a land-mark to mariners, not only into this port, but even into the mouth of the *Ouſe*, being ſeen out at ſea to the entrance of the channels called *Lynn-deeps* and *Boſton-deeps*, which are very difficult navigations. The living is a vicarage, in the gift of the mayor and burgeſſes. The town is governed by a mayor, a recorder, twelve aldermen, eighteen common-councilmen, &c. It gives title of *Baron* to the noble family of *Irby*; Sir *William Irby* being ſo created by his preſent Majeſty, in 1761.

Among the fens in this neighbourhood great numbers of geeſe are bred, which are driven up in large droves to *London* during the ſeaſon; decoys for the various kinds of wild-ducks are here more numerous than in any other part of *England*. More to the ſouthward the *herons* alſo reſort in great numbers, building their lofty neſts on the branches of trees in the manner of rooks.

GRANTHAM, a neat populous borough of the ſub-diviſion called *Keſteven*, is a place of great reſort, and has abundance of good inns, it lying on the N. road, a hundred and ten miles from *London*. It has a large and noble church, with a ſtone ſpire two hundred and eighty feet high, which, by a mere deception of the ſight, ſeems to ſtand awry. It is governed by an alderman, twelve juſtices of the peace, a recorder, a coroner, &c. It has alſo a good free-ſchool, built and endowed by Dr. *Richard Fox*, biſhop of *Wincheſter*, who was a native of this town; and here the celebrated Sir *Iſaac Newton* received his firſt education. In this town there are alſo two charity-ſchools, and upon the neighbouring courſe are frequently horſe-races. It gives title of baron to the noble family of *Robinſon*; the father of the preſent Lord being ſo created in 1761.

GAINSBOROUGH, a large and well built town of *Lindſay* ſub-diviſion, on the borders of *Nottinghamſhire*, is ſeated on the *Trent*, a hundred and fifty-three miles from *London*; it has a large market held weekly on Tueſdays, and gives title of earl to the noble family of *Noel*. Its church was rebuilt by act of parliament in 1735; and here are ſeveral meeting-houſes of Diſſenters. The *Danes* landed here when they came up the *Trent*, which brings up ſhips of burden with the tide, though it is forty miles diſtance by water from the *Humber*.

SECT. XXXVII.

NORFOLK.

THIS county received its name from its northern ſituation with reſpect to *Suffolk*; it is bounded on the N. and E. ſides by the *German* ocean; on the W. by *Cambridgeſhire*, a ſmall part of *Lincolnſhire*, and the *Waſh*; on the S. and a ſmall part of the S. E. by *Suffolk*. It extends about ſeventy-ſeven miles from E. to W. forty-five from N. to S. and about two hundred and twenty in circumference. In ſhape it very much reſembles a tortoiſe, the weſtern projection forming the head of that animal, and the reſt of the county the ſhell. The whole county is remarkably level.

It is divided into thirty-one hundreds, and contains a hundred and ſixty-four vicarages, one city and thirty-two market-towns, ſix hundred and ſixty pariſhes, near fifteen hundred villages, about forty-ſeven thouſand one hundred and eighty houſes, and two hundred and eighty-three thouſand inhabitants. This county is in the dioceſe of *Norwich*, and ſends twelve members to parliament, namely, two for the county, and two for each of the following boroughs: *Norwich*, *Lynn-Regis*, *Yarmouth*, *Thetford*, and *Caſtle-Riſing*.

The air of this county is ſharp and piercing, which throws the ſeaſons backwarder than in other counties under the ſame latitude in *England*. The inland county is thought very healthy; but the ſoil is obſerved to have a greater variety in it than is found perhaps in any other county, and from thence has been conſidered as an epitome of *England*, it having all the kinds of ſoil that is found throughout the kingdom, namely, arable, paſture, woodlands, meadows, heaths, fens, light ſandy ground, and deep clay; but even the worſt of theſe are far from being unprofitable, the ſandy heaths feeding ſheep, and breeding rabbits, and the fens affording rich paſture for cattle. Much barley and wheat are grown, and turnips in great quantities for the feeding of cattle. The chief commodities are *wheat* and *barley*, *ſheep* and *horned cattle*, *wool*, *rabbits*, and *honey*; no county in *England* rears ſo many and ſuch fine *turkeys*; *herrings* and *mackarel* are caught in great abundance in their reſpective ſeaſons; *jet* and *amber* are thrown upon the ſea-coſt. The manufactures are *worſted*, *woollens*, and *ſilks*, in which all the inland parts are employed. This county gives title of duke to the noble family of *Howard*, premier duke of *England*.

The principal rivers of *Norfolk* are the *Great Ouſe*, which divides it on the W. from *Suffolk* and *Cambridgeſhire*; the *Waveny*, which is the boundary between *Norfolk* on the S. W. and *Suffolk*: the two different courſes of theſe rivers are the more remarkable, as both riſe within a very ſmall diſtance of each other in the ſouthern edge of the county. The *Yare*, which is peculiar to *Norfolk*, riſes near the centre of the county, and runs eaſtward through *Norwich* to *Yarmouth*, where it falls into the *German* ocean. A little above this laſt mentioned town the *Yare* is joined by the *Waveney*. Theſe three rivers abound with fiſh, and are particularly famous for excellent perch; but the *Yare* has alſo a fiſh, called a *ruff*, peculiar to itſelf, that exceeds the perch in the delicacy of its taſte; it is much about the ſame ſize, and the body is covered with ſharp prickles, from whence it has its name. The back is of a browniſh colour, the belly of a pale yellow, and about the jaws it has double ſemi-circular marks. There are likewiſe the *Nen*, the *Little Ouſe*, and the *Bure*; all of which are ſmall ſtreams.

The principal towns in this county are the following:

NORWICH, a very ancient, large, handſome, populous, and well inhabited city, ſeated on the banks of the river *Yare*, which runs through a part of it, a hundred and nine miles N. E. by N. of *London*. It is encompaſſed by walls, which have twelve gates, and has a fine old caſtle, at preſent uſed as a priſon. It has ſeveral bridges over the river, and thirty-ſix churches, beſides the cathedral, which is a handſome ſtructure, and has a lofty ſpire ſteeple; there are here alſo meeting-houſes of Diſſenters of all denominations. As the walls of this city are three miles in compaſs, the whole ſpace within them is not inhabited, as they encloſe many gardens and orchards. There are here, however, about eight thouſand houſes; the ſtreets are pretty wide, and there is a very ſpacious market-place. It has alſo a play-houſe, and a place of entertainment called *Vauxhall*.

The manufactures carried on in this city are of *camelots* or *camblets*, *crapes*, *bombazines*, and various kinds of ſtuffs, but theſe are by no means in ſo flouriſhing a ſtate as formerly: the numerous manufactures which are carried on with great ſpirit and ſucceſs at *Mancheſter* having greatly interfered with the ſtaple of this city, and rendered great numbers of poor burdenſome to the pariſhes.

YARMOUTH, a ſea-port town, a hundred and twenty-two miles to the N. E. of *London*, is ſeated on the river *Yare*, where it falls into the ſea, and is a place of great ſtrength, both by art and nature, it being almoſt ſurrounded with water, and defended by a very ſtrong fort. It is an ancient town, much older than *Norwich*, and is well built and very populous. It has the fineſt quay in *England*, if not in *Europe*, and is ſaid to equal at leaſt that of *Marſeilles*; for the ſhips ride here ſo cloſe, that for half a mile together they go acroſs the ſtream with their bowſprits over the land, their bows or heads touching the very wharf; ſo that one may walk from ſhip to ſhip as on a floating bridge, all along by the ſhore ſide, but it will not admit of ſhips of large burden. The quay, which reaches from the draw-bridge almoſt to the ſouth gate, is ſo ſpacious and wide, that in ſome places it is near a hundred yards from the houſes to the wharf. In this pleaſant and agreeable range of buildings are ſome very magnificent ſtructures, and among the reſt the cuſtom-houſe, the town-hall, and ſome merchants houſes which reſemble little palaces rather than the dwelling-houſes of private men.

The receipts at the cuſtom-houſe of *Yarmouth* in the year 1781 amounted to 26,634l. and the ſalaries and incidents to 6,893l.

The greateſt defect of this town ſeems to be, that though it is very rich, and increaſing in wealth and trade, and conſequently in people, there is not room to enlarge it by new buildings. It conſiſts of about fifteen hundred houſes, and though there are ſeveral pretty wide ſtreets, they are in general very narrow, and juſt wide enough for their little carriages to paſs through. It is eſteemed the key of this coaſt; but though the harbour is a very fine one, it is very dangerous for veſſels in windy weather. Many ſand banks lie off the coaſt of *Norfolk*, among which thoſe which are called the *Yarmouth-roads* are the moſt dangerous, and cauſe frequent ſhipwrecks. *Yarmouth* is governed by a mayor, eighteen aldermen, and thirty-ſix common-councilmen. This town, though ſo conſiderable, has only two churches, but it has a conſiderable number of meeting-houſes. The ſteeple of *St. Nicholas*'s church is ſo high, that it ſerves for a land-mark to thoſe at ſea; and it is remarkable, that which way ſoever this ſteeple is viewed, it appears crooked.

Yarmouth is noted for its red herrings, which are jocoſely called *Yarmouth* capons, and alſo for its coaches, which are nothing more than ſledges drawn with one horſe. During the fiſhing-ſeaſon the land is covered with people, and the river with barks and boats, buſy day and night in landing and carrying off the herrings, which are caught here in almoſt incredible quantities, particularly in the months of October and November. The *herrings* are chiefly converted into what are called *red herrings*, by ſalting and drying in wood-ſmoke. *Mackarel* are caught in great abundance during the ſeaſon, in the months of May and June. After the herrings are cured, they export them to *Genoa*, *Leghorn*, *Naples*, *Meſſina*, *Venice*, *Spain*, and *Portugal*; and at the ſame time carry to thoſe places great quantities of woollen goods. They have alſo a conſiderable trade in woollen manufactures to *Holland*, *Norway*, and the *Baltic*, from whence they import timber and naval ſtores: they have alſo a great ſhare in the coal-trade between *Newcaſtle* and the port of *London*. It is likewiſe concerned in the *Greenland* fiſhery. *Yarmouth* is a place much reſorted to for ſea-bathing, at the proper ſeaſon.

LYNN-REGIS, or KING'S-LYNN, was firſt called *Lynn-Epiſcopi*, as being the property of the biſhop of *Norwich*, till the diſſolution of monaſteries by *Henry* VIII. when that prince becoming its poſſeſſor, conferred on it the title of *Lynn-Regis*. It is a handſome, large, and well built town, one hundred and two miles N. E. of *London*.

It is ſeated at the mouth of the *Ouſe*, which, by means of the ſeveral ſtreams it receives before it falls into the ſea, forms a navigation, by which the merchants of *Lynn* entirely ſupply *Cambridgeſhire*, *Huntingdonſhire*, the N. part of *Buckinghamſhire*, *Bedfordſhire*, and *Northamptonſhire*, as well as the inland parts of *Norfolk* and *Suffolk*; more particularly with coals and wine: and they carry on a conſiderable foreign trade, eſpecially to *Holland*, *Norway*, the *Baltic*, *Spain*, and *Portugal*. The harbour is ſafe when ſhips have once entered it; but there are flats and ſhoals at the entrance, at which buoys are placed; and there are always good pilots ready for ſteering veſſels into a ſecure ſtation.

The town contains about two thouſand four hundred houſes; and is ſtrong by ſea, as it was alſo formerly by land, where there are the ruins of the works, in part, demoliſhed in the civil wars, yet not ſo much but they may be eaſily repaired. *St. Ann*'s fort and platform at the N. E. end commands all ſhips that enter the harbour.

It has a ſpacious and fine market-place, in which is a handſome ſtatue of *James* II. with a fine croſs, which has a dome and gallery round it, ſupported by ſixteen columns; and the market-houſe is a modern free-ſtone building, ſeventy feet high, neatly adorned with ſtatues and other embelliſhments. Four rivulets, over which are fifteen bridges, run through the town; and the tide in the *Ouſe*, which is here about as broad as the *Thames* at *London-bridge*, riſes twenty feet perpendicular. The town is ſupplied with freſh water by conduits and pipes from the neighbourhood.

The king's *ſtaith-yard* is a very handſome ſquare, adorned with a ſtatue of *James* II. here the greateſt part of the wines imported are landed. The town-houſe, called *Trinity-hall*, is an ancient and noble building. The *Exchange*, in the middle of the town, is an elegant ſtructure of free-ſtone, adorned with two orders of columns, and within it is the cuſtom-houſe; the receipts of which, for the year 1781, were 37,114 l. the ſalaries and incidents amounted to 3,515 l.

It has two churches, a very large chapel, and two Diſſenting meeting-houſes. *St. Margaret*'s church, which is very large, formerly belonged to an abbey. *St. Nicholas*'s chapel is very ancient, and has a tower and octangular ſpire.

In this chapel is a library, to which lord *Townſend*, the late earl of *Orford*, Sir *Charles Turner*, &c. were conſiderable benefactors.

The town is governed by a mayor, a recorder, a high ſteward, twelve aldermen, and eighteen common-council; and there is here a very laudable cuſtom, which is, that every firſt Monday of the month, the mayor, aldermen, preachers, &c. meet to hear and determine all diſputes in an amicable manner, in order to prevent law-ſuits. There are here alſo a free-ſchool, which is a ſtrong and beautiful building, two hoſpitals, and a charity-ſchool.

About twelve miles to the N. E. of *Lynn* is *Houghton*, a magnificent ſeat built by Sir *Robert Walpole*, who was afterward earl of *Orford*. The firſt ſtone of this building was laid in the year 1722, and the whole was completed in the year 1735. Here was one of the moſt valuable aſſemblages of capital pictures in the kingdom; but they are now tranſported to the frozen regions of the N. of *Europe*. The earl of *Orford* ſurvived the completion of this noble manſion only ten years, the four laſt of which he ſpent in a private ſtation, after having been prime miniſter during twenty years, previous to which exaltation, he had filled many high offices in the ſtate. He is the only miniſter in this country, ſince the time of lord-treaſurer *Burleigh*, who acquired great wealth in his eminent ſtation; beſide which, he procured for his three ſons the moſt lucrative ſinecure poſts which ſubſiſt in this country; to one the auditorſhip of the receipt of the Exchequer; to the ſecond, the clerkſhip of the *Pells*; and to the third, the office of Uſher in the ſame court, all places for life, (*See page* 504.) This was the miniſter who firſt violated the purity of the conſtitution by ſyſtematical corruption. The founder of *Houghton* expreſſed a wiſh, in the inſcription upon the firſt ſtone, that the building he was then erecting might be poſſeſſed by his deſcendants to the end of time, which is not likely to be crowned, for the title may be expected to become extinct on the death of the preſent poſſeſſor, the third earl, who, with his uncle *Horatio Walpole*, (now more than eighty years of age, and without iſſue) are the only legitimate male deſcendants of the firſt earl; from his daughter the earl of *Cholmondeley* is deſcended, but his lordſhip likewiſe has no iſſue.

SECT. XXXVIII.

NOTTINGHAMSHIRE.

THIS county takes its name from *Nottingham*, the county-town, called by the *Saxons Snottingaham*, or a houſe of *Dens*, from the ſpacious vaults dug in the rocks, in which, probably, the ancient *Britons* reſided. It is remarkable for being bounded on the four cardinal points of the compaſs by four ſingle counties, a circumſtance which is not found in the ſituation of any other county in *England*: on the N. it borders upon *Yorkſhire*; on the E. on *Lincolnſhire*; on the S. on *Leiceſterſhire*; and on the W. on *Derbyſhire*. It extends forty-eight miles in length from N. to S. and twenty-ſix in breadth from E. to W.

This county, which lies in the dioceſe of *York* is divided into ſix wapentakes, and contains nine market-towns, one hundred and ſixty-eight pariſhes, ninety-four vicarages, four hundred and fifty villages, about ſeventeen thouſand four hundred and ſixty houſes, and ninety-five thouſand inhabitants. It ſends eight members to parliament, namely, two for the county, and two for each of the following boroughs: *Nottingham*, *Eaſt-Retford*, and *Newark upon Trent*.

The air of this county is eſteemed exceedingly healthful, but the ſoil is various: the eaſtern ſide, which is called "the clay," is very fruitful, and yields great plenty of corn and graſs; but the weſtern parts, which are named "the ſand," are leſs fertile, being generally very woody, and in ſome places barren. The chief commodities are *pit-coal*, of which there is great plenty; a kind of ſtone ſomewhat like alabaſter, but not ſo hard, which when burnt, makes a plaſter harder than that of *Paris*, with which the inhabitants generally plaſter the floors of their upper rooms, inſtead of boarding them. Their other commodities are *malt*, *wool*, *liquorice*, *wood*, *fiſh*, and *fowl*. Their manufactures chiefly conſiſt of *frame-work knitting*, *glaſs*, and *earthen-ware*.

The principal rivers of this county are, the *Trent* and the *Idle*. The *Trent* is one of the three moſt capital rivers in *England*, running a courſe of near two hundred miles before it reaches the *Humber*. Its ſpring-head is in the highlands of *Staffordſhire*, as has been already obſerved in treating of that county, and from thence it runs through *Derbyſhire*, *Nottinghamſhire*, and *Lincolnſhire*. It enters this county at the S. W. point, where it is joined by the *Erwaſh*, and runs to the eaſtward till it reaches *Newark*, where it forms an iſland, and turning to the N. after a courſe of about fourteen miles, it forms the boundary of this county on the ſide of *Lincolnſhire*. The *Idle* riſes in *Sherwood-foreſt*, and running through the northern parts of the county to the edge of *Yorkſhire* and *Lincolnſhire*, there joins the *Trent*.

Almoſt the whole of the middle and weſtern parts of the county were formerly occupied by the extenſive foreſt of *Sherwood*, which is the only royal foreſt N. of the *Trent*; but the wood has in many parts been cleared, and the extent of the foreſt much contracted. A canal from *Cheſterfield* in *Derbyſhire* runs acroſs the northern part of this county, and falls into the *Trent* juſt as that river ceaſes to be its boundary; but of this more will be ſaid when treating of *Derbyſhire*.

The principal towns in this county are the following:

NOTTINGHAM, which is delightfully ſeated on a rock, one hundred and twenty-two miles N. W. of *London*, at the foot of which runs the river *Lene*, which, at a mile's diſtance, falls into the *Trent*, over which there is a handſome ſtone bridge, and another over the *Lene*. The town is large and well built; moſt of the houſes in the market-place and principal ſtreets, have their front ſupported by lofty ſtone columns, of the *Doric* order, which not only make a very handſome appearance, but afford ſhelter in bad weather. The ſtreets are well paved, and from their ſituation on a rock, are always clean. The market-place, which is large and ſpacious, has a beautiful croſs, in which a kind of dome is ſupported by very lofty ſtone columns, under which is kept the corn-market. In a ſtreet at ſome diſtance from this market, are ſeveral ſtone ſteps diminiſhing as they riſe, and on the top ſtands a very noble column crowned with a ball. This is called the *Hen-croſs*, and here is a market for all ſorts of poultry.

The rock on which the town ſtands is ſo ſoft as eaſily to yield to the chiſſel, and renders the town remarkable for its cellars, two or three being ſometimes under each other, with the ſteps hewn out of the rock, in ſome places to the number of ſixty or ſeventy in depth. Theſe conveniencies, together with the goodneſs of the malt, enable the inhabitants to provide the beſt malt liquors, and to make a conſiderable advantage in ſending them to moſt parts of *England*; for which purpoſe the low lands of this county are chiefly ſowed with barley. As the meadows which lie between the town and the *Trent* are liable to be overflowed, a good boarded cauſeway for foot-paſſengers extends about a mile in length.

The town has three churches; that of *St. Mary*'s is a large and noble *Gothic* ſtructure, with a ſquare tower; and that of *St. Peter*'s is a very handſome building, with a painting of the Laſt Supper for the altar-piece. It has a lofty ſpire, and each church has a good ring of bells and chimes. *St. Nicholas*'s church, is, however, a meaner building. There are alſo eight meeting-houſes.

Heavy goods are brought hither from *London* by ſea, and from thence up the river *Trent*, and many coal-pits within three or four miles of the town, afford plenty of fuel at a ſmall expence. It is governed by a mayor, a recorder, ſix aldermen, two ſheriffs, two chamberlains, two coroners, and eighteen common-council.

Here the manufacture of ſtockings is very flouriſhing and extenſive, particularly the finer kinds, and thoſe of ſilk and cotton; the materials for the latter are prepared by ſpinning machines which are worked by water. Here is likewiſe a pottery for coarſe earthen ware. It was in this town that the royal ſtandard was firſt erected, on the breaking out of the civil war in the reign of *Charles* I.

At the S. W. end of the town, on a very elevated ſpot, is a magnificent ſtructure, now called *Wollaton-hall*, built entirely of ſtone, and commanding a delightful proſpect over the meadows below it, which extend about fourteen miles in length, like a level bowling-green, interſperſed with villages, and the river *Trent* winding through them; on the E. end the view extends over the town and the diſtant country; and on the N. over the park, which is beautifully variegated with hills and valleys.

In this park are the remains of a church or pagan temple, hewn out of the rock, the roof vaulted and ſupported by a kind of maſſy pillars, in a very rude taſte: the floor, the roof, the pillars, and ſides, being all of a piece. In the ſame ledge of perpendicular rocks, are the remains of ſeveral houſes, chambers, dove-houſes, *&c.* which might poſſibly be the reſidence of ſome of the ancient *Druids*.

To the E. of the town is *Holme Pierpoint*, the ſeat of the late duke of *Kingſton*. Beſide theſe noble ſeats this county can boaſt many others, more eſpecially in and about *Sherwood-foreſt*, the three principal of which are ſituated ſo near to each other, that a circuit of leſs than thirty miles might comprehend them all. They are, *Workſop-manor*, the ſeat of the duke of *Norfolk*; *Welbeck-abbey*, the reſidence of the duke of *Portland*; and *Clumber-houſe* and *Park*, belonging to the duke of *Newcaſtle*.

NEWARK is a very handſome well built town, ſeated on the *Trent*, ſeventeen miles to the N. E. of *Nottingham*, and one hundred and twenty-three from *London*. The market-place is a noble ſquare, and the church is large and ſpacious, with a handſome lofty ſpire. The town is under the government of a mayor, and twelve aldermen. Here was once a handſome caſtle, which is now in ruins. The *Trent* here divides itſelf and forms an iſland, to which there is a bridge leading from the town.

MANSFIELD, a large well built market-town, ſeated in the foreſt of *Sherwood*, thirteen miles to the N. of *Nottingham*, and one hundred and thirty-ſix to the N. W. of *London*; carries on a conſiderable trade in malt. It gives title of earl to the late Lord Chief Juſtice of *England*.

RETFORD is divided into *Eaſt* and *Weſt Retford*, by the river *Idle*, which runs through it. This town enjoys many conſiderable privileges, and is governed by a ſteward, who is generally a perſon of quality. In *Weſt Retford* is a very fine hoſpital, founded in 1666, by Dr. *Dorrel*, and ſince incorporated.

SECT. XXXIX.

DERBYSHIRE

IS bounded on the N. by *Yorkſhire* and a part of *Cheſhire*; on the E. by *Nottinghamſhire*; on the S. by *Leiceſterſhire* and a point of *Warwickſhire*; on the W. by *Staffordſhire*; and on the N. W. by *Cheſhire*. It extends fifty-nine miles in length from N. to S. and is thirty-four miles from E. to W. where broadeſt; but in the ſouthern part it is not above ſix: it is computed to be near one hundred and thirty miles in circumference.

This county is divided into ſix hundreds, in which are contained eleven market-towns, fifty-three vicarages, one hundred and ſix pariſhes, near five hundred villages, twenty-one thouſand one hundred and fifty houſes, and one hundred twenty-ſix thouſand nine hundred inhabitants. It is ſeated in the dioceſe of *Litchfield* and *Coventry*, and ſends four members to parliament, two for the county, and two for the town of *Derby*.

The air, eſpecially on the E. ſide, is wholeſome and agreeable; but in the mountains of the *Peak*, toward the N. it is ſharp and cold. The N. and W. parts are hilly and ſtony. The hills in the northern part of the county, by attracting the paſſing clouds, cauſe the rain to deſcend there in greater abundance than on the circumjacent counties. Very little timber, or even underwood, grow here, and the fields are univerſally encloſed with ſtone walls. The ſouthern and eaſtern parts have rich lands, that are pleaſant and fertile, producing moſt kinds of grain, particularly barley. Even the N. W. part, called the *Peak*, is abundantly rich; for the bleak mountains abound in the beſt *lead*, with *marble*, *alabaſter*, *mill-ſtones*, *iron*, *coal*, and a coarſe ſort of *cryſtal*, and the intermediate valleys are fruitful in graſs.

The *terra ponderoſa*, or *heavy earth*, is here found in great quantities, as well as in ſome other parts of the kingdom. This kind of earth ſeems to be the medium ſubſtance between earths and ores, and ſuch connective ſeries is obſervable throughout nature, in animals, vegetables, and foſſils. The penetrating mind of Dr. *Crawford* has very lately diſcovered in this heavy earth important medical virtues, particularly in the cure of ſcrofulous diſeaſes; and his diſintereſted generoſity has led him to make the diſcovery public, inſtead of deriving pecuniary advantages to himſelf by its concealment.

The principal rivers are the *Derwent*, the *Dove*, the *Erwaſh*, and the *Trent*. The two firſt riſe in the *Peak*; the *Derwent* running from N. W. to S. E. through the middle of the county, and at length becoming a conſiderable river, diſcharges itſelf into the *Trent*, about ſeven miles below *Derby*. The *Dove* parts this county from *Staffordſhire*, and falls into the *Trent*, about four miles to the N. of *Burton upon Trent*. The *Trent*, of which we have given a particular account in treating of *Staffordſhire* and *Nottinghamſhire*, only croſſes the narrow part of this county to the ſouthward.

Here are what are called the *Seven Wonders of the Peak*, one of the moſt extraordinary of which is *Poole's-hole*, a ſtupendous cavern, at the foot of a great mountain. The entrance is ſo low and narrow that you muſt ſtoop to get in; but it ſoon opens into a wide and lofty concavity, that has ſome reſemblance to a *Gothic* cathedral, which reaches above a quarter of a mile in length. Water drops every where from the roof and ſides, and being of a petrifying quality, it encruſts all the ſtones with long cryſtals, in various forms, which, by the help of a ſtrong imagination, ſeem to appear as lions, lantherns, organs, a flitch of bacon, *&c.* At length you come to the queen of *Scots* pillar, which is the boundary of moſt people's curioſity, and was ſo named by that unhappy princeſs, when ſhe viſited this place. It is compoſed of a clear bright ſtone, like alabaſter, or rather like that kind of ſpar which is found about lead. A ſtream of water runs along the middle of this cavern among the fallen rocks, with an hideous noiſe. On the left hand is a ſort of chamber, where tradition relates that *Poole*, a famous robber, lived, whoſe kitchen and bed-chamber are ſhewn, after creeping on hands and knees through a narrow paſſage extending ten yards. What appears moſt extraordinary is, the ſurpriſing height of the arch, which Dr. *Leigh* compares to fret-work, organ, and choir-work, beſpangled with ſtars, which dazzle the eyes, and look extremely beautiful from the reflection of the lights.

Another of theſe wonders is *Mam-Tor*, which ſignifies the *Mother Rock*. From the top of a prodigious precipice, the ſoft earth being continually crumbling and falling down, raiſes a hill below, which viſibly increaſes without an apparent diminution of the precipice; the ignorant people therefore imagine, that, though the earth is continually falling, the mountain loſes nothing of its bulk.

Another wonder is called by the groſs name of the *Devil's Arſe*. Here, on the ſteep ſide of a mountain, is a large opening, almoſt in the form of an old *Gothic* arch, above thirty feet perpendicular, and above twice that breadth at the bottom. Several ſmall cottages are built on each ſide the entrance, whoſe inhabitants in a great meaſure ſubſiſt by guiding ſtrangers into the cavern. Its width, however, ſoon diminiſhes; for, after croſſing one ſtream of water, the roof gradually deſcends, till it is ſo low that a man cannot ſtand upright under it; but, ſtooping for a little way, and paſſing over another ſtream, it becomes more lofty; being a ſpacious vaulted cavern, to the centre of which the guide having brought his company, they are ſuddenly ſurpriſed by the ſound of various muſical inſtruments and voices behind them from near the top of this ſpacious cupola; ſome of the performers holding lighted candles. The effect of this ruſtic concert is greatly heightened by the reverberation of the ſound, which is produced by the formation of the place. Proceeding on, you come to a third rivulet, where the rock deſcends almoſt to the ſurface of the water, and ſtops all further advance.

Another wonder is called *Tides-Well*, or *Weeden-Well*, a ſpring, which, according to ſome writers, ebbs and flows regularly like the ſea. That it does ebb and flow is certain; but it is at very unequal periods, ſometimes not in a day or two, and ſometimes twice in an hour. The baſon of the ſpring is about a yard deep, and the ſame in length and breadth. When it flows the water riſes with a bubbling noiſe, as if the air, which was pent up within the cavities of the rock, was forcing itſelf a paſſage, and driving the water before it.

The next wonder, as it is called, is *Buxton-Wells*, which, beſides their medicinal uſe, have this ſingularity, that within five feet of one of the hot ſprings, there ariſes a cold one; but this is not very extraordinary, ſince hot and cold ſprings riſe near each other in ſeveral places in *England*, and in other countries. Theſe ſprings poſſeſs a leſs degree of warmth than thoſe at *Bath*. The water of *Buxton Wells* is ſulphurous, with a ſmall quantity of ſaline particles; but it is not in the leaſt impregnated with vitriol: hence they are very palatable in compariſon with other medicinal waters. They are ſalutary in ſcorbutic, rheumatic, or nervous complaints, both by bathing and drinking. Theſe waters were well known in the time of the *Romans*. Beſide the principal ſprings which are at the village of *Buxton*, there are many others that riſe unregarded in the neighbouring encloſures, and on the ſides of the hill.

In the midſt of a plain open field is a frightful chaſm in the earth, or rather rock, called *Elden-hole*, the mouth of which is about twenty feet over one way, and fifty or ſixty another, deſcending down perpendicularly to a depth that is ſaid never yet to have been aſcertained, though ſeveral attempts have been made to find its bottom. Mr. *Cotton* ſays he let down eight hundred fathoms of line, which is ſixteen hundred yards, or near a mile perpendicular.

The laſt wonder is that of *Chatſworth-houſe* and gardens, belonging to the duke of *Devonſhire*. On the top of a mountain, where mill-ſtones are dug, is a vaſt extended moor, which for fifteen or ſixteen miles together has neither hedge, houſe, nor tree; but appears like a waſte and barren wilderneſs, over which, when ſtrangers travel, it is impoſſible to find their way without a guide. If contraries illuſtrate each other, here they are ſeen in the ſtrongeſt oppoſition; for nothing can be more ſurpriſing to a traveller who comes from the north, when, after a tedious progreſs through a diſmal deſert, on a ſudden to be brought to a precipice, where he looks down from a comfortleſs and barren waſte into the moſt delightful valley, and beholds a noble palace ſurrounded by the fineſt gardens imaginable. Before the W. front of the houſe, which is very fine, runs the river *Derwent*, which, though not many miles from its ſource, ſometimes appears like a large and rapid river, when after a ſudden rain the torrents ruſh down from the mountains. Over this river is a ſtately ſtone-bridge, with an ancient tower upon it, and in an iſland in the river is a tower, in the form of a caſtle. The front to the garden is a regular piece of architecture. The ſaſhes of the ſecond ſtory are ſeventeen feet high, of poliſhed looking-glaſs, each ſquare two feet wide, and the wood-work double gilt. The windows, doors, and rooms are adorned with beautiful marble, and the inſide with paintings. The chapel is extremely beautiful, the altar-end and the floor are of marble, the ſeats and gallery are of cedar, and the reſt of the wall and cieling finely painted. The gardens abound with green-houſes, ſummer-houſes, walks, wilderneſſes, and orangeries, intermixed with ſtatues, urns, canals, baſons, and a great variety of water-works; among which are many curious fountains, an artificial willow-tree, which drops water from every leaf, and a wonderful caſcade, where from a neat houſe of ſtone, like a temple, a whole river deſcends along the ſlope of a hill, a quarter of a mile in its progreſs, over ſteps, with a roaring noiſe, till it at laſt finds a ſubterranean paſſage.

The principal towns in *Derbyſhire* are the following:

DERBY, ſituated on the W. banks of the *Derwent*, over which it has a handſome ſtone-bridge, a hundred and twenty-ſix miles to the N. W. of *London*. It is a pleaſant, agreeable, and well-built town, inhabited by many gentry. The river is navigable up to the bridge, and juſt above it is a beautiful artificial iſland raiſed out of the water, and formed into a garden. This iſland ſtands before the celebrated engine-houſe for making organzine, or thrown ſilk; by which invention one workman will twiſt as much ſilk as could otherwiſe be done by fifty, and that in a truer and much better manner. This engine contains 26,586 wheels, and 97,746 movements, which work 73,726 yards of ſilk thread every time the water wheel goes round, which is three times in one minute, and 318,504,960 yards in one day and night. One water-wheel gives motion to all the reſt of the wheels and movements, of which any one may be ſtopt ſeparately. One fire-engine likewiſe conveys warm air to every part of the machine, and the whole work is governed by one regulator. The model of this machine is ſaid to have been taken from the original at *Piedmont* by Mr. *Lambe*, or *Lombe*, under the diſguiſe of a common workman, in which ſituation he drew the plan on paper, and eſcaped with it to *England*, where his brother Sir *Thomas Lambe*, obtained a patent for working it. By means of this machine large ſums have been ſaved to the nation, which uſed to be expended for the purchaſe of organzine, or thrown ſilk, from *Italy*. Silk, cotton, and fine worſted ſtockings are likewiſe made in this town, and ſome of the beſt *china ware* in *England*.

Derby, which contains five pariſhes, and ſeveral meeting-houſes, is very populous. It has a neat market-place, a handſome town-houſe of free-ſtone, and very handſome ſtreets. The principal church is that of *All Saints*, which has a beautiful *Gothic* tower a hundred and ſeventy-eight feet high, and for the elegance of its ornaments is not to be equalled by any in this or the adjacent counties. According to an inſcription in this church, the ſteeple was erected about queen *Mary's* reign, at the expence of the batchelors and maidens of the town; on which account, whenever a maiden, or a native of the town, was married, the bells uſed formerly to be rung by batchelors. The government of this town is under a mayor, an high-ſteward, nine aldermen, a recorder, fourteen brothers, fourteen capital burgeſſes, and a town-clerk. It gives title of earl to the family of *Stanley*. The principal trade of the town conſiſts in malt and ale.

At *Cromford*, a village on the river *Derwent*, in the centre of the county, and midway between *Derby* and *Cheſterfield*, are very capital *cotton-mills*, conſtructed by that great mechanical genius Sir *Richard Arkwright*, by means of whoſe inventions the manufacturing of cotton goods is carried on in many parts of the N. of *England* to an aſtoniſhing extent.

WIRKSWORTH is ſeated in a valley near the ſpring-head of the river *Eccleſborn*, about the centre of the county, and is a pretty large, populous place, eleven miles N. of *Derby*, a hundred and thirty-ſeven miles from *London*. The town is remarkable for having the greateſt lead-market in *England*, and for having what is called a bar-moot-court, to judge controverſies among the miners, and to adjuſt ſubterranean quarrels and diſputes.

CHESTERFIELD is a handſome populous town, ſituated on a hill between two ſmall rivers, a hundred and forty-ſix miles N. of *London*. It has a handſome large church, which has a ſpire of timber covered with lead, but warped all awry; and alſo ſeveral meeting-houſes. It is governed by a mayor. Its market is conſiderable for corn, lead, and country commodities. Here are manufactured ſtockings, and ſome carpeting; alſo potteries for brown earthen ware. In its neighbourhood are capital iron works. The houſes are for the moſt part built of rough ſtone, and covered with ſlate. The inhabitants carry on a conſiderable trade to and with all the neighbouring counties in lead, grocery, the malting of barley, tanning, ſtockings, blankets, bedding, &c. *Cheſterfield* has a large free-ſchool, reckoned the moſt conſiderable of any in the N. of *England*, and likewiſe ſeveral alms-houſes. This town gives title of earl to the family of *Stanhope*.

In the year 1773 a navigable canal began to be formed, to paſs from *Cheſterfield* through *Nottinghamſhire* to the *Trent*; and was completed in the year 1775. In its courſe a ſubterranean tunnel is cut through *Norwoodhill*, which extends 2850 yards, or upward of a mile and a half, which is ſo perfectly ſtraight, that the termination at one end may be ſeen at the other. The arch is twelve feet high, nine feet three inches wide, and in the deepeſt part thirty-ſix yards below the ſurface of the earth.

Matlock's teped ſpring iſſues amidſt the moſt delightful ſcenes which the county exhibits, and is the reſort of much company at the cloſe of ſummer and in the autumn. It is ſituated two miles N. of *Cromford*, and about fifteen from *Derby*.

SECT. XL.

YORKSHIRE.

YORKSHIRE, called alſo *Ebor*, which in extent is equal to ſome ſovereignties, and is larger than any two of the largeſt counties in *England*, is bounded on the N. by *Weſtmoreland* and the biſhopric of *Durham*; on the E. by the *German* ocean; on the S. by *Lincolnſhire*, *Nottinghamſhire*, and *Derbyſhire*; on the S. W. by a ſmall part of *Cheſhire*; on the W. by *Lancaſhire*; and on the N. W. by *Weſtmoreland*. It extends ninety miles in length from N. to S. one hundred and fifteen in breadth from E. to W. and above three hundred and ſixty in circumference. On the weſtern ſide are a ridge of hills, which have been called "the *Engliſh Appenines*." This county is divided into three ridings, called the north, eaſt, and weſt-riding; beſide which there is a fourth diviſion called *Richmondſhire*. The county is ſub-divided into twenty-ſix wapentakes, which contain one city and fifty-four market-towns, two hundred and forty-two vicarages, five hundred and ſixty-three pariſhes, two thouſand three hundred and thirty villages, about a hundred and ſix thouſand one hundred and fifty houſes, and ſix hundred and thirty-ſix thouſand nine hundred inhabitants. It lies in the dioceſe of *York*, except *Richmondſhire*, in the north-riding, which belongs to the dioceſe of *Cheſter*; it ſends thirty members to parliament, namely, two knights of the ſhire for the county, two citizens for *York*, and two for each of the following boroughs: *Kingſton upon Hull*, *Knareſborough*, *Scarborough*, *Rippon*, *Richmond*, *Heydon*, *Boroughbridge*, *Malton*, *Thirſk*, *Aldborough*, *Beverley*, *Northallerton*, and *Pontefract*.

The air and ſoil of this extenſive county vary extremely; the *eaſt-riding*, on account of its neighbourhood to the *German* ocean, is leſs healthy than the other ridings; but this inconvenience decreaſes in proportion as the country recedes from the ſea. However, where the air is moſt indifferent, the ſoil is moſt fruitful, for on the hilly parts of this riding, eſpecially in what is called the *York Wolds*, the ſoil is generally barren, dry, and ſandy; great numbers of lean ſheep are therefore ſold from hence, and ſent into other counties to be fattened for the market. In the year 1780, the ſociety for the encouragement of arts, manufactures, and commerce, adjudged honorary premiums to three gentlemen of this riding, for planting the greateſt number of *larch trees*, being upward of 93,000. The coaſt is remarkable for its variety and abundance of fiſh.

The *weſt-riding* enjoys a ſharp but healthy air, and the land on the weſtern ſide is hilly, ſtony, and not very fruitful; but the intermediate vallies conſiſt of much good meadow ground, and alſo paſture for the largeſt cattle. Much flax is grown here, and large plantations of liquorice, about *Pontefract*. On the ſide next the river *Ouſe*, the ſoil is rich, producing *wheat* and *barley*; and in its worſt parts very good *oats*. Its commodities, beſide what have been mentioned, are *iron*, *pit-coal*, *jet*, *allum*, *horſes*, and *goats*. Here the clothing manufactures principally flouriſh.

The *north-riding* in general exceeds the other two in the ſalubrity and coldneſs of the air. The worſt parts breed lean cattle; but on the ſides of the hills, in the vallies, and plains, it produces good corn, and rich paſtures for large cattle: in the diſtrict of *Pickering*, which forms the N. E. corner of *Yorkſhire*, and conſiſts of a very extenſive, ſecluded, and fertile vale, is a foſſile marle, produced by a petrifying ſpring, very beneficial for improving land; *rape* is grown there in great quantities; the culture of tobacco was likewiſe introduced about the year 1782, and was brought to great perfection, as well as in the adjoining vale of *York*; but the culture of this plant being prohibited in *Great-Britain*, formerly from a diſpoſition to encourage the riſing colony of *Virginia*, and now, on account of the duties which are paid on its importation, great quantities were ſeized and burnt, and penalties levied to a very large amount: *potatoes* are likewiſe much cultivated in this county. Nor is it wanting in ſubterraneous riches, as *marble*, *pit-coal*, *copperas*, *allum*, and between the clefts of the rocks on the ſea-coaſt is found the beſt ſort of *jet*.

Richmondſhire, on the N. W. was formerly a county of itſelf; here many *lead mines* are worked to great advantage. In *Yorkſhire* likewiſe are the diſtricts of *Cleveland*, *Holderneſs*, and *Craven*: the firſt gave, until the year 1774, a ducal title; the ſecond an earldom, which became extinct in the year 1778, and the third at preſent confers the title of Baron. In this laſt diſtrict are two of the higheſt hills in *England*; the one named *Wharnſide*, the other *Ingleborough*.

The principal rivers are the *Ouſe*, or *Northern Ouſe*, and thoſe which fall into it, as the *Dun* or *Don*, the *Derwent*, the *Calder*, the *Aire*, the *Wharſe*, the *Nidd*, the *Yore*, and the *Swale*, all which ſtreams terminate in the *Humber*, which falls into the *German* ocean, between *Yorkſhire* and *Lincolnſhire*. The *Ouſe* riſes in the W. N. W. ſide of the county, and chiefly running to the S. E. at length falls into the *Humber*. The *Dun* or *Don*, riſes in the hills near the S. W. end of *Yorkſhire*, where it is called the *Sheaf*, and running to the ſouthward till it has reached *Sheffield*, turns to the N. E. and falls into the *Ouſe*. The *Calder* has its ſource in the edge of *Lancaſhire*, and entering the S. W. ſide of this county, runs eaſtward, and joins the river *Aire*. The *Aire* has its ſpring at the foot of a high hill, called *Pennigent*, running ſlowly and chiefly to the eaſtward, diſcharges itſelf into the *Ouſe*. The *Wharſe*, or *Wherſe*, riſes among the hills in the W. of *Yorkſhire*, and runs with a ſwift and impetuous current, moſtly to the S. E. till it falls into the *Ouſe*. The *Swale* riſes among the N. W. hills of *Yorkſhire*, and running chiefly to the S. E. joins the *Nidd* about four miles below *Boroughbridge*. Beſide theſe, the *Tees* riſes in the biſhopric of *Durham*, and becoming the boundary between the two counties, runs eaſtward till it falls into the *German* ocean. The *Derwent*, which divides the N. and E. ridings, riſes in the N. E. of *Yorkſhire*, near the ſea-coaſt, between *Whitby* and *Scarborough*, and firſt runs to the S. then winds to the W. and again to the S. falling into the *Ouſe*. The *Hull* has its ſource into the *Woulds*, from whence it runs moſtly to the ſouthward, paſſing near *Beverley*, and falls into the *Humber*; they afford abundance of fiſh, particularly *ſalmon*, *trout*, and *craw-fiſh*. Into theſe principal rivers a great number of rivulets diſcharge themſelves.

This county partakes of the advantage derived from that great modern improvement navigable canals. A deſign was formed to obtain a communication between the weſtern and eaſtern coaſts acroſs *Lancaſhire* and *Yorkſhire*, by means of a canal, proceeding from the river *Merſey* at *Liverpool* to the river *Ouſe* at *Selby*, about ſixteen miles above its junction with the *Humber*, but the whole plan has not been completed; however the canal is rendered navigable acroſs the county of *York*, from *Holme-bridge*, four miles N. W. of *Skipton* to the *Ouſe*, paſſing by *Leeds*; and an act of parliament has now paſſed the houſe of commons to enable the proprietors to borrow an additional ſum for the purpoſe of completing this deſign. From this canal a branch is formed, about three miles in extent, to *Bradford*. Another of ſmall extent is formed near *Wakefield*, to facilitate the communication between that place and *Hallifax*.

We ſhall now deſcribe the principal places in this extenſive county.

YORK is ſeated on the river *Ouſe*, in latitude 53° 59′ N. longitude 1° 7′ W. from *Greenwich*, one hundred and ninety-ſeven miles to the N. of *London*, and is unqueſtionably the ſecond city in *England*, with reſpect to its antiquity, and in population and wealth is only rivalled by *Briſtol*. It has undergone various revolutions; but is ſtill adorned with many buildings, both public and private; it being very populous, and inhabited by much gentry. It is ſurrounded with a good wall, through which are four gates and five poſterns; it has a caſtle, built by *William* the Conqueror, which was formerly a place of great ſtrength, but is now a priſon, in which debtors and felons are confined, in a manner more agreeable to the dictates of religion and humanity, than perhaps in any other priſon in the kingdom.

The bridge over the *Ouſe* conſiſts of five arches, of which that in the centre is fifty-one feet in height, and eighty-one in diameter.

There are now in this city but ſeventeen churches in uſe, with ſome meeting-houſes; though, in the reign of *Henry* V. there were forty-one pariſhes, beſide ſeventeen chapels, and nine abbeys. The cathedral, or minſter, is a noble *Gothic* ſtructure, in which the rules of proportion are better obſerved than is uſually found in other churches of that kind of architecture. The W. end meaſures a hundred and twenty-four feet in breadth: it is adorned with two regular towers, which diminiſh by degrees, and have a good effect. Between them is the principal entrance, over which is a magnificent window that is only equalled by that in the E. front. The great arch, under which is the entrance into the church, is ſaid to be the largeſt of the kind in *Europe*. The moſt remarkable deficiency in the building is in the lantern-ſteeple, which terminates very indifferently: it is however finely ornamented, and has eight ſtately windows, meaſuring forty feet from top to bottom. The nave of the church exceeds that of St. *Paul*'s in *London* ſeveral feet both in height and breadth, but is not quite ſo high as that of *Weſtminſter-abbey*, though it exceeds it by upward of ſixteen feet in breadth. The ſtone ſcreens at each end of the choir are beautifully wrought: the firſt ſeparates the choir from the middle of the church, the other terminates it behind the altar, which by a gradual aſcent of ſixteen ſteps is raiſed to a graceful height above the level of the body of the church. From the middle of the church is ſeen the noble window at the E. end, which is upwards of thirty feet in breadth, and ſeventy-five in height. The maſonry of the upper part is beautifully executed, below which, in one hundred and ſeventeen partitions, is expreſſed the hiſtory of the Bible, on painted glaſs. The S. end of the cathedral is beautified with a circular window, called from the colour of the ſtained glaſs, "the Marygold-window." The N. end is occupied by five lights, which reaching almoſt from the top to the bottom, may be conſidered as one ſtately window, repreſenting a rich embroidery of moſaic needle-work. The chapter-houſe is an octogon *Gothic* building, ſixty-three feet in diameter, with windows of painted glaſs on each ſide; the roof, which is ſixty-eight feet high, is ſupported without any pillar, and over the building is a timber ſpire, covered with lead.

The Archbiſhop of *York* is primate and metropolitan of *England*: his office is to crown the queen conſort, to whom he is perpetual chaplain. *Henry* VII. gave the title of duke of *York* to his ſecond ſon, afterward *Henry* VIII. which title had before been conferred by *Edward* IV. on his ſecond ſon, and ever ſince it has been conferred on the ſecond ſon of the king of *England*, or the next brother to the Prince of *Wales*, when he becomes of age.

Among the modern buildings of this city, is an aſſembly-houſe, a noble ſtructure, deſigned by the earl of *Burlington*, conſiſting of a ſtately *Egyptian-hall*, one hundred and twenty-three feet in length, and about forty in breadth and height, and alſo a common ball-room, ſixty-ſix feet long, with about two thirds of that dimenſion in height and breadth; with other ſmaller rooms for cards and tea. Here is a fine race-ground, where the fleeteſt horſes in the kingdom ſtart.

The corporation have lately built a manſion-houſe for the lord-mayor, for ſo he is ſtyled here as well as in *London*: The government of the city is veſted in the lord mayor, twelve aldermen, a recorder, two ſheriffs, twenty-four prime common-council-men, eight chamberlains, ſeventy-two other common-council, &c. The city is a county of itſelf, whoſe juriſdiction extends over thirty-ſix villages and hamlets, which is called "*Ainſley* liberty."

Harrowgate, near *Knareſborough*, in the W. riding, twenty-one miles W. of *York*, has a mineral ſpring, of a ſulphurous quality, which is eſteemed very ſalutary in ſcrophulous complaints.

HULL, or KINGSTON UPON HULL, ſtands on the W. ſide of the river *Hull*, where it diſcharges itſelf into the *Humber*, one hundred and ſeventy-ſix miles W. of *London*. It is very populous; but as its ſituation will not admit of any additional buildings, the ſtreets are very cloſe, and much crouded. The town is very well fortified, and is undoubtedly the fourth port in *England* for commerce; for here centres the cloth trade from *Leeds*, *Wakefield*, and *Halifax*; the lead from *Derbyſhire*, butter from moſt parts of *Yorkſhire*, cheeſe from *Cheſhire*, *Warwickſhire*, and *Staffordſhire*, and corn from many counties. In return for theſe, are imported all kinds of goods, not only from all other parts of *England*, but from foreign countries, particularly *Hamburg*, *Dantzic*, *Riga*, and *Peterſburgh*. Many ſhips are annually ſent out from this port on the *Greenland* fiſhery, and a great number are employed in the coaſting trade. In the year 1781, the receipts of the cuſtoms at this port amounted to 107,980l. and the payments in debentures, bounties, certificates, ſalaries, and incidents, to 6,586l. Here is a very extenſive dock, ſaid to be the largeſt in *England*, which was finiſhed in the year 1778.

The town contains two pariſh-churches, and ſeveral meeting houſes of the diſſenters. Among the other public buildings are the *Trinity-houſe*, for the relief of ſeamen, their wives or widows; an exchange for tranſacting buſineſs among the merchants, and a town-hall. The bridge over the river *Hull* is of ſtone; it conſiſts of fourteen arches, and makes a noble appearance. The town, with ſome contiguous lands, forms a county of itſelf, governed by a mayor, ſheriff, twelve aldermen, &c. They have a ſword of ſtate, a cap of maintenance, as marks of their power on land, and an oar of *lignum vitæ*, to denote their juriſdiction of admiralty, which they enjoy upon the river *Humber*.

LEEDS, the principal of the clothing towns, is ſituated in the W. riding of *Yorkſhire*, one hundred and ninety miles from *London*, and twenty-five S. W. of *York*, on the banks of the river *Aire*, over which it has a handſome ſtone bridge, which was formerly capacious enough for holding on it the cloth-market; but a very extenſive building has been erected for the purpoſe. The method in which this branch of trade is tranſacted is ſo extraordinary, as to deſerve particular notice. Early on *Tueſdays* and *Saturdays*, at ſix in ſummer, and ſeven in winter, the market-bell gives the ſignal to the clothiers in the ſeveral inns, to bring in their cloth, which is done with ſuch expedition, that in a few minutes all the counters are covered with pieces of cloth. When the bell ceaſes ringing, the chapmen enter the market, and twenty thouſand pounds worth of cloth is often ſold within an hour. At half an hour after eight the bell rings again, upon which the buyers, ſellers, and cloth, all diſappear, and by nine the market is left clear to the linen-drapers, hardwaremen, ſhoemakers, &c. Here is alſo a great demand for white cloths, which are ſold in a magnificent hall. The *Guildhall* is alſo a noble building, adorned with a fine ſtatue of queen *Anne*. Here are three churches, only one of which is parochial; this is St. *Peter*'s, which has the cieling finely painted in freſco, by *Parmantier*: and a Preſbyterian meeting-houſe, eſteemed the handſomeſt ſtructure of the kind in the N. of *England*. The town is governed by a mayor, twelve aldermen, and twenty-four aſſiſtants. The great trade of *Leeds* occaſioned the river *Aire* to be made navigable, by which means a communication is opened by water with *Wakefield*, *York*, and *Hull*, to which places, beſides its woollen manufactures and other goods exported to *Holland*, *Hamburgh*, &c. *Leeds* has the advantage of furniſhing *York* with coals. This town gives title of duke to the family of *Oſborne*.

HALLIFAX, a very conſiderable town in the W. riding of *Yorkſhire*, S. W. of *Leeds*, one hundred and ninety-nine miles of *London*. Although it has only one pariſh, it is of larger extent than the whole county of *Rutland*, being near twelve miles in diameter, and has more pariſhioners than any other pariſh in *England*; for it contains twelve chapels of eaſe, a number of meeting-houſes, and, according to Mr. *Pennant*, one hundred and forty thouſand inhabitants. The houſes are built of ſtone, and formed into good ſtreets. Here is a capacious market-houſe, called "the new piece hall." The women card, ſpin, and wind: the men weave, and work at dreſſing or dying the cloth, and throughout the whole pariſh, induſtry, neatneſs, and content, appear in all their natural charms. It has been computed, that in the article of *ſhalloons* alone, not leſs than one hundred thouſand pieces are annually made in this one pariſh only. This town gave title of earl to the family of *Montague Dunk*, which is now extinct.

Bradford and *Wakefield*, in this riding, are likewiſe conſiderable manufacturing towns. Theſe woollen manufactures have, of late years, much interfered with the manufactures of broad cloth in the W. of *England*.

Dyer deſcribes a houſe of induſtry erected near the river *Calder*, between *Hallifax* and *Wakefield*, in the following beautiful manner:

> Behold, in *Calder*'s vale, where wide around
> Unnumber'd villas creep the ſhrubby hills,
> A ſpacious dome for this fair purpoſe riſe.
> High o'er the open gates, with gracious air,
> Eliza's image ſtands. By gentle ſteps
> Up-rais'd, from room to room we ſlowly walk,
> And view with wonder, and with ſilent joy,
> The ſprightly ſcene; where many a buſy hand,
> Where ſpoles, cards, wheels, and looms, with motion quick,
> And ever-murm'ring ſound, th' unwonted ſenſe
> Wrap in ſurpriſe. To ſee them all employ'd,
> All blithe, it gives the ſpreading heart delight,
> As neither meats, nor drinks, nor aught of joy
> Corporeal, can beſtow. Nor leſs they gain
> Virtue than wealth, while on their uſeful works
> From day to day intent, in their full minds
> Evil no place can find. *Fleece, Book III.*

SHEFFIELD, ſituated on the river *Dun* or *Don*, in the ſouthern confine of the county, one hundred and fifty-eight miles from *London*, has long been famous for its manufactures of edge-tools, knives, and ſwords, for the old poet *Chaucer*, four hundred years ago, deſcribed a man with a *Sheffield* whittle (or knife) by his ſide. The trade of this town was in no former time ſo extenſive as at preſent, to which the prevailing uſe of plated goods has greatly contributed. A *ſilk-mill* is likewiſe erected here. Near the town are valuable lead-works. Six miles to the N. E. is *Rotherham*, ſituated likewiſe on the *Don*, where large iron works are carried on, conſiſting of foundries, ſmelting works, and rolling mills. Iron ore is produced in the neighbourhood, and coal in great abundance. The burning of lime makes a conſiderable branch of trade. A pottery is likewiſe carried on in this town.

SCARBOROUGH, a town in the N. riding of *Yorkſhire*, two hundred and forty-one miles to the N. of *London*. Its ſituation is perfectly romantic, being built on the top of a ſteep rock, bending in the form of a creſcent to the main ocean, of which an almoſt unbounded proſpect appears from all parts. The ſummit of this mountain contains no leſs than eighteen or twenty acres of meadow ground, and on the upper part ſtood a caſtle. The town, which is populous, is almoſt encompaſſed by the ſea, and walled where it does not join to the caſtle, or is not more ſtrongly defended by the ſea; and it has one of the beſt harbours in the kingdom. In this town are mineral ſprings, and it is much reſorted to for the purpoſe of ſea-bathing; on which account public rooms for aſſemblies and balls have been erected. Many merchant ſhips are built here, and large contracts are made with government for the tranſport ſervice. The receipts at the cuſtom-houſe for this port, in the year 1781, amounted to 4,527l. the ſalaries and incidents to 783l.

WHITBY, a ſea-port town in the N. riding, about twenty miles N. W. of *Scarborough*, was in former times diſtinguiſhed for its abbey, of which ſome ruins ſtill remain, but it is now rendered a populous and opulent town by its maritime concerns. It has a ſafe and commodious harbour, which is ſecured by a noble pier. Many merchant ſhips are built here. The inhabitants are much concerned in the fiſheries, particularly in that for whales. Some intercourſe is maintained with *Hamburgh* and the *Baltic* from this port: its cuſtom-houſe revenue in 1781 was 4,849l. and the ſalaries and incidental charges amounted to 751l. Two miles to the N. W. are large *allum works*. *Whitby* has the honour of having been the birth-place of that ſkilful, intrepid, and almoſt univerſal navigator, Capt. *James Cook*, who penetrated into regions which adventurous man had never before attempted, and ſo ſatisfactorily aſcertained them, that no incentive remains for any future navigator to purſue a ſimilar courſe. He was born in the year 1727, and was unfortunately killed at the age of fifty-two. The particulars of this chief of navigators may be ſeen in the ſummary account of his three voyages, which is given in the appendix to the firſt volume of this work, page 542 to 609.

The hiſtorical events which diſtinguiſh this county are, the ſiege of *York* city by *William* the conqueror, in the year 1069; on which occaſion he made a grant to his nephew, *Alan* earl of *Britain*, of near two hundred manors and townſhips in a very conciſe but effectual manner: a *fac ſimile* of the original is given in *Drake*'s *Antiquities*, p. 89. in which the king ſtyles himſelf, "I William, ſurnamed the baſtard, &c." The grant is in *Latin*, and deprived the laſt and greateſt of the *Saxon* earls of his vaſt poſſeſſions. Previous to this ſiege, a valuable library, which had been founded about the year 800 by archbiſhop *Egbert*, was accidentally conſumed by fire.

At *Northallerton*, in the N. riding, on the river *Wiſk*, was fought, on the 22d of Auguſt 1138, a ſignal battle, between the Scotch, led by *David* their king, who was oppoſed by the great northern barons. It was called "the battle of the ſtandard," from a crucifix which the *Engliſh* erected as a military enſign. The invader was defeated with great ſlaughter, ten or twelve thouſand of his men being ſlain.

On *Wakefield green*, near the town of that name, in the W. riding, a battle was fought, on the 24th of December 1460, between *Richard* duke of *York*, then claiming the crown, and the *Lancaſtrians*, with queen *Margaret* at their head; in which the duke was ſlain, and his ſecond ſon, the earl of *Rutland*, then twelve years of age, was ſtabbed in flight by lord *Clifford*, in revenge for the death of his father, who was killed in the firſt battle of St. *Alban*'s by the duke of *York*, (ſee p. 564). Three months after, viz. on the 29th of March, *Edward* IV. the eldeſt ſon of the deceaſed duke, at the head of 40,000 men, engaged the *Lancaſtrians* amounting to 60,000, and gained a moſt deciſive victory. As *Edward* had iſſued orders that no quarter ſhould be given, the carnage on this occaſion was dreadful; 36,000 men being computed to have been ſlain.

On the 2d of July 1644, a very memorable battle was fought on *Marſton Moor*, near *York*, between the armies of the royaliſts and parliamenterians, in which 50,000 men were engaged. The action was one of the moſt fierce, obſtinate, and bloody, of any in that fatal conteſt, and victory was at length obtained by the parliamenterians, chiefly by the uncommon bravery and generalſhip of *Cromwell*.

SECT. XLI.

The Biſhopric of DURHAM.

THIS biſhopric received its name from its chief town, called by the *Saxons Deorham*, or *Dunholm*, to expreſs its ſituation on a hill ſurrounded by a river. On the converſion of the kingdom of the *Northumbrians*, of which this was a part, this county was beſtowed on St. *Cuthbert*, biſhop of *Lindisfarn*, and his poſterity for ever. This grant was ratified both by the *Danes* and *Normans*, with the addition of ſeveral privileges, particularly that of being a county palatine, enjoying the ſame prerogatives within, as the king did without its bounds, with reſpect to forfeitures, *&c.* Thus it was a kind of royalty ſubordinate to the crown.

It is bounded on the N. by *Northumberland*, from which it is ſeparated on the N. E. by the river *Tyne*; on the E. by the *German* ocean; on the S. and S. W. by *Yorkſhire* and the river *Tees*; and on the W. by *Weſtmoreland* and *Cumberland*. It extends thirty-ſeven miles in length, from N. to S. and forty-ſeven in breadth, from E. to W. It is in the dioceſe of its own name, and contains one city and ſeven market-towns, fifty-nine vicarages, one hundred and thirteen pariſhes, near two hundred and thirty villages, about fifteen thouſand nine hundred and eighty houſes, and ninety-ſix thouſand nine hundred inhabitants; but ſends only four members to parliament, namely, two for the county, and two for the city of *Durham*.

The air of this county is wholeſome, and though very ſharp in the weſtern parts, is milder toward the ſea, whoſe warm vapours mitigate the ſeverity of the winter ſeaſons. The ſoil is very different, the weſtern ſide being mountainous and barren, while the eaſtern and ſouthern particularly reſemble the S. of *England*, and conſiſt of beautiful meadows, rich paſtures, woods, and corn-fields. Immenſe quantities of *coal*, *lead*, and *iron*, are found in the bowels of the earth.

The principal rivers are the *Were*, which riſes in the weſtern part, and after ſeveral turnings falls into the ſea at *Sunderland*: the *Tees*, which riſes within three miles of the head of the *Were*, and forms the boundary between this county and *Yorkſhire*: the *Tyne* and the *Derwent*, of which we ſhall give a deſcription in treating of *Northumberland*.

The principal places in this county are the following:

DURHAM, pleaſantly and commodiouſly ſituated on an eaſy aſcent, and almoſt ſurrounded by the river *Were*, over which are two large ſtone bridges, is two hundred and fifty-ſix miles N. W. from *London*. It is encompaſſed by a wall, and has a caſtle, ſeated on the higheſt part of the hill, now uſed for the biſhop's palace. It contains ſix pariſh-churches, beſides the cathedral, and is governed by a mayor, twelve aldermen, twelve common-councilmen, a recorder, a town-clerk, &c. Its pleaſant and healthful ſituation make it much frequented by the neighbouring gentry, and the wealthy clergy. The cathedral ſomewhat reſembles *Weſtminſter-abbey*, and adjoining to it are the houſes of the dean and prebendaries. The biſhop, as count palatine, appoints all officers of juſtice; and, before his prerogatives were abridged by *Henry* VIII. had a court of *Chancery* and *Common-Pleas*; iſſued out writs in his own name, and coined money. He is ſtill ſheriff paramount, and his deputy is not obliged, like other ſheriffs, to account with the *Exchequer*, but only with the biſhop. The earldom of *Sedberg* is ſtill annexed to the biſhopric, which is eſteemed one of the beſt in *England*; and as the country about *Rome* is called *St. Peter*'s patrimony, ſo that about *Durham* is called St. *Cuthbert*'s.

Manufactures do not flouriſh in this city; but ſome ſhalloons, tammies, and calamancoes are made here. Its reputation for muſtard is acquired by the great quantities of that ſeed which is grown on the lands in the neighbourhood.

To the W. of this city about a mile, at a place called *Neville's Croſs*, a moſt ſignal victory was obtained by *Philippa*, conſort of *Edward* III. over *David Bruce*, king of *Scotland*, at the head of a very numerous *Scotch* army, on the 17th of October 1346, not two months after the great victory of *Creſſy*. Of the *Scotch* 15,000 men at leaſt were ſlain, with ſeveral of the nobility, the king himſelf, and many noblemen, were made priſoners.

SUNDERLAND, a ſea-port town, two hundred and ſeventy-one miles from *London*, ſtands on a peninſula almoſt ſurrounded by the ſea, and the mouth of the river *Were*. It is a well built, thriving, and populous town, inhabited by many rich merchants and tradeſmen. Its port is capable of receiving many hundred ſail of ſhips; and from thence are loaded and ſent great numbers of ſhips with coals, ſalt, glaſs, and other merchandize, as well to different places in this kingdom, as to foreign parts. It has a very fine church, with a dome at the E. end, under which is the altar, placed beneath a canopy of inlaid work, ſupported in front by two fluted columns of the *Corinthian* order. A bathing houſe has been built here.

The making of glaſs is the principal employment for the working poor in this town, where there are many glaſs-houſes. This article is exported in large quantities to *London*, and other ports. Much ſail-cloth is made at *Biſhop's Weremouth*, a little to the weſtward, higher up the river of that name.

At the N. eaſtern extremity of the county is **SOUTH SHIELDS**, which enjoys a very conſiderable ſhare of the coal-trade. Ship-building is a conſiderable object here, and the making of glaſs. Near to the confluence of the *Derwent* with the *Tyne*, and upon the eaſtern banks of the former river, are conſiderable iron works, where the ore is ſmelted and caſt into pigs.

DARLINGTON is a pretty large town, two hundred and thirty-eight miles from *London*. It is ſeated in a flat, on the river *Skern*, which falls into the *Tees*, and is remarkable for its dirty ſituation, and its beautiful church, which has a high ſpire, riſing up in the midſt of it. It has a good ſtone bridge of conſiderable length, over little or no water. However, it is a place of good reſort, the market is large and convenient, and is particularly celebrated for its *huckabacks*, which are made no where elſe in *England*, and of which, as well as other linen cloth, it ſends up large quantities to *London*. The water of the *Skern* is eſteemed ſo good for bleaching, that linen has been ſent hither from *Scotland* to be bleached. Dr. *Aikin* ſays, a curious water-machine for grinding *optical glaſſes*, and for ſpinning *linen-yarn*, has lately been erected here, the invention of a native of the town.

STOCKTON UPON TEES, noted for its ale, is a cheerful flouriſhing town, in the S. E. part of the county; it has a conſiderable ſail-cloth manufactory, and a ſilk mill has been erected here. Much butter is exported from hence coaſtways, chiefly to the *London* market.

SECT. XLII.

NORTHUMBERLAND.

THIS county received its name from being ſituated to the N. of the *Humber*. In the *Saxon* heptarchy it was a part of the kingdom of the *Northumbrians*, which contained not only the county now called *Northumberland*, but alſo *Yorkſhire*, *Lancaſhire*, *Durham*, *Cumberland*, and *Weſtmoreland*. It is ſeated in the extremity of *England* next to *Scotland*, and is bounded on the E. by the *German* ocean; on the S. by the biſhopric of *Durham*; on the W. and S. W. by *Cumberland*; and on the N. W. and N. by *Scotland*, from which it is ſeparated by the river

Tweed. It extends about ſeventy miles in length from N. to S. and fifty in breadth from E. to W.

It contains twelve market-towns, nine vicarages, four hundred and ſixty pariſhes, about twenty-two thouſand ſeven hundred and forty houſes, and a hundred and twenty-ſix thouſand four hundred inhabitants. It is in the dioceſe of *Durham*, and ſends eight members to parliament; namely, two for the county, and two for each of the following boroughs, *Newcaſtle upon Tyne*, *Morpeth*, and *Berwick upon Tweed.*

The air of this county is not ſo cold as might be imagined from the latitude in which it lies; for its ſituation between two ſeas in the narroweſt part of *England*, gives it the advantage of having the cold moderated by the vapours of each; and for this reaſon the ſnow ſeldom lies long in *Northumberland*, except on the tops of high hills. The air is extremely healthful, and the people, who generally live to a great age, are ſeldom afflicted with ſickneſs. The ſoil is various, the eaſtern part is fruitful, having very good wheat and moſt ſorts of corn, with rich meadows on the banks of the rivers; but the weſtern part is generally barren, it being moſtly heathy and mountainous. The S. E. part abounds with *pit-coal*; the S. W. angle has very rich *lead mines*, but very little wood. This county gives title of duke to the noble and ancient family of *Percy.*

The rivers cauſe the country to be well watered, and afford great plenty of *ſalmon* and *trout*. The principal of theſe are the *Tyne*, the *Tweed*, and the *Coquet*; the former has two arms at a great diſtance from each other, but are united a little above *Hexham*. *South Tyne* riſes in the N. E. edge of *Cumberland*, but ſoon entering *Northumberland*, bends toward the E. *North Tyne* has its ſource in the weſtern part of *Northumberland*, called *Tyne-Dale*, then running to the S. E. it receives the river *Reed*, and joins *South Tyne* near *Hexham*, from whence it runs eaſtward by *Newcaſtle* into the *German* ocean. The *Tweed* is the boundary between this county and *Scotland*, in the latter of which it riſes, and having entered *Northumberland*, purſues its courſe to the N. E. till it reaches the *German* ocean at *Berwick*. The *Coquet* riſes on the weſtern border of the county, near *Scotland*, and taking a winding courſe in an eaſtern direction, diſcharges itſelf into the *German* ocean, oppoſite the little iſland which bears its name.

The principal places in this county are:

NEWCASTLE UPON TYNE; which in the times of ſuperſtition, abounded in monaſteries, nunneries, and other religious eſtabliſhments, on which account it was ſtyled "*Monk-Cheſter*," after its old name of *Ad Murum* (from its vicinage to the *Picts Wall*) was laid aſide. It is now the largeſt and moſt populous town of *Northumberland*, and is two hundred and ſeventy miles from *London*, ſituated between the *Picts-wall* and the *Tyne*, which is here a fine and deep river; ſo that ſhips of three or four hundred tons burden may ſafely come up to the town, though the large colliers are ſtationed at *Shields*. It is ſo ſecure an haven, that veſſels, when they have paſſed *Teynemouth-bar*, are in no danger either from ſtorms or ſhallows. It is defended by *Clifford*'s fort, which effectually commands all veſſels that enter the river. The town may be conſidered as divided into two parts, of which *Gateſhead*, on the *Durham* ſide, is one, and both were joined by a ſtone bridge, which had ſtood above five hundred years. It originally conſiſted of twelve arches, but by the embankment of the river for the purpoſe of forming the quays on the N. ſide, they were reduced to nine. On this bridge houſes were erected, which, in general, ſtood at ſome diſtance from each other. In the year 1771, a dreadful flood carried away four of theſe arches, with the houſes which ſtood upon them. Mr. *Pennant* ſays, one of theſe houſes remained for a long time ſuſpended over the water, and the ſhrieks of the devoted inmates were heard, without a poſſibility of affording them relief. *Tour to Scotland*, p. 312.—This part of the bridge was rebuilt and finiſhed in the year 1779. The ſituation of the town is very uneven; it riſes on the N. bank of the river, where the ſtreets upon the aſcent are exceeding ſteep. Moſt of the houſes are built with ſtone; but ſome of them are of timber, and the reſt of brick. Through this town went part of that wall which extended from ſea to ſea, and was built by the *Romans* to defend the *Britons* againſt the incurſions of the *Picts*, after all their trained youth had been drawn from the kingdom to recruit the armies of their conquerors. The liberty of the town and the power of the corporation extended no farther than the gate upon the bridge, which ſome years ago put a ſtop to a terrible fire, which would otherwiſe, perhaps, have burnt the whole ſtreet of houſes on that ſide of the bridge, as it did thoſe beyond it. On the eaſt ſide of this gate are carved the arms of the biſhop of *Durham*, and on the W. ſide thoſe of the town of *Newcaſtle*. The town is defended by an exceeding ſtrong wall, in which are ſeven gates, and as many turrets, with ſeveral cazemates bomb-proof. The caſtle, which is old and ruinous, over-looks the whole town.

There is here a very noble exchange, and the wall of the town, running from it parallel with the river, leaves a ſpacious piece of ground before it, between the water and the wall, which being well wharfed and faced with free-ſtone, forms the longeſt and largeſt quay for landing goods that is to be ſeen in *England*, except that at *Yarmouth*. Here are four pariſh churches, beſide one at *Gateſhead*, and likewiſe ſeveral meeting-houſes. *St. Nicholas*'s church ſtands on the top of a high hill, and has a lofty ſteeple of curious architecture. It was founded in the reign of *William Rufus*, and modernized in the year 1783. Among the other public buildings is a manſion-houſe for the reſidence of the mayor, who is allowed ſix hundred pounds for the year, to maintain a proper ſtate. Here is alſo a hall for the ſurgeons to meet in, and a large hoſpital, built by the contribution of the keel-men, for the maintenance of the poor of their fraternity, and ſeveral charitable foundations.

Newcaſtle was firſt made a borough by *William* the Conqueror, and the firſt charter which was granted to the townſmen for digging coals was by *Henry* III. in the year 1239; but in 1306, the uſe of coal for fuel was prohibited in *London*, by royal proclamation, chiefly becauſe it injured the ſale of wood for fuel, great quantities of which were then growing about that city; but this interdiction did not long continue, and we may conſider coal as having been dug and exported from this place for more than four hundred years. Mr. *Pennant* ſays, there are about twenty-four conſiderable collieries which lie at different diſtances from five to eighteen miles of the river. *Tour to Scotland*, p. 311. Mr. *Brand* makes the average of ſix years to Chriſtmas 1776, produce an annual conſumption of 380,000 chaldrons *Newcaſtle* meaſure; of which about 30,000 chaldrons are exported to foreign parts. The boats employed in the colliery are called *keels*, and they are deſcribed by Mr. *Pennant* as ſtrong, clumſy, and oval, carrying about twenty tons, and he ſays about 450 of ſuch keels are conſtantly employed. The keelmen are thoſe who load and unload theſe boats, or lighters: they were formed into a fraternity ſo early as the year 1539. Theſe ſeem to have been dependant on the hoſtmen, who were incorporated in 1600, but their employment is not aſcertained by Mr. *Brand*: probably they acted as agents in freighting the ſhips which came to that port for coals, which they obtained from the proprietors of the coal mines. Mr. *Pennant* ſtates the ſhipping at *Newcaſtle*, in the year 1776, to be as follows:

	Ships.	Tons.
Coaſt trade	3585	689,090
Foreign ports	363	49,124
Total	3948	738,214

In the year 1787, ſeven ſhips were fitted out for the *Greenland* whale-fiſhery, whoſe burden was 2300 tons.

The exports from hence, beſide coals, conſiſt of *lead*, *glaſs*, *ſalt*, *bacon*, *ſalmon*, and *grinding ſtones*. In the year 1776, 30,000 firkins of butter and 40,000 hundred weight of tallow, were ſhipped chiefly coaſtways. The receipt at the cuſtom-houſe in the year 1781, by the report of the commiſſioners appointed to enquire into the public revenue, appears to have been 40,759 l. and the charges in debentures, bounties, portages, ſalaries, and incidents, were 5,400 l. beſide which a duty is paid to the duke of *Richmond* on all coals ſent coaſtways, which generally amounts to 15,000 l. a-year.

The making of glaſs appears to have been carried on here ever ſince the year 674. Both *Hutton* and *Pennant* (from whom *Brand* has drawn much important information without acknowledgement) ſay there are ſixteen glaſs-houſes here, namely, one for plate-glaſs, three for crown-glaſs, five for window-glaſs, two for white or flint-glaſs, and five for bottles.

Mr. *Pennant* ſtates the revenues of the town, in the year 1774, to have been 20,360l.; and the diſburſements to be 19,445l.: and the inhabitants of *Newcaſtle* and *Gateſhead* to amount to 30,000. In the year 1760, the chriſtenings in the four pariſhes were 588, and the burials 522. In 1768, in the five pariſhes, the chriſtenings were 741, and the burials 773: in 1773, chriſtenings 796; burials 596. Ships are built very ſkilfully: the merchants who reſide here trade to *Holland*, *Hamburgh*, *Norway*, and the *Baltic*. This town gives title of duke to the family of *Clinton*. The great abundance of fuel has cauſed ſome manufactures to be carried on here, particularly the making of hardware and of ſalt, but the latter is now become inconſiderable.

NORTH SHIELDS is a port near the mouth of the river, about ten miles from *Newcaſtle*, where the large ſhips, which cannot proceed farther, lie in a ſecure harbour.

BERWICK is pleaſantly ſituated on the S. ſide of an eaſy declivity, on the *Scotch* coaſt of the river *Tweed*, about half a mile diſtant from its conflux with the ſea, and three hundred and thirty-three miles from *London*. It is regularly fortified with baſtions, flanks, and a ditch on the N. and E. and on the S. W. with high walls well built, and planted with cannon, to which the river ſerves as a moat. The houſes make a good appearance, and the town-houſe is a handſome ſtructure, with a lofty turret, in which is a ring of eight bells. Here is a very ſtately bridge of ſixteen arches over the *Tweed*. The church, built by the protector *Cromwell*, is a neat building, but has neither ſpire nor bells. The barracks form a regular ſquare, and will conveniently contain two regiments of foot. The town is governed by a mayor, a recorder, a town-clerk, and four bailiffs.

Corn and eggs are ſhipped from this place for *London* and other ports; but the principal trade conſiſts of the *ſalmon* which is taken in the *Tweed*, and eſteemed the beſt in the kingdom, great quantities of which, being pickled, are put up in veſſels called kits, and ſhipped off for *London*, where they are called *Newcaſtle* ſalmon. During the months of June and July the beſt ſalmon may be bought at *Berwick* for one penny *per* pound. Conſiderable quantities of the ſmaller fiſh are ſent alive to *London* in veſſels called ſmacks, built for that purpoſe, they having a well in the middle, bored full of holes for the free paſſage of the ſea-water, in which the fiſh live without injury. Its cuſtom-houſe receipts, in the year 1781, were 742l. but the ſalaries and incidents amounted that year to 1158l.

This town is particularly mentioned in all laws, proclamations, &c. that comprehend both *England* and *Scotland*, as if it was in neither of thoſe countries. It gives title of baron to the family of *Hill*, which title was created in 1784.

ALNWICK, the county town, is populous and well built, ſeated on the N. ſide of a hill near the river *Aln*, over which is a ſtone bridge, at the diſtance of three hundred and four miles from *London*. It has a large town-houſe where the quarter-ſeſſions and county-courts are held, and the members of parliament elected. It has three gates which are almoſt entire, and ſhew that it was formerly ſurrounded by a wall, and was defended by an old ſtately *Gothic* caſtle, now the ſeat of the duke of *Northumberland*.

A late writer, who viſited theſe parts, makes the following remark:—"Were the dukes of *Northumberland*, in theſe peaceable times, like their neighbour the duke of *Bridgewater*, to exerciſe the ſame ardour in the promotion of arts and commerce, which their anceſtors, in turbulant times, diſplayed in arms, *Alnwick*, and the adjacent country, might be rendered as famous for manufactures as it was formerly renowned for bloody battles." *Tour in England and Scotland*, p. 353.

About ſeven miles to the S. E. of *Alnwick* ſtands *Warkworth*, a pleaſant village, which gives the title of baron to the duke of *Northumberland*, and near it is a remarkable cave called the *Hermitage*, cut out of the ſolid rock. The roof is arched, and the ſides adorned with pillars in the *Gothic* taſte. It is divided into two apartments of the ſame dimenſions, one of which ſeems to have been a lodging-room, and the other a chapel. At the E. end of the chapel is an altar, with a croſs cut in the rock above it; and in the window the figure of a woman in a recumbent poſture at full length. At one end of this figure is another, which ſeems to be weeping over it, and at the other end a bull's head.

About ten miles to the N. W. of *Alnwick* is *Chillingham-caſtle*, the ſeat of the earl of *Tankerville*. It is ſurrounded by a large park, in which a number of buffaloes are kept, who are wild, and very fierce. The breed of this animal has been preſerved here for many years.

The higheſt mountain in this county, or perhaps in all *England*, is that of *Cheviot*, made famous by the old ballad of *Chevy Chace*. The top, to thoſe who are below, ſeems to terminate in a point; but has a level plain about a mile and a half in circumference, with a large pool of water in the midſt of it. From hence, in clear weather, is an extenſive proſpect of near fifty miles on every ſide.

On the northern coaſt of this county, at not more than a mile diſtant from the ſhore, is *Holy-iſland*, about two miles in extent, the habitation of ſome fiſhermen. It, however, once had a cathedral, and was a biſhop's ſee, from whence it probably obtained its name, although it was likewiſe then called *Lindiſfarne*. It had ſixteen biſhops in ſucceſſion from the year 635 to 854. More to the S. is the ſtill ſmaller iſland of *Coquet*.

This county has been the ſcene of fierce conteſts in ancient times with the *Scotch*, when they made inroads into the kingdom: two of the moſt diſtinguiſhed battles in theſe predatory and waſteful wars were, that at *Halidown-hill*, near *Berwick*, and at *Flouden*, or *Flodden-field*. The firſt was fought on the 19th of July 1333, and terminated in a dreadful overthrow of the *Scotch* by *Edward* III. near 30,000 being ſlain, in which number were the chief officers and nobility in their army. The battle of *Flouden*, or *Flodden-field*, was fought on the 9th of September, 1513, the ſituation of which place is not exactly aſcertained, but it is ſaid to have been on the banks of the river *Tyll*, but ſome ſay the river *Sandyford*: however, it was not far from *Cheviot-hill*. In this battle, *James* IV. commanded the *Scotch* army in perſon, and the earl of *Surry* the *Engliſh*. The *Scotch* were defeated; their king, and moſt of his nobility, ſlain. According to *Buchanan* there fell above 5000 *Scotch* on that day; but other accounts double the number.

In the contentions between the houſes of *York* and *Lancaſter*, the moſt conſiderable action which this county witneſſed was that at *Hexham*, on the 13th of May 1463, when lord *Montacute* or *Montague*, brother to the earl of *Warwick*, with an army of *Yorkiſts*, attacked the *Lancaſtrians*, and gained a complete victory over them. The duke of *Somerſet*, (ſon of him who was ſlain at *St. Alban*'s, (*ſee page* 561), with the lords *Roos* or *Roſs*, and *Hungerford*, were made priſoners, and, according to the ſanguinary proceedings of thoſe times, beheaded at *Hexham*, and twenty officers of diſtinction at *York*. This was the third duke of *Somerſet*, and he was ſucceeded by his brother *Edmund*, who was vanquiſhed and beheaded at *Tewkeſbury*, (*ſee p.* 543.)

SECT. XLIII.

CUMBERLAND.

THIS county is bounded on the N. by *Scotland*; on the E. by *Northumberland*, and part of the biſhopric of *Durham*, and *Weſtmoreland*; on the S. by *Lancaſhire*; and on the W. by the *Iriſh* ſea and *Solway-frith*. It extends about ſeventy miles in length from S. W. to N. E. and fifty in breadth from E. to W. where it is broadeſt. *Cumberland* is divided into five wards, and contains one city, fourteen market-towns, ninety pariſhes, thirty-ſeven vicarages, and near four hundred and forty-ſeven villages. It lies partly in the dioceſe of *Cheſter*, and partly in that of *Carliſle*, and ſends ſix members to parliament, two for the county, two for *Carliſle*, and two for *Cockermouth*. It is one of the leaſt populous counties in the kingdom.

The air is cold and piercing, yet leſs than might be expected from its being ſituated ſo far to the north. The mountains feed large flocks of ſheep whoſe fleſh is particularly ſweet and good, and the valleys produce corn, *&c.* This county is generally admired for the pleaſant proſpects it affords; but theſe would be more beautiful could trees be brought to thrive here better than they generally do. The principal commodities produced by this county are *coal, lead, copper, lapis calaminaris,* and *black lead,* the latter of which is a mineral almoſt peculiar to this county, which contains more than is ſufficient to ſupply all *Europe.* It is obtained at *Borrowdale,* on the ſouthern border. Here are likewiſe procured *wild-fowl, ſalmon, pearls, &c.* The laſt are found in muſcles at the mouth of a brook called the *Irt,* which diſcharges itſelf into the ſea a little to the N. of *Ravenglaſs.*

The mountain of *Skiddow,* in this county, is one of the moſt remarkable in the kingdom, being above a thouſand yards perpendicular height from the ſurface of *Derwent-water.* Here eagles and other birds of prey reſort. This mountain is not difficult of acceſs, and is covered with graſs, which gradually grows coarſer in the aſcent. At the top, the atmoſphere is ſo rarified as to prevent vegetation. The whole top is covered with a looſe brown ſlaty ſtone. *Tour in England and Scotland,* p. 60.

The principal rivers of this county are the *Eden,* which takes its riſe from *Ulles Water,* and, after a courſe of about thirty miles to the northward, turns to the W. and falls into *Solway* frith. This river is remarkable for a ſmall delicious fiſh called *char:* the *Derwent* runs through the middle of the county, and diſcharges itſelf into the *Iriſh* ſea: this river abounds with *ſalmon.*

The county, and the adjoining one of *Weſtmoreland,* are highly celebrated for their lakes, and the beautiful romantic ſcenery which their banks and the adjacent country exhibit. Theſe majeſtic and diverſified appearances of nature were firſt recommended to public notice by the late Dr. *Brown,* and have ſince been deſcribed by the pen and the pencil. The principal of thoſe in *Cumberland* are, *Derwent-water, Ulles,* and *Broadwater:* beſide which there are inferior ones, named *Baſſingthwaite, Lowater, Waſdale,* and *Dalgarth.* The lake of *Derwent-water* is in the vale of *Keſſwick:* it is three miles in length, and a mile and half wide. Five iſlands riſe out of this lake, which being covered, either with turf or trees, add greatly to the beauty of the appearance. On one of theſe iſlands is an elegant modern built houſe. More to the N. W. the river *Derwent,* after running a ſhort ſpace in a narrow channel, enlarges into a long and narrow lake called *Baſſingthwaite,* at the termination of which is a remarkable water-fall, called *Low-dore.* The eſtate of the unfortunate earl of *Derwentwater,* has lately been reſtored to the family, ſubject to a large fee-farm rent, for the uſe of *Greenwich* hoſpital. (*See p.* 517.)

Ulles-lake is a long and narrow piece of water, the ſouthern part of which is in *Weſtmoreland,* and all the reſt is equally divided between the two counties, on the *Cumberland* ſide of which is *Gowbarrow-park.*

The chief towns in this county are the following:

CARLISLE, a city of great antiquity, is ſeated at the confluence of ſeveral ſmall rivers, which almoſt encompaſs it: the river *Petrill* running on the E. *Cauda* on the W. and *Eden* on the N. which latter ſoon after falls into the ſea. It ſtands three hundred and one miles from *London,* and is ſurrounded with walls and defended by a caſtle, on the W. ſide. The houſes are well built, and the cathedral is a venerable *Gothic* pile, beſides which there is another church called *St. Cuthbert*'s. The city has three gates, called *Scots-gate, Iriſh-gate,* and *Engliſh-gate;* and the walls are ſo thick, that three men may walk a-breaſt on them within the parapet. Over the *Eden* is a bridge that leads toward *Scotland,* which country is not above ten miles diſtant. The city is very ſmall, but has a good trade in *fuſtians, printed linens,* and *checks.* It has ſuffered the fate of moſt frontier towns, and has been taken, retaken, burnt, and deſtroyed ſeveral times by the *Scots, Danes,* and *Norwegians;* and lay once in ruins for near two hundred years, till it was rebuilt by *William Rufus.* In 1745 this city was taken by the *Scottiſh* rebels, and ſoon after retaken by his late royal highneſs *William* duke of *Cumberland.* It is under the government of a mayor, twelve aldermen, *&c.* and here begin the remains of the famous wall which the emperor *Severus* built inſtead of *Hadrian's Dyke,* or rampart, and which croſſed the north end of this county, and extended through the ſouthern part of *Northumberland,* ending at the *German* ocean, near the mouth of the river *Tyne,* in order to ſtop the invaſions of the *Picts.* The whole extent of this wall is about an hundred miles: it was eight feet broad, and twelve high. This city gives title of earl to the family of *Howard.*

Eight miles N. W. of *Carliſle* was SOLWAY MOSS, a ſwampy, ſpongy moraſs, formed on the top of a hill, and extending in one direction between two and three miles, in the other, about half that ſpace. In the latter end of the year 1771, in conſequence of a long ſeries of heavy rains, this moſs was rendered ſo ſwollen and moiſt, as to be no longer coheſive; it therefore poured down the hill with a moſt impetuous fury; filling up a brook which ran in the vale beneath, deſtroying much cattle, with many cottages and farm-houſes, and overſpreading an extenſive plain, almoſt to the banks of the river *Eſk,* with a black ſoft peat-earth, for of that kind of ſubſtance it was compoſed. Not leſs than four hundred acres of rich land were thus overſpread.

The country between *Carliſle* and *Penrith* poſſeſſes a kindly ſoil, which is now greatly improving by cultivation; here is much corn land, and about *Carliſle* is a great extent of rich grazing land. *Tour in England, &c.* p. 68.

PENRITH, or PERITH, is a pretty large well-built place, ſeated under a hill called *Perith Fell,* two hundred and eighty-two miles from *London;* it has a very good market for all ſorts of commodities and cattle; the market-houſe is convenient and ſpacious, and the church is a large and very handſome ſtructure. The town is built of red ſtone, whence it received its name *Penrith,* which in *Britiſh* ſignifies a red hill. On a high hill to the N. of the town ſtands a watch-tower or beacon, built entirely of ſtone, which commands a very diſtant view of all the country round. From hence, in turbulent times, notice was uſed to be given of the approach of an enemy. On the ſummits of ſome mountains near *Penrith* the ſnow is ſaid generally to remain the whole year round.

COCKERMOUTH is a manufacturing town due W. of *Penrith,* both populous and opulent by making hats, ſtockings, and ſhalloons.

Cumberland having been a frontier county, the ancient ſeats of the nobility and gentry are, for the moſt part, built in the form of caſtles, of which twenty-five ſtrong ſtone buildings ſtill remain.

WHITEHAVEN is ſeated on a creek of the ſea, on the N. end of a high hill, where is a quarry of a hard white ſtone, which gives name to the place; and which, with the help of a great ſtone-wall, ſecures the harbour. It ſtands forty miles to the S. W. of *Carliſle,* and three hundred and three N. W. of *London;* and has riſen from a ſmall place to a very conſiderable one, it being about one third bigger than the city of *Carliſle,* and contains three times the number of inhabitants, who, by being engaged in profitable employments, exhibit a continual ſcene of induſtry. There is here a cuſtom-houſe, and the port is well ſecured by numerous and coſtly works. The revenues of the cuſtoms amounted, in the year 1781, to 15,076l. and the debentures, bounties, certificates, ſalaries, and incidents, amounted to 10,858l. of which ſeven thouſand pounds were in debentures and bounties. Very large importations of tobacco are made at this port. The coal-trade is ſo increaſed of late that it is the moſt eminent port in *England* for that article next to *Newcaſtle;* the city of *Dublin,* all the towns of *Ireland* on that coaſt, with ſome parts of *Scotland,* and the *Iſle of Man,* being principally ſupplied from hence. An attempt was made by an *American* privateer, in 1778, commanded by *Paul Jones,* to burn this town, but it was happily fruſtrated.

The coal in the pits near this place has ſeveral times been ſet on fire by the fulminating damps, and has continued burning for many months, till large ſtreams of water were conducted into the mines, ſo as to fill thoſe parts where the coal was on fire. But more mines have been ruined by inundations from ſprings burſting into them. Theſe mines are ſunk to the depth of a hundred and thirty fathoms, and are extended under the ſea to places where there is above them ſufficient depth of water for ſhips of large burden. Theſe are the deepeſt coal-mines that have been hitherto wrought, and perhaps the miners have not in any other part of the globe penetrated to ſo great a depth below the ſurface of the ſea; the mines in *Hungary*, as well as in *Peru*, being ſituated in mountainous countries, where the ſurface of the earth is elevated to a great height above the level of the ocean. It is ſuppoſed there are no leſs than 40,000 miners employed under-ground in the tin mines of *Cornwall*, and perhaps as many, if not more, in other works of *copper*, *lead*, and *coal* in *Great-Britain*; a great number of theſe live and die without ever ſeeing the light of the ſun.

Eight miles more to the N. is *Workington*, a ſmall ſea-port town, near which is a large iron foundry. At this port *Mary* queen of *Scots* landed, when, in an ill-fated hour, ſhe ſought a refuge in *England*. About the ſame diſtance, ſtill more to the N. is *Maryport*, at the confluence of the river *Ellen*. This town is of very modern date.

SECT. XLIV.

WESTMORELAND.

THIS county probably received its name from its weſtern ſituation, and the meres or lakes it contains. It is bounded on the N. and N. W. by *Cumberland*; on the E. and S. E. by *Yorkſhire*; and on the S. and S. W. by *Lancaſhire*. Its extent from N. E. to S. is forty miles, and its breadth from the eaſtern projection to that in the W. forty-two. It is generally divided into the baronies of *Kendal* and *Weſtmoreland*: the former is very mountainous, but the latter is a large champaign country. Theſe are the only principal diviſions of this county, which contains eight market-towns, twenty-ſix pariſhes, and two hundred and twenty villages. It lies partly in the dioceſe of *Cheſter*, and partly in that of *Carliſle*. The earl of *Thanet* is hereditary ſheriff of the county, which ſends only four members to parliament, namely, two for the county, and two for the borough of *Appleby*. *Weſtmoreland* gives the title of earl to the family of *Fane*.

The air is clear, ſharp, and ſalubrious, the natives being ſeldom troubled with diſeaſes, but generally live to old age. The ſoil is various; that on the mountains is very barren, while that in the valleys is fertile, producing good corn and graſs, eſpecially in the meadows near the rivers. In the hilly parts on the weſtern borders it is generally believed there are vaſt quantities of copper ore, and veins of gold; ſome mines of copper are worked, but moſt of the ore lies ſo deep, that it will not anſwer the expence. This county yields the fineſt *ſlate*, and abundance of excellent hams are cured here.

The principal rivers are the *Eden*, the *Lone*, and the *Ken*. The *Eden*, which riſes in the eaſtern borders, runs moſtly northward, and having received eight ſmall rivers, enters *Cumberland*; the *Lone* riſes within a few miles of the *Eden*, and after running a little way to the eaſtward, turns toward the S. and enters *Lancaſhire*; the *Ken* flows from a lake called *Ken*, or *Kent-mere*, and running moſtly ſouthward, after it has paſſed *Kendal*, which takes its name from this river, falls into the *Iriſh* ſea at the S. W. point of the county. Theſe rivers run in rocky channels, and are generally ſwift limpid ſtreams, well ſtored with excellent trout.

Among the mountains, where eagles build their neſts, in the W. part of the county, on the borders of *Lancaſhire*, (into which a part extends) is WINANDER-MERE, the greateſt and moſt beautiful lake in *England*, and ſaid to be ſo called by the *Saxons* from its winding banks. It is about ten miles in length, from N. to S. but in no part broader than a mile. It is paved as it were at bottom with one continued rock. In ſome parts it is of a vaſt depth, and is well ſtored with a fine fiſh called a *char*, which is rarely found, except among the *Alps*. The *Ulles-water*, mentioned in *Cumberland*, is alſo well ſtocked with fiſh, and has likewiſe ſome *chars*; but not in ſuch plenty as the former; we have already obſerved that *Cumberland* and this county lay claim to this lake. In the foreſt of *Martindale*, to the S. of *Ulles-water*, the breed of *red deer* ſtill exiſts in a wild ſtate.

The chief towns in this county are the following:

APPLEBY, ſeated on the river *Eden*, by which it is almoſt ſurrounded, in the moſt fertile part of *Weſtmoreland*, two hundred and ſixty-ſeven miles from *London*. It is a very ancient place, but is much decayed, and chiefly conſiſts of only one broad ſtreet of mean houſes. This is eſteemed the county town, and here the aſſizes are held in the town-hall. At the upper end of the *Broad-ſtreet* is a caſtle, which was formerly the gaol for malefactors, and is ſurrounded with the river and with a ditch. Here is the principal corn-market for theſe parts. The town is governed by a mayor, a recorder, twelve aldermen, a common-council, and ſerjeants at mace.

KENDAL, the largeſt town in the county, is ſeated in a valley among hills, on the W. ſide of the river *Ken*, or *Kent*, two hundred and fifty-ſix miles from *London*, and is a rich and populous town, which has two bridges of ſtone, and another of wood, over the river, and at a ſmall diſtance are the ruins of a caſtle. The town is famous for its manufacture of coarſe woollen ſtuff called *cotton*; alſo *druggets*, *hats*, and *knit ſtockings*. The *tanning* of *leather* is a conſiderable employment for this town. The town is governed by a mayor, a recorder, twelve aldermen, and twenty-four burgeſſes.

LONSDALE, or KIRBY LONSDALE, is a large well-built town, ſeated on the river *Lone*, two hundred and thirty-one miles to the N. N. W. of *London*, and has a handſome ſtone bridge, with a ſtately church, from which, and from the banks of the river, is a fine proſpect of the mountains at a great diſtance, and of the beautiful courſe of the river *Lone*, in a valley far beneath. This town has a good trade in cloth. It gives the titles of earl and viſcount to the family of *Lowther*.

The only port in the county is *Milthorpe*, which is capable of receiving no other than ſmall veſſels.

SECT. XLV.

LANCASHIRE.

THIS county receives its name from *Lancaſter*, its county town. It is bounded on the N. by *Weſtmoreland* and *Cumberland*; on the E. by *Yorkſhire*; on the S. by *Cheſhire*; and on the W. by the *Iriſh* ſea. It extends ſeventy-two miles from N. to S. including a detached part of the county on the N. W. of fifteen miles extent, called the hundred of Furneſs, which is ſeparated from the reſt by a ſandy creek, at the mouth of the river *Ken*, and at the head of *Morecombe bay*, which creek is fordable at low water more than ſix miles over. The county is forty miles acroſs from E. to W. where broadeſt. It abounds with iron-ore and ſlate.

Lancaſhire is divided into ſix hundreds, and contains twelve vicarages, twenty-ſeven market-towns, ſixty-three pariſhes, eight hundred and ninety-four villages, about forty-three thouſand houſes, and two hundred and ſixty thouſand inhabitants. It lies in the dioceſe of *Cheſter*, and ſends fourteen members to parliament, namely, two for the county, and two for each of the following boroughs: *Lancaſter*, *Liverpool*, *Preſton*, *Wigan*, *Clithero*, and *Newton*.

Lancaſter was made a county palatine by *Edward* III. in favour of *Henry Plantagenet* duke of *Lancaſter*, whoſe daughter was married to *John* of *Gaunt*, the king's fourth ſon. On the death of the duke the parliament confirmed the grant to *John* of *Gaunt*, then created duke of *Lancaſter*. This dutchy deſcended to *Henry* of *Bolingbroke*, the ſon of *John* of *Gaunt*, who, when he aſſumed the crown, and became the IVth *Henry*, procured an act of parliament that this dutchy ſhould be held diſtinct from the crown. The officers of this county palatine are, the chancellor, vice-chancellor, ſecretary, attorney-general, and ſerjeant, regiſter, examiner clerks, prothonotary, &c.

The air here is in general very healthful, the inhabitants often living to a great age. The ſoil may be conſidered under three different claſſes; the hilly parts are ſtony and barren: the level grounds bear crops of wheat and barley, and there are here alſo moſs or peat ground, which affords little elſe but turf and fir-trees, that are frequently found lying under the ſurface. The chief commodities of this county are great plenty of all ſorts of proviſions; *pit-coal*, of which they have a ſpecies called *cannel-coal*, far exceeding all other, not only in making a clear fire, but as capable of being manufactured into candleſticks, cups, ſtandiſhes, ſnuff-boxes, *&c.* and of being poliſhed ſo as to repreſent a beautiful black marble. Very good *oats* are grown in this county; but *potatoes* are cultivated in great quantities, and are of the beſt quality. Its manufactures are *woollen* and *cotton cloths* of various kinds; *tickings*, and *cotton velvets*, for which *Mancheſter* is particularly famous; *ſail-cloth* and *plate-glaſs*.

The principal rivers are the *Merſey*, which parts *Cheſhire* from this county, and the *Ribble*, which riſes in *Yorkſhire*, and enters this county above *Clithero*, running S.W. by *Preſton* into the *Iriſh* ſea. Beſide theſe there are many leſſer ſtreams, among which is the *Leven* river, flowing from *Winander-mere*, and after a courſe of about four miles extending into a wide ſtream, diſcharges itſelf into the bay of *Morecambe*. In the hundred of *Furneſs* is likewiſe *Coniſton water* or *mere*, upward of four miles in length from N. to S. but in its whole extent very narrow. This lake nouriſhes the *Char*.

The navigations made by the duke of *Bridgewater* in this county, are highly worthy of notice. They were begun about thirty-three years ago, and have been completed a few years; they bear veſſels of ſixty tons burden, and are carried over two rivers, the *Merſey* and the *Irwell*. The ſough, or adit, which was neceſſary to be made, in order to drain the water from the coal mines, at a place called *Worſley*, is rendered navigable for boats of ſix or ſeven tons burden, and forms a ſubterraneous river, which runs about a mile and half through a hill, and communicates with the canal. This river leads to the head of the mines, is arched over with brick, and is juſt wide enough for two boats to paſs. The progreſs here is made by the help of lighted candles, which ſerve only to make darkneſs viſible.

But this diſmal gloom is rendered ſtill more awful by the ſolemn echo produced from this ſubterraneous water, which returns various and diſcordant ſounds. One while the grating noiſe of engines is heard, which by a curious contrivance let down the coals into the boats; then the ſhock of an exploſion, occaſioned by the blowing up the hard rock, which will not yield to any other force than that of gun-powder; the next minute the ear is ſaluted by the ſongs of merriment from either ſex, who thus beguile their labours in the mine. The ſtrata of coal which have been found on either ſide of this ſubterranean canal are immenſe.

On reaching the head of the works, a new ſcene opens to the view. There are to be ſeen men and women almoſt in the primitive ſtate of nature, toiling in different capacities, by the glimmering of a dim taper: ſome digging coal out of the bowels of the earth; ſome loading it in little waggons made for the purpoſe; others drawing thoſe waggons to the boats.

On beholding the human ſpecies thus deprived of the light of day, that common inheritance of mankind, and buried in a diſmal and confined cavern, our feelings prompt us to pity their condition; but when we obſerve the lively ray of cheerfulneſs break forth in this ſcene of darkneſs and diſtreſs; when we behold the glow of health in the midſt of damp and ſuffocation; we then ceaſe to pity them, and begin to examine ourſelves: we then diſcover that our enjoyments above ground ſerve only to multiply our wants; and are convinced of the truth of that maxim, which aſſures us, that happineſs is every where, or no where to be found.

To perfect this canal navigation, without impeding the public roads, bridges are built over it, and where the earth has been raiſed to preſerve the level, arches are formed under it; but what principally ſtrikes every beholder, is a work raiſed near *Barton-bridge*, to convey the canal over the river *Merſey*. This is done by means of three ſtone arches, ſo ſpacious and lofty, as to admit veſſels ſailing through them; and indeed nothing can be more ſingular and pleaſing, than to obſerve large veſſels in full ſail under the aqueduct, and at the ſame time the duke of *Bridgewater*'s veſſels ſailing over all, near fifty feet above the navigable river. From the duke's coal-pits at *Worſley*, the canal is carried to *Mancheſter*, and proceeding from thence to the *Merſey*, forms a water communication between that town and *Warrington*, whilſt another branch paſſes over the *Merſey*, and proceeds along the borders of *Cheſhire* to *Runcorn*, where it communicates with that river, being brought to its level by means of fifteen locks. The *Sankey* navigation is another modern improvement in the county of *Lancaſhire*, which is a ſemicircular canal, about twenty miles in extent, terminating in the *Merſey* below *Warrington*. The canal from *Liverpool*, which is deſigned to extend to *Leeds*, is already carried to *Wigan*, and will be now completed; another act of parliament being obtained.

The principal places in this county are the following:

LANCASTER, the county town, ſeated near the mouth of the river *Lone*, or *Loyne*, two hundred and thirty-three miles from *London*, is an ancient, neat, and handſome town, and has a port for veſſels of ſmall burden. Its commerce is not inconſiderable; the cuſtom-houſe revenues in the year 1781 being 25,651 l. the charges in debentures and bounties, were 8,258 l. in certificates, portages, ſalaries, and incidents, 1456 l. The bridge here has five arches, and is ſtrong and handſome. The caſtle is now the county gaol, in which the aſſizes are held, and upon its top, at one corner, is a ſquare tower called *John of Gaunt*'s chair, from whence a delightful proſpect of the adjacent country, and of the courſe of the river *Lone*; but more eſpecially toward the ſea, where the view extends to the *Iſle of Man*. It has only one church, and is governed by a mayor, a recorder, ſeven aldermen, two bailiffs, twelve capital burgeſſes, twelve common burgeſſes, a town clerk, and two ſerjeants at mace.

About five miles N. E. of *Lancaſter* is a remarkable cave called *Dunald Mill-hole*. In the middle of a large common, a brook, nearly as wide as the *New River*, after turning a corn-mill juſt at the entrance of the cave, runs into its mouth by ſeveral beautiful caſcades, continuing its courſe two miles under a large mountain, and at length re-appears near *Cansfield*, a village in the road to *Kirby-Lonſdale*.

MANCHESTER, a very large and populous town, is ſeated between the rivers *Irk* and *Irwell*, upon a rocky hill, a hundred and eighty-one miles to the N. N. W. of *London*, and is a place of great antiquity. It carries on the moſt extenſive manufactures of any town in the kingdom, particularly in various branches of *cotton* and *linen*, with ſome of *ſilk*, diſtinguiſhed by the name of *Mancheſter* goods. It has increaſed ſo much of late years, that though neither a city, borough, nor corporation, it is ſuppoſed to contain upward of fifty thouſand inhabitants.

Of theſe manufactures Dr. *Aikin* thus ſpeaks:—"*Mancheſter* is the centre of the *cotton trade*, an immenſe buſineſs, extending in ſome or other of its operations from *Furneſs*, (where great cotton-ſpinning mills have been eſtabliſhed) to *Derby*, N. and S.; and from *Halifax* to *Liverpool* E. and W. The labours of a very populous neighbourhood are collected at *Mancheſter*; whence they are ſent to *London*, *Liverpool*, *Hull*, and other places. Theſe conſiſt of a great variety of cotton and mixed goods, fitted for all ſorts of markets both at home and abroad, ſpreading over great part of *Europe*, *America*, and the coaſt of *Guinea*, and bringing back vaſt profits to this country. The raw material is principally imported at *Liverpool* and *Lancaſter*; but is occaſionally brought from *London*, and other ports. The manufacture of *tapes*, and other ſmall wares, of ſilk goods, and of hats, is alſo carried on at *Mancheſter*; from which various ſources of wealth it has attained greater opulence than almoſt any of the trading towns in *England*. Its buildings, eſpecially the more modern ones, are on a proportional ſcale of ſize and elegance."

The ſpirit of enterpriſe and adventure has, however, been carried to ſuch an extreme here, and prompted to ſuch deſtructive ſpeculations, that even the proſperous ſtate of theſe manufactures has ſerved to involve many commercial houſes in bankruptcy and ruin, and lately gave ſuch a general ſhock to the mercantile part of the kingdom, as all the loſſes and harraſſments which the commerce of *Holland* has experienced, did not effect, among that frugal and ſolidly wealthy people.

It has a collegiate church, which has a choir of excellent workmanſhip, and two modern churches, one finiſhed in 1723, and an act paſſed for building another in 1753. Theſe are very handſome ſtructures. A literary and philoſophical ſociety has of late years been formed in this town, from the communications of the members of which ſome intereſting papers have been ſelected and publiſhed. *Mancheſter* has likewiſe many meeting-houſes of Diſſenters, and a handſome town-houſe; ſome new ſtreets have been lately built with great elegance. Dr. *Percival* conſiders the rapid increaſe of population in *Mancheſter* as commencing about the year 1765. By an accurate ſurvey taken in the year 1773, the number of houſes in *Mancheſter*, and its appendage *Salford*, was 4268, and the inhabitants 27,246. The proportion of perſons to one houſe, therefore, was more than 6⅓. As the births and deaths among the diſſenters are there received into the pariſh-regiſter, an accurate ſtate of facts may be obtained; and from 1768 to 1772 incluſive, being five years, the medium of deaths annually was 958, and of births 1098; exceſs of births 140 in the year: among theſe the annual deaths of diſſenters were 50, and births 181, which made nearly the whole exceſs of births. At that time the number of Quakers were, males 81, females 84. This valuable writer aſſerts, that, notwithſtanding the enlargement of *Mancheſter*, there has been a ſenſible improvement in the healthineſs and longevity of its inhabitants; the proportion of deaths in 1773 being conſiderably leſs than in 1757, which he aſcribes, excluſive of medical improvements, to the large acceſſion of new ſettlers from the country, who are generally healthy perſons in the prime of life. *Eſſays, Medical, Philoſophical, and Experimental,* II. 3, *&c.*

The chriſtenings and burials in *Mancheſter* appear to have been as follow:

In the year	Chriſtenings.	Burials.	In the year	Chriſtenings.	Burials.
1762	689	574	1768	960	867
1765	886	754	1777	1513	864

The chief magiſtrate is a conſtable, or head-borough. This town gives title of duke to one of the families of *Montague*. In the late war it raiſed a regiment of volunteers, a detachment of which was employed at *Gibraltar* during that memorable ſiege, and acquired great honour.

LIVERPOOL, or LEVERPOOLE, at the beginning of the preſent century was only an inconſiderable fiſhing-town; it is commodiouſly ſituated on the river *Merſey*, two hundred miles N. W. of *London*. It has an excellent harbour, which has been formed with great labour and expence, ſhips being admitted into noble wet docks, ſecured by large flood-gates. Since the completion of the duke of *Bridgewater*'s canals, the laſt of which was that at *Runcorn*, a new dock has been formed by the duke, above the town, which in ſome meaſure interferes with thoſe belonging to the corporation. It is much increaſed and beautified within theſe few years; and, next to *London*, has the greateſt trade of any town in *England*, being thought to exceed even *Briſtol*; but in the year 1781, the receipts at the cuſtom-houſe fell ſomewhat ſhort of thoſe at that city, (*ſee page* 536) being 241,587 l. out of which was paid in debentures, bounties, certificates, and portages 90,959 l. ſalaries and incidents 7,422 l. One very conſiderable branch of trade carried on from this port, is that of procuring ſlaves on the coaſt of *Africa*, and diſpoſing of them in the *Weſt India* iſlands, the *Carolinas*, and other parts of the northern continent of *America*; the returns for which are made in large quantities of cotton and ſugar; but the balance is ſettled by bills drawn at two years date. The trade to *Ireland* is very conſiderable; many ſhips are ſent to the *Greenland* whale-fiſhery; and the coaſting trade from hence to the port of *London* employs a great number of ſhips; the cargoes with which they are freighted conſiſting chiefly in corn and cheeſe: many good ſhips are built here. The exchange is a handſome modern edifice of ſtone, with piazzas for the merchants, and over it is the town-hall, where the courts of juſtice are held, and the buſineſs of the corporation tranſacted; it has likewiſe an aſſembly room. A very neat and elegant playhouſe is erected in this town; and in its vicinity is a race ground. There is no place in the kingdom where ſo many fine hunters are kept as here. Near the town is an *obſervatory*, which was begun to be built in the year 1766, and is furniſhed with all kinds of aſtronomical inſtruments. The houſes are generally new, and built with brick. The ſtone which is uſed here is obtained from quarries in the neighbourhood; it is of a yellow colour, and extremely ſoft when hewn in the quarry, but hardens by being expoſed to the air; yet it is probably the ſpecies of ſtone leaſt durable of any kind uſed in building throughout the kingdom. Here are alſo four churches, which are very noble ſtructures; and one of them, *St. George*'s, has the fronts of the galleries, the pulpit, and the altar, entirely of mahogany. There are alſo ſeveral meeting-houſes for Diſſenters The town is governed by a mayor and aldermen. It has alſo ſeveral alms-houſes for the ſupport of ſailors' widows and indigent perſons.

Dr. Enfield ſtates the population of *Liverpool* as follows. *Hiſtory of that town*, p. 28.

In the year	Number of Inhabitants.	Annual Addition.
1700	5714	
1710	8168	245
1720	10,446	227
1730	12,074	162
1740	18,086	601
1750	22,099	401
1760	25,787	368
1770	34,004	822

Chriſtenings and Burials in Liverpool:

1765	956	1251	1777	1224	1760
1768	1057	1073			

Eight miles E. of *Liverpool*, near the ſmall thoroughfare town of *Preſcot*, is *Knowſley*, the ſeat of the earl of Derby, which we are led to notice from an inſcription affixed on a colonnade at the back front, which was erected in the year 1732, and records a very remarkable tranſaction, alluded to in page 506 of this volume. The inſcription is as follows:—"*James* earl of *Derby*, lord of *Man* and the Iſles, grandſon of *James* earl of *Derby*, and of *Charlotte*, daughter of *Claude* de la *Tremouille*, whoſe huſband, *James*, was beheaded at *Bolton*, XV. October M DC LI. for ſtrenuouſly adhering to *Charles* the Second, who refuſed a bill paſſed unanimouſly by both houſes of parliament, for reſtoring to the family the eſtate loſt by his loyalty to him. M DCC XXXII."

The fact which this inſcription records does not relate to the poſſeſſion of the *Iſle of Man*, or other large poſſeſſions which the family had enjoyed, and was deprived of by the parliament during the commonwealth; thoſe were reſtored to it immediately upon the reſtoration; but there were other poſſeſſions which the family had held by royal grants, among which were thirty-three manors, including the greateſt part of *Flintſhire*, and much land in *Lancaſhire*, which had been ſold under the authority of the commonwealth legiſlature: the act of parliament alluded to in the inſcription went to reſtore theſe, on the repayment of the purchaſe-money, and theſe the king choſe by his negative to ſecure to the purchaſers. Much pains have been taken to gain an accurate account of this curious and intereſting occurrence: the information has been procured from a very reſpectable branch of the family: the ſubject is doubtleſs extraneous to the plan of a geographical account of *England*, but although we are averſe to digreſſions, we cannot paſs over a fact ſo authenticated, which has never been before noticed by any writer. We ſhall further crave the liberty to ſay ſomething of this diſtinguiſhed family. It derived its conſequence from Sir *John Stanley*, who lived in the reigns of *Richard* II. and *Henry* IV.; he acquired large poſſeſſions by marrying *Iſabel*, daughter and heireſs of Sir *Thomas Latham*, who poſſeſſed *Latham* and *Knowſley* in this county; he was alſo much in favour with *Henry* IV. who having directed him to take poſſeſſion of the *Iſle of Man*, on the forfeiture of *Henry Piercy* earl of *Northumberland*, afterward made a grant of the iſland, with all the iſlands adjacent, the regalities, franchiſes, and rights thereof, to him and his heirs, to be holden of the king and his ſucceſſors, by homage, and the ſervice of two falcons, payable on the day of their coronation. Sir *John Stanley* likewiſe received many other valuable grants from that prince; and *Henry* V. was no leſs liberal to his ſon, Sir *John Stanley*. Each deſcendant of this family is diſtinguiſhed for making noble and wealthy alliances by marriage. In the year 1461, Sir *Thomas Stanley*, who had married a ſiſter of the the great earl of *Warwick*, was created earl of *Derby*: notwithſtanding which alliance, this family appears to have eſcaped in the general ſlaughter of the nobility, which the contentions between the houſes of *York* and *Lancaſter*, produced. This earl, after the deceaſe of his firſt wife, married *Margaret*, daughter of *John Beaufort*, duke of *Somerſet*, widow of *Edward Tudor*, earl of *Richmond*, by whom ſhe had *Henry*, afterward king of *England*, but by this lady the earl had no iſſue. *James*, the ſeventh earl, was a nobleman of undaunted ſpirit, poſſeſſing likewiſe great natural and acquired abilities; he devoted himſelf to the intereſts of *Charles* I. and afterward to thoſe of his ſon; but being taken priſoner at the battle of *Worceſter*, was tried by martial law, and ſentenced to death; which fate he met with uncommon firmneſs at *Bolton*; his eſtates were alſo confiſcated by the parliament. On the failure of lineal deſcendants from *James*, the 10th earl, in 1735, the royalties of the *Iſle of Man*, with the title of baron *Strange*, devolved on the duke of *Athol*, grandſon of *Maria Sophia*, youngeſt daughter of *James*, ſeventh earl of *Derby*, which lady married the fourth earl of *Athol*; but the titles of earl of *Derby* and baron *Stanley* veſted in a lineal deſcendant of a younger ſon of the firſt earl of *Derby*, through a courſe of near three hundred years.

Warrington, a large market-town ſeated on the river *Merſey*, a hundred and eighty-two miles from *London*. It has one large church, a large and elegant chapel of eaſe, and ſeveral meeting-houſes, with a market well ſupplied with corn, cattle, and fiſh. Here is a ſtone bridge over the river, which leads into *Cheſhire*. In this town and the neighbouring villages *ſail-cloth* is made for the royal navy. Here are alſo copper-works, ſugar-houſes, and glaſs-houſes, which furniſh the induſtrious with the means of obtaining a comfortable ſubſiſtence; and on the banks of the *Merſey*, which, by means of wears and locks, is made navigable to *Mancheſter*, are *paper-mills*, *gunpowder-mills*, *oil-mills*, *iron-forges*, and *ſlitting-mills*.

Bolton in the Moors, the birth-place of that great and ſucceſsful mechanic Sir *Richard Arkwright*, is a very populous manufacturing town, as is *Blackburn*, to the N. and *Rochdale* to the E. of it. At *Bolton* the earl of *Derby* ſuffered death, and the ſtone which ſerved as a block, was preſerved as a memorial in the church-yard, from whence it has lately been ſtolen.

Preston, a large fine town, ſeated on the river *Ribble*, two hundred and twelve miles from *London*. Though it has no manufacture, yet as it has a court of chancery, and other officers of juſtice for the county palatine of *Lancaſter*, it is full of gentlemen, attorneys, proctors, and notaries. It is a clean, neat, and gay place, to which the gentry many miles round reſort in winter, and have aſſemblies, balls, &c. hence it is vulgarly called *Proud Preſton*. It has a large market-place, and the ſtreets are open, wide, and well paved. On the neighbouring common are annual horſe-races. Near it the duke of *Hamilton*, who came to reſcue *Charles* I. from impriſonment, was defeated in 1648; as were alſo the rebels under general *Forſter*, on the thirteenth of November, 1715, by generals *Carpenter* and *Willes*.

Wigan, a large well built town, ſeated on the river *Douglas*, a hundred and ninety-five miles from *London*, is inhabited by ſhopkeepers of almoſt all kinds, and has been noted for its manufacture of *coverlets*, *rugs*, and *blankets*; it is governed by a mayor, a recorder, twelve aldermen, &c. A little to the S. of this town is a large manufactory for making caſt plate-glaſs, carried on by an incorporated company. (*See page* 523 *of this Volume.*)

SECT. XLVI.

Cheshire.

THIS county is ſeparated on the N. from *Lancaſhire* by the river *Merſey*, but juſt at the N. E. point it borders on *Yorkſhire*; on the E. it is bounded by *Derbyſhire*; on the S. E. by *Staffordſhire*; on the S. by *Shropſhire*; on the W. by *Denbighſhire* and *Flintſhire*, from which latter it is ſeparated by the *Dee*; and on the N. W. it is waſhed by the *Iriſh* ſea, into which projects a peninſula about thirteen miles in length, and ſix in breadth, formed by the mouths of the *Merſey* and the *Dee*.

The whole county extends thirty-three miles in length from N. to S. and forty-two in breadth from E. to W. without including the peninſula juſt mentioned on the W.; or a narrow track of land which ſtretches between *Lancaſhire* and *Derbyſhire*, quite to *Yorkſhire*, on the N. E. It is divided into ſeven hundreds, in which are contained thirteen market-towns, twenty vicarages, eighty-ſix pariſhes, and ſix hundred and ſeventy villages. It lies in the dioceſe of *Cheſter*, and ſends only four members to parliament, namely, two for the county, and two for the city of *Cheſter*.

As this county, like *Lancaſhire* and the biſhoprick of *Durham*, is a county palatine, it has a diſtinct government, which is adminiſtered by a chamberlain, a judge ſpecial, called chief-juſtice of *Cheſhire*, a puiſne judge, &c. This juriſdiction has been held in the three counties from immemorial cuſtom, or at leaſt, ever ſince the *Norman* conqueſt. Sir *William Blackſtone* ſuppoſes ſuch authority to have been entruſted to a ſubject, becauſe each territory bordered upon an enemy's country (*Wales* or *Scotland*), to render them more watchful in their defence; and that the inhabitants, having juſtice adminiſtered at home, might not, by going out of the county, weaken its ſtrength. The earldom of *Cheſhire* was united to the crown by *Henry* III. and has ever ſince given title to the king's eldeſt ſon.

The air is temperately cold and very healthy; for the generality of the inhabitants live to a good old age. It is very rich in paſture and corn land; but there are ſeveral heaths upon which horſes and ſheep feed, among which are the extenſive foreſts of *Macclesfield* and *Delamere*. The country is generally level; the higheſt hills in it are about *Frodſham*; and the extenſive paſtures with which it abounds feed a great number of cows, whoſe milk is peculiarly rich, and of which is made the excellent cheeſe well known by the name of *Cheſhire*; and ſuch quantities are made of it, that *London* alone is ſaid to take annually fourteen thouſand tons of it; vaſt quantities are alſo ſent to *Briſtol*, *York*, *Scotland*, *Ireland*, &c. However, a conſiderable quantity of what commonly goes by the name of *Cheſhire* cheeſe is made in *Shropſhire*, *Staffordſhire*, and *Lancaſhire*. The art of making cheeſe, Mr. *Pennant* ſays, was introduced here by the *Romans*, and the *Ceſtrians* have improved ſo highly in this article, as to excel all countries, not excepting that of *Italy*, the land of their ancient maſters. *Tour in Wales*, I. 122. This county alſo produces excellent ſalt, mill-ſtones little inferior to thoſe of *France*, *fowl*, *fiſh*, and *metals*.

The principal rivers of *Cheſhire* are the *Merſey*, which runs from the N. E. and is the boundary between this county and *Lancaſhire*; the *Weever*, which riſes in *Shropſhire*, and, after running about eighteen miles from S. to N. turns to the weſtward, and diſcharges itſelf into the mouth of the *Merſey*: in its courſe it receives the united ſtreams of the *Whelock* and the *Dane*. The *Dee*, which riſes from two fountains in Wales, runs almoſt due N. to *Cheſter*, and diſcharges itſelf by a very wide and extended mouth into the *Iriſh* ſea. It abounds with fine *ſalmon* and *trout*.

We have already ſpoken of the canal formed by the duke of *Bridgewater*, in our account of *Lancaſhire*, where it commences, and is conveyed over the river *Merſey* into this county, and proceeds weſtward about twenty-five miles. At *Preſton on the Hill*, five miles from *Runcorn*, the capital canal which runs through the centre of this county to *Staffordſhire*, by joining the duke's, completes the communication between the *Trent* and the *Merſey*, of which we have given a full account in deſcribing the county of *Stafford*.

The principal towns in *Cheſhire* are the following:

Chester, a very ancient city, a hundred and eighty-two miles N. W. of *London*. It is of a quadrangular form, and the walls which ſurround it are two miles in circumference, affording a pleaſant walk, with very agreeable proſpects. The ſtreets, which croſs each other at right angles, are bounded by four gates, which anſwer the four cardinal points, of which the E. gate in particular is very ſtately. It is remarkable that all the principal ſtreets have a kind of piazza over the ground-floor, even with which are the tradeſmen's ſhops: theſe afford ſhelter from rain, and at the end of every ſtreet is a flight of ſteps to aſcend to the piazza. Here is a ſtrong caſtle on the S. ſide of the city, in which is the county-hall, where all cauſes belonging to the county palatine are determined. The exchange is a neat building, ſupported by columns thirteen feet high, each of one ſtone, and over it is the city-hall. Here is a ſtrong ſtone bridge over the *Dee*, which extends into *Wales*, and by it is a handſome water-houſe. *Cheſter* has nine pariſh-churches one of which is in the S. aile of the cathedral, which is a pile venerable for its antiquity; but it is in no extraordinary condition. The city is governed by a mayor, two ſheriffs, and twenty-four aldermen. It was formerly a harbour for ſhips; but ſuch vaſt quantities of ſand have been thrown up by the ſea, that the river would now hardly float a ſmall bark up to the city. Great pains have, however, been taken to remedy this inconvenience, and the inhabitants have cut a canal of near ten miles in length at a very great expence, through which ſhips of conſiderable burden may come to *Cheſter*. The cuſtom-houſe revenues here, in the year 1781, amounted to 4,143l. out of which were paid in debentures, bounties, and certificates, 2,190l. ſalaries and incidents, 1,805l. ſo that this branch of revenue yielded a balance to the public of only 137l. In the year 1784 it very nearly doubled that produce, and yielded a nett revenue of 4,506l.

NANTWICH, or NAMPTWICH, is ſeated on the banks of the river *Weever*, which runs through it, and is a large town, a hundred and ſixty-two miles from *London*. It is well built, and the ſtreets make a handſome appearance. The inhabitants are rich, and carry on a good trade, particularly in ſalt and cheeſe; the latter exceeding all that is made in the country, from the excellency of the ſoil. Here are brine ſprings which lie on the banks of a freſh water ſtream, from which great quantities of white ſalt are obtained. The water brought from the ſprings to the *wich-houſes*, as they are called, by troughs, is received into large caſks ſet in the ground; from hence it is put into the leads, and a fire made for keeping it warm, during which, women with wooden rakes gather it as it ſettles to the bottom. After this it is put into ſalt barrows, a kind of wicker baſkets, in the ſhape of a ſugar-loaf reverſed, that the water may drop from it and leave the ſalt dry.

MIDDLEWICH, which ſtands between *Nantwich* and *Northwich*, likewiſe takes its name from its wich-houſes, and is alſo a large market-town, with a ſpacious church: it is ſeated on the river *Croke*, a hundred and ſeventy miles from *London*; has two excellent ſalt ſprings, and is chiefly noted for making ſalt.

NORTHWICH is likewiſe famous for the ſame ſprings, and is ſeated a hundred and ſeventy-five miles from *London*. About the end of the laſt century was diſcovered, on the S. ſide of the town, rock ſalt, which they ſtill continue to dig up and ſend in large lumps to the neighbouring ports of *Liverpool* and *Briſtol*, where it is diſſolved and made into common ſalt. The ſalt mines here are very curious; the deſcent into them is by a bucket, and they are a hundred and fifty feet below the ſurface of the earth, where the mine looks like a cathedral, ſupported by rows of pillars, and the roof, which reſembles cryſtal, is compoſed of the ſame rock, tranſparent and glittering from the numerous candles of the workmen labouring with their pick-axes in digging it away. This rock work extends ſeveral acres. Much ſalt is alſo procured at *Sandbach*, a town to the E. of the three towns called *Wyches*, and from *Smallwood* ſalt-works, a few miles diſtant from it.

Congleton, *Macclesfield*, *Knutsford*, and *Stockport*, are in a flouriſhing ſtate from the manufactures carried on in them; particularly thoſe of cotton: there are likewiſe ſilk mills, and much ribbon-weaving.

SECT. XLVII.

THE ISLE OF MAN.

THE ISLE OF MAN, which *Cæſar* calls *Mona*, is ſituated between *England* and *Ireland*, at almoſt an equal diſtance from each, and lies between 53°. 55'. and 54°. 22'. N. latitude, and 4° 11', to 4°. 38'. W. longitude from *Greenwich*. It is about thirty miles in length from N. to S.; in the wideſt part not above fifteen broad, nor leſs than eight in the narroweſt. It is entirely ſurrounded with rocks, and conſequently has a very dangerous coaſt.

The ſoil is very different; the lime-ſtone ground to the S. is as good as any in *England*; but the mountains are cold and leſs fruitful. Theſe mountains extend in a ridge almoſt the whole length of the iſland, and ſupply the inhabitants quite round with exceeding good water, and excellent peat for fuel. *Snafield*, the higheſt of theſe mountains, riſes at leaſt five hundred and eighty yards above the level of the ſea; another account makes it treble that height; and from thence is a fine proſpect of *England*, *Ireland*, *Scotland*, and *Wales*.

The air is cold and ſharp in winter; but where they have ſhelter it is as mild as in *Lancaſhire*, the froſts being ſhort, and the ſnow never lying long on the ground, eſpecially near the ſea. They have no coal-pits, but good quarries of black marble, and other ſtones for building. They have likewiſe mines of *lead*, *copper*, and *iron*. The orchards and gardens produce as good fruit, roots, and vegetables, as any in the neighbouring countries.

The horned cattle are generally leſs than thoſe of *England*, and the gentlemen have good draught and ſaddle horſes; but there is a very ſmall ſort bred in the mountains three feet ſome inches high, which are very handſome, and run with great ſwiftneſs. Here is alſo a breed of ſmall ſwine, which run wild in the mountains; theſe and the wild ſheep are eſteemed excellent meat. They have no *badgers*, *foxes*, *otters*, *moles*, *hedge-hogs*, *ſnakes*, or any other noxious animals. *Eagles* and *hawks* reſort here.

The number of inhabitants was ſtated by the duke of *Atholl*, in his letter to the lords of the treaſury, in the year 1765, to have been between thirty and forty thouſand, and ſince that time the iſland has greatly increaſed in population. They are an orderly civilized people, very charitable to the poor, and hoſpitable to ſtrangers. Their language, which is called the *Manks*, is a dialect of the *Erſe*, or that ſpoken in the weſtern iſles of *Scotland*, with a mixture of ſome *Greek*, *Latin*, and *Welſh* words. Into this language Bibles and devotional books have of late years been tranſlated.

In their habit and manner of living they imitate the *Engliſh*, only the poorer ſort wear a kind of ſandals made of untanned leather, they being croſs-laced from the toe to the inſtep. Oat-cakes are their common bread. They have mills both for grinding of corn, and fulling of cloth. Their ſtaple commodities are *wool*, *hides*, and *tallow*; and they are extremely well ſituated for foreign trade.

The iſland is divided into ſix ſheadings, and every ſheading has its proper coroner, who is in the nature of a ſheriff, and is entruſted with the peace of his diſtrict, ſecures criminals, and brings them to juſtice. The legiſlative power is lodged in twenty-four keys, ſo called from their unlocking, as it were, or ſolving the difficulties of the law. Theſe repreſent the commons, and join with the lord's court in making all new laws, and with the deemſters or judges in ſettling and determining the meaning of the ancient laws and cuſtoms in all difficult caſes. Since the iſland has been transferred from the *Atholl* family to the crown, the principal officers have been his majeſty's *deemſter*, the clerk of the rolls, and the attorney-general for the iſland.

The biſhop of *Man* is ſuffragan to the archbiſhop of *York*, and ſtyled biſhop of *Sodor* and *Man*; the former being a biſhopric in the weſtern iſlands of *Jona*, or *St. Columbus*, commonly called *Columb-kyle*; but the biſhop is a baron of the iſle, and has his own courts for his temporalities, in which one of the deemſters ſits as judge; but he has no ſeat in the houſe of lords. The religion and worſhip is exactly the ſame with that of the church of *England*. The clergy meet in convocation at leaſt once a year, on Thurſday in *Whitſun-week*, and they are dignified with the title of Sir before their Chriſtian names. There are here ſeventeen pariſh-churches, and four chapels; with four market-towns; namely *Caſtletown*, the capital, and reſidence of the governor, where the courts of juſtice are held; *Douglas*, *Peel*, and *Ramſay*.

DOUGLAS is the richeſt and moſt populous town of the iſland. The harbour for ſhips of tolerable burden is extremely ſafe, and has a fine mole, which runs out into the ſea, and renders this one of the beſt harbours in any part of the three kingdoms.

On the little *Iſle of Peele*, on the W. ſide of *Man*, is a town of the ſame name, with a fortified caſtle.

The iſland has been ſucceſſively inhabited by the *Britons*, *Scotch*, and *Norwegians*; but at laſt became ſubject to *England* about the cloſe of the reign of *Edward* I. or the beginning of that of *Edward* II. It appears to have been at one time held by the dukes of *Northumberland*, for, on the attainder of that nobleman in the reign of *Henry* IV. the king granted it in full ſovereignty to Sir *John Stanley*, and his heirs, to be holden by homage, and the preſentations of two falcons on a coronation. It was the laſt place which adhered to the intereſts of *Charles* II. during his exile. After the execution of *James* the ſeventh earl of *Derby*, his counteſs defended it for ſome time, but it at length ſurrendered to the parliament forces, and general *Fairfax* was governor of the iſland during the commonwealth. The earls of *Derby*, lineally deſcended from the firſt grantee, held it until the year 1735, when that line terminating, it paſſed to the duke and dutcheſs of *Atholl*. The ſituation of the iſland being remarkably ſuited for carrying on a contraband trade, an act of parliament paſſed in the reign of *George* I. by which the lords of the treaſury were empowered to treat for the purchaſe of the iſle of *Man*, or of ſuch parts of the rights claimed by the earl of *Derby* in the iſland as ſhould be found expedient to veſt in the crown, for preventing illicit trade, but nothing was then effected, or after it devolved to the *Atholl* family; the late duke aways declaring, that “ no temptation of gain could induce him to give up ſo ancient, ſo honourable, and ſo noble a birth-right, ſuch as no ſubject of the crown of *England* now has, or ever had.” *Letter from the duke of Atholl to the lords of the Treaſury, dated 20th Auguſt*, 1764. The evil, however, grew to ſuch a magnitude, that Mr. *Grenville*, during his adminiſtration, thought it neceſſary for the legiſlature to interfere, and make ſome regulations reſpecting the *Iſle of Man*; and the apprehenſion of ſuch a meaſure, probably inclined the duke and dutcheſs to propoſe terms, on which to ſurrender their rights of ſovereignty; and in the year 1765 an act paſſed for veſting the iſland in the crown, on payment of 70,000l. ſecuring to the *Atholl* family their landed property, with all their manorial rights and courts baron, inland waters, fiſheries, and mills, with all mines, minerals, and quarries; alſo all deodands, waifs, eſtrays, and wrecks at ſea, together with the patronage of the biſhopric, and the other eccleſiaſtical benefices in the iſland.

From the account of the revenues which was delivered to the lords of the Treaſury by the duke it appears, that from the year 1754 to 1763 incluſive, the whole amounted to 85,085l. Manks money, ſeven pounds of which being equal to ſix pounds *Britiſh*, reduces the ſum to 72,930l. Sterling, or upward of ſeven thouſand pounds *per annum*.

A few years after this bargain was made, the duke claimed the duty of 10s. paid by every herring boat, as part of his reſerved rights; but that and ſome other claims were rejected by the law officers of the crown to whom they were referred. An application has lately been made to parliament for a farther compenſation, on the plea, that the ſum given was inadequate, but without ſucceſs.

The firſt *Tynwald*, after the iſland became ſubject to the crown, was held in the year 1770, and conſiſted of a general convention of the eſtates and legiſlature of the iſland. An exciſe-office and cuſtom-houſe were eſtabliſhed, and a military force was ſent thither: the ports of the *Iſle of Man* were put under the ſuperintendency of the officers of the port of *Whitehaven*; from which it is diſtant fourteen leagues. Two acts of parliament have been paſſed, the firſt, in 1767, which was deſigned to regulate the manufactures, and to encourage the herring fiſhery by bounties; the other, in 1771, withdrew the bounties, and applied the money ariſing from the duties to the repairing, amending, and ſupporting the ſeveral harbours.

By papers laid before the Houſe of Commons it appears, that the revenue of the Cuſtoms, in the year 1765,

		£.
was		185
in 1770	-	1,484
in 1780	-	3,216
in 1789	-	6,968

From another paper it appears, that from May 1765 to January 1770, the diſburſements exceeded the groſs revenues by 8,816l. but from the 5th of January 1782 to the 10th October 1784, the revenue exceeded the diſburſements by 829l.

Before the S. promontory of *Man* is a little iſland called the *Calf of Man*: it is about three miles in circuit, and ſeparated from *Man* by a channel about a quarter of a mile broad. At one time of the year it abounds with *puffins*, and alſo with a ſpecies of ducks and drakes, by the *Engliſh* called barnacles, and by the *Scots* clakes and *Soland* geeſe. The *puffins*, in the month of July, breed in the holes of the rabbits, who reſign their habitations to theſe ſtrangers. In Auguſt, they are hunted, as it is called, and many thouſand young ones are taken every year; theſe are moſtly eaten on the iſland, but many of them are pickled, and ſent about as preſents. About the rocks of this iſland alſo breed an incredible number of all ſorts of ſea fowl.

SECT. XLVIII.

WALES.

WE are now come to *Wales*, an extenſive mountainous country, ſeparated from *England* by a range of almoſt inacceſſible mountains, which to the ancient inhabitants of *Britain* ſeemed formed by nature as bulwarks for the defence of liberty. Thither therefore thoſe *Britons* retired, who finding reſiſtance ineffectual, diſdained to ſubmit to the *Romans*, and thither they were followed by their countrymen, who were afterward unable to oppoſe the victorious arms of the *Saxons*. Thus theſe barren mountains became the aſylum of liberty, and were inhabited by a brave race, who for the ſake of that invaluable bleſſing, freedom, preferred them to their native poſſeſſions in the fertile plains of *England*.

By this means they have preſerved their race, who ſtill ſpeak the ſame language, have the ſame tempers and diſpoſitions, and deſpiſe a pedigree that can be traced no higher than *William the Conqueror*.

The *Saxons* gave the country the name of *Wallia*, and the people that of *Welſh*; terms by which they uſed to denote countries and people, that appeared to them ſtrange and unknown. Hence the people themſelves, who are unacquainted with the *Engliſh*, know not that their country is called *Wales*, or themſelves or their language termed *Welſh*; but inſtead of *Wales* uſe the word *Cycary*, or the ancient country, and call the language *Cymeraeg*. However, people in affluent circumſtances, and thoſe who keep inns on the public roads, generally ſpeak *Engliſh*. The *Welſh* counties and boroughs received the privilege of ſending members to parliament, by an act paſſed in the 27th *Henry* VIII.

It was anciently bounded on all ſides by the *Severn* and *Dee*, till the *Saxons* made themſelves maſters of all the plain country over theſe rivers, and *Offa*, king of *Mercia*, made a great ditch, as the boundary between his kingdom and *Wales*. The kings of *England*, alſo, after the conqueſt, obliged the inhabitants to retire farther weſtward, and to ſecure themſelves among the mountains; they enjoyed their own laws, lived under their own princes, and maintained their liberties againſt all the attempts of the *Engliſh*, till in the year 1282, *Llewellin ap Griffith*, prince of *Wales*, loſt his life in a battle fought with *Edward* I. which proved fatal to the liberties of *Wales*. His queen was afterward delivered of a prince at *Caernarvon*, who was the firſt *Engliſh* prince of *Wales*, and from that time the eldeſt ſon of the kings of *England* have held the principality of *Wales*. It is a commonly received, but ill-founded ſtory, that *Edward*, ſoon after the birth of this prince, ſummoned a meeting of the *Welſh* lords, and promiſed to give them a prince of unexceptionable manners, a *Welſhman* by birth, and one who could ſpeak no other language. The aſſembly receiving theſe declarations with the warmeſt approbation, he then inveſted his infant ſon with the principality; but the beſt hiſtorians have treated this relation as a *Monkiſh* conceit, ill ſuiting the dignity of character which that prince always maintained.

This country is at preſent divided into twelve counties, which, beginning at the north-eaſt, are *Flintſhire*, *Denbighſhire*,

ſhire, *Caernarvon*, *Angleſey*, *Merionethſhire*, and *Montgomeryſhire*, called NORTH-WALES; *Radnorſhire*, *Cardiganſhire*, *Pembrokeſhire*, *Caermarthenſhire*, *Brecknockſhire*, and *Glamorganſhire*, termed SOUTH-WALES. The inhabitants of *Wales* have been ſuppoſed to amount to about three hundred thouſand.

NORTH WALES.

FLINTSHIRE,

THE leaſt of the twelve *Welſh* counties, is bounded on the N. and N. E. by an arm of the ſea, forming a large bay, at the mouth of the river *Dee*, which divides it from *Cheſhire*; on the N. W. by the *Iriſh* ſea; on the E. by the river *Dee*, which continues to divide it from *Cheſhire*, and on the S. and S. W. from *Denbighſhire*. It is twenty-nine miles in breadth from N. W. to S. E. and twelve in length, where broadeſt. A part of *Flintſhire* extends on the E. ſide of the *Dee*, about nine miles, between *Cheſhire* and *Shropſhire*. It is at firſt no more than five miles acroſs, but ſpreads out in its moſt eaſtern part to about eight miles. It is divided into five hundreds, in which are two market-towns and twenty-eight pariſhes. The greateſt part of this county lies in the dioceſe of *St. Aſaph*, and the reſt belongs to that of *Cheſter*. It ſends two members to parliament, one for the county, and one for the town of *Flint*, *Caerwys*, &c.

The vallies in this county poſſeſs *coal* and *freeſtone*, the hills *lead* and *calamine*, with vaſt quantities of *lime-ſtone*. The principal trade of the county is mining and ſmelting. The northern part produces *wheat*, much of which is exported to *Liverpool*, the county raiſing more than ſufficient for the conſumption of its inhabitants: there is alſo much wood. A lofty range of mountains riſes on the W. and forms a bold frontier. *Flintſhire* is entirely deſtitute of the foſſil, uſually called by the ſame name. The collieries of *Moſtyn* and *Bychton* have been worked for a very conſiderable time, and, in the laſt century, ſupplied *Dublin* and the eaſtern part of *Ireland* with coals. Theſe coal mines were diſcovered in the reign of *Edward* I. but at preſent the conſumption of coals is much on the decline, partly from the riſe of the works at *Whitehaven*, but more from the loſs of the channel of the *Dee*, which, in the beginning of the preſent century, flowed cloſe to the ſhore, but now it flows from the oppoſite ſhore. The tides recede here ſo far that no great variety of fiſh can be procured: thoſe moſt abundant are of the flat kind. *Pennant's Tour in Wales.* I. 3 to 43.

The cows, though ſmall, yield a great quantity of milk, in proportion to their ſize, and their fleſh is excellent beef. This county produces good butter, cheeſe, and honey, of which laſt the natives make *metheglin*, a wholeſome liquor, much uſed in thoſe parts.

The principal rivers are the *Clwyd*, the *Wheeler*, the *Dee*, the *Sevion*, the *Elwy*, and the *Alen*.

On the E. ſide of the county, near *Northop*, are conſiderable potteries of coarſe earthenware, which is principally tranſported to *Ireland*, and the towns on the *Welſh* coaſt, particularly *Swanſea*; there are beſide, other works for the making *fire bricks*, few clays being better fitted for the purpoſe of reſiſting the intenſe heat of the ſmelting furnaces. They are made of different ſizes, and ſome, which are called bearers, weigh 200lb. Great quantities of tiles for barn-floors, and for rooms, are alſo made here. *Pennant.* I. 91.

The principal towns in this county are the following:

ST. ASAPH, an epiſcopal city, called by the *Welſh Lhan Elwy*, as being ſituated at the confluence of the river *Elwy* with the *Clwyd*, obtained its *Engliſh* name from *Aſaph*, a devout man, who was biſhop of this place. The town, though ſeated near the pleaſant vale of *Clwyd* and the ſee of a biſhop, is a poor ill-built place; but has a weekly market.

FLINT is ſituated near the river *Dee*, where is a ſmall harbour; it is twelve miles W. of *Cheſter*, has no market, but four fairs in the year. The aſſizes are held here, and the town is governed by a mayor, who is ſtyled governor of the caſtle, which was a very extenſive building, and now lies in ruins. In this place the unfortunate *Richard* II. was confined by the duke of *Lancaſter*.

HOLYWELL, a town ſeated twelve miles to the N. E. of *St. Aſaph*, is famous for *St. Winifred's Well*, which is one of the fineſt ſprings in the world. It pours out twenty-one tons of water in a minute, which running in the middle of the town down the ſide of a hill, is made uſe of by every houſe as it paſſes, after which it turns ſeveral mills, uſed in various manufactures, which greatly increaſe the population of the place, and its neighbourhood; the townſhip containing more than 2000 ſouls. Over the ſpring, where there is a handſome bath, is a neat chapel, which ſtands upon pillars, and on the windows are painted the chief events in *St. Winifred*'s or *Wenefrede*'s life. About the well grows ſome moſs, which people fooliſhly imagine to be *St. Winifred*'s hair. She is reputed a virgin martyr, who lived in the ſeventh century, and, as the legend ſays, was raviſhed and beheaded in this place by a pagan tyrant, and this ſpring it is ſaid miraculouſly roſe from her blood. Hence this bath was much frequented by popiſh pilgrims out of devotion, as well as by thoſe who came to bathe in it, for medicinal purpoſes. Mr. *Pennant* ſays, "the cuſtom of viſiting this well in pilgrimage, and offering up devotions there, is not yet entirely laid aſide: in the ſummer a few are ſtill to be ſeen in the water, in deep devotion, up to their chins for hours, ſending up their prayers, or performing a number of evolutions round the polygonal well. In the year 1686 *James* II. viſited this well, and received as a reward, a preſent of the very ſhift in which his great-grandmother, *Mary* queen of *Scots*, loſt her head." *Tour in Wales.* I. 37.

DENBIGHSHIRE

IS bounded on the N. by the *Iriſh ſea* and a part of *Flintſhire*; on the E. by *Flintſhire* and *Shropſhire*; on the S. by *Merionethſhire* and *Montgomeryſhire*; on the W. by *Caernarvonſhire*, from which it is particularly ſeparated by the river *Conway*. It extends from N. W. to S. E. forty-eight miles, and from N. to S. in its broadeſt part it is twenty miles, but in general it is much leſs. This county is divided into twelve hundreds, which contain four market-towns, and fifty-ſeven pariſhes. It is partly in the dioceſe of *St. Aſaph*; but the greateſt part of the vale of *Clwyd* is in the dioceſe of *Bangor*. It ſends two members to parliament, one for the county, and one for the borough of *Denbigh*.

The ſoil of this county is various; for the famous vale of *Clwyd* is a fruitful, pleaſant, and delightful ſpot, ſaid to be equalled by few places in *Europe*, and takes up ſo great a part of the county, that it extends near ſeventeen miles from N. to S. and from E. to W. about five. The E. ſide of the county is not very fertile, and the W. is in a manner entirely barren. The inhabitants generally live to a great age, and thoſe who dwell in the above vale are remarkable for retaining great vivacity to the longeſt period of life. The chief commodities this county affords are *lead*, *horned cattle*, *ſheep*, *goats*, *fiſh*, and *fowl*.

The valleys are well watered by rivers; the *Clwyd* riſes in the middle of the county, and taking a compaſs to the S. E. then turns to the N. W. and having entered *Flintſhire*, falls into the *Iriſh* ſea. The *Elwy* riſes in the S. W. edge of the county, and runs chiefly to the N. and N. E. till it enters *Flintſhire*, immediately after which it falls into the *Clwyd*. The *Dee* enters this county from *Merionethſhire*, and becomes the boundary between it and *Cheſhire*. The *Conway* is, in ſome meaſure, the boundary between *Denbighſhire* and *Caernarvonſhire*.

The principal places in this county are the following:

DENBIGH, the county town, ſeated on the ſide of a rocky hill on a branch of the river *Clwyd*, twenty-ſeven miles to the W. of *Cheſter*, and two hundred and nine to the N. W. of *London*. It was formerly walled round, and ſecured by a caſtle, thought to be impregnable, from its advantageous ſituation. It gives the title of earl to the family of *Fielding*; it is governed by an alderman, two bailiffs, twenty-five capital burgeſſes, *&c.* Its market on

Wedneſdays is plentifully ſupplied with corn, cattle, and other proviſions. The town is pretty large and populous, and a conſiderable trade is carried on by the tanners, glovers, and ſhoemakers.

RUTHEN is ſeated in the vale of *Clwyd*, ten miles to the S. E. of *Denbigh*. It had once a large caſtle, which is now in ruins; it is a pretty large corporation town, well inhabited.

WREXHAM, the largeſt and moſt populous town in *North Wales*, is ſeated on a river that falls into the *Dee*: its church is not only the glory of the place but of N. *Wales*: the inſide is very ſpacious, and conſiſts of a nave, two aiſles, and a chancel: above the pillars are abundance of groteſque carvings in ridicule of the regular clergy, and the female religious, both abbeſſes and nuns. In the year 1331 the ſteeple of this church was blown down, and in 1457 the church was burnt down. In order to rebuild it, an indulgence of forty days, for five years, was granted to every contributor toward the pious work. It was finiſhed about the year 1472: the ſteeple, as appears from an inſcription on it, was not finiſhed till 1506. Beſide the church, there are two large meeting-houſes, in one of which it is ſaid, they preach in *Welſh* one part of the day, and in *Engliſh* the other. Here is a conſiderable manufacture of flannel, which is ſent in large quantities to *London*.

The W. part of this pariſh is hilly and mineral: part of the mines on the waſte are the property of lord *Groſvenor*, and ſome belong to the corporation of *Cheſter*. Near *Wrexham* is a great foundry for cannon, under the direction of Mr. *Wilkinſon*, who, in the late war between the *Turks* and *Ruſſians*, furniſhed each power with thoſe deſtructive engines.

Four miles S. of *Wrexham* is *Rhiwabon*, or *Ruabon*, the church of which village was fitted up in a very neat manner, chiefly at the expence of Sir *Watkin Williams Wynne*, who beſtowed on it an organ and a ſmall font, the latter on occaſion of chriſtening his eldeſt ſon in 1772.

The park of *Watſtay*, now called *Wynn-ſtay*, reaches to this village, and is moſt advantageouſly ſituated: the grounds well wooded, the views diſtinct, and extremely grand, eſpecially thoſe toward the *Berwyn* mountains, on the borders of *Merionethſhire*, and the auguſt breach made into them beyond *Llangollen*, by the rapid *Dee*, through the country of the irregular and wild *Glendwr*. The former name of the place, as obſerved above, was *Wat-ſtay*, from its ſituation on the famous dike, but was changed to *Wynn-ſtay* by Sir *John Wynn*, out of reſpect to his own name. The new part of the manſion was built by the late Sir *Watkin*; the preſent owner has built a noble room: adjoining to the houſe is a ſmall elegant theatre, in which the munificent owner annually enlivens the gloom of the depth of winter with theatrical entertainments, during a whole week, and in a moſt princely manner entertains the whole country round.

CAERNARVONSHIRE, *or* CARNARVONSHIRE,

CALLED by the *Welſh Sir Gaernarvon*, is bounded on the N. by the *Iriſh* ſea, on the E. by *Denbighſhire*, on the S. E. by *Merionethſhire*, on the N. W. by the narrow channel which ſeparates it from *Angleſey*, and on the S. by *St. George's Channel*; into which its ſouthern part extends in a narrow peninſula. From *Bardſey Sound*, on the S. W. point, to the great *Orme's-head* on the N. E. point, the county extends forty-eight miles; its greateſt breadth from E. to W. is twenty-four miles, but in general it is much narrower. This county is divided into ſeven hundreds, in which are ſix market-towns, and ſixty-eight pariſhes; it is ſeated in the dioceſe of *Bangor*, and ſends two members to parliament, one for the county, and one for *Caernarvon*.

The ſnow on many of the mountains lies for nine or ten months in the year. The ſoil is particularly ſtony, and riſes in vaſt mountains one above another, from whence this county has not been improperly called the *Engliſh Alps*. The higheſt mountain, which is called *Snowdon-hill*, is boggy on the top, and has two lakes that abound with fiſh; particularly the *char* and the *guiniard*. The height of this mountain, reckoning from the quay at *Caernarvon* to the higheſt peak, Mr. *Pennant* ſays, is 1189 yards and one foot. *Tour in Wales*. II. 165. *Snowdon* was held as ſacred by the ancient *Britons*, as *Parnaſſus* was by the *Greeks*, and *Ida* by the *Cretans*. It is ſtill ſaid, that whoever ſleeps upon *Snowdon* will wake inſpired as much as if he had taken a nap on the hill of *Apollo*. The *Britons* in very early times worſhipped mountains and rivers. Mr. *Pennant* found pieces of lava on this mountain, and on the ſummit groups of columnar ſtones of vaſt ſize, lying in all directions. The ſheep which feed on the ſides of this mountain yield the ſweeteſt mutton in *Wales*. Here are likewiſe many goats. Theſe are driven to a conſiderable height, in the ſummer ſeaſon, their keepers dwelling in tents, and ſubſiſting on oatmeal cakes, butter, cheeſe, and whey. The moſt remarkable mountain, next to that of *Snowdon-hill*, is *Penman Mawr*, which hangs perpendicularly over the ſea at ſo vaſt a height, that few ſpectators would be able to look down the dreadful ſteep. On the ſide next the ſea is a road cut out of the rock, about ſix or ſeven feet wide, which winds up a ſteep aſcent, and uſed to be defended on one ſide only by a ſlight wall, in ſome parts about a yard high, in others by only a bank, that ſcarce roſe a foot above the road. The ſea was ſeen daſhing its waves forty fathoms below, with the mountain riſing as much above the traveller's head. This dangerous road was a few years ago ſecured by a wall breaſt high, to the building of which the city of *Dublin* largely contributed, it being in the high road to *Holyhead*. This county is alſo remarkable for the great number of its lakes.

The principal river is, the *Conway*, which parts *Caernarvonſhire* from *Denbighſhire*. It riſes from a lake where the three counties of *Caernarvon*, *Denbigh*, and *Merioneth* join, and running northward, falls into the *Iriſh* ſea at *Aberconway*. Here are many other ſmaller rivers, diſperſed in various parts of the country. The chief towns are the following:

BANGOR, ſeated thirty-ſix miles to the W. of *St. Aſaph*, and two hundred and thirty-ſix to the N. W. of *London*; on the ſtraits of *Menai*, which ſeparate this county from *Angleſea*. Though the ſee of a biſhop it is an old and mean place; yet was ſo conſiderable in ancient times, that it was called *Bangor the Great*, and was defended by a ſtrong caſtle. It has a market on Wedneſdays, and its principal buildings are the cathedral and the biſhop's palace; the former is celebrated for being the ſite of the moſt ancient *Britiſh* monaſtery, or rather ſeminary, which contained 2400 monks, who dividing themſelves into ſeven bands, paſſed their time alternately in prayer and labour. *Bedæ Hiſt. Eccleſ.* 280; or, as another writer ſays, an hundred, by turns, paſſed an hour in devotion, ſo that the whole twenty-four hours were employed in religion. This pious community was diſperſed, after the ſlaughter of their brethren at the battle of *Cheſter*, and their houſe overthrown. *William* the monk, and librarian of *Malmſbury*, contemporary with king *Stephen*, ſpeaks of the remains in his days. *Scrip. poſt Bedam* 294. This ſeminary ſent out many thouſands of religious: about the year 400 it produced the celebrated *Pelagius*, who is uſually ſtigmatiſed by the name of "the arch-heretic." The monks of this community, in common with all the *Britiſh* clergy, were ſtrenuous oppoſers of the uſurpation of the church of *Rome*: ſeven biſhops, and a great number of learned men, were deputed from *Bangor*, to meet the famous miſſionary *Auguſtine*, the monk; when he inſiſted on their concurrence with his demands, in ſo dictatorial a tone, that they broke up the conference, fixed in the reſolution to maintain the original rites of their own church, which remained pure, and independent of all foreign prelates, for many centuries after that period. The town is governed by the biſhop's ſteward, who holds the courts.

The ancient *Britiſh* boats, called by *Pliny*, *vitilia navigia*, are the ſame as the modern coracles, which are much uſed in theſe parts, and on the *Severn*, for the purpoſe of ſalmon fiſhing. They have now loſt the cauſe of their name, being no longer covered with *coria* or hides, but with ſtrong pitched canvaſs. They hold only a ſingle perſon, who uſes a paddle with great dexterity. Water races are often performed in theſe ſlight veſſels. The *Britons* had them of large ſize, and even made ſhort voyages in them, according to the account we receive from *Lucan*.

Caernarvon borders on the ſea, by which, and two rivers, it is ſurrounded on all ſides, except toward the E. It ſtands ſeven miles to the S. W. of *Bangor*, and two hundred and fifty-one to the N. W. of *London*. "This town," ſays Mr. *Pennant*, "is juſtly the boaſt of *North Wales*, for the beauty of ſituation, goodneſs of the buildings, regularity of the plan, and, above all, the grandeur of the caſtle. It is deſtitute of manufactures, but has a briſk trade with *London*, *Briſtol*, *Liverpool*, and *Ireland*, for the ſeveral neceſſaries of life." *Tour in Wales*, II. 214. The conſtable of the caſtle is always mayor of the town by his patent; beſides whom there is always an alderman, two bailiffs, a town-clerk, &c. It was built by king *Edward* I. to ſecure a paſſage into the *Iſle of Angleſey*, and here was born king *Edward* II. the firſt *Engliſh* prince of *Wales*, as we have already obſerved; in this place was likewiſe held the chancery and exchequer for *North Wales*.

Aberconway, or **Conway**, is ſeated at the mouth of the river *Conway*, fifteen miles to the N. W. of *Denbigh*, and two hundred and nine from *London*. It is a large walled town, with the remains of a caſtle, which in ancient times was a moſt magnificent ſtructure. Here is one church in which they preach one Sunday in *Engliſh*, and the other in *Welſh*; it has a remarkable epitaph to the following purpoſe: "Here lieth the body of *Nicholas* " *Hookes* of *Conway*, gent. who was the one-and-fortieth " child of his father, *William Hookes*, Eſq. by *Alice* his " mother, and the father of twenty-ſeven children. He " died the twentieth day of March, 1637."

Off the ſouth-weſtern point of this county, about two miles diſtant, is the ſmall iſland of *Bardſley*, not four miles in circumference, where, in former times, was a celebrated convent.

The ISLE *of* ANGLESEY, *or* ANGLESEA;

THE moſt weſtern county of *North Wales*, is ſeparated from *Caernarvon* by a narrow ſtrait, called *Menai*. It is nineteen miles in length from N. to S. and twenty-two in length from E. to W. from the point near *Beaumaris* to *Holyhead*. This iſland was called by the ancients *Mona*, and was the ſeat of the *Druids*; but being reduced by the *Engliſh* in the reign of *Edward* I. it received the name of *Angleſey*, or the *Engliſh Iſland*. The ſtraits of *Menai* in ſome places may be paſſed on foot at low water.

It is divided into ſix hundreds, in which are two market-towns, two chaces, and ſeventy-four pariſhes. According to *Camden* it formerly contained three hundred and ſixty-three villages. It lies in the dioceſe of *Bangor*, and ſends two members to parliament, one for the county, and one for *Beaumaris*.

The ſoil of *Angleſey* is much more fertile than might be imagined from its ſtony, rocky, and mountainous bottom. It particularly abounds in *barley* and *oats*, which are ſaid to be the beſt in all *Wales*, and likewiſe in *cattle*, *fowl*, and *fiſh*. From the mountains are dug *mill-ſtones* and *grind-ſtones*. Near *Kemlyn* harbour is a quarry of a beautiful marble, among which is found the aſbeſtos, called here ſalamander's wool; it is a ſubſtance like flax, and will bear a common fire without being conſumed. Not far from this is a yellow ſulphurous copper ore, and about three miles to the eaſtward is a vein of ſtony ochre of various colours, as, red, yellow, and blue.

Dulas-bay on the N. coaſt, runs about a mile and half deep into the country, and is frequented by ſmall veſſels which take off the oats and butter of thoſe parts, near to which is **Pary's Mountain**, which contains the moſt conſiderable body of copper ore perhaps ever known. The external aſpect of the hill is extremely rude, and riſes into enormous rocks of coarſe white quartz. The ore is lodged in a baſon, or hollow, and has on one ſide a ſmall lake, over whoſe waters, diſtaſteful as thoſe of *Avernus*, no bird is known to paſs. The whole aſpect of this track has, by the mineral operations, aſſumed a moſt ſavage appearance. Suffocating fumes of the burning heaps of copper ariſe in all parts, and extend their baneful influence for miles around. Mr. *Pennant* ſays that the ore has been worked in a very diſtant period, and veſtiges of the ancient operations appear in ſeveral parts, carried on by trenching, and heating the rocks intenſely, then ſuddenly pouring on water ſo as to cauſe them to crack or ſcale. In the year 1768, after a long courſe of fruitleſs ſearch, which was on the point of being abandoned, a large body of copper ore was found, which has ever ſince been worked to great advantage, and ſtill promiſes a vaſt ſupply. The water lodged in the bottom of the bed of ore, being ſtrongly impregnated with the metal, is drawn up, and diſtributed into pits. A quantity of iron is immerſed in this water, and the particles of copper are immediately precipitated, whilſt the iron itſelf is gradually diſſolved into a yellow ochre, great part of it floats off by the water and ſinks to the bottom. The pieces of iron ore are frequently taken out, and the copper ſcraped off, and this is repeated until the whole of the iron is conſumed. The copper thus procured differs little from native copper, and is prized accordingly, being ſold at from 25l. to 45l. a ton. This kind of proceſs has long been practiſed in the *Wicklow* mines of *Ireland*, and, above a century, in thoſe of *Herngrundt* in *Hungary*; where it is called *Ziment copper*. The waters of the *Hungarian* mines are much more ſtrongly impregnated with copper than thoſe of *Parry*'s-*mountain*. Mr. *Pennant* ſays eight tons of gunpowder are annually uſed for blaſting the rock. *Tour in Wales*. II. 271. Nature has been profuſe in beſtowing her mineral favours upon this ſpot; for above the copper ore, and not more than two-thirds of a yard beneath the common ſoil, is a bed of yellowiſh greaſy clay, from one to four yards thick, containing lead ore, from a ton of which metal upward of fifty ounces of ſilver are generally obtained. Theſe works have added greatly to the population of the iſland, for about fifteen hundred perſons are employed, who, with their families, are ſuppoſed to make 8000 ſouls, who procure their ſubſiſtence from theſe mines; the chief proprietor of which was the late Sir *Nicholas Bailey*, and, at his death, they deſcended to his nephew the earl of *Uxbridge*.

The principal rivers are the *Brant*, the *Alow*, and the *Keveny*.

Among the antiquities of this iſland are two circles of ſtones, like thoſe of *Stonehenge* on *Saliſbury-plain*, ſuppoſed to be the ruins of a druidical temple. This iſland gives the title of earl to the family of *Anneſley*.

The principal places in this iſland are,

Beaumaris, the county town, where all the public affairs of the iſland are tranſacted. It is ſeated on the E. ſide of *Angleſey*, nine miles to the N. of *Bangor*, and two hundred and forty-one N. W. of *London*. It was built by king *Edward* I. to ſecure his conqueſts here, who for that purpoſe erected a caſtle in the year 1295. The town receives its name from its ſtanding in a fine mooriſh plain. It is at preſent a populous place, in which the ſeſſion and county gaol are kept. It has a good harbour for ſhipping; and as it lies in the direct road to *Holyhead*, this contributes to its trade, by the paſſengers who go through it in order to ſail for *Ireland*; but, notwithſtanding its harbour, it has little or no foreign trade. It principally conſiſts of two handſome ſtreets, and has a church, in which are ſome fine monuments.

Holyhead lies twenty-four miles to the W. of *Beaumaris*, oppoſite to *Dublin*, from which it is diſtant 74 miles, the ſhorteſt and ſafeſt paſſage over *St. George's Channel*. This being the moſt weſterly point of *Angleſey*, it is a little iſland of itſelf, joined to *Angleſey* by a ſtone bridge. It has a village called in the *Welſh Caer Gybi*, which conſiſts of a few ſtraggling thatched houſes, built on the rock; yet ſeveral of them have good accommodations for travellers. The packet boats from *Dublin* arrive here three times a week, if the wind permits.

On the rocks grow the herb of which is made *kelp*, a fixed ſalt uſed in making glaſs, and in alum-works. In the neighbourhood is a large vein of white fuller's earth, and another of yellow, which might be of uſe to fullers. Large flocks of puffins are often ſeen here; they all come in one night, and depart in the ſame manner.

Off the northern point of *Angleſey*, at the diſtance of about two miles, is the little iſland of *Skerries*, formed of a ſolid rock, and here a light-houſe is erected. Vaſt quantities of fiſh reſort here, and ſeals in great numbers. At the ſtated ſeaſon large flights of puffins likewiſe frequent it, to lay their eggs and rear their young.

MERIONETHSHIRE

IS bounded on the N. by *Caernarvonſhire* and *Denbighſhire*; on the E. by *Montgomeryſhire*; on the W. by *St. George's Channel*, or the *Iriſh* ſea; and on the S. by the river *Douay*, which parts it from *Cardiganſhire*; extending thirty-eight miles in length, from N. to S. and thirty-five in breadth, from E. to W. where broadeſt.

This county is divided into ſix hundreds, in which are four market towns, and thirty-ſeven pariſhes. It lies in the dioceſe of *Bangor*, and ſends one member to parliament, namely, a knight for the ſhire.

The ſoil of *Merionethſhire* is as ſterile as any in *Wales*, being very rocky and mountainous; notwithſtanding, it feeds large flocks of ſheep, many goats, and herds of horned cattle, which find pretty good paſture in the valleys. The wool of the ſheep is manufactured in the county into ſtockings and flannels. Beſide theſe, among their other commodities, may be reckoned, *deer*, *fowl*, and *fiſh*, eſpecially *herrings*, which are taken on this coaſt in great plenty.

This county is watered by ſeveral rivers, the principal of which are the *Dee*, the *Avon*, and the *Drurydh*. The *Dee* has two ſpring-heads in the eaſtern part of the county, which being united, is ſuppoſed to run through the lake called *Bala*, or *Pimble-meer*, without mixing its waters with thoſe of the lake; at leaſt the fiſh ſeem not to mingle; for it is ſaid, that though the *Dee* abounds with ſalmon, none are ever taken in the lake out of the ſtream of the river; nor does the *Dee* carry off any guiniads, a fiſh peculiar to the lake, which reſembles the whiting, but taſtes like a trout. This river, after leaving the lake, runs by a N. E. courſe into *Denbighſhire*. The *Avon*, or *Avonawrs*, riſes in *Beroſe-wood*, on the E. ſide of the county, and running moſtly S. W. falls into *St. George's Channel*. The *Drurydh* iſſues from a lake in the N. of *Merionethſhire*, and running to the S. W. alſo falls into the *Iriſh* ſea.

HARLECH, the principal town in this county, is ſeated on a ſteep rock on the ſea-ſhore, and is but a poor place, though it is the county-town. It had formerly a ſtrong handſome caſtle, which had a garriſon for king *Charles* I. in the civil wars, on which account it was afterward demoliſhed by the parliament. The town is governed by a mayor, and has a weekly market on Saturdays.

DOLGELLY is ſeated at the foot of a great rock called *Cader Idris*, which is of great height, and is waſhed by the river *Avon*. It is but an ordinary town, yet has a conſiderable manufacture of ſtockings and flannels. At the town of *Bala*, ſituated on the banks of the lake of the ſame name, great quantities of knit woollen ſtockings are made by men, women, and children.

In the ſouthern part of the county are conſiderable iron works.

MONTGOMERYSHIRE,

THE laſt county in *North Wales*, is called by the *Welſh* *Sir Trevalwyn*, and is bounded on the N. by *Merionethſhire* and *Denbighſhire*; on the N. E. and E. by *Shropſhire*; on the S. by *Radnorſhire*; on the S. W. by *Cardiganſhire*; and on the W. by part of *Merionethſhire*. It extends thirty-five miles in length, from N. to S. and in one part forty-four in breadth from E. to W. This county is divided into ſeven hundreds, containing five market-towns, and forty ſeven pariſhes. It lies in the three ſeveral dioceſes of *St. Aſaph*, *Bangor*, and *Hereford*; but ſends only two members to parliament, one for the county, and one for the town of *Montgomery*.

This county being extremely mountainous is not very fertile, except in the valleys, which afford ſome corn, and plenty of paſture; the S. S. E. and N. E. parts being much more level, are extremely fruitful, eſpecially a pleaſant vale through which the *Severn* glides in beautiful meanders. This county has long been famous for an excellent breed of horſes, which are larger than thoſe bred in any other part of *Wales*. This county likewiſe abounds in horned *cattle*, *fowl*, *fiſh*, and *corn*.

The vaſt hill of *Plynlimmon*, a part of which ſtands in this county, and a part in *Cardiganſhire*, ſtands on a very extenſive baſe, and towers to a great height. Its ſummit is boggy, preſenting a moſt extenſive view over a dreary and almoſt uninhabited country.

In the northern part of the county, near *Langynog*, a conſiderable ſlate quarry has been diſcovered of late years, but the want of water carriage is a great impediment to the profit which would otherwiſe ariſe to the proprietor. This county produces no coals.

It is watered with ſeveral ſmall ſtreams which fall into the *Severn*, a river that is the principal beauty of this county: its ſource is a ſmall lake on the vaſt mountain of *Plynlimmon*, and in its courſe it receives ſo many ſmall ſtreams, that it becomes navigable before it leaves the county. The rivers *Rhydel* and *Wye* have their ſources on the ſame mountain: but theſe laſt ſoon leave *Montgomeryſhire*. The *Tanat* riſes toward the N. W. ſide of the county, and running eaſtward forms part of the northern boundary between *Montgomeryſhire* and *Denbighſhire*; falling into the *Severn* at the N. E. point of the county. The *Turgh* riſes on the W. ſide of *Montgomeryſhire*, and running eaſtward till it reaches the foot of *Mount Golway*, turns to the N. and, after receiving the *Murway*, falls into the *Tanat*. Theſe rivers abound with fiſh, and the ſalmon, at certain ſeaſons, proceeds up the *Severn* to the baſe of the mountain of *Plynlimmon*.

MONTGOMERY, the county town, is pleaſantly ſeated in a fertile ſoil, and a healthful air, on the aſcent of a hill, twenty-four miles to the S. of *Shrewſbury*, and a hundred and ſixty-one to the N. W. of *London*: it had once a caſtle, which was demoliſhed in the civil wars. It is a pretty large town, formerly walled round, and has a market on Tueſdays.

WELSHPOOL is ſeated in a vale on the bank of the *Severn*, ſeven miles to the N. of *Montgomery*, and a hundred and ſixty-eight to the N. W. of *London*. It is the largeſt and beſt town of the county. Great quantities of flannel, manufactured in the upper country, are brought hither on ſmall *Welſh* horſes, and conveyed from hence by water carriage to *Shrewſbury*. The *Severn* begins to be navigable at the *Poole-ſtake*, about three miles from the town. *Dyer's* deſcription of this merchandize is no leſs juſt than poetical.

> The northern *Cambrians*, an induſtrious tribe,
> Carry their labours on pigmean ſteeds,
> Of ſize exceeding not *Leiceſtrian* ſheep,
> Yet ſtrong and ſprightly: over hill and dale
> They travel unfatigued, ———
>
> *Fleece*, *Book*. III.

Not far from *Welſh pool* is *Powis-caſtle*, now called *Powis-court*, built of a reddiſh ſtone, and is a large ſtately ſtructure. "The gardens," ſays Mr. *Pennant*, "are deſcended into by terraces below terraces: a laborious ſeries of flights of ſteps, covering rock, which one *De Valle* had blaſted away in former days. The gardens were filled with water-works; the whole in imitation of the wretched taſte of *St. Germains en Laye*, [See page 490 of this volume] which the late family had a moſt unfortunate opportunity of copying." *Tour in Wales*. II. 337.

SOUTH WALES.

RADNORSHIRE.

WE now come to *South Wales*, and ſhall begin with RADNORSHIRE, called by the *Welſh* *Sir Vaes y Ved*. It is bounded on the N. by *Montgomeryſhire*; on the E. by *Shropſhire* and *Herefordſhire*; on the S. and S. W. by *Brecknockſhire*; and on the W. by *Cardiganſhire*; extending twenty-five miles in length, from N. to S. and thirty in breadth, from E. to W.

This county is divided into ſix hundreds, in which are contained three market-towns, and fifty-two pariſhes. It is ſeated in the dioceſe of *Hereford*, and ſends two members to parliament, one for the county, and one for the town of *Radnor*.

The ſoil of this county is in general but indifferent; yet ſome places produce corn, particularly the eaſtern and ſouthern parts, but in the northern and weſtern, which are mountainous, the land is chiefly ſtocked with horned cattled, ſheep, and goats.

In this county, beſide the rivers *Tame*, or *Temd*, which, on the N. E. divides this county from *Shropſhire*, and the *Wye* which waters the W. ſide, it has the *Ithon*, which riſes in the northern borders of the county, forming its winding courſe to the ſouthward, and, after having received ſeveral rivulets, falls into the *Wye*. Several other ſmall rivers riſe in the middle of the county, and run into *Shropſhire* and *Herefordſhire*; by which means this county is ſupplied with plenty of fiſh.

The principal towns in this county are the following:

NEW RADNOR, the county town, is ſeated near the ſpring-head of the little river *Somergil*, a hundred and fifty-three miles to the W. N. W. of *London*. It ſtands in a pleaſant valley at the foot of a hill, where a caſtle formerly ſtood, which was deſtroyed by *Owen Glendour*, when, upon the depoſition of *Richard* II. he aſſumed the title of prince of *Wales*. The town is governed by a recorder, twenty-two aldermen, a bailiff, and twenty-five burgeſſes, and has a court of pleas for all actions, without being limitted to any particular ſum; yet the aſſizes are not held here. The town of *Old Radnor* is about three miles to the E.

PRESTEIGN is ſituated in a rich and pleaſant valley, a hundred and forty-nine miles from *London*, and is a handſome town, with regular well-built ſtreets. It has ſeveral convenient inns, and its market is remarkable for *barley*, of which a great deal of malt is made. Here the aſſizes are held and the county gaol is kept.

CARDIGANSHIRE,

CALLED by the *Welch Sir Aberteivy*, is bounded on the N. by a ſmall part of *Merionethſhire* and *Montgomeryſhire*; on the E. by *Radnorſhire* and *Brecknockſhire*; on the S. by *Caermarthenſhire* and a ſmall part of *Pembrokeſhire*; and on the W. by *Cardigan Bay* in *St. George's Channel*. It extends forty-two miles in length from N. to S. and twenty in breadth from E. to W. and is divided into five hundreds, which contain ſix market-towns, and ſixty-four pariſhes. It lies in the dioceſe of *St. David*, and ſends two members to parliament, one for the county, and one for the town of *Cardigan*.

The air is milder here than in moſt parts of *Wales*. To the S. and W. are plains fruitful in corn; but the northern and eaſtern parts are a continued ridge of mountains, which, compared with the reſt, are bleak and barren: yet in the worſt parts of this county there are paſtures in which are bred flocks of ſheep and large herds of cattle. Here is alſo plenty of tame and wild fowl; alſo near the rivers are found great numbers of *otters*. In the valleys are ſeveral lakes, and this country is well ſupplied with ſea and river fiſh. Coals and other fuel are ſcarce; but the mountains abound with veins of *lead* and *ſilver ore*; a ton of which laſt will yield ſeventy or eighty ounces of ſilver. The mines have been worked ſeveral times to great advantage; and particularly Sir *Hugh Middleton* is ſaid to have cleared two thouſand pounds a month, for ſeveral years together, which enabled him to bring the *New River* water to *London*; but *Mr. Pennant* ſays he expended the whole on that great object, and was ſo reduced, as to ſupport himſelf by becoming an hireling ſurveyor. *Tour in Wales*, II. 30.

The principal rivers are the *Teivy*, which riſes from a lake of the ſame name, at the foot of the mountains on the eaſtern edge of *Cardiganſhire*: at firſt it wanders, loſt as it were among the rocks and ſtones with which this part of the country abounds, till beginning to have a regular channel, it runs to the S. W. and falls into *St. George's Channel* below *Cardigan*. This river is famous for its great plenty of excellent ſalmon, and for its abounding with *otters*. The *Rydal* has its ſpring on the S. W. ſide of *Plinlymmon* mountain, and runs S. and S. W. till it falls into *St. George's Channel*, jointly with the *Iſtwith*, which riſes beyond the lead mines on the N. E. ſide of *Cardiganſhire*.

CARDIGAN, the principal town, is called by the *Welſh Aberteivy*, from its being ſituated at the mouth of the *Teivy*; it is two hundred and thirty-four miles to the W. N. W. of *London*, and is a large, ancient, and populous borough, with a good ſtone bridge over the river leading into *Pembrokeſhire*. The tide flows up to the town, and the chief trade of the inhabitants is to *Ireland*, to which, and other parts, they export lead. *Cardigan* was once defended by walls and a caſtle, but they are in ruins. It gives the title of earl to a branch of the family of *Montagu*. The town is governed by a mayor, a recorder, and thirteen aldermen; here the county buſineſs is tranſacted, and the aſſizes held. The church is a handſome ſtructure, as is alſo the town-hall.

ABERISTWITH is a populous town, ſeated on the river *Rydal*, near the place where it falls into the mouth of the river *Iſtwith*, thirty miles to the N. E. of *Cardigan*, and one hundred and ninety-nine to the W. N.W. of *London*. It is a large populous town, governed by a mayor, recorder, and other inferior officers, and has a conſiderable market on Mondays. It had formerly a caſtle and walls; but they have long ſince been decayed.

PEMBROKESHIRE,

CALLED by the *Welſh Penbrokeſhire*, is bounded on the N. E. by *Cardiganſhire*; on the E. by *Carmarthenſhire*; on the S. by the mouth of the *Briſtol Channel*; and on the W. and N. by *St. George's Channel*; extending twenty-ſeven miles in length and twenty-one in breadth from E. to W.

This county is divided into ſeven hundreds, which contain one city, ſeven market-towns, and one hundred and forty-three pariſhes. It lies in the dioceſe of *St. David's*, and ſends three members to parliament, one for the county, one for *Haverfordweſt*, and one for *Pembroke*.

The ſoil is fertile: its few mountains, which are chiefly in the N. E. part, yield good paſture for cattle, and the parts near the ſea afford plenty of good corn and rich meadows. It likewiſe abounds in *goats* and *fowl*, particularly in excellent *falcons*, *fiſh*, *pit-coal*, and *iron ſtone*.

It is well watered with rivers; for beſides the *Teivy*, which parts it from *Caermarthenſhire*, are the *Clethy*, which riſes at the foot of *Wrenywaur-hill*, and running ſouthward, joins the *Dougledye*. This laſt has its ſource near the middle of the county, and running toward the S. E. joins the *Cledhewen*, after paſſing by *Haverfordweſt*, it at length receives the *Clethy*, and at laſt falls into *Milford-haven*.

The principal places in this county are,

ST. DAVID'S, a city which ſtands on the moſt weſtern promontory of all *Wales*, two hundred and ſeventy-two miles from *London*. It was not at firſt an epiſcopal ſee; but afterward, in the reign of king *Arthur*, became the metropolitan of all the churches in *Wales*, and thus continued till the reign of king *Henry* I. when it became ſuffragan to the ſee of *Canterbury*. It was once a conſiderable city defended by walls; but theſe are demoliſhed, and it is at preſent a ſmall town thinly inhabited, without ſo much as a market. The cathedral is the remains of a venerable building.

From the point of land on which *St. David's* ſtands, may be diſtinguiſhed, in a clear day, the coaſt of *Ireland*, though it is near forty miles diſtant. Before this point lie ſeveral dangerous rocks called the *Biſhop and his Clerks*, on which many ſhips have been loſt. Near theſe is a little iſland named *Ramſey*. Theſe are the reſort of an incredible number of ſea-fowl in the breeding ſeaſon.

HAVERFORD-WEST is commodiouſly ſeated on the river *Dougledye*, over which is a ſtone bridge, fifteen miles S. by E. of *St. David*'s, and two hundred and fifty-five miles W. of *London*: it is a large handſome place, with ſeveral good houſes, and contains three pariſh churches, among which *St. Mary*'s is a neat building, with a high ſpire. There is alſo a fourth church in the out parts. *Haverford* has a conſiderable trade and ſeveral ſhips belonging to it. It had formerly a wall and a caſtle, which are now demoliſhed. The aſſizes and county gaol are kept here.

MILFORD-HAVEN, to the S. of *St. Bridge's bay*, is a large, ſafe, and moſt commodious harbour, ſurpaſſing any in *Great Britain*, capable of receiving a thouſand ſhips. It has thirteen roads, ſixteen creeks, and five bays, all of which have their particular names; great quantities of fine rock oyſters are taken here. Many ſums of money have been voted by parliament, for the purpoſe of improving and fortifying this haven, but they have been expended without economy or effect. The capaciouſneſs and ſafety of this harbour have cauſed it to be recommended as the fitteſt place for forming a grand arſenal, and making it the rendezvous for the naval ſtrength of the kingdom in time of war; but its diſtance from the capital, and the incapacity of the adjacent country to ſupply ſhip-timber, will ever prevent ſuch a meaſure being adopted. Here the earl of *Richmond* landed, in the year 1485, when he came to aſſert his claim to the crown, againſt *Richard* III.

PEMBROKE, the county town, is commodiouſly ſeated on the innermoſt creek of *Milford-haven*, over two branches of which there are two handſome bridges. It ſtands two hundred and fifty-ſix miles W. of *London*, and is ſurrounded with a wall which has three gates, and alſo defended by a ſtrong caſtle ſeated on a rock. It is well built and has two churches. The commerce carried on from hence is rather on the decline. It gives the title of earl to the family of *Herbert*, and is governed by a mayor, bailiff, and burgeſſes.

TENBY, ten miles E. of *Pembroke*, on the W. ſide of *Caermarthen* bay in the *Briſtol Channel*, is a ſmall but commodious harbour, from whence conſiderable quantities of coals are ſhipped to *Ireland*.

CAERMARTHENSHIRE, or CARMARTHENSHIRE,

IS bounded on the N. by *Cardiganſhire*; on the E. by *Brecknockſhire* and *Glamorganſhire*; on the S. by the *Briſtol Channel*; and on the W. by *Pembrokeſhire*; extending about thirty-ſix miles in length from N. to S. and toward the centre, where broadeſt, forty-three in breadth from E. to W. It is divided into ſix hundreds, in which are contained eight market towns, and one hundred and forty-five pariſhes. It lies in the dioceſe of *St. David*'s, and ſends two members to parliament, one for the county, and the other for the town of *Caermarthen*.

As the land in this county is leſs incumbered with rocks and mountains than the other parts of *Wales*, it is more fertile; it produces great plenty of corn and graſs, and the rich meadows feed very fine cattle. This county alſo abounds in *wood*, *pit-coal*, *fowl*, and *fiſh*, eſpecially *ſalmon*.

The principal rivers are the *Towy*, which riſes in *Cardiganſhire*, and entering the N. E. ſide of this county, runs S. and S. W. and at length falls into *Briſtol Channel*; the *Cothy* riſes near the N. borders of *Caermarthenſhire*, and running moſtly S. joins the *Towy*; the *T*[illegible], or *Teivy*, riſes in *Cardiganſhire*, but ſoon becomes the boundary between that county and *Caermarthenſhire*, till being joined by the little river *Keach*, it parts *Cardiganſhire* and *Pembrokeſhire*.

CAERMARTHEN, or **CARMARTHEN**, the county town, is pleaſantly ſituated on the banks of the *Towy*, two hundred and eight miles to the N. W. of *London*. The town is well built, populous, and daily increaſing. Hither the gentry of *South Wales* chiefly reſort, invited by its pleaſing ſituation, handſome buildings, and the public diverſions held here. It has a convenient quay for the lading and unlading of goods, and a handſome ſtone bridge over the river: but the inhabitants ſuffer from the ſands thrown up by the ſea in the mouth of the harbour. It gives the title of marquis to the duke of *Leeds*, of the name of *Oſborne*.

The diverſified and romantic appearances of the adjacent country have received great embelliſhment of deſcription from the harmonious verſe of Mr. *Dyer*, in his poem of *Gronger-hill*.

This was the birth-place of *Merlin*, the ancient *Britiſh* prophet, who flouriſhed in 480, and about a mile from the town, by the road ſide, almoſt oppoſite to the Biſhop of *St. David*'s palace, is a place called *Merlin's Grove*. This celebrated magician was in fact the ſon of a noble *Roman* of the ſame name, his mother a veſtal, who to ſave her life and honour, invented a ſtory that ſhe was forced and impregnated by an incubus, which impoſed upon the credulous diſpoſition of the times. *Merlin*, whilſt a boy, in conſequence of his ſuppoſed extraordinary birth, was introduced to *Vortigern*, who had retired into *Wales* to eſcape the treacherous *Saxons*, and his ſuperior talents gained him the admiration of the king and his court. He became an able mathematician and aſtronomer, and deeply read in all the learning of his age: the vulgar, as uſual, aſcribed all that he did to art magic, numerous prophecies were attributed to him, inſomuch, that the council of *Trent* is ſaid to have forbidden the mention of them.

BRECKNOCKSHIRE

IS called by the *Welſh Brycheinog*, which the *Engliſh* have changed to *Brecknock*. The *Welſh* name has been derived by ſome authors from *Brechanius*, a *Britiſh* prince, famous for his twenty-four daughters, who, from the ſanctity of their lives, were, after their deaths, eſteemed ſaints. It is bounded on the N. by *Radnorſhire*; on the E. by *Radnorſhire* and *Herefordſhire*; on the S. by *Glamorganſhire*; and on the W. by *Caermarthenſhire* and *Cardiganſhire*; extending thirty-two miles in length from N. to S. and in the broadeſt part, of the ſame extent in breadth.

This county is divided into ſix hundreds, contains four market towns, and ſixty-one pariſhes. It lies in the dioceſe of *St. David*'s, and ſends two members to parliament, one for the county, and one for *Brecknock*.

This county is extremely mountainous, which renders travelling ſo diſagreeable and dangerous, that the *Engliſh* who ride through it, call it *Break-neck-ſhire*: toward *Radnorſhire* it is ſomewhat more low and level. The valleys produce much corn, and from the mountains great herds of cows and oxen are brought to *England*; this county alſo produces goats, ſome veniſon, and plenty of fowl.

The principal rivers of *Brecknockſhire* are, the *Uſk*, which riſes from a ſpring on the ſide of the *Black Mountain*, on the S. W. border of the county, and running firſt to the N. and then to the E. paſſes into *Monmouthſhire*. The *Wye* is the N. E. boundary between this county and *Radnorſhire*, after which it enters *Herefordſhire*. The *Irvon* riſes among the mountains on the N. W. and running firſt to the S. and then to the N. E. falls into the *Wye*. Both theſe and the ſmaller rivers are well ſtored with fiſh, particularly the *Uſk* and the *Wye*, which abound with ſalmon and trout.

Breck-nock-meer is a lake in the middle of the county, to the E. of *Brecon*, between two and three miles over, ſo full of fiſh, that the inhabitants commonly ſay, that there are only two thirds of water to one third of fiſh.

BRECON, or **BRECKNOCK**, the capital of the county, is called by the *Welſh Aber-Houdhy*, it being ſeated at the confluence of the *Houdhy* and the *Uſk*, one hundred and ſixty-three miles W. of *London*. It is an ancient and large town. The aſſizes are kept here, and it has a pretty good trade in woollen manufactures.

Glamorganshire

IS bounded on the N. by *Glamorgan* and *Brecknockſhires*; on the E. by *Monmouthſhire*; on the S. by *Briſtol Channel*; and on the W. by the ſame channel and *Caermarthenſhire*; extending twenty-three miles in length from N. to S. and forty-three in breadth from E. to W. including a narrow peninſula, which runs weſtward into the ſea from *Swanſey*.

It is divided into ten hundreds, in which are contained one city, eight market-towns, one hundred and eighteen pariſhes, and twenty-five caſtles. It lies in the dioceſe of *Landaff*, and ſends two members to parliament, one for the county, and one for the town of *Cardiff*.

On the N. ſide of this county, where it is mountainous, the long continuance of the ſnow renders the air ſharp; but the country being more level on the S. ſide, it is there milder, more populous, and bears very large crops of corn, with very ſweet graſs; whence it is called the *Garden of Wales*. Cattle abound in all parts, there being fruitful valleys among the mountains, that yield very good paſture. Its other commodities are *lead*, *coals*, *iron*, and *lime-ſtone*.

The principal rivers in this county are the *Rumney*, the *Taff*, or *Tave*, the *Tawy*, the *Neath*, and the *Elay*; theſe, with the many rivulets running into them, render this county fertile, and at the ſame time ſupply the inhabitants with great variety of fiſh. Over the *Taff* a very remarkable bridge has been thrown, conſiſting of only one arch, which is 140 feet wide, and 34 high; this arch, probably the wideſt in the world, was both planned and executed by a common maſon. The *Neath*, which riſes about four miles due E. of the *Tawy*, runs a courſe remarkably parallel, and falls into the ſame bay, beneath the town of *Neath*. There are ſeveral ſmall iſlands ſcattered about its coaſt.

The principal places in this county are the following:

Landaff, ſeated on an aſcent, by the river *Tave*, near *Cardiff*, one hundred and ſixty-ſeven miles to the W. of *London*, though the ſee of a biſhop, and therefore ſtyled a city, has not a market. The cathedral is however a neat ancient building.

Cardiff, or **Caerdiff**, is ſeated on the river *Tave*, two miles to the S. of *Landaff*, and is a handſome populous trading town. It has a caſtle, a wall, and four gates, with a bridge over the river. In the caſtle *Robert* duke of *Normandy* was for many years confined by his brother *Henry* I. and here he ended his days. The neighbouring country is fruitful, and two miles below the town is a commodious haven in *Briſtol Channel*, from which ſmall veſſels may come up to the bridge. The town carries on a conſiderable trade with *Briſtol*.

Cowbridge, twelve miles W. of *Cardiff*, is the county town, and here the aſſizes are held. It is a neat place, of ſmall extent.

Caerphilly is ſeated between the rivers *Tave* and *Rumney*, five miles to the N. of *Landaff*. It ſtands on a mooriſh ground among the hills; and the many *Roman* coins dug up here, render it probable that the walls were built by the *Romans*. The caſtle is one of the nobleſt remains of antiquity in the whole iſland. It was larger than any caſtle in *England*, that of *Windſor* excepted; and from what remains of it, appears to have been extremely beautiful. One half of a round tower has fallen quite down, but the other overhangs its baſis more than nine feet, and is as great a curioſity as the leaning tower of *Piſa* in *Italy*.

Neath, ſeated on the river of the ſame name, over which there is a fine bridge, two hundred and two miles to the W. of *London*. It is an ancient and pretty large town. Small veſſels come to this town to load coals, which are here in great plenty. Near it are iron works and copper ſmelting houſes. On the other ſide of the river are the ruins of a fine monaſtery; but a large ſtructure belonging to it is kept in good repair.

Swansey is a ſea-port town, commodiouſly ſeated on the ſea-ſhore, near the mouth of the river *Tawy*, two hundred and five miles W. of *London*. It is a large, clean, and well built town. It has the beſt trade of any town in the county, eſpecially for coals, which are ſent by ſea to *Somerſetſhire*, *Devonſhire*, *Cornwall*, and *Ireland*; a hundred ſail of ſhips being often ſeen here at a time loading coals. The pleaſantneſs of its ſituation and the cheapneſs of proviſions, have induced many perſons who have retired from buſineſs in *London*, with ſmall fortunes, to ſettle in this neighbourhood. Much of the *Angleſea* copper ore is here ſmelted, as likewiſe lead ore. This port ſupplies the country round with ſhop goods and grocery, which are procured at *Briſtol*. Coaſting veſſels are built here, and in autumn the ſhore is uſed for the purpoſe of ſea-bathing.

Among the many antiquities of *Glamorganſhire*, one of the moſt ſingular is in the weſtern peninſula of the county called *Gower*, where, on a mountain named *Kevyn-Bryn*, is a ſtone of an immenſe ſize, computed to weigh near twenty ton, laid upon ſeveral others by way of ſupporters. They are all of the mill-ſtone kind, and though the upper one is ſtill ſo large, yet ſeveral tons have been broken off for mill-ſtones. It is commonly known by the name of *Arthur's Stone*.

CHAP. XXX.

Of NORTH BRITAIN, or SCOTLAND, with its Iſlands.

SECT. I.

Its Situation, Extent, Face of the Country, Air, Soil, Produce, Lakes, and Rivers.

SCOTLAND, which ſince the Union has been called *North Britain*, is the northern part of this iſland, which in the fifth year of queen *Anne*, A. D. 1707, was, by the conſent of the parliaments of both kingdoms, united to *England*; and they being thus joined, the whole iſland is ſtyled *Great Britain*.

Thus all the northern part of this iſland beyond the counties of *Cumberland* and *Northumberland*, belongs to *Scotland*, together with a multitude of iſlands, which amount to about three hundred; but ſome of them are very inconſiderable. This country is bounded on all ſides by the ocean, except on the S. where it is ſeparated from *England* by the river *Tweed*, *Cheviot-hills*, the river *Erſk*, and *Solway Frith*. It is generally reckoned to extend three hundred miles in length, and one hundred and eighty in breadth, from *Aldermouth-head*, near the *Iſle of Mull*, to *Buchaneſs*, where it is broadeſt. The coaſt is much indented, and the land in ſeveral places nearly cut through by bays, gulfs, and rivers, the firſt of which form excellent harbours, and the latter abound with freſh water fiſh.

North Britain, excluſive of its iſlands, lies between 54° 40′ and 58° 40′ N. latitude, and between 1° 34′ and 6° 18′ W. longitude. In the northern parts the longeſt day is upward of eighteen hours, and the ſhorteſt five hours forty-five minutes: but the brightneſs of the northern lights in a great meaſure remedy the inconvenience of the ſhorteſt days of winter.

The capital rivers, particularly the *Forth*, *Clyde*, *Tay*, the *Spey*, the *Ann*, *&c.* divide the country into peninſulas; theſe running ſo far within land as to be intercepted only by a ſmall iſthmus, or neck of land. Theſe and the other rivers, which are very numerous, will be particularly treated of in our deſcription of the countries through which they paſs.

Several acts of parliament have been obtained for the purpoſe of rendering the river *Clyde* navigable, particularly to aſſiſt the commerce of *Glaſgow*, and to open a communication, by means of a canal, with the eaſtern and weſtern oceans. Theſe objects have at length been obtained, by the completion of a canal from the river *Forth* to the river *Clyde*, which is amongſt the moſt ſtupendous works which this country, in this age, ſo diſtinguiſhed by internal navigable communication, has produced. The full extent of this canal is upward of thirty-five miles; its elevation above the level of the ſea is 160 feet. It deſcends into the river *Clyde* by nineteen locks, and into the *Forth* by twenty. It is carried over many ſmall rivers, and three turnpike roads; beſide which there is an aqueduct extending 400 feet in length, over a deep valley. The whole extent of the canal may be generally paſſed, by a loaded boat, in about eighteen hours.

The moſt remarkable lochs or lakes in *Scotland* are *Lochtay*, *Lochneſs*, and *Lochlevin*, which ſend forth rivers of the ſame name with themſelves; *Lochlomond*, which ſends forth the river *Lomond*; and *Lochiern*, from which flows the river *Iern*.

Great part of the country, particularly toward the N. and W. is mountainous, the principal of which are the *Grampian hills*, which interſect the kingdom from N. E. to S. W. paſſing from near *Aberdeen* into *Argyleſhire*; the mountains in general are covered with heath; and are called the *Highlands*, but theſe in ſeveral places yield good paſture: between the higher grounds are many rich valleys, which produce corn and cattle. Indeed the ſouth parts of *Scotland* are far preferable to the northern parts of *England*. The grain moſtly cultivated is *oats*, as it will grow in the mountainous parts. In unfavourable ſeaſons, when the genial warmth of the ſummer ſun has been ſparingly imparted, much corn in the northern parts fails of ripening, and a ſcarcity of grain enſues. To remove the fatal conſequences of ſuch dearths, it was held forth to the *Scotch*, at the time when the union was under diſcuſſion, to induce them to accede to it, that public granaries ſhould be eſtabliſhed, but nothing of the kind has hitherto been attempted. The productions in *Scotland* are in general much the ſame as in *England*. In the *Lowlands* there is little timber, but in the more northern parts there are foreſts of *fir-trees*, that might afford maſts for the largeſt men of war. There are alſo many large woods of oak, aſh, and elm, fit for building; and large plantations have of late years been made by ſeveral noblemen, on their eſtates, particularly the earl of *Fife*. There are abundance of fruit-trees in their gardens and orchards. The ſoil likewiſe in many places produces great plenty of *hemp* and *flax*. They have *coal-pits*, which afford excellent coal, great quantities of which are brought to *London*, where it is known by the name of *Scotch-coal*. This is the common fuel in ſeveral parts; but in the *Highlands* wood is burnt, and in other places turf, peat, heath, broom, and furze. They have likewiſe mines of *lead*, with quarries of *free-ſtone*, and the latter in ſuch plenty, that moſt of the principal towns are built with nothing elſe.

The country abounds with flocks of ſheep, many of which are ſent into *England*, as is the greateſt part of their wool. It has alſo great herds of cattle, which are generally black, except in corn ſoils, and theſe are much larger than thoſe bred in other parts; but in general, their ſheep and horned cattle are much ſmaller than thoſe of *England*, and their fleſh is very ſweet. The *Highlanders* annually bring great numbers of them into the *Lowlands*, where ſome are fatted; but the bulk of them, with many of thoſe bred in the *Lowlands*, are ſent into ſeveral parts of *England*, eſpecially to *Norfolk*.

They breed great numbers of horſes, eſpecially in *Galloway* and the *Highlands*. Theſe, though ſmall, are hardy, and capable of great fatigue, and are therefore extremely proper for a mountainous country, which in many places will not admit of carriages and teams: theſe will thrive upon what would ſtarve other horſes.

Scotland has not only plenty of the domeſtic fowl common in other countries, but mang other kinds, eſpecially in the iſlands, where they are ſo numerous, that the inhabitants can neither conſume nor vend half of them. *Eagles* inhabit the mountainous regions.

SECT. II.

Of the Government, Religion, Fiſheries, Trade, and Revenues of NORTH BRITAIN.

THE parliament of *Scotland* being now incorporated with that of *Great Britain*, there are ſixteen peers choſen out of the nobility who repreſent that body, and forty-five members who repreſent the following ſhires and diſtricts.

The ſhires which ſince the Union ſend one member each to parliament, are, 1. *Aberdeen*, 2. *Air*, 3. *Argyle*, 4. *Banff*, 5. *Berwick*, 6. *Bute*, and *Caithneſs*, by turns, 7. *Clackmannan*, and *Kinroſs*, by turns, 8. *Dunbarton*, 9. *Dumfries*, 10. *Edinburgh*, 11. *Elgin*, 12. *Fife*, 13. *Forfar*, 14. *Haddington*, 15. *Inverneſs*, 16. *Kincardine*. 17. *Kircudbright*, 18. *Lanerk*, 19. *Linlithgow*, 20. *Nairn*, and *Cromarty*, by turns, 21. *Orkney* and *Shetland*, 22. *Peebles*, 23. *Perth*, 24. *Renfrew*, 25. *Roſs*, 26. *Roxburgh*, 27. *Selkirk*, 28. *Stirling*, 29. *Sutherland*, and 30. *Wigton*.

Beſide theſe there are the following fifteen diſtricts of royal burghs, which alternately ſend one member to parliament. 1. *Aire*, *Irwin*, *Rothſay*, *Inverary*, and *Campbell-town*. 2. *Bamff*, *Elgin*, *Cullen*, *Kintore*, and *Inverary*. 3. The city of *Edinburgh*. 4. *Forreſs*, *Nairn*, *Inverneſs*, and *Fortroſe*. 5. *Pittenween*, *Eaſt-Anſtruther*, *Weſt-Anſtruther*, *Craile*, and *Kilrennie*. 6. *Inverkeithing*, *Stirling*, *Dumfermling*, *Culroſs*, and *Queensferry*. 7. *Burnt-iſland*, *Dyſert*, *Kirkaldy*, and *Kinghorn*. 8. *Dundee*, *Perth*, *St. Andrew's*, *Cowpar*, and *Forfar*. 9. *Montroſe*, *Aberdeen*, *Brechin*, *Aberbrothock*, and *Inverbervey*. 10. *Kircudbright*, *Dumfries*, *Lochmaban*, *Annan*, and *Sanquhar*. 11. *Lanerk*, *Linlithgow*, *Selkirk*, and *Peebles*. 12. *Renfrew*, *Glaſgow*, *Ruglen*, and *Dumbarton*. 13. *Dingwall*, *Tayne*, *Dornock*, *Weik*, and *Kirkwall*. 14. *Jedburgh*, *Haadington*, *Dunbar*, *North-Berwick*, and *Laudar*. 15. *Wigton*, *Whithorn*, *New-Galloway*, and *Stranroer*.

The courts of civil judicature in *Scotland*, are,

1. The *college of juſtice*, commonly called the *ſeſſion*, which conſiſts of a preſident, and fourteen lords of ſeſſion, who ſit twice a year to adminiſter juſtice. Before this court are tried, at ſtated times, all civil cauſes, which they determine by acts of parliament, and the cuſtom of the nation; and where theſe are defective, they decide according to the civil law, and the rules of equity. An appeal from this court may be made to the Houſe of Lords; but the preſence of nine judges is required to reverſe a decree made by the court of ſeſſion.

2. The *juſticiary*, uſually called the juſtice or criminal court, conſiſts of five lords of the ſeſſion, the juſtice-general, and juſtice-clerk. Theſe are joined by a pannel or jury, of fifteen out of forty-five, by whom all cauſes of a criminal nature are tried, and the opinion of the majority conſtitutes a verdict. They hold aſſizes all over the kingdom twice every year, and from thence are called "lords of the circuit."

3. The *court of exchequer*, which is like that of *England*, and conſiſts of a chief and four other barons, *&c.* The officers of ſtate are, the keeper of the ſeal, the lord privy ſeal, the lord clerk-regiſter, and the lord advocate.

Beſide the above national judges, every county or ſhire has a chief magiſtrate or his deputy, who is ordinary judge in all civil and criminal cauſes; but, in moſt caſes, an appeal lies from this magiſtrate to the ſeſſion and court of juſticiary.

4. The *court of admiralty* is a ſupreme court, in which all maritime cauſes, crimes, treſpaſſes, quarrels, *&c.* may be tried before the lord high admiral's judge, for he himſelf never judges; he forms his deciſions on the civil law, and the cuſtoms of *Scotland.*

The only order of knighthood in *Scotland* is that of the thiſtle, which is a military badge of honour, and is ſaid to have been inſtituted in the ninth century, by *Achaicus*, king of *Scotland.* It conſiſts of the ſovereign and companions, or knights of the thiſtle. Their enſign is a garter with this inſcription, *Nemo me impune laceſſit.* No one ſhall moleſt me with impunity.

There are alſo in *Scotland* what are called *commiſſary courts*, which are a kind of eccleſiaſtical courts, in which cauſes are tried by commiſſaries. The principal of theſe is at *Edinburgh.* The four commiſſaries of that metropolis try cauſes reſpecting wills and teſtaments, patronage to eccleſiaſtical benefices, tithes, and of matrimony and adultery, in order to a plenary divorce, ſo that the innocent perſon may marry, as if the offending party were naturally dead.

The eſtabliſhed religion is called the *Preſbyterian*; it being a church government by paſtors, teachers, elders, and deacons. The eccleſiaſtical courts are the four following:

I. The *General Aſſembly*, which is the higheſt eccleſiaſtical court in the kingdom. It meets annually in May, and ſits about ten days. A lord commiſſioner, who is always a nobleman of the firſt quality, preſides here as a repreſentative of the king's perſon. All the members are annually elected.

II. The *Provincial Synod* is compoſed of the members of ſeveral adjacent preſbyteries; it meets twice a year.

III. The *Preſbytery*, which conſiſts of a miniſter and one elder from five, or ten, or more neighbouring pariſhes, who, being aſſembled, chooſe five of the miniſters to be præſes, or moderators. Here are tried appeals from the Kirk-ſeſſion; and here they inſpect into the behaviour of the miniſters and elders within their reſpective bounds. They ſupply vacant pariſhes, ordain paſtors; examine and licenſe ſchoolmaſters and young ſtudents for probationary preachers; and judge when or on whom to inflict the greater excommunication.

IV. The *Kirk-ſeſſion* conſiſts of the miniſter, elders, and deacons in each pariſh, who conſider the affairs of the pariſh as a religious ſociety. They judge in all leſſer matters eſteemed ſcandalous, can ſuſpend from the communion, and regulate every thing relating to public worſhip and the poor.

The number of kirks or churches in *Scotland* amounts to about nine hundred and fifty, beſides a few chapels, which make up ſixty eight preſbyteries, included in thirteen provincial ſynods.

The law of *Scotland* has provided againſt pluralities, and throughout the whole country there are no benefices worth leſs than fifty pounds ſterling *per annum*; which in that country is a good maintenance, nor any that exceed a hundred and fifty pounds a year.

There are here however ſeveral ſects of Diſſenters from the eſtabliſhed worſhip, the principal of which are the *Epiſcopalians*, who uſe the form of prayer of the church of *England*; the non-jurors among theſe are not permitted to have public meeting-houſes, but are only ſuffered to preach and read divine ſervice privately; while thoſe who take the oaths, and pray for his majeſty in expreſs terms, have meeting-houſes. There are alſo *Erſkinites* and *Gibbonites*, ſo called from the miniſters of thoſe names, who have ſeparated from the church of *Scotland*, and upon that account they are alſo called *Seceders.* There are likewiſe *Mountaineers*, thus named from their preaching in the open fields, and on the mountains; theſe are alſo called *Covenanters.* But the moſt modern ſect is that denominated *Glaſſites*, or *Sandimanians.*

Scotland has four univerſities; *St. Andrews*, which was founded in the year 1411; *Glaſgow*, in 1454; *Aberdeen*, in 1477; and *Edinburgh*, in 1582.

From the government and religion of *North Britain*, we ſhall proceed to its trade. The *Scots* plaids are a manufacture in which they excel all other nations, both as to colour and fineneſs; they have likewiſe manufactures of various other woollen ſtuffs; but the principal articles are *linen cloth*, which is greatly encouraged and improved; *cambricks*, *muſlins*, ſtriped, flowered, and plain. The ſalt of *Scotland*, which is principally made in what they call pans or caldrons, is ſaid to be better and ſtronger than that of *Shields* and *Newcaſtle*, and cures fiſh to greater advantage; whence it is ſo valued abroad, that greater quantities of it are annually exported to *Norway*, *Germany*, and the *Baltic*, than from the above-named *Engliſh* ports.

The fiſheries of *Scotland* are very conſiderable, and of great advantage to the people, particularly that of *ſalmon*, *cod*, and *herrings*, all of which employ a vaſt number of hands, and are barrelled and exported in great quantities to the continent. Indeed *Scotland* has the advantage of catching herrings ſooner, and curing them at a leſs expence than *England*: their ſituation for exporting them is likewiſe extremely commodious, ſo that they can be ſooner at market than the *Dutch*; thoſe belonging to the *Glaſgow* merchants ſooner arriving on the coaſts of *Spain*, *Portugal*, and up the *Straits*, as the merchants of *Dundee*, *Aberdeen*, *&c.* can ſooner reach the *Baltic.* In the year 1786 a company was incorporated by the name of the *Britiſh* Society for extending the fiſheries, &c. for a particular account of which ſee page 497 of this volume.

It was agreed at the Union, that the ſubjects of the united kingdom ſhould have free trade equally in either country; to be regulated as in *England*, the *Scots* merchants not only to trade to all parts of *Europe*, but to our plantations in *America*, and the *Weſt India Iſlands*; from whence they uſed to bring great quantities of tobacco, ſugar, drugs, *&c.* The commerce, as well as the agriculture and manufactures of *Scotland*, have of late years very greatly increaſed.

In ſhort, *Scotland* is ſaid to have this advantage to boaſt, which neither *England* nor any nation in *Europe* has, namely, that in every branch of its trade with other countries, the balance is on its ſide, that is, the *Scots* ſend out to every country more commodities than they receive back, and conſequently the difference or overplus muſt be made good in ſpecie. According to Mr. *Pennant*, *Scotland* annually exports above 180,000 tons of coal. *Tour in Scotland.* II. 219.

Sir *John Sinclair* makes the amount of ſpecie in *Scotland* at the time of the Union to be

In foreign ſilver coin	£	132,081
In *Scottiſh* milled money	-	96,856
In *Scottiſh* hammered money		142,180
In *Engliſh* milled money	-	40,000
	£	411,117

The rental of *Scotland*, at the ſame time, ſuppoſing the land-tax then levied to be equal to a fifth part of the whole, was 240,000l. The ſame writer makes the preſent hereditary revenue of the crown to be no more than 800l. *per annum*, although in the year 1711 it amounted to 7055l. but then the clear produce, after all deductions were made, was 3341l. The diminution of this revenue has ariſen from a variety of laviſh grants made by the crown, and a neglect in collecting what remains.

The produce of the *Scotch* cuſtoms in the year ending 5th *January*, 1789, was

				£250,839
From which the deductions were	Debentures	-	60,592	
	Bounties	-	63,036	
	Salaries	- -	20,917	
	Incidents	-	27,093	
				171,638
				£ 79,201

The money remitted to the Exchequer in *England*, from this part of the revenue was, however only 40,000l. but it is generally much more conſiderable. The average for the laſt eight years being 72,500l.

The ſalt duties, which are under the management of the ſame commiſſioners, yielded in the ſame year (1788)

				£18,043
Deductions.	Salaries	-	3,159	
	Incidents		1,588	
	Bounties	-	3,755	
	Drawbacks		247	
				8,749
Nett produce		-		£ 9,294

The duties of exciſe, including the annual malt, the hereditary and temporary exciſe, and alſo the fines and forfeitures for the year ending 5th, *January*, 1788, produced

	£ 422,018
The expences of management were -	83,982
Nett produce -	338,036

No branch of the revenue of *Scotland* has increaſed with more rapidity than the ſtamp duties. In the year 1788 they produced 73,877 l. The charges of management and collection to 8,032 l. Nett produce 65,845 l. The ſame writer urges the propriety of eſtabliſhing a ſtamp office at *Edinburgh*, as great inconveniences ariſe from all the paper and parchments being ſtamped in *London*.

The revenue of *Scotland* in general for the year 1788, including the income of the crown, and of the public, amounted to

£. 1,099,148

The expenditure of *Scotland* was	£.
Expences of the crown -	60,342
Expenditure of the public -	173,921
Bounties, drawbacks, &c. -	127,629
Public expences ſettled either by the articles of the Union, or by ſubſequent acts of parliament	64,868
Caſh remitted to the *Engliſh* exchequer -	628,081
Balance remaining with various public officers for national purpoſes - -	44,307
	1,099,148

This revenue, ſays our author, is more than equal to the preſent income of *Sweden*, and ſuperior to that of *England* in the reign of queen *Elizabeth*. He adds, that at leaſt a ſeventeenth part of the revenue raiſed by *Great Britain* is now drawn from *Scotland*, whilſt at the time of the Union the proportion furniſhed by it was ſuppoſed to be no more than a thirty-ſixth part of the whole. *Sir John Sinclair's Hiſtory of the Public Revenue of the Britiſh Empire*. Part III. Page 335, 343, 345, 350.

Some writers have ſuppoſed the population of *Scotland* to be about a million and half, but others eſtimate it at above two millions. It has been aſſerted that in the war which terminated in the year 1762 *Scotland* furniſhed 70,000 men for the ſervice of the army and navy, which ſerves to ſupport the larger calculation of the number of inhabitants. [See what is ſaid on the population of *England*, page 497 of this volume.]

The power which the feudal ſyſtem gave to the lords or chieftains over their vaſſals, ſubſiſted in *Scotland* long after the union, in the fulleſt extent, particularly in the *Highlands* and iſlands. The chief, or laird of a clan, was conſidered by his tenants and peaſants as paramount to the ſovereign of the kingdom, and they could ſcarcely be brought to acknowledge any other allegiance to a king than what their chief inſtructed them to pay. The wiſdom of the *Britiſh* government at length deviſed means to weaken this power of the lairds: by reſtricting the mountaineers in ſome of their cuſtoms, their attachment to their lairds gradually leſſened, and in leſs than half a century, the moſt ſalutary conſequences have enſued. The rooted prejudices of both have been eradicated; the manners of the common people meliorated, whilſt their employments and purſuits have been directed to national purpoſes, in the cultivation of the lands, and the introduction of manufactures.

The *Scots* in general are well made, with frequently a characteriſtic prominence of the cheek-bones, and are ſeldom corpulent; have hardy conſtitutions, are capable of great fatigue, patiently endure the coarſeſt and ſcantieſt fare; meet difficulties with compoſure, and dangers with firmneſs and courage: they are intelligent, frugal, induſtrious, and wary; in their manners grave and ſteady; they are fond of the muſic and the dances of their country, are religious, though diſinclined to epiſcopacy, and ever retain a fondneſs for their native country into whatever regions they migrate, or on whatever ſpot they ſettle. Titles of nobility in *Scotland*, as in *England*, deſcending only to the eldeſt ſon of the poſſeſſor, not, as in many countries in *Europe*, to all the male iſſue; the deſcendants in general of noble families therefore mingle with the maſs of citizens, and engage in active employments, particularly the profeſſion of the law, or that of arms. Their women are comely, induſtrious, and chaſte, but little acquainted with the domeſtic cleanlineſs, which peculiarly diſtinguiſh the *Engliſh*. Of the national character of the men, Dr. *Johnſon* thus ſpeaks, "It may be peculiar to the *Scots* to have attained the liberal without the manual arts; to have excelled in ornamental knowledge, and to have wanted not only the elegancies but the conveniences of common life. Literature, ſoon after its revival, found its way to *Scotland*; and from the middle of the ſixteenth century, almoſt to the middle of the ſeventeenth, the politer ſtudies were very diligently purſued. The *Latin* poetry of *Deliciæ Poëtarum Scotorum* would have done honour to any nation; yet men thus ingenious and inquiſitive, were content to live in total ignorance of the trades by which human wants are ſupplied, and to ſupply them by the groſſeſt means. Till the Union made them acquainted with *Engliſh* manners, the culture of their lands was unſkilful, and their domeſtic life unformed. Since they have known that their condition was capable of improvement, their progreſs in uſeful knowledge has been rapid and uniform. What remains to be done they will quickly do, and then wonder why that which was ſo neceſſary and ſo eaſy was ſo long delayed." *Journey*, &c. p. 56. A late writer of their own country has obſerved, "the *Scots* ſhould conſider, by the Union, they have connected themſelves with a nation who will make as diſtinguiſhed a figure in the page of hiſtory as any people that ever exiſted. A nation that can boaſt, not only of warriors and of ſtateſmen, of poets, philoſophers and artiſts, equal, and in many inſtances ſuperior, to thoſe of other countries, but who have alſo brought the various arts connected with the cultivation of the ſoil, the improvements neceſſary in carrying on every ſpecies of manufacturing induſtry, the theory and the practice of commerce, that wonderful aſſemblage that conſtitutes naval ſtrength, and above all, the principles of good government, and the forms of a free conſtitution, to an height of perfection, which the world never before witneſſed. May both nations, or to ſpeak more properly, the natives of *South* and *North Britain*, ſenſible of the mutual advantages they now enjoy, forget every remnant of jealouſy and rancour, and thoſe whom the hand of Providence hath joined, may no man impiouſly put aſunder. *Sir John Sinclair*. Part III. Page 359.

For a farther account of *Scotland*, we refer our readers to the beginning of the account we have given of *Great Britain* in general, and conclude this ſection with obſerving, that *Scotland* is divided into thirty-three ſhires, or counties; theſe are the ſhires of *Berwick*, *Haddington*, *Edinburgh*, *Roxborough*, *Selkirk*, *Peebles*, *Lanerk*, *Dumfries*, *Wigtown*, *Aire*, *Dumbarton*, *Bute*, *Caithneſs*, *Renfrew*, *Stirling*, *Linlithgow*, *Perth*, *Kincardine*, *Aberdeen*, *Inverneſs*, *Nairne*, *Cromarty*, *Argyle*, *Fife*, *Forfar*, *Banff*, *Kircudbright*, *Sutherland*, *Clackmannan*, *Kinroſs*, *Roſs*, *Elgin*, and *Orkney*.

SECT. III.

BERWICKSHIRE.

THIS county received its name from *Berwick upon Tweed*, which once belonged to it; but it was originally termed the *Mers*, or *March*, from its being the boundary between *England* and *Scotland*. It lies in the S. E. of *Scotland*, and is bounded on the E. by the *North-ſea*; on the S. by the *Tweed* and *Tiviotdale*; on the W. by *Tweedale*, in *Peebleſhire*; and on the N. by *Eaſt Lothian*, in *Haddingtonſhire*; extending about thirty miles in length, and containing two preſbeteries, and thirty-five pariſh-churches.

This county is divided into three parts, namely, *Mers*, *Lammermoor*, and *Lauderdale*.

The principal towns of this ſhire are,

Duns, a burgh famous for giving birth to that celebrated ſchoolman *John Duns Scotus*, who was born in 1274, became the greateſt ſcholar of that age, and was ſtiled, *The ſubtle Doctor*. It is ſeated twelve miles to the W. of *Berwick upon Tweed*, and is a pretty large populous town, which has the beſt trade of any in the county. Its market is ſaid to be the beſt in all *Scotland* for horſes, cows, and ſheep.

COLDINGHAM ſtands near the coaſt, and is famous for an ancient abbey, built about the year 1106, the remains of which are uſed for a pariſh-church. *Ebba*, its lady abbeſs, upon an invaſion of the *Danes*, ſlit her noſe, cut off her upper lip, and perſuaded all her nuns to do the ſame, that their deformity might ſave them from violation; which ſo exaſperated thoſe barbarians, that they ſat fire to the nunnery, and committed all the chaſte ſiſterhood to the flames. This abbeſs was afterward ſainted, and a neighbouring promontory is from her called *St. Ebba's Head*, and by the ſailors *St. Tabbe's*. In the adjacent moor there is not a hedge or tree to be ſeen for the ſpace of eight miles.

GREENLAW, the chief burgh of the ſhire belonging to the earl of *Marchmont*, ſtands about five miles from *Duns*; and in its neighbourhood that nobleman has a fine ſeat.

LAUDER, an ancient royal burgh, the capital of *Lauderdale*, is pleaſantly ſeated on a river of the ſame name, which runs through it, twenty-two miles S. of *Edinburgh*. It has a bridge over the river, is the ſeat of the commiſſary court, and has a good market.

From the long valley of this name on both ſides the river *Lauder*, the family of *Maitland* takes the title of earl; and there is a ſtately ſeat on the river, in the neighbourhood of the town, called *Lauderforth*, which belongs to the earl of *Lauderdale*.

SECT. IV.

HADDINGTON, or EAST LOTHIAN.

THIS ſhire is bounded on the N. and E. by the *Frith of Forth*; on the S. by the hills of *Lammermoor*, in *Berwickſhire*; and on the W. by *Mid Lothian*, or *Edinburghſhire*. According to ſome authors it is only thirteen, and according to others twenty-two miles in length, and twelve in breadth.

EAST LOTHIAN produces corn of all ſorts, and has plenty of *graſs*, *coal*, and *limeſtone*. It feeds a great number of ſheep, eſpecially about the hills of *Lammermoor* and by *Weſt Lammerlow*. A great deal of ſalt is made here. The people employ themſelves in ſpinning, dying, weaving, &c. Here are ſeveral convenient harbours, with the advantage of ſome fiſhing towns; and particularly there is every year a herring-fiſhery after *Lammas* at *Dunbar*, where they take enough both for home conſumption and exportation.

The principal towns in this ſhire are *Haddington* and *Dunbar*.

HADDINGTON, or HADINA, the ſhire town, is a royal burgh, pleaſantly ſeated on the *Tyne*, over which it has a handſome bridge with three large arches. Here are the remains of an ancient nunnery, and of a good church built of hewn ſtone, to which adjoins the chapel of the family of *Lauderdale*, with their and other very noble tombs, but the choir of the church is pulled down. This town gives title of earl to a branch of the family of *Hamilton*, which has large poſſeſſions and fine ſeats in the neighbourhood. No place in *Scotland* is ſurrounded with more little towns and houſes of the nobility and gentry than this; among which is *Yeſter*, a noble ſeat, the manſion-houſe of the earl of *Tweedale*.

DUNBAR, a royal burgh, is ſeated on the S. ſide of the mouth of the *Forth*, where is a good harbour, twenty-five miles to the E. of *Edinburgh*. The town is handſome and well built; the houſes, as in moſt of the principal towns, being all of ſtone covered with ſlate. It has been defended by a ſtrong wall, which is now decayed; and on the oppoſite ſide of the haven are the ruins of a caſtle, almoſt covered with the ſea at high tide: it was once remarkably ſtrong, and was the ſeat of the earls of *March*, afterward ſtyled earls of *Dunbar*. This fortreſs was often won by the *Engliſh*, and as often recovered by the *Scots*; but ſuffered demolition in 1656 by order of the commonwealth, leſt it ſhould afford a retreat for the royaliſts. The port is very conſiderable, and of great advantage to all ſhips in the *Firth*. The inhabitants have here a very conſiderable herring-fiſhery, and ſend out ſhips to the whale-fiſhery.

SECT. V.

MID LOTHIAN, or EDINBURGHSHIRE. *A Deſcription of* EDINBURGH, *and of the other Places worthy of Notice; with an account of the* ISLAND OF BASS, *and of the* Solan *Geeſe which reſort thither.*

THIS is the principal town in *North Britain*, both on account of its fertility and as it contains the capital. It is bounded on the E. by *Eaſt Lothian* for thirteen miles together; on the S. E. by *Berwickſhire* for about four miles; on the S. by the ſhire of *Selkirk* and *Tweedale*, in *Peebleſhire*, for thirteen miles; on the S. W. by *Lanerkſhire* for ſix or ſeven miles; and by the ſame on the W. for two miles; on the N. W. by *Linlithgowſhire* for fourteen miles; and on the N. by the *Frith of Forth*, for eight miles: extending about twenty-one miles in length, and in ſome places ſixteen or ſeventeen in breadth; but in others not above five or ſix.

MID LOTHIAN is ſo fertile that it yields a great deal of corn of all ſorts, with good paſture for cattle, and is provided with all neceſſaries in abundance, particularly *coals*, *limeſtone*, and a kind of ſoft *black marble*; and near the water of *Leith*, ſome miles diſtance from *Edinburgh*, is a *copper mine*.

EDINBURGH, the metropolis of *North Britain*, is ſituated in 55° 58′ N. latitude, and in 3° 12′ W. longitude, from *Greenwich*, fifty-two miles W. N. W. of *Berwick upon Tweed*, ninety N. of *Carliſle*, one hundred and ninety-nine N. N. W. of *York*, and three hundred and ninety-ſix miles N. N. W. of *London*. It is a city and county of itſelf, and was formerly the reſidence of the kings of *Scotland*. In the reign of *James* I. in the year 1436, a parliament was firſt held here, as are ſtill the ſupreme courts of judicature. It ſtands two miles to the S. of the port of *Leith*, and is ſeated upon the ſide of a high hill, or rather a narrow ridge. At the extremity of the E. end of the city is the palace of *Holy-rood Houſe*; leaving which a little to the left, you come through a populous ſuburb to the entrance, called *The Water-port*, and from thence proceeding to the W. the ſtreet goes on in a ſtraight line, through the whole to the caſtle, extending a mile and quaarter in length, and in ſome places eighty feet in width: it is perhaps, the largeſt, longeſt, and fineſt ſtreet for buildings, and the number of its inhabitants, in the world. From the gate of the palace, which ſtands on a level with the plain country, the ſtreet begins gradually to aſcend; but is no where ſteep; yet the aſcent being continued ſo far, the upper part muſt neceſſarily be very high; for the caſtle, which ſtands at the extremity W. as the palace does E. has on every ſide, except on that which joins it to the city, very ſteep and frightful precipices. The ſtreet is extremely well paved; bnt the ridge or top of the aſcent is ſo narrow, that the ſtreet and the row of houſes on each ſide take up the whole breadth; ſo that which way ſoever you turn, you immediately go down a ſteep deſcent from N. to S. and theſe ſide lanes are called wynds. The houſes are very large, and ſome of them ſo lofty, eſpecially in the *High ſtreet*, that five or ſix ſtories are but an ordinary height. Moſt of the houſes being parted into tenements, they have as many landlords as ſtories, each ſtory containing a range of rooms, ſufficient to accommodate a family. At proper diſtances there are elegant conduits ſupplied with water from a reſervoir on the *Caſtle-hill*, which is filled by ſubterranean leaden pipes brought from ſprings at the diſtance of a mile S. of the city.

The royal palace, called *Holy-rood-houſe*, from its being originally an abbey of that name, was firſt converted into a palace by *James* V. and rebuilt by *Charles* II. all but two towers on the W. ſide of the entrance. It is a magnificent ſtone building in the form of a ſquare, adorned with the ſeveral orders of architecture, and divided into four courts. The entrance is very grand, and over the gate is a large apartment, which the duke of *Hamilton* claims as hereditary keeper of the palace. The inner court is very magnificent, and has piazzas all round, which lead into very noble apartments, richly furniſhed; among which is a gallery ſaid to be adorned with the pictures of all the kings of *Scotland*, from *Fergus* their firſt king, three hundred and twenty years before the birth of Chriſt, to the Revolution. This palace is encompaſſed by beautiful gardens.

From the palace-gate weſtward the ſtreet is called *Canongate*, from the canons of the abbey formerly reſiding there. This abbey was founded by *David* I. in the year 1128, and dedicated to the holy croſs. Mr. *Pennant* ſays it was the richeſt religious houſe in *North Britain*. *Tour in Scotland*. II. 242. *Canongate* is a kind of ſuburb, in which are ſeveral magnificent houſes of the nobility, with ſpacious gardens behind them. The city is parted from this ſuburb by the *Netherbow-port*, or gate, which was rebuilt in 1716. It is encloſed on all ſides, except toward the N. by a wall, and is ſecured by a lake on that ſide. It has ſix gates beſide that juſt mentioned.

The great church which was the cathedral, is a large and ſtately ſtructure, in the form of a croſs, now divided into four churches; here alſo the magiſtrates aſſemble, and the judges in their habits in the time of ſeſſion. In a large chapel in the S. W. part of this church the general aſſembly hold their ſeſſions, as does alſo the commiſſion of the aſſembly, in the interval between the general meetings. This ſtructure is adorned with a very high ſteeple, the ſummit of which reſembles an imperial crown. Here they have a ſet of bells which are not rung by ropes, as in *England*, that manner of ringing being unknown in this country; but tunes are played very muſically upon them by ſtriking them. This is done from twelve to one every day, Sundays and holidays excepted; for which the performer receives a ſalary from the city. The four churches in this ſtructure, with the reſt, and the chapel in the cathedral, make twelve in all. There are alſo about twenty meeting-houſes of the epiſcopal party.

On the S. ſide of the great church is a ſmall ſquare, called *The Parliament-cloſe*; where is the parliament-houſe, in which the ſeveral courts of juſtice are held, the *council-chamber*, the *exchequer*, the *public regiſters*, the *court* for the *royal burghs*, the *lawyer's library*, the *poſt-office*, &c. The E. and part of the S. ſide is built into private dwellings, which are magnificent and lofty, they being ſeven ſtories to the front of the ſquare: and the hill they ſtand on having a very ſteep deſcent, ſome of them are backward no leſs than fourteen ſtories high. In the middle of this ſquare is an equeſtrian ſtatue of *Charles* II.

The caſtle, which, as hath been already ſaid, is ſeated at the W. end of the city, is inacceſſible on the N. W. and S. and the entrance from the city is defended by a round battery, and an out-work at the foot of it. In this ſtructure is a royal palace, magnificently built with hewn-ſtone, in which are kept the regalia of *Scotland*, and the records of ſtate, the former, though ſaid to be depoſited here, are never ſhewn. The governor is always a perſon of the firſt quality, and general of the forces; and both he, the lieutenant-governor, foot-major, and other officers, have very handſome apartments. From the caſtle is a delightful proſpect over the city and neighbouring country.

Near the *Potter-row-port* ſtands the college, or univerſity. The ſtudents do not reſide together nor live in common, but only attend their claſſes at certain hours. This univerſity was founded in 1582 by king *James* VI. in conſequence of a legacy left in 1558 by *Robert Reid*, biſhop of *Orkney*. The firſt eſtabliſhment conſiſted of a primate, or principal, a profeſſor of divinity, four regents, or maſters of philoſophy, a profeſſor of philology, and a regent of humanity. In 1640 the town added a profeſſor of mathematics; to which have been lately added profeſſors of eccleſiaſtical hiſtory, civil law, theoretical and practical medicine, chemiſtry, &c. They have a good library. Here is alſo a noble muſeum, in which is contained a prodigious number of curioſities both of art and nature. Under the library is a royal printing houſe, where they are chiefly employed in printing Bibles.

The phyſicians who were incorporated in 1682, by *Charles* II. have their college in *Fountain-cloſe*, near the *Netherbow*. They have a noble muſeum, called from its founder, *Sir Andrew Balfour*, M.D. *Muſeum Balfourianum*; and on the N. ſide of the city they have a neat phyſic garden, containing ſome thouſand exotic plants.

In this city are ſeveral hoſpitals, the chief of which is *Herriot*'s, a large and beautiful building, ſaid to be the moſt magnificent of the kind in the world. It is an exact ſquare, with piazzas encompaſſing the inſide. At the corners are ſquare towers, adorned with little turrets. It is a pile of *Gothic Grecian* architecture, founded by *Geo. Herriot*, goldſmith and jeweller to *Anne* of *Denmark*, queen conſort of *James* I. He left the vaſt ſum of 44,000l. ſterling, for the building and endowment it. It maintains one hundred and three boys. In the interior ſquare is a ſtatue of the founder; in the council-room is his portrait, a half length by *Scougal*; in his hand are ſome jewels, for to that branch of buſineſs he owed his fortune, particularly by the vaſt quantities bought for the wedding of the princeſs of *Bohemia*. He was member of the *Britiſh* parliament, and died aged ſixty-three, in the year 1623. In the ſame room is a head of *William Aytonne*, maſon and builder of the hoſpital. *Pennant*. II. 249. Behind this is another fine foundation, called *Watſon*'s *Hoſpital*, N. E. of which is the *Merchant*'s *Maiden Hoſpital*, founded by the merchants of *Edinburgh*, for the maintenance of the girls of diſtreſſed burgeſſes. It ſupports about ſixty. *Idem*. 250. Near the college is the *Trade*'s-*maiden-hoſpital*, a plain neat building, founded in 1707, by the mechanics of the city, for the maintenance of the daughters of their decayed brethren. At preſent it maintains fifty-two girls. The *Orphan hoſpital* was begun in 1733. It maintains ſeventy poor children, who weave their own clothes, and aſſiſt in the whole economy of the houſe. *Idem*. 248.

A royal infirmary has likewiſe been erected here, after the example of thoſe of *London*, *Bath*, &c. by the liberal contribution of many well diſpoſed perſons; to this work the proprietors of quarries contributed ſtone and lime, the merchants timber, the farmers engaged to carry materials gratis, and even the journeymen maſons and labourers contributed a certain portion of their labour.

The city is governed by a provoſt, who has the addition of lord, whoſe office is much the ſame with that of the lord mayor of *London*; four bailiffs, who, beſide the power of aldermen in the government of the city, have that of ſheriffs; there is alſo a common-council, which uſually conſiſts of twenty-five perſons, but on extraordinary occaſions of thirty-eight. All theſe are choſen annually; and the provoſt, dean of guild, and treaſurer, are required to be merchants; or if any inferior tradeſman be choſen, he muſt quit his trade, and not return to it without leave of the magiſtrates and town council.

There are fourteen incorporated trades, each of which has its deacon, or maſter of the company; theſe are the *ſurgeons*, *goldſmiths*, *ſkinners*, *farriers*, *hammermen*, *wrights*, *maſons*, *taylors*, *bakers*, *butchers*, *cordwainers*, *weavers*, *wakers*, or *fullers*, and *bonnet-makers*. But none of the merchants or traders are to make any bye-laws, without the conſent of the magiſtrates and town-council, except to chooſe their own deacons at the appointed time, to make perſons free of their trade, or to try their work.

The trained bands of the city conſiſt of ſixteen companies; beſide which they have a ſtanding company of town-guards.

There is in *Edinburgh* a very uſeful kind of blackguard boys, who attend at taverns, coffee-houſes, and other places to go on errands, and know every body of any note in the town. Though they are in rags, and lie every night in the ſtreets, or upon the ſtairs of the houſes, yet they are conſiderably truſted, and ſeldom prove unfaithful. They are ſubject to a kind of magiſtrate, called *The Conſtable of the Cawdies*, who generally puniſhes them for any neglect or miſdemeanor by a fine of ale or brandy; but ſometimes corporally. Moſt of them are very acute, and execute whatever employment is aſſigned them with great ſpeed and addreſs.

We ſhall now take a view of the other places in this county moſt worthy of notice.

LEITH, the port of *Edinburgh*, is a large flouriſhing town in 55° 58′ N. latitude, and 30° 10′ W. longitude from *Greenwich*, two miles to the E. of *Edinburgh*. It lies on the *Frith of Forth*, upon the river called *The Water of Leith*, which falls into the frith. The river runs through the middle of the town, and over it is a ſtately ſtone bridge of one large arch, to which ſhips of burden may come, and at high water lay their ſides cloſe to the ſhore. Here is a very fine quay, well wharfed with ſtone, and fenced with piles. At the mouth of the harbour is a very long and well built pier, which runs out a great way beyond the land, and prevents the entrance of the harbour being filled with ſand. It is alſo ſecured by long ranges of piles, or counter-piers; and a beacon or maſt is ſet up at low-water mark, for the convenience of navigation. The buildings on the S. ſide, oppoſite to the water, are very lofty and handſome, they being generally about ſix ſtories high, with large ſaſh windows. Here are commodious cellars and warehouſes for laying up goods, the merchants of *Edinburgh* having the bulk of all their commodities here, in order to be ready for carriage either by land or ſea: ſo that *Leith* is very properly called the ware-houſe, as well as the port of the city. Here are likewiſe glaſs-houſes and ſaw-mills.

NORTH LEITH, which lies on the other ſide of the harbour, has docks for building and repairing ſhips. Here are the ruins of a citadel built by *Oliver Cromwell*, and in part demoliſhed by *Charles* II. The original name was *Inverleith*, and it was firſt mentioned in the year 1329, in a grant of it to the citizens of *Edinburgh*, under whoſe juriſdiction it lies. The earl of *Hertford*, in the reign of *Henry* VIII. burnt both this place and *Edinburgh*.

DALKEITH is a pretty large and pleaſant town, defended by a caſtle; it ſtands at the confluence of the two rivers *Eſk*, ſix miles to the S. E. of *Edinburgh*, and is the ſeat of a preſbytery that contains ten pariſhes. Here is a noble palace built by the late dutcheſs of *Buccleugh*; this is ſaid to be the model of that which belonged to king *William* at *Loo*, in *Guelderland*, only this is of ſtone and that of brick. It ſtands on a riſing ground by the *North Eſk*, and commands the view of a large park, beautified with a canal and water-works. The grand ſtaircaſe of the houſe is ſupported by marble columns, and every ſtair curiouſly inlaid with walnut-tree. This ſtaircaſe leads into a noble room adorned with the pictures of all the beauties of the age, at whole-length, in pannels.

The ISLAND OF BASS, ſtands within the *Forth*, about a mile from the S. ſhore, forty-five miles to the E. of *Edinburgh*. It is about a mile round, and is on every ſide a ſteep rock, being only acceſſible by one perſon at a time. It riſes high above the ſea in the form of a cone. At the top was a fort mounted with cannon; but ſince the Revolution it has been neglected.

This rock is reſorted to in May and June by incredible flocks of fowl, at which time its ſurface is almoſt covered with their neſts, eggs, and young birds. The beſt taſted of theſe different ſorts of wild-fowl is the *Solan* gooſe. Before the flight of theſe birds arrive, it is ſaid, they ſend ſome before to fix their manſions, on which account they are called *ſcouts*. The inhabitants take care not to diſturb them till they have built their neſts, after which no noiſe will fright them. They fix their eggs ſo dexterouſly to the rock by one end, that if one be removed, it is impoſſible to fix it again. They are of an aſh-colour, but the old ones are entirely white. Their neck reſembles that of the crane, and they have a ſtrong ſharp bill, between three and four inches long, which they ſtrike through their prey with ſuch violence, that it often ſticks ſo faſt in a board baited with a herring, that being unable to pull it out again, they are taken. They leave this place in September, but whither they retire in winter is unknown. People make great profit of the young ones, which are taken from their neſts by a man let down the rock with a rope.

SECT. VI.

ROXBURGH, ROSSBURGH, *or* TEVIOTDALE.

THIS is a ſheriffdom hereditary in the family of *Douglas*, by the title of the ſheriff of *Tiviotdale*, it being thus called from the river *Tiviot* running through it. It is bounded on the E. by *Northumberland*; on the S. E. by part of *Cumberland*; on the S. and S. W. by *Annandale*; and on the W. by *Tweedale*; extending thirty miles in length from E. to W. and fifteen in breadth. It is divided into *Tiviotdale*, *Liddeſdale*, and *Euſdale*, or *Eſkdale*, and has three preſbyteries, to which belong twenty-five pariſhes; and, with the *Mers*, make up a provincial ſynod of ſix preſbyteries and ſeventy-one pariſhes.

This diſtrict has many mountains, of which the moſt famous is *Cockraw*, from whence runs a chain of hills weſtward, dividing *Scotland* from *England*, which are in many places impaſſable; ſome of them are very high, but furniſhed with excellent graſs, and have plenty of lime and free-ſtone. This country produces good corn, particularly *oats*, great quantities of which are ſent from hence to *England*: it has alſo excellent paſturage, and abounds with large *black cattle*, *ſheep*, and *horſes*.

The principal towns in this ſhire are *Kelſo* and *Jedburgh*.

KELSO, which is a burgh of barony, is a large and very handſome town, pleaſantly ſeated by the river *Tweed*, on the borders of *England*. It has the beſt trade of any town in this part of the country, and has a very good market kept in a large ſquare of handſome houſes: it has alſo ſome good ſtreets, a handſome pariſh church, that is the remains of an abbey of *Ciſtercian* monks, and a town-hall. The duke of *Roxburgh*, who is ſtyled lord of the town, has a houſe in it, and alſo a noble ſeat called *Fleurs*, with pleaſant gardens.

JEDBURGH is a royal burgh, ſeated near the confluence of the *Teſy* and the *Jed*, from whence it takes its name, forty-three miles from *Edinburgh*. It gives title of lord to the eldeſt ſon of the marquis of *Lothian*.

MELROSS, or MAILROSS, ſtands on the *Tweed* about nine miles from *Jedburgh*, and is the ſeat of a preſbytery and a royalty belonging to the earl of *Haddington*. An abbey was founded here in 1136, which was poſſeſſed by the *Bernardine* monks, and appears by its ruins to have been one of the nobleſt abbies in *Europe*: the window over the great gate of the abbey, which is ſtill entire, is larger than that of *York* minſter, and round the top are the ſtatues of our Saviour and the twelve apoſtles. The choir of the church, which is ſtill viſible, is a hundred and forty feet long.

SECT. VII.

SELKIRK.

THIS county is bounded on the N. by *Tweedale*, in *Peebleſhire*, and *Mid Lothian*; on the E. and S. by *Tiviotdale*, or *Roxburghſhire*; on the W. by *Tiviotdale*, and part of *Anandale* in the ſhire of *Dumfries*. According to *Camden* its diameter is ſixteen miles every way; but, according to others, it extends twenty-two miles in length, and only ten where broadeſt.

This county is alſo called *The ſheriffdom of Ettrick foreſt*, from the river *Ettrick*, which runs through it, and is one of the principal rivers in the country; its other rivers moſt worthy of notice are the *Yarrow* and the *Gallow-water*.

The hills in *Selkirkſhire* feed great herds of black cattle, and flocks of ſheep, with which the inhabitants carry on a good trade to England, and the meadows on the banks of the river produce corn and graſs.

SELKIRK, which gives name to the ſhire, is a royal burgh on the banks of the river *Ettrick*, thirty-three miles to the S. of *Edinburgh*, and gives title of earl to a branch of the family of *Hamilton*. It is the ſeat of a preſbytery, which has eleven pariſhes under its juriſdiction, and here the ſheriff keeps his court. The chief employment of the inhabitants is the making of boots and ſhoes.

SECT. VIII.

PEEBLESHIRE, *or* TWEEDALE.

THE ſhire of *Peebles* is called alſo *Tweedale*, from the river *Tweed*, which riſes at a place called *Tweed's Croſs*, and runs from W. to E. through this country. *Peebleſhire* is bounded on the E. by the ſhire of *Selkirk*; on the S. by *Anandale*, in the ſhire of *Dumfries*; on the W. by *Clydſdale*; and on the N. by *Mid Lothian*; extending about twenty-eight miles in length, and eighteen where broadeſt. It contains ſeventeen pariſh churches, which are all included in the preſbytery of *Peebles*.

It in general riſes in hills, many of which are as verdant as the downs of *Suſſex*, and intermixed with pleaſant vallies, fruitful in corn and graſs. The chief mountain here is *Braidalb*, from whence the ſea may be ſeen on both ſides of the iſland. This ſhire has plenty of *lime-ſtone*; the grain is chiefly *oats* and *barley:* the inhabitants have *black cattle*, *milk*, *cheeſe*, and *butter*. The ſheep feed in vaſt flocks on the hills, and are much prized both for their fleſh and wool.

Several rivers which fall into the *Tweed* ſupply the country with plenty of *ſalmon*; and a lake called *The Weſt Water-loch*, ſo abounds with eels and other fiſh, in the month of *Auguſt*, that, during the weſt wind, they are ſaid to enter the river *Yarrow*, which runs from the lake, in ſuch ſhoals, that they are ready to overturn the people who go in to catch them. There is another lake called *Lochgenen*, from being ſeated on a hill named *Genen*, and from it a river runs that falls from a precipice into *Anandale*, the height of two hundred and fifty paces, ſo that fiſh are frequently killed by the fall of the water.

The only town of note here is PEEBLES, a royal burgh and market town, ſeated in a very pleaſant plain, on the banks of the *Tweed*, over which it has a ſtone bridge of five arches, and near a river of its own name, over which there are two bridges. It ſtands twenty-two miles to the S. of *Edinburgh*, and was formerly remarkable for its three churches, three gates, three ſtreets, and three bridges; but the town is at preſent ſmall.

SECT. IX.

LANERK, *or* CLYDSDALE. *The city of* GLASGOW.

THIS ſhire, which is called *Lanerk* from its ſhire town, and *Clydſdale* from the river *Clyde*, is bounded on the E. by the ſhire of *Linlithgow*; on the S. E. by *Anandale*; on the S. by *Dumfriesſhire*; on the S. W. by that of *Air*; on the N. W. by that of *Renfrew*; on the N. by that of *Dumbarton*; and on the N. E. by *Sterlingſhire*. It is generally reckoned forty miles in length, about twenty-four where broadeſt, and ſixteen in the narroweſt part. It is divided into two wards, the *Upper* and *Nether* ward; the one called *The Shire of Lanerk*, and the other *The Barony of Glaſgow*; the one hilly, and fit for paſture: the other level, and ſuited for corn.

The river *Clyde*, which runs through this ſhire into its own frith, riſes in *Errick-hill*, in the *Upper* ward; and from the ſame hill riſes the river *Anan*, which runs into the *Iriſh* ſea, and the *Tweed*, which falls into the *German* ocean.

This is a pleaſant fruitful country, and, though in ſome places mountainous, and in others woody, is well inhabited, eſpecially near the *Clyde*. It abounds with *coal* and *limeſtone*, and has ſome profitable *lead mines*; gold has alſo been found in great quantities, though it does not appear that any of that valuable metal is ever found at preſent; abundance of *lapis-lazuli* is dug up here, particularly in *Crawford-moor*.

The principal places in this ſhire are the following:

GLASGOW, the ſecond city in *Scotland*, pleaſantly ſeated on the ſide of a hill ſloping to the river *Clyde*, in 55°. 51′ N. latitude, and in 4°. 15′ W. longitude from *Greenwich*, thirty five miles to the W. of *Edinburgh*. It has a noble and beautiful ſtone bridge over the river, which ſometimes overflows its banks; and as one third of the city lies in a flat next the river, that part is then overflowed. In the centre of *Glaſgow* is the *Tolbooth*, or town-houſe, a very magnificent ſtructure of hewn-ſtone, lately rebuilt, with noble apartments for the magiſtrates, and a very lofty tower, with bells which chime every hour. From this town-houſe and the adjacent market-place, run the four principal ſtreets of the city, in the form of a croſs, dividing the city into four equal parts, each adorned with ſeveral public buildings, and each ſaid to be larger and finer than any one ſtreet in *London*; the houſes being uniformly built of free-ſtone, ſix ſtories high, and ſome more: they are for the moſt part adorned with columns of the *Doric* order, have beautiful piazzas, and are well ſaſhed. From the centre, the whole city may be ſeen; and the ſtreets are ſpacious, ſtraight, and well paved. The *Exchange* is a modern building.

In the higher part of the city, and at the end of one of the ſtreets, ſtands the cathedral, a vaſt pile dedicated to *St. Mungo*, who was biſhop here about the year 560. It is divided into two churches, one over the other, called *The Upper and Lower*; and its ſeveral rows of pillars and exceeding high towers, with the tall ſpire, the higheſt in *Scotland*, riſing from one of the towers, ſhew the extraordinary ſkill of the architect. Here are five other very good churches, all of them neatly built, with handſome ſteeples. Beſides theſe places of worſhip there are convenient apartments for the meeting of the preſbytery, which conſiſts of nineteen pariſhes, and for the provincial ſynod, which conſiſts of one hundred and twenty-ſeven.

Near the cathedral is a ruinous caſtle, which in the time of Epiſcopacy was the palace of the archbiſhop, who was lord of the city, and gave it its firſt charter. It is fenced in with a very high wall of hewn ſtone, and has a fine proſpect of the whole city.

The univerſity here conſiſts of only one college; but it is by far the beſt, the moſt ſpacious, and the fineſt built in *Scotland*. It contains two large ſquares of noble and lofty ſtone buildings, adorned with a high tower, and many fine turrets, and is ſeparated from the town by a very high wall. The front toward the city is a noble piece of architecture. This univerſity was founded by *James* I. in 1453. By the firſt foundation it was under the government of a rector, a dean of the faculty, a principal or warden, who was to teach theology, three profeſſors of philoſophy, and afterward ſome of the clergy taught the civil and canon law. *James* VI. granted it a new charter, and in 1617 eſtabliſhed a principal, three profeſſors of philoſophy called *regents*, four purſers, a ſteward or ſurveyor to furniſh the ſtable, *&c.* and ſeveral of the ſucceeding kings ratified its privileges, and were benefactors to the univerſity. The library is furniſhed with many curious printed books, and valuable manuſcripts. The precincts of the college are enlarged by ſome acres of ground, purchaſed by the king and parliament; theſe are converted into well planted walks and gardens, one of which is for medicinal plants. The ſcholars wear ſcarlet gowns, and here lodge in the college, which at *Edinburgh* they do not.

Though the river is navigable for ſmall veſſels up to the town, yet *New Glaſgow* at the mouth of the *Clyde*, is the harbour for all thoſe that are of conſiderable burden, it having a good quay and cuſtom-houſe for all the coaſt; ſhips are alſo laid up here and refitted, and the goods are brought from thence to the city in lighters. The merchants of *Glaſgow* carry on a conſiderable commerce with *Virginia*, *Boſton*, and other ports of *North America*. They have alſo a very conſiderable trade in herrings, which they export to *Spain* and *Portugal*. The city has likewiſe a manufacture of *plaids* and *muſlins*. It gives the title of earl to the family of *Boyle*; and in this city has lately been erected a noble foundation under the name of the *Glaſgow* charitable marine ſociety, in order to provide for ſuch ſeamen as ſhall become old and diſabled in the merchant's ſervice, and to afford relief to their widows and children.

HAMILTON, ſeated near the confluence of the *Avon* and *Clyde*, eleven miles to the S. W. of *Glaſgow*, is a well built town, with a bridge over the *Avon*, and a handſome pariſh church. It is larger than moſt of the royal burghs, and the houſes, which are built with free-ſtone, are ſupported on pillars; but its principal ornament is the noble ſeat of the duke of *Hamilton*, which has a magnificent front entirely of free-ſtone, adorned with different orders of architecture, and very deep wings. The apartments are truly noble, and the pictures, furniture, and other decorations, are exquiſitely fine.

LANERK is a royal burgh in the diviſion called *The Upper Ward*; it is ſituated on the *Clyde*, nine miles to the S. W. of *Hamilton*, and is the ſeat of a preſbytery which conſiſts of thirteen pariſhes.

A little below the town the river *Douglas* falls into the *Clyde*, and gives the name of *Douglaſdale* to the lands near it. In a vale near this river ſtood a very old caſtle, which had been the paternal ſeat of the family of *Douglas* for above a thouſand years; but in December 1758 this ancient caſtle was conſumed by fire.

SECT. X.

DUMFRIESSHIRE, *including* ANNANDALE *and* NIDDISDALE.

DUMFRIES is bounded on the N. by part of *Clydſdale*, *Tweedale*, *Tiviotdale*, and *Selkirk*; on the W. by *Tiviotdale* and *Eſkdale*; on the S. by *Solway Frith*; and on the E. by *Northumberland* and *Roxburgh*; extending about fifty miles in length, and thirty in breadth.

ANNANDALE, which ſignifies the dale or valley on the river *Annan*, lies on the E. part of the ſhire between *Niddiſdale* on the W. and *Eſkdale* on the E. extending twenty-four miles in length, and fourteen in breadth. The river *Annan* runs through the middle of the ſhire, and falls into *Solway Frith*, after a courſe of twenty-ſeven miles, in which it receives ſeveral ſmall rivers, that run on both ſides through pleaſant woods and fruitful fields abounding with paſture. This diviſion is a ſtewarty, that gives title of marquis to the family of *Johnſton*.

NITHSDALE, or NIDDISDALE, on the W. ſide of *Annandale*, is ſo called from the *Nith*, or *Nid*, which runs through it: it has both paſture and arable lands; for though it is encompaſſed on all ſides with a ridge of rocks, the bottoms produce abundance of corn.

The river *Nith*, or *Nid*, iſſues out of a lake called *Lochcure*, and runs into *Solway Frith*.

Nithſdale is divided into the *Overward*, which contains the pariſhes in the preſbytery of *Pen-pont*; and the *Netherward*, containing thoſe of *Dumfries* preſbytery. Here were formerly woods and foreſts, which are now much exhauſted; and pieces of gold have after great rains been found in ſome of the brooks.

ANNAND, the chief town of *Annandale*, was an ancient royal burgh and ſea-port at the mouth of the *Annan*, where it falls into *Solway Frith*, ſeventy miles to the S. of *Edinburgh*. It had once a caſtle and a pretty good trade; but being often taken by the *Engliſh*, and burnt to the ground in the reign of *Edward* VI. moſt of the merchants removed to *Dumfries*, and it has never ſince recovered itſelf. It has however a weekly market, with a handſome bridge over the river.

DUMFRIES, the chief town of *Nithſdale*, and the capital of the S. W. part of the kingdom, is a pleaſant and thriving place, whence it has been called *The Liverpool of Scotland*: it ſtands eight miles from the mouth of the *Nith*; but the tide flowing up brings ſmall ſhips quite up to the quay, and about four miles lower the largeſt ſhips may ride in ſafety. It has ſpacious ſtreets, with a ſtately church, and a caſtle, which, though old, is pretty ſtrong. It has alſo four gates, and a noble bridge of free ſtone over the river, leading to *Galloway*: this bridge has thirteen arches, and is eſteemed the fineſt in *Britain* next to thoſe of *Weſtminſter*, *London*, *Blackfriars*, and *Rocheſter*. In the middle of it is a gate which bounds the ſhire of *Dumfries* and the ſtewarty of *Golloway*. A ſtreet leads from it by an eaſy aſcent to the caſtle, which is on the E. ſide of the town, and commands a proſpect of the town and the adjacent country; and from the caſtle a ſpacious high ſtreet runs by an eaſy deſcent to the church, which is half a mile diſtant. On each ſide of the high ſtreet are good ſtone buildings, thoſe on the N. ſide having gardens next the river; and about the middle of it are the Exchange and the townhouſe. It has likewiſe a large market place, with a noble croſs. The town gives the title of earl to the family of *Crichton*. It is the ſeat of a preſbytery, to which belongs eighteen pariſhes, and is the place where the provincial ſynod meets, which conſiſts of four preſbyteries, that have under them fifty-four pariſhes.

DRUMLANRIC lies ſeventeen miles to the N. of *Dumfries*; it has a weekly market, and gives the title of earl to the duke of *Queenſbury*, who has here a noble palace, adorned with terrace walks, beſides a ſtately bridge over the river *Nith*. Like *Chatſworth* in *Derbyſhire*, it ſtands in a wilk rocky country, and is environed with mountains.

SECT. XI.

The Stewarty of KIRCUDBRIGHT, *or* LOWER GALLOWAY.

BOTH this diſtrict and the ſtewarty of *Orkney* and *Shetland* differ only from the ſhires in the title of the chief officer, who is here called the ſtewart, and in the other the ſheriff. *Galloway* is divided into two parts; this ſtewarty, which is toward the E. being called *Lower Galloway*; and the weſtermoſt *Upper Galloway*, or *Wigtown*. *Lower Galloway* begins at the middle of the bridge of *Dumfries*, and lies between *Nithſdale* on the E. and the water of *Cree* on the W. and is bounded on the N. by a part of *Kyle* in the ſhire of *Air*; and the *Iriſh* ſea on the S. According to *Templeman*, it extends forty-three miles in length, and thirty-two in breadth.

The countrry ſeems one continued heath, except here and there a grove of trees; yet vaſt herds of ſmall black cattle, and flocks of ſheep, are grazed here, and ſent in great numbers to *England*.

KIRCUDBRIGHT, which gives its name to this ſhire, ſtands in a bay at the mouth of the river *Dee*, eighty-three miles to the S. W. of *Edinburgh*, and is an ancient royal burgh, the ſeat of a preſbytery, to which belong ſixteen pariſhes, and the place where the ſteward holds his courts. It has a weekly market, and a good ſalmon fiſhery on the river *Dee*, which riſes in the mountains near *Carrick*; it is is ſo circuitous, that though it is not ſeventy miles in a direct line, it runs near two hundred. It has a commodious harbour ſufficient to hold all the *Britiſh* navy, and the largeſt firſt rates may caſt anchor by the church-yard. It is alſo land-locked from all winds, which, together with the waves, are broken by *Roſs Iſland* at its mouth. The town ſtands in a perfect amphitheatre, like *Trent* on the confines of *Italy*. Notwithſtanding the excellence of their harbour, no trade is carried on here.

NEW GALLOWAY is a royal burgh on the river *Ken*, fourteen miles from *Kircudbright*, with a good weekly market, well ſupplied with corn and other proviſions; and it has a good ſalmon-fiſhery in a lake called *Lochken*, which abounds not only with ſalmon, but other fiſh: this lake is about five miles long, and in ſome places about a mile broad, containing ſeveral iſlands.

SECT. XII.

UPPER GALLOWAY, *or the Shire of* WIGTON.

THIS county extends from the water of *Cree*, which divides it on the E. from *Lower Galloway*, to the point called *The Mull of Galloway*, and *The Iriſh Sea*. According to *Templeman*, it is thirty-ſeven miles in length, and twenty-ſix in breadth; but is much indented by *Loch-rian* on the N. and the bay of *Glenluce*, or *Glenluſs*, on the S. *Galloway* had anciently its own princes, but it now gives title of earl to a branch of the family of *Stuart*.

The principal towns of this ſhire are the following:

WIGTON, a royal burgh, a market town, and the capital of the county, is ſeated near the mouth of the river, on a bay of its own name, ninety-nine miles to the S.W. of *Edinburgh*. This bay is eleven miles in length and breadth: it is a good port, which has a very narrow entrance. At this town the ſheriff holds his courts, and it is the ſeat of a preſbytery that conſiſts of ten pariſhes. It gives the title of earl to the chief of the family of *Fleming*.

PORT-PATRICK, a market town beyond the river *Loſſie*, a hundred and ten miles to the S. W. of *Edinburgh*, has a ſafe harbour called *The Rine*, or *Beak of Galloway*. It lies oppoſite to *Donaghedee*, in *Ireland*, and is a dirty poor place, whence the packet-boats go to *Belfaſt*, and other ports of that kingdom, to which coaſt it is but a ſhort paſſage, and of which there is a full view all the way: but little uſe is made of the harbour, except for the pocket-boats and a few fiſhing veſſels. A neighbouring hill affords a diſtinct view of *Ireland* to the S.W. of the coaſt of *Cumberland* and the *Iſle of Man* to the S. E.

SECT. XIII.

The Shire of AIRE.

THIS ſhire is bounded on the N. by that of *Renfrew*; on the S. by *Galloway*; on the E. by *Clydſdale*; and on the W. by the frith of *Clyde*. It is divided into *Carrick*, *Kyle*, and *Cunningham*, which are eſteemed the three great baileries, and are thus called from being governed by bailiffs. According to *Templeman*, there are ſeven hundred and ninety-five ſquare miles in the baileries of *Kyle* and *Carrick*, and two hundred and twenty-nine in the diviſion called *Cunningham*.

In this county is a conſiderable lake called *Dun*, ſix miles long, and two broad, with an iſland in it, upon which is an old houſe called *Caſtle-Dun*. Upon the water *Dun*, or *Dawn*, iſſuing from this lake, is a bridge of one arch ninety feet wide, which is much wider than the *Rialto* at *Venice*, or the middle arch of the great bridge at *York*.

We ſhall begin with *Carrick*, which is bounded on the N. by *Kyle*, on the E. by *Kyle* and *Galloway*, and on the S. by the latter alone, and on the W. by the frith of *Clyde*; extending thirty-two miles along the frontiers of *Galloway*, where it is longeſt, from E. to W. and twenty-five, where broadeſt, from N. to S.

The chief rivers of this diſtrict are the *Stineher* and the *Girven*, which abound with ſalmon and other fiſh. Here are alſo lakes and woods.

The principal town in the earldom of *Carrick* is BARGENY, which has a market, and gives title of lord to a branch of the family of *Hamilton*.

KYLE is ſeparated from *Carrick* by the river *Dun*, and from *Cunningham* by the *Irwin*; it has *Cunningham* on the N. part of *Clydſdale* on the E.; *Nithſdale*, *Carrick*, and part of *Galloway*, on the S.; and the frith of *Clyde* on the W.; extending thirty-four miles from E. to W. and twenty-ſix from N. to S. It is divided by the river *Aire* into two ſtewarties.

AIRE, the chief town of this diviſion, and the capital of the whole country, is ſeated at the mouth of the river of its own name, ſixty-five miles to the S. W. of *Edinburgh*. It has a good harbour near the frith of *Clyde*, and is well ſituated for trade. It is an ancient town diſtinguiſhed by its privileges, its juriſdiction extending ſixty-four miles from the mouth of the *Clyde* to the borders of *Galloway*. The river turns ſeveral mills in the middle of the *New Town*; this is joined to the *Old Town*, which ſtands on the S. ſide of the river, by a ſtone bridge of four arches. The *Old Town* is ſeated in a ſandy plain, amidſt pleaſant fertile fields, that afford a good proſpect winter and ſummer. It was formerly reckoned next to *Glaſgow*, the principal market town in the W. of *Scotland*, and has a ſtately church. It is the ſeat of a preſbytery, to which belong twenty-eight pariſhes, and, with *Glaſgow*, conſtitutes a provincial ſynod; but its trade is ſaid to be much decayed.

CUNNINGHAM, the laſt diviſion of this county, is bounded on the E. by *Renfrew* and *Clydſdale*, on the S. by *Kyle*, and on the W. and N. by the frith of *Clyde*. Its greateſt length from the N. E. to the S. W. is about twenty-nine miles, and its greateſt breadth from E. to W. about twelve. It is divided from *Kyle* by the river *Irwin*, and is a much finer and leſs mountainous country.

IRWIN is the beſt town of this diſtrict; it ſtands at the mouth of the river of the ſame name; ſixty-three miles to the S. W. of *Edinburgh*; it gives title of viſcount to the family of *Ingram*.

SECT. XIV.

The Shire of RENFREW, *or* RAINFRAW.

THIS county is called *The Barony*, by way of eminence; it having given the title of baron to the prince of *Scotland* before the Union, as it does now, to his royal highneſs the prince of *Wales*. It is bounded on the S. by *Cunningham*, on the E. by *Lanerkſhire*, and on the S. by *Lenox*, it extending, according to *Templeman*, thirty miles from N. to S. and thirteen where broadeſt from E. to W.

The principal towns of this county are the following:

RENFREW, the ſhire town, and a royal burgh, ſeated on a branch of the *Clyde*, called *The Cathcart*, forty-ſix miles to the W. of *Edinburgh*. It is a ſmall but ancient town, where the ſheriff holds his courts.

PASLEY, or PASLAY, is ſeated on the river *Whitecart*, ſix miles to the W. of *Glaſgow*, where is a pearl-fiſhery; and though no royal burgh, is much larger than *Renfrew*, and is the ſeat of a preſbytery compoſed of ſixteen pariſhes. Here is a bridge over the *Cart*, and there are ſtill to be ſeen the remains of an abbey founded in the year 1160: the remains of which, together with its church, gardens, orchard, and a little park, are encloſed by a ſtone wall, about a mile in compaſs.

GREENOCK, a handſome well built town on the frith of the *Clyde*, twenty-ſix miles to the W. of that river, has a good road for ſhips that come into and go out of *Glaſgow*. It is the chief place of the W. of *Scotland* for the herring fiſhery; and the merchants of *Glaſgow*, who are concerned in it, employ the veſſels of the inhabitants for catching and curing the fiſh, and for carrying them afterward to a foreign market. Here are many opulent merchants, and the town is noted for good ſeamen and excellent pilots.

SECT XV.

DUMBARTONSHIRE, *or* LENOX.

THIS county, which lies on the other ſide of the *Clyde* above *Glaſgow*, runs far N. among a cluſter of hills, and is bounded on the S. by the frith and river of *Clyde*; on the E. by *Menteith* and *Stirlingſhire*, it being ſeparated from the latter by the water of *Blane*; on the W. by the *Grampian hills*; on the N. W. by *Argyleſhire*; and on the W. by the lake called *Lochlomond*, and a water of the ſame name that falls into it. According to the editor of *Camden*, it extends only twenty-four miles in length, and twenty in breadth; but Mr. *Templeman* makes it forty-one miles long, and twenty-ſeven broad. Its bounds were formerly larger than they are at preſent, eſpecially on the eaſt ſide; and it has now only twelve pariſhes.

The lower part of *Dumbartonſhire*, which lies to the E. is very fruitful in corn; eſpecially toward the rivers; and the upper, which is hilly, is fit for paſture, eſpecially at the beginning of the *Grampian-hills*, and feeds numerous flocks of ſheep. It has alſo a noble herring-fiſhery in two bays, named *Loch-Long*, and *Loch-Fyn*, that break into it from the mouth of the *Clyde*.

LEVINIA, the *Latin* name for *Lenox*, is derived from the river *Leven*, which runs from *Loch-Lomond* into the *Clyde*. This loch, or lake, ſpreads between the mountains, twenty-four miles in length, and eight in breadth; though at the narroweſt part it is but two. It abounds with fiſh, particularly with a delicious ſort of the eel kind, called *pollac*, that is ſaid to be peculiar to this lake. It contains thirty iſlands, three of which have churches, and many of the reſt are inhabited, particularly *Inchmurin*, which is fruitful in corn and graſs, and abounds with deer. Several of them are called *Floating Iſlands*: theſe are ſaid to be artificial, and formed of beams faſtened together and covered with earth and turf; upon ſome of theſe are forts, into which the natives uſed to retire in time of war. The ſhire of *Lenox*, together with the town of *Richmond* in *Yorkſhire*, give the title of duke to the family of *Lenox*, deſcended from *Charles* II.

DUMBARTON, the principal town of this ſhire, from which it takes its name, is ſeated at the confluence of the *Leven* and the *Clyde*, fifteen miles to the N. W. of *Glaſgow*, and was once conſiderable for its trade, which is now much decayed; but is ſtill remarkable for its caſtle, which is thought to be one of the ſtrongeſt in *Europe*; it being ſeated on the top of a craggy rock, very ſteep on all ſides, except to the *Clyde*. It has only one narrow ſteep aſcent, where ſteps are cut out of the rock, paſſable by only one man at a time. As this is one of the ſtrong paſſes between the low country and the high-lands, a governor and a garriſon are conſtantly kept in it.

SECT. XVI.

The Shire of BUTE *and* CAITHNESS.

THE ſhire of *Bute* contains *Bute* and *Arran*, two of the weſtern iſlands, and is now joined with *Caithneſs*, in ſending one member to the parliament of *Great Britain*.

Theſe iſlands are tolerably fertile, and their produce much the ſame as that of the other weſtern iſlands. They lie in the frith of *Clyde*, and have *Argyleſhire* on the N. *Cantyre* on the W. and *Renfrew*, *Cunningham*, and *Kyle*, on the E. The ISLAND OF BUTE, which is about twelve miles in length, and five in breadth, with an area of twenty-ſeven miles, is ſeparated on the N. by two narrow ſtraits from *Argyleſhire*, and on the W. from the *Iſle of Arran*; it lies ſix miles to the W. of the coaſt of *Cunningham*, and but half a mile from *Argyleſhire*.

This iſland has a quarry of red ſtone. There is a conſiderable herring and cod-fiſhery on the coaſt. The earl of *Mount-Stuart* is its chief proprietor and hereditable coroner.

The chief town of the ſhire is ROTHSAY, ſituated near the middle of the iſland. The inhabitants ſubſiſt chiefly by fiſhing and agriculture. It is a royal burgh, and has two forts, one called *The Caſtle of Rothſay*, the other *The Caſtle of Kermes*.

The ISLE OF ARRAN lies about four miles from the S. part of the *Iſle of Bute*, and ſix to the E. of *Cantyre*, extending, according to the General Atlas, twenty-four miles from N. to S. and nine where broadeſt, from E. to W.; but Mr. *Mackay*, a native of the iſland, in his journey through it, ſays, it is but twelve in circuit. The middle of the iſland is mountainous, and the higheſt part, called *Capra*, abounds with deer. Here are many horſes and black cattle, both of a middling ſize, with abundance of ſmall ſheep and goats, land and ſea fowl: here are alſo found *fullers-earth* and *cryſtal*: on the coaſt are ſeveral caves, one of which is large enough to hold a hundred men; and at the farther end of it is a pillar cut out of the rock, with a deer and a double hilted ſword carved upon it. The natives pretend that *Fune Machkowle*, a giant, who diſtinguiſhed himſelf by his great exploits, lodged in theſe caves with his attendants. A miniſter ſometimes preaches in one of them to ſuch as live at a diſtance from the church: here are many large ſtones, from ſix to fifteen feet high, ſet upon one end, ſome ſingly, and others in a circular form, ſuppoſed to have been the remains of pagan temples, or of places adminiſtering juſtice.

This iſland has ſeveral rivers which abound with ſalmon, as the ſea all round does with *cod*, *herrings*, *ling*, *whitings*, and *ſhell-fiſh*. But the adjacent ſea is tempeſtuous and dangerous, eſpecially when a ſtrong S. or S. W. wind blows.

The ſhire of WEIK, or CAITHNESS, though united in ſome meaſure to *Bute*, by ſending a member alternately to parliament, is as far diſtant from the iſlands juſt deſcribed as poſſible, it being ſeated in the N. E. extremity of *Scotland*: it has therefore the northern ocean on the E. *Strathnaver* and *Sutherland* on the S. and S. W. and on the N. is divided from the *Orkney Iſlands* by *Pentland Frith*. It comprehends all the country beyond the river *Neſſe*, and the lake into which it flows, and extends thirty-five miles from N. to S.

The land is much indented by the many windings and breakings of the ſhore, and the whole coaſt, except the bays, conſiſts of high rocks and many promontories. The ſea is here very dangerous, eſpecially in calm weather, except at ſtated times, on account of the many vortexes, owing to the repulſe of the tides from the ſhore, and their paſſage between the *Orkney Iſlands*.

This county is populous, and has many little towns and villages, with a preſbytery of twelve pariſhes, and gives title of earl to a branch of the family of *Sinclair*; but the earl of *Breadalbin*, who has a great eſtate in this county, is hereditary ſheriff.

The rocks on the coaſt are much frequented by *eagles*, *hawks*, *maws*, *herons*, and other fowls of various kinds, like thoſe of the *Orkney* and *Shetland Iſlands*; and the people take the young fowls from their neſts by a hook and line.

The principal towns in this county are *Wick*, or *Weik*, and *Thurſo*.

WEIK, from whence this is called *The Shire of Weik*, is a royal burgh, and market town, where the courts are kept. It ſtands on the E. ſide of the county, at the mouth of *Murray Frith*.

THURSO lies oppoſite to it on the W. ſide of the county, about twelve or fourteen miles from *Weik*, and is ſo defended by the promontory called *Holborn-head*, that it is a ſecure place for ſhips to ride in. It is more populous and better built than *Weik*, and has the beſt church in the ſhire.

SECT. XVII.

STIRLINGSHIRE, *or* STRIVELING. *The towns of* STIRLING *and* FALKIRK.

THIS county is bounded on the W. by part of *Lenox* and *Clydſdale*; on the N. by *Monteith*; on the S. and S. E. by *Lothian*; extending twenty miles in length and twelve in breadth.

The S. part is mountainous; but that which lies upon the *Forth* is very fertile, and alſo abounds with coal. The *Forth*, which is the moſt famous, though not the largeſt river in *Scotland*, riſes near the foot of mount *Lomond*, and runs from W. to E. into the frith of *Edinburgh*.

STIRLING, the capital of the county, to which it alſo gives name, ſtands thirty miles to the N. W. of *Edinburgh*, upon the deſcent of a ſteep rock, at the foot of which runs the *Forth*; and takes its name from the *Saxon* word *ſter*, which ſignifies a hill, and *lin*, a water. *Boethius* ſays, this town gave name to ſterling money, becauſe *Oſbert*, a *Saxon* prince, after the overthrow of the *Scots*, eſtabliſhed here a mint, *lib.* x. *p.* 106.

Sterling is a miniature reſemblance of *Edinburgh*, being built on a rock, on the ſame form with that on which the capital of *North Britain* is placed, with a ſtrong fortreſs on its ſummit. From the top of the caſtle is the fineſt view in *Scotland*. The town is incloſed with a wall, except the north, where it is waſhed by the river *Forth*, over which is a bridge of hewn ſtone, with an iron gate and four ſtately arches, to which ſhips come up at full tide, and a little below it is the haven. The town contains about four thouſand inhabitants, has a manufacture of *tartanes* and *ſhalloons*, and employs about thirty looms in that of carpets. The great ſtreet is very broad, the other ſtreets are narrow and irregular. *Pennant*, II. 22. The caſtle is ſtrengthened on every ſide with batteries and ramparts, and has a conſiderable number of great guns for defending the paſſage of the bridge: for in times of trouble the chief magazine of the nation is uſually conveyed hither, it lying upon a conſiderable paſs between the N. and S. parts of *Scotland*, and almoſt in the centre of the kingdom. It is indeed the only place to which people can come from all parts of the nation, except from the iſlands, without croſſing ſome bay or frith of the ſea, which has rendered it of ſuch importance, that it is always kept in good condition, and the garriſon generally conſiſts of two hundred men, beſides officers. It has ſix rooms of ſtate, which are extremely noble, from their extraordinary height, length, and breadth, adorned with fine carved work on the wainſcot and cieling. At the top of it the late earl of *Mar* made a very convenient apartment of twelve rooms on a floor, for the governor's lodgings. It has a large park walled round, but little or no wood in it. This caſtle has been the reſidence of the kings of *Scotland*, at which time parliaments were frequently held in it.

As *Stirling* ſtands in a commodious ſituation for commerce, ſo it has in one direction a fine proſpect of *Edinburgh*, the caſtle and frith, with the mountains of *Argyle-*

ſhire and *Dumbartonſhire* another, as well as of the various windings of the *Forth*. It has a conſiderable manufacture of *ſerges*. Here is an hoſpital for decayed merchants.

FALKIRK is a handſome ancient town, ſeated on the ſouth ſide of the *Forth*, eight miles to the ſouth of *Sterling*; it is a market town, noted for being the place where the rebels defeated the king's forces on the 17th of *January*, 1746. Here are held the great fairs for black cattle from the highlands, in which 24,000 head are computed to be annually ſold. *Pennant's Tour*, II. 229.

About a mile from this town the *Carron* company have a very large foundry, in which they caſt cannon of the largeſt bore. This foundry conſiſts of the greateſt iron-works in *Europe*; they were founded about the year 1761, before which time there was not a ſingle houſe ſtanding on the ſpot, and the country was a mere *Moor*: at preſent the buildings of all ſorts are of vaſt extent. Theſe works are ſaid to conſume one hundred tons of coal daily. During the late *American* war twelve hundred people were employed in theſe works, and at preſent a thouſand, in conſequence of large orders from *Ruſſia* and *Germany*. *Carron* wharf lies upon the river of the ſame name, which falls, a few miles below, into the *Firth* of *Forth*. The navigable canal which forms a communication between the *firths* of *Clyde* and *Forth*, and runs near the town of *Glaſgow*, terminates to the eaſtward near theſe works. This canal is forty miles long, and near fifty feet broad; on it are thirty-nine locks, ſixteen of which are near *Carron*, and in the courſe of two miles. About a mile and a half above *Carron* the canal is carried upon a large bridge over the road. Veſſels came from *Glaſgow* to the ſea on it in ten hours. *Pennant*, I. 261, II. 230. *Tour in England and Scotland*, p. 254.

SECT. XVIII.

Of LINLITHGOW, *or* WEST-LOTHIAN; *its Situation, Extent, Produce, and principal Towns; with an Account of the* Roman Wall *built acroſs this Part of* SCOTLAND.

WEST-LOTHIAN is bounded on the north by the *Forth*; on the eaſt and ſouth by *Mid-Lothian*; on the weſt by part of *Clydſdale*; and on the north-weſt by *Stirlingſhire*; extending about fourteen miles in length, and thirteen in breadth.

It abounds with coal, lime-ſtone, and ſalt; with great plenty of fiſh. In the reign of king *James* VI. a mine was diſcovered here which yielded a great deal of ſilver.

The principal places in this county are the following:

LINLITHGOW, from which the ſhire takes its name, ſuppoſed to be the *Lindum* of *Ptolemy*; it is ſituated on the ſide of a lake, ſixteen miles to the weſt of *Edinburgh*, and is remarkable for its ancient palace, ſeated on an iſland in the midſt of the lake, which has an aſcent of ſeveral ſteps in the form of an amphitheatre. It was magnificently built of hewn ſtone by ſeveral kings, and completed by *James* VI. The writer of a tour in *England* and *Scotland* ſays, "it is now a ruin, being entirely deſtroyed by the king's army in 1746," p. 256.—Adjoining to the palace is St. *Michael*'s church, a noble ſtructure with a lofty ſteeple. In the town is alſo a quadrangular court adorned with a curious fountain: on the ſouth ſide is the *Tolbooth* or *town-houſe*, neatly built of hewn ſtone, with a very high ſteeple, in which are bells and a very fine clock.

The lake itſelf is a mile in length, and a quarter of a mile over, and abounds with perch and other ſort of fiſh; and on the north ſide is a park belonging to the palace.

The town has the appearance of great trade, with a harbour for ſhips near the caſtle of *Blackneſs*, where is a large cuſtom-houſe, with other houſes for the uſe of the merchants. Here is a manufacture of linen; and the water of this lake is reckoned ſo extraordinary for bleaching, that a great deal of it is brought from other parts hither to be bleached.

According to Mr. *Pennant*, here is a conſiderable trade carried on in dreſſing leather, which is ſent abroad to be manufactured. Many hands are alſo employed in dreſſing flax, and in wool-combing. The town contains three or four thouſand ſouls. *Tour in Scotland*, II. 231.—The *caſtle* was founded by *Edward* I. who reſided in it for a whole winter.

Severus's or *Adrian*'s wall, which extended acroſs this part of *Scotland*, began at the *Forth* near *Queen*'s *Ferry*, and extended thirty-ſix *Scots* miles to *Dumbarton*, at the frith of *Clyde*, for covering the provincial *Britons* againſt the incurſions of the *Picts*. It was built with ſtone ten feet thick, and had watch-towers within call of one another, where centinels kept watch day and night; it had alſo a court of guard to lodge a ſufficient number of ſoldiers againſt any ſudden alarms, and ſtrong forts able to receive a whole army; with a good ditch before it twelve feet wide.

SECT. XIX.

Of the Shire of PERTH; *its Situation, Extent, Produce, Rivers, Diviſions, and principal Towns.*

THIS is a large, plentiful, and rich county, bounded on the eaſt by *Angus*; on the ſouth-eaſt by *Kinroſsſhire* and *Fife*; on the ſouth by *Clackmannanſhire*, *Stirlingſhire*, and the river and frith of *Forth*; on the weſt and ſouth-weſt by *Argyleſhire*, *Lenox*, and *Dumbartonſhire*; on the north-weſt and north by *Lochaber* and *Badenoch*; and on the north-eaſt by *Marr*. According to *Camden*, it extends fifty-two miles in length from eaſt to weſt, and about forty-eight in breadth from north to ſouth. It contains *Perth Proper*, part of *Gowry*, *Strathern*, *Athol*, *Braidalbin*, and *Menteith*, in which are five preſbyteries, and eighty-eight pariſh churches.

The duke of *Athol* is hereditary ſheriff of this county.

The principal rivers of this county are the *Tay*, which is the longeſt in all *Scotland*, and riſes in the mountains of *Braidalbin*; and after ſpreading itſelf into a lake of the ſame name, fifteen miles in length, and near ſix in breadth, it runs near forty miles, excluſive of its turnings and windings, into the *Frith* of *Tay*. The *Keith*, which is famous for its ſalmon-fiſhery, has a cataract near the *Blair* of *Dromond*, the noiſe of which is ſo loud as to ſtun thoſe who come near it. The river *Ern* riſes from the lake called *Lochern*, in the mountainous country of *Strathern*, and falls into the *Tay*, after a courſe of thirty-four miles.

The principal places in PERTH PROPER are the following:

DUNKELD, on the north ſide of the *Tay*, twelve miles to the north of *Perth*, and about forty from *Edinburgh*, is ſeated at the foot of the *Grampian* hills, and is ſurrounded with woods. This is the chief market-town of the *Highlands*, and has been adorned with many ſtately buildings by the duke of *Athol*. It conſiſts of only one pariſh, which is ſupplied with three churches. The two principal ſtreets are remarkably fine; in ſome of the ſmaller are ſtill to be ſeen a few wooden houſes in the old ſtyle, but as they decay the magiſtrates prohibit the rebuilding them in the ſame manner.

The *cathedral* of *Dunkeld* was demoliſhed in 1559, "Fanatic fury," ſays Mr. *Pennant*, "ſoon deſtroyed the magnificent works of miſtaken piety. Pull down the neſts, and the rooks will fly away, was the maxim of the rough apoſtle *Knox*, and his diſciples took effectual care to execute the directions of their maſter." The monuments were deſtroyed in 1689 by the ſoldiers garriſoned there. Mr. *Pennant* ſearched in vain for the tomb of *Marjary Scott*, who died here in 1728, on which the following epitaph is ſaid to have been inſcribed, which marks her extraordinary longevity.

Stop paſſenger, until my life you read;
The living may get knowledge from the dead.
Five times five years I liv'd a virgin life,
Five times five years I liv'd a happy wife;
Ten times five years I liv'd a widow chaſte,
Now weary'd of this mortal life I reſt.
Betwixt my cradle and my grave were ſeen
Eight mighty kings of *Scotland*, and a queen.
Four times five years a common-wealth I ſaw,
Ten times the ſubjects riſe againſt the law.

Thrice did I ſee old prelacy pull'd down,
And thrice the cloak was humbled by the gown.
An end of *Stuart*'s race I ſaw, nay more,
I ſaw my country ſold for *Engliſh* ore.
Such deſolations in my time have been!
I have an end of all perfection ſeen.

PERTH is a royal burgh, and the county-town where the ſheriff keeps his courts. It ſtands thirty miles to the north of *Edinburgh*, and conſiſts of only one pariſh, which is ſupplied with three churches. Here is a fine town-houſe. St. *John*'s church, which ſtands in the middle of the town, is divided into two.

Boethius aſſerts, that the town of *Perth* was founded by *William the Lion*, A. D. 1210, after the deſtruction of *Bertha*, a place ſituated about two miles to the north of it. This town ſtands on one of the fineſt rivers in *North Britain*. *Major* calls it "the only walled city in *Scotland*," p. 20. The importance of the place made it frequently experience the calamities of war. *Edward* I. when he over-ran *Scotland*, poſſeſſed himſelf of this city. *Edward* II. made it for ſome time his reſidence: in 1312 it was taken by *Robert Bruce*, who levelled its walls and filled up its ditches. *Edward* III. reſtored its walls and fortifications. *Cromwell* took the city in 1651; a citadel was then built, capable of containing 500 men, the remains of which ſtill retain the name of *Oliver's mount*. Mr. *Pennant* ſays, the ſettlement of *Oliver's* forces here, after the peace, contributed much to introduce that ſpirit of induſtry, which, to this time, diſtinguiſhes the inhabitants. *Tour*, II. 75. The ſame writer ſays, the town contains 11,000 inhabitants, 9,000 of whom are of the eſtabliſhed church of *Scotland*. The great improvement of the town is to be dated from the year 1745, ſince which it is ſuppoſed to have increaſed one-third. The *Tay* waſhes its eaſt ſide, and is deep enough to bring veſſels of 120 tons burthen as far as the quays. The exports are white and brown linens, of which about 75,000l. worth are annually ſent to *London*, beſides a great quantity to *Edinburgh* and *Glaſgow*. About 10,000l. worth of linen yarn is alſo ſent to *London*, *Mancheſter*, and *Glaſgow*. *Linſeed-oil* is here a conſiderable article of commerce; it employs ſeven water-mills, which procure near 300 tons of oil; this is chiefly ſent to *London*, and brings in 8 or 9,000 *l*. The firſt of theſe mills was erected by *John* Duke of *Athol*. The exports of *ſalmon* to *London* and the *Mediterranean*, brings in from 12 to 14,000 *l*; that fiſh is taken here in great abundance; 3000 have been caught in one morning, weighing, one with another, ſixteen pounds a-piece. The fiſhery begins on St. *Andrew's* day, and ends on the 26th of *Auguſt*, O. S. *Pennant*, II. 74, 76, 77. *Perth Bridge* is the moſt beautiful ſtructure of the kind in *North Britain*: it was deſigned and executed by Mr. *Smeaton*. It is 900 feet long, and twenty-two broad within the parapets, and conſiſts of nine arches; that in the centre is 75 feet in diameter. By means of this bridge a communication is opened with all the great roads in the kingdom. It was erected at the expence of 26,000 *l*.; for which purpoſe the commiſſioners of forfeited eſtates contributed 11,000 *l*. *Idem*, 113. The *abbey* near *Perth* was demoliſhed in the year 1559.

The writer of a tour in *Scotland* in 1785, ſays, in the vicinity of this city are ſome of the moſt extenſive bleaching-fields in *Scotland*. *Cotton* manufactures begin to thrive here, p. 181. To which we ſhall add, that manufactures of *muſlins*, *gauzes*, and *Perſians*, which were ſet up about four years ago (from 1788), are now in a very flouriſhing condition. The combinations of the journeymen-weavers in *Spital-fields*, to raiſe the price of their wages, gave riſe to theſe manufactures.

About a mile from *Perth*, is SCONE or SCOON, which is ſeated on the north bank of the *Tay*, and is thought to be in the centre of the kingdom. It was anciently famous for its abbey, founded by king *David* I. for the monks of the order of St. *Auguſtine*, where the kings of *Scotland* were crowned. In the church of this abbey was kept the famous chair, the bottom of which conſiſted of the fatal ſtone, which was conſidered as the palladium of the *Scottiſh* monarchy. The legend aſſerts, that this ſtone had firſt ſerved *Jacob* for his pillow; was afterward tranſported into *Spain*, where it was uſed as a ſeat of juſtice by *Gethalus*, contemporary with *Moſes*; it afterward found its way to *Dunſtaffage*, in *Argyleſhire*; continued there as the coronation-chair till the reign of *Kenneth* II. who, to ſecure his empire, removed it to *Scone*. Here it remained, and in it every *Scottiſh* monarch was inaugurated till the year 1296, when *Edward* I. tranſported it to *Weſtminſter-abbey*, and with it, according to ancient prophecy, the empire of *Scotland*. *Idem*, 116. There is alſo a fine palace, now belonging to Lord *Stormont*, who has made many additions to it. It was in the chapel belonging to this palace that king *Charles* II. took the covenant.

The CARSE OF GOWRY, the next diviſion, is eſteemed the moſt beautiful ſpot in *Scotland*.

STRATHERN, the third diviſion, extends above forty miles from eaſt to weſt, and twenty from north to ſouth. The *Ochil-hills*, which extend along the ſouth part, abound with metals and minerals, particular *copper*, *lapis calaminaris*, and *lead*; there is here alſo excellent *peat*, and abundance of *wood*.

ABERNETHY ſtands in the ſouth-eaſt corner of this diviſion, at the confluence of the *Ern* and *Tay*, ſomewhat above twenty-four miles from *Duplin*.

There are two caſtles on the banks of the *Ern*, one of them *Tullibardin*, the ancient ſeat of the *Murrays*, which gives title of marquis to the eldeſt ſon of the duke of *Athol*; and the other is *Duplin* caſtle, the ſeat of the earl of *Kinnoul*, to whom it gives title of viſcount; the houſe of the latter is adorned with the fineſt paintings and carving, and his lordſhip has a park well planted with trees, and walled round.

MENTEITH, the next diviſion, extends forty-four miles from eaſt to weſt, and twenty-eight where broadeſt. This territory is ſaid to derive its name from the river *Teith*, and reaches to the mountains that encloſe the eaſt ſide of *Loch-Lomond*.

The only place of note in this diviſion is the pleaſant little town of DUMBLAIN, on the weſt ſide of the river *Allan*, where king *David* once erected a biſhopric. The town is a perfect amphitheatre, in a fine bottom ſurrounded with hills, and gives title of viſcount to the duke of *Leeds*.

The fifth diviſion is BRAIDALBIN, a country among the *Grampian hills*, extending about thirty-two *Scots* miles from eaſt to weſt, and about thirteen from north to ſouth. It is inhabited by the *Highlanders*, who retain their ancient language.

ATHOL, the moſt northern diviſion, extends in length from the north-weſt to the ſouth-eaſt forty-three miles, and thirty-one where broadeſt. Here are many mountains, and the vallies are full of wood. It gives title of duke to the noble and ancient family of *Murray*; but contains no place of importance.

SECT. XX.

Of KINCARDINSHIRE, *or* MEARNS; *its Situation, Extent, Produce, and principal Towns.*

THIS country is bounded on the eaſt by the *Northern* ocean; on the ſouth by the *North Eſk*; on the weſt by the *Granſbain-hills*; and on the north by *Aberdeenſhire*, from which it is divided by the river *Dee*; extending about twenty-ſeven miles in length, and twenty in breadth.

There are ſaid to be about five millions of fir-trees in this county, beſides thoſe which are planted by the gentry about their ſeats. Upon the ſea-coaſts are ſeveral convenient creeks and ſome good harbours.

KINCARDIN, once the county-town, ſtands on the river *Dee*, eighteen miles to the eaſt of *Aberdeen*, and is the ſeat of a preſbytery conſiſting of fifteen pariſhes.

STONEHIVE, the preſent county-town, has a very good harbour, ſecured by a ſtone pier. At the entrance of the harbour is a huge rock near forty ells high, which ſeems every moment ready to fall; and at a ſmall diſtance is a dropping cave, where the water petrifies.

FOURDON, or MEARNS, in the times of popery, was famous for the reliques ſuppoſed to have been depoſited there of St. *Palladius*, the firſt biſhop in *Scotland*, who was ſent over by pope *Celeſtine* in the year 431 to preach the goſpel to the *Scots*, and confute the *Pelagians*.

SECT. XXI.

Of Aberdeenshire; *its Situation, Extent, Diviſions, Produce, and principal Towns.*

THIS county is bounded on the ſouth by the river *Dee* and the *Grainſbain* mountains, which divide it from *Angus* in the ſhire of *Forfar*, and *Kincardinſhire*; on the eaſt by the *Northern* ocean; on the weſt by part of *Murray*; on the north-weſt by *Bamff*; and on the north by the ocean; extending, according to *Templeman*, ſeventy-three miles in length, and twenty-eight in breadth. It contains *Mar*, with its appurtenances, *Strathdee*, *Strathdon*, the braes of *Mar* and *Cromar*, with the greateſt part of *Buchan*, *Garioch*, and *Strathbogy*. The ſouth part contains *Mar*, with its ſubdiviſions, from whence it was formerly called the ſhire of *Mar*.

The hilly parts, eſpecially the craigs of *Pennau*, where the eagles build their neſts, are covered with woods of oak and fir, and have plenty of game and paſture, therefore feed abundance of black cattle, ſheep, deer, and horſes. There are here alſo quarries of ſpotted marble, lime-ſtone, and ſlate, with a ſpecies of ſmall ſtones peculiar to this country, called elf-arrow heads, which ſeem of a flinty kind, and are of different ſhapes; but moſt of them reſemble the head or point of an arrow or ſpear.

Aberdeen, a city and univerſity, has its name from the *Don*, at the mouth of which river it is ſituated, in 57° 6′ N. latitude, and 1° 58′ W. longitude, eighty miles north of *Edinburgh*. There are two towns, the *Old* and *New*. *Old Aberdeen* was the ſeat of a biſhop, it having a large and ſtately cathedral, generally called St. *Machar's*. On the ſouth ſide of it ſtands *King's* college, founded by *James* IV. where are profeſſors of divinity, civil law, phyſic, the mathematics, and the oriental tongues. Its library conſiſts of a good collection of ancient and modern books, with ſome valuable ancient manuſcripts. This college is not inferior to any in *Scotland*. The church, with its turret or ſteeple, is of hewn-ſtone, and the top vaulted with a double croſs arch, ſurmounted by an imperial crown. In the year 1785 it was ſaid to inſtruct about one hundred and fifty ſtudents, only eighty of whom had apartments in the college.

New Aberdeen is about a mile diſtant from the *Old*, and is ſeated at the mouth of the river *Dee*. It is the county-town, and conſequently the ſeat of the ſheriff's courts. It exceeds all the cities in the north of *Scotland* in extent and beauty. Mr. *Pennant* deſcribes it as well built with granite from the neighbouring quarries, and about two miles in circumference; containing 13,000 ſouls, and about 3000 in the ſuburbs. The beſt ſtreet, or rather place, he ſays, is the *Caſtle-ſtreet*; in the middle of which is an octagon building, with neat *bas-relievos* of the kings of *Scotland*, from *James* I. to *James* VII. The town-houſe makes a good appearance, and has a handſome ſpire in the centre. *Tour in Scotland*, I. 137.

Here is the tomb of *Andrew Cant*, who was miniſter of *Aberdeen*, from whom a writer in the *Spectator* (N° 147) derives the term "to cant;" but the moſt probable derivation is from *canto*, to ſing, the manner of delivery in thoſe times, among the preſbytery of *Scotland*, being in a ſtyle between ſinging and ſaying. The inſcription on his monument is ſtill legible, and ſpeaks of him in very high terms.

The people of *Aberdeen*, and indeed of almoſt all this part of the country, are generally of the *Epiſcopalian* perſuaſion; ſo that were it not for the legal eſtabliſhment, the *Preſbyterian* preachers would have but ſlender incomes: almoſt every pariſh has a meeting-houſe, where the liturgy is read: at *Aberdeen* they have beautiful chapels, in ſeveral of which are organs.

Aberdeen once enjoyed a conſiderable ſhare of the *tobacco* trade, but was at length forced to reſign it to *Glaſgow*, the latter being ſo much more conveniently ſituated. At preſent its imports are from the *Baltic*, and a few merchants trade to the *Weſt Indies* and *North America*. Its exports are *thread*, *ſtockings*, *ſalmon*, and *oatmeal*. For the ſtocking manufacture 20,800 *l.* worth of wool is annually imported; of this wool is annually made 69,333 dozen pairs of ſtockings. Theſe are made by the country people in almoſt all parts of this great county; who are paid four ſhillings per dozen for ſpinning, and fourteen ſhillings per dozen for knitting; beſide which there are about 2000 *l.* value of ſtockings manufactured from the wool of the county, which greatly encourages the breed of ſheep. About 200 combers are alſo employed conſtantly. The thread manufacture is alſo a conſiderable article in itſelf, though not in compariſon of the woollen. *Pennant*, I. 136.

The *college* was founded in 1494, by *William Elphinſton*, biſhop of this place, and lord-chancellor of *Scotland*, in the reign of *James* III. and lord privy-ſeal in that of *James* IV. *Hector Boethius* was the firſt principal of the college, and ſent for from *Paris* for that purpoſe, on an annual ſalary of forty marks *Scots*, at thirteen pence each. It afterward fell into decay, and *George Keith*, earl *Marſhal* in 1593 reſtored it, and has obtained the credit of being its founder, for from him it is called the *Marſhallian* college. Since his time the city has adorned it with ſeveral additional buildings. In this college, which is an univerſity of itſelf, are a principal, four profeſſors of philoſophy, a profeſſor of divinity, a profeſſor of mathematics, and a profeſſor of medicine. It has a good library, which was founded by the city, and has been enriched by the gifts of ſeveral learned men; among which is the *Alcoran* on vellum, finely illuminated, and an *Hebrew Bible* MS. with *Rabinical* notes on vellum.

The bridge over the *Don*, which is at the north end of the old town, conſiſts of one immenſe arch of ſtone ſprung from two rocks, one on each ſide, which ſerve as abutments; ſo that it may be ſaid to have a foundation coeval with nature, and that will laſt as long. The other bridge is upon the river *Dee*, a mile to the weſt of *New Aberdeen*, and has ſeven ſtately arches. This city gives title of earl to an ancient branch of the family of *Gordon*.

Though the river is large, the channel is narrow, and the bar often ſhifting, ſo that no ſhip of any burden ventures in without a pilot, though Mr. *Pennant* ſays there is ſufficient depth of water for ſhips of two hundred tons burden.

The *ſalmon-fiſheries* on the *Dee* and *Don* are an important branch of trade. About 46 boats and 130 men are employed on the firſt, and in ſome years 167,000 lb. weight of fiſh have been ſent pickled to *London*, and about 930 barrels of ſalted fiſh exported to *France*, *Italy*, &c. The fiſhery on the *Don* is far leſs conſiderable. The proprietors of this fiſhery are united into a company, the capital of which is divided into many ſhares, of which no perſon can enjoy above one at a time. The profits are very conſiderable. As to the herring-fiſhery, it is a common bleſſing to the whole eaſtern ſhore of *Scotland*; and enables the *Aberdeen* merchants to carry on a profitable trade to *Dantzic*, *Koningſberg*, *Riga*, *Narva*, *Wybourg*, and *Stockholm*.

Pork is reckoned to be better cured here for long voyages than at any other place in *Europe*, and it is pickled, packed up in barrels, and exported in great quantities, chiefly to the *Dutch*, for victualling their *Eaſt India* ſhips and men of war.

Peterhead, which ſtands on the ſouth-ſide of the water of *Ugie*, is a market-town and ſea-port of conſiderable trade in the north-eaſt part of the county, upon the promontory called *Buchanneſs*, and is noted for the Pretender's landing there in 1715.

SECT. XXII.

Of the Shire of Fife; *its Situation, Extent, Produce, and principal Towns.*

THIS county conſiſts of a fine peninſula incloſed between the *Forth* and the *Tay*, bounded on the eaſt by the *Northern* ocean; on the ſouth by the *frith* of *Forth*; on the weſt by the *Ochil-hills*, *Kinroſsſhire*, and *Perthſhire*; and on the north is divided by the *frith* of *Tay* from *Gaury* and *Angus*; it being commonly reckoned thirty-two miles in length, and about ſeventeen in breadth. The principal rivers are the *Leven* and *Edin*, which abound with ſalmon and other fiſh. The coaſt exhibits many ſmall towns that are nurſeries for ſeamen.

The earl of *Rothes* is hereditary ſheriff. No county of *Scotland* ſends ſo many members to parliament, or is inhabited by a greater number of the nobility.

The principal towns are the following:

Bruntislan, or **Burnt Island**, a royal burgh, ten miles to the north-weſt of *Edinburgh*; it lies oppoſite to *Leith*, and a paſſage-boat goes thither from hence every day. The town ſtands on the middle of the north-ſide of the *Forth*, and enjoys a fine proſpect of *Leith* road, and of the city and caſtle of *Edinburgh*. Mr. *Pennant* deſcribes the harbour as the beſt on the coaſt. It is formed partly by a rocky iſle, and partly by artificial piers, for there are no harbours on this ſide of *Scotland* that are entirely natural. It is dry at low water.

St. Andrew's had its name from St. *Andrew*, whoſe bones are ſaid to have been brought hither from *Patras*, a town of *Peloponneſus*. This is an ancient, and was once a flouriſhing city, the metropolis of all *Scotland*, the ſeat of its firſt univerſity, and before the Revolution was the ſee of an archbiſhop. It is ſituated thirty miles to the north-eaſt of *Edinburgh*.

"This city," ſays Mr. *Pennant*, "is ſituated on the extremity of a plain, at the water's edge. On approaching it, its numerous towers and ſpires give it an air of vaſt magnificence, and ſerve to raiſe the expectation of ſtrangers to the higheſt pitch. On entering the weſt port, a well-built ſtrait ſtreet, of a vaſt length and breadth, appears, but ſo graſs-grown, and ſuch a dreary ſolitude reigns, that a ſtranger is likely to be impreſſed with an idea that the city has been laid waſte by the peſtilence. The towers and ſpires, when examined cloſely, appear to be the aweful remains of the magnificent, the pious works of paſt generations. The *citadel* was the labour of 160 years (from 1161 to 1318); yet in *June* 1559 *John Knox* effected its demolition in a ſingle day." *Pennant*, II. 188, 191. The town was erected into a royal burg by *David* I. in the year 1140; the charter of *Malcolm* II. is preſerved in the *Tolbooth*, written on a bit of parchment; where are alſo kept the ſilver keys of the city, which, for form ſake, are to be delivered to the king, ſhould he viſit the place.

It underwent a ſiege in 1337. It is greatly reduced in the number of inhabitants; at preſent ſcarcely exceeding 2000. *Pennant* II. 196. Its preſent circuit is about a mile; it contains three principal ſtreets. The trade of *St. Andrew*'s was once very conſiderable, at preſent there is only one veſſel belonging to the port. The harbour is artificial, being guarded by piers, with a narrow entrance, to give ſhelter to veſſels from the violence of a moſt heavy ſea.

Here is only one pariſh-church, that of the *Holy Trinity*, remaining, and two chapels. This church is an ancient ſtately edifice, built with fine free-ſtone, in the form of a croſs, with a handſome ſpire in good repair. In it is a fine monument of archbiſhop *Sharp*, who was aſſaſſinated in his coach upon a moor as he was returning home. This prelate was by education a rigid preſbyterian, but apoſtatiſed, and was rewarded with this archbiſhoprick, when he became a violent perſecutor; in conſequence of which, nine men, enthuſiaſtically attached to the party he harraſſed, bound themſelves by a vow to cut off their perſecutor, and effected it in 1675.

This city, which was founded by biſhop *Wardlaw*, in 1411, and confirmed by *Benedict* III. is particularly famous for its **University**, conſiſting of three colleges, of which, during the continuance of epiſcopacy, the archbiſhops were chancellors: it is now governed by a chancellor, who is elected by the two principals, and the profeſſors of the colleges; the rector is choſen annually, and by the ſtatutes ought to be one of the principals of the three colleges, which are called St. *Salvator's*, St. *Leonard's*, and the *New*, or St. *Mary's College*.

St. *Salvator's* college was founded by *James Kennedy*, biſhop of St. *Andrew's*, in 1458, who erected the edifice, furniſhed it with coſtly ornaments, and endowed it with ſufficient revenues for a doctor, a bachelor, and a licentiate in divinity, four profeſſors of philoſophy, and eight poor ſcholars. It has alſo a good library, founded by Dr. *Sheen*. The edifice itſelf is a ſtately pile of fine hewn ſtone, but the college revenue is not ſufficient to keep it in repair.

St. *Leonard's* college was founded by *John Hepburne*, prior of St. *Andrew's* in the reign of *James* V. A. D. 1512. By an act which paſſed in the twentieth year of the reign of king *Geo.* II. (A. D. 1747) theſe two colleges were united.

The *New College* was founded by archbiſhop *Bethune*, or *Beaton*, uncle to the cardinal of that name, with endowments for a principal, a profeſſor, and ſome ſtudents in divinity, that being the only ſcience taught in this college. As the two laſt colleges have a better revenue than that of St. *Salvator*, they are in much better repair. In the latter, king *Charles* I. held a parliament, in a ſpacious room able to ſeat four hundred perſons in regular order; and it ſtill retains the name of the parliament-room.

The entrance of the caſtle of St. *Andrew's* is ſtill to be ſeen, and the window is yet ſhewn, out of which it is ſaid cardinal *Beaton* leaned to glut his eyes with the cruel martyrdom of *George Wiſhart*, who was burnt on the ſpot beneath. In this ſame caſtle, in *May* 1546, *Beaton* met with the reward of his cruelty, being ſlain by *Norman Leſley*, eldeſt ſon of the earl of *Rothes*, at the head of fifteen perſons, who ſurpriſed the caſtle.

Falkland is a neat large town, ſeated at the foot of *Lomond-hill*, which is ſaid to be full a mile in height, and covered with fine paſtures for ſheep. From the top there is not only a proſpect of *Fifeſhire*, but of the country all round it; to the ſouth beyond *Edinburgh* and the *Lothians* almoſt to *Berwick*; to the weſt as far as the hills by *Stirling*; and to the north into *Perthſhire* and *Angus*. Near this town *James* V. built a palace, which, by its ruins, eſpecially the two ſides yet ſtanding in the inner ſquare, appears to have been a large and noble ſtructure.

SECT. XXIII.

Of the Shire of Angus *or* Forfar; *its Situation, Extent, Produce, and principal Towns.*

THIS county is divided on the north from the brae of *Mar*, by the ridge of the *Brinchinin-mountains*; on the eaſt it is bounded by *Mearns*; on the ſouth by the frith of *Tay* and the *Northern* ocean; and on the weſt and north-weſt by *Perthſhire*; extending thirty-four miles in length, and twenty-ſix in breadth.

The ſhire of *Angus*, as it is generally called by the *Scots*, is diverſified with large hills, lakes, foreſts, paſtures, and meadows. It is fertile along the coaſt, but is there very narrow; yet ſpreads wide among the mountains, which are inhabited by *Highlanders*, and abound with harts, hinds, roe-bucks, and fowl. They have alſo ſome mines of lead and iron.

The principal towns of this county are, *Aberbrothic*, *Forfar*, *Dundee*, and *Montroſe*.

Aberbrothic, or **Arbroath**, is ſeated near the ſea, at the mouth of the little river *Brothic*. It is a ſmall but flouriſhing place, well built, and ſtill increaſing. In the year 1776 it was ſaid to contain about 3500 inhabitants. It has an artificial harbour, formed of piers, where, at ſpring-tides, ſhips of 200 tons may come in. This port is of great antiquity, as appears from an agreement yet extant between the abbot and the burghers, in the year 1194, concerning the making of the harbour. "The glory of this place," ſays Mr. *Pennant*, "was the abbey, whoſe very ruins give ſome idea of its former magnificence. It was founded by *William* the *Lion*, in 1178, and dedicated to *Thomas à Becket*. The laſt abbot was the famous cardinal *Beaton*." *Tour in Scotland*, II. 131, 135.

Forfar is a royal burgh, a market-town, and the ſeat of a preſbytery, containing ten pariſhes. It ſtands fourteen miles weſt of *Montroſe*, is governed by a provoſt and bailiff, was anciently the ſeat of ſeveral parliaments, and had a royal palace, though ſcarcely any remains of it are now left. Mr. *Pennant* calls it the capital of the county, and ſays it contains about 2000 ſouls, p. 169.

Dundee is ſeated in a plain at the foot of a hill on the north-ſide of the *Tay*, near its entrance into the ocean. This is eſteemed the beſt town in the ſhire for ſtrength, ſituation, and trade. The weſt end of the church was beaten down by *Cromwell's* army, and the other three parts are now divided into three ſeparate churches. The ſteeple has a fine tower, like that at *Wrexham*, in *Wales*, and very lofty. The church-yard is without the town, and adorned with fine monuments. There are here alſo one or two meeting-houſes for the *Epiſcopalians*.

The town is populous, and one of the gayeſt in *Scotland*. The houſes are not high, but well built, chiefly of ſtone, in a very beautiful manner, which, together with its fine ſituation, and the ſplendor in which the inhabitants live, have given it the name of *Bonny Dundee*. The inhabitants, who carry on a foreign trade, are generally rich, and for ſuch as fall to decay there is a large and handſome hoſpital, with gardens that extend down to the river.

The harbour, which is two or three leagues within the mouth of the *Tay*, has three entrances; and is capable of containing two or three hundred ſail of ſhips of ſmall burden. From the harbour is a pleaſant walk paved with flag-ſtones, and ſhaded with rows of trees on each ſide, which ſerves for an exchange to the merchants and maſters of ſhips; and on one ſide are alſo large warehouſes for goods, and granaries for corn.

As this is one of the beſt ports for commerce in all *Scotland*, it has a conſiderable inland trade, eſpecially for corn and linen, which the merchants buy up for exportation, and which enriches all the adjacent country.

Montrose is ſeated at the mouth of the river *Eſk*, on the *Northern* ocean, forty-ſix miles to the north-eaſt of *Edinburgh*. It is well ſituated for trade, and has a harbour for ſhips of conſiderable burden; hence the inhabitants carry on a good foreign trade, particularly to *Norway*. The town is adorned with many fine buildings, and principally conſiſts of one long handſome ſtreet, which runs parallel with the ſhore. It gives the title of Duke to the chief of the family of *Graham*, and is famous for the eſcape of the real or pretended ſon of *James* II. who took ſhipping here privately in 1716.

SECT. XXIV.

Of INVERNESS-SHIRE; *including* BADENOCH *and* LOCHABER, *with a ſmall Part of* ROSS *and* MURRAY; *their Situation, Extent, and Produce; with a Deſcription of* INVERNESS, *and ſome Account of* FORT WILLIAM *and* FORT AUGUSTUS.

INVERNESS-SHIRE, which was formerly much more extenſive than it is at preſent, is bounded on the north by *Roſs* and *Cromarty*; on the eaſt by *Murray-land*, *Aberdeen*, and *Perthſhires*; on the ſouth by *Lorne*, *Broadalbin*, and *Athol*, and by the Weſtern ſea on the weſt; extending about ſixty miles from eaſt to weſt, and about ſeventy, where broadeſt, from north to ſouth.

This ſhire abounds with iron ore; it has ſome woods, and produces fir and oak. It alſo contains ſeveral remarkable lakes; one of the moſt extraordinary of which is ſeated upon a very high mountain; it extends about thirty fathoms in length, and ſix in breadth; yet no ſtream is obſerved to run either to or from it, being entirely fed by its own ſprings, though ſo deep that it has never been fathomed. It is equally full at all ſeaſons of the year, and though the water is always cold, it never freezes. About ſeventeen miles to the weſt, on the north-ſide of a mountain called *Glenintea*, is a lake called *Lochanwyn*, or the *Green-lake*, which is covered with ice all the year round.

Badenoch has part of *Murray* on the north; *Lochaber* on the weſt; *Athol* on the ſouth, with a part of *Murray* and the *Braes* of *Mar* on the eaſt; extending, according to *Templeman*, forty-nine miles in length, and twenty-two in breadth in the wideſt part. This tract particularly abounds with deer.

Lochaber is bounded on the north by *Badenoch*; on the eaſt by *Athol* and part of *Badenoch*; on the ſouth by *Lorne* and *Broadalbin*; and on the weſt by a mountainous tract toward the coaſt.

This diſtrict has ſome veins of iron, but not much corn; for though very pleaſant, it is reckoned one of the moſt barren countries in *Scotland*.

Inverness, from which this county has its name, is its principal town, and is ſeated at the bottom of the frith of *Murray*, where it receives the *Neſs*, a hundred and ſix miles to the north of *Edinburgh*; longitude 4° W. lat. 57° 36′ N. It is a royal burgh, a market-town, the ſeat of a ſheriff, and of a preſbytery, containing thirteen pariſhes. It ſtands on the ſouth ſide of the *Neſs*, over which it has a bridge of hewn-ſtone, with ſeven arches, that leads into what is properly called the *North Highlands*. "It may be called," ſays *Dr. Johnſon*, "the capital of the *Highlands*. It was the laſt place which had a regular communication by high roads with the ſouthern countries. All the ways beyond it have, I believe, been made by the ſoldiers in this century. Here therefore, *Cromwell*, when he ſubdued *Scotland*, ſtationed a garriſon, as at the boundary of the *Highlands*. The ſoldiers ſeem to have incorporated afterward with the inhabitants, and to have peopled the place with an *Engliſh* race, for the language of this town has been long conſidered as peculiarly elegant. Hither the young nymphs of the mountains and valleys are ſent for education." *Journey, p.* 53, 54. It is conveniently ſituated for trade, of which it has a conſiderable ſhare, with a harbour for ſmall ſhips, a church for the *Highlanders*, and another for the *Lowlanders*, and the ruins of a caſtle, called "the caſtle of *Macbeth*," in which the kings of *Scotland* formerly reſided, ſtands on a hill that affords a fine proſpect of the town and the adjacent country. It is reckoned a well-built, clean, and pleaſant town; it has in particular two very good ſtreets, with coffee-houſes and taverns, and the people are more polite than in moſt towns in *Scotland*. Over againſt the ancient caſtle of *Macbeth*, on another hill, *Cromwell* built a fort, which was demoliſhed after the Reſtoration, but it was reſtored after the Revolution, and king *William* III. always kept a garriſon in it, on account of its being one of the moſt conſiderable paſſes between the *Low countries* and the *Highlands*. At preſent it is totally demoliſhed.

Not far diſtant from *Inverneſs* is *Culloden Moor*, "the place," ſays *Mr. Pennant*, "to which *North-Britain* owes its preſent proſperity, by the victory of *April* 16th, 1746." *Journey into Scotland, I.* 175.

In this neighbourhood is *Foules*, the ſeat of Sir *Henry Monro*, who there holds a foreſt from the crown by a very whimſical tenure; that of delivering a ſnow-ball on any day of the year that it is demanded; and he ſeems, according to *Mr. Pennant*, to be in no danger of forfeiting his right by failure of the quit rent, for ſnow lies in the form of a *glaciere*, in the chaſms of *Benwewich*, a neighbouring mountain, throughout the year.

Innerlochy, Inverlochy, or Fort William, ſtands in the centre between the *North* and *Weſt Highlands*, at the mouth of the river *Aber*, a hundred miles to the north-weſt of *Edinburgh*. It is a regular fort, erected after the Revolution, and received the name of *Fort William*, in honour of *William* III. it was intended as a curb on the *Highlanders*, and has ſtill a large garriſon. It is ſo ſituated, that however it may be ſtraightened by a blockade, or ſiege by land, it may receive conſtant ſupplies by ſea.

Fort Augustus is a regular fortification, built by general *Wade*, near the ſouth end of *Lochneſs*, to awe the *Highlanders*, and to prevent their diſturbing the ſoldiers he employed in making a road here, which with extraordinary pains they carried through mountains and moraſſes that ſeemed almoſt impaſſable. By this road the king's forces may eaſily enter and traverſe the country, which was before inacceſſible to all but the *Highlanders*. *Dr. Johnſon* deſcribes it as commanded by the neighbouring hills; and ſays it has been taken by the Highlanders. Its ſituation ſeems well choſen for pleaſure, if not for ſtrength; as it ſtands at the head of the lake, and receives a ſupply of every thing wanted from *Inverneſs*, by means of a ſloop of ſixty tuns burden.

SECT. XXV.

Of ARGYLESHIRE, *or* INVERARY, *including* ARGYLE PROPER, CAWAL, LORNE, KNAPDALE, *and* CANTYRE; *with the Situation, Extent, and Produce of each. A poetical Deſcription of* LEVEN WATER, *by Dr. Smollet. Of the principal Iſlands belonging to* ARGYLESHIRE.

ARGYLESHIRE is bounded by *Lochaber* on the north-eaſt; by *Perthſhire* on the eaſt; by the *Iriſh* ſea and the frith of *Clyde* on the ſouth, and by ſeveral iſlands on the weſt and north. It extends a hundred and twenty miles in length, and forty in breadth.

This county comprehends *Argyle Proper*, *Cawal*, *Lorne*, *Knapdale*, *Cantyre*, and many of the *Weſtern* iſlands. It is the ſeat of a provincial ſynod, containing five preſbyteries and forty-nine pariſhes, and gives title of duke to the noble family of *Campbell*. It contains many caſtles and gentlemen's ſeats, moſt of which belong to the branches of that family, which are famous for having ſuffered for their ſtedfaſt adherence to the Proteſtant religion and the liberties of their country, particularly from the time of the Reformation to the Revolution.

The country is mountainous, and the inhabitants, who ſpeak *Erſe*, the ancient language of *Scotland*, live moſtly by hunting and fiſhing; for it has ſeven-great lakes, with other leſſer ones, that abound with fiſh. The coaſt conſiſts of high rocks, and bleak mountains covered with heath, which feed great numbers of black cattle, deer, and other wild beaſts; for their cattle generally run wild, but are excellent meat.

The diſtrict of *Argyle Proper* has *Knapdale* and *Cawal* on the ſouth; *Lenox* and the *Grampian* hills on the eaſt; *Lochaber*, or *Loquabar* on the north; and *Lorne* on the weſt. It lies between *Loch Fin*, which is ſixty miles long and about four broad, and *Loch-Aw*, a freſh-water lake, twenty-four miles in length, and one in breadth. This laſt lake contains twelve iſlands.

CAWAL, the next diviſion, lies between *Loch-Fin* on the weſt; the frith of *Clyde* on the eaſt; the iſle of *Bute* on the ſouth; *Argyle Proper* and the *Grampian* mountains on the north; and abounds with lakes and bays.

LORNE, the third diviſion, is a level country, the pleaſanteſt and moſt fruitful part of *Argyleſhire*, eſpecially in barley; it has alſo many lakes. It is bounded on the eaſt by *Broadalbin*; on the ſouth by *Loch Leaven*, a lake of great extent; on the weſt by the Weſtern Iſlands; and on the north by *Lochaber*; extending about thirty miles in length from north to ſouth, and about nine, where broadeſt, from eaſt to weſt.

On *Lochleven* reſides a gentleman of the name of *Smollet*, related to the late *Dr. Smollet*, to whoſe memory he has raiſed an obeliſk on the bank near the houſe in which he was born. That writer, ſo diſtinguiſhed for his irreſiſtable humour in delineating character, for his ſtrength of language, and acuteneſs of intellect, addreſſed ſome beautiful lines to *Leven water*, which it gives us pleaſure to inſert here, as they are truly pictoreſque, and are but little known.

On *Leven's* banks, while free to rove,
And tune the rural pipe to love,
I envied not the happieſt ſwain
That ever trod th' *Arcadian* plain.
  Pure ſtream! in whoſe tranſparent wave
My youthful limbs I wont to lave;
No torrents ſtain thy limpid ſource;
No rocks impede thy dimpling courſe,
That ſweetly warbles o'er its bed,
With white, round, poliſhed pebbles ſpread;
While, lightly pois'd, the ſcaly brood,
In myriads, cleave thy cryſtal flood:
The ſpringing *Trout*, in ſpeckled pride;
The *Salmon*, monarch of the tide;
The ruthleſs *Pike*, intent on war;
The ſilver *Eel*, and mottled *Par*.
Devolving from thy parent lake,
A charming maze thy waters make,
By bow'rs of birch, and groves of pine,
And hedges flower'd with eglantine.
Still on thy banks, ſo gaily green,
May num'rous herds and flocks be ſeen;
And laſſes, chanting o'er the pale;
And ſhepherds, piping in the dale;
And ancient faith, that knows no guile,
And induſtry, imbrown'd with toil;
And hearts reſolv'd, and hands prepar'd,
The bleſſings they enjoy, to guard.

In this diſtrict *Lochaber* runs ſo far into the land from the *Weſtern* ſea, that it is only disjoined from *Loch-Neſs*, which diſcharges itſelf into the *Eaſtern* ocean, by a very narrow ridge of hills which riſes between them.

KNAPDALE is bounded on the eaſt by *Loch-Fin*, which ſeparates it from *Cawal*; on the ſouth by *Cantyre*; on the weſt by the Weſtern Iſlands; on the north by *Lorne*; and on the north-eaſt by *Broadalbin*.

The principal town in this diviſion is INVERARY, which is ſeated on *Loch-Fin*, ſeventy-five miles to the north-weſt of *Edinburgh*, and forty-five from *Glaſgow*. It is a royal burgh, a market-town, and the ſeat of a preſbytery, conſiſting of twelve pariſhes. Near it is a fine large caſtle, adorned with gardens and a park, and is the chief reſidence of the duke of *Argyle*.

CANTYRE, or KINTIRE, which ſignifies the *Land's Head*, is the moſt ſouthern diviſion of the ſhire, and is a peninſula that extends thirty-ſeven miles from north to ſouth, and ſeven in breadth. From the point of land, called the *Mull* of *Cantyre*, it is ſcarce ſixteen miles to the *Fair Foreland*, in *Colerain*, on the north-eaſt of *Ireland*. It is inhabited both by *Highlanders* and *Lowlanders*, but for the moſt part by the former, brought hither by the *Argyle* family, who have taken extraordinary care in civilizing the inhabitants.

The principal place here is *Campbell Town*, which is ſeated on the lake of *Kilkerran*, on the eaſtern coaſt. In the year 1767 a coal mine was opened here, from which great expectations were raiſed. Many veſſels go annually from this town, on the *Newfoundland* fiſhery.

The principal of the *Weſtern* Iſlands belonging to *Argyleſhire* are *Iſla*, or *Ilay*; *Jura*; and *Mull*.

ILAY, or ISLA, is ſeated fifteen miles from *Cantyre*; it extends twenty-four miles in length, and from eight to eighteen in breadth. It has ſeveral rivers and freſh-water lakes. The lake called *Loch-Finlagen*, in the centre of the iſland, is three miles round, and diſcharges itſelf into the ſea. In this lake is a ſmall iſland, called *The Royal Seat* of the great *Macdonald*, who was crowned and anointed king of the *Iſles* by the biſhop of *Argyle*, and ſeven prieſts, in the preſence of all the heads of the tribes of the iſles and continent. There are a multitude of little iſlands on the coaſt, ſome of which are inhabited.

JURA is twenty-four miles long, and ſeven broad. It is ſeparated by a narrow ſtrait from *Ilay*, one mile in breadth. It belongs to the duke of *Argyle*, and the eaſt coaſt is well inhabited. It is famous for its medicinal waters, and its rivers which abound with *ſalmon*. On the weſtern ſhore are found coral and coraline. In the middle of the iſland are four very high mountains, the two higheſt of which are called by ſeamen *The Paps* of the *Jura*. Between the north end of *Jura* and the little iſle of *Scarba* is a whirlpool, that has an impetuous current not to be paralleled any where about the iſlands of *Great Britain*; yet the ſmalleſt fiſhing-boat may croſs it at the laſt hour of tide without the leaſt danger. There is only one church in the iſland. The inhabitants are all Proteſtants, but ſpeak *Erſe*, and wear the *Highland* habit.

MULL, the largeſt of theſe iſlands, lies at a ſmall diſtance to the north of *Jura*, is twenty-four miles in length, and in the broadeſt part is as much in breadth; it is divided from *Lochaber* by a channel not half a league broad. *Dr. Johnſon* ſuppoſes this iſland to be the third of the *Hebrides* in extent. He eſtimates it to contain about three hundred ſquare miles. A ridge of mountains runs through the middle of the iſland, and one of them is ſo high, that it is ſeen from all the weſtern iſlands, and from a great part of *Scotland*. The iſland is well watered with rivulets, and affords good paſturage: the horſes and black-cattle are ſmall but ſprightly, and the latter very good meat. This iſland, among others on the coaſt, ſuffered greatly by the ſeverity of the winter of 1771, the effects of which it continued to feel when *Dr. Johnſon* viſited it in *Oct.* 1773. Cattle belonging to one farmer on the iſlands had then periſhed, which amounted in value to three hundred pounds; a loſs, our author obſerves, which probably more than the life of man is neceſſary to repair. The iſle of *Mull* has ſeveral bays, and places for anchorage, of which that of *Duart*, on the eaſt ſide, is moſt frequented. It has three caſtles, of which caſtle *Duart*, on a promontory near the ſouth-eaſt corner of the iſland, is the principal.

There is a port toward the north called *Tobor Morar*, in which veſſels are well ſecured from a boiſterous ſea, but a hollow between two mountains admits a particular wind with great violence. *Johnſon's Journey*, *p.* 318.

The inhabitants are ſuppoſed to amount to about ſix thouſand.

On the weſtern coaſt of *Mull* are many little iſlands, among which is JONA, or *Icolmkil*, which is but two miles long and one broad; yet on ſeveral accounts is worthy of notice. Marble is found upon it of various colours, with very beautiful veins.

This iſland in the early ages was the great ſchool of theology, and the place of ſepulture for the ancient kings.

It had two monaſteries, and has a church famous for the burial of the kings of *Scotland*, of whom here lies no leſs than forty-eight. *Dr. Johnſon* thinks that ſome of the *Norwegian* or *Iriſh* princes might be buried here, but it is now a matter merely of conjecture who were depoſited in theſe ſubterraneous vaults. This ſpot is alſo famous for being the reſidence of *Columbus*, the apoſtle of the *Picts*, from whoſe cell this iſland, ſays *Bede*, was called *Columbhill*. After the *Scots* left the iſle, a biſhop's ſee was erected in *Sodor*, a little village, from which all the iſlands within his dioceſe were called *Sodorenſis*. Its church, firſt dedicated to St. *Columbus*, is now called St. *Mary*'s. *Dr. Johnſon* deſcribes the churches of the two convents as yet ſtanding, though unroofed. They were built of unhewn ſtone, but ſolid, and not inelegant. The epiſcopal church, he ſays, conſiſts of two parts, ſeparated by the belfry, and built at different times. The original church had, like others, the altar at one end, and tower at the other; but as it grew too ſmall, another building of equal dimenſion was added, and the tower then was neceſſarily in the middle. It appears evident that theſe ſtructures are of different ages, for the arch of the firſt church is *Roman*, being part of a circle; that of the additional building is pointed, and therefore *Gothic*, or *Saracenical*; the tower is firm, and wants only to be floored and covered. Of the chambers or cells belonging to the monks there are ſome walls remaining, but nothing like a complete apartment. The bottom of the church was ſo overſpread with mud and rubbiſh, that our author could trace no inſcriptions.

This iſland is at preſent one of the moſt fruitful in the cluſter of *Scottiſh* iſlands, both corn and cattle are annually exported. The village near the churches is ſaid to contain ſeventy families, which at five in a family is more than an hundred inhabitants to a mile. *Dr. Johnſon* mentions ſome remarkable inſtances of the attachment which the natives ſhewed to their chief, *Sir Allan Maclean*; he likewiſe deſcribes them as miſerably neglected and remarkably groſs. This iſland, which was once the metropolis of learning and piety, has now no ſchool of education, nor temple of worſhip, only two inhabitants that can ſpeak *Engliſh*, and not one that can write or read.

Here are what are termed black ſtones, though their real colour is grey. On theſe black ſtones, it is ſaid, *Macdonald*, king of the Iſles, kneeled, and with hands lift up to heaven, delivered the rights of their lands to his vaſſals in the iſles and continent, ſolemnly ſwearing that he would never recal the privileges he then granted.

The old Highland chiefs were accuſtomed to ratify their moſt ſolemn contracts or alliances, by oaths taken upon black ſtones; and ſuch an obligation was conſidered as more ſacred than any other, and could not be violated without the blackeſt infamy. In thoſe days of violence and rapine, it was of great importance to impreſs upon ſavage minds the ſanctity of an oath, by ſome particular and extraordinary circumſtances. They would not have recourſe to the black ſtones, upon ſmall or common occaſions, and when they had eſtabliſhed their faith by this tremendous ſanction, inconſtancy and treachery were no longer feared. *Dr. Johnſon, p.* 349.

SECT. XXVI.

Of the Shires of NAIRN *and* CROMARTY; *their Situation, Produce, and principal Towns.*

NAIRN is in ſome meaſure united to *Cromartyſhire*, by their ſending alternately one member to parliament. *Nairn* is bounded on the north by *Murray* frith; on the eaſt by *Elgie*; and on the weſt and ſouth by *Inverneſs*, comprehending the weſt part of *Murray*, which lies between the river *Findorn* and *Nairn*; extending in its greateſt length twenty miles, and in its greateſt breadth fourteen.

NAIRN, the principal town, is a royal burgh, a hundred and four miles from *Edinburgh*, and had formerly a harbour, which is now choaked up with ſands that cover the ruins of an ancient caſtle.

CROMARTYSHIRE is but a ſmall country in a peninſula, ſeparated on the ſouth from *Nairnſhire* by a part of *Murray* frith, which runs up to *Inverneſs*; and on the north from *Roſsſhire* by the frith of *Cromarty*; it being bounded on the weſt by the ſhires of *Inverneſs* and *Roſs*; and is only twelve miles long, and three where broadeſt.

CROMARTY, the capital, is delightfully ſeated fourteen miles from *Inverneſs*, on the branch of the *Murray frith*, called the *Frith* of *Cromarty*: a road where the whole royal navy might ſecurely anchor. At the entrance to this frith are dangerous rocks called the *Craigs*; and at this town is a ferry which croſſes into *Roſsſhire*, from which the inhabitants are ſupplied with peat for fuel. It is a market town, and has ſpacious links, or a level green ſtrand. It gave title of earl to an unfortunate nobleman, who was alſo hereditary ſheriff of the county: but both titles are now forfeited to the crown.

SECT. XXVII.

Of the Shire of BAMF; *its Situation, Extent, Product, and principal Towns.*

THE ſhire of BAMF comprehends that part of *Buchan* north of the river *Ugie*, with the diſtricts of *Strathavern*, *Euzie*, *Boyne*, *Balvenie*, *Strathyla*, and *Strathavin*. On the north it is bounded by *Murray* frith; on the eaſt by the river *Dovern* and the northern ocean; on the ſouth by the river or water of *Ugie*, which ſeparates it from *Aberdeenſhire*; on the ſouth-weſt by the *Braes* of *Badenoch* and *Braemer*; and on the weſt by the water of the *Spey* and *Elginſhire*. Its dimenſions are variouſly given: but, according to *Templeman*'s ſurvey, it is fifty miles in length from eaſt to weſt, and its greateſt breadth eighteen.

That part called *Buchan*, extends north from the river *Ugie* to the ſea, and weſt as far as the river *Dovern*, that is nine miles from north to ſouth, and twenty from eaſt to weſt. It is watered by abundance of brooks and rivers, and conſiſts of corn-fields and little hills; it being the moſt extenſive tract in the whole kingdom free from mountains. The *Boyne* is a little diſtrict that extends along the frith of *Murray*, and is fruitful near the ſhore, but in other parts mountainous, and has large quarries of ſpotted marble.

BALVENY is a mountainous tract on the weſt ſide of the ſhire, and is famous for a rock that produces hones and whetſtones ſufficient to ſupply the whole iſland; ſo that the people uſe them as ſlates for covering their houſes. Here are alſo ſprings of alum-water, and veins of a ſtone from which alum is extracted.

STRATHYLA, which lies to the north-eaſt of *Balveny*, has ſuch plenty of lime-ſtone, that the inhabitants build their houſes with it. They are alſo conſiderable gainers by ſelling their lime in exchange for cattle and fine linen yarn at a weekly market in the village of *Keith*, on the river *Dovern*.

STRATHAVIN is a diſtrict ſeated on the river *Avon*; *Strathdovern* alſo receives its name from its extending along the river *Dovern*.

The principal places in this county are the following:

BAMF, the county town, ſeated at the mouth of the *Dovern* one hundred and ten miles to the north of *Edinburgh*; but has no port, and conſequently little trade, except for corn and ſalmon. It is a royal burgh, and here the ſheriff holds his courts. It has the ruins of a caſtle, and of an abbey which belonged to the *Ciſtercian* monks.

TUREFF is ſeated ſeven miles from *Bamf*, on a river that falls into the *Dovern*; it is a market town, and the ſeat of a preſbytery. The adjacent country is very pleaſant, and abounds with gentlemen's ſeats.

FRASERBURGH is a ſea-port on the coaſt of *Murray* frith, fifteen miles from *Bamf*, and is reckoned the chief town of the diſtrict of *Buchan*; it has two piers of freeſtone, which render the harbour ſafe and commodious.

Upon the banks of the *Spey*, which runs through this county, is *Gordon* caſtle, the nobleſt palace in the North, it being the duke of *Gordon*'s chief ſeat, adorned with pleaſant gardens, an extenſive park, and fine canal, with an agreeable fountain and ſtatues. The caſtle is ſo large, that it appears more like a little town than a nobleman's ſeat.

SECT. XXVIII.

Of the Shire of SUTHERLAND; *its Situation, Extent, Produce, and principal Towns.*

THIS county, including *Strathnaver*, has *Caithneſs* and the Northern ocean on the eaſt; *Roſs* on the ſouth; the country of *Aſſynt* to the weſt; and the Northern ocean to the north; extending, according to *Templeman*, eighty-eight miles in length, and forty-two in breadth.

The country is very mountainous, but leſs ſo than *Roſs*, and according to *Camden*, is more fit for breeding of cattle than bearing of corn. The valleys, however, are pleaſant, fertile, and well inhabited. It abounds with black cattle, ſheep, deer, and wild-fowl; and it is ſaid that all the deer bred on the mountain of *Arkill* have forked tails. Here are hills of white marble, and a great deal of freeſtone, lime-ſtone, iron-ſtone, and good ſlate. It is remarkable, that though this county is ſeated ſo far north, *ſaffron* grows here very kindly.

There is one ſort of bird ſaid to be peculiar to theſe moſt northern diſtricts, which the inhabitants call a *knag*: it reſembles a parrot, and digs its neſt with its beak in the trunk of trees.

In this county are above ſixty lakes, abounding with ſwans, geeſe, ducks, and other fowl of various kinds; they are alſo well ſtocked with fiſh. The largeſt is *Loch-Fin*, which is fourteen miles long. In many of them are very pleaſant iſlands. In ſhort, this country is ſo full of bays, rivers, and lakes, that there is ſcarce a town in it which is not waſhed with ſalt or freſh water, and both its bays and coaſts abound with ſeals, ſalmon, and ſhell-fiſh of all ſorts. It gives title of earl to the chief of the noble family of *Sutherland*, who has the titles of hereditary ſheriff and admiral. It has many commodious harbours, from which the inhabitants export *barley*, *ſalt*, *coal*, *beef*, *hides*, *tallow*, *ſkins*, *wool*, *butter*, *cheeſe*, *ſalmon*, &c.

The north part, called *Strathnaver*, is ſeparated from the reſt by mountains, and bounded on the north and weſt by the ocean; on the eaſt by *Caithneſs*; and on the ſouth by *Aſſynt* and *Sutherland*. It is ſo called from the river *Navern*, which runs through it; it extends thirty-four miles from eaſt to weſt, and twelve from north to ſouth; but in others no more than ſix.

In the height of ſummer here the ſun is above the horiſon upwards of eighteen hours, and when ſet, twilight prevails till it riſes again: the nights are as long in the midſt of winter; but in that ſeaſon the air is illuminated by the *aurora borealis*, or the northern lights. It is alſo obſerved, that the winters here are in general more temperate than they are farther to the ſouth, and that ſome of the rivers, particularly the *Neſs*, never freeze: which is aſcribed by naturaliſts to the ſalt and mild vapours from the neighbouring ſea, which fill the air, and as it were ſheathe the acute particles of the cold; and for the ſame reaſon the ſnow in the vallies neither lies ſo deep nor ſtays ſo long on the ground, as in other places.

DORNOCH, the capital of the county, is ſeated on the bank of the frith of *Murray*, one hundred and thirty miles to the north of *Edinburgh*, and was formerly the ſee of a biſhop; here was alſo a cathedral for the dioceſe of *Caithneſs*, with a caſtle for the earl of *Sutherland*, and the family burying-place.

SECT. XXIX.

Of the Shire of CLACKMANAN; *its Situation, Extent, Produce, and principal Places.*

CLACKMANANSHIRE is bounded on the north by the *Ochill-hills*; on the ſouth by the frith of *Forth*, on the eaſt by part of *Perthſhire*; and on the weſt by part of *Sterlingſhire*. It is about eight miles long, and where broadeſt but five.

About *Alloa* and *Clackmanan* are many coal-pits; and the inhabitants export great quantities of coal, not only to *Edinburgh*, but even to *England*, *Holland*, and *France*; for it yields the beſt and the greateſt quantity of coal of any part of *Scotland*, being that diſtinguiſhed in *England* by the name of *Scots* coal. This county joins with the ſhire of *Kinroſs* in alternately ſending a member to parliament, though *Kinroſs* is generally included in *Fifeſhire*.

CLACKMANAN, the county town, ſtands on a riſing ground, upward of thirty miles from *Edinburgh*, and has a noble caſtle, adorned with fine gardens.

But the moſt conſiderable place is ALLOA, or ALLOWAY, a ſea-port, five miles to the eaſt of *Sterling*, and the laſt on the *Forth*, where that river falls into the arm of the ſea called the frith of *Forth*. This town, though a village, is larger and better built than moſt of the borough towns in the kingdom. There is in particular one ſtreet that runs down to the harbour, the broadeſt and beſt paved of any next to *Edinburgh*, with rows of lime-trees on each ſide, as at *Dundee*, and in the towns of *Holland*. *Alloa* has a very conſiderable foreign trade, and ſeveral manufactures are carried on there, all of which have ſome relation to navigation. They particularly make excellent ſail-cloth, which is ſaid to be as good as that of *Holland*. A factory has likewiſe been ſettled here for the merchants of *Glaſgow*, who have erected warehouſes for ſtowing their tobacco, ſugar, and other goods, in order that they may be ready for exportation to *Holland*, *Hamburgh*, *Bremen*, the *Baltic*, *London*, or wherever they are to be conveyed. The river is here as broad as the *Thames* at *London-bridge*, the water deep, and the tide flows ſo ſtrong, that ſhips may lay their ſides to the wharf, and load and unload their goods without difficulty. Here are ſalt-houſes along the ſhore for boiling of ſalt, which is fetched away in great quantities by ſhips that bring other goods from *Hamburgh*, *Bremen*, or the *Baltic*.

The earl of *Mar* had formerly a ſeat here, called *Alloway-caſtle*, encompaſſed with fine plantations; the gardens taking up forty-two acres, and the wood, with the viſtos cut through it, a hundred and fifty. On the ſouth ſide of the houſe is a ſpacious parterre, beautifully adorned with ſtatues and vaſes; and from thence to the river runs a fine avenue, from which and from the parterre are thirty-two different viſtos, each terminating on a remarkable ſeat, or mountain, at ſome miles diſtance; one of them ſhews *Sterling-caſtle*, which though but four miles from hence by land, yet from the various windings of the river, is twenty-four by water. In the middle of the terrace is a fine baſon of water, and at the end of the river is a pair of pyramidical gates, where a ſhip of three hundred tons burden may unload. The earl of *Mar* was deprived of this fine ſeat for being very active in promoting the rebellion in 1715; and the crown, to whom it became forfeited, has cauſed it to be kept in good order.

SECT. XXX.

Of the Shire of ROSS; *its Situation, Extent, Produce, and principal Towns and Iſlands; as* SKY, LOUIS, *and* HARRIS.

THE ſhire of *Roſs* in general, including *Tayn* and *Cromarty*, for the latter, though a ſmall county of itſelf, is alſo conſidered as a part of *Roſsſhire*, has the Weſtern ſea, and the iſle of *Sky* on the weſt; *Strathnaver* and *Sutherland* on the north and north-eaſt; *Cromarty* and *Murray frith* on the eaſt; and *Inverneſs* on the ſouth. The form is very irregular, it being much contracted on the north-eaſt and ſouth by the neighbouring counties; according to *Templeman*, it is eighty miles in length, and ſeventy-eight in breadth.

This extenſive country is for the moſt part mountainous and woody towards the *Weſtern* ocean; but on that ſide next to the *German* ſea it is better cultivated, more fruitful in corn, fruit, and herbs, than could be expected in a country ſo far north, and abounds in paſture.

Upon the *Charron* and the *Braau*, are woods of fir, fifteen or twenty miles in length. It feeds great numbers of black cattle, horſes, goats, and deer; has abundance of land and ſea-fowl, and is well ſupplied with freſh water fiſh, by its lakes and rivers. The lochs, or lakes, on the weſt coaſt, in the proper ſeaſon, abound with herrings. *Loch-Bryan*, on the ſame coaſt, is another bay, that runs ten miles up the country.

COYGACH and ASSYNT are two mountainous diſtricts north from hence, but they abound with deer, and have huge rocks of marble. Toward the coaſt here are ſeveral gentlemen's ſeats. This county has ſome mountains ſo high, that they are covered with ſnow all the year round. The principal places it contains are the following:

CHANNERIE, or CHANOURY, a market-town, ſo called from a college of regular canons that flouriſhed there. It ſtands on the peninſula between the bay of *Cromarty* and *Murray*, among pleaſant and fertile hills, and has a ferry over the frith into *Murray*. It was anciently the ſee of a biſhop, and had a large cathedral, a part of which is yet remaining, and a caſtle, in which the biſhop reſided. It is at preſent the ſeat of a preſbytery, conſiſting of ſeven pariſhes; and has a ſtately houſe belonging to the earl of *Seaforth*.

DINGWELL, a market-town and royal burgh, ſeated at the bottom of the frith of *Cromarty*, fifteen miles weſt of the town of *Cromarty*, is the ſeat of a preſbytery, containing thirteen pariſhes.

TAENE, a royal burgh and market-town, ſtands in a fruitful country, twelves miles to the north of *Cromarty*, and is the ſeat of a preſbytery, containing nine pariſhes.

We ſhall now give an account of the principal of the *Weſtern Iſlands*, generally included in the ſhire of *Roſs*.

SKIE, or SKY, the largeſt but one of all the *Weſtern Iſlands*, is divided from *Roſsſhire* by a ſtrait thirty-five miles in length, but in ſome places ſo narrow, that a man may be eaſily heard from one ſide to the other, eſpecially if the wind be favourable. It extends ſixty miles in length, and about twenty in breadth; and the coaſt is cut into a great number of gulfs and promontories. In ſome places there is fine white marble, black and white marcaſites, agate, and variegated ſtones of all colours, cryſtals alſo of different colours, plenty of free-ſtone and lime-ſtone, and after great rains ſtones of a purple colour roll down the rivulet.

Though the channel which ſeparates it from *Scotland* is navigable by the largeſt men of war, yet the current is ſo violent, that no ſhip is able to ſail againſt it, be the wind ever ſo fair: yet in the narrow ferry, called the *Kyle*, they make cows ſwim over; for this purpoſe they tie a withy about the cow's lower jaw, and thus bind five of them together, after which a man in a boat holds the withy that ties the foremoſt, and thus rows over; and in this manner takes over three or four hundred cows in the ſpace of a few hours.

It is very high land both on the coaſt and within the country, where are ſeven high mountains, that lie near each other almoſt in the centre of the iſland.

Port Ree on the iſland of *Sky* is ſo called becauſe *James* V. of *Scotland*, who had the curioſity to viſit the iſlands, came into it: a place at a ſmall diſtance is named *Kingſborough*, becauſe the king lodged there after he landed at *Port Ree*. *Johnſon's Tour in Scotland*, p. 149, 152.—*Taliſher* is the houſe of colonel *Macleod*, an officer in the *Dutch* ſervice, and a near relation to the laird; beſide which, Dr. *Johnſon* names *Dunvegan*, *Armidel*, *Coriatachar*, and *Oſtig*, the latter of which is a town where a Mr. *Macpherſon* is miniſter. Mr. *Macqueen* is miniſter of another pariſh in *Sky*. There is one inn at *Sky*, which is at *Sconſor*, by the ſea-ſide: here the poſt-office is kept. This iſland lies open on the weſt and north to a vaſt extent of ocean, and is cooled in the ſummer by perpetual ventilation; but by the ſame blaſts is kept warm in winter. The weather here is not pleaſing: half the year the country is deluged with rain; from the autumnal to the vernal equinox a dry day is hardly known, except when the ſhowers are ſuſpended by a tempeſt. Their winter overtakes their ſummer, and the harveſt frequently lies upon the ground drenched with rain. "The autumn here," ſays Dr. *Johnſon*, "ſtruggles hard to produce ſome of our early fruits: I gathered *gooſeberries* in *September*, but they were ſmall, and their huſks were thick." *Tour*, 176.—Indeed the winter of the *Hebrides* conſiſts of little elſe than rain and wind; for being ſurrounded by an ocean which never freezes, the blaſts which come to them over the water are too much ſoftened to have the power of congelation. The dark months of winter are here a ſeaſon of great diſtreſs, becauſe the ſummer can do little more than feed itſelf, and winter comes with its cold and its ſcarcity upon families very ſlenderly provided. In the year 1771 the ſeaſon proved very unfavourable, and it was for ſome years afterward remembered by the name of "the black ſpring," and from the effects of it the iſland did not recover for many years. The ſnow lay upon the ground, a calamity hardly known before: part of their cattle died for want, part were unſeaſonably ſold to buy ſuſtenance for the owners, and the kine that ſurvived were ſo emaciated and diſpirited that they did not require the male at the uſual time. *Johnſon*, 177. The chief manure in uſe here is *ſea-weed*, which, when they lay it to rot upon the field, gives them a better crop than thoſe of the *Highlands*. They heap ſea-ſhells upon the dung-hill, which in time moulder into a fertilizing ſubſtance. *Idem*, 178.—They ſow only *oats* and *barley*; with great labour in the huſbandry, and much manure, barley will yield ten-fold, but oats ſeldom bring them more than three grains for one. The little *hay* that is made on this iſland, being frequently wet and dry before it is houſed, becomes no better than withered ſtalks, without taſte or ſmell. It is eaten by the cattle becauſe they have nothing elſe, but moſt *Engliſh* farmers would throw it away. About ſeventeen or eighteen years ago, (from 1788) a practice was introduced which has proved very beneficial. Their rocks abound with *kelp*, a ſea-plant, of which the aſhes are melted into glaſs. They burn *kelp* in great quantities, and then ſend it away in ſhips, which come regularly to purchaſe that article. This new ſource of riches has raiſed the rents of many maritime farms. *Idem*, 184.—There are water-mills in *Sky*, and *Raaſa*, a neighbouring iſland; but where they are too far diſtant the houſewives grind their oats with a *quern*, or hand-mill, which conſiſts of two ſtones about a foot and half in diameter: the lower is a little convex, to which the concavity of the upper muſt be fitted. In the middle of the upper ſtone is a round hole, and on one ſide is a long handle. The grinder ſheds the corn gradually into the hole with one hand, and works the handle round with the other. The corn ſlides down the convexity of the lower ſtone, and by the motion of the upper is ground in its paſſage. Theſe ſtones are found in *Lochabar*. Mr. *Pennant*, who has given a print of women ſinging at the *quern*, ſays, the landlords prohibit the uſe of this machine, unleſs where there are no corn-mills, as they receive toll for all corn ground at the mill, and by the uſe of the *quern* that receipt is loſt. At ſtated times the annual growth of cattle is driven to a fair, by a general drover, and with the money which they produce, the rents are paid. The common price which they fetch is from two to three pounds a head. Theſe cattle go from the iſlands very lean, and are turned into paſtures in *England* for a long time to fatten, before they are ſold to the butcher. Of their black cattle ſome are without horns, theſe are called by the *Scotch*, *humble-cows*, as we call a bee an humble-bee that wants a ſting. Their *horſes* are like their cows, of a moderate ſize; the *goat*, which may be conſidered as the principal inhabitant of the earth, complying with every difference of climate and of ſoil, is an uſeful quadruped on this iſland. The goats, and the ſheep, of which there are great numbers, are milked like the cows; ſheep's milk is never eaten before it is boiled. This iſland has *ſtags* and *roebucks*, but no hares. There are neither rats nor mice in *Sky*, becauſe the weazel is numerous here. The vulgar inhabitants of *Sky* hold not only eels but pork and bacon in abhorrence; and Dr. *Johnſon* ſays, he never ſaw a hog in the *Hebrides*, except one at *Dunvegan*. p. 136.—The beaſts of prey in the iſlands are foxes, otters, and weazels. The foxes are bigger than thoſe in *England*, but the otters exceed ours in a far greater proportion. The farmers in *Sky* pay a tax of ſixpence in the pound, which is applied as a reward for catching foxes; a guinea a head is paid for that animal. *Johnſon*, p. 137.

Cod and *ling* are common upon the coaſt, and *herrings* in great abundance, for the taking of which they have many convenient bays and harbours, with about thirty ſmall rivers that afford *ſalmon* and other fiſh, and abundance of freſh-water lakes well ſtored with *trouts* and *eels*. They have land and water-fowl in great abundance, and among the reſt *eagles* and *hawks*. They have likewiſe *otters* and *ſeals*, and of the former are a large ſpecies with a white ſpot on the breaſt; but theſe are very ſcarce, and hard to be killed. They have likewiſe *ſnakes* of ſeveral kinds.

The iſland is divided into three parts, belonging to three different proprietors, or lairds; they are named *Macdonald*, *Macleod*, and *Mackinnon*. *Johnſon's Tour in Scotland*, p. 195.—It is the ſeat of a preſbytery, and has ten pariſh-churches. The proprietors and all the people are *Proteſtants*, except ſome of the meaner ſort, who are of the *Romiſh* religion.

“The ancient rigour of puritaniſm,” ſays Dr. *Johnſon*, “is now very much relaxed.” p. 241.—The number of inhabitants on the iſland is ſaid to amount to fifteen thouſand. *Johnſon's Tour*, p. 366.—They are commonly of the middle ſtature, with fewer among them very tall or very ſhort than are ſeen in *England*. p. 190.—As they are accuſtomed to run upon rough ground, they can, with great agility, ſkip over the bog or climb the mountain. Having little work to do, they are habitually idle. The higheſt title is *Laird*, who is proprietor of the land; his tenants commonly bear his name, and until the concluſion of the laſt rebellion, the laird poſſeſſed an excluſive right of legal juriſdiction. The clans knew no law but the *Laird*'s will; they learned from him to whom they ſhould be friends or enemies, what king they ſhould obey, and what religion they ſhould profeſs. The next in dignity is the *Tackſman*, or large taker or leaſeholder of land: of this he keeps part in his own hand, and lets part to under-tenants: he is commonly a collateral relation to the laird. The only gentlemen on the iſlands are lairds, tackſmen, and the miniſters, who frequently improve their livings by becoming farmers. *Johnſon*, 195. “I never was,” ſays Dr. *Johnſon*, “in any houſe of the *Highlands*, where I did not find books in more languages than one. Literature is not neglected by the higher rank in the *Hebrides*.” p. 119.

Land is ſometimes leaſed to a ſmall fellowſhip, who live in a cluſter of huts called “a tenant's town,” and are bound jointly and ſeparately for the payment of their rent. Theſe employ in the care of their cattle and the labour of tillage a kind of tenants yet lower, who having a hut, with graſs for a certain number of cows and ſheep, pay their rent by a ſtipulated quantity of labour.

The habitations of men in the *Hebrides* may be diſtinguiſhed into huts and houſes; the former is a dwelling with only one floor, the other a building with one ſtory over another. The laird, who formerly lived in a caſtle, now lives in a houſe, ſometimes ſufficiently neat, but ſeldom very ſpacious or ſplendid. Huts are of many gradations, from mucky dens to commodious dwellings. The petty tenants and labouring peaſants live in miſerable *cabins*, which afford them little more than ſhelter from the ſtorms.

We learn from Dr. *Johnſon*, that the bagpipe begins to fall into diſuſe in the *Hebrides*, although ſome of the chief families ſtill entertain a piper, whoſe office was anciently hereditary. The tunes of the bagpipe are traditional. There has been in *Sky*, beyond all time of memory, a college of pipers, which is not quite extinct. There was another in *Mull*, which ceaſed about thirty years ago (from 1788.) To theſe colleges, while the pipe retained its honour, the ſtudents in muſic repaired for education. *Johnſon*, p. 238.

In the iſlands there are now parochial ſchools, to the ſupport of which the lord of every manor pays a certain ſtipend. Here the children are taught to read, but by the rule of their inſtitution they teach only *Engliſh*. In *Sky* there are two grammar-ſchools, where boarders are taken to be regularly educated. The price of board is from three pounds to four pounds ten a year, and the price of inſtruction is half-a-crown a quarter; but the ſcholars live at ſchool only in the ſummer, for in winter proviſion cannot be made for any conſiderable number in one place. *Johnſon's Tour*, p. 239.

The marriage portion given with maidens is ſeldom in money, but generally in cows, a rich farmer may portion off his daughter with from thirty to forty cows, but two are conſidered as a decent fortune for one who pretends to no diſtinction. An hundred pounds is a portion beyond the hope of any but the laird's daughter.

RAASAY is an iſland lying eaſt of *Sky*; it is, by computation, fifteen miles long and two broad. It is ſuppoſed to contain about 9000 inhabitants. The laird, or proprietor, Mr. *Macleod*, is likewiſe proprietor of the iſlands *Rona* and *Fludda*, and poſſeſſes an extenſive diſtrict in *Sky*. “The eſtate,” ſays Dr. *Johnſon*, “has not, during 400 years, gained or loſt a ſingle acre.” *Raaſay* is the only inhabited iſland, *Rona* and *Fludda* affording only paſture for cattle, of which 160 winter in *Rona*, under the ſuperintendance of a ſolitary herdſman. Here the laird has an orchard, and very large foreſt-trees grow about his houſe. *Johnſon's Tour*, p. 132, 142.

LEWIS and HARRIS, which have been ſuppoſed to be two iſlands, form only one, which lies ſixty-eight miles weſt of the main land of *Scotland*, and twenty-two from the iſle of *Sky*. It is ſubdivided into *Lewis* and *Harreis*, or *Harris*, by a narrow channel, which runs ſo far within the country, that it is only joined by a ſmall neck of land: the whole extending near a hundred miles in length from north to ſouth, and ten or twelve in breadth, it being commonly called the *Long Iſland*. It is healthy, eſpecially in the middle. The ſoil is arable for about ſixteen miles on the weſt coaſt, and in ſome places on the eaſt; but it is generally ſandy, except the muirs or heaths, which are partly of red and partly of black clay; of which the women here make veſſels for boiling their meat, and for preſerving their ale. Their manure is ſea-weeds, ſoot, and peat-aſhes. On the iſland is bred *cows*, *horſes*, *ſheep*, *goats*, and *hogs*.

All the coaſt and numerous bays abound with cod, ling, herrings, and every other kind of fiſh taken in the *Weſtern* iſles: but the fiſhery is very much interrupted by whales, the young ones of which are eaten by the common people, who reckon their fleſh very good food.

The inhabitants are of a good proportion and ſtature, generally of a ruddy complexion, healthy, ſtrong, and long-lived. The ſmall-pox proves very fatal to the young people, but ſeldom comes among them. They are in general acute and ſagacious, very dexterous at ſwimming, and are ſuch ſtout mariners, that they will tug at the oar a whole day with no other refreſhment than a little bread and water, except their favourite ſnuff: but the ſea on their coaſt is very tempeſtuous, and ſubject to ſudden ſqualls, by which the light veſſels they uſe are frequently overſet. Once every ſummer they viſit the neighbouring iſlands, to purchaſe fowls, eggs, down, and feathers; and, as ſoon as they come on ſhore, turn round with the ſun, uncover their heads, and return thanks to God.

Here are ſeveral natural and artificial forts, with heaps of ſtones upon the heaths, ſuppoſed to be monuments of perſons of note, or a general memorial for all who fell there in battle; and in the village of *Claſſerneſs* is a druidical temple, as is ſuppoſed. It conſiſts of a circle of twelve obeliſks, each ſeven feet high, and ſix feet diſtant from each other. In the centre ſtands a ſtone thirteen feet high, exactly reſembling the rudder of a ſhip: directly ſouth from the circle ſtand four obeliſks, running out in a line; another like this goes due eaſt; and a third to the weſt: the number and diſtances of the ſtones being the ſame in the wings. But toward the north is a kind of avenue, in two ſtraight ranges of obeliſks of the ſame ſize, and at the like diſtance as thoſe of the circle: yet the ranges themſelves are eight feet aſunder, and conſiſt of nineteen ſtones each, the thirty-ninth being at the entrance of the avenue. It is obſerved, that this temple ſtands aſtronomically, as denoting the twelve ſigns of the zodiac, and the four principal winds on the wings ſubdivided each into four more; by which, and the nineteen ſtones on each ſide the avenue, repreſenting the cycle of nineteen years, it appears to have been dedicated to the ſun, and ſubordinately to the elements and ſeaſons, particularly the winds and the ſea, as is manifeſt from the rudder in the middle.

SECT. XXXI.

Of the Shire of ELGIN; *its Situation, Extent, Climate, Produce, and principal Towns.*

THIS county comprehends the weſtern parts of *Murray*, and is bounded on the eaſt and ſouth-eaſt by the river *Spey*; by *Aberdeenſhire* and *Badenoch* on the ſouth; and by the ſhire of *Nairn* and the *Northern* ocean on the weſt and north; it being about twenty-four miles in length, and twenty-one in breadth. The ſouth ſide is called the *Braes* of *Murray*, and the ſouth-eaſt the ſtrath or valley of *Spey*.

The air is ſalutary, and the winter mild: for *Murrayland*, which includes this ſhire, *Nairn*, and a part of *Inverneſsſhire*, is thought to enjoy the beſt climate and ſoil of all the north of *Scotland*; ſo that the inhabitants boaſt that they have forty clear days in a year more than their neighbours.

Here are ſeveral woods of firs and other trees, that extend ten miles in length, with ſome large woods of oak. No part of *Scotland* is more plentifully provided with bread, meat, fruit, and fiſh. In this county the common drink is ale; they have alſo *French* wine, and ſpirituous liquors of their own diſtillation. The chief rivers are the *Spey*, the *Neſs*, and the *Loſſie*.

The principal places in this county are the following:

ELGIN, a royal burgh, ſeated in a pleaſant plain, one hundred and four miles to the north of *Edinburgh*. It is waſhed on the eaſt and north by the river *Loſſie*, over which it has a bridge, and conſiſts of one very long ſtreet, and ſeveral ſhorter, with a neat church in the middle. The houſes are almoſt all built upon arches, which, with their intermediate pillars, form agreeable piazzas, and ſerve to defend the inhabitants from the rain, wind, or ſun. It is alſo famous for the ruins of one of the moſt ſtately cathedrals in the kingdom: moſt of the end walls are ſtill ſtanding, and many noble pillars, which ſhew its former grandeur. At the other end of the town are the ruins of an ancient caſtle, demoliſhed by the *Danes*. The ſheriff keeps his court here. It has a weekly market, and is the ſeat of a preſbytery, conſiſting of thirteen pariſhes. The *Highland* gentry come to reſide here every winter; and in this part of the country there are ſome gentlemen poſſeſſed of the beſt eſtates in all *Scotland*.

FORRES, a market-town and royal burgh, pleaſantly ſeated on the weſt ſide of the county, on a river that falls into the *Findern*, ten miles from *Elgin*, at the end of ſeveral ridges of mountains: it conſiſts of one long ſtreet, with a church, a *tolbooth* or town-houſe, and the ruins of an old caſtle, in which, it is ſaid, the kings of *Scotland* uſed to reſide. It is the ſeat of a preſbytery, containing ten pariſhes. Near the town is a large pillar of one ſtone, adorned with *baſſo-relievos*, much obſcured by time: this is a monument of a victory obtained by *Malcolm Mackenneth*, over *Sweno*, king of *Denmark*.

SECT. XXXII.

The Iſles of ORKNEY *and* SHETLAND.

Their Situation, Extent, Climate, Soil, *and* Produce, *with the* Manners, Cuſtoms, *and* Trade *of the Inhabitants*.

THE ORCADES OR ORKNEY ISLANDS, with thoſe of SHETLAND, make one ſtewartry, and ſend one member to parliament; the former lie north of *Dungſbyhead*, in *Caithneſsſhire*, the moſt northern promontory of *Scotland*, between 58° 27′ and 59° 10′ N. latitude, and between 1° 30′ and 2° 50′ W. longitude. They are divided from the continent by the ſtrait called *Pentland-frith*, which is twenty-four miles long, and from twelve to ſixteen in breadth. They are reckoned about thirty in number, and, according to Mr. *Templeman*, containing an area of ſix hundred ſquare miles; but they are not all inhabited, a conſiderable number, which are called *Holms*, being only uſed to paſture ſheep and goats.

The longeſt day upon theſe iſlands exceeds eighteen hours by ſome minutes, and for the greateſt part of *June* one may ſee to read at midnight without a candle. The winters have leſs ſnow than rain, which ſometimes falls in violent ſpouts, and the wind is often very boiſterous. But nothing can be a finer ſight in calm weather, than to ſee the ſea in the narrow ſounds and paſſages between the iſlands, where the different tides run as from a ſluice, as well one way as the other, and the boats flying along thoſe rapid currents, like an arrow out of a bow; it being as impoſſible to row againſt them, as to ſhoot *London-bridge* againſt the ſteep fall at low water.

In *Pentland-frith*, behind the iſland *Swinna*, are two great whirlpools, called the *Wells of Swinna*, which ſwallow up any veſſel that comes within their draught; and the paſſage of that ſtrait itſelf is very dangerous, from the many ſtrong tides, which are no leſs than twenty-four, and, upon the leaſt contrary wind, make the ſea run very high.

As theſe iſlands are larger, and have more towns and inhabitants than thoſe of *Shetland*, ſo the ſoil is alſo better, and more improveable. The fields in ſummer every where abound with a variety of plants and roots, the latter of which are generally very large; but in winter and ſpring, when graſs is ſcarce, their horſes are fed with ſea-weeds: but there is ſcarce a tree or ſhrub except myrtle, juniper, wild roſes, heath, and ſome fruit-trees, in their gardens. Theſe iſlands produce corn, but the chief of it is oats and barley; their ſheep, ſwine, and moſt of their cattle, feed at large, without a herdſman to look after them.

Their horſes are very ſmall, but hardy and ſerviceable. They have all ſorts of wild-fowl, with numbers of *eagles* and *kites*, and the former are ſaid to ſeize ſometimes upon young children, and carry them a great way; and therefore if any one kills an eagle, he may, by law, claim a hen from every houſe in the pariſh where it is killed. Hawks and falcons have neſts in ſeveral parts of the iſlands, and the king's falconer comes annually and takes the young, for which he has a ſalary of twenty pounds, and a hen or dog out of every houſe in the country, except ſome houſes that are privileged. The country alſo abounds with *ſwans*, *geeſe*, *ducks*, and *Solan geeſe*; but there are no venomous animals, and it is ſaid that if any are brought here they immediately die.

There are many ſmall whales round the coaſt, with thoſe amphibious animals *otters* and *ſeals*. They have alſo an amazing plenty of *herrings* and other ſea-fiſh, with abundance of *oyſters*, *muſſels*, *crabs*, *cockles*, &c. They have no large rivers, yet there are ſome rivulets full of trouts, and many lakes.

As to minerals, there are ſome mines of *ſilver*, *tin*, *lead*, and perhaps other metals, but none of them are improved. There are in many places quarries of *free-ſtone*, with grey and red *ſlate*, and ſome *marble* and *alabaſter*.

The inhabitants are well-proportioned, and of a healthy conſtitution; but as they feed very much upon ſalt meat and fiſh, eſpecially the poorer ſort, they are ſubject to the ſcurvy; but living with great frugality, they generally enjoy life to a great age, and ſeldom die of the doctor. The generality of the people ſpeak *Engliſh*, with the *Scots* accent; but many of them uſe the *Daniſh* or *Norwegian* tongue among themſelves, which they have retained ever ſince the *Norwegians* firſt peopled theſe iſlands.

Several gentlemen have eſtates on theſe iſlands; but the king is proprietor, and one half of the whole belongs to the crown, beſides the biſhop's rates, which amount to about nine thouſand marks *Scots*, *per annum*. There is here a yearly roup, or ſale by auction, of *Orkney* rents, and the higheſt bidder is preferred to be the king's ſteward for the time, and, as ſuch, is the principal judge of the country.

The churches of both the *Orkney* and *Shetland* iſlands were formerly under the government of a biſhop, whoſe cathedral was *St. Magnus*, in *Kirkwall*. There are in all thirty-one churches, and about a hundred chapels in the country, making up in the whole about eighteen pariſhes.

The trade of the *Orkneys* differs from that of *Shetland* only in not depending on the reſort of ſtrangers, but on their own produce. They annually export a great quantity of *corn*, *black cattle*, *ſwine*, and *ſheep*, as alſo of *butter*, *tallow*, and *ſalt*, together with *otter-ſkins*, *lamb* and *rabbit-ſkins*, &c. great quantities of *down*, *feathers*, *quills*, *hams*, and *wool*. Their corn, in particular, is ſold as far as *Edinburgh*, from whence they bring what goods they want in exchange. But the chief of their commerce conſiſts in their fiſhery for herrings and white fiſh, and in their corn and cattle. But as they have not merchants to export their fiſh, when taken, they moſt commonly fiſh for the *Dutch*, and the merchants of *Inverneſs*; and though this ſometimes obliges them to go far from home, yet being an adventurous hardy people, they make no difficulty of fiſhing in the darkeſt nights, at a diſtance from the iſlands, and in boats that are none of the beſt.

The principal of the *Orkney* iſlands are the following:

Hoy is about twelve miles long, and ſix where broadeſt. The eaſt part, called *Waes*, is fertile and well inhabited, and it has ſome good harbours, with freſh-water lakes and rivers abounding with trout and other fiſh. About the ſummer ſolſtice the reflection of the ſun may be ſeen all night, as if covered with a cloud. There are here vallies ſo deep and gloomy as to ſtrike terror into the mind of a traveller, the rocks riſing to a prodigious height, and meeting ſo near at the top, that very little of the ſky can be ſeen below. In one of the valleys is a ſtone called the *dwarf-ſtone*, thirty-ſix feet long, eighteen broad, and nine thick, in which is a ſquare hole, about two feet high for an entrance, with a ſtone of the ſame ſize for a door. Within this entrance is the reſemblance of a bed, with a pillow cut out of the ſtone, big enough for two men to lie on. At the other end is a couch, and in the middle a hearth, with a hole cut out above for a chimney. It lies in a heath about a mile from any houſe, and is ſuppoſed to have been an hermitage. On the tops of the mountains are wild ſheep, and in a promontory called *Lyre-head*, a bird called a *lyre* builds its neſt: it is about the ſize of a duck, very fat, and ſuch delicious eating, that the natives climb for it at the hazard of their lives; and, like the bird-catchers we have mentioned in treating of *Norway*, (ſee page 106 of this volume) are let down by ropes two hundred fathoms in ſearch of the neſts and the young ones, which, when they find, they put in a bag, and ſell for a very good price. Here are alſo hares as white as ſnow.

Pomona is the largeſt of all the *Orkney* iſlands, and on that account is called the **Main-land**. It is twenty-four miles in length, and from ſix to nine broad. It has nine pariſh-churches, ſeveral mines of white and black *lead*, and has four remarkably good harbours, *Kirkwall*, *Deic Sound*, *Grahamſhall*, and *Kairſton*. The eaſt part, called *Dierneſs*, is a peninſula joined to the other by a ſmall neck of land. The iſland is, in general, fertile, and both parts pleaſant and well inhabited. It has lakes and rivulets abounding with ſalmon and other fiſh, and ſeveral bays and promontories. The cape at the north end, called the *Mule*, is very high, and the ſea in a tempeſt beats againſt it with ſuch force, that it riſes higher than its top. In this iſland are two temples, where the natives believe the ſun and moon were worſhipped: theſe are one on the eaſt and the other on the weſt ſide of a lake. The largeſt is a hundred and ten paces in diameter, and the other is ſemi-circular.

The only good town in the *Orkneys* is **Kirkwall**, which is ſeated forty-five miles from *Dungſby-head*, and is a royal burgh, narrow, but near a mile long. The houſes are of ſtone, covered with ſlate, and the inhabitants are governed by a provoſt, four bailiffs, and a common-council, like the other burghs in *Scotland*. The ſeat of juſtice is kept here for all the reſt of the iſlands; and here the ſteward, ſheriff, and commiſſary keep their ſeparate courts. Its ancient privileges are ſtill kept up, and they have a power to arreſt by their own officers, to impriſon, to make bye-laws, to chooſe their own magiſtrates, &c. yet they cannot try in capital cauſes, that part of juſtice being left to the lords of juſticiary. This iſland has a large ſafe harbour in a bay on the north ſide.

Beyond theſe, and ſtill farther to the north, lies **Sanda**, the ſoil of which is very dry, and exceeding ſandy, from whence it received its name. It is eleven or twelve miles in length, but very narrow. It is reckoned the moſt fruitful and beautiful of all the *Orkney* iſlands.

Fair is an iſland ſeated nine leagues from the *Orkneys*, and five from *Shetland*, and is ſeen from both. This iſland has three very high rocky promontories, inacceſſible, except on the north-eaſt, where the land is lower, and forms a ſafe harbour. Its *hawks* are reckoned the beſt that are to be found, and go as far as the *Orkneys* for moor-hens and other prey. On the north-weſt ſide is a vaſt rock, which riſes like a tower, is covered with graſs, and feeds many ſheep. The iſland has but few inhabitants, they being often plundered by the mariners who come this way to fiſh. The *Dutch Eaſt India* ſhips that chooſe to come north-about, paſs by this iſland, where they often find men of war ſent from *Holland* to wait for and convoy them home.

The **Shetland** or **Zetland** iſles are about forty-ſix in number, with many holmes, or little uninhabited iſlands on which cattle are fed, and barren rocks. They lie to the north-eaſt of *Scotland*, between 59° 50′ and 60° 48′ N. latitude, and between 00° 50′ E. and 1° 50′ W. longitude.

Captain *Phipps* lays down the longitude and latitude of *Hangcliff-point*, in the iſland of *Shetland*, to be 60° 9′ N. and 00° 56′ W. of *Greenwich*.

There are only about twenty-ſix of theſe iſlands inhabited, and of theſe there are only three or four of note, whoſe principal towns are little better than villages, frequented by the many ſtrangers employed in the fiſhery: yet ſome learned men have contended for theſe being the *Ultima-Thule* of the ancients, in which they placed their *Elyſian Fields*; and the ſurpriſing length of the days during the months of *June* and *July*, when the people can ſee to read by the midnight-lights, probably raiſed an opinion, that the inhabitants enjoyed everlaſting day. In the mean time it muſt be obſerved, that theſe iſlands, which, during four months in the year, enjoy almoſt perpetual day, are during the winter involved in darkneſs, and encompaſſed by ice, ſtorms, and tempeſts: not a ſhip is to be ſeen near them, their ſea not being navigable in moſt of the ſounds; but when the ſun returns to their coaſts, with his warm enlivening beams, about the middle of *May*, a moſt cheerful ſcene ſucceeds this ſolitary gloom; the ſea is covered with ſhips and boats, two thouſand ſail frequently crouding into their ports, and as it were covering the ſea, ſpreading their nets for the herrings in all the ſounds and channels among the iſlands. It is to this concourſe of foreigners, and particularly of the *Dutch*, who often come with fifteen hundred, and ſometimes with two thouſand buſſes, all the trade of *Shetland* is owing. The *Dutch*, for the ſake of trade, ſet up booths on ſhore, as in a fair, where they ſell many uſeful things, eſpecially wine, brandy, and ſpices; and in return, receive fleſh and vegetables. During this fair, as it may be called, the iſlanders enrich themſelves by ſelling ſeveral ſorts of *Scots* manufactures to the *Dutch* ſeamen, as well as all ſorts of proviſions; and alſo by fiſhing with their own barks and cobles.

Though the air of winter is extremely cold, yet many of the natives live to a great age. Whatever were the original inhabitants, they are ſaid to be at preſent mixed with *Scots Lowlanders*; they dreſs like them, and talk *Engliſh*. The ſhortneſs of their days, with the length of the nights, in the winter, and the tempeſtuous ſtate of the weather at that ſeaſon, render them generally ignorant of whatever paſſes in the world from *October* till *May*: thus they knew nothing of the Revolution, which happened in *November* 1688, till *May* 1689, when being told of it by a fiſherman, they put him in priſon for high treaſon.

They have abundance of little horſes, called *ſkeltries*, fit both for the plough and ſaddle, being naturally pacers, very ſprightly, and ſtrong enough to carry double, though they have ſmall legs, and are ſo light that a man may lift them from the ground. They are never houſed, and when they have no graſs, live upon ſea-weeds, which can only be had at the tide of ebb; yet they live to thirty years of age, and are all the while of ſervice.

The chief iſland, called *Shetland*, and alſo *Mainland*, is above ſixty miles in length, and twenty where broadeſt; but is much indented by bays.

The principal town is LERWICK, on the eaſt ſide of the iſland, which is encreaſed by the fiſhing trade to about three hundred families.

On the weſt ſide is a ſmall town called SCALLOWAY, the inhabitants of which amount to about an hundred: yet this is the only place for adminiſtering juſtice, and had anciently a caſtle, which is fallen to decay. This little town has likewiſe the only preſbytery in all the *Shetland iſles*.

BRASSA, to the eaſt of *Mainland*, and oppoſite to *Lerwick*, is five miles long, two broad, and has ſome arable land, and two churches. It is famous for its ſound, in which the great herring-fiſhery is carried on. The *Hamburghers* and people of *Bremen* come hither about the middle of *May*, ſet up ſhops, and exchange *linen*, *muſlin*, *bread*, &c. for *fiſh*, *mutton*, *fowls*, *ſtockings*, &c. The natives are at this time conſiderable gainers by letting out their houſes and ground to the ſeamen for ſhops.

The SKERRIES are two dangerous little iſlands, on which ſhips are often caſt away; they lie about ſeventeen miles to the north-eaſt of *Mainland*. The BURRAY, WHALSEY, VUST, YELL, PAPAFLEUR, and FETLOR or FESLAR are all inconſiderable iſlands.

FOULA is about three miles long, and remarkable for a rock ſo high that it may be ſeen in *Orkney*; and is ſuppoſed by ſome writers to have been the *Ultima Thule* of the ancients.

SECT. XXXIII.

A Deſcription of the moſt remarkable of the Weſtern Iſlands *not included in the Shires of* Scotland; *with a particular Deſcription of* ST. KILDA, *and the iſland of* STAFFA.

THE *Weſtern iſlands* were by the ancients called *Æbudæ* and *Hebrides*, and have been computed at three hundred in number. The natives ſalt their beef in cow hides, which they think contribute to preſerve it, and give it a better taſte than caſks: they ſend a great deal of it to *Glaſgow*, where it is barrelled up and exported to the *Weſt Indies*.

Here are large *eagles* and *hawks*, which are very deſtructive to the lambs and fawns; the tame and wild fowl, as *pheaſants*, *moor-fowl*, *ſwans*, *tarmagans*, *plovers*, *pigeons*, are plentiful; here are alſo many ſorts extremely beautiful, which are rare, or utterly unknown elſewhere; among the latter is a fowl called *colk*, ſomewhat leſs than a gooſe, that has beautiful feathers, or rather down, of various colours; it has a tuft on its head, and its tail is longer than that of a houſe-cock. There is another named *gawlin*, which is ſomewhat leſs than a duck, and is ſaid to ſing always before good weather; and ſome of the highland pipers have formed an agreeable tune of its notes. Another, called a *rain-gooſe*, is ſaid always to make a doleful noiſe before rain. Another extraordinary bird is called "the biſhop of *Carara*;" it is as large as a gooſe, and has a white ſpot on its breaſt; it is party-coloured; and its fat is uſed by the natives againſt the ſciatica. Another bird is called *ſcreachanaitin*, which ſhrieks moſt hideouſly; it is as big as a large *mull*, but longer in the body, of a bluiſh colour, and its bill of a carnation: it is obſerved to be extremely fond of its mate, for whenever the cock or hen is killed, the other makes a lamentable noiſe about the place during eight or ten days after.

The principal of thoſe properly called the WESTERN ISLANDS, are a range of narrow iſlands, extending from north to ſouth, namely, *Lewis* and *Harris*, already deſcribed, as making a part of *Roſs-ſhire*; and *Viſt*, which is divided into North and South; and behind them, farther to the weſt, the iſle of *St. Kilda*, which, though ſmaller than the others, merits a more particular deſcription.

VIST, which lies to the ſouth of *Harris*, is a long ſlip indented with ſeveral bays. *North Viſt* is nine miles in length from north to ſouth; it is in part mountainous and heathy, yet ſerves for paſturage; but the weſt ſide being plain and arable, is exceedingly fruitful in barley, oats, and rye, and ſeeds abundance of cows and ſheep. This, with the iſland of *Benbecula* and *South Viſt*, are by ſome geographers eſteemed one iſland, becauſe at low water there is an eaſy paſſage from one to the other, either upon dry ſands or by wading; and together they are about thirty-three miles in length, and contain ſuch a multitude of freſh water lakes, bays, and iſlands, that it is ſaid to be impoſſible to number them; and moſt of the lakes abound with fowl and fiſh. *North Viſt* has an excellent harbour on the ſouth-eaſt ſide, in a bay called *Lochmaddy*, famous for a great fiſhery of *cod* and *ling*, and here ſuch quantities are ſometimes taken, that four hundred veſſels have been laden with them in one ſeaſon. The natives live to a very great age, and ſpeak the *Erſe* tongue in perfection.

The little iſland of ST. KILDA may be ranked among the greateſt curioſities of the *Britiſh* empire; and therefore, notwithſtanding its ſmall extent, deſerves particular notice, on account of the genius of its inhabitants, their manners, cuſtoms, and the conſtitution of their little community.

All the territories belonging to the inhabitants of *St. Kilda* are no more than three ſmall iſlands, and five naked rocks. The principal iſland, and indeed all the reſt, ſituated in about 58° 30′ N. latitude, are to the weſt of *North Viſt*. The length of the whole iſland is not much more than nine miles, and its breadth does not much exceed ſix. It is encompaſſed by an inacceſſible barrier of rocks, two places excepted, one to the north-weſt, and the other to the north-eaſt. The latter has a large bay, formed by two promontories, the firſt extending from the north-eaſt ſide of the iſland, and the other from the ſouth.

The hand of nature has divided this iſland into four diſtinct parts by mountains, which on the ſea-ſide are faced with frightful precipices; particularly that which riſes gradually from the head of the bay, and may not improperly be called "the *Britiſh Teneriff*." Its top in a clear day commands a proſpect of land and ſea above an hundred and forty miles in length. On the north ſide it hangs over the deep in a moſt frightful manner; where a view of it from the ſea fills a man with aſtoniſhment, and a look over it from above ſtrikes him with horror; yet a *St. Kildian* will ſtand or ſit on the very brink of this ſtupendous precipice with the moſt careleſs indifference; though its perpendicular height is no leſs than eighteen hundred yards.

The ground of *St. Kilda*, like the greateſt part of that of the *Highlands*, is much better calculated for paſture than tillage, and all the arable land ſcarcely exceeds eighty acres; but a great deal more might be added, was induſtry and the ſpirit of improvement ſufficiently encouraged: but all the lands already cultivated lie very compactly together within the precincts of the village in which the whole community dwells. In the lower grounds are many excellent plots of graſs, which are in ſome places intermixed with a beautiful variety of the richeſt plants, on which the cattle feed luxuriantly during the ſummer ſeaſon; in return for which they yield more than an ordinary quantity of milk. All the arable land is divided into many unequal plots, and each of theſe is encloſed by the ſtones picked out of the land; theſe boundaries are eſteemed ſacred, and have been kept up for many ages; whence it would be impoſſible for a *St. Kildian*, however cunning or rapacious, to encroach on his neighbour's farm. Every inch of ground within theſe incloſures is cultivated; which they perform in the following manner: after turning up the ground with a ſpade, they rake or harrow it very carefully, picking out every ſtone, every noxious root or weed that falls in their way, and pound to duſt every clod with a mallet. They then ſow their little fields, ſtrew them over with a manure of turf and peat aſhes, and having harrowed them over again, leave them, to ſpeak in their own ſtyle, in the hands of Providence, with a firm perſuaſion that their honeſt induſtry will be amply rewarded.

Though this iſland is ſituated ſo far to the north, the harveſt is commonly over before the beginning of *September*; and ſhould it fall out otherwiſe, the whole crop might be deſtroyed by the equinoctial ſtorms, which, with the exceſſive quantity of rain that falls generally throughout ſeven or eight months in the year, are the moſt diſagreeable circumſtances experienced on this ſpot.

Thus they raiſe their oats, and their barley, which is larger than in any other of the *Weſtern iſlands*; but they have not one tree growing here. Their horſes and cows, though very ſmall, are alſo ſomewhat larger than in the adjacent iſlands.

The *St. Kildians* owe a great part of their felicity to their ſheep and wild fowl. They have conſiderable flocks of the former; which are all of the ſmalleſt kind, and their wool is ſhort and coarſe. Every one of them has two horns, and many of them four.

The wild fowl appear here in innumerable flocks, and, according to the *Rev. Mr. Macauley*, whoſe information we have followed in this account, in ſummer ſeveral of the rocks are entirely covered with *ſolan geeſe* and other fowls, and appear at a diſtance like ſo many mountains covered with ſnow. The neſts of the *ſolan geeſe* are ſo cloſe, that when a perſon walks between them, the hatching fowls on either ſide can always take hold of his cloaths, and the hens will often ſit ſtill till they are attacked, rather than expoſe their eggs to the danger of being deſtroyed by ſea-gulls; at the ſame time the male birds fly about and furniſh food for their mates that are employed in hatching. The *ſolan geeſe* repair hither in the month of *March*, and continue till after the beginning of *November*. Before the middle of that month, they and all the other ſea-fowl that frequent this coaſt, retire, much about the ſame time, into ſome other milder regions, ſo that not a ſingle fowl is to be ſeen from the beginning of winter to the middle of *February*.

Another ſea-fowl highly eſteemed in this iſland, is the *Fulmer*, which, the inhabitants ſay, furniſhes oil for the lamp, down for the bed, the moſt wholeſome food, and the moſt efficacious ointment for healing wounds. It is of the ſize of an ordinary barn-door fowl, but its legs and wings are much longer. The back, wings, and tail are of a light grey; round the breaſt and neck of a lighter colour: his head is round, his neck ſhort and thick; his bill is made for ſtrength, bending inward, pointed like that of an eagle, and in length about an inch and an half. He is a moſt ravenous fowl, and feeds only on ſorrel and the fat of fiſh. Pieces of whale and ſeal blubber are often found in his neſt. The young fulmer is no ſooner attacked in his neſt, than he endeavours to diſconcert the fowler by ſpouting a quantity of oil out of his wide noſtrils directly into the face and eyes of his annoyer, and by that means frequently gains an opportunity of eſcaping. But thoſe who are verſed in this diverſion take all poſſible precautions to ſurpriſe him; for thinking his oil incomparably precious, they exert all their ſkill and dexterity to ſave it. Every fulmer yields near a pint of this liquid ſubſtance, which drops out of the noſtrils of the fowl while warm, and a conſiderable quantity of it is annually preſerved. Of the fowls themſelves every family has a great number ſalted in caſks for winter proviſions.

The third ſpecies are the *Lavie*, which being the earlieſt viſitants in *February*, no ſooner appear, than the moſt conſiderable perſons on the iſland aſſemble together to congratulate each other on ſeeing theſe harbingers of plenty and happineſs, and to divide the people into parties compoſed of their ableſt fowlers. The lavie in ſize reſembles a duck, though it is rather longer. He is black above, but the whole breaſt and belly white, with a circle of the ſame colour round the neck; the bill is black, and ſharp at the point, and the egg beautifully variegated with black, white, and red, blue, green, and yellow; but ſcarce any two are alike. This fowl builds no neſt, and like ſeveral other ſpecies of water-fowl, lays but one egg, which ſhe fixes in ſo nice a manner, that if once touched, it is impoſſible to fix it in the ſame place again; and if the fowls are ſurpriſed ſo as to ſtart away in a hurry, their eggs tumble down into the ſea in thick ſhowers.

Theſe birds are caught by letting down men, by means of ropes, into the ſhelves of the rocks, each having a broad piece of linen, or ſomething white, fixed on his breaſt. This is done in the night, when the bird miſtaking an object ſo conſpicuous for a part of the rock, endeavours to cling to it, and is immediately caught and killed. Thus employed, the fowlers continue till the dawn, when making the wonted ſignal by pulling a rope, their companions draw up, by means of another rope, the prey which they have taken, which ſometimes conſiſts of ſeveral hundred lavies, after which they pull up the fowlers. This profeſſion, on account of the courage and dexterity requiſite, is much diſtinguiſhed and reſpected.

Here are alſo a great number of *Puffins*; and frequently a large *ſea-gull*, which latter is deteſted by every *St. Kildian*, as it preys upon all kinds of eggs that fall in its way, and frequently upon the young fowl. It is hardly poſſible to expreſs the hatred with which thoſe, otherwiſe, good-natured people, endeavour to exterminate theſe gulls; if their name happens to be mentioned, it puts their whole blood into a ferment. To eat any of its eggs, though amongſt the largeſt and beſt the iſland affords, would be a moſt flagitious action; they therefore extract the meat out of the ſhell, and leaving it empty in the neſt, the gull ſits upon it till ſhe pines away.

Among the land birds are very large *Ravens*, a few *Eagles*, with *Herons*, *Curlews*, *Plovers*, *Pigeons*, *Starlings*, *Larks*, *Wrens*, and *Sparrows*.

This ſecluded race of people live together like the inhabitants of a town or city, their houſes being built in regular rows forming a ſtreet: theſe habitations are built with ſtone, without either lime or mortar, from eight to nine feet high. All their dwellings are divided into two apartments by partition walls. In the diviſion next the door, which is much the largeſt, they have their cattle ſtalled during the winter ſeaſon; the other ſerves for kitchen and bed-chamber. There are alſo a number of little cells diſperſed over the iſland; theſe conſiſt entirely of ſtones, and in them they ſecure their eggs and wild fowl.

The men are ſtout and hardy, ſhort, thick, and conſequently clumſy; but are remarkably ſtrong, will carry heavy burdens, and tug at the oar for many hours, with an almoſt undiminiſhed vigour: but the women are generally handſome; their complexions freſh and lively, and their features regular.

The cloathing of both ſexes is quite coarſe, and made for warmth. All the colours known among them, till of late, were black, white, grey, and brown, the natural colours of their ſheep: and yellow was their only artificial one. All the linen manufactured among them is inconſiderable, and extremely coarſe; one holiday ſhirt will ſatisfy the ambition of the greateſt beau among them; and what they wear next their ſkin, on ordinary occaſions, is made of wool. The weavers are but indifferent workmen. Every man is the taylor and ſhoemaker of his own family: all the leather in the iſland, and thoſe neareſt to it, is tanned with the tormentil-root, and executed very well.

The *St. Kildians* ſpeak a corrupt dialect of the *Gaulic*, with a little mixture of the *Norvegian*: their manner of pronouncing is very ſingular, for every man, woman, and child, has an unconquerable liſp.

Theſe people are extremely fond of muſic, whether vocal or inſtrumental; to a bad violin, indifferently played, they will dance with rapture, and even the old women will bear a part in theſe aſſemblies. They delight much in ſinging, and their voices are muſical. The women, while cutting down the barley in the field, or grinding corn with their hand-mills in the houſe, are almoſt conſtantly chanting; and the men, when pulling at the oar, exert all their ſkill in animating each other by ſinging ſome ſpirited ſongs adapted to their employment; and indeed ſome bright ſparks of fire, and ſome noble flights of fancy, may be diſcovered in their otherwiſe homely compoſitions. The ſubjects commonly handled by theſe laborious bards of *St. Kilda*, in their odes, are the beauty and accompliſhments of their favourites among the fair ſex, the heroic actions of their friends, their own dexterity in climbing rocks, ſuperior ſkill in fiſhing, or extraordinary vigour, ſkill, and conſtancy while at the oar.

They all in general poſſeſs the virtue of hoſpitality in an eminent degree, and behave with the utmoſt generoſity, humility, and reſpect, to the ſtrangers who come among them.

They marry early, and their gallantries are generally innocent: impurities faſhionable elſewhere, if committed here, are never unattended with infamy; and, as *Tacitus* obſerves of the ancient *Germans*, "No one makes a jeſt of vice; to debauch, or be debauched, is not called the way of the world." Here the nuptial tie is always held ſacred. If a young man is poſſeſſed of a ſpade, rake, reel, and fowling-rope, he marries without the leaſt fear or ſolicitude, as by ſuch aids he can truſt to maintain himſelf, his wife, and children, whilſt he lives contentedly on a ſmall ſpot of ground, and pay his rents to the proprietor's ſteward in barley and feathers.

"Drunkenneſs," ſays Mr. *Macauley*, "is not yet introduced here; but the *St. Kildians* have a moſt violent paſſion for tobacco. They buy an annual ſtore of this favourite plant from the ſteward; which in ſpite of their fondneſs for it, they muſt manage with the moſt exact œconomy, as it is impoſſible to procure a new ſupply, till the market of another year returns with him. For this univerſally bewitching article, and for ſome other goods indiſpenſably neceſſary, particularly ſalt, iron, and timber, they barter away their cows, ſheep, grain, and feathers."

It appears that Chriſtianity was very early introduced into this iſland. The largeſt church was dedicated to Chriſt, and called his temple. It was built of ſtone without any cement. At the diſtance of a mile from the village is a chapel, which has an altar within, and ſome monkiſh cells without. The people have for ſome time been proteſtants of the church of *Scotland*, and a miniſter from thence is ſent hither. They are devout; attend divine worſhip regularly every *Sunday*; but, with all their virtues, make no ſcruple of lying, and uſing all the arts of cunning to deceive the ſteward, when he makes his annual viſit to receive a heavy tax they are obliged to pay to his lord in proportion to the ſtock which they poſſeſs; and among other things, every ſecond he-lamb, every ſeventh fleece, and every ſeventh ſhe-lamb.

The preſent proprietor is named *Norman Macleod*, whoſe anceſtors have poſſeſſed the iſland for at leaſt two hundred years. Our author ſays, this gentleman has leaſed out the revenue which he draws from the iſland to a relation, for the yearly rent of about eleven pounds ſterling; this leaſeholder collects it in perſon, and is known among the *St. Kildians* as the ſteward of their lord. He generally reſides at the iſland of *Harris*.

The moral character of theſe people may be comprized in a few words: being at a diſtance from the ſeats of juſtice, they are abſolute ſtrangers to the chicanery and delay of the law; and though they are ignorant, and ſo illiterate that few of them can read, yet they firmly believe the exiſtence and providence of a Supreme Being, the immortality of the human ſoul, and the obligations of morality.

* * *

Since the ſuppreſſion of the rebellion of 1745, many ſalutary regulations have been introduced into the *Highlands* and over the iſlands. The unlimited power of the lord over his vaſſals, is now laid under proper and uſeful reſtrictions by the abolition of the local juriſdictions. The ferocity of the *Highlanders*, which uſed to ſhew itſelf in ſanguinary acts, on the ſlighteſt imaginary affront, even at ſocial meetings, has greatly ſubſided ſince they have been prohibited the uſe of arms. The iſlands are hereby rendered defenceleſs to the attack of a foreign enemy, but that is an evil little to be apprehended. *Thurot* indeed viſited the iſland of *Iſla*, where he procured ſome black cattle and oatmeal, but had the generoſity to pay for every thing with which he was ſupplied.

The diſpoſition of the great lords to advance their rents in every part of *Scotland*, has excited in the oppreſſed peaſantry a ſtrong propenſity to emigrate to *North-America*, and deprived the country of ſome of the moſt uſeful of its inhabitants. This may be a conſequence of the chiefs being diveſted of their prerogatives, which cauſes them to turn their attention to the improvement of their revenues, and as they receive leſs homage than in former times, to require more rent. Some *Lairds*, whoſe humanity and more extenſive political views have cauſed them to attend to the eaſe and happineſs of their vaſſals, have effectually ſuppreſſed this ſpirit of emigration among them, and found no diminution in the number of inhabitants on their eſtates. On one or two of the iſlands this epidemical diſcontent has not been felt. Indeed the parliament of *Great Britain* granted to the *Scottiſh* chiefs, when they abridged their privileges, a ſum of money in compenſation, greater perhaps than moſt of them had ever poſſeſſed; but ſuch an acquiſition ſerved only to awaken rapacity.

Throughout the *Hebrides*, it is common to ſee the churches unroofed, and demoliſhed; *Dr. Johnſon* goes ſo far as to ſay, that in the iſlands he viſited he neither ſaw nor heard of any houſe of prayer, except in the iſland of *Sky*, that was not in ruins. The zeal of puritaniſm, when it directed the hand of power, effected theſe demolitions; on which *Dr. Johnſon* remarks, "if the remembrance of papal ſuperſtition is obliterated, the monuments of papal piety are likewiſe effaced." *Journey to the Weſtern iſlands, p.* 146.

Both *Mr. Pennant* and *Dr. Johnſon* ſpeak of many inſtances of longevity which they met with in *Scotland*. The former mentions the following ſix perſons who were all living at the village of *Luſs*, near *Loch-Lomond*, at the time he was there in 1774, viz.

Rev. Mr. *James Robinſon*, miniſter, aged	90
Mrs. *Robinſon*, his wife	86
Anne Sharp, their ſervant	94
Niel Macnaughtan, kirk-officer	86
Chriſtian Goy, his wife	94
Walter Maclellan	90

In the low lands *Dr. Johnſon* was introduced to two ladies of high quality, one of whom, in her 94th year, preſided at her table with the full exerciſe of all her powers; and the other had attained her 84th without any diminution of her vivacity, and with little reaſon to accuſe time of depredations on her beauty. *Journey, p.* 193.

We ought not to quit the *Hebrides* without taking notice of the iſland of *Staffa*, a ſpot remarkably diſtinguiſhed in the natural hiſtory of the globe. Every thing that we know concerning it has been obtained by the aſſiduous reſearches of Sir *Joſeph Banks*, who viſited it in the year 1773, except a ſlight mention which is made of it by *Buchanan*. STAFFA lies on the weſt coaſt of *Mull*; its greateſt length is about an *Engliſh* mile, and its breadth about half a mile. At high water it is divided into two unequal parts, or iſlands, the ſmalleſt of which is called in *Erſe*, *Bro-ſha-la*. Here are formed a vaſt number of ſtupendous *baſaltic* pillars of the nature of the *Giant's cauſeway* in *Ireland*, (ſee pages 615 and 616 of this volume); every ſtone is regularly formed into a certain number of ſides and angles; the S. W. part of the iſland is the ſeat of the moſt remarkable pillars; the whole of that end of the iſland being ſupported by ranges of theſe chiefly above fifty feet high, which ſtand in regular colonnades, according as the bays or points of land are formed: theſe reſt upon a firm baſis of ſolid unformed rock; above theſe, the ſtratum which reaches to the ſoil or ſurface of the iſland, varies in thickneſs, as the iſland forms into hills or vallies. Here is a vaſt cave, known by the name of *Fingal's cave*, called in *Erſe Fiuhn*, whom the tranſlator of *Oſſian's* works has called *Fingal*. This cave is 371 feet long from its entrance, 53 feet broad at the entrance, and 20 at the farther end; 117 feet high at the mouth, and 70 at the farther end. The tide flows into it, and at high water it is 18 feet deep at its mouth, and 9 at its extremity. This cave is ſpoken of by Sir *Joſeph Banks* as in his opinion the moſt magnificent that has ever been deſcribed by travellers. "The mind," ſays he, "can hardly form an idea more magnificent than ſuch a ſpace, ſupported on each ſide by ranges of columns, and roofed by the bottoms of thoſe which have been broken off in order to form it; between the angles of which a yellow ſtalagmitic matter has exuded, which ſerves to define the angles preciſely; and at the ſame time to vary the colour with a great deal of elegance. To render this cave more agreeable, the whole is lighted from without, ſo that the fartheſt extremity is very plainly ſeen at the entrance. The air within being agitated by the flux and reflux of the tides, is perfectly dry and wholeſome, entirely free from the damp vapours with which natural caverns generally abound." The ſtratum on this iſland is rough on its ſurface, and has often large lumps of ſtone ſticking in it, as if half immerſed; itſelf, when broken, is compoſed of a thouſand heterogeneous parts, which together have very much the appearance of *Lava*. The pillars on this iſland are now known to be a genuine maſs of *Baſaltes*, or *Giant's cauſeway*, but in moſt reſpects ſuperior to the *Iriſh* in grandeur. *Pennant's Tour in Scotland, II.* 299—307.

CHAP.

CHAP. XXXI.

OF IRELAND.

SECT. I.

Of IRELAND *in general.*

Its Situation, Extent, Air, Soil, Produce, Rivers, and Lakes.

THIS is a large, and in general a fertile iſland, ſeated to the ſouth of the little iſles juſt deſcribed; to the weſt of *England* and *Scotland*, from which it is divided by *St. George*'s *Channel*, and a ſtrait about fifteen miles broad, which ſeparates it from part of *Scotland*: it has the mouth of *St. George*'s *Channel* on the ſouth; and the great *Atlantic ocean*, which lies between it and the frozen region of *Newfoundland* and *Labrador*, or *New Britain*, in *North America*, on the weſt. It is ſeated between 5° 25′ and 10° 37′ W. longitude from *London*, and between 51° 16′ and 55° 15′ N. latitude, or between the middle parallel of the eighth clime, where the longeſt day is ſixteen hours and a half, and the twenty-fourth parallel, or the end of the tenth clime, where the longeſt day is ſeventeen hours and a half. Its extent is two hundred and eighty-five miles from *Fairhead*, the north point of *Antrim*, to *Miſſenhead*, the ſouth point of *Cork*, which is its greateſt length; but it is much indented on the ſouth-eaſt by *St. George's Channel*; and on the weſt and north by the *Atlantic ocean*, which render its breadth very unequal: the greateſt breadth, which is from the eaſt part of *Down* to the weſt part of *Mayo*, is an hundred and ſixty miles; but in the middle from *Dublin* on the eaſt, to the weſt of *Galway*, it is only an hundred and forty-ſix. It is computed to contain 11,067,712 *Iriſh* plantation acres, which amount to 17,927,864 *Engliſh* ſtatute acres. The proportion which it is ſuppoſed to bear to *England* and *Wales* is as 18 to 30. It probably takes its name from a *Phœnician* or *Gallic* term, ſignifying the furtheſt habitation weſtward.

The air is much the ſame with thoſe parts of *England* that lie under the ſame parallel; only in ſome parts it is more groſs and unhealthy, eſpecially to ſtrangers, on account of its many lakes, bogs, and marſhes.

In general it is a level country, watered by many lakes and rivers, and the ſoil is in moſt places very good and fruitful; even thoſe where the bogs have been drained are good meadow ground. Their paſtures feed prodigious numbers of cattle; but in ſeveral parts they are not ſo large as in *England*, on which account a bounty has long been given for the importation of *Engliſh* bulls and large ſtone-horſes, which have mended the breeds. Indeed the far greater part of the land is uſed for grazing, whence they are enabled to ſupply the ſhips of all the *European* nations, particularly the *Engliſh* and *Dutch*, with beef and butter; but advantageous as this trade is, it is carried to an exceſs that is very prejudicial to *Ireland*, as it cauſes agriculture to be neglected, which would employ many more hands, and prevent their being frequently obliged to purchaſe great quantities of corn from *England*; from whence it is alſo not uncommon to purchaſe ſhip loads of potatoes, which in many places ſupply the want of bread. They alſo raiſe flax and hemp; and the gardens of *Ireland* produce all the fruits and vegetables fit for the kitchen, that are to be found in *Great Britain*, though fine fruit is dearer there than in *England*.

Ireland is remarkable for breeding and nouriſhing no venomous creatures.

It ought not to be omitted, now we are treating on the ſoil, that there are ſome bogs in this country ſo deep, as entirely to ſwallow up a man and horſe, who ſink in unknown depth, though they are covered with turf which ſeems to promiſe ſolid ground; however, roads have been made for horſes and carriages over theſe dreadful bogs, by ranging rows of faggots faſtened together, and covered with earth, which forms a kind of bridge that ſhakes under the feet of the paſſengers. There are other bogs that have too ſtrong a cruſt of turf to be eaſily broken, and are conſtantly paſſed in ſafety, though they ſhake and quiver at every ſtep of the foot.

The turf which grows upon many of the bogs is taken off, dried, and ſold for fuel; and is of great uſe where coals are ſcarce. There are, however, ſeveral pits of excellent coal, and navigable canals are now formed in order to convey it by water-carriage to *Dublin*, and all the other towns on the coaſt. This country has likewiſe quarries of ſeveral kinds of beautiful marble; alſo free-ſtone, a beautiful kind of hard white ſtone fit for building, full of ſhining particles which glitter in the ſun, and ſlate; alſo mines of copper and iron.

The principal rivers of *Ireland* are the following:

The *Shannon*, which is the largeſt river in *Ireland*, riſes in the county of *Leitrim*, in the province of *Connaught*, which it divides from *Leinſter* and *Munſter*, and running from north to ſouth, after forming ſeveral lakes, turns to the weſt, and falls into the *Atlantic ocean*, after a courſe of one hundred and forty-five miles. This river is in moſt parts wide and deep, and has within it ſeveral fine and fruitful iſlands, with a fertile ſoil on both its banks: but it is not navigable above fifty miles for ſhips, on account of a cataract.

The *Suir*, the *Neor*, and the *Barrow*, riſe from branches of a mountain called *Slieu-Bloom*. The *Suir* has its ſource in the branch called *Bein-Duffe*, in the county of *Tipperary*, and making firſt a ſouth-eaſt, and then a ſoutherly courſe for upwards of forty miles, it turns to the north, afterward to the eaſt, and at length unites its ſtreams with the *Neor* and the *Barrow*.

The *Neor* riſes out of the ſame branch, and taking a ſouth-eaſt courſe, unites its ſtream with the *Barrow*.

The *Barrow* riſes out of the ſame mountain in *Queen's county*, and after taking a northerly courſe, returns to the ſouth, and before it arrives at *Roſs* is joined by the *Neor*, from whence it continues a ſoutherly courſe under the name of the river *Roſs*, and being joined by the *Suir*, they all loſe themſelves in the ſea at the mouth of the harbour of *Waterford*.

The *Black-water*, ſometimes called the *Broad-water*, riſes out of a mountain in the county of *Kerry*, from whence being ſwelled by many ſtreams, it takes firſt a ſoutherly, and then an eaſterly courſe, till at length turning ſuddenly to the ſouth, it purſues that courſe till it falls into the bay of *Yoghall*. There are ſeveral other rivers in *Ireland* called the *Black-water*, one of which falls into the *Boyne*, another into the *Shannon*, and another, in the county of *Wexford*, falls into the ſea.

The river *Band*, famous for its *pearl-fiſhery*, but more ſo for its *ſalmon*, riſes from the mountains in the county of *Down*, from whence it flows northward, and after a courſe of about thirty miles, falls into the lake called *Lough-neagh*, and paſſing through it, continues its courſe to the north, dividing the counties of *Antrim* and *Londonderry*, and falls into the ſea a little to the north-weſt of *Colerain*.

The *Lee* riſes out of a lake in the county of *Cork*, and taking an eaſterly courſe of about twenty-ſix miles, is enlarged by its receiving ſeveral rivers and rivulets, till at length paſſing by *Cork*, it diſcharges itſelf into the ſea.

The *Liffey* is only remarkable for having the metropolis of the kingdom ſeated on its banks, it being otherwiſe an inconſiderable ſtream. It riſes in the county of *Wicklow*, and making a circling courſe through that county and the counties of *Kildare* and *Dublin*, diſcharges itſelf into *Dublin bay*, a little below that city;

it being navigable for barges no higher than the tide reaches. What is called the *Liffey* at *Dublin*, is properly a creek of the bay into which the little river *Liffey* runs, and which a mile above *Dublin* reſembles the *New River* near *London*.

The *Boyne* is a much more conſiderable river: it riſes in the *King's county*, is famous for its excellent *ſalmon*, and falls into the ſea at *Drogheda*.

In *Ireland* are more lakes, or, as they were formerly called *loughs*, than perhaps in any other country of the ſame extent; and theſe abound more in the provinces of *Ulſter* and *Connaught*, than in any other parts of the kingdom. They are properly ranked under two denominations; freſh-water lakes, which have no acceſs of the tide or mixture of the ſea, and ſalt lakes, into which the tide flows, and may more properly be called inlets of the ſea.

Of the freſh-water lakes, one of the moſt extraordinary is *Lough-lene*, in the county of *Kerry*, which is remarkable for its ſingular beauties. It is about ſix miles in length, and, at a medium, near half as much in breadth; and is interſperſed with a variety of beautiful iſlands, many of them rich in herbage, and well inhabited. *Eagles* and *oſprays* are here in great numbers, and the iſlands and rocks in and around the lake are adorned with groves of the *arbutus tree*, which are frequently four feet and an half in circumference, and nine or ten yards high.

Lough-erne and *Lough-neagh* are by much the largeſt lakes in *Ireland*. The former is divided into two branches, the upper and lower, which are ſeparated by the water being contracted into the compaſs of a conſiderable river for ſome miles, after which, enlarging itſelf, it forms the lower lake. This lough, in both its branches, takes its courſe through the whole length of the county of *Fermannagh*, from the S. E. point to the N. W. dividing it almoſt into two equal parts. It abounds with a great variety of fiſh, as *pike* of a prodigious ſize, large *bream*, *roach*, *eels*, and *trout*; but it is chiefly valued for its *ſalmon*.

Lough-neagh is ſomewhat of a ſquare form, but indented on every ſide. It is eſteemed the largeſt lake in *Ireland*, and is exceeded by few in *Europe*; it being twenty miles long from the N. W. point to the S. E. near fifteen miles from the N. E. to the S. W. and ten or twelve broad at a medium. *Lough-neagh* communicates its benefits to five counties, *Armagh*, *Tyrone*, *Londonderry*, *Antrim*, and *Down*; the latter of which it only touches by a ſmall point on the S. E. ſide. It receives ſix conſiderable rivers, four of leſſer note, and ſeveral brooks; yet has but one narrow outlet to diſcharge this great flux of water.

There are a conſiderable number of ſuch lakes as may more properly be called inlets of the ſea; among theſe are *Loch foyle*, a large oval lake, about fourteen miles long, and from ſix to eight miles broad, into which the ſea flows by a channel not much more than a mile over.

The lake of *Strangford*, in the county of *Down*, extends from *Newtown* in the N. to *Strangford* in the S. about thirteen *Iriſh* miles; and in ſome places is from three to five miles broad. There are diſperſed in it fifty-four iſlands ſmall and great, ſome of which are noted for reſtoring and fattening diſtempered horſes; others are ſtocked with rabbits, and to others reſort a multitude of *ſwans*, *wild-geeſe*, *widgeon*, *teal*, and four or five ſorts of *divers*.

Inland navigations have of late years been purſued in *Ireland* with as much ſpirit and effect as in *England*. A noble canal is now completed, which opens a communication between the *Shannon* and the *Liffey*, near *Dublin*, and many others of leſs extent are either forming or completed.

Ireland is far from being a mountainous country, yet there are in different parts of the kingdom ſome mountains which riſe to a conſiderable height. The GAULTEES are a chain of mountains in the county of *Tipperary*, which run in the direction of N. and S. and tower majeſtically; MANGERTON, in the county of *Kerry*, is ſaid to be 3060 feet perpendicular height; the mountains of MOURNE and IVEAGH in the county of *Down*, are alſo diſtinguiſhed for their lofty ſummits.

There is perhaps no country in the world that abounds more with ſpacious and commodious harbours than *Ireland*, but theſe natural advantages cannot be carried to their full extent from the reſtrictions which are laid on the commerce of this country. Theſe harbours will be enumerated in treating of the ſeveral provinces and counties of this kingdom.

Ireland, according to *Templeman*, is to *Scotland* in extent as ſeventeen to fourteen, but according to *Malines*, it is as eighteen to fourteen. The ſpring does not ſet in ſo early here as in *England*, and the leaves do not quit the trees until the month of November. The air in *Dublin* has been found to be warmer in winter and cooler in ſummer than in *London*. The climate of *Ireland* is ſubject to ſudden changes of weather and frequent winds; it is even more mutable than that of *England*. This iſland in ancient times has been called *Scotia*, *Britannia parva*, *Hibernia*, *Juverna*, *Ierne*, *&c.* According to Archbiſhop *Uſher*, *Hibernia* is comparatively but a modern name, and the ancient *Scotia* was no other than *Ireland*, and in the eleventh century, *Caledonia* began to be called *Scotia Minor*, or *nova*, and *Ireland* retained the name of *Scotia*, with the addition of *major* or *vetus*, until the fifteenth century.

SECT. II.

The Perſons, Character, Habits, Genius, Temper, Dreſs, Religion, Government, Manufactures, *and* Trade *of the* Iriſh; *with a ſhort view of the hiſtory of that country.*

THE inhabitants of *Ireland* may be ſaid to be compoſed of three diſtinct claſſes of people. The original natives compoſe the moſt indigent and illiterate part of the community; theſe lead a life of ſevere dependence on their ſuperiors. Emigrants from *Scotland* have made ſuch numerous ſettlements here, as to form the next diviſion; theſe chiefly inhabit the northern parts of the kingdom; between whom and the old *Iriſh* a deeply rooted diſaffection ſtill ſubſiſts, on account of the tenacity of each to their particular religious perſuaſions and indigenous manners. The third and moſt conſiderable claſs is compoſed of the deſcendants of the *Engliſh*; theſe occupy the eaſtern coaſt, and are very numerous in the commercial diſtricts, ſuch as *Dublin*, *Waterford*, and *Cork*: and among them are to be found the beſt cultivated underſtandings and moſt liberal manners.

The *Iriſh* are in general a ſtrong-bodied, nimble, active people; many of both ſexes are tall, handſome, and genteel. The men are bold, hardy, and remarkably athletic: thoſe who are well-bred have an aſſured addreſs, a fluency of ſpeech, and a flow of compliments, eſpecially when in the company of ladies, which have rendered them very ſucceſsful in alliances with the fair ſex. It will not be doing injuſtice to the character of the *Iriſh* to ſay, that they are haughty, vain-glorious, quick in reſenting a ſuppoſed affront, and violent in all their affections; whence the frequency of duels in this kingdom, perhaps beyond any other ſpot in the world. On the other hand, they have generally a fund of good nature, and all ranks are particularly remarkable for their hoſpitality.

The *Iriſh* have been reproached for want of genius, and by the ignorant have been frequently termed a nation of blunderers; but theſe aſperſions are very unjuſt, ſince *Ireland* has produced many perſons whoſe genius and learning would have done honour to any nation: among which are the learned *Dr. James Uſher*; that great philoſopher the honourable *Mr. Robert Boyle*; that able defender of revelation, *Dr. John Leland*; ſeveral of the earls of *Orrery*; *Mr. Molineux*, the friend of the great *Mr. Locke*; *Sir Richard Steele*, *Dean Swift*, *Berkley*, *Dean Parnell*, *Congreve*, *Goldſmith*, &c.

The ancient habit of the *Iriſh* was a doublet and cloſe breeches, over which they wore a frize cloak, with a fringed or ſhaggy border. The women wore a kind of mantle, or blanket, called a *caddah*, over their head and ſhoulders, and underneath a long gown; and both men and women had a kind of ſhoe without a heel, made of half tanned leather, called a *brogue*: but at preſent all ſorts of perſons conform to the *Engliſh* dreſs, except in the brogue, which is worn by the poor in the country, and ſometimes the caddah. But it is very common for the loweſt of the people to wear neither ſhoes of any ſort nor ſtockings, except when they are dreſſed on Sundays or holidays: particularly when they travel on foot, they uſually walk without their ſhoes and ſtockings, which they put on before they enter any town, and pulling them off when they have left it, put them in their pocket. This they allege keeps their feet cool, and prevents the loſs of time by picking their way through the dirt, or going round to eſcape croſſing a rivulet.

The *Iriſh* tongue bears ſome affinity to the *Welſh* and *Erſe*; and all three are ſuppoſed by ſome to be only different dialects of the ſame language, more particularly the firſt and the laſt. Some of the *Iriſh* characters are very different from ours; however, very few of thoſe who ſpeak the language fluently, are able either to write or even to read it. Buſineſs is principally tranſacted in *Engliſh*.

The eſtabliſhed religion in *Ireland* is the ſame as in *England*. The church is under the government of four archbiſhops, namely, the archbiſhop of *Armagh*, who has the title of primate of all *Ireland*; the archbiſhop of *Dublin*, who is ſtyled primate of *Ireland*; and thoſe of *Caſhel* and *Tuam*. Under theſe four archbiſhops are nineteen biſhops; namely, under *Armagh* are the biſhops of *Meath*, *Clogher*, *Down*, *Kilmore*, *Dromore*, *Raphoe*, and *Derry*. Under the archbiſhop of *Dublin*, the biſhops of *Kildare*, *Oſſory*, and *Ferns*. Under the archbiſhop of *Caſhel*, the biſhops of *Limerick*, *Waterford*, *Cork*, *Colyne*, and *Killaloe*. Under the archbiſhop of *Tuam*, *Elphin*, *Clonfert*, and *Killala*. Theſe ſeveral prelates have their deans, and other dignitaries, except *Meath*, which has neither dean, chapter, nor cathedral.

Diſſenters of all denominations are tolerated in *Ireland*, particularly *Preſbyterians*, *Independants*, *Baptiſts*, and *Quakers*. But the far more numerous body are the *Papiſts*, who have their biſhops and other dignitaries like the eſtabliſhed church; but neither they, nor the inferior clergy of that communion, have any other revenues than the voluntary contributions of the laity. It is ſuppoſed that throughout *Ireland* there are about four Papiſts to one Proteſtant; but in the capital the diſproportion is now only as two to one.

In the whole kingdom of *Ireland* there are but 2293 pariſhes, and there are ſaid to be more clergy in the ſingle dioceſe of *Lincoln* than in all *Ireland*, owing to the union of livings in that kingdom. In one county where there are ſeventy ſix pariſhes, it is aſſerted there are but fourteen churches.

For the promotion of learning in *Ireland*, there is one univerſity, and ſeveral free-ſchools erected for the education of youth; and for promoting the principles of proteſtant Chriſtianity among the poor popiſh natives of Ireland, and inuring them from infancy, to induſtry, and obedience to their ſovereign, is inſtituted the incorporated ſociety for promoting *Engliſh Proteſtant* working ſchools. But that ardent friend to the human race, the late *Mr. Howard*, detected many abuſes in this inſtitution, which has long received very liberal ſupport from *England*. The influence which the *Romiſh* eccleſiaſtics have over the poor ignorant natives has been found very hurtful to government, by enticing them to paſs over into the ſervice of *France*, or *Spain*, who readily receive them, and the former particularly, find them the moſt uſeful infantry in their pay.

The power of the lord lieutenant, who repreſents the king, may be in ſome meaſure reſtrained, or enlarged, according to the king's pleaſure, or the exigencies of the times. He never appears in public without being attended by a body of horſe-guards. With reſpect to his authority, his train and ſplendour, there is no viceroy in Chriſtendom that comes nearer the grandeur and majeſty of a king. He has a council compoſed of the great officers of the crown, namely, the chancellor, treaſurer, and ſuch of the archbiſhops, earls, biſhops, barons, judges, and gentlemen, as his majeſty is pleaſed to appoint.

The parliament here as well as in *England*, is the ſupreme court, which is convened by the king's writ. The laws are made in *Ireland* by the houſes of lords and commons, after which they are ſent to *England*, for the royal approbation; when, if approved by the king in council, they paſs the great ſeal in *England*, and are returned. Thus the two houſes of parliament make laws which bind the kingdom; raiſe taxes for the ſupport of government, and for the maintenance of an army of twelve thouſand men, who are placed in barracks in ſeveral parts of the kingdom. The houſe of lords conſiſts of the four archbiſhops, one duke, earls, viſcounts, biſhops, and barons; the number of the lay-peers has been conſiderably augmented during the preſent reign. The houſe of commons is compoſed of three hundred members.

For the regular diſtribution of juſtice, there are alſo in *Ireland*, as in *England*, four terms, held annually, for the deciſion of cauſes; and four courts of juſtice, the *chancery*, *king's-bench*, *common-pleas*, and *exchequer*. In the firſt the king's chancellor and keeper of the great ſeal alone preſides; but in the courts of king's-bench, and common-pleas, are three judges in each; and in the exchequer, a treaſurer, chancellor, and three barons, and in all of them ſeveral ſubordinate officers. Here is likewiſe a court of exchequer-chamber for correcting errors in the other courts; in which the lord chancellor and lord treaſurer preſide, with other aſſiſtant judges. Here are alſo judges of aſſize and jail delivery; theſe are thoſe of the ſupreme courts, who take their circuits twice a year, in the ſeveral counties, that of Dublin excepted, for the trial of priſoners, and ſuits of niſi prius between party and party; as alſo a court of admiralty, which has juriſdiction in maritime affairs, and is adminiſtred by commiſſion from the admiralty of *England*.

Beſide theſe there are ſpiritual courts; as the courts of prerogative, where a commiſſary judges of the eſtates of perſons deceaſed, whether inteſtate or by will; and in every dioceſe is a conſiſtory court, from whence appeals lie to the ſupreme court of prerogative, and from thence to a court of ſpecial delegates appointed by the king.

There are likewiſe governors of counties, and juſtices of the peace, appointed by the king's commiſſion, through the ſeveral counties, to preſerve the peace in the place where they reſide; and alſo high and petty conſtables, and other officers, inſtituted for the ſame purpoſe: but the chief officer of every county is the high ſheriff, who, as in *England*, was formerly choſen in the county court by the ſuffrages of the people, but is now nominated by the lord lieutenant.

The preſent revenue of *Ireland* is ſuppoſed to be ſomething more than half a million ſterling, out of which near 90,000l. is granted in penſions; this, with the reſtraints which are laid on their commerce, both as to imports and exports, the prohibitions from carrying on certain branches of the woollen manufacture, and the money drawn out of the kingdom by abſentees who poſſeſs large landed property, form an aggregate of grievances which ſupplies conſtant ſubjects of complaint among the *Iriſh*; but they ſhould conſider, on the other hand, that their lands are not charged with a tax, nor are their exports or imports ſubject to high duties; and the encouragement given to the linen manufacture has been truly munificent. Moſt of the manufactures of *Ireland* are carried on upon the eaſtern and northern coaſts, particularly at *Belfaſt*, *Londonderry*, and other parts of the province of *Ulſter*, which, though the pooreſt ſoil, is, next to *Dublin*, and its neighbourhood, the moſt improved and flouriſhing part of the kingdom. Here the linen manufacture was eſtabliſhed in the reign of *James* I. which proved an increaſing ſource of wealth; notwithſtanding the *Scots* have of late made great progreſs in eſtabliſhing among themſelves the ſame article of commerce. Vaſt quantities of ſalted proviſions are annually exported from *Cork*. Much commerce is likewiſe carried on at *Limeric* and *Waterford*.

The chief exports of Ireland conſiſt of their *linens*, together with *yarn*, *lawns*, and *cambricks*, which are manufactured to great perfection, and exported to a conſiderable advantage; the *Engliſh* laws giving great encouragement to theſe branches of trade, which, with a few exceptions, may be ſaid to be the ſource of all the wealth of *Ireland*. To theſe may be added *wool* and *woollen yarn* exported to *England* only; *beef*, *pork*, green *hides*, ſome tanned *leather*, *calf-ſkins* dried, great quantities of *butter*, *tallow*, *candles*, *ox* and *cow horns*, *ox hair*, a ſmall quantity of *lead*, *copper ore*, *herrings*, *dried fiſh*, *rabbit-ſkins*, and *furr*, *otter-ſkins*, *goat-ſkins*, *ſalmon*, and a few other particulars. *Wool* and *yarn* are allowed to be exported only to *England*; but from the thirſt of gain, all hazards are run to tranſport them by ſtealth to *France*, to the great detriment of the *Engliſh* woollen trade; and perhaps the beſt method of preventing it, would be to reſtore the woollen manufacture to *Ireland*, at leaſt in the coarſe branches of it, and to make it the intereſt of the *Iriſh* to manufacture their wool at home. The exportation of printed books from *Dublin*, is now become a very conſiderable article of commerce.

The *Iriſh*, notwithſtanding the diſcouragements laid on their woollen manufactures, import from England conſiderable quantities of broad-cloth, which they certainly might make at home; alſo all kinds of *groceries*, *coals*, *braſs*, *hardware*, and a great number of other particulars; beſides a conſiderable quantity of wine from *France*, *Spain*, and *Portugal*.

Ireland is divided into four provinces, which, begining at the S. are, *Munſter*, *Leinſter*, *Connaught*, and *Ulſter*; the firſt and laſt of which extend from one ſea to the other. Some geographical writers divide *Ireland* into five circuits, but that diviſion is not generally adopted.

Some writers, in their zeal for the antiquity of the *Iriſh* hiſtory, have attempted to prove, from teſtimonies which they deem ſatisfactory, that the iſland was viſited in the year of the world 1956, by *Partholan*, the ſeventh lineal deſcendant from *Japhet*, the ſon of *Noah*, about 278 years after the flood, and 560 years before the time of *Moſes*. Mr. O'Halleran aſſerts confidently, that ſome deſcendants from the *Brigantes* of *Spain*, conquered *Ireland* in the year of the world 2736, which is more than 200 years before *Homer* lived. It is indeed admitted that *Magonius*, or, as he is generally called, *St. Patrick*, was ſent by the Pope *to Ireland*, then called *Scoti*, early in the fifth century, to perſuade the people who had then embraced Chriſtianity, to acknowledge the papal authority, whilſt *Britain* did not receive *St. Auguſtine*, for the like purpoſe, until a century and half afterward. But although the very high antiquity of *Ireland* is much conteſted, and believed by very few, yet the opinion of *Spencer*, that "the *Iriſh* were at leaſt among the moſt ancient people in this end of the world," is generally received; the hiſtory of the country however contains very few intereſting events for a long ſeries of years. About the concluſion of the eighth century the *Danes* and *Norwegians*, or as they were called, the *Eaſterlings*, made frequent deſcents, and at length began to erect places of defence, in order to maintain a footing on the iſland. They were the firſt who erected ſtone buildings there: by them *Dublin*, *Waterford*, *Wexford*, *Limeric*, and *Cork* were built. Still the internal ſtate of the kingdom can only be imperfectly known; it is certain however that ſeveral petty princes ſhared the country. Henry II. of *England*, ſoon after he aſcended the throne, began to meditate the conqueſt of *Ireland*, to effect which he inſtigated *Strongbow*, earl of *Pembroke*, with ſome other lords, to eſpouſe the cauſe of *Dermot M'Murrough*, king of *Leinſter*, whoſe oppreſſive tyrrany had cauſed him to be driven from his country, and who interceded with *Henry*, then in *France*, for his aſſiſtance toward re-eſtabliſhing himſelf in his kingdom. Theſe lords having compelled the *Danes* to evacuate *Ireland*, who had eſtabliſhed themſelves on the S. E. coaſt, proceeded to ſubdue the natives, which excited the jealouſy of *Henry*, who was not ſatisfied until the *Engliſh* lords had ſworn fealty to him and his heirs, and reſigned into his hands all the *Iriſh* cities and forts which they had gained. In 1172 *Henry* in perſon paſſed over to *Ireland* with a formidable power, which ſoon procured him to be acknowledged lord paramount of the whole of that iſland. He proceeded to ſettle a civil adminiſtration at *Dublin* which nearly conformed to that of *England*. He likewiſe very liberally rewarded his *Engliſh* nobility with eſtates in *Ireland*, and eſtabliſhed at *Dublin*, a trading colony from *Briſtol*.

At this time *Ireland* had not ſubmitted to the authority of the pope, which induced *Adrian* IV. a native of *England*, who filled the papal chair, to grant the iſland, in the year 1156, to *Henry* II.; his bull, to that effect, is preſerved in *Rymer's Fœdera*, Tom. 1. p. 15. and the grant is on the expreſs condition that the *Iriſh*, when conquered, ſhall pay *Peter's* pence, or each houſe a penny, to the ſee of *Rome*. When this iſland became ſubject to the kings of *England*, it was called "the dominion, or lordſhip of *Ireland*," and the king was ſtyled "lord of *Ireland*," until *Henry* VIII. aſſumed the title of king of *Ireland*, which was confirmed by both houſes of parliament. Before it became ſubject to *England* the *Iriſh* were governed by what they called the *Brehon* law, the judges being ſtyled *Brehons*, and to them was entruſted the power of declaring the law, in all caſes which were brought before them, there being no written laws to direct their deciſions, the only rules of law conſiſted in the cuſtoms of the courts, and traditions handed down from one generation to another. In the reign of king *John*, the laws of *England* were introduced, but it was not until the reign of *Edward* III. when *Lionel* duke of *Clarence*, the king's third ſon, was lord lieutenant, that the *Brehon* laws were formally aboliſhed by a parliament held at *Kilkenny*. In the reign of *Henry* VII. *Sir Edward Poyning* being then lord deputy, a variety of regulations were framed, and paſſed into laws, which are generally known by the name of *Poyning's* Statutes. Theſe became the baſis for the government of *Ireland*, which kingdom was, by an expreſs law paſſed in *England*, in the reign of *George* I. rendered ſubordinate to, and dependent upon, the crown of *Great Britain*, and the king, with the lords and commons of *Great Britain*, aſſembled in parliament, had power to make laws to bind the people of *Ireland*; ſo that the *Iriſh* were not only ſubject to laws paſſed in *England*, but their parliament had no other power than that of putting a negative on bills brought into either of their houſes, whilſt the heads of every act, were, previouſly to their being brought in there, tranſmitted to *England*, and laid before the king in council; if approved, they were returned, and muſt paſs through both houſes of the *Iriſh* parliament without any alteration, if they were diſapproved they were heard of no more.

Such continued to be the nature of the government in *Ireland* until the attempt to ſubdue the *American* colonies, about the year 1777, involved *Great Britain* in a war with *France*, *Spain*, and *Holland*; in which exigency of affairs large draughts of troops were made from *Ireland*, and that iſland was left in a very defenceleſs ſtate. This furniſhed a plea for the people to form themſelves into volunteer companies, in which each man cheerfully, and at his own expence, provided himſelf with clothes, arms, accoutrements, and every thing neceſſary for taking the field. Even men of fortune and conſequence did not ſcruple to ſerve as privates in theſe corps. So generally was a military ſpirit diffuſed, that it is ſaid between fifty and ſixty thouſand men were thus embodied. The defence of the kingdom from foreign enemies they then diſclaimed as their ſole object; and loudly called upon government to emancipate their country from the oppreſſions and reſtrictions under which it groaned, and at the ſame time a reform in parliament was ſtrenuouſly urged. Whilſt theſe meaſures were purſuing, the utmoſt good order and regularity prevailed; riots and inſurrections, which had been frequent in various parts of the kingdom, were effectually ſuppreſſed, and the ſtricteſt diſcipline was adhered to. Government, unwilling to contend with ſo numerous and determined a confederacy, made ſeveral conceſſions, which the juſtice of the cauſe alone would not have obtained: the duration of parliaments was limited to eight years; which uſed to be determined only by the demiſe of the king, or when the crown thought fit to diſſolve them: many reſtrictions reſpecting trade, and the exportation of *Iriſh* manufactures were taken off; cotton yarn, manufactured in *Ireland*, was allowed to be imported into *England* duty free, the culture of tobacco was encouraged, and a bounty was given upon the importation of hemp from *Ireland* into *England* for twenty one years; the act of the 6th *George* I. which ſubjected *Ireland* to acts paſſed in the *Britiſh* parliament, was repealed, and the country placed in ſomewhat the ſame ſituation as *Scotland* was in the reign of *James* I. The miniſter likewiſe, notwithſtanding the ſtrong oppoſition which was made by the manufacturing towns of *England*, and the *Weſt India* merchants, carried through both houſes of parliament a number of reſolutions, by which *Ireland* was allowed a free trade, with only the exception of the *Aſiatic* commerce, and ſubject to the navigation laws which ſubſiſted in *England*, and to all future navigation laws which ſhould be made for *England*, thus placing *Ireland* upon much the ſame footing as the union had placed *Scotland*; for a participation of the *Eaſt India* trade, though then ſtrongly contended for, was inflexibly refuſed to that nation. The *Iriſh*, however, rendered aſſuming by what they had already obtained, and inflated by the palatable poiſon which they greedily ſwallowed from the oppoſition orators in the *Britiſh* houſe of commons, and afterward from their own, ſpurned at the proffered advantages, which hereafter they may ſooner covet than obtain. Peace being then reſtored to *England*, the military aſſociations in *Ireland* became languid, and government, at length, found means entirely to ſuppreſs them.

It is highly to the honour of the *Iriſh* parliament, that the roman catholics of that kingdom have been relieved in many caſes, particularly with reſpect to the holding of landed eſtates, and proteſtant diſſenters were put upon the fair and equal footing of citizens, (A. D. 1779) by the repeal of the corporation and teſt acts; laws, in their principle unjuſt, and in their operation impious.

SECT. III.

Of the Province of MUNSTER, *containing the Counties of* Cork, Waterford, Tipperary, Limerick, *and* Kerry.

THIS province is bounded on the E. and S. E. by the province of *Leinſter* and *St. George's Channel*, on the S. and W. by the *Atlantic ocean*, and on the N. by the provinces of *Connaught* and *Leinſter*, from which it is ſeparated by the *Shannon*. It extends an hundred and thirty miles in breadth from *Waterford haven* in *St. George's Channel* to the W. point in *Kerry*; and an hundred and twenty in length from the N. parts of *Tipperary* to *Baltimore* in *Cork*; but from *Baltimore* to the N. parts of *Kerry*, it is only ſixty-eight miles. The circumference, including the great windings and turnings, is above ſix hundred miles.

It is divided into five counties, namely, *Cork*, *Waterford*, *Limerick*, *Kerry*, and *Clare*; which are ſubdivided into fifty-two baronies, containing one archbiſhoprick and five biſhopricks, eighty pariſhes, and twenty-five boroughs.

It enjoys a mild, temperate air, and has many excellent bays, havens, and good towns. In ſome parts it is hilly and woody, mixed with wild ſolitary mountains; but the vallies are chiefly laid out in paſture land. Its principal commodities are *cattle*, *wood*, *wool*, and *fiſh*, eſpecially *herrings* and *cod*.

CORK was formerly a kingdom, and contained all the country between *Liſmore* and *Brandon-hills* in *Kerry*, where it faces *Deſmond* to the W. and includes a part of it. It has *Waterford* on the E. *Kerry* and the *Atlantic ocean* on the W; on the N. *Limerick*; and on the S. and S. E. *St. George's Channel*. The former is very irregular both in length and breadth.

It is divided into fifteen baronies, and is partly woody and mountainous, and partly fenny: yet it has ſeveral towns, and abounds in fine rivers and good harbours. A copper mine has been diſcovered near *Cork*. This county gives the title of earl to the noble family of *Boyle*, and ſends twenty-ſix members to parliament; namely, two knights for the ſhire, and two burgeſſes for each of the following towns: the city of *Cork*, *Youghal*, *Kinſale*, *Bandon-bridge*, *Mallow*, *Baltimore*, *Clognikelty*, *Charleville*, *Caſtlemartyr*, *Middleton*, *Rathcormuck*, and *Doneraile*.

The principal places in this county are the following:

YOUGHAL, a conſiderable ſea-port, ſeated at the mouth of the river *Broadwater*, not very large, but walled round, and divided into two parts. The convenience of the harbour, its good quay, and the fertility of the adjacent country, draw many merchants to it, and render it populous as well as rich. Before the harbour is a bar, which can only be paſſed at high water.

CORK, a large, populous, and wealthy city, is ſeated on the river *Lee*, in 51° 54′ N. latitude and in 8° 28′ W. longitude from *Greenwich*; a hundred and twenty-four miles S. W. of *Dublin*. It is of an oval form, incloſed with walls and the channel of the river, which alſo croſſes it.—This iſland is interſected by ſeveral canals, either natural or artificial, which, being banked and quayed in, bring up ſhips almoſt to every ſtreet. It is ſaid to contain near nine thouſand houſes. It ſtands about ſeven miles up the river from the ſea, where the mouth of the harbour is two miles broad. The harbour called "the cove" is one of the beſt in the world; the entrance is ſafe, and the whole navy of *England* might ride in it ſecure from every wind that blows, but ſhips of burden are obliged to unload at *paſſage*, about five miles from the town, the channel not admitting veſſels of above one hundred and fifty tons. The trade of this place chiefly conſiſts in furniſhing the ſhipping of *European* nations in general with ſalted proviſions. The *Engliſh* ſhips bound to the *Weſt Indies*, conſtantly put in here to victual. The ſlaughter houſes are all in the ſuburbs, and theſe being ſituated on the declivity of a hill, and having the advantage of a ſtream of water which conſtantly flows down it, may be kept extremely pure and ſweet. This city, with its liberties, is about three miles round, and forms a county of itſelf. It has two gates, one to the N. and the other to the S. The cathedral and the red abbey are on the S. ſide of the town; *St. Francis's* abbey and *Shandon* church on the N. ſide. There are in all ſeven pariſh churches, and the remains of two other abbeys, namely, *St. Dominick's*, and *St. Cill's*; and, though the monaſtries are deſtroyed, the monks ſtill remain to this day, and regularly perform ſervice; beſide which there are ſeven other maſs-houſes, alſo four diſſenting meeting houſes, belonging to the *Preſbyterians*, *Anabaptiſts*, *Quakers*, and *French proteſtants*; but it is ſaid that the adherents to the church of *Rome* outnumber all the other denominations here, at leaſt at the rate of ſeven to one. Here is alſo a ſteeple, ſuppoſed to have been built by the *Danes*, and to have been at firſt uſed by them as a watch-tower; and near the river is a cuſtom-houſe and ſtore houſe. There are two large ſtone bridges, one to the N. and the other to the S. over the grand branches of the *Lee*, beſide ſeveral ſmall ones, and ſome draw-bridges, which are thrown over the leſſer branches or canals; but many of the canals are now filled up. There is likewiſe an *Exchange*, a *barrack*, ſeveral hoſpitals, and other public ſtructures, but all indifferently built. There is a public walk called "the *Mall*," with a row of trees on one ſide, and houſes on the other. Another public walk is called "the *Red houſe walk*," and lies W. of the city; it is a mile in length and, planted on each ſide. A neat theatre has been erected, in which the *Dublin* company of comedians exhibit during the ſummer ſeaſon. A number of ſedan chairs ply at *Cork*.

Stanihurſt ſays that 130 years ago *Cork* was but the third city in *Munſter*, now it is the ſecond in the kingdom, and therefore called "the *Briſtol* of *Ireland*." Except in the article of linen, its exports are more conſiderable than thoſe of *Dublin*, conſiſting in *beef*, *pork*, *butter*, *hides*, *tallow*, *&c.* "All the wealth of *Munſter* and *Connaught*," ſays a true friend to *Ireland*, "paſſes through two or three cities, which may be ſaid to have eaten up the ſurrounding country, where the wretched peaſant never taſtes the fleſh of the cattle which he feeds, but ſubſiſts upon potatoes, generally without butter, and ſometimes without milk." *Survey of the S. of Ireland p.* 177. The city of *Cork* was taken by the earl of *Marlborough* in September 1690, after a ſiege of only four days, and *Kinſale* ſoon after.

Five miles below *Cork*, the channel of the river dividing, forms a large and pleaſant iſland, on which are ſeveral villages.

KINSALE is a neat handſome, populous, and rich town, ſeated in a fruitful ſoil, near the mouth of the river *Bann*, fourteen miles S. of *Cork*. It has an admirable harbour, and a good bay, with a light-houſe upon a peninſula, called "the Old Head of Kinſale," which guides the ſhips in the night to the mouth of the river. There is a bar before the port, but the pilots find from three and a half to four fathoms of water in the ſhoaleſt place upon the bar at low-water, ſo that ſhips of any burden may go over it when the tide is up; and even at the quay, where is the cuſtom-houſe, is twenty feet of water. Within two miles from the quay, below the town, are two very ſtrong forts, one on each ſide of the river, which effectually ſecure the harbour from all attacks by ſea: the town is alſo well fortified with lines and out-works by land. It gives the title of baron to the family of *Courcy*; premier baron of *Ireland*, which nobleman poſſeſſes the ſingular privilege of wearing his hat in the royal preſence.

CAPE CLEAR is an iſland ſo called from its Cape; on it is a caſtle for the ſecurity of ſhips which take ſhelter under its cannon. This is the ſouthernmoſt iſland, as *Mizen-head* to the W. is the ſouthernmoſt land of *Ireland*.

The county of **WATERFORD** is ſo ſurrounded by the *Blackwater*, the *Suir*, and the ſea, that it forms a peninſula.

It is divided on the E. by its haven from the county of *Wexford*, in the province of *Leinſter*; on the S. it is bounded by the ocean; on the W. by the county of *Cork*; and on the N. by the river *Suir*, which ſeparates it from *Tipperary* and *Kilkenny*. It extends forty-ſix miles in length, and twenty-four in breadth: though in ſome places it is pleaſant and fertile, yet for the moſt part it is mountainous, and has a very indifferent ſoil. It is ſubdivided into ſix or ſeven baronies, and, as well as *Wexford* and *Shrewſbury* in *England*, gives the title of earl to the ancient family of *Talbot*. It ſends ten members to parliament, namely, two for the county, and two for each of the following towns, viz. the city of *Waterford*, *Liſmore*, *Dungarvan*, and *Tallow*.

The principal place in this county is

WATERFORD, the only city in the county; it is conveniently ſeated for trade, ſeventy-five miles S. of *Dublin*, and lies four miles and a half from the mouth of the river *Suir*, where it joins with the *Nure* and the *Barrow*; theſe together form the haven, which runs about nine miles up the country, and is all the way deep and clear. It is commanded by *Duncannon fort*, and on the W. ſide of the town is a citadel. There are likewiſe a block-houſe and ſtore-houſe on the S. ſide of the quay. The city and its liberties, which take up a great extent, form a county of themſelves. Ships of burden came up cloſe to its fine quay, which is a very noble work.

The county of **TIPPERARY** is bounded on the E. by *Queen's-county*, and the county of *Kilkenny*, on the S. by thoſe of *Cork*, and *Waterford*, on the W. by the county of *Limeric* and the river *Shannon*, and on the N. and N. E. by *King's-county* and the territory of the *O'Carrols*. It is of a very irregular form, but is computed to be ſixty miles in length, and thirty-ſix in breadth. The whole county was once a palatinate, under the ſeparate juriſdiction of the *Ormond* family.

This county is ſubdivided into fourteen baronies, and has four boroughs, with ſeveral other market towns. It ſends eight members to parliament, namely, two for the county, and two each for the city of *Caſhel*, and the boroughs of *Clonmel* and *Fethard*.

The S. part of this county produces much corn, and is well inhabited; both that and the W. point abound in good paſtures and fine ſheep-walks, which furniſh the greateſt and beſt flocks of ſheep in *Ireland*; but the N. part is very mountainous and barren.

CASHEL, the only city of this county, and the ſee of an archbiſhop, ſtands eighty miles S. W. of *Dublin*. It has been ſtyled a good town, but a poor city; and is ſaid to contain between five and ſix hundred houſes. Here *Henry* II. held a ſynod. The cathedral, which ſtands upon the rock of *Caſhel*, is both the largeſt and moſt ancient in the kingdom. This rock of *Caſhel* was formerly choſen for the reſidence of the kings of *Munſter*, and commands an extenſive view of the moſt fertile country in the iſland.

The county of **LIMERIC** is bounded on the N. by the *Shannon*, on the W. by the county of *Kerry*, which ſeparates it from the *Atlantic* ocean; on the S. by the counties of *Kerry* and *Cork*, and on the E. by *Tipperary*. It is about twenty-three miles from N. to S. and forty-eight from E. to W. It is ſubdivided into ten baronies, contains three boroughs, and ſends eight members to parliament, namely, two for the county and two for each of the following towns, *Limeric*, *Aſkeyton*, and *Kilmallock*.

LIMERIC, the county town, was, within a century paſt, reckoned the ſecond place in *Ireland*, at preſent it is not half ſo large as *Cork*. "It has loſt its rank," ſays a judicious obſerver, "not becauſe it thrives leſs, but becauſe *Cork* thrives more than heretofore, for it is in ſo flouriſhing a ſtate that it has taken the lead of *Gallway* and *Waterford*. *Survey of the S. of Ireland*, p. 214. It conſiſts of what is called the *Iriſh* and the *Engliſh* town. The latter ſtands upon a piece of ground called "the king's iſland," which is formed by the *Shannon*; the two towns are united by an old bridge called *Boals*; on the ſame arm of the river, is a modern bridge of three arches, communicating with the quays and the new ſtreets; there is a third bridge called *Thomonds*, which is thrown over the greater arm of the river. *Limeric* is a place fortified by nature, being built on an iſland, encircled by the arms of the *Shannon*, but is now diſmantled, and ſcarce a trace of its old walls and ſeventeen gates are to be ſeen; the ſubſtitution of ſpacious quays and commodious houſes, for lofty battlements and maſſive baſtions has given it a thorough and healthy ventilation, to effect which they have obtained liberal grants from parliament. Here was once a manufacture of ſerges, now in a low ſtate, but the town is at preſent famous for its manufacture of gloves, and ſome ſoldiers of the N. of *Ireland*, who were diſbanded here, have introduced the weaving of linen. Very capital canals have been formed from hence which have greatly promoted the trade of the place. There are here three churches, a cathedral, and a cuſtom houſe; the latter a very elegant modern ſtructure. In this town a treaty was concluded, in the year 1691, which was called the conditions of *Limeric*, and put an end to the wars of *Ireland*.

The county of **KERRY** is bounded on the S. and E. by the county of *Cork*, and on the W. by the *Atlantic ocean*, extending ſixty miles in length, and forty-ſeven in breadth. It is ſubdivided into eight baronies, and ſends eight members to parliament, namely, two for the county, and two for each of the boroughs of *Trailey*, and *Ardfert*.

The principal places it contains are *Trailey* and *Dingle*.

SECT. IV.

Of the Province of LEINSTER; *containing the Counties of* Louth, Eaſt-Meath, Weſt-Meath, Longford, Dublin, Kildare, King's-County, Queen's-County, Wicklow, Catherlagh, Kilkenny, *and* Wexford. *The City of* Dublin.

THIS province is waſhed on the S. and E. by the ſea, and is much indented by the provinces of *Munſter*, *Connaught*, and *Ulſter*; the two former of which bound it on the W. and S. W. and the latter on the N. It is ſeparated from *Connaught* by the *Shannon*, and from a part of Munſter by the *Suir*, extending in length about an hundred and twelve miles from the moſt northern parts of *Eaſt-Meath* to the ſouthern point of *Wexford*; and about ſeven in breadth from *Wicklow* to the moſt weſtern part of the *King's-county*; its circuit, including the turnings and windings, is computed at about three hundred and ſixty miles. It is the moſt level part of *Ireland*, and the beſt cultivated.

This province is divided into the counties of *Louth*, *Eaſt-Meath*, *Weſt-Meath*, *Longford*, *Dublin*, *Kildare*, *King's-county*, *Queen's-county*, *Wicklow*, *Catherlagh*, *Kilkenny*, and *Wexford*; containing ninety baronies, and nine hundred and twenty-ſix pariſhes, under one archbiſhop and three biſhops, with forty-ſeven parliamentary boroughs. The market-towns, and other places of trade, amount to ſixty-three.

The principal rivers of this province are the *Barrow*, the *Boyne*, the *Nure*, the *Liffey*, the *Slaine*, and the *May* in *Queen's-county*, which falls into the *Shannon*.

The county of LOUTH, which was formerly reckoned a part of *Ulſter*, is waſhed on the E. by *St. George's* channel; on the S. E. is bounded by *Meath*, from which it is parted by the *Boyne*; on the W. it has *Monaghan*, and *Eaſt-Meath*; and on the N. *Armagh* and *Carlingford bay*. This is the leaſt county in the kingdom, being only twenty-five miles from N. to S. and thirteen, where broadeſt, from E. to W.; but in many places is much ſhorter and narrower. It is divided into four baronies: beſides the towns and liberties of *Drogheda*, which are a diſtinct county, it ſends ten members to parliament, namely two for the county, and two for each of the following boroughs, *Atherdee*, *Carlingford*, *Dundalk*, and *Dunleer*. It is fruitful in corn and paſture. The places of moſt note, as they lie from N. to S. are thoſe which follow:

CARLINGFORD has one of the beſt harbours in *Ireland*; it is ſeated on the S. ſide of a large bay of its own name, where the road is exceedingly good quite to the ſea, as is alſo the harbour, which has room for the whole royal navy of *Great Britain*, ſince it extends three leagues up the country, is two miles broad where narroweſt, and has from ten to twenty fathoms of water. There is a bar, indeed, acroſs the mouth of the main port or bay, but it is even there nine or ten feet deep at low water, and two fathom, more at high tide. It ſtands forty-nine miles N. of *Dublin*. *Carlingford* has a conſiderable trade in *linen* and *linen-yarn*. The town is rather neat than fine, and rather large than populous: it is not a place of ſtrength, except toward the ſea. It has barracks for a company of foot.

DROGHEDA is the largeſt town in the county, and ſeated on a bay of its own name, twenty-ſix miles N. of *Dublin*. It has a good harbour, but it is of difficult entrance. It gives the title of Earl to the family of *Moore*.

The county of EAST-MEATH is bounded on the N. and N. E. by thoſe of *Cavan* and *Louth*; on the E. by *St. George's-channel*; on the S. by the counties of *Kildare* and *Dublin*; and on the W. by *Longford* and *Weſt-Meath*; extending thirty-two miles from N. to S. and twenty-five from E. to W. It is ſubdivided into eighteen baronies, and ſix boroughs, which ſend two members each to parliament, beſide thoſe for the county; theſe are *Trim*, *Athboy*, *Navan*, *Kells*, *Duleck*, and *Ratoath*. It gives the title of Earl to the family of *Brabazon*.

The principal town in this county is *Trim*, which is ſituated on the *Boyne*. It had formerly a caſtle, and was walled. It ſtands twenty-three miles N. W. of *Dublin*.

The county of WEST-MEATH is thus called from its being ſituated to the W. of the former, and extends W. to the *Shannon*, which parts it from *Roſcommon*: it alſo lies between *Longford* on the W. and *King's county* on the S. According to ſome writers it extends forty miles in length, and twenty in breadth, while others contract its extent within narrower bounds. It contains thirteen baronies, and ſends ten members to parliament, namely, two knights of the ſhire, and two burgeſſes each for *Mullingar*, *Fore*, *Athlone*, and *Killbeggan*.

It gives the title of earl to the family of *Nugent*.

ATHLONE, is ſeated about fifty miles W. of *Dublin*, on the banks of the *Shannon*, over which it has a bridge, which leads into the county of *Roſcommon*. The parts of the town on each ſide the river are in different pariſhes, with but one church, and that on the *Leinſter* ſide, built by a grant of parliament. On the *Roſcommon* ſide is the old caſtle, a barrack for a regiment of dragoons, and a charter ſchool for twenty boys and as many girls. It is a place of conſiderable ſtrength: being reckoned the key of *Connaught*. General *Ginkle*, for his bravery and conduct in taking this town, was created earl of *Athlone*, by *William* III. and the title is ſtill enjoyed by his deſcendants, who reſide in *Holland*.

The county of LONGFORD is bounded on the E. and S. by *Weſt-Meath*; on the W. by the *Shannon*, which ſeparates it from *Roſcommon*; on the N. W. by *Leitrim*; and on the N. by *Cavan*: extending twenty-ſeven miles in length, and ſixteen in breadth. It is ſubdivided into ſix baronies, and contains twenty-four pariſhes, four boroughs, and ſends ten members to parliament, namely, two for the county, and two for each of the following towns, viz. *Longford*, *Granard*, *Laneſborough*, and *St. John's-town*.

The county of DUBLIN is bounded on the E. by *St. George's channel*; on the S. by the river *Bray*, which parts it from *Wicklow*; on the W. by the county of *Kildare*; and on the N. by *Eaſt-Meath* and the river *Nenny*. Its greateſt extent from N. to S. is twenty-ſix miles, and from E. to W. fifteen.

It is divided into ſix baronies, and ſends ten members to parliament, namely, two for the county, two for the city of *Dublin*, two for its univerſity, two for the borough of *Swords*, and two for that of *Newcaſtle*.

DUBLIN is pleaſantly ſeated at the mouth of the little river *Liffey*, in 53°. 21'N. latitude, and in longitude, 6°. 7.'W. from *Greenwich*, ſeventy-four miles to the W. of *Holyhead* in *Wales*, and two hundred and ſixty-eight to the N. W. of *London*. This is the mart and centre of commerce for the whole kingdom, excepting ſuch ports as are eminent for ſome particular branch of trade; though its harbour is ſo far from being commodious that it has a bar at its mouth, ſo that ſhips of great burden cannot venture in; nor can thoſe which are able to paſs the bar, come up loaded to the quays, they being obliged to lie at *Poolbeg*, three miles below *Dublin*, and to deliver their goods by lighters. Great pains and expence have, however, been beſtowed in order to render this bay as ſafe and commodious as poſſible: banks faced with ſtone have been extended for a conſiderable length on both ſides, and a new wall built on the S. By theſe means, a great extent of land which uſed to be overflowed every high tide, has been taken from the bay, in order to render the harbour deeper; and to prevent ſhips leaving the proper channel, a double row of piles has been fixed, between which ſhips may ſail in the utmoſt ſecurity.

The caſtle of *Dublin* was an ancient ſtructure, conſiſting of ſeveral round towers of ſtone, mouldering into ruins, but has been rebuilt in a magnificent manner; and contains many ſtately apartments. It ſtands on an elevated ſpot, and is the reſidence of the lord lieutenant. It conſiſts of two large courts, called the upper and lower caſtle yard. In the low court is the treaſury and ſome other public offices.

The *quays* of *Dublin* are its principal beauty; they lie on each ſide the river, which is banked and walled in the whole length of the city. From the river to the houſes on each ſide is the breadth of a wide ſtreet; the buildings thus fronting each other with the river in the centre produce a grand effect. The *Liffy* runs about two miles almoſt ſtraight through the city, but it is not more than one fourth as broad as the *Thames* at *London*; over it are thrown five bridges, of which *Eſſex* and *Queen's* are very handſome modern buildings of white ſtone, which is procured near the city; the other three are mean ſtructures. On the S. ſide of the river is a noble cuſtom-houſe; there is alſo an elegant *Exchange*, of white ſtone, richly embelliſhed with ſemi columns of the *Corinthian* order, a cupola and other ornaments.

To the E. of the caſtle is a ſpacious area, on one ſide of which is the parliament-houſe, the front of which is ſupported by very lofty columns; theſe are extended on each ſide in the wings, which reach to the ſtreet. Theſe columns riſe almoſt to the top of the building, which is terminated by a very large and grand entablature.

Near the parliament-houſe is Trinity-college, an univerſity conſiſting of only one college, and founded by queen *Elizabeth* in the year 1591. Its revenue has been ſince encreaſed by ſeveral donations. The building conſiſts of two ſquares, one behind the other, in the whole of which are thirty-three buildings of eight rooms each; three ſides of the farther ſquare are of brick, the fourth is a moſt ſuperb library, which being built of very bad ſtone is now mouldering away. A great part of the books on one ſide were collected by archbiſhop *Uſher*, who was one of the original members of this body, and unqueſtionably the moſt learned man it ever produced. The univerſity has alſo an elaboratory, and an anatomy-houſe in which are great numbers of ſkeletons and curioſities in anatomy, particularly a mummy remarkably perfect, the ſkeleton, between ſeven and eight feet high, of one *Magrath*, who was born near *Cloyne*. This man was carried through various parts of *Europe*, and exhibited as the prodigious *Iriſh* giant; but ſuch was his early imbecility, both of body and mind, that he died of old age in his twentieth year. Here is another ſkeleton of one *Clark*, a native of *Cork*, who was called "the oſſified man." Early in life his joints ſtiffened, and by degrees his very organs of life were converted into bone.

The number of ſtudents here is very variable, ſometimes about four hundred. The original foundation conſiſted of a provoſt, three fellows, and three ſcholars: theſe have from time to time been augmented to twenty-two fellows, twenty ſcholars, and thirty ſizers. Of the fellows, ſeven are called ſeniors, and in them is lodged the government of this whole body, ſubject however to the provoſt's control, whoſe conſent muſt be given to render any act valid. Fellowſhips are loſt by marriage: a ſenior fellowſhip is ſuppoſed to be worth about 700l. per annum, the provoſtſhip 3000l.

The number of inhabitants in *Dublin* is computed at about 150,000, and the number of houſes at 13 500; the city is diſtributed into twenty pariſhes. The buildings in *Marryous ſquare* are in a very elegant ſtyle. Near it is *Stephen's green*, round which is a gravel walk of near a mile in circuit, and is a place of faſhionable reſort. The duke of *Leinſter's* houſe is a very auguſt pile of building.

Among the churches, the cathedral, dedicated to *St. Patrick*, is a fine old *Gothic* ſtructure, famous for its curious workmanſhip within, arched roof, and high ſteeple, and alſo for its moveable pulpit, which, till the people are ſeated, and divine ſervice is ready to begin, ſtands in a corner of the church; but, to the ſurpriſe of the ſtranger, is removed into the great iſle frequently without being obſerved; and the miniſter appears in a pulpit, where a minute or two before was an open ſpace. To this cathedral belong a dean, chanter, chancellor, treaſurer, two archdeacons, and twenty-two prebendaries.

At the W. end of the town are the *Barracks*, which are very handſome and extenſive rough ſtone buildings, ſituated upon an eminence, and ranged in ſeveral fronts and wings, joined together. They are capable of receiving 3000 foot, and 1000 horſe.

A little beyond the barracks is the *Phœnix-park*, of larger extent than *Hyde-park*, but deficient in its umbrageous beauties; it conſiſts of a pleaſing variety of hills and vales, has ſome thorns and clumps of elms, and is ſtocked with deer. A commodious road extends through it to the ring, where it encircles a very fine *Corinthian* column, bearing on the top a phœnix in flames, erected by the late earl of *Cheſterfield* when lord lieutenant of *Ireland*. Hither a train of the nobility and gentry go in their coaches on ſummer evenings, and make a very ſplendid appearance. In the park there are alſo very handſome ſeats for thoſe who walk.

Oppoſite the barracks W. of *Dublin*, ſtands the Hoſpital of *Kilmainham*, founded by *Charles* II. a very noble ſtructure, in which there are apartments for old and diſabled ſoldiers, who are maintained here, in much the ſame manner as at *Chelſea*.

At a ſmall diſtance from the above edifice is *Stephens'* hoſpital, founded by *Dr. Stephens* and his ſiſter, a maiden lady, for the cure of all ſick and wounded perſons who are objects of charity. This is a neat and elegant ſtructure, and is endowed with a great revenue.

Near it is the hoſpital for idiots and lunatics, erected in purſuance of the will of *Dean Swift*.

Beſide theſe truly charitable and humane endowments, there are ſeveral other hoſpitals, or infirmaries, for the ſick and wounded, particularly, the *Charitable Infirmary*, *Mercer's hoſpital*, and the *Meath hoſpital*; with one particularly appropriated to the uſe of incurables; a *Lying-in-hoſpital*, founded by the exertions of *Dr. Moſs*, a phyſician in *Dublin*, whoſe widow and family have been frequently the objects of parliamentary liberality.

One of the moſt conſiderable of the charitable foundations of this city is the *Poor-houſe*, in which a great number of old and decayed perſons are maintained; infants are alſo received, brought up, educated, and inured to labour. For this charity the *Iriſh* parliament grants a ſum of money annually. The *Blue-coat-hoſpital* and *Free-ſchool* were erected in 1680 by *Charles* II. for educating, maintaining, and putting out apprentices to trades or ſea-ſervice the ſons of the reduced citizens of *Dublin*.

The city is governed by a lord mayor, who is granted a conſiderable ſum to enable him to ſupport the dignity of his office; he wears a collar of SS. there are alſo twenty-four aldermen. Every third year the city and its ſuburbs are ſurveyed by the lord mayor and twenty-four companies.

In this city a ſociety for the encouragement of Arts, manufactures, huſbandry, and commerce, was eſtabliſhed in the year 1749, which has been highly beneficial to the country, and is now very reſpectable. In the beginning of the year 1786, a royal academy, for the advancement of Science, polite literature, and antiquities, was incorporated by letters patent, of which his Majeſty is patron. Here is likewiſe a national bank, which was incorporated in 1783.

The county of KILDARE has thoſe of *Dublin* and *Wicklow* on the E. the *King's* and *Queen's counties* on the W. *Catherlagh* on the S. and *Eaſt-Meath* on the N.; extending twenty-three miles from E. to W. and thirty-ſeven from N. to S.; but both are very unequal, it running in a narrow ſlip between the counties of *Dublin* and *Wicklow*, and between the latter and *Queen's-county*.

It is divided into ten baronies, and ſends ten members to parliament, namely, two for the county, and the ſame number for each of the following towns, viz. *Kildare*, *Naas*, *Harriſtown*, and *Athy*.

KING'S-COUNTY was formerly called *Offaly*, but had its preſent name in honour of *Philip* II. of *Spain*. It is bounded on the E. by *Kildare*; on the S. by *Tipperary* and *Queen's-county*; on the W. by part of *Tipperary* and *Galloway*, from which laſt it is ſeparated by the *Shannon*; and on the N. by *Weſt-Meath*. According to ſome authors it is thirty ſeven miles from N. to S. and twenty-eight from E. to W.; but, according to others, it is forty-eight miles in length, and fourteen in breadth; however, it is very unequal both ways, and runs with a narrow ſlip betweeen *Tipperary* and *Queen's-county*. It is a populous and well improved county, divided into eleven baronies, and ſends ſix members to parliament, namely, two for the county, two for *Philipſtown*, and two for *Bannagher*.

PHILIPSTOWN, or KINGSTOWN, is the capital of the county, and is ſeated twenty-eight miles W. of *Dublin*. It has barracks for a company of foot, and gives title of baron to the lord viſcount *Moleſworth*.

QUEEN'S-COUNTY, ſo called in honour of the firſt Queen *Mary*, in whoſe reign it was made a county, is bounded on the E. by *Kildare* and *Catherlagh*, on the S. by *Catherlagh* and *Kilkenny*, on the N. and W. by *King's-county* and part of *Tipperary*; extending thirty-five miles in its greateſt length from N. to S. and near the ſame from E. to W. It is divided into ſeven baronies, and ſends eight members to parliament, two for the county, and two each for *Portarlington*, *Maryborough*, and *Ballynekil*.

MARYBOROUGH, or *Queen's-town*, ſtands ſeventy-two miles S. W. of *Dublin*. It was ſo called in honour of Queen *Mary*, and has barracks for a troop of horſe. It gives the title of baron and viſcount to *Molyneux Sefton*.

The county of WICKLOW, which was once a part of that of *Dublin*, is bounded on the E. by *St. George's channel*, on the S. by the county of *Wexford*, on the W. by *Kildare* and *Catherlogh*, and on the N. by *Kildare* and *Dublin*; extending thirty-ſix miles in its greateſt length, and twenty-eight where broadeſt. In this county are very valuable copper-mines.

It is divided into ſix baronies, and ſends ten members to parliament, two for the county, and two each for the towns of *Wicklow*, *Baltinglaſs*, *Carysfort*, and *Bleſſington*.

It is ſomewhat mountainous, but the low lands are fruitful, and, among other advantages, contain a copper mine.

The COUNTY of CATHERLAGH, or CATHERLOUGH, has *Wexford* on the S. part of *Queen's-county* and *Kilkenny* on the W. part of *Kildare* and *Wicklow* on the N. and part of Wicklow and Wexford on the E. lying for the moſt part between the rivers *Barrow* and *Slane.* It extends twenty-eight miles from N. to S. and eighteen from E. to W.; but is very unequal, running with a narrow ſlip between *Kilkenny* and *Wexford.*

It is divided into five baronies, and ſends only ſix members to parliament, namely, two for the county, and two each for the towns of *Catherlagh* and *Old Leighlin.*

The county of KILKENNY is bounded on the E. by *Wexford* and *Catherlagh*, on the S. by *Waterford*, from which it is parted by the *Suir*; on the W. by *Tipperary*; on the N. W. by *Upper Oſſory*; and on the N. by *Queen's-county.* Its greateſt extent from N. to S. is forty miles, and from E. to W. twenty. It comprehends ten diſtricts and baronies, and ſends ſixteen members to parliament; namely, two for the county, two for the city of *Kilkenny*, and two for each of the following towns, *St. Cannice*, or Iriſh-town, *Gowran*, Thomas-town, *Eniſteage*, *Callen*, *Knocktopher.*

This is a plentiful county, ſo populous as to be adorned with more towns and caſtles than any in the kingdom; and, though it is mountainous in the S. part, is ſaid to have fire without ſmoke, earth without bog, water without mud, and air without fog: thus having all the four elements in perfection, it is eſteemed an healthful as well as pleaſant county. It is remarkable for its *coal* mines, as well as for its quarries of marble. Theſe coals are univerſally prized for the purpoſe of drying malt, becauſe they emit no ſmoke. A fire made of them yields a very intenſe heat; it does not blaze but glow, looking like lumps of red hot iron. Near *Oſſory* are the mountains called *Sliewbloamy*, or *Bladinhills*, out of which ſpring the *Suir*, or *Shure*, the *Nure*, and *Barrow.* They deſcend in three ſeveral channels, but join in one before they fall into the ſea. The *Neor*, or *Neure*, divides this county into two parts. "The peaſants of the county," ſays a late writer, "are the moſt comely breed of men: they are generally middle ſized, and have almoſt univerſally, dark brown hair, and eyes of the ſame colour: their complexions are clear, their countenances grave, and their faces of that oval character which the *Italian* painters ſo much admired." *Survey of the S. of Ireland*, p. 110.

KILKENNY, the county town, once a biſhop's ſee, is delightfully ſeated on the *Neure*, fifty-ſix miles S. S. W. of *Dublin.* It has two ſtone bridges over the river, and its ſtreets are paved with marble, for want of any other ſtone in the neighbourhood. The only manufactures here are for coarſe cloths, and fine blankets. It is deſcribed as the beſt inland town in the kingdom. It ſtands on two hills, on one of which is the old caſtle of the *Ormond* family, on the other the Cathedral, a venerable gothic edifice, but without a ſpire, near to which is a round tower of great antiquity; there are alſo three other towers, the remains of abbies now in ruins, called *St. John's*, *St. Francis's*, and the *Black abbey.* The town conſiſts of between two and three thouſand houſes, and only two churches; but there are ſeveral maſs-houſes, each of which has a congregation vaſtly more numerous than thoſe of the two churches. The caſtle, whoſe magnificence was heightened by the ſublimity of the ſituation, has been gradually falling into decay ſince the attainder of the laſt duke of *Ormond.* Here that family reſided; and the unfortunate duke kept a court, as ſeveral of his predeceſſors had done, in a ſtyle much more magnificent than any of the modern viceroys. The endowed ſchool here is called a college.

The laſt county in the province of *Leinſter*, is that of WEXFORD, which is bounded on the N. by *Wicklow*, on the E. S. and S. W. by *St. George's-Channel*; and on the W. by *Catherlagh* and *Kilkenny*, extending forty-ſeven miles from N. to S. and twenty-ſeven from E. to W. It is divided into eight baronies, and ſends eighteen members to parliament; namely, two for the county, and the ſame number for each of the following boroughs, viz. *Wexford*, *New Roſs*, *Enniſcorthy*, *Fethard*, *Newborough*, *Bannow*, *Clomines*, and *Taghmon.* The principal towns in this county are *Roſs*, *Duncannon*, and *Wexford.*

SECT. V.

Of the Province of CONNAUGHT; *containing the Counties of* Thomond *or* Clare, Galway, Mayo, Roſcommon, Sligo, *and* Leitrim.

THIS province is ſeparated from thoſe of *Munſter* and *Leinſter*, on the S. and E. by the *Shannon*, and is bounded on the N. and W. by the ocean. It is one hundred and thirty miles in length from *Cape Leon*, the moſt ſoutherly point of *Clare*, to the N. part of *Leitrim*; about eighty-four in breadth, from the E. point of *Leitrim*, to the *Black Harbour* in the W. part of *Mayo*; and about five hundred in circumference.

It has many convenient bays and creeks, but few rivers of conſiderable note, except the *Shannon.*

This province contains one archbiſhoprick, five biſhopricks, ſeven market-towns, twelve boroughs that return members to parliament, and three hundred and ſixty-ſix pariſhes; with ſix counties, which are ſubdivided into fifty-one baronies. Theſe counties are *Thomond* or *Clare*, *Gallway*, *Mayo*, *Roſcommon*, *Sligo*, and *Leitrim.*

THOMOND, or the county of CLARE, was formerly joined to *Munſter*, but has been long annexed to *Connaught.* On the E. and S. ſides, it is parted by the *Shannon*, from *Tipperary*, *Limerick*, and a part of *Kerry* in *Munſter*; on the N. it is bounded by the county of *Gallway*; and on the W. by the *Atlantic* ocean. It is about fifty-five miles from N. to S. and thirty-eight from E. to W.; and is ſuppoſed to contain ten thouſand houſes. It is divided into nine baronies, and but one borough, which is that of *Ennis*; it therefore ſends but four members to parliament.

The county of GALLWAY is bounded on the E. and S. E. by part of *Roſcommon*, *King's-county* and *Tipperary*, from the two laſt of which it is parted by the *Shannon*; on the S. by the county of *Clare*; on the W. by the *Atlantic* ocean; and on the N. and N. E. by *Mayo*, *Meath*, and *Roſcommon.* It is eighty-two miles from E. to W. and forty-two from N. to S.; and is divided into ſeventeen baronies, and ſends eight members to parliament; namely, two for the county, two for the towns of *Gallway*, *Athenry*, and *Tuam.* The river *Shannon* here forms a lake ſeveral miles in length; and *Lough Corrib*, which runs into the bay of *Gallway* a little above the city, is twenty miles long, and in ſome places five broad. It is much indented with little bays, and bordered all along with a mixture of verdant iſlands and rugged rocks, among which are three iſlands called *South Arran*, which give the title of Earl to the family of *Gore.*

MAYO is bounded on the F. and N. E. by *Roſcommon* and *Sligo*; on the S. and S. E. by *Gallway*; and on the W. and N. by the *Atlantic* ocean; extending ſixty-two miles from N. to S. and fifty-two from E. to W. It is divided into nine baronies, in which there is but one borough town, and it ſends only four members to parliament; two for the county and two for *Caſtlebar.*

ROSCOMMON is bounded on the E. by *Longford* and *Eaſt-Meath*; on the W. by *Sligo* and *Leitrim*; on the S. by *Gallway* and *Mayo*; and on the W. by another part of *Gallway* and *Mayo*; extending fifty miles from N. to S. and twenty eight from E. to W. It is ſubdivided into ſix baronies; it ſends eight members to parliament, two for the county, and two each for *Roſcommon*, *Boyle*, and *Tulſk.* The town of ROSCOMMON is a mean place, conſiſting chiefly of one ſtreet; yet here are kept the ſeſſions-houſe and jail. It gave the title of Earl to the family of *Dillon*; but the title has for many years lain dormant, and is probably now extinct.

Boyle is a good market-town and a corporation, by the lake *Key*, near the borders of *Sligo.* It is a place of ſome trade, and is remarkable for an old abbey, of which only the ruins now remain. It has alſo a fine ſeat, which belonged to the late lord *Kingſborough*.

SLIGO is bounded on the eaſt by the county of *Leitrim*; on the ſouth and ſouth-weſt by *Roſcommon* and *Mayo*; and on the north and north-weſt by the *Atlantic ocean*; extending thirty-five miles in length, and as much in breadth. Great part of this country is mountainous, and covered with bogs; but the lower grounds have a good ſoil, proper for grazing. It is ſubdivided into ſix baronies, and contains forty-one pariſhes, and about five thouſand nine hundred and ſeventy houſes. It has but one borough, and ſends four members to parliament; two for the county, and two for the town of *Sligo*.

SLIGO, the county town, is ſeated on a bay of the ſame name, a hundred and ten miles to the north-eaſt of *Dublin*, and is the only town of note in the county. It has a very commodious harbour, and ſhips of two hundred tons burthen may come up to the quay. Here is alſo a good caſtle. The town is populous, but not large; nor is the trade conſiderable, though much better than in any other place beyond it.

A mile from *Caſtle-connor*, in this county, is a round hill, an entrance into which was diſcovered in 1646, leading to quadrangular chambers, arched over. The caves of the rock of *Corin* are equally remarkable, where, within a ſteep and almoſt inacceſſible entrance, are many ſtrange receſſes. Before theſe caves is a path, about a hundred paces in length, alſo cut out of the rock. This work, which is called the *Giant's houſe*, is ſuppoſed to be formed either by the ancient *Iriſh* or *Danes*.

The county of LEITRIM is bounded by *Sligo* on the weſt and ſouth-weſt; by *Donegal* bay on the north; by *Longford*, in *Leinſter*, on the ſouth-eaſt; and by the counties of *Fermanagh* and *Cavan* on the eaſt and north-eaſt. It is forty-four miles in length, but only eighteen in breadth; and is a wild mountainous country, but abounds in graſs, which feeds a prodigious number of cattle. It is divided into five baronies, and contains twenty-one pariſhes, about four thouſand houſes, two boroughs, and ſends ſix members to parliament; two for the county, and two each for *Jameſtown* and *Doumruſk*.

Leitrim, the county town, ſtands near the *Shannon*, which riſes in this county; but the town is decayed, and of little conſequence.

SECT. VI.

Of the Province of Ulſter; *containing the Counties of* Down, Armagh, Managhan, Cavan, Fermanagh, Tyrone, Antrim, Londonderry, *and* Donegal; *their* Situation, Extent, Lakes, Rivers, Soil, Produce, Mountains, *and principal* Towns; *with a particular Deſcription of the* Giants Cauſeway.

THIS province is encompaſſed on three ſides by the ſea, it being bounded on the eaſt by *St. George's Channel*; on the north by the *Northern ocean*; on the weſt by the *Atlantic ocean*; on the ſouth-weſt by the province of *Connaught*; and on the ſouth by that of *Leinſter*; and is about a hundred and ſixteen miles in length, and a hundred in breadth. It is ſubdivided into fifty-five baronies, and contains nine counties, twenty-nine boroughs, three hundred and ſixty-five pariſhes, and about a hundred and fifteen thouſand five hundred inhabitants, with one archbiſhopric, and ſix biſhoprics.

The air is temperate and ſalubrious, being cooled by various winds in ſummer, and qualified by moderate rains in winter. It has many great lakes and rivers that abound with fiſh, many woods, plenty of corn and graſs, with a great number of black cattle and ſome ſheep.

The principal rivers and lakes are the following: the river RANN, which riſes in the county of *Down*, receives the river *Tanwagee*, paſſes through *Lough-Neagh*, and after dividing the counties of *Antrim* and *Londonderry*, falls into the *Northern ocean* a little below *Coleraine*.

LOUGH-FOYLE, which paſſes by *St. John's-Town* and *Londonderry*, and forms a bay of the ſame name at its entrance into the *Northern ocean*.

The SWILLY, in the county of *Donegal*, alſo falls into the ſame ocean, with a kind of lake.

LAGAN-WATER, in the county of *Down*, paſſes by *Dromore*, *Liſburn*, and *Belfaſt*, into the bay of *Carrickfergus*.

NEWRY-WATER parts *Down* from *Armagh*, and falls into *Carlingford bay*.

This country is too much overrun with wood, which calls for the induſtry of the inhabitants to clear away; and the low grounds, where the drains are neglected, ſoon degenerate into bogs; but on thoſe ſpots which are carefully cultivated, good crops of oats are produced, and, where marl is found, barley is raiſed. The ſtaple commodity of this country is the *linen manufacture*, which has been of the greateſt benefit to all ranks of people. Hence this province may be ſaid to be in general populous, flouriſhing, and daily increaſing in the number and wealth of its inhabitants.

Its higheſt mountains are thoſe of MOURNE, the baſe of which terminates on the ſea-ſhore. Among theſe, that named *Slive-Donagh* is three miles in gradual aſcent, and half a mile in perpendicular height. Theſe are reckoned among the higheſt mountains in *Ireland*, and are uſeful land-marks for ſailors. They afford variety of plants, and many ſprings: beſides, a multitude of cattle graze on them in ſummer. In one of them are quarries of mill-ſtones, and in another are found cryſtals. Theſe mountains are famous for the goats whey, preſcribed by phyſicians for ſcorbutic and nephritic ailments, as alſo for diſorders of the lungs; and in *April*, *May*, and *June*, are much frequented by the gentry of both ſexes, many of whom have found relief; the ſhrubs and medicinal herbs which grow here, affording the fitteſt nouriſhment to thoſe animals. There has been a pearl-fiſhery on the river *Bann*, but it is not now much attended to.

This province is divided into the nine following counties, *Down*, *Armagh*, *Monaghan*, *Cavan*, *Fermanagh*, *Tyrone*, *Antrim*, *Londonderry*, and *Donegal*.

The county of DOWN is bounded on the eaſt and ſouth by *St. George's Channel*; on the weſt by the county of *Armagh*; and on the north by the county of *Antrim*. It lies oppoſite to the *Iſle* of *Man*, the counties of *Cumberland* and *Weſtmoreland*; and the north part of it fronts the *Mull* of *Galloway*, which is viſible at about five leagues diſtance. It is about forty-four *Engliſh* miles in length, upward of thirteen in breadth, and divided into ſeven baronies, which contain about nineteen thouſand two hundred and ſeventy houſes, ſeventy-two pariſhes, and ſends fourteen members to parliament, namely, two for the county and twelve for the ſix following boroughs, *Newry*, *Downpatrick*, *Newtown*, *Killeleagh*, *Bangor*, and *Hillſborough*.

NEWRY is a borough and market-town on the ſide of a ſteep hill, at the bottom of which runs the *Newry-water*, having over it two ſtone bridges, one on the road from *Dublin*, from which it is forty-nine miles diſtant, and another in the way to *Armagh*. The turnpike-road from *Dublin* to *Belfaſt*, *Antrim*, and *Armagh*, goes through the town; and here is a lock of a canal, formed by parliamentary encouragement; and over this canal is a third bridge. The town has ſuffered greatly by the rebellions that have happened in this province; and was burnt down by the duke of *Berwick* in 1689: but it is now ſo much improved in its trade and buildings, that it is the largeſt town in the county. At one end of it is a ſpacious church ſeated on a hill, and at the other a ſchool-houſe near the river. It carries on a larger trade than any other town in the county, to which the increaſe of the *linen manufacture* has greatly contributed. It has alſo a manufacture of earthen-ware, and houſes for baking of ſugar. It has likewiſe received great benefits reſpecting trade from the navigable canal juſt mentioned. In its neighbourhood is plenty of a hardy gritty free-ſtone, which is eaſily cut into ſquares, and is uſed for building. There is alſo a caſtle built on an eminence, to command the head of the bridge, which was formerly a conſiderable paſs, to ſecure the road through the bogs and mountains between *Dundalk* and this town. It is almoſt encompaſſed with mountains, except to the north, where it opens into a good country, through which the new canal is carried.

ROSTREVOR is a ſmall town, with a church, on the north ſide of *Carlington* harbour, defended from the winds by the hills, which are cloathed with wood; and an arm of the ſea forming a noble baſon at the foot of theſe hills, affords an agreeable proſpect. Here is a quay for ſhips, which ſafely ride at anchor within a few yards of the ſhore, a ſalt-houſe, and a pottery for white earthen-ware, made of the fine potters clay found near *Carrickfergus*.

Rathfryland, or **Rathon-island**, probably ſo called from *Rath*, a high fort on an iſland, it riſing above all the neighbouring grounds. It ſtands on a hill, where four great roads, laid out in almoſt ſtraight lines, lead up to it, and meet in the centre of the town, at one end of which is the church, built on a rock of free-ſtone; and at the higheſt point of the hill are the ruins of a caſtle, and on its ſide is a warren well-ſtocked with excellent rabbits. This is one of the greateſt marts for linen in this county. Two miles from it is a ſmall pleaſant lake, which hath on the verge of it a large plantation of young foreſt trees, called *Ballyrony*.

Killoch, or **Port St. Ann**, is a town with a commodious harbour on the north-eaſt ſide of *St. John*'s-*Point*. A rock ſtands in the middle of the entrance of the harbour, which is covered at half flood; but there is a ſecure paſſage either to the eaſt or weſt of it. A mile within that rock, on the weſt ſide, is a quay and baſon for ſhips, where they may lie defended from all winds. In this town is a neat chapel, barracks for two troops of dragoons, a *Proteſtant* charter working ſchool for the linen manufacture, &c. and ſalt works: but its principal trade at preſent ariſes from the exportation of barley, and the importation of moſt ſorts of commodities conſumed in the adjacent country.

Downpatrick, which ſignifies *Patrick*'s *Mount*, ſtands five miles from *Killogh*, and is eſteemed one of the moſt ancient places in the kingdom. It is a market-town and biſhopric, erected in the fifth century by *St. Patrick*; but is now united to the ſee of *Connor*. Within two hundred paces of the town, on the aſcent of a hill, are the ruins of an old cathedral, remarkable for a tomb, which contained the body of *St. Patrick*, *St. Bridget*, and *St. Columb*; and there were anciently four religious houſes, beſides the cathedral, in and near the town. It is ſituated on a branch of the lake of *Strangford*, and is adorned with ſeveral handſome public buildings; the pariſh-church is lately rebuilt, and it has a ſeſſions-houſe, the dioceſe ſchool, and an alms-houſe for old and decayed *Proteſtants*, with an *Engliſh* ſchool for forty children, who are cloathed and educated in the *Proteſtant* religion; the two laſt built and endowed by *Edward Southwell*, *Eſq*; who was principal ſecretary of ſtate for *Ireland*; an alms-houſe for three clergymen's widows, with good gardens, and twenty pounds per annum for each of them; a barrack for a troop of dragoons, and a large market-houſe. From this place the family of *Dawny* have the title of viſcount.

Here is a variety of fine proſpects from the ſouth branch of *Strangford* lake. Among the hills and many iſlands are flights of ſwans and other water-fowl, and the lake abounds with good ſalmon, mullet, and other ſea-fiſh. Over a branch of the lake, upon the road to *Killeleagh* and *St. Field*, is a handſome ſtone bridge of ſix arches. About a mile from the town is *St. Patrick*'s well, to which, at certain ſeaſons of the year, many thouſand people reſort, ſome in expectation of receiving benefit from the water bleſſed by that ſaint, others to perform a penance enjoined by the *Popiſh* prieſts.

Strangford is a ſmall but ancient town, belonging to the earl of *Kildare*, ſeated on the river *Strangford*, five miles from *Down*, and is ſo called from the great rapidity of the tides here, it being reckoned the ſtrongeſt current in *Europe*. It gives the title of viſcount to the family of *Smythe*. The ſea runs here both at flood and ebb like a ſluice, at the rate of ſix knots, or miles, an hour. The lake is near four miles broad at a medium, and about ſeventeen long. It abounds with many kinds of excellent fiſh, as baſs, mullets, whitings, large ſea trouts, oyſters, lobſters, ſhrimps, &c. and there are great quantities of kelp burnt on the iſlands in the lake, and on the ſtony flat coaſts.

Bangor, a market-town on *Carrickfergus* bay, ſix miles from *Carrickfergus*, is governed by a provoſt and twelve burgeſſes, who elect the members of parliament. It is remarkable for a very old abbey, and the firſt church built of ſtone in the province of *Ulſter*; alſo for being the landing-place of duke *Schomberg*, when ſent againſt the rebels in 1689. The town contains about two hundred houſes, has little trade, but ſpins conſiderable quantities of fine linen yarn. It has ſome noble ruins of an ancient abbey, and the walls of an old cuſtom-houſe.

Belvoir, a pleaſant ſeat of the honourable *Arthur Hill*, *Eſq*; three miles from *Belfaſt*. The avenue to it is wide and handſome; the gardens adorned with regular canals, caſcades, ſlopes, and terraces; the kitchen garden is encloſed with eſpaliers; part of the garden lies over the *Lagan* river, and at a ſmall diſtance is a neat church.

Killeleagh is ſeated on an arm of the lake of *Strangford*, ten miles from *Newtown*, and is agreeably built upon a riſing ground, commanding a proſpect of part of the lake. The caſtle ſtands at the head of the ſtreet; and at the lower end is a little ſafe bay, where ſhips lie ſheltered from all winds. On one ſide is a ſmall river running under a ſtone bridge into the ſea. Adjoining to the caſtle are gardens and plantations. This borough is governed by a provoſt, who, with twelve burgeſſes, elect their repreſentatives in parliament. Here the linen manufacture has ſpread to advantage, and it is remarkable for its fine white thread. Here is a barrack for a troop of dragoons, a handſome church, and a good parſonage-houſe. This town gave birth to that eminent naturaliſt and phyſician *Sir Hans Sloane*, who was preſident of the royal ſociety, and died in the year 1752, at the very advanced age of 92. His unequalled collection of curioſities was purchaſed by the *Engliſh* parliament after his death, and forms the *Britiſh Muſeum*, to which many ineſtimable additions have ſince been made.

Hillsborough, a market town, finely ſituated on a healthy gravelly ſoil, in view of the *Maze* courſe, and the town of *Liſburn*. The chief magiſtrate here is called ſovereign, who with twelve burgeſſes elect repreſentatives in parliament. Here are good gardens, and fine plantations, with the ruins of a noble houſe, belonging to the family of *Hill*, to which *Hillſborough* gave the title of viſcount; and in the year 1751, the preſent poſſeſſor was advanced to the dignity of *Viſcount Kilwarlin*, and *Earl* of *Hillſborough*, and obtained an *Engliſh* peerage in 1772: the above ſeat was deſtroyed by an accidental fire. The pariſh church is a ſpacious and well-contrived building, ſeated on a riſing ground, near the ruins of an old manſion-houſe.

Dromore takes its name from its ſituation, it ſignifying the back of a great hill. It ſtands twelve miles from *Belfaſt*, and is a market-town, and the ſee of a biſhop, the cathedral of which was founded by *St. Coleman*, who flouriſhed in the ſixth century. Here is a decent church with a ſteeple, but it has no revenue for the ſupport of the cathedral ſervice; the miniſter of the pariſh, who is treaſurer of *Dromore*, diſcharging the duties of it. Here are two alms-houſes for clergymen's widows of the dioceſe, erected by the contributions of the biſhop and clergy. The dioceſe ſchool is kept here, and near it is an *Engliſh Proteſtant* ſchool, where poor children are trained up in the *Proteſtant* religion, and ſome of them ſet to work; twelve of them are cloathed at the expence of the pariſh. The river *Lagan* divides the town, at the eaſt end of which is a *Daniſh* mount, that is always green, and has its top encircled with a rampart, between eighty and ninety feet over, having a ſtrong battlement and a ſpacious parapet.

The county of **Armagh**, or **Ardmagh**, is ſeparated in part from that of *Down* by the river *Newry*; it is bounded on the ſouth by *Lowth*; on the weſt by *Tyrone* and *Monaghan*; and on the north by *Lough-Neagh*, extending thirty-two miles in length, and ſeventeen in breadth; and is divided into five baronies. It ſends ſix members to parliament; two for the county, two for the city of *Armagh*, and two for the borough of *Charlemont*.

Armagh is ſeated near the river *Kalin*, thirty miles to the ſouth of *Londonderry*. It gives name to the county of *Armagh*, and is the ſee of an archbiſhop, who has the title of primate of all *Ireland*. It was a very ancient and conſiderable city, it being once the metropolis of the whole kingdom; yet is now a ſmall place, but has ſome good houſes, with a very ſpacious church ſeated on the top of a hill, and the ruins of a monaſtery, priory, and the archbiſhop's palace. The hill on which the church is ſeated, affords a view all round of a very delightful country.

The county of MONAGHAN is bounded on the north by *Tyrone*; on the ſouth by *Cavan*; on the ſouth-eaſt by *Louth* and part of *Eaſt-Meath*; on the eaſt by *Armagh*; and on the weſt by *Fermanagh*. It is thirty-two miles in length from north-weſt to ſouth-eaſt, and thirty from eaſt to weſt. It abounds with hills, woods, and marſhes; is divided into five baronies; but ſends only four members to parliament, two for the county, and two for the town of *Monaghan*.

MONAGHAN, the county town, is a ſmall neat place, and has a ſeſſions-houſe in which the aſſizes are held. Here are ſold conſiderable quantities of linen, and it has a thriving trade in other articles.

The county of CAVAN is bounded on the north by *Fermanagh*; on the eaſt by part of *Monaghan*, *Meath*, and *Lowth*; on the ſouth by *Longford* and *Weſt-Meath*; and on the weſt by *Leitrim*; extending forty-ſeven miles from the ſouth-eaſt to the north-weſt, and twenty-five from eaſt to weſt in the broadeſt part. It is divided into ſeven baronies, and gives title of earl to the noble family of *Lambert*. It ſends ſix members to parliament; two for the county, two for *Cavan*, and two for *Belturbet*. It contains thirty-ſeven pariſhes, and about eight thouſand three hundred and twenty houſes. It has ſeveral pleaſant lakes, and much fenny paſture; but in other parts has a rich fertile ſoil, well planted and improved.

BELTURBET is ſeated three miles from *Lough Ern*, and ſtands on the river of that name. It is a ſmall place, but has a conſiderable fair for linen cloth.

CAVAN, the county town, ſtands ſeven miles from *Belturbet*, is larger than that town, but is a place of no great trade.

The county of FERMANAGH is bounded on the north and north-eaſt by *Tyrone*; on the eaſt by *Monaghan*; on the ſouth by *Cavan*; on the ſouth-weſt by *Leitrim*; and on the north-weſt by *Donegal*; extending thirty-eight miles in length, and twenty-four in breadth. It is divided into eight baronies, in which there is not one market-town, and but one borough, which is named *Enniſkilling*; ſo that it returns only four members to parliament.

This county is full of woods and bogs, a third part of it being filled with *Lough-Ern*, the greateſt lake in all this part of *Ireland*, of which we have already given an account in deſcribing the lakes in general.

ENNISKILLING is ſeated in the middle of the lake, where the waters are contracted into the breadth of an ordinary river, and thus continue for ſix miles. At this town is a ſtrong fort, it being a paſs of the greateſt importance from the north part of *Ireland* to the ſouth; and is famous for its obſtinate defence againſt queen *Elizabeth*'s army in 1595, and that of the proteſtants in 1689 againſt king *James*'s forces.

The county of TYRONE, or TIR-OEN, is bounded on the north by *Londonderry*; on the eaſt by part of *Antrim*, from which it is divided by *Lough-Neagh*; on the ſouth and ſouth-weſt by part of *Fermanagh*, *Monaghan*, and *Armagh*; and on the weſt by the river *Liſſer*, which divides it from *Donegal* and part of *Fermanagh*. It is forty-ſix miles in length, and thirty-ſeven in breadth. Though great part of it is rough and mountainous, yet in other parts it is not inferior to many counties in the kingdom for the richneſs of its ſoil, and the goodneſs of its paſtures. It is divided into four baronies, which contain thirty pariſhes, about twelve thouſand ſix hundred and eighty houſes, and ſends ten members to parliament; two for the county, and two each for *Dungannon*, *Strabane*, *Clogher*, and *Augher*.

LOUGH-NEAGH, in this county, is about thirty miles in extent, full of fiſh, and the banks variegated with ſhady groves, meadows always verdant, and rich corn-fields, adorned with gentle hills and pleaſant brooks.

CLOGHER is a city, and the ſee of a biſhop, ſeated in *Lower Tyrone*, founded by *St. Patrick*, and well endowed; but the town is ſmall, and much decayed.

DUNGANNON, which is reckoned the county town, is a place of ſome ſtrength, ſituated upon a hill ſeventy-two miles from *Dublin*, and has a conſiderable trade in linen and linen yarn.

The county of ANTRIM, which is the moſt northern part of all *Ireland*, is bounded by *St. George's Channel* on the eaſt; the county of *Down* on the ſouth-eaſt; part of *Armagh* on the ſouth; *Londonderry* on the weſt, from which it is ſeparated by the river *Bann*; and the *Northern ocean* on the north; extending forty-ſix miles in length and twenty-ſeven in breadth. It gives title of earl and baron to the ancient family of *Mac Donnel*. It is ſubdivided into eight baronies, and contains fifty-ſix pariſhes, about eighteen thouſand one hundred houſes, and ſends ten members to parliament; two for the county, two for *Liſburn*, two for *Belfaſt*, two for *Antrim*, and two for *Randalſtown*.

The moſt remarkable curioſity in this county, and indeed in all *Ireland*, is the GIANTS CAUSEWAY, a ſurpriſing ſtructure of ſtones, extending a great way into the ſea, where the ſame work ſeems to have been begun on the oppoſite ſhore of *Scotland*. This ſtupendous cauſeway was ſuppoſed to be the work of the giants, undertaken in order to form a communication between *Ireland* and *Scotland*. Nor is it at all wonderful that ſuch a ſuppoſition ſhould obtain credit among the vulgar; ſince, though it is a work far above human ſtrength, yet it has the greateſt appearance of art. The ſea cliffs are very high in the place where the cauſeway begins; and what is commonly called the cauſeway, is a low head, extending from the foot of the cliffs, like a mole, into the ſea. This head, when conſidered attentively, ſeems a ſtupendous production of art; and *Dr. Pococke*, who was biſhop of *Oſſory*, and fellow of the *Royal Society*, informs us that he meaſured the moſt weſterly point at high water, to the diſtance of three hundred and ſixty feet from the cliff; but was told that at low water it extended ſixty feet farther upon a deſcent, till it was loſt in the ſea. Upon meaſuring the eaſtern point, he found it five hundred and forty feet from the cliff; and ſaw as much more of it as of the other, where it winds to the eaſt, and is, like that, loſt in the water.

The cauſeway is compoſed of pillars of all angular ſhapes, from three ſides to eight. The eaſtern point, where it joins the rock, terminates in a perpendicular cliff, formed by the upright ſides of pillars, ſome of which are thirty-three feet four inches high. Each pillar conſiſts of ſeveral joints or ſtones lying one upon another, from ſix inches to about a foot in thickneſs; and what is very ſurpriſing, ſome of theſe joints are ſo convex that their prominences are nearly quarters of ſpheres, round each of which is a ledge which holds them together with the greateſt firmneſs, every ſtone being concave on the other ſide, and fitting in the moſt exact manner the convexity of the upper part of that beneath it. The pillars are from one to two feet in diameter, and generally conſiſt of about forty joints, moſt of which ſeparate very eaſily; and one may walk upon the tops of the pillars as far as the edge of the water.

But this is not the moſt ſingular part of this extraordinary curioſity, the cliffs themſelves being ſtill more ſurpriſing. From the bottom, which is of black ſtone, to the height of about ſixty feet, they are divided at equal diſtances by ſtripes of a reddiſh ſtone, that reſembles a cement, about four inches in thickneſs; upon this there is another ſtratum of the ſame black ſtone, with a ſtratum five inches thick of the red. Over this is another ſtratum ten feet thick, divided in the ſame manner; then a ſtratum of the red ſtone twenty feet deep, and above that a ſtratum of upright pillars: above theſe pillars lies another ſtratum of black ſtone twenty feet high; and, above this again, another ſtratum of upright pillars, riſing in ſome places to the tops of the cliffs, in others not ſo high, and in others again above it, where they are called the chimneys. The face of theſe cliffs extends about three *Engliſh* miles.

About a quarter of a mile to the ſouth-eaſt of the cauſeway is ſeen what is called *the organs*, compoſed of the ſame kind of pillars as thoſe we have already deſcribed. Notwithſtanding the great appearance of art, it is certain that all theſe are merely the work of nature; ſince, if this cauſeway had been built by human beings, they muſt likewiſe have built not only theſe cliffs but alſo the rocks, which, even at ſeveral miles diſtance from the ſea, are formed in the ſame manner of convex and concave ſtones, nicely fitted to each other.

It is now pretty well agreed upon by naturaliſts, that theſe angular, or, as they are ſcientifically called, baſaltic pillars, have been produced by ſubterraneous fires, being, upon a nice examination, found to be mixed with tuff and other ſubſtances produced by fire. A few years ago ſcarce another ſuch maſs as the *Giant's cauſeway* was known to exiſt in the world, except *Fingal*'s cave in the iſland of *Staffa*; but new ones have of late been diſcovered, and *Sir William Hamilton* met with ſome ſuch in *Italy* very lately, in the province of *Abruzzo*, in the kingdom of *Naples*, and in the iſland of *Ponza*. See *Philoſophical Tranſactions*, vol. LXXVI, part 2, page 365, for the year 1786. The cauſe of the regular form of theſe pillars is a problem for which the moſt careful reſearches have not furniſhed a ſatisfactory ſolution; hence aroſe the opinion that they could not poſſibly be the effects of nature, and they have therefore been conſidered as produced by human hands. "But," ſays the late profeſſor *Bergman*, in his letter to *Dr. Van Troil* on this ſubject, "this idea betrays the utmoſt ignorance in regard to the true nature of theſe mountainous pillars, and does not even deſerve a refutation." The baſalt mountains are ſo very ancient, that the age of any one of them cannot be aſcertained.

The principal towns in this county are the following:

Antrim, a conſiderable thriving market-town and corporation, thirteen miles to the weſt of *Carrickfergus*, and is pleaſantly ſeated on both ſides of what is called the *Six-mile Water*, over which is a handſome bridge. Here is a harbour for boats, and a ſtately manſion-houſe which belonged to the late lord viſcount *Maſſareen*, with a fine park.

Carrickfergus, or **Knockfergus**, is a rich and populous borough, ninety miles from *Dublin*, ſeated on a bay of its own name, where it has an excellent harbour with a ſtrong caſtle on a high rock, and had an ancient palace converted into a magazine for arms. It is a fortified place walled round, and has ſome modern outworks. In the year 1760, this place was attacked by that gallant naval partiſan of *France*, *Thurot*, who, landing 600 men in the bay, marched up to the town. The garriſon, conſiſting of four companies of raw undiſciplined troops, was commanded by *Lieutenant-colonel Jennings*, who, after he had defended the place as long as it was tenable, made an honourable capitulation; and the *French*, being furniſhed with proviſions, of which they ſtood in great need, re-embarked, having behaved during their ſhort ſtay with great moderation and generoſity. *Thurot*'s ſmall ſquadron was met, a week after, by commodore *Elliot*, having a force pretty equal, near the *Iſle of Man*; when a deſperate action was fought, in which *Thurot* was ſlain, and his ſhips taken. The town and liberties have the privilege of being a diſtinct county, yet the aſſizes and quarter ſeſſions for the country of *Antrim* are kept there.

Belfast is ſeated at the bottom of the bay of *Carrickfergus*, three leagues from that town, and is the chief place of trade, as well as of beauty, in all this part of *Ireland*. It has a very long ſtone-bridge over the river, and ſhips come up the *Cormoyl-road*, which is a ſafe commodious harbour below the town, with good depth of water. There are here many rich merchants, and a very conſiderable trade from this part to *Scotland*, particularly to *Glaſgow*; the town and moſt of the adjacent country being inhabited by the *Scots*, who have their regular preſbyteries, kirk-ſeſſions, and other judicatures here as in *Scotland*, though not with equal authority.

It may be proper here to ſpeak of the ſtate of the linen manufacture, that great ſtaple of the north of *Ireland*, as the breeding of cattle is the great object of profit to the ſouthern provinces. In the year 1772, this trade aroſe to its greateſt height: in that year an entry was made, at the *Cuſtom Houſe* of *London*, of *Iriſh* linens, to the amount of 1,954,496 yards, of which 776,625 yards came from *Belfaſt*, and the linens manufactured there are eſteemed of the fineſt fabric. The following year a ſpirit of emigration very unaccountably and very fatally prevailed. In the courſe of two years 62 ſhips, amounting to 17,350 tons, ſailed from the north of *Ireland* for *North America*. The number of perſons who embarked in theſe ſhips were eſtimated to be equal to the tonnage. By reports made to the *Engliſh Houſe of Commons* about this time, it appeared, that the linen manufactures of *Scotland* and *Ireland*, in conſequence of the ſpirit of emigration which prevailed in both countries, had decreaſed at leaſt one half in the courſe of two years. The ſeed from whence the flax grown in *Ireland* is raiſed, has been conſtantly imported into the kingdom, either from *North America* or from *Ruſſia*; experience having proved, that better crops are procured from foreign ſeed than from that raiſed in the country.

The county of **Londonderry**, or **Coleraine**, is bounded on the north by a part of *Donegal* and the *Northern ocean*; on the eaſt by *Antrim*, from which it is ſeparated by the river *Bann*; on the ſouth and ſouth-weſt by the county of *Tyrone*; and on the weſt by *Donegal*; extending thirty-ſix miles in length, and thirty in breadth. It is ſubdivided into four baronies, which contain thirty-eight pariſhes, about thirteen thouſand ſix hundred houſes, and ſends eight members to parliament; two for the county, and two for each of the towns of *Londonderry*, *Coleraine*, and *Newtown-Amivady*.

It is a pretty champaign country, and very fruitful; its boggy and unheathy ground being manured by ſhells brought from the ſea-coaſt. Its chief river is the *Bann*, which is remarkable for its beauty and clearneſs: it riſes out of the *Mourne* hills in the county of *Down*, and after loſing both itſelf and name for about thirty miles in the lake called *Lough-Neagh*, recovers its name again at *Tome-caſtle*, from whence, being ſkirted with woods on both ſides, it paſſes into the ſea. There is a ſmaller river of the ſame name, and therefore this is called the *Great Bann*; though it is not very large.

This county, which was formerly wild and uncultivated, has been greatly improved by the citizens of *London*, to whom king *James I.* by letters patent, granted it in perpetuity, with the city of *Londonderry*, and the town of *Coleraine*, by the name of 'The ſociety of the governor and aſſiſtants of *London* of the new plantation of *Ulſter*, in the realm of *Ireland*, in conſideration of their ſettling a colony there.'

Londonderry, the ſee of a biſhop, and the capital of the county, is ſeated on the weſt ſide of the river *Foyl*, one hundred and four miles north-weſt of *Dublin*, and is the centre of trade for this part of the country, though its river is not ſo large as that at *Coleraine*; but it has a much better port; for ſhips of the greateſt burthen navigate without interruption, and though it is twenty miles in extent, very large ſhips can moor cloſe to the quay, where it is from four to five fathoms deep. *Londonderry* was built by a company of *London* adventurers, in the reign of *James I.* and has three or four caſtles on the north bank of the river, beſides a fort, which lies below the town: it is likewiſe encompaſſed by a ſtrong wall; and beſides the above forts, there are ſome out-works. This city is not very large, but is handſomely built; the ſtreets are wide, well paved, and all the houſes of ſtone. The church is very large and well built, and king *William III.* cauſed a town-houſe to be erected for the inhabitants, in conſideration of their brave defence againſt his enemies. There are a great number of ſhipping belonging to the city; and the merchants not only carry on a great trade in the herring-fiſhery, but have a conſiderable ſhare in many other branches of foreign trade, eſpecially to the *Weſt-Indies*, for which they are very advantageouſly ſituated; for, being open to the *Northern* and *Weſtern* oceans, they are not expoſed to the dangers and delays which frequently attend a paſſage through the *Channel*. The city of *Londonderry* is inhabited entirely by *Proteſtants*.

This city has rendered itſelf remarkable by the bravery of its inhabitants in three ſieges, in each of which they were driven to the greateſt extremity; but obliged the enemy to retire. The laſt gallant defence was made by the inhabitants againſt the *French* and *Iriſh* troops of king *James II.* from the ſeventh of *December* 1688, to the laſt day of *July* 1689, which was the more remarkable from its being beſieged at a time when it was neither well fortified, nor garriſoned, and very ſcanty in proviſions, as well as in ammunition; and which relief was ſo long coming from *England*, that many died for want, beſides what were killed in defence of the town, by making ſallies. During this ſiege all the commanding officers loſt their lives: upon which the garriſon and inhabitants choſe *Mr. Walker*, a clergyman, to the command, who diſtinguiſhed himſelf in an aſtoniſhing manner by his bravery and conduct.

While the people were reduced to the utmoſt diſtreſs by famine, two ſhips under the command of commodore *Rooke*, laden with proviſions, having ſome land forces on board, commanded by major general *Kirk*, bravely forced their way to the town, notwithſtanding a boom being laid acroſs the river, and the fire of the enemy's cannon from ſeveral forts.

COLERAINE lies on the eaſt ſide of the mouth of the *Great Bann*, nine miles from *Londonderry*: it is a neat, handſome, populous, and walled town; and a place of good trade, particularly in that kind of linen called *Coleraine*; but the river, though of a long courſe, and bringing with it the water of all the rivers that diſcharge themſelves into the great *Lough-Neagh*, being confined within a narrow channel, pours its waters out with ſuch a furious current, that the tide is hardly ſtrong enough to ſtem it, ſo as to render it navigable: hence it is very difficult for veſſels to make their way in; nor can any ſhips of great burden go in at all. Beſides the linen trade, it has a *ſalmon-fiſhery*, which is very beneficial. This town gives the title of baron to the family of *Hanger*.

The county of DONEGAL, or TYRCONNEL, is bounded on the eaſt by the counties of *Londonderry*, *Tyrone*, and part of *Fermanagh*; on the weſt and north by the *Atlantic* and *northern* oceans. It extends ſixty-four miles from the ſouth-eaſt to the north-weſt, and is ſubdivided into five baronies, in which are contained forty pariſhes, with about ten thouſand eight hundred houſes, and it ſends twelve members to parliament; two for the county, and two for each of the following towns: *St. John's Town*, *Donegal*, *Ballyſhannon*, *Kilbeg*, and *Liſford*.

DONEGAL, from whence the country has its name, ſtands at the bottom of a ſpacious bay, which has many good roads and harbours, but no trade; nor is there any thing conſiderable in the town itſelf.

LOUGH-SWILLY, into which runs a river of the ſame name near *Letterkenny*, a little market-town, is a ſalt-water lake that runs about twenty miles ſouth into the country; it is about five miles broad at the mouth, has an iſland called *Inch*, and abounds with fiſh. A thouſand ſail of ſhips may ride in ſafety here for twenty miles together. There are many villages and gentlemen's ſeats on its banks, and yet it has no trade, there being only a few fiſhing-boats which reſort there to catch herrings and ſalmon, of which there is prodigious plenty.

LOUGH-DIRG is famous for an iſland, in which is a cell where the popiſh friars uſed formerly to make their votaries believe *St. Patrick* had his purgatory; and that he obtained it from God by his prayers, in order to convince unbelievers of the immortality of the ſoul, and the exiſtence of future torments. It was anciently much frequented by people of the *Romiſh* church, as well foreigners as natives, who came thither in pilgrimage, to do penance, and perform religious ceremonies, though it was invented ſome ages after *St. Patrick*'s death. Certain friars reſided on the iſland, who, after having made the pilgrims watch and faſt till their minds were prepared to receive any impreſſions, amuſed them with ſtories of the ſtrange apparitions they ſhould behold there, and ſhutting them up, left them for ſome hours in the dark; and thus, when let out, their diſordered imaginations made them tell ſtrange ſtories of what they had ſeen and ſuffered. The cell was, however, demoliſhed in the year 1497, by the authority of pope *Alexander VI.* yet was afterward reſtored, and again viſited by pilgrims; but in the latter end of the reign of *James I.* ſome gentlemen being ſent by government to ſearch into the affair, found that this pretended entrance into purgatory was only a little cell hewn out of a rock, ſo low that a tall man could but juſt ſtand upright in it; and of ſuch ſmall extent, that it could not contain more than ſix or eight perſons; but, when the door was ſhut, was quite dark: upon which the lords juſtices baniſhed the friars, demoliſhed their houſes, and cauſed the cell to be laid open.

CHAP. XXXII.

Of ICELAND, GREENLAND, and SPITSBERGEN.

SECT. I. ICELAND.

Its Situation, Extent, Climate, *Face of the* Country: *its* Diviſions *and number of* Inhabitants, Minerals, Volcanoes, (*particularly mount* Hecla), *and remarkable hot* Springs: *its* Vegetables *and* Animals.

ICELAND, which received its name from its exceſſive coldneſs, and the great flakes of ice ſeen near it, is a large iſland in the *Northern* ocean, about four hundred and eighty miles diſtant from the coaſt of *Norway*, and four hundred to the northward of *Scotland*, lying between 11° and 27° W. longitude, and between 63° 45′ and 67° N. latitude. It extends four hundred miles in length, and a hundred and ſixty in breadth; ſubject to the king of *Denmark*.

This iſland is ſeated ſo far to the north, that, during two months of the ſummer, the ſun never goes entirely below the horizon, one-half remaining above it from ten at night till two in the morning, when it riſes entirely; and about the winter ſolſtice, for two months, it never riſes wholly above the horizon, one-half of it being only to be ſeen from ten in the morning till two in the afternoon.

They have always a ſhort ſpring and autumn in *Iceland* before and after the ſummer ſeaſon. The cold is ſevere in winter, and the heat very intenſe in ſummer, on account of the length of the days, and there being no night to cool the air: but neither of them is inſupportable, at leaſt to the inhabitants, or the *Norwegians* and *Danes*. The air is alſo ſalubrious, and agrees very well with foreigners as well as with the natives.

ICELAND properly conſiſts of a prodigious range of mountains running from eaſt to weſt, on the declivities of which, and in the vallies lying between them, the inhabitants live. Several of theſe high mountains are always covered with ice and ſnow: but on others, ſeated near the coaſt, are plains covered with verdure, ſeveral miles in extent, that produce fine graſs. Though the country is ſo mountainous, there are roads paſſable for horſes in every part of the iſland; and even carriages were formerly uſed, but they are now laid aſide, on account of the trouble attending them: and every year ſome hundreds of pack-horſes come over the mountains from the north to the

the trading places in the ſouth parts of the iſland, loaded with butter, woollen manufactures, &c. which are bartered for other commodities.

This country, according to the general diviſion, conſiſts of four quarters, which derive their names from the four cardinal points towards which they lie: this diviſion is cauſed by ſo many branches of mountains that ſeparate the quarters from each other. Hence the middle of the iſland is not inhabited, the people living only in theſe valleys, which are between twenty and thirty miles broad, and are properly the ſyſſels, which will be hereafter more particularly mentioned, to which other ſmall vallies among the mountains, where good paſtures are found, likewiſe belong. From theſe mountains ſeveral brooks and rivers, ſome of which are very conſiderable, run into the valleys, and afford excellent fiſh.

The number of the inhabitants on this iſland, according to an authentic computation, amounts to about fifty thouſand. Yet there are no towns of any conſequence, though there are numerous trading places at each harbour. The villages are compoſed of thirty or forty, and ſometimes fifty, ſmall dwellings, placed at a diſtance from each other.

In the rocks of *Iceland*, *cryſtals* are ſometimes found, many of which repreſent an object viewed through them double; but theſe are properly only a ſpecies of *talc*. There are likewiſe evident ſigns that the mountains contain iron, copper, and even ſilver ore, near which are found two kinds of agate, which will burn like a candle; alſo a ſpecies of *bitumen*, which is black, ſhining, and pretty hard; with another ſort of black earth that is ſtill harder, and breaks into thin tranſparent laminæ; this laſt is not inflammable, but vitrifies in the fire. In one part of the iſland ſulphur is dug out of the ground; but the ſulphur trade is now diſcontinued.

Though this iſland is ſeated ſo far to the north, earthquakes and volcanoes are more known here than in many countries which are ſituated in much warmer climates: the former have ſeveral times laid the country deſolate, particularly in the years 1734, 1752, and 1755, when at the ſame time fiery eruptions broke out of the earth, and produced very fatal conſequences. Many of the ſnowy mountains have alſo gradually become volcanoes, particularly the mountains of *Myvatn*, *Kattlegia*, and *Hecla*, the firſt of which was a violent volcano between the years 1730 and 1740, the ſecond in 1756; but the latter is beſt known, eſpecially to foreigners. It is in the ſouth-eaſt part of the iſland, not far from the ſea. This mountain has frequently ſent forth flames, and a torrent of burning matter. The inhabitants imagine this to be the place where the ſouls of the damned are tormented. “And indeed,” ſays *Dr. Van Troil*, “I am not ſurpriſed that a people ſo much inclined to ſuperſtition as the *Icelanders* are, imagine this to be the entrance of hell; for which reaſon they ſeldom paſs one of theſe openings without ſpitting into it; or, as they ſay, *uti fandens mun*, into the devil's mouth.”

Its eruptions have been very frequent, eſpecially in 1693 and 1766, when they were moſt dreadful, and occaſioned terrible devaſtations, the aſhes being thrown all round the iſland to the diſtance of a hundred and eighty *Engliſh* miles; and when *Dr. Van Troil* viſited it in the year 1779, the people of the neighbourhood believed it would ſoon burſt out again. This mountain takes up four hours to aſcend from its foot to the ſummit; and on the north-weſt ſide is a vaſt chaſm, reaching from the top almoſt to the bottom; and it is remarkable, that while flames and ignited matter iſſued from this chaſm, the huge maſſes of ice and ſnow, with which the other ſide was covered, were not melted, though the heat within the mountain was ſo intenſe as to calcine large ſtones and other ſubſtances.

Dr. Van Troil, who viſited *Iceland* to obſerve its natural curioſities, deſcribes a part of the iſland as having been laid waſte, to an extent of between 60 and 70 *Engliſh* miles, by the lava which had been diſcharged. This lava is called *Gorde* and *Hualey-re-Hraun*, from *brinna*, to flow. The ſame traveller afterward viſited the crater of mount *Hecla*, he and his company being the firſt who had ever reached the ſummit of this celebrated volcano. He deſcribes the mountain as ſomething above 5000 feet high, ſeparated at the top into three points, of which that in the middle is the higheſt. There have been different craters through which the burning matter has been at different times diſcharged. Though there was no eruption at that time, yet there were ſufficient proofs of its burning inwardly, for on the upper part there were ſpots which were covered with ſnow to the depth of four or five inches, whilſt other ſpots were obſerved without any ſnow at all; and on the higheſt point, where *Fahrenheit*'s thermometer was at 24° in the air, it roſe to 153° when it was ſet down on the ground; and in ſome little holes it was ſo hot, that the obſervation could not be purſued with a ſmall pocket thermometer.

It is alſo remarkable that ſprings naturally warm, and even thoſe that are hot, are frequently found in *Iceland*, with others that have a mineral taſte. About mount *Hecla* are ſeveral baſins of warm water, which ſometimes emit a copious ſteam, though at others this vapour is not ſo viſible. Theſe hot ſprings are of three ſorts; ſome are a little more than tepid, ſo that a perſon may hold his hand in the water without any inconvenience; others are ſo hot as to riſe in ſmall bubbles, like water ſimmering over the fire; but in others the ebullition is ſo ſtrong as to force the waters up to a conſiderable height. The laſt ſort are obſerved to be either periodical or variable in their ebullitions; particularly in a diſtrict named *Reyker-harbour*, or *Reikum*, are three hot ſprings, about thirty fathoms diſtant from each other, which bubble up alternately; and this ebullition generally happens in each of them about three times in a quarter of an hour. Though theſe wells lie in a plain, they ſpring from a hard ſtony bottom, where two of them eject the water from the interſtices between the ſtones, about an ell in height; but in the bottom of the third is a round aperture, through which, in its turn, it throws the water five or ſix ells high. After this it ſubſides about two ells, and one may go down during that interval, and take a ſurvey of this wonderful ſpring. Its ebullition has three gradations: during the firſt, the water riſes half way up the cavity; afterward it fills to the top; and the third time ſhoots up to the above-mentioned height. When the water is ſubſiding it abſorbs any light ſubſtance, as a piece of wood; but at the return of the ebullition ejects even the heavy ſtones that are thrown into it.

Dr. Van Troil ſays, there is not any thing of a ſimilar nature to theſe ſprings in any other part of the known world. The inhabitants diſtinguiſh them into two ſorts; one of which they call *lauger*, or warm baths; and the other *huerer*, or ſprings that throw up the water to a conſiderable height. Similar ſprings to the former are found in various parts of *Europe*, but the latter are thoſe which are peculiar to *Iceland*.

The ſpouting ſpring at *Reikum* ſome years ago threw up water to ſixty or ſeventy feet perpendicular height; but a fall of earth having almoſt covered the whole opening, it now ſpouts only between 54 and 60 feet ſideways. Here were found a great many petrified leaves, and ſome native ſulphur, of which alſo the water had a much ſtronger taſte than any where elſe.

Near *Laugervatn*, a ſmall lake of about a mile in circumference, which is about two days journey from *Hecla*, is an aſſemblage of theſe hot ſpouting ſprings, which preſents one of the moſt beautiful ſights that can be beheld. Eight different hot ſprings ariſe in ſteam, which loſes itſelf high in air; one in particular, when *Dr. Van Troil* ſaw it, threw up in the air a column from 18 to 24 feet high, and from ſix to eight feet diameter: the water was extremely hot; a piece of mutton and ſome ſalmon trouts were almoſt boiled to pieces in ſix minutes, and taſted excellently.

In ſeveral of theſe hot ſprings the inhabitants who live near them boil their victuals, only by hanging a pot, in which the fleſh is put into cold water, in the water of the ſpring: they alſo bathe in the rivulets that run from them, which, by degrees, become luke-warm, or are cooled by their being mixed with rivulets of cold water. The cows that drink of theſe ſprings are ſaid to yield an extraordinary quantity of milk; and it is likewiſe eſteemed very wholeſome when drank by the human ſpecies.

At *Geyſer*, not far from *Skallholt*, one of the epiſcopal ſees in *Iceland*, a moſt extraordinary large ſpouting fountain is to be ſeen, with which the celebrated water works at *Marley*, *St. Cloud*, *Caſſel*, and *Herrenhauſen* near *Hanover*, can hardly be compared. "One ſees here," ſays *Dr. Van Troil*, "within the circumference of about three *Engliſh* miles, 40 or 50 boiling ſprings together, all of which, I believe, proceed from one and the ſame reſervoir. In ſome the water is perfectly clear, in others thick and clayey; in ſome, where it paſſes through a fine ochre, it is tinged red as ſcarlet; and in others, where it flows over a paler clay, it is white as milk. The water ſpouts up from ſome continually, from others only at intervals. The largeſt ſpring, which is in the middle, particularly engaged our attention the whole day that we ſpent here, from 6 in the morning till 7 at night. The aperture through which the water aroſe was 19 feet in diameter; round the top of it is a baſin, which, together with the pipe, has the form of a cauldron: the margin of the baſin is upward of nine feet one inch higher than the conduit, and its diameter is fifty-ſix feet. Here the water does not ſpout continually, but only by intervals, ſeveral times a day; in rainy and bad weather higher than at other times. One day that we were there, the water ſpouted at ten different times, from ſix in the morning till eleven A. M. each time to the height of between five and ten fathoms; till then the water had not riſen above the margin of the pipe; but now it began by degrees to fill the upper baſin, and at laſt ran over. The people who were with us told us, that the water would ſoon ſpout up much higher than it had done till then, and this appeared very credible to us. To determine its height therefore with the utmoſt accuracy, *Dr. Lind*, who had accompanied us on this voyage in the capacity of an aſtronomer, ſet up his quadrant. Soon after four o'clock we obſerved that the earth began to tremble in three different places, as likewiſe the top of a mountain which was about three hundred fathoms diſtant from the mouth of the ſpring. We alſo frequently heard a ſubterraneous noiſe like the diſcharge of a cannon; and immediately after a column of water ſpouted from the opening, which at a great height divided itſelf into ſeveral rays; and, according to the obſervation made with the quadrant, was ninety-two feet high. Our great ſurprize at this uncommon force of the air and fire was yet increaſed, when many ſtones, which we had flung into the aperture, were thrown up again with the ſpouting water."

Salt ſprings are not known here; however, ſalt has been found at the foot of the burning mountains; and that ſalt might be made here by art is unqueſtionable, from the ſucceſs of former trials.

There are but few woods in the iſland, though here and there a ſmall wood is to be ſeen; but great numbers of large and ſmall trees are driven hither by the ſea, eſpecially on the north coaſt, where they generally lie and rot, the inhabitants having no ſhips to convey the wood for ſale to their countrymen. There are here a great quantity of ſhrubs, on which grow all ſorts of berries, as juniper, blackberries, &c. and theſe are burnt every year for charcoal, which is uſed by the natives in their forges. The common fuel of the country is turf, ſome of which has a very ſtrong ſulphureous ſmell, and in ſome parts of the iſland they even burn fiſh bones.

Very good graſs grows not only in the vallies which border on the lakes and rivers, but alſo in the hollows between the mountains, and ſometimes on their ſummits. The fineſt paſtures are in the northern parts of the iſland, where the graſs ſprings up very faſt to a great height. The cattle are generally driven to graze among the mountains, where they find good paſture; but the graſs that grows near the habitations of the *Icelanders* is reſerved for winter fodder.

Here are alſo many ſalubrious and medicinal herbs, as ſcurvy-graſs, ſamphire, angelica, which is much uſed by the inhabitants, and berg-graſs, a kind of odoriferous moſs that is very nouriſhing, great quantities of which are laid up by the inhabitants for occaſional uſes. Hitherto few eſculent vegetables have been cultivated in *Iceland*; but as all kinds of culinary herbs thrive in the gardens at *Beſſeſtader*, and thoſe of the epiſcopal palaces, it is probable that, with proper culture, they would alſo grow in moſt parts of the iſland.

The inhabitants are entirely diſcouraged from purſuing agriculture, as they have not yet been able, in this ſoil, to bring any corn to maturity; yet ſome parts of the iſland are known, by ſeveral evident traces, to have been formerly cultivated.

Bread is but little known among the common people, for though a large quantity of meal and bread is annually imported into the harbours of *Iceland*, the lower claſs of people can purchaſe but little or none of it, on account of the price. They however make a kind of meal and bread of a ſort of wild barley, which grows there; and in times of ſcarcity have recourſe to a ſea vegetable, called in Latin *alga marina ſaccarifera*, which is dried before the fire, and ſold at half the price of dried fiſh. The cattle feed on this ſea-weed at low-water, and prefer it to any other marine vegetable.

Bears are frequently driven to this iſland upon the large flakes of ice from *Greenland*; but the inhabitants are ſo vigilant and dexterous in deſtroying them, that the only ſpecies of wild beaſt to be found in *Iceland* are foxes, ſome of which are brown and others white.

The horſes here, as in all other northern countries, are ſmall, but ſtrong and full of mettle, and, except thoſe broke for the ſaddle, lie in the open air all the year round. In winter they ſubſiſt only on what fodder they can ſcrape from under the ice and ſnow. Such horſes as the owners have no immediate occaſion for, are turned out among the mountains; and when wanted a man goes in queſt of them, every one knowing his own horſe by certain marks.

Great numbers of ſheep are to be ſeen in *Iceland*; and where the inhabitants are chiefly employed in grazing, it is not uncommon for a man to be maſter of a flock of four or five hundred. The grazing countries lie chiefly in the northern and eaſtern parts of the iſland; for the inhabitants of the ſouthern, being moſtly employed in fiſhing, leave their flocks abroad both in ſummer and winter. Nature, however, ſeems to have provided a ſhelter for them, there being large caves into which they retire in ſevere weather. In winter, when the ſnow is not very deep, and the weather is inclinable to be fair and mild, the ſheep are turned out to pick what they can find under the ſnow; when, if they happen to be ſurpriſed by its falling in a great quantity, they inſtantly form themſelves into a cloſe compact body, by laying their heads together in the centre; in this poſture they are quite covered with the ſnow, and are ſometimes ſo benumbed with cold as not to be able to help themſelves, till their owner, happening to find them, clears them a way out. This is often a work of ſome days; and frequently the weight of the incumbent ſnow is ſo great, that they are cruſhed down by it, and killed, before their maſters can come to their relief. When they paſs ſome days under the ſnow, the ſheep, in the extremity of hunger, have been known to eat one another's wool; but this is apt to diſorder them very much: on which account, when the inhabitants have any apprehenſions of bad weather, they take care to keep their flocks at home.

The wool of their ſheep is very coarſe; but a ſomewhat finer ſort lies underneath. Thoſe writers are miſtaken who obſerve, that all the ſheep in this iſland have more than two horns: a few of them indeed have five, ſome have four, but they have generally only two. As for goats, they have no great number of them. Some of the *Iceland* cows and oxen have no horns; and in the ſouthern parts they are fed with fiſh bones, and the water in which fiſh has been boiled. Here are no hogs. As to domeſtic animals, there are a ſufficient number of dogs, and but very few cats.

The keeping of poultry, and all other tame fowl, is ſo expenſive, that very few of them are to be ſeen here; but they have plenty of ſwans, wild geeſe, and ducks, among which may be reckoned the eider, the eggs and feathers of which are much valued. There are likewiſe ſnipes, woodcocks, and other wild-fowl. At certain times an incredible number of eggs of ſea-fowl, of which the inhabitants are very fond, are found along the ſea-coaſt. They eat all their proviſions without ſalt.

The birds of prey are the eagle, hawk, raven, and falcon; ſome of the laſt are entirely white, others are partly of that colour, and others brown. In every diſtrict are certain falconers, who are alone empowered to catch falcons: theſe carry them to the king of *Denmark*'s falconry at *Beſſeſtader*, where the king's falconer, who annually viſits that place, picks out the beſt. The governor of *Iceland* pays the falconer fifteen rixdollars for every white falcon, ten for one that is partly white, and ſeven for every brown falcon that is choſen; beſides which the falconers receive a gratuity of five or ſix rixdollars when they firſt bring them in.

The rivers, lakes, and bays, with the other parts of the ſea, ſupply the *Icelanders* with prodigious quantities of various kinds of fiſh.

SECT. II.

Of the Perſons, Food, Dreſs, Employments, Language, Religion, Government, *and* Trade *of the* Icelanders.

THE *Icelanders* are naturally of a robuſt and vigorous conſtitution; but are often worn out by the continual fatigues and hardſhips they undergo at ſea in their fiſheries; and when about fifty years of age become afflicted with various diſeaſes, eſpecially thoſe of the breaſt and lungs; whence few of them arrive at an advanced age. In caſe of ſickneſs they entirely reſign themſelves to Nature and Providence, for there is not one phyſician or ſurgeon in the whole iſland. Indeed a few perſons keep medicines by them, with which they are ſupplied from *Denmark*; but they are not very well acquainted with their virtues, or the method of adminiſtering them.

Their common drink is milk, which, when ſweet, they drink by itſelf; but when it turns ſour, mix it with water. They are very fond of beer and ſpirituous liquors, and the moſt wealthy among them ſometimes purchaſe red and white *French* wines.

The *Icelanders* are wiſely contented with what apparel their own country furniſhes. The cloth which they wear is called *Wadmal*; beſides which they alſo uſe a cloſe garment of linen. However ſome of the gentry are fond of appearing in cloths and ſtuffs made in *Denmark*, though a ſtuff manufacture has lately been ſet up at *Beſſeſtader*. Their fiſhing dreſs is made of untanned leather, which is kept pliable by being rubbed with the liver of fiſhes.

As they are obliged to buy their timber of the *Daniſh* company eſtabliſhed here, they build their houſes as cheap as poſſible; ſo that they are neither commodious nor handſome.

The *Icelanders* in winter, both the men, women, and children, knit woollen waiſtcoats, ſtockings, gloves, and the like; and alſo employ themſelves in weaving *Iceland* cloth. Their looms indeed are but very indifferent; but thoſe made in *Denmark* now begin to be introduced among them.

The *Iceland* language is the ſame with the old *Norwegian*, though it is not at preſent quite pure and uncorrupted. They are not wanting in mental endowments, which is evident from the learned men and ingenious artiſts this iſland has produced. Several of their authors have written very accurate and elegant diſſertations relating to the northern hiſtory. They even began to cultivate the ſtudy of letters ſo early as the year 1130.

The only religion tolerated in *Iceland* is the *Lutheran*. The churches on the eaſt, ſouth, and weſt quarters are under the juriſdiction of the biſhop of *Skaalholt*, and thoſe of the north quarter are ſubject to the biſhop of *Hoolum*. The biſhops of *Iceland* cultivate the eſtates annexed to their reſpective ſees, the annual produce of which is about two thouſand rixdollars; but out of theſe revenues a ſtated ſum is appropriated to the rectors and aſſiſtants of the ſchool, and the miniſters of the cathedral: beſides this a certain number of ſcholars muſt be lodged and clothed, and alſo the biſhop's palace, &c. muſt be kept in good repair out of the ſame revenues; and after theſe deductions the remainder is the biſhop's income. Some of the preachers are liberally provided for; others but indifferently; and many of them very ſcantily: among the latter not a few of them are obliged to be ſatisfied with the poor pittance of four rixdollars, which amounts to about eighteen ſhillings a year.

The ſecular government of this iſland, under the king of *Denmark*, is lodged in the governor-general of *Iceland* and *Faroe*, who uſually reſides at *Copenhagen*, and deputes under him a prefect, who lives at the king's palace at *Baſſeſtader*. Here is alſo a collector, who levies all the king's revenues in the iſland, and paſſes his accounts at the treaſury.

The revenues of *Iceland* ariſe, firſt, from the farms of the ports or harbours, which annually amount to above ſixteen thouſand rixdollars. Secondly, from the taxes and tithes, which according to the cuſtom of the country are accounted for in fiſhes, and farmed to private perſons. Thirdly, from the farmers of the ſequeſtered convents and crown lands. Fourthly, from the king's boats; and, fifthly, from the hundred and thirty-eight ells and a half, and ninety-two pair of ſtockings, delivered in annually by every diſtrict, called a ſyſſel; and likewiſe one hundred and ſeventy-two pounds of fiſh, payable by ſome ſyſſels. There are eighteen of theſe ſyſſels or diſtricts in *Iceland*.

With reſpect to the diſtribution of juſtice, here are two ſuperior judges, one of whom preſides over the ſouth and eaſt quarters, and the other over the north and weſt; each of theſe has uſually under him a deputy or inferior judge. There are alſo twenty-one ſyſſelmen, who are a kind of inferior officers, who, beſides levying the king's revenue farmed in their reſpective ſyſſels, hold ſeveral courts of judicature, to which belong certain diſtricts. An appeal lies from this court to the ſupreme court at *Copenhagen*, if the matter of litigation exceeds a particular ſum.

For the regulation of eccleſiaſtical affairs, here is a provoſt court, conſiſting of the provoſt and two aſſiſtants. The next is a conſiſtory, which, as well as the others, is held at *Oxera*, for the dioceſe of *Skaalholt*, to which belongs one hundred and ſixty-three pariſhes. In this conſiſtory the prefect, as the repreſentative of the governor, ſits as preſident; the provoſt and miniſters, and even the biſhop himſelf, being only aſſiſtants. In the dioceſe of *Hoolum*, which contains one hundred and forty pariſhes, a conſiſtory is held in autumn at a ſeat called *Flige Myre*, where the prefect deputes another to repreſent him as preſident. From the conſiſtories an appeal lies to the ſupreme court at *Copenhagen*.

The capital puniſhments inflicted on male criminals in *Iceland* is beheading with an ax, and hanging to a wooden beam fixed in the cliff of a rock; but females who have forfeited their life are put in a ſack and then drowned.

In ſpeaking of the commerce of *Iceland* it muſt be obſerved, that the company that farms it was eſtabliſhed in 1733 by a royal charter, and ſtiled the *Iceland* company of *Copenhagen*. This company ſends twenty-three ſhips every year, with their factors and ſub-factors, who viſit all the ports on the iſland. Theſe ports and harbours are divided into fleſh and fiſh ports; the former are but eight in number, and lie on the north and eaſt coaſts of the iſland; but the latter are fourteen, and theſe lie on the ſouth-weſt ſide. There are alſo ſome ports from which both fleſh and fiſh are exported.

Accounts are kept here, and all calculations made, by fiſhes; a fiſh, which is properly two pounds of fiſh, being equal to a lub-ſchelling, and conſequently forty-eight fiſhes are equal to a ſpecie dollar, worth about four ſhillings and ſix-pence ſterling. *Daniſh* marks at eight lub-ſchellings are ſometimes current here, and alſo, though ſeldom, ſome lub-ſchelling pieces. A quarter of a ſpecie dollar, equal to twelve fiſhes, is the ſmalleſt piece of money current in *Iceland*; ſo that any balance under this, not being payable in money, is made up in fiſh and tobacco.

The exports of *Iceland* chiefly conſiſt in dried fiſh, ſalted mutton, a good deal of beef, butter, and train oil; a great quantity of tallow, coarſe jackets of *Iceland* woollen cloth, woollen ſtockings and gloves, red wool, ſheep-ſkins, and lamb-ſkins, fox tails of ſeveral colours, feathers, and quills. In 1751 *Frederic* V. in order to encourage the *Icelanders* to improve their manufactures, and to promote trade and commerce, beſtowed on them a bounty of ten thouſand rixdollars, and lent them five thouſand more. The imports of *Iceland* are chiefly iron horſe-ſhoes, timber, meal, bread, wine, brandy, tobacco, coarſe linen, a few ſilk ſtuffs, and domeſtic utenſils.

SECT. III.

Of GROENLAND, or GREENLAND.

Its Situation, Climate, Vegetables, Animals; *particularly of the* Whale, Fin-fiſh, Sea-unicorn, Sword-fiſh, *the* Morſe, *and* Seal.

IT is not yet determined to which part of the earth *Greenland* properly belongs; yet as it extends as far to the eaſt as the laſt-mentioned iſland, and has been even ſuppoſed to join *Spitzbergen*, which is ſeated in thirty degrees eaſt longitude, it can no where be more properly placed than here. Its full extent and dimenſions are entirely unknown. The moſt ſoutherly part lies in 59° 50′ N. latitude, from whence the coaſt ſtretches to the north-weſt beyond 78° of north latitude, while the eaſtern coaſt reaches, according to the *Daniſh* writers, to 82°. The weſt coaſt was firſt diſcovered in 1585 by *Mr. John Davis*, an *Engliſhman*, from whom the ſtraits that run between the continent of *North America* and *Greenland*, are named.

On the eaſtern and ſouthern coaſt vaſt flakes of ice, which may properly be called iſlands, are ſeen, and theſe are driven from *Spitzbergen* toward the ſouth by a very ſtrong current. Of theſe floating ice iſlands much has been ſaid in our Appendix to the firſt volume, when relating Captain *Cook*'s Second Voyage; in which he penetrated toward the ſouth pole.

The eaſt ſide of *Greenland*, which is oppoſite to *Iceland*, is at preſent inacceſſible, on account of the mountains of ice, which riſe to an aſtoniſhing height, and cover the ſea: this part is therefore unknown; but ſailing between theſe and *Iceland*, ſeveral adventurers have ſafely arrived there; and this courſe the *Dutch*, in particular, have ſucceſsfully ſteered.

The weſt ſide of *Greenland* towards *Davis*'s Straits, is, however, better known. On that ſide the coaſt is defended by rocks and ſeveral large and ſmall iſlands. It has alſo wide and deep bays, which run a great way into the land, ſome of which are the mouths of large rivers, and others form good roads and harbours. The main-land conſiſts of little more than confuſed heaps of rocks, the ſummits of which are always covered with ice and ſnow, as are alſo ſome of the valleys.

The climate, as far as the *Daniſh* coloniſts have penetrated, is not inſupportable; but the weather is very changeable and unſettled. During the ſummer ſeaſon, which laſts from the end of *May* to the middle of *September*, the ſun ſhines bright and very warm; and on the main-land, above which no cloud can be ſeen, the weather is very pleaſant, and always clear: but a cold damp fog, that intercepts the ſun-beams, continually hovers over the iſlands, except in the month of *Auguſt*, which is the only time in the whole year when the vapours are diſſolved. The rains that fall here are neither frequent nor heavy. In this climate it ſeldom thunders; and ſtorms, which are very rare, are of no long continuance; but the moſt violent guſts of wind come from the ſouth. The winters, as far as 64°, are generally reckoned by the *Danes* and *Norwegians* pretty temperate, to which the calm and clear weather may greatly contribute. But when a north-eaſt wind blows, which comes from mountains covered with ice and ſnow, it is extremely ſevere; the air being thick, and filled with clouds of icy particles, which cauſe a moſt piercing froſt.

This account of the weather is true only of the ſouthern parts of this country, ſubject to the *Danes*; for to the northward of 68° of latitude, the cold is in winter ſo exceſſive, that the moſt ſpirituous liquors, as *French* brandy, will freeze near the fire ſide. As the weather is in this climate very calm, the ice in the bays between the iſlands is not diſturbed till the end of *Auguſt*; and even in the creeks it does not begin to thaw till the cloſe of *May*, when it is gradually waſhed away by the agitation of the waves. From *June* to *Auguſt* the ſun is continually above the horizon, and conſequently during that term they have no night; but in winter the ſun is inviſible to the *Greenlanders*, and their day is nothing more than the morning and evening twilight, which do not laſt above two hours.

In the valleys and plains the ſoil conſiſts of moor and turf-land, and in ſome few ſpots, particularly in the ſouth parts, in about 61° of latitude, grow angelica, ſcurvy-graſs, wild roſemary, ſome good eſculent herbs, and alſo fine graſs with yellow flowers, the roots of which ſmell in the ſpring like roſes. Indeed that part of the country which lies between 60° and 64° of latitude has the beſt ſoil; ſo that in ſome places cabbages and turnips thrive very well, and the latter are remarkably ſweet. There is not a tree of any kind to be ſeen in the country, except on the ſides of a bay, ſixty *Norway* miles to the ſouth of *Hope-colony*, where a little coppice of birch-trees grow; but their trunks are no thicker than a man's leg. Some ſhrubs are diſperſed here and there; as ſmall juniper, gooſeberry, and bilberry buſhes, brambles, &c.

No trial has yet been made of what minerals are contained in the *Greenland* mountains. There are, however, rocks of aſbeſtos, from which conſiderable quantities have been hewn. Some mountains alſo conſiſt of an imperfect kind of variegated marble, of which the inhabitants make kettles and other utenſils.

On the main land are found ſome hares; but theſe, which are very ſmall, are grey in ſummer, and perfectly white in winter. Here is alſo a ſpecies of rein-deer; but they are very different from thoſe of *Lapland*. The foxes are white, brown, and grey; but ſmall. White bears are ſometimes found here, and toward the north are very numerous; theſe differ from the bears of other countries, their heads being long like that of a wolf, which they much reſemble in form. The *Greenlanders* are very daring and active in deſtroying them.

The only domeſtic animals found here are dogs, that never bark, but ſnarl and howl: they are timorous, and unfit for the chace; yet if not tamed when young, become wild and very miſchievous. The *Greenlanders* kill and eat theſe dogs, and alſo often uſe them to draw their ſledges, yoking four, ſix, and ſometimes eight or ten, to a ſledge, loaden with five or ſix of the largeſt ſeals, with the maſter ſitting upon them, who drives as faſt with them as we can do with good horſes; for they often travel ſixty miles in a winter day upon the ice. Neither ſnakes nor any other venomous creatures can live in this climate; nor are they plagued with beetles, rats, mice, or the like.

The land-fowl in this country are, the ryper, a ſort of large parrot, which is grey in ſummer and white in winter, but builds his neſt very high in the cliffs of the rocks; with eagles, falcons, large ſpeckled owls, ravens, different ſorts of ſparrows; and, in ſhort, all the kinds of land and ſea fowl known in *Norway* are ſeen in amazing numbers. Among the inſects the muſketoes, or gnats, ſwarm in this country, and are extremely troubleſome; but they have neither ants nor bees.

The freſh water in *Greenland* has been highly recommended for its ſalubrity and palatableneſs. The rivers afford plenty of trout, cray-fiſh, and ſalmon; and the ſea yields an inexhauſtible variety of all kinds of fiſh, except oyſters; but it abounds with excellent muſcles, and very large ſhrimps, or prawns. The ſmaller ſpecies of fiſh are dried here for winter ſtore, eſpecially the lodden, a ſort of ſmall herring. Here are alſo great plenty of cod, haddock, thornback, and holybutt, by ſome called the turbot of the *North*, which is ſo big that it will fill a large caſk.

The *Greenland* ſea, and other parts of the *Northern* ocean that lie near the north pole, contain a very great number of the largeſt ſpecies of fiſhes, particularly WHALES, which there ſwim in vaſt ſhoals. In theſe regions the great Creator has dealt out their food with a liberal hand; and of all climates this is the beſt adapted to their hot conſtitutions and enormous bodies, which are, as it were, incloſed in fat. This ſpecies of fiſh differs from all other kinds in many particulars; for in their internal parts they reſemble land animals. They breathe with lungs, and conſequently cannot remain long under water. They alſo copulate like quadrupedes, bring forth their young alive, and ſuckle them with their milk. The fins of other fiſh conſiſt of bones, or cartilages, faſtened together by thin membranes running between them; but the whale has articular bones, like the fingers of a human hand, with their proper ligaments, covered with a thick ſkin like that of the other parts of its body. By means of this mechaniſm the whale can move and turn about with greater eaſe than he could with fins of the common form, and ſecure himſelf from falling precipitately upon the rocks when he dives to the bottom of the ſea; for which end he lays his thick tail horizontally on the ſurface of the water, which is of great ſervice to him in this motion.

Whales are of ſeveral kinds, and may be divided into ſuch as have apertures in the head, and ſuch as have noſtrils for reſpiration. Some of the former have two holes or apertures, as the *whale* properly ſo called, the fin-fiſh, &c.; others have only one, as the *cachellotte*, or *ſpermaceti* whale: but thoſe that reſpire through the noſtrils are ſeldom to be met with. This ſpecies may alſo be divided into thoſe that have plain, and thoſe that have prominent backs.

The *Greenland* whale, with a flat back, is thick and unweildy, its head taking up one third part of its bulk. Theſe are from ſixty to ſeventy feet in length; the fins on their ſides from five to eight feet; and the tail, which is in a horizontal poſition, or bent a little upward on both ſides, is from three to four fathoms broad. When the whale is attacked, he turns upon his ſide and brandiſhes his tail, which it is dangerous to approach: the tail alſo ſerves him for an oar, with which he rows himſelf forward with ſurpriſing ſwiftneſs. The ſkin of the back is black and ſmooth, but in ſome places variegated or marbled. Next to the ſkin, which is not thicker than ſtrong writing-paper, or thin parchment, is the rind, which is near an inch thick; and between this and the fleſh lies the fat, to the thickneſs of nine, and ſometimes twelve inches. Under the fat is the fleſh, which is dry and very red. In its upper jaw, on both ſides, are the ſpicula, or whale bone, which ſerve him for teeth; and the largeſt of theſe, which are placed in the middle, are ſeven or eight feet in length, and ſometimes more. On each ſide are generally two hundred and fifty of theſe ſpicula; ſo that they amount in all to five hundred. The tongue is very fat, and ſo large that it fills ſeveral caſks. The eyes of the whale, which are no bigger than thoſe of an ox, are in the hind part of the head, where it is broadeſt, and are defended by eye-lids and eye-brows. This fiſh is very quick of hearing, though it has no external ears, and has only a black ſpot under the upper ſkin behind the eye, and under that ſpot a narrow duct, which ſeems to convey the ſound to the tympanum, or drum. They generally bring forth only one at a birth, though they have ſometimes two, and their milk is like that of a cow. Their uſual food is a ſmall, black, round inſect, of about the ſize of a horſe-bean, which abounds in theſe ſeas, and of which the whale ſucks in prodigious ſwarms with his vaſt mouth, and afterward grinds them with his ſpicula. The *nord-caper*, ſo called from the vaſt number of them ſeen about the *North Cape* in *Norway*, is much ſlenderer and ſmaller than the whale.

The FIN-FISH equals the whale in length, but not in thickneſs, and has a fin on his back, from whence he receives his name. He throws water higher than a whale of his ſize; has brown lips, which are twiſted like a rope; and his body in colour much reſembles a tench. He is extremely nimble, as well as ſtrong.

The NARVAL, OR SEA-UNICORN, is chiefly remarkable for its long horn, which reſembles ivory, but is generally more ſolid and ponderous. This fiſh is ſmooth like an eel, its colour white, ſprinkled with black ſpots, and its eyes ſmall. It has two fleſhy fins, and a ſemi-circular hole on the top of its head, from whence it ſpouts water like a whale. The horn, from which it receives its name, grows ſtraight forward from the middle of its upper jaw, is curiouſly wreathed, and terminates in a point: with this it attacks the largeſt whale, and can ſtrike with ſuch violence as to pierce the ſide of a ſhip. The horn of this fiſh has a place in the cabinets of the curious, where it has been ſhewn for that of the unicorn.

The SWORD-FISH, ſo called from their ſharp-pointed upper jaw, which reſembles a ſword, purſues the *whale* and *fin-fiſh* with great eagerneſs. They are of a ſlender form, of various ſizes, from three to twenty feet in length, and their eyes ſtand far out of their head. A few of them will diſpatch a large *whale*, and when they have killed him they feed chiefly on his tongue.

Among the amphibious animals are the MORSE and the SEAL. The *morſe* is as large as an *ox*, with four feet, a thick round head, and a ſhort neck, in which lies his principal ſtrength. He has red eyes, ſmall ears, and large noſtrils, from whence he ſpouts water. His ſkin is very thick, and covered with hair, and from his upper jaw proceed two long teeth as white as ſnow, and more eſteemed than ivory, as they keep their colour better. This creature is very bold, and when attacked he will make toward a boat, and endeavour to overſet it.

The SEALS are of the ſize of a large dog, are moſtly black, but ſome grey, with very fine ſmooth hairy ſkins. The old ones make a noiſe like the howling of dogs, and the young ones like the bleating of lambs. Their head and body are ſhaped much like thoſe of a dog, whence they are by ſome called ſea-dogs. Theſe are the moſt ſerviceable of all animals to the *Greenlanders*, for their fleſh ſerves them for food, although very coarſe and rank, and the ſkin for cloathing and boats: of its entrails and membranes they make ſails and windows; its ligaments ſerve them for thread and cords; and of the bones they make all kinds of domeſtic utenſils and implements of hunting.

SECT. IV.

Of the Perſons, Language, Dreſs, Houſes, Furniture, *and* Boats *of the* Greenlanders; *their Method of catching* Whales, Seals, *and* Salmon; *their* Manners, Cuſtoms, Religion, *and* Trade. *Of* SPITSBERGEN.

THE *Greenlanders* of both ſexes are generally ſhort, but fat, plump, and well proportioned. Their faces are ſomething flat, their hair black and lank, and their complexion of a browniſh red. They are ſtrangers to the ſmall-pox, and are ſeldom afflicted with epidemical diſeaſes; but the ſcurvy is the reigning diſtemper, and on this occaſion their common remedy is ſcurvy-graſs and other ſimples. They have neither ſurgeon nor phyſician among them; but readily rely on certain impoſtors who pretend to foretel future events, and to be ſkilled in phyſic. There are among them ſome inſtances of longevity; and theſe perhaps would be more frequent, did not their manner of life expoſe them to numberleſs dangers.

Their language has ſomething very ſingular in it, and is difficult to be learned, yet it is ſaid to have many elegant phraſes. *Mr. Egede* has publiſhed a dictionary of it; and for the inſtruction of the *Greenlanders*, the four Goſpels, with ſeveral ſmall tracts, have been tranſlated into their tongue, and printed at *Copenhagen*. The *Greenland* dialect is moſtly the ſame throughout the whole country known to the *Danes*, except ſome little difference in the pronunciation. The women have alſo a particular manner of pronouncing their words, which generally terminate in an *n*.

Their cloathing is made of the ſkins of deer, thoſe of ſeals, and of certain birds, ſewed together with the ſmall guts of the ſeal. There is very little difference between the dreſs of the two ſexes.

The man's dreſs conſiſts of a coat or jacket, with a cap or hood ſewed to it, that covers the head and ſhoulders. This coat reaches down to the knees. Their breeches are very ſmall, and ſit cloſe; and the hair of the ſkins the coat is made of is turned inward, to keep them warm. Over this coat they put a large frock made of ſeal-ſkins, dreſſed and tanned without the hair, in ſuch a manner as to keep out the water. Between the leathern frock and the under coat they wear a linen ſhirt, or, for want of linen, one made of ſeals guts, which alſo helps to keep out the water from the under coat. Thoſe ſeated near the ports frequented by the *Danes* and *Dutch*, have ſhirts of ſtriped linen, with coats and breeches made of red and blue ſtuffs, which they buy of the *Daniſh* or *Dutch* merchants, but after their own faſhion; and theſe they wear upon extraordinary occaſions.

ons. They formerly wore ſtockings made of rein-deer or ſeal-ſkins; but now they have worſted ſtockings of different colours, as white, blue, and red, which they buy of the *Danes*: their ſhoes and boots are made of ſeal-ſkins well dreſſed or tanned.

The women's coats are higher on the ſhoulders, and wider, than the men's, with higher and larger hoods. The married women who have children have much larger coats than the reſt, on account of their carrying their children in them upon their backs; for theſe are their only ſwaddling cloaths and cradle. They wear drawers, which reach to the middle of their thigh, and over them breeches. The drawers they keep on day and night; but the breeches, which come down to the knee, they only wear when they go abroad in winter, and as ſoon as they come home pull them off. Next to their body they wear a waiſtcoat made of a young fawn's ſkin, with the hairy ſide inward. The coat, or upper-garment, is ſometimes made of fine coloured ſwan-ſkins trimmed and edged with white, neatly wrought in the ſeams and about the edges, which look very well. Their ſhoes and boots, with a little difference, are like thoſe of the men.

Their hair, which is very long and thick, is braided, and tied up in a knot, which becomes them; they commonly go bare-headed, both without and within doors; and in the ſouthern parts ſeldom wear their hoods except it rains or ſnows. Their chief finery conſiſts in wearing glaſs beads of ſeveral colours, corals about their neck and arms, and pendants in their ears; ſome of them alſo wear bracelets of black ſkin ſet with pearls, with which they adorn their cloaths, and even their ſhoes. The *Greenland* women have likewiſe another more extraordinary kind of embelliſhment: they make black ſtreaks between their eyes, on their forehead, upon the chin, arms, and hands, by paſſing under the ſkin a needle and thread made black. Hideous as this renders them in the eyes of ſtrangers, they think it extremely ornamental, and ſay that thoſe who do not thus adorn their faces, will have their heads turned into train oil tubs, that ſhall be placed under the lamps that burn in the land of ſouls.

They have two ſorts of habitations, one of which ſerves for the winter, and the other for the ſummer ſeaſon. The winter dwellings are the largeſt. Theſe are dug deep in the earth, and raiſed a little above the ſurface of the ground with ſtone and turf. In this hut the windows are on one ſide made of ſeal-guts dreſſed and ſewed together, or the maws of holybutts, which are white and tranſparent. On the other ſide the beds are placed, which conſiſt of benches made with boards, raiſed half a yard from the ground. Their bedding conſiſts of the ſkins of ſeals and rein-deer. On the hearth is a great lamp in the form of a half-moon, and over it are hung their kettles formed of a kind of marble, or, where they have the advantages of trade, of braſs or copper, in which they boil their proviſions. The entrance is dug narrow and winding under ground; and the door ſo very low, that they muſt creep on their hands and feet to get in; which is ſo contrived in order to keep out the cold. The inſide is lined with ſeal-ſkins. Some of theſe houſes are ſo large as to afford lodging for ſeven or eight families. Upon the benches where their beds are placed, is the ſeat of the women, who employ their time in ſewing and making up cloaths, while the men belonging to the family, or ſtrangers, ſit on the oppoſite ſide under the windows, upon benches placed there for that purpoſe. Dry moſs rubbed very ſmall is laid on one ſide of the lamp, which being lighted, burns ſoftly, and if not laid on too thick does not cauſe any ſmoke. This fire gives ſuch a heat, that it not only ſerves to boil their victuals, but alſo heats their rooms to that degree, that they are as hot as a bagnio; however, to thoſe who are not uſed to this method, the ſmell of the houſe is very diſagreeable, as well from the number of burning lamps, all ſupplied with train oil, as from various ſorts of raw meat, fiſh, and fat, heaped up in theſe habitations; but eſpecially their urine tubs ſmell inſufferably.

They betake themſelves to theſe winter retreats in *October*, and continue in them till the beginning of *May*. All the warm part of the year they lodge in tents, which are their ſummer habitations. Theſe are made of poles ſet in a circular form, bending to a point at the top, in the form of a ſugar loaf, fenced by a double cover, the innermoſt of which is of the ſkins of ſeals or rein-deer, with the hairy ſide inward; and the outermoſt of the ſame ſkins, but without hair, and dreſſed with fat, that they may not be penetrated by the rain.

They eat whenever they are hungry, but their chief meal is at night: their common food is the fleſh of rein-deer and hares, all kinds of land and water fowl, ſeals, ſeveral ſorts of freſh water and ſea-fiſh, and even ſome parts of the whale. Their manner of dreſſing and eating their victuals is indeed extremely diſguſtful. They are ſaid to prefer the blood of the ſeal to any other drink; but they uſually quench their thirſt with water, yet can drink a great deal of brandy without being intoxicated.

In their marriages the chief qualifications required in the bride are ſkill in domeſtic affairs, and eſpecially in cutting out and ſewing their garments. On the other hand, nothing recommends a ſuitor more than boldneſs, activity, and ſucceſs in fiſhing and hunting. But at the marriage feſtivities the bride puts on a ſhew of gravity, and a melancholy air. Here relations never intermarry, even to the third and fourth degree of conſanguinity. They have a reſpectful idea of marriage, and in general every *Greenlander* has but one wife. They are fond of their children, even to a culpable exceſs; and, inſtead of moderate correction, or checking them for their faults, let them do whatever they pleaſe.

The men are chiefly employed in hunting and fiſhing, for which they have very curious tackle. The boats in which the men row out to ſea are about ſix yards long, and only three quarters of an ell broad in the middle, ending in a very ſharp point at both extremities. They are made of very thin narrow boards faſtened together with whale-bone, and covered with ſeal-ſkins. Only one man goes out in theſe boats, the top of which is covered with ſkin, with only an opening in the middle, which, when the man has entered, is faſtened cloſe round his waiſt, ſo that no water can enter the boat; and thus equipped he will row ſixty or ſeventy miles a day, though he has but one oar, which is ſix or ſeven feet long, and flat at both ends. Theſe boats are eaſily overſet, which they look upon as no great damage, if the owner eſcapes with his life. They have alſo a kind of open barges, which are likewiſe pointed at both ends, but are not very deep: theſe are covered with ſeal-ſkins, and are high at the extremities. They make uſe of them in conveying their effects in their emigrations, or when they embark for the whale fiſhery, and in coaſting from one part to another.

The *Greenlanders* are more frequently employed at ſea than on ſhore. When they go to catch whales they put on their beſt apparel, fancying that if they were not neatly dreſſed, the whale would ſhun them. Upon theſe occaſions about fifty perſons, men and women, ſet out together in one of the large boats. When they have found the whale they ſtrike him with their harpoons, to which are faſtened lines or ſtraps two or three fathoms long, made of ſeal-ſkins; at the end of which they tie a bag of a whole ſeal-ſkin filled with air like a bladder, that the whale, when he finds himſelf wounded, and flies away with the harpoon ſticking in his body, may be the ſooner tired and more eaſily found, the air bag hindering him from keeping long under water. When he loſes ſtrength they attack him with ſpears and lances till he is killed; and then put on their coats made of dreſſed ſeal-ſkin, with boots, gloves, and caps, laced ſo tight together that no water can penetrate them. In this garb they leap into the ſea, and begin to ſlice off the fat all round the body; and are ſometimes ſo daring as to get upon the whale's back, while he is yet alive, in order to make the quicker diſpatch in killing him, and cutting away the fat.

They uſe much the ſame method in killing the ſeals, only the harpoon is leſs, to which is faſtened a line of ſeal-ſkin, ſix or ſeven fathoms long, and at the end of it a bag of ſeal-ſkin filled with air, to keep the ſeal when wounded from eſcaping by diving. But in the northern parts, where the ſea is frozen, they uſe other methods in catching of ſeals. They firſt look out for the holes which the ſeals themſelves make with their claws, of about the bigneſs of a halfpenny, that they may fetch their breath. On their finding one of theſe holes, they ſeat themſelves near it; and as ſoon as they perceive the ſeal put his ſnout to it for air, immediately ſtrike him with a ſmall harpoon, which they have ready in their hand, to which is faſtened a ſtrap of a fathom long, which they hold in the other hand.

They have alſo another way of catching ſeals, by making a great hole in the ice; or, in ſpring, they find holes which the ſeals have made to get upon the ice, in order lie and baſk themſelves in the ſun.

They have another method in the ſpring, when the ſeals lie upon the ice, near holes which themſelves make to get up and down. The *Greenlanders*, diſguiſed in ſeal-ſkins, with a long pole in their hands, move their heads forward and backward, and ſnort like a ſeal, till they come ſo near him, that they reach him with the pole and ſtrike him.

As fiſhing is the principal concern of theſe people, we are from thence enabled to judge of their characters and capacities. To excel therein is of the utmoſt importance to them, ſince on their ability in hunting and fiſhing depends their whole ſubſiſtence. In fiſhing they make uſe of hooks of iron or bones; their lines are made of whalebone, cut very ſmall and thin; and with this tackle they catch abundance of fiſh. Their way of fiſhing for ſmall ſalmon, or ſea-trout, is as follows: At low water they build ſmall encloſures of ſtone, near a river's mouth, or any other place where ſalmon reſort: when the tide comes in, the ſalmon which enter the river paſs at high water over the incloſure; and remaining in the river till the water falls again, are there confined, and may be caught with the hand.

The *Greenlanders* are ſtrangers to trades, arts, and ſciences. They have no traffic one among another, and their commerce with foreigners is very inconſiderable. They neither uſe nor have any knowledge of money, but fix a certain value on iron.

When the *Greenlanders* meet together, they expreſs their mirth by drumming, ſinging, and dancing. They are accuſtomed from their very childhood to an unbounded liberty, all of them being on a level. They have indeed little regard to the forms of ceremony and decorum, which in other places obtain the name of politeneſs; yet are free, open, and cheerful in converſation, nothing pleaſing them better than merry jeſts and raillery. They live very ſociably, and repoſe great confidence in each other. Illicit amours are extremely rare if not unknown in this country; and as they abſtain from theft, rapine, and violence among themſelves, they are never known upon any pretence to make war on their neighbours. They think themſelves greatly ſuperior to the *Danes*, and make no ſcruple to pilfer any thing from them, when it can be done with ſafety; but it is probable they have little idea of property; and as they behave with ſuch integrity to each other, it is natural to ſuppoſe that they have learned this pilfering of the *Dutch* and *Daniſh* ſeamen. They exerciſe great hoſpitality, and indeed have moſt things in common; ſo that if there be any among them who cannot work, or get his livelihood, they do not let him ſtarve, but admit him freely to their table. They are as remarkable for their good-nature and inoffenſive behaviour, as for being free from hatred and envy, ſtrife and rage. They have as great an abhorrence of ſtealing from each other, as any nation upon earth, and therefore have no ſuch things as locks and keys.

They are, however, charged with having no idea of a *God*; and ſome authors have ſaid that their language has not any expreſſion to denote a Supreme Being: though they themſelves acknowledge that they are convinced of the immortality of the ſoul, and believe that as ſoon as a perſon dies he goes to the land of ſpirits, and there enjoys the felicity of hunting from age to age; while the body remains behind, and moulders in the duſt.

They maintain that there is a ſpirit which they call *Torngarſuk*, to whom they aſcribe a ſupernatural power, though not the creation of the world. The *Angakuts*, or prophets, form very whimſical ideas of this being; ſome repreſenting him as without form or ſhape, others giving him that of a bear, and others pretending that he has a large body and but one arm. They aſſign him his abode in the lower regions of the earth, which they repreſent as poſſeſſing every advantage of which they have any idea; ſuch as perpetual ſunſhine, good water, with deer and fowls in abundance. They likewiſe maintain that a ſpirit reſides in the air, whom they name the *Moderator*, or *Reſtrainer*; and their *Angakuts*, pretending an authority from him, eſtabliſh their own conſequence, by laying the people under certain reſtrictions, which they aſſure them are neceſſary for their ſecurity and well being.

Their notions of the heavenly bodies are alſo very whimſical. They ſay the moon was once a young man, and the ſun a young woman his ſiſter, with whom he was familiar in the dark; but that ſhe being deſirous to find out her lover, rubbed her hands with ſoot, with which ſhe marked his white bear-ſkin coat; and hence they ſay came the ſpots in the moon. The ſun flying from his embraces aſcended the air, whither the moon followed her, and ſtill continues to purſue, without being able to overtake her.

They do not compute or meaſure their time by weeks or years, but only by months, beginning their computation from the ſun's firſt riſing above their horizon in the winter; from whence they tell the moons, in order to know exactly the ſeaſon in which every ſort of fiſh, ſea-animals, or birds, ſeek the land, that by this knowledge they may regulate their different employments. According to their aſtronomical ſyſtem, the heavens turn round the point of a huge rock.

What ſeems moſt extraordinary in a people thus ſeated in frozen regions, where genius and imagination might be ſuppoſed to be extinguiſhed, is their taſte for poetry. The poems they compoſe are a kind of lyric odes, the harmony of which depends both upon rhyme and quantity; there being a viſible regularity in the number of ſyllables of which their verſes are compoſed, and a plain regard to cadence even in their manner of reading them. Their poetry is as far from being rude, as it is from being exact; but it is their common phraſeology in all their paſſionate language, whether they expreſs love, joy, or grief, but more eſpecially anger: for when two people quarrel in this country, they challenge each other, not to fight, for that they never do but in jeſt, or by way of diverſion, but to contend in verſe; and he who firſt wants words to expreſs himſelf in this poetical duel, is held to be conquered; and ſo the controverſy ends, without either bloodſhed or law-ſuit.

Mr. Egede, who was ſent to *Greenland* by the *Daniſh* ſociety for propagating the Goſpel, lived among this people fifteen years, which he ſpent with the moſt indefatigable zeal and laborious application, by which means he made a great number of converts. He returned to *Copenhagen* in 1736; and by his ſolicitation a ſeminary was founded in that city, for educating able miſſionaries and cathechiſts to be ſent to *Greenland*.

The *Greenland* trade is at preſent carried on by the *Copenhagen* company, who ſend thither three or four ſhips every year, and the *Dutch* are prohibited from coming within ſeveral miles of their colonies. The commodities *Greenland* affords for commerce, are whale-blubber, whale-bone, ſea-unicorns horns, the ſkins of rein-deer, bears, ſeals, and fox-ſkins, which they barter for the following merchandizes: coarſe ſhirts, linen and woollen cloth, knives, ſaws, needles, fiſhing-hooks, and other hard-ware; looking-glaſſes, rafts, poles, deal boards, cheſts, kettles of copper, braſs, and tin, with other articles.

The information moſt to be depended upon reſpecting this country, is to be met with in *Mr. Crantz's* account of *Greenland*, and ſome papers in the *Philoſophical Tranſactions*, from whence this account is chiefly formed.

SPITZBERGEN.

This is the moſt northern country of *Europe*, being to the north of *Norway*, between *Greenland* to the weſt, and *Nova Zembla* to the eaſt. The ſun here is not viſible above the horizon for four months of the winter ſeaſon, during which time it is one continued night. The reader will find an account of this uninhabited iſland in our Appendix to the firſt volume, page 572.

A NEW
SYSTEM
OF
GEOGRAPHY.

BOOK IV.

Of AMERICA in general; and the Independent UNITED STATES, formed by the late Revolution in the Northern Diviſion of that Continent.

WE are now entering upon a country of amazing extent, unknown to the ancients: a country diſcovered ſo lately as the year 1491, by the judgment, the vigilance, the perſeverance, and maritime ſkill of the great *Columbus*, a *Genoeſe*; who, by this diſcovery, extended geographical knowledge, and the ſcience of navigation; opened new ſources of commerce, and entirely changed the political ſyſtem of *Europe*.

America, the fourth grand diviſion of the earth, received its name from *Americus Veſpuſius*, a *Florentine*; who was far from deſerving that honour, to which he had no other claim than a few inconſiderable diſcoveries after *Columbus* had led the way, and his drawing a map of the country: if therefore it was proper for it to receive the name of any *European*, it might with more juſtice have been called *Columbia*, from the great man who made it known to the *Europeans*; and it is frequently ſo called by the *Britiſh* race of inhabitants there.

This *New World*, as it is emphatically called, extends from the frozen regions of the *North*, where its limits are impervious to human obſervation on account of the impaſſable barriers of ice, which never yield to the influence of the ſummer ſun, through an extent of country, in which ſucceſſively paſs all the climates to be found in the other regions of the earth, and at length terminates on the ſouth in the ſnowy rocks of *Terra del Fuego*. Thus the continent of *America* extends from about the eightieth degree north, to the fifty-ſixth degree ſouth latitude; and where its breadth is known, from the thirty-fifth to the hundred and twenty-fifth degree of weſt longitude from *London*, without including the iſlands, ſtretching between eight and nine thouſand miles in length: but in its greateſt breadth, where certainly known, three thouſand ſix hundred and ninety; though in the middle it is not above ſixty or ſeventy miles over.

It is bounded on the north by the ſeas about the north pole; on the eaſt by *Davis's Straits*, which ſeparates it from *Greenland*, and by the great *Atlantic Ocean*, which divides it from *Europe* and *Africa*; on the ſouth by the vaſt *Southern* or *Pacific Ocean*; and on the weſt by the *North Pacific Ocean*, which ſeparates it from the eaſtern part of the continent of *Aſia*, the deſolate but mild and extenſive regions of *New Holland*; alſo from *New Guinea*, and an immenſe number of fruitful and populous iſlands. About the ſixtieth degree of north latitude, it very nearly joins the moſt eaſtern point of *Aſia*, a fact which the indefatigable labours of *Captain Cook* aſcertained.

It is very remarkable, that the climates of *North America* are many degrees colder than any of the countries in the ſame latitude in *Europe*: thus *New Britain*, which is nearly in the ſame latitude with *Great Britain*, is inſupportably cold to an *European*: the greateſt part of the frozen country of *Newfoundland*, the bay of *St. Laurence*, and *Cape Breton*, lie oppoſite the coaſt of *France*: *Nova Scotia* and *New England* are in the ſame latitude as the *Bay of Biſcay*: *New York* and *Pennſylvania* lie oppoſite to *Spain* and *Portugal*. Hence the coldeſt winds of *North America* blow from the north and the weſt, as they do here from the north and the eaſt. Many cauſes have been aſſigned for this remarkable increaſe of cold in *America*, to that felt under the ſame parallel of latitude in *Europe*: one is, the wind travelling over a vaſt extent of land from the north and weſt before it reaches thoſe parts of *America* above mentioned; on the ſame account perhaps it is, that the city of *Amſterdam*, though not one degree farther north than *London*, has a much greater degree of cold: the immenſe woods which overſpread vaſt tracts of land, are doubtleſs another cauſe; and ſome philoſophers have maintained, that *America* was entirely overſpread with an immenſe ocean, long ſince the records of hiſtory ſpeak of *Aſia* and *Europe*. See *Recherches Philoſophique ſur les Americains*.

This vaſt continent is divided almoſt in two, by an iſthmus about fifteen hundred miles in length, and in one place ſo narrow as to be only about ſixty miles over; but being mountainous, it would be impoſſible, perhaps, to open a communication there between the *Atlantic* and the *Pacific Oceans*. All the continent to the north of this iſthmus, together with the iſthmus itſelf, is ſtyled *North America*; and all to the ſouth of it, including that even on this ſide the equator, is ſtyled *South America*. This narrow neck is called the iſthmus of *Darien*.

North America is far from being mountainous, and chiefly conſiſts of gentle aſcents and level plains; the principal hills in this extenſive tract are called the *Acallachian* or *Aligany mountains*, which extend on the back of the new States. But in *South America* is the immenſely long and lofty chain called the *Cordillera of the Andes*, which in height and length exceed any chain of mountains in the other three parts of the earth; for beginning near the iſthmus of *Darien*, they extend to the ſtraits of *Magellhaens*, cutting the whole ſouthern part of *America* in two, and running a length of four thouſand three hundred miles.

America is alſo extremely well watered by rivers, not only for the ſupport of animal life, and all the advantages of fertility, but for the convenience of trade, and the intercourſe of the diſtant inhabitants by water. In *North America* the great river *Miſſiſſippi*, riſing about the falls of *St. Anthony* in lat. 47° N. runs above two thouſand miles chiefly from north to ſouth, receiving in its courſe the *Ohio*, the *Miſſorie*, the *Illinois*, the *Ouiſconſin*, the *St. Croix*, the *St.*

Pierre, and other large rivers, ſcarcely inferior to the *Rhine* or the *Danube*, navigable almoſt to their ſources, and laying open the inmoſt receſſes of this continent. Near the heads of theſe are extenſive lakes of freſh water, which have a communication with each other, and with the great river *St. Laurence*, which is navigable for ſhips above four hundred miles from its mouth, where it is ſaid to be ninety miles broad. On the eaſtern ſide of *North America* are the fine rivers *Hudſon*, *Delaware*, *Potowmack*, *Suſquehanna*, *Connecticut*, and ſeveral others of great length and depth.

In *South America* are the two largeſt rivers in the known world, the river of *Amazons*, and the *Rio de la Plata:* the firſt riſes in *Peru*, and, after a courſe of above three thouſand ſix hundred miles, in which it receives a prodigious number of navigable rivers, falls into the ocean between *Braſil* and *Guiana*. The *Rio de la Plata*, or *Plate River*, riſes in the heart of the country, and becomes ſo large by the acceſſion of other conſiderable rivers, pouring ſuch an immenſe flood into the ſea, that it makes it taſte freſh for ſeveral leagues from the ſhore. Beſides theſe there is the *Oronoko*, and ſeveral other very conſiderable rivers.

A country of ſuch vaſt extent on each ſide the equator, muſt neceſſarily have a variety of ſoils as well as climates; but if we except the moſt northern and ſouthern parts, which here, as every where elſe, are naturally cold and barren, the reſt is an immenſe treaſury of nature, producing moſt of the *metals*, *minerals*, *plants*, *fruits*, *trees*, and *woods*, to be met with in the other parts of the world, and many of them in greater quantities and higher perfection. The gold and ſilver of *South America* has ſupplied *Europe* with ſuch immenſe quantities of thoſe precious metals, that the value of ſpecie, in conſequence, is greatly decreaſed; according to *Monteſquieu*, the quantity then in circulation when he wrote, was, to that before the diſcovery of the *Indies*, as thirty-two is to one. And in the revolution of about thirty years, which time has elapſed ſince he made the calculation, the difference has become conſiderably greater; notwithſtanding the immenſe quantities of ſilver annually carried to *China*, which never returns.

The ſouthern diviſion of this country alſo produces an immenſe quantity of *diamonds*, *pearls*, *emeralds*, *amethyſts*, and other valuable ſtones, which are brought from thence into *Europe*, in ſuch quantities, as have alſo greatly lowered their value. To theſe may be added a great number of other commodities, which, though of leſs price, are of much greater uſe. Of this ſort are the conſtant and plentiful ſupplies of *cochineal*, *indigo*, *anatto*, *logwood*, *braſil*, *fuſtick*, *pimento*, *lignum-vitæ*, *rice*, *ginger*, *cacao*, or the *chocolate nut*, *ſugar*, *tobacco*, *banillas*, *cotton*, *red-wood*, the *balſams* of *Tolu*, *Peru*, and *Chili*, *Jeſuit's bark*, *mechoacan*, *ſaſſafras*, *ſarſaparilla*, *caſſia*, *tamarinds*, *hides*, *furs*, *ambergris*, and a great variety of woods, roots, and plants, to which, before the diſcovery of *America*, we were either entire ſtrangers, or forced to procure them at an exorbitant price from *Aſia* and *Africa*.

America has alſo a variety of moſt excellent fruits, which here grow wild to great perfection; as *pine-apples*, *pomegranates*, *citrons*, *lemons*, *oranges*, *mancatons*, *cherries*, *pears*, *apples*, *figs*, *grapes*; vaſt numbers of culinary, medicinal, and other herbs, roots, and plants.

Add to this, the ſurpriſing fertility with which the ſoil is bleſſed, by which many exotic productions are nouriſhed in as great perfection as in their native ground.

With all this plenty and variety, the vaſt continent of *America* formerly laboured under the want of many neceſſary and uſeful commodities: for upon the firſt landing of the *Europeans*, they found neither corn, wine, nor oil; the inhabitants in many places knew not the uſe of corn, but made their bread of pulſe or roots: their drink was the water of the clear ſpring; and, with regard to money, they were ignorant of the uſe of it. Our kind of ſheep, goats, cows, aſſes, and horſes, were not to be found there, though the land abounded with paſtures; and at firſt the ſight of a man on horſeback would throw a whole troop of the innocent and ſimple inhabitants into a dreadful panic. But all theſe animals have been tranſported thither in ſuch plenty, and have increaſed ſo faſt in thoſe fertile paſtures, that the country has no want of them, as appears from the innumerable hides, particularly of oxen, continually exported from thence. However, in the room of theſe domeſtic animals, they had others no leſs valuable, and to which we in *Europe* were utter ſtrangers; theſe we ſhall deſcribe in the countries where they are bred.

The ſame may be ſaid of the vaſt variety of birds to be ſeen there, ſome of which greatly ſurpaſs all that are to be found in any other parts of the world, for their ſurpriſing beauty, fine ſhape, bright and glowing colours. The ſeas, lakes, and rivers, alſo abound with the greateſt variety of fiſh.

Before the arrival of the *Europeans*, they had arts of their own; having ſome notion of painting, they alſo formed pictures by the beautiful arrangement of feathers of all colours, and in ſome parts built palaces and temples. Though the uſe of iron was unknown, they poliſhed precious ſtones, cut down trees, and made not only ſmall canoes, but boats of conſiderable bulk. Their hatchets were headed with a ſharp flint, and of flints they made knives. Thus, at the arrival of the *Europeans*, they afforded a lively picture of the primitive ſtate of mankind in the infancy of the world. At that period the arts, the ſciences, and all the learning that had long flouriſhed in theſe more enlightened parts of the earth, were entirely unknown. Theſe, which had before travelled weſt from *Egypt* to *Greece*, and from thence to *Rome*, have proceeded in the ſame courſe, and are daily gaining ground where ignorance reigned triumphant; and the time may arrive, when *America* may become the ſeat of mighty empires, and rival *Europe* in arms, arts, commerce, and power.

North America, by the treaties of peace which were ratified in the year 1783, and which produced the great revolution on that continent, is now divided in the following manner:

I. The dominions of *Great Britain* contain on the continent *Labrador*, or *New Britain*, with the countries about *Hudſon's Bay*, *Canada*, and *Nova Scotia:* alſo many rich and fertile iſlands, the principal of which are *Newfoundland*, *Cape Breton*, *Providence*, *Jamaica*, *St. Chriſtopher's*, *Antigua*, *Nevis*, *Dominica*, *Barbuda*, *Anguilla*, *Montſerrat*, *St. Vincent's*, *Barbadoes*, the *Grenades* and *Granadillas:* to which may be added, the *Bermudas* or *Summer Iſlands*.

II. The *Thirteen United States* of *America*, viz. *New Hampſhire*, *Maſſachuſſet's Bay*, *Rhode Iſland*, and *Providence Plantations*, *Connecticut*, *New York*, *New Jerſey*, *Pennſylvania*, *Delaware*, *Maryland*, *Virginia*, *North Carolina*, *South Carolina*, and *Georgia*. Theſe, by the treaty of peace ſigned at *Paris* in the year 1783, were acknowledged by the commiſſioner on the part of the king of *Great Britain*, to be free ſovereign and independent ſtates. The boundaries of theſe United States are aſcertained as follows, in the ſecond article of that treaty.

"From the north-weſt angle of *Nova Scotia*, viz. that angle which is formed by a line drawn due north from the ſource of *St. Croix River* to the highlands: along the ſaid iſlands, which divide thoſe rivers, that empty themſelves into the river *St. Laurence*, from thoſe which fall into the *Atlantic Ocean*, to the north-weſtermoſt head of *Connecticut* river; thence down along the middle of that river to 45° N. latitude; from thence, by a line due weſt on ſaid latitude, until it ſtrikes the river *Iroquois* or *Cataraquy*; thence along the middle of ſaid river into *Lake Ontario*, through the middle of ſaid lake, until it ſtrikes the communication by water between that lake and *Lake Erie*; thence along the middle of ſaid communication into *Lake Erie*, through the middle of ſaid lake, until it arrives at the water communication between that lake and *Lake Huron*; thence along the middle of ſaid water communication into the *Lake Huron*; thence through the middle of ſaid lake to the water communication between that lake and *Lake Superior*; thence through *Lake Superior*, northward of the *Iſles Royal* and *Phelipeaux*, to the *Long Lake*; thence through the middle of ſaid *Long Lake*, and the water communication between it and the *Lake of the Woods*, to the ſaid *Lake of the Woods*; thence through the ſaid lake to the moſt north-weſtern point thereof, and from thence on a due weſt courſe to the *River Miſſiſſippi*; thence, by a line to be drawn along the middle of the ſaid

River Miſſiſſippi, until it ſhall interſect the northernmoſt part of 31° N. latitude. South, by a line to be drawn due eaſt from the determination of the line laſt mentioned, in the latitude of 31° N. of the equator, to the middle of the *River Apalachicola*, or *Catahouche*; thence along the middle thereof to its junction with the *Flint River*; thence ſtraight to the head of *St. Mary's River*; and thence down along the middle of *St. Mary's River* to the *Atlantic Ocean*. Eaſt, by a line to be drawn along the middle of the *River St. Croix*, from its mouth in the *Bay of Fundy* to its ſource, and from its ſource directly north to the aforeſaid highlands, which divide the rivers that fall into the *Atlantic Ocean* from thoſe which fall into the *River St. Laurence*; comprehending all iſlands within twenty leagues of any part of the ſhores of the *United States*, and lying between lines to be drawn due eaſt from the points where the aforeſaid boundaries, between *Nova Scotia* on the one part, and *Eaſt Florida* on the other, ſhall reſpectively touch the *Bay of Fundy* and the *Atlantic Ocean*, excepting ſuch iſlands as now are, and heretofore have been, within the limits of the ſaid province of *Nova Scotia*."

III. The dominions of *Spain*; containing *Louiſiana*, *Old Mexico*, *New Mexico*, *California*, *Eaſt* and *Weſt Florida*, in *North America*: with the extenſive countries of *Terra Firma*, *Peru*, and *La Plata*, or *Paraguay*, in *South America*.

The valuable iſlands of *Cuba*, half of *Hiſpaniola*, or *St. Domingo*, *Porto Rico*, *Trinidad*, and *Margaretta*, in *North America*. *Chiloe*, the *Kings* or *Pearl Iſlands*, *Juan Fernandes*, and the *Gallipagos Iſlands*, in the *Pacific Ocean*.

The dominions of *France* on the continent were confined to *Louiſiana*, on the weſtern ſide of the river *Miſſiſſippi*, by the peace of *Paris* in 1763, which country has ſince been transferred to *Spain*.

The *French* have, however, the following iſlands: *St. Martin's*, *St. Bartholomew's Deſeada*, *Guadaloupe*, *Maragalante*, *Martinico*, *St. Lucia*, *Tobago*, and part of *Hiſpaniola*.

V. The dominions of *Portugal* conſiſt of the rich and extenſive country of *Braſil*, in *South America*.

VI. The dominions of the *Dutch* conſiſt of *Surinam* in *Guiana*, on the continent of *South America*, with the iſlands of *Curaſſao*, *Bonaire*, and *Aruba*, near the coaſt of *Terra Firma*; with *Euſtatia* and *Saba*, two of the *Caribbee Iſlands*.

VII. Thoſe of the *Danes* are *St. Thomas*, and *St. Croix*.

VIII. The parts ſtill poſſeſſed by the native *Indians* are, all the countries on the north and weſt of *North America*, which coaſts, to the northward of forty-five degrees, have been carefully explored by *Captain Cook*, and a very lucrative intercourſe in furs carried on with the various tribes of *Indians*.

In *South America* the *Indians* poſſeſs the greateſt part of *Guiana*, and all the moſt ſouthern part of that continent, as *Patagonia*, and the iſland *Terra del Fuego*.

We ſhall begin with the dominions which are ſtill retained by *Great Britain*.

CHAP. I.

Of the Northern Part of the AMERICAN Dominions, now ſubject to GREAT BRITAIN; particularly of the Countries bordering on HUDSON'S-BAY; with the Iſlands of NEWFOUNDLAND, CAPE BRETON, and St. JOHN.

SECT. I.

Of the Countries bordering on HUDSON'S-BAY; *a particular Account of the* Climate, Soil, Vegetables, *and* Minerals. *The late Attempts to trace the Country to the* North-Weſtward, *both over Land and by the Coaſt. A Deſcription of the* Beaver.

THE moſt northen part of *America* ſubject to the *Engliſh*, particularly the countries bordering on *Hudſon's-bay*, which are ſituated between 50° and 70° of north latitude, and extend between 51° and 100° weſt longitude, including *Hudſon's-bay*, are bounded on the north by unknown lands and ſeas about the pole; on the eaſt, by the *Atlantic Ocean*; on the ſouth, by the *Gulf of St. Laurence* and *Canada*; and on the weſt by an immenſe country, very thinly inhabited by a ſavage race of *Indians*. Were we to extend the country claimed by *Great Britain*, as far as her mariners have diſcovered to the north, we might ſtretch it to 81° 30′ N. latitude; for ſo far Captain *Hudſon* and Captain *Baffin* ſailed, and gave their reſpective names to the bays.

The knowledge we have obtained of theſe countries, is owing to the repeated attempts that have been made to diſcover a north-weſt paſſage to the *Eaſt Indies*. But though theſe countries, which extend ſixteen hundred miles in length, are claimed by *Great Britain*, and diſtinguiſhed by *Engliſh* names, as the eaſt coaſt of *Hudſon's-bay* by that of *New Britain*, and the weſt by that of *New North Wales* and *New South Wales*; yet very little advantage has been made of them, except by the *Hudſon's-bay* company, who have ſeveral ſettlements on the coaſt of *Hudſon's-bay*.

Formerly the *Hudſon's-bay* company, jealous of an interference in their monopoly, exerted all their influence to quaſh a ſpirit of diſcovery in theſe regions; and when Captain *Chriſtopher Middleton*, in conſequence of the ſanguine hopes entertained by *Mr. Dobbs*, was ſent out, in the year 1741, to trace the coaſts to the north-weſtward, the cauſe of the failure of that attempt was imputed by ſome to the ſecret practices of the company. The preſent governor and committee, however, make amends for the narrow prejudices of their predeceſſors, for every thing has been done by them which could be required toward perfecting a ſearch for a *north-weſt* paſſage. In the year 1761 an unſucceſsful attempt was made by order of the company, by a Captain *Chriſtopher*, who repeated his voyage the enſuing ſummer, but found neither inlet nor river which could contribute to the intereſts of commerce.

In *December* 1770, the company cauſed a journey to be taken by land, which was performed by *Mr. Hearne*, in the company's ſervice, attended by ſome truſty northern *Indians*. In this he was employed more than eighteen months, returning 30th *June* 1772: in that time he proceeded to latitude 72°, and about 25° W. longitude from fort *Prince of Wales*, from whence he departed. *Mr. Hearne* travelled 1300 miles before he arrived at the ſea; his moſt weſtern diſtance from the coaſt of *Hudſon's-bay* was near 600 miles, and a vaſt track of continent ſtretched farther on in that direction. The muſt powerful race of *Indians* inhabiting theſe regions are the *Arathepeſcow*, who make continual ſlaughter among the inferior tribes, of which the moſt weſtward are called *Dog-ribbed Indians*. Some other tribes he was informed inhabited the country about and beyond the *arctic circle*; theſe were called *Copper-coloured* and *Northern Indians*.

Whilſt *Captain Cook* was employed in his laſt voyage, a conſiderable object of which was to explore the *weſtern* coaſt of *North America* in high latitudes, and to aſcertain if, by means of any large rivers, the interior parts of that continent could be rendered acceſſible by ſhipping, and a communication opened with *Lake Superior*, the armed brig the *Lion* was ſent out in the ſummer of 1776 to *Davis's Straits* and *Baffin's Bay* to explore the coaſts, and obtain a paſſage on that ſide, with a view to co-operate with *Captain Cook*,

Cook, who it was ſuppoſed would, about that time, be trying for a paſſage on the oppoſite ſide of *America*. This attempt not being made to the ſatisfaction of the board of Admiralty, another commander was ſent out the next year, in the ſame ſhip, for the ſame purpoſe; but this voyage proved no more ſatisfactory than the former. *See Dr. Douglas's Introduction to Captain Cook's Third Voyage, page* xlvii. *to* l.

So intenſely cold is the climate, that *Mr. Ellis*, who wintered in a creek, about five miles above *York Fort*, in only 57° 30′ N. latitude, was ſcarce able to preſerve his own life and the lives of his party, although every precaution was taken to fence againſt the cold, by conſtructing an houſe of thick pieces of timber, and each crevice cloſe ſtuffed with moſs, and plaſtered over with clay; yet at the beginning of *November*, the cold became ſo intenſe, that all the bottled beer became frozen, although packed up in tow, and placed near a good fire. Abroad, the cold became inſupportable, unleſs they were entirely incaſed in the warmeſt furs. No kind of liquid indeed could withſtand the cold, for brandy, and even ſpirits of wine, froze; the latter only to a conſiſtence of oil. If the men touched iron, or any other ſolid ſurface, their fingers were frozen faſt to it; and if, in drinking a dram of brandy out of a glaſs, they chanced to touch the glaſs with their tongue or lips, in pulling it away the ſkin was left upon it.

The hares, rabbits, and partridges, which in ſummer are brown and grey, change in winter to white. Every animal is here furniſhed by nature with extraordinary furs, to reſiſt the cold, which fall off as the warm weather returns; and even this is the caſe with the dogs and cats brought hither from *Europe*.

In the ſouthern part of this country the ſoil is fertile, the ſurface being a looſe dark mould, under which are layers of different coloured clay.

There are many ſorts of minerals here; particularly *lead* and *iron ore*, and the natives who live to the northward, frequently bring pieces of copper to the factory. There are likewiſe a great variety of *talcs*, *ſpars*, and *rock-cryſtals* of different colours, as red and white, the former reſembling rubies, and the latter, which are very tranſparent, ſhooting into pentangular priſms. In the northern parts is found a kind of coal; the *aſbeſtos*, or *ſtone-flax*, is found here; and alſo a ſtone of a black, ſmooth, and ſhining ſurface, that eaſily ſeparates into thin tranſparent leaves, which the natives uſe as looking-glaſſes. The country likewiſe abounds in various kinds of *marble*, ſome ſpeckled with green, blue, and red, and others perfectly white.

Among the animals are *deer*, *rabbits*, *beavers*, and other beaſts; with a great variety of birds, as *ſwans*, *wild-geeſe*, *plover*, *ducks*, and many others that fly to the northward in the ſpring to breed, and return to the ſouthward in autumn. There are likewiſe *eagles*, *hawks*, *partridges*, *pheaſants*, *crows*, and *owls*.

As the inhabitants of this country are cloathed in the ſkins of *beavers*, and as the principal trade conſiſts in thoſe ſkins, with which they have ſupplied us by means of the *Hudſon's-bay* company, it will be proper to give here a deſcription of that curious animal. A large *beaver* is about twenty-eight inches in length, from the hind part of the head to the root of the tail, and weighs ſixty or ſeventy pounds, but their colour is different; in ſome places they are black, in others white, and in others almoſt of the colour of the deer. It is an amphibious animal. The *beaver*, or, as it is likewiſe called, the *caſtor*, lives to a great age; the females generally bring forth four young ones at a time. Their jaws are furniſhed with two cutters and eight grinders; the upper cutter is two inches and a half in length, and the lower ſomething longer, the upper jaw projects over the lower one. The head is ſhaped like that of a rat, and is ſmall in proportion to its body; its ſnout is long, its eyes ſmall, and its ears ſharp and round: its legs are about five inches in length, with paws formed like a man's hand; but the hind feet are webbed like the toes of a gooſe. The tail is ſhaped like the blade of a paddle, and is four inches broad where it joins to the body, five or ſix in the middle, and three at the extremity: it is about fourteen inches in length, and about an inch in thickneſs. It is covered with a ſcaly ſkin, the ſcales being near a quarter of an inch long, and fold over each other like thoſe of a fiſh.

The induſtry, foreſight, and good management of theſe animals are extremely ſurpriſing, and ſcarce credible to thoſe who never ſaw them. When they want to form a ſettlement, three or four, or more of them, aſſemble together, and firſt pitch upon a place where they may have proviſions, ſuch as the bark of trees, roots, or graſs, with every thing neceſſary for erecting their edifices, which muſt be ſurrounded with water; and if there be neither a convenient lake nor pond, they make one by ſtopping the courſe of ſome brook or river. For this purpoſe they cut down trees, above the place where they are reſolved to build, and take their meaſures ſo well, as always to make the tree fall towards the water, that they may have the leſs diſtance to roll it when they have cut off the branches. This done, they float it to the place appointed, and theſe pieces they cut bigger or leſs to ſuit their convenience. Sometimes they uſe the trunks of large trees, which they lay flat in the water; at others they faſten ſtakes in the bottom of the channel, and then interweaving ſmall branches, fill up the vacancies with clay, mud, and moſs, in ſuch a manner as renders the dam very tight and ſecure. In theſe works their tails ſerve them for carts and trowels, and their teeth for ſaws and axes; their paws ſupply the place of hands, and their feet ſerve inſtead of oars.

The conſtruction of their houſes is no leſs admirable; they are generally built upon piles, at ſome diſtance from the ſhore, but ſometimes cloſe to the banks of the rivers; they firſt make holes at the bottom of the water for planting ſix poſts, upon which each of their edifices is built in a moſt curious manner; their form is round, with a flat roof; the walls are two feet thick, and ſometimes more; they are formed of the ſame materials as the dams juſt mentioned, and every part is ſo well finiſhed, that no air can poſſibly enter: about two-thirds of the edifice is raiſed above the water; in this they lodge, and are careful to keep it clean. They have generally three or four different avenues to each houſe, which they enter under water. To provide proviſions againſt the winter, they draw the ſticks they cut from the trees, and thruſting one end into the mud, let them lie under the water to preſerve the bark green and tender for their winter proviſions. There are ſometimes found eight or ten beavers in one houſe, at others not more than three or four; and let them be as numerous as they will, they all lodge upon one floor.

The *beavers* are excellent food, but the tongue and tail are the moſt delicious parts. The *Indians* ſometimes roaſt theſe animals in the ſame manner as we do pigs, firſt burning off their fur.

The coaſts are frequented by *ſeals*, and the rivers and lakes have very large *ſturgeons*, *pike*, and *trout*; with two very delicious kinds of fiſh, the one called *titymag*, the other reſembling an *eel*, ſpotted with yellow and white, and called by the natives *mutboy*: theſe are reckoned fatteſt in winter, at which ſeaſon they are caught by making holes in the ice, and letting down a baited hook, at which the fiſh greedily bites. At the mouths of the rivers, eſpecially thoſe more to the north, are plenty of fine *ſalmon*, *trout*, and a fiſh called a *ſucker*, which reſembles a carp. There comes in with the flood tide a great number of *white whales*, which are eaſily taken.

SECT. II.

The Perſons, Dreſs, Manners, Cuſtoms, *and* Religion, *of the* INDIANS *on the weſtern Coaſt of* HUDSON'S-BAY; *with a Deſcription of* YORK FACTORY.

THE natives are of the middle ſize, and of a copper colour: they have black eyes, and long, lank, black hair; but their features vary as in *Europe*. They are of a cheerful diſpoſition, good-natured, affable, friendly, and honeſt in their dealings.

In ſummer the men are cloathed in a cloſe coat made of a blanket, which they buy of the *Engliſh* ſettled in their neighbourhood. They have a pair of leather ſtockings, which reach ſo high as to ſerve alſo for breeches, and they make their ſhoes of the ſame materials.

The clothes of the women differ from thoſe of the men only in their generally wearing a petticoat that in winter comes a little lower than their knees. Their ordinary apparel is made of the ſkins of deer, otters, or beaver, with the hair or fur on them. The ſleeves of their upper habit are generally tied on with ſtrings at the ſhoulders, ſo that their arm-pits, even in the depth of winter, are expoſed to the cold, which they imagine contributes to their health: their diſeaſes indeed are but few, and thoſe chiefly ariſe from colds caught after drinking ſpirituous liquors, which they buy of the *Engliſh*; and it is a melancholy truth, that thoſe who live near the ſettlements of the *Hudſon's bay* company, are, by drunkenneſs become meagre, ſmall, indolent, and hardly able to encounter the hardſhips of the country; while thoſe who live at a diſtance are hardy, vigorous, and active.

They dwell in tents covered with mooſe and deer-ſkins ſewed together. Theſe are of a circular form, probably becauſe ſuch form is moſt capacious and convenient for their ſitting round the fire, which is in the middle. They are formed of poles, which are extended at the bottom, and at the top lean to the centre, where an opening is left to admit the light and let out the ſmoke. They ſtrew the floor with the tops of pine-trees, and lie with their feet to the fire and their heads to the ſides of the tent. The entrance is generally on the S. W. ſide, and they go in by lifting up one of the ſkins, to which is faſtened a piece of ſtick, to make it flap cloſe.

They have a cuſtom that muſt appear ſhocking to every humane mind, and in which they are in ſome meaſure imitated by the *Hottentots*. The latter, as hath been mentioned in treating of *Caffraria*, (ſee vol. I. p. 373.) expoſe their parents, when labouring under the infirmities of old age, to periſh with hunger, or to be devoured by wild beaſts, and theſe Indians ſtrangle theirs; for when their parents grow ſo old as to be unable to ſupport themſelves by their own labour, they require their children to ſtrangle them, and their performing it is eſteemed an act of duty. This is done in the following manner: the old perſon's grave being dug, he goes into it, and after having converſed and ſmoaked a pipe, or perhaps drank a dram or two with his children, he informs them that he is ready; upon which two of them put a thong about his neck, one ſtanding on one ſide, and the other oppoſite to him, which they pull violently till he expires; they then cover him with earth, and over that erect a kind of rough monument of ſtones. Such old people as have no children, require this office of their friends; but in this caſe it is not always complied with.

They are ſaid to acknowledge a Being of infinite goodneſs, whom they ſtile *Uckewma*, or the Great Chief; him they conſider as the author of all the bleſſings they enjoy, and ſing a kind of hymn to his praiſe, in a grave and ſolemn tone, that is not altogether diſagreeable; but their religious ſentiments are very inconſiſtent and confuſed. They likewiſe acknowledge another being, whom they call *Wittieca*, and repreſent as the author of all evil; of him they are much afraid; but it is not ſaid that they uſe any methods to appeaſe him.

We have already ſpoken, (ſect. I.) of a Journey made into theſe parts by *Mr. Hearne*, attended by ſome of the native *Indians*, for the purpoſe of diſcovery. In the courſe of his progreſs he paſſed through an immenſe tract of land, in which dreary deſarts, frozen lakes, and tribes of miſerable Indians, without fixed habitations, were the only objects which preſented themſelves. Before he paſſed the *Arctic circle*, and all the while he proceeded farther northward, which was in the months of June and July, the ſun was always a good height above the horizon. On his return, in January 1772, the Indians who accompanied him happened to find, in a little hut, a young woman, ſitting alone, who, on examination, appeared to be one of the weſtern *dog-ribbed Indians*. She had been taken priſoner by the *Arathapeſcow* Indians in the ſummer of 1770, and the next ſummer ſhe eſcaped from them, deſigning to return to her own country, but it was ſo far off ſhe could not trace back the way. The particulars which ſhe related throw great light on the manners of the Indians in theſe parts. This forlorn wanderer had not ſeen a human face for ſix months, but procured a good ſubſiſtence by ſnaring rabits, partridges, and ſquirrels; and at that time was in good health and fleſh. She had made herſelf a comfortable warm winter cloathing of the ſkins of rabbits. When ſhe made her eſcape all the ſtock which ſhe poſſeſſed was about five inches of an iron hoop for a knife, a ſtone for a ſteel, and other hard ſtones for flints, beſides other fire tackle, as tinder, &c. about an inch and an half of the ſhank of the ſhoeing of an arrow, the iron of which ſhe had made into an awl. Half a ſcore of the men who accompanied *Mr. Hearne* preſently began to wreſtle with each other, to determine who ſhould have her for a wife. She related, that when the *Arathapeſcow* Indians took her priſoner, they ſtole on the tents of her tribe in the night, when the occupiers were aſleep, and killed every ſoul, except herſelf and three other young women: her father, mother, and huſband, were in the ſame tent with her, and they were all killed. Her child, about five months old, ſhe took with her, wrapped in a bundle of her cloathing, undiſcovered, in the night; but when the party arrived at the place where they had left their wives, the Indian women began to examine the bundle, and diſcovering the child, killed it immediately. The relation of this ſhocking ſcene only excited laughter in the ſavages of *Mr. Hearne*'s gang. She deſcribed her country as ſo far to the weſtward, that ſhe never ſaw any iron there, or other kind of metal, till taken priſoner; thoſe of her tribe making their hatchets and chiſſels of deers' horns, their knives of ſtone and bone; their arrows are ſhod with a kind of ſlate, with bones and deers' horns, and their inſtruments to make their wood-work are nothing elſe than beavers' teeth. They had heard of the uſeful materials with which the other nations to the eaſtward of them are ſupplied by the *Engliſh*; but inſtead of drawing nearer, to be in the way of trading for iron work, and other uſeful articles, they are obliged to retreat farther back, to avoid the *Arathapeſcow* Indians, who make ſurpriſing ſlaughter among them every year, both in winter and ſummer.

The *Hudſon's Bay* Company poſſeſs three forts, or rather factories, on the ſouthern coaſt of *James's Bay*, by which the ſouth eaſtern termination of *Hudſon's Bay* is diſtinguiſhed, and where its vaſt breadth is contracted to within five degrees of longitude. Theſe factories bear the name of *Rupert*, *Mooſe*, and *Albany*; each of which ſtands at the mouth of a river, and lie from 50°. 50′ to 52°. N. latitude: there is alſo a factory called *Flamborough*, ſituated a conſiderable way up *Hays's* River. But, notwithſtanding the ſeverity of the climate in this weſtern hemiſphere, the company's two principal factories are ſtill more to the northward; the one is *York* fort, which ſtands on the N. E. point of a long and narrow iſland, dividing a vaſt river into two extenſive branches, which diſcharge themſelves into the bay at the factory; one of theſe branches is called *Nelſon's* river, and the other *Hayes's*; this factory lies in 57°. 25′ N. latitude, and longitude 92°. 30′ W. The moſt northern ſettlement is *Prince of Wales's* fort, at the mouth of *Churchill* river, in 58°. 48′ N. latitude, and 94°. 7′ W. longitude, about 120 miles N. W. of the former.

In the year 1782, *M. de Perouſe*, in the *Sceptre* of 74 guns, having under his command two frigates of 36 guns each, was ſent by the Admiral of the *French* fleet in *America*, on an expedition againſt the *Engliſh* ſettlements on *Hudſon's Bay*. The difficulties and dangers which he encountered, in paſſing the ſtraits which lead from the *Atlantic Ocean* into this vaſt bay, (which in magnitude is nearly equal to the *Mediterranean Sea*) cauſed the ſummer to be nearly waſted before he doubled the eaſtern point of the bay, and although it was then the beginning of Auguſt, his farther progreſs was impeded by intenſe fogs and vaſt floating iſlands of ice. Croſſing the bay, however, in its wideſt part, he came before fort *Prince of Wales*, which he found quite unprepared to withſtand the attack of an *European* enemy, hoſtile ſhips having then for the firſt time appeared in thoſe parts. The *French* commander afterward proceeded to *York Fort*, which was equally defenceleſs. The buildings were blown up, and the merchandize in general deſtroyed. The computation made by the victors of the loſs ſuſtained to the Company was half a million ſterling; but this was an enormous exaggeration, made for no other purpoſe than to give ideal conſequence to the expedition. Theſe poſſeſſions were reſtored to the *Engliſh* by the peace which took place the enſuing year.

The *Hudſon's Bay Company* was incorporated by Charter in the year 1670: its capital originally was little more than 10,000*l.* but it has increaſed to upwards of 100,000*l.* The trade carried on from hence is of the moſt beneficial nature to *Great Britain*, as large quantities of furs are obtained upon the moſt advantageous terms, in exchange for the manufactures of *England*, particularly iron tools; theſe furs are imported, and the greateſt part of them manufactured for uſe. It has been much contended, that ſo lucrative a commerce ought not to receive the ſhackles of a monopoly; and it is probable that they would have been long ſince taken off, if the climate had been ſufficiently temperate to admit of eſtabliſhing governments and revenue officers, as the proſpect of extending influence, by creating patronage, is never overlooked by government; but *England* being in poſſeſſion of *Canada*, has greatly leſſened the trade carried on at the factories on the coaſt of *Hudſon's Bay*, and of late years the weſtern coaſt of *America*, about the ſame parallel of latitude, has become a mart for the ſame commodity, but conveyed to a different market, of which we ſhall ſpeak in the next ſection.

SECT. III.

Of NOOTKA, *or* KING GEORGE'*s* SOUND, *and the Trade carried on from thence by the Engliſh.*

THE diſcovery of this harbour by Capt. *Cook*, in the year 1778, has been related, and the manners of the people ſomewhat circumſtantially deſcribed, in the Summary of the third Voyage of that great navigator, given in the Appendix to the firſt Volume of this work, p. 594 to 597; the prices given by the *Chineſe* for the furs procured here on that voyage, have been likewiſe ſpoken of pages 614 and 615, which led Capt. *King* to recommend the carrying on a regular commerce from *Nootka Sound* to *China*. The adventurous ſpirit and enlarged commercial views, which ſo ſtrongly characterize *Britiſh* merchants, were highly gratified by ſuch a project; and ſeveral merchants of *London* formed an aſſociation, and fitted out ſhips for the purpoſe; nor have their expectations been diſappointed, although the diſtance from *Europe* to this weſtern coaſt of *North America*, neceſſarily ſubjects the ſhips to a long and moſt circuitous voyage; ſome ſhips have likewiſe proceeded from *Botany Bay* to this ſound, and others from *China*. This new branch of commerce chiefly interfered with the intereſt of the *Ruſſians*, the *Chineſe* having for a conſiderable time been ſupplied with furs from *Kamptſcatka*, by *Ruſſian* merchants; but it was from a power whoſe jealouſy was excited by no immediate claſh of intereſts, that the *Engliſh* were interrupted in carrying on a traffic which is likely to procure ſome of that ſilver which *China* has for many years continued to engulf.

The *Spaniards*, conſidering themſelves as poſſeſſing a right to all the weſtern coaſt of *North America*, founded on a vague and indefinite grant from pope *Alexander* VI. have ever looked with a jealous eye upon the ſhips of other *European* nations who viſit the *South Sea*; they actually ſeized upon the *Engliſh* ſhips which they found in *Nootka Sound*, and impriſoned the officers and crews; but as the court of *Madrid* has agreed to reſtore the ſhips and men, and make the owners full ſatisfaction, it is to be hoped and expected that the trade with the *Indians* reſiding about this harbour, will continue to be carried on by the *Engliſh*, without the flames of war being kindled between the two nations. *Nootka Sound* lies in 49°. 33′ N. latitude, and in 126°. 48′ W. longitude from *Greenwich*, at the mouth of a great river which is ſuppoſed to extend far up the country, in a S. E. direction, and to have its ſource near to that of the *Miſſiſſippi*, but of this no certain information has yet been obtained. It is called *the River of the Weſt*.

SECT. IV.

Of the Tribes of ESKIMEAUX, *or* ESKIMOWS, *Indians.*

THE tribes of Indians who inhabit the country to the eaſtward of thoſe already deſcribed, are the *Eſkimeaux*, which name is derived from an *Indian* word that ſignifies *eaters of raw fleſh*; for, after thoroughly drying the fleſh of the beaſts they kill, they eat it without any other preparation; and it is evident that to this *Indian* term is added a *French* termination; but to adapt it to the *Engliſh* pronunciation, it ſhould rather have been written by our authors *Eſkimows*.

Theſe people are of ſeveral tribes, ſome inhabiting the country to the N. of *Hudſon's Bay*, on and above the *Arctic Circle*, and others that on the E. which is called *Labradore*, or *New Britain*, extending in the whole over thirty degrees of latitude. Thoſe to the N. are in numbers fewer, in ſtature more dwarfiſh, and in every reſpect ſuffer ſeverely under the rigour of their climate, but in each part the human race is very thinly ſcattered, their lives are never extended to an *European* old age, and their manners are coarſely ſavage, though to *Europeans* they behave peaceably, and on many occaſions have diſcovered a diſintereſted readineſs to relieve thoſe in diſtreſs. The *Eſquimeaux* Indians are of a dark copper colour, ſhort of ſtature, the talleſt ſeldom exceeding five feet in height, their heads are large, their faces flat, and their feet remarkably ſmall. The women are coarſe and ill favoured; ſuch as are mothers have long and flabby breaſts, cauſed by the cuſtom of giving ſuck to their children till they are five or ſix years old; they likewiſe are accuſtomed to carry their children at their backs, who, in that poſition, drag at the breaſt, and draw the milk over the ſhoulder of their mother, which contributes to ſuch a diſtention. During the ſeverity of the long winter, which reigns in the northern parts more particularly, theſe people reſide in huts conſtructed of ſtones cloſely cemented together, and rendered extremely warm. Whilſt the ſhort ſummer continues, which is only about three months, the weather is intenſely hot; at which ſeaſon, and ſo long as the climate is ſupportable, theſe Indians are chiefly upon the water in their boats, procuring fiſh for their ſubſiſtence: they are bold, intrepid, and expert in purſuing whales through all the dangers of a tempeſtuous ſea: — the oil obtained from ſeals and whales they eſteem the higheſt gratification. It is ſaid that one of theſe Indians, a young man, who had been accuſtomed to live for ſeveral years among *Europeans*, conforming to their manner and diet, being in ſome diſtant part, and ſtanding by an Engliſhman, who was cutting up a ſeal, from which the oil flowed copiouſly, he collected as much of it as he could in the palms of his hands, and ſwallowed it with extreme avidity, exclaiming "ah! how happy was I in my own dear country, when I had my belly full of this delicious fare." Indeed no people entertain a greater partiality for their native country than the *Eſquimaux*; one reaſon for which predilection, in them, but which is alſo prevalent amongſt the inhabitants of all the dreary regions of the earth, has been ſaid to ariſe from his organs of reſpiration being only ſuited to the denſe air which he breathes, his habits of life being ſuch as would render it difficult for him to reſpire in a ſofter or more temperate climate; even the atmoſphere of *Amſterdam*, *Copenhagen*, or *London*, which in ſome months of the year is thick and foggy, an *Eſquimaux* would feel too clear for his lungs, and from his confirmed habits alſo all the pleaſurable delights of an *European* would only excite in him abhorrence.

The food and manner of living of theſe Indians, ſubject them to all the dreadful conſequences of an inveterate ſcurvy: they are likewiſe frequently afflicted with blindneſs, from the country which they inhabit being covered with ſnow during eight or nine months in the year, the reflections of the ſun's rays from which prove very injurious to the organs of ſight, particularly during the ſpring of the year; to guard againſt this baneful effect, they provide themſelves with what they call "ſnow eyes," which conſiſt of a piece of wood or ivory placed before the eyes, and tied to the back part of the head, in which two holes are perforated, which are ſomewhat ſmaller than the eye, and through theſe they view objects in the manner as we make uſe of perſpective glaſſes, though they are unacquainted with that artificial medium.

The clothes of the men are made of ſeal-ſkins, and ſometimes of the ſkins of land and ſea-fowl ſewed together; their coats have a hood like a capuchin, are cloſe from the breaſt before, and reach no lower than the middle of the thigh: the breeches are cloſe before and behind, gathered like a purſe, with a ſtring, and tied about their waiſts: they have ſeveral pairs of boots and ſocks, which they wear one over another, to keep them warm and dry. The difference between the dreſs of the men and that of the women is, that the latter have a narrow flap behind to their jacket, that reaches to their heels. Their hoods are likewiſe larger and wider at the ſhoulders, for the ſake of carrying their children in them at their backs; and their boots, which are a great deal wider, are commonly ſtuck out with whalebone, becauſe when they want to put a child out of their arms, they ſlip it into one of their boots till they can take it up again. A few of them wear ſhifts of ſeal's bladders ſewed together. Their clothes are in general ſewed very neatly: this is performed with an ivory needle, and the ſinews of a deer ſplit fine, which are uſed for thread. They diſcover a good deal of taſte in adorning them with ſtripes of different coloured ſkins ſewed in the manner of borders, cuffs, and robings for their clothes, which altogether appear handſome as well as convenient.

Theſe ſimple people were ſo far from being jealous of their wives, that they offered them to the *Engliſh* ſailors, from an opinion that the children they had by them would be in every reſpect as much ſuperior to thoſe of their nation as they took the *Engliſh* to be; for they imagine, ſays our author, that in the moſt literal ſenſe every man begets his like, and that the ſon of a captain muſt infallibly be a captain.

On their going to ſea, in order to catch fiſh, they uſually take in their boats a bladder filled with train-oil, as our people do a dram-bottle, and ſeem to drink the contents with the ſame reliſh; and when their ſtock is out, they have been ſeen to draw the bladder through their teeth in order to extract the very laſt drop of this precious liquid.

SECT. V.

Of NEWFOUNDLAND.

NEWFOUNDLAND received its name from *John Cabot*, a *Venetian*, but employed by *Henry* VII. of *England*, who diſcovered it in the year 1497. It is of a triangular form, and ſituated to the E. of the *gulf of St. Laurence*, between 47°. 50′. and 51° 7′. N. latitude, and between 52°. 26′. and 58°. W. longitude from *Greenwich*: it is bounded to the E. and S. by the *Atlantic Ocean*, on the N. by the ſtraits of *Belleiſle*, which divide it from *New Britain*, or *Labrador*, and on the W. by the *Gulf of St. Laurence*. It is computed to be three hundred miles long, and two hundred broad.

The coaſts are extremely ſubject to fogs, occaſioned by the vapours exhaled from the lakes and ſwamps with which the iſland abounds; yet the air is ſalubrious. The winters are ſevere, attended with almoſt continual ſtorms of ſnow and ſleet, the ſky being uſually overcaſt.

The ſoil is generally ſuppoſed to be barren, except on the banks of the rivers, which are tolerably fertile. There are however woods of different kinds throughout almoſt all the country, for ſeveral miles from the coaſt, which contain abundance of timber fit for ſhip and boat building, as well as for erecting ſtages for curing and drying fiſh; and beyond theſe woods, where the lands have been cleared, there are in many places good paſturage. The inland parts of the country riſe into high hills, and ſink into bogs and ſwamps; where ſuch parts as are not covered with water, afford only ſhrubs, ſpruce, and white moſs. This iſland however contains many fine rivers, lakes and rivulets, which abound with *beavers*, *otters*, and other animals, and afford great plenty of *ſalmon*, and various other ſpecies of fiſh. The foreſts are ſtored with *deer*, *mooſe*, *bears*, *wolves*, and *foxes* in great plenty; but here are few *cattle*, *ſheep*, or *horſes*; inſtead of the latter, the inhabitants make uſe of dogs for drawing wood and other neceſſaries. Theſe they manage with great dexterity, fixing them in leathern collars, and yoking together what number they pleaſe. There are here great plenty of *wild fowl*, but the ſtaple commodity of the iſland is *cod-fiſh*, which are larger and in greater abundance, than in any other part of the world; and from hence a conſiderable part of *Europe* is chiefly ſupplied with this article, particularly the ports ſituated in the *Baltic*, *Spain*, *Portugal*, *Italy*, and the *Levant*.

A vaſt bank is formed to the eaſtward and ſouthward of this iſland, by the earth and ſand which the violence of the ſea drives from the adjacent continent: this bank extends to very near ten degrees of longitude, but its breadth is more circumſcribed, being little more than half that extent where broadeſt. Here the fiſhery for cod is carried on to the greateſt effect. A thick fog ſettles on this ſpot throughout the year, which the force of the ſun is never able to diſſipate, or at moſt but for a very ſhort interval.

This fiſhery has been carried on by the *Engliſh* ever ſince the year 1608; the ſpot then choſen was from Cape *Bonaviſta* to Cape *Ras*, taking in all the eaſtern coaſt, which laid the foundation for the town of *St. John's*, ſituated in 47°. 32′. N. latitude, and in 52°. 26′. W. longitude from *Greenwich*, the harbour there being ſafe and commodious. The *French* likewiſe, about the ſame time, had ſome veſſels employed in the cod fiſhery to the ſouth of *Newfoundland*. They erected ſome huts on ſhore in the bay of *Placentia*, where, in the year 1687 they built a ſmall fort. A jealouſy of each other ſoon aroſe, but by the 13th article of the treaty of *Utrecht*, the abſolute right in the iſland was acknowledged to belong to *Great Britain*, whilſt the *French* retained the right of fiſhing on the ſouthern coaſt, and on ſome parts of the *great bank*.

The *cod* is the fiſh which reſorts to theſe banks in great ſhoals; it is of a ſmaller ſize than ſome which are caught in the *European* ſeas, and ſeldom exceeds eighteen or twenty inches in length. Throughout all nature there are no living creatures ſo prolific as fiſh, and amongſt the various ſpecies of fiſh none are more exuberant in fecundity than the cod, ſeveral millions of eggs having been counted in a ſingle fiſh. During the latter end of July, and through the whole month of Auguſt, theſe fiſh are not found here; but they are vaſtly abundant through the reſt of the year. The fiſhery, with this interruption, is continued from the beginning of the month of April to the latter end of September; for in the winter ſeaſon the ſun does not impart ſufficient heat to dry the fiſh; they not being eaten freſh, but ſalted and dried for diſtant markets: ſome are only ſalted, and then they are called *green cod*. From the liver of the cod an oil is extracted. They are caught with lines, which are baited with a particular ſpecies of ſmall fiſh.

Great Britain, at the loweſt computation, annually employs upward of three thouſand ſail in this fiſhery; on board of which, and on ſhore, to cure and pack the fiſh, are not leſs than ten thouſand hands; ſo that it is at the ſame time not only a very profitable branch of trade to the merchant, but a ſource of livelihood to many thouſands of people, and a moſt excellent nurſery to the royal navy, which is hence ſupplied with a great number of bold and expert ſeamen.

On theſe coaſts are alſo taken a great number of *whales*, *ſeals*, *porpoiſes*, &c. ſo that above five thouſand barrels of oil, beſides a great quantity of whale-bone, ſeal-ſkins, &c. are annually exported from hence to different parts of the world; all which ſufficiently ſhew the importance of the iſland notwithſtanding the ſeverity of the climate, and the roughneſs and barrenneſs of the ſoil.

The number of *Engliſh* inhabitants on the iſland is uncertain and fluctuating. They are indeed very inconſiderable, if compared with its extent; but there are not half the number in winter that there are in ſummer. *Placentia*, now the capital of the iſland, which is ſeated on the ſouthern point, contains no more than between three and fourſcore houſes.

It appears from the fifteenth report of the commiſſioners appointed to examine the public accounts and revenues of the kingdom, (in which report they ſtate the produce and expenditure of the cuſtoms in the colonies and plantations) that the ſalaries and incidental charges for *Newfoundland*, amounted, in the year 1784, to 354*l.* and that nothing was brought into the revenue from thence.

The ſhips employed in this fiſhery are from fifty to an hundred and fifty tons: they generally have from twelve to twenty five men on board. Theſe veſſels come to ſhore every day, where the fiſhermen throw the cod they have taken upon a ſtage prepared for that purpoſe. One of them, who is called the cut-throat, opens the fiſh with a two-edged knife, and cuts off his head; a ſecond hands the fiſh to the carver, who ſtands oppoſite to him at a table erected upon the ſtage, who with a ſingle-edged knife, ſix or eight inches long, and very thick on the back, to increaſe its weight, ſplits the fiſh open; when it is conveyed to the ſalter, who places it with the ſkin undermoſt in a barrel, and then very ſlightly covers it with ſalt, laying the fiſh regularly one upon another.

After leaving the cod in ſalt three or four days, and ſometimes twice as long, according to the ſeaſon, they put it into a tub, waſh it well, make it up in piles, and, in fair weather, ſpread it out with the ſkin undermoſt, on a kind of ſtage raiſed with wattles about two feet from the ground; before night they turn the ſkin uppermoſt, which they alſo do whenever it rains. When the fiſh becomes a little dry, it is raiſed into larger piles, where it reſts a day or two; after which it is again expoſed to the air, and turned according as there is occaſion, before they again raiſe it into large piles; where, after this is done, it ſometimes remains fifteen days without being moved; after which it is once more expoſed to the air, and when almoſt dry, gathered together again in order to ſweat, which takes up twenty-four hours or more, according to the ſeaſon: it is then opened and expoſed to the air for the laſt time, and when thoroughly dried, houſed.

Fiſh cured in this manner are not only more fair to the eye, but more grateful to the taſte, than thoſe which are partly prepared at ſea; and ſuch fiſh as are cured in the ſpring before the great heats, are eſteemed the beſt.

By the 4th article of the treaty of *Verſailles* in 1783, the poſſeſſion of *Newfoundland* was confirmed to *Great Britain*, but the ſmall rocks or iſlands of *St. Pierre* (*Peter*) and *Miqueloon*, were ceded to the king of *France*; and by the 5th article of the ſame treaty, the right of that nation to fiſh on the coaſts of *Newfoundland* was much more extended than by the treaty in 1763, and it is now enjoyed not only along a conſiderable part of the eaſtern coaſt, but through the whole of the weſtern ſide of the iſland. Notwithſtanding theſe extended limits, the fiſheries carried on by the *French* in theſe parts are now ſo much reduced, that their home conſumption of fiſh is ſcarcely ſupplied from it, whilſt *Great Britain*, beſide furniſhing its own inhabitants, is ſuppoſed to derive an annual profit of 300,000*l.* from the ſale of fiſh obtained from hence and carried to foreign markets. Thus do the faſtings enjoined by the church of *Rome* tend to enrich a kingdom of Proteſtants.

By the 3d article of the treaty with the *American* States ſigned at *Paris* in the year 1783, the people of the *United States* have "the right of taking fiſh of every kind ſecured to them, as well on the *great bank* as on all other banks of *Newfoundland*, in the *Gulf* of *St. Lawrence*, and at all other places in the ſea, where the inhabitants of both countries uſed at any time heretofore to fiſh, but not to dry or cure them on the iſland, but on any of the unſettled bays, harbours, and creeks, of *Nova Scotia* and *Labrador*, ſo long as the ſame ſhall remain unſettled, and no longer, without a previous agreement with the inhabitants, or poſſeſſors."

SECT. VI.

Of Cape Breton, *called by the* French L'Isle Royal.

THE iſland of Cape Breton, ſixteen leagues to the S. W. of *Newfoundland*, is ſeparated from the continent by a narrow paſſage on the W. This iſland is about one hundred and ten miles from the N. E. to the S. W. Round it are ſeveral harbours and bays, which, from its ſituation in the *Gulf of St. Laurence*, have made it conſidered as the key of *Canada*, it being a ſafe retreat for ſhips bound either to or from thence. It forms the ſouth weſtern coaſt of the entrance into the *Gulf of St. Laurence*, as the iſland of *Newfoundland* does the north eaſtern.

It is of a very irregular figure, and ſo cut through by lakes and rivers, that its two principal parts are held together only by an iſthmus of about eight hundred paces in breadth; this neck of land ſeparates the bottom of *Port Toulouſe* from ſeveral lakes which are called *Labrador*. Theſe lakes diſcharge themſelves into the ſea to the E. by two channels, formed by the iſlands of *Verderronne* and *la Boularderie*. It is ſeparated from *Nova Scotia* by a narrow ſtrait called *Canſo*.

All its ports open toward the E. turning a little to the S. The harbour of *Louiſburgh*, formerly called the *Engliſh Harbour*, is perhaps one of the fineſt harbours in *America*, being near four leagues in circumference, and having every where ſix or ſeven fathoms water. Poſſeſſing all theſe advantages, it is rendered uſeleſs one half of the year, being frozen up from the month of November to May. The town of *Louiſburgh* is ſituated on the S. W. ſide, in latitude 45°. 54′. N. and in 59°. 54′. W. longitude from *Greenwich*. When it was laſt taken by the *Engliſh*, it was pretty ſtrongly fortified, with as much regularity as the ſituation would admit. It had a good rampart, with irregular baſtions, a dry ditch, a covert-way, with an excellent glacis, and before two of the curtains a ravelin, with a bridge to the ſallee-ports; but the chief ſtrength of the place by land conſiſted in the thickneſs of the walls, and the impaſſable moraſſes that extend from the foot of the glacis to a conſiderable diſtance. In the centre of one of the chief baſtions was a ſtrong building, with a moat on the ſide toward the town; and this was called the citadel, though it had neither artillery, nor was a ſtructure proper for receiving any: indeed the entrance to it was over a draw-bridge, on one ſide of which was a corps de garde, and advanced centinels on the other. Within this building were the apartments for the governor, the barracks for the garriſon, the arſenal, and under the platform of the redoubt a magazine always well furniſhed with military ſtores. The pariſh-church, or rather chapel, was alſo within the citadel, and without it was another belonging to the hoſpital of *St. Jean de Dieu*, an elegant and ſpacious ſtructure, built with ſtone. On an iſland at the entrance of the harbour was a ſtrong fort, and on the oppoſite ſide a very high tower, ſerving as a light-houſe. According to the *Abbe' Raynal*, *France* expended on theſe works thirteen hundred thouſand pounds ſterling, the ſtone and moſt of the other materials being brought from *Europe*. Hiſt. *Politique liv.* xvi. The fortifications were all blown up and demoliſhed in the year 1760. When the town of *Louiſburgh* was laſt taken from the *French*, it conſiſted of only ſeveral narrow lanes, and had few tolerable houſes in it, they being of wood, with a foundation of ſtone carried about ſix feet above the ground.

There are ſeveral other excellent ports; which are the more neceſſary, as the ſea round the iſland is ſubject to violent ſtorms of wind, with ſnow and ſleet, and ſuch fogs that it is frequently impoſſible to ſee the length of a ſhip: but what is ſtill more extraordinary, theſe fogs will, in the ſpace of one froſty night, caſe over the rigging of ſhips with ſuch thick ice, as to render them impoſſible to be worked till it is beaten off: the quantity beaten off from only one of the ſhips employed in the conqueſt of the iſland in 1758, was computed to amount to ſix or eight tons weight; yet this amazing quantity was all congealed on the night of the 5th of May!

The ſoil and climate nearly reſemble thoſe of *Newfoundland*, and conſequently its produce is not very different. A conſiderable part of the land is barren; it, however, produces oaks of a prodigious ſize, pines for maſts, and all ſorts of timber fit for building. The moſt common ſorts are *cedar*, *oak*, *aſh*, *beech*, *maple*, *aſpin*, *wild-cherry*, and *plane-trees*. It likewiſe produces ſome ſorts of fruit, particularly *apples*, with *herbs* and *roots*, ſome kinds of grain, with *hemp* and *flax*.

It is obſervable, that the mountains may be cultivated up to the tops, and that the good ſoil always inclines toward the S. There are here great numbers of fowl, particularly very large *partridges*, which in their feathers reſemble pheaſants. There are here likewiſe animals brought from *Europe*, as horned *cattle*, *hogs*, *ſheep*, *goats*, and *poultry*. The lakes, rivers, and bays, abound with *beavers*, *otters*, and excellent fiſh in the greateſt plenty. On this iſland are inexhauſtible mines of coal.

This induced the *French*, on their being excluded from *Nova Scotia* and *Newfoundland*, to begin a ſettlement here in 1714, which they continued to increaſe, and fortified it in 1720. They were, however, diſpoſſeſſed in 1745 by the bravery of the inhabitants of *New England*, with little aſſiſtance from *Great Britain*; but, by the treaty of *Aix-la-Chapelle*, it was reſtored to them, when they ſpared no expence to fortify and ſtrengthen it. However, it was again reduced in 1758 by the *Britiſh* troops under the generals *Amherſt* and *Wolfe*, and admiral *Boſcawen*, together with a large body of *New England* men, who found in that place two hundred and twenty-one pieces of cannon, and eighteen mortars, together with a very large quantity of ſtores and ammunition. It was yielded for ever to the crown of *Great Britain* by the peace of 1763, ſince which the fortifications have been blown up, and the town of *Louiſbourgh* diſmantled.

SECT. VII.

The ISLAND *of* ST. JOHN.

THOUGH the *Iſland of St. John* is ſeated in the neighbourhood of *Cape Breton*, and lying partly between it and the continent, has conſequently nearly the ſame climate, yet it greatly exceeds the iſlands juſt mentioned, with reſpect to its pleaſantneſs and the fertility of its ſoil. It is computed to be about ſixty miles in length, and has not only a commodious harbour for carrying on the fiſhery, but abounds with a variety of uſeful timber, and moſt kinds of game common to the neighbouring country. This iſland is ſo fertile, and was ſo well improved while poſſeſſed by the *French*, that it was juſtly ſtyled the granary of *Canada*, which it furniſhed with great plenty of moſt ſorts of corn, as well as great quantities of beef and pork: when laſt taken, it had upward of ten thouſand head of black cattle, and ſome of the farmers raiſed twelve hundred buſhels of corn annually. It has ſeveral rivers, which abound with *ſalmon*, *trout*, *eels*, &c. and the ſurrounding ſea affords plenty of *ſturgeon*, *plaice*, and moſt kinds of *ſhell-fiſh*. An iſland of this advantage was at once carefully cultivated, and its importance concealed from the *Engliſh*, leſt it ſhould induce them to make themſelves maſters of it, and by that means cut off the principal ſupplies for *Quebec*. There are yet conſiderable quantities of land uncultivated, which, by a proper improvement, would greatly increaſe its value. When this iſland was ſurrendered to lieutenant-colonel lord *Rollo*, in 1758, it had four thouſand inhabitants.

By the fifteenth report of the commiſſioners of public accounts it appears that the iſland of *St. John*, in the year 1784, cauſed an expence to the public in ſalaries to officers and incidents reſpecting the cuſtoms, amounting to 67*l.* and that no receipts were brought to account.

Both this iſland and that of *Cape Breton* are at preſent under the government of *Nova Scotia*, as are alſo ſeveral ſmall adjacent iſlands.

SECT. VIII.

Of ACADIE, *or* NOVA SCOTIA, and the Settlement of *New Brunſwick*.

ACADIA, or NOVA SCOTIA (*New Scotland*), is the moſt eaſtern part of the continent of *America*. It is bounded by the *Gulf of St. Laurence* and the *Straits of Canſo*, which ſeparate it from *Cape Breton*, on the N. E. on the S. and E. by the *Atlantic Ocean*; on the W. by the *Bay of Fundy* and the province of *Main*, belonging to *Maſſachuſett's-bay*; and on the N. by the river *St. Laurence* and part of *Canada*. It extends from Cape *Sable*, its moſt ſouthern point, which is in 43°. 24'. to 49°. 30' N. latitude, and from 60°. 15'. to 67° W. longitude. It is ſo indented by what is called the *Bay of Fundy*, that the S. E. part, toward the ocean, forms a triangular peninſula, which is joined by a ſmall iſthmus, to the other part.

The *French* for ſome time inſiſted that *Nova Scotia* comprehended only the peninſula: and when, by the treaty of *Utrecht*, the king of *France* yielded to *Great Britain* the full poſſeſſion of this country, its limits were left undefined, the words of the 12th article of the treaty being, "all *Nova Scotia*, or *Acadie*, with its ancient boundaries;" but *France* having now loſt all her other poſſeſſions on the continent, the geographers of the two countries no longer differ concerning the extent of this country.

The climate is very ſevere in winter, at which time the cold is ſharp and the ſnow lies deep on the ground; but the air is then generally clear, with a bright ſunſhine and azure ſky; but the ſummer is hotter than in *England*.

The ſoil of this province is various, in ſome places barren, and in others exceedingly pleaſant and fertile; particularly round the *Bay of Fundy*, and on the rivers which fall into it: there are large tracts of ground on both ſides of theſe rivers, for fifty or ſixty miles into the country, and ſeveral miles from the bay, which were once marſhy, but, by being dyked, are improved to great advantage. The eminences in this province are alſo very pleaſant and fruitful, producing *wheat*, *rye*, *Indian-corn*, *peas*, *beans*, *hemp*, *flax*, and ſome kinds of fruit in great perfection, as *gooſeberries*, *raſpberries*, and *ſtrawberries*, which grow in the woods. Several parts yield fine *timber*, and particularly excellent *oak* fit for building of ſhips; with fir, ſpruce, birch, &c. It abounds with all the neceſſaries of life, particularly a great number of *deer* and other game, with plenty of *wild-fowl*. The rivers abound with *ſalmon* and other kinds of river-fiſh. There are alſo ſeveral fiſheries erected in the different harbours, and carried on with ſome ſucceſs.

The coaſt has the advantage of many bays, harbours, and creeks; and many of the rivers, are navigated for a long courſe by the native *Indians*. *Chebucto*, upon which the town of *Halifax* is ſeated, is a very fine harbour, both for ſafety and convenience, having depth of water for the largeſt ſhips; and furniſhing the means for them to heave down and careen. The entrance into it is from the S. with a large iſland of an irregular form, lying on the N. E. ſide, named *Cornwallis Iſland*, from the firſt governor of *Halifax*. The town is ſituated on the W. ſide of the harbour.

There are alſo ſeveral other towns laid out round the bay, and partly inhabited; but the moſt conſiderable ſettlements are upon the *Bay of Fundy*, and the rivers that fall into it.

This country was diſcovered by *John Cabot*, in the year 1497, but lay long neglected before any conſiderable ſettlement was made in it. The *French*, however, had landed and built houſes; but in 1614, captain *Argal*, by order of the governor of *Virginia*, ſailed thither, and obliged them to depart.

In 1621 king *James* gave a grant of this province to Sir *William Alexander*, afterward earl of *Stirling*, and ſecretary of ſtate for *Scotland*, by whom it was called *Nova Scotia*. The next year Sir *William* ſent a number of people, and all kinds of neceſſaries for beginning a ſettlement; but in 1632, *Quebec* and *Cape Breton*, which had been taken from the *French*, were, together with this province, ceded to them by a treaty concluded between *Charles* I. and *Lewis* XIII. when a number of *Engliſh* removed out of it, and the *French* kept it in their poſſeſſion till the year 1654, when *Oliver Cromwell* ſent major *Sedgewick*, who took *Port Royal*, and obliged the *French* to quit the country.

Nova Scotia continued in poſſeſſion of the *Engliſh* till the reign of *Charles* II. when it was again ceded to the *French* by the treaty of *Breda*, by whom it was held till the year 1690, when the people of *New England*, finding the inconvenience of having the *French* ſo near them, got together ſome ſhips, and a ſmall land force, which proceeded to *Port Royal*, and ſoon reduced the place; but the *French* inhabitants, being allowed to keep their lands, houſes, and property, on ſwearing allegiance to the *Britiſh* government, and having the aſſurance given them that they ſhould never be called upon to bear arms againſt their countrymen, they, in general, accepted the conditions, from which time they were called, “the neutral *French*.” The manners of theſe people were remarkably ſimple; they cultivated the land, and employed themſelves in hunting and fiſhing. Having but few wants, and poſſeſſing the ready means of ſupplying the few they had, they multiplied exceedingly, and in little more than fifty years were ſuppoſed to conſiſt of eighteen thouſand ſouls. In the year 1710, a ſquadron of ſhips of war and ſome land forces were ſent to *Port Royal*, which then received the name of *Annapolis*, in honour of the reigning queen. An *Engliſh* governor was appointed, and a garriſon ſtationed. The *French* neutrals were ſtill however allowed the free exerciſe of their religion, and remained ſecure in their perſons and property; notwithſtanding which, this mixture of *Engliſh* and *French* was ſoon found to produce jealouſies and diſcontents on both ſides, which had conſiderably increaſed by the time that the next contention with *France* aroſe. The poſſeſſion of theſe parts had then become an important object to both nations, and the neutral *French* were charged with carrying on a ſecret correſpondence with their countrymen in *Canada*; and it was ſuppoſed that by their practices the *French*, in the year 1744, attacked and took the fort of *Canſo*. Theſe imputations cauſed them to be treated by the *Engliſh* as diſaffected ſubjects, and many families tranſported themſelves and their effects to *Canada*, and other parts of *America* belonging to *France*. The number of *French* neutrals in *Nova Scotia* being thus greatly reduced, it was determined at length by the *Britiſh* government to remove the remainder, which was executed with great ſecrecy; they were put on board ſhips and conveyed to different parts of *America*, in the poſſeſſion of the *Engliſh*. Since their expulſion, *Nova Scotia* has been very thinly peopled.

After the peace of *Aix la Chapelle* a deſign was formed of re-peopling the country by forming a ſettlement on the eaſtern ſide of the peninſula, and near four thouſand ſoldiers and ſailors who had been diſcharged the ſervice, invited by the offers of land and aſſiſtance, were conveyed thither with their families at the expence of government. Fifty acres of land in fee-ſimple were offered to every private ſoldier or ſeaman, free from the payment of quit-rent or taxes for the term of ten years, and at the expiration of that time, they were to pay only one ſhilling a year for every fifty acres. But this was not all; every private ſoldier or ſeaman who had a family was to have ten acres for every perſon of which his family conſiſted, whether women or children; and farther grants were to be made to them on the like conditions, in proportion as their families increaſed, or to their abilities for cultivating the land.

At length a ſpot was pitched upon for building a town, which received the name of *Halifax*, in honour of the earl, who was then firſt commiſſioner of trade and plantations, and the principal promoter of the ſettlement; but theſe coloniſts have not exerted themſelves in the grand object of purſuit which was intended to occupy them, the fiſheries upon the adjacent coaſts; and much of the land which was then granted ſtill remains uncleared and uſeleſs; however, the admirable harbour has been found highly ſerviceable to the *Britiſh* navy, and it has received every attention from the mother country; for near four thouſand pounds per annum is ſaid to have been expended on this town and port during the firſt twenty years. In the year 1763 a court of admiralty for all *North America* was eſtabliſhed here, and during the late war this place was the general rendezvous for the *Britiſh* ſhips of war, and the chief reſort of the merchant ſhips.

By the fifteenth report of the commiſſioners of the public accounts it appears that the receipts from the cuſtoms at the port of *Halifax*, in the year 1784, amounted to 368*l.* out of which 240*l.* were paid in ſalaries, and 34*l.* in incidents, and that the net produce to the revenue was 37*l.*

At the concluſion of the war with the *American* colonies a new government was formed on the weſtern and northern parts of *Nova Scotia*, and called NEW BRUNSWICK, for the purpoſe of inviting the *German* officers and ſoldiers who had ſerved in the pay of *Great Britain*, of which the *Brunſwickers* were the moſt numerous, to clear the land, and take up their abode there, a ſtrong diſpoſition prevailing among them to ſettle in that country to which they had been ſent for the purpoſe of ſubduing it. *New Brunſwick* has the whole courſe of the river *St. Croix*, from its ſource, for its ſouth weſtern boundary; the province of *Quebec* to the W. and N.; the bay of *Chaleurs* and the gulf of *St. Laurence* on the E. A conſiderable advantage held out to the ſettlers on this ſpot was the ſupplying the *Britiſh Weſt India* iſlands with lumber, and taking their produce in return. The town of *Shelburne*, ſo called from the nobleman who was then firſt lord of the treaſury, was ſoon built, the houſes being entirely of wood. Its harbour is called *Port Roſeway*. Hither the loyaliſts reſorted in great numbers, bringing with them property and ſpecie to a very great value, the reſentment of the new ſtates, which was too ſtrong for even ſelf-intereſt to reduce, having forced them to quit that country. The town of *Shelburne* is ſaid to be two miles in extent, and to contain 9000 inhabitants.

SECT. IX.

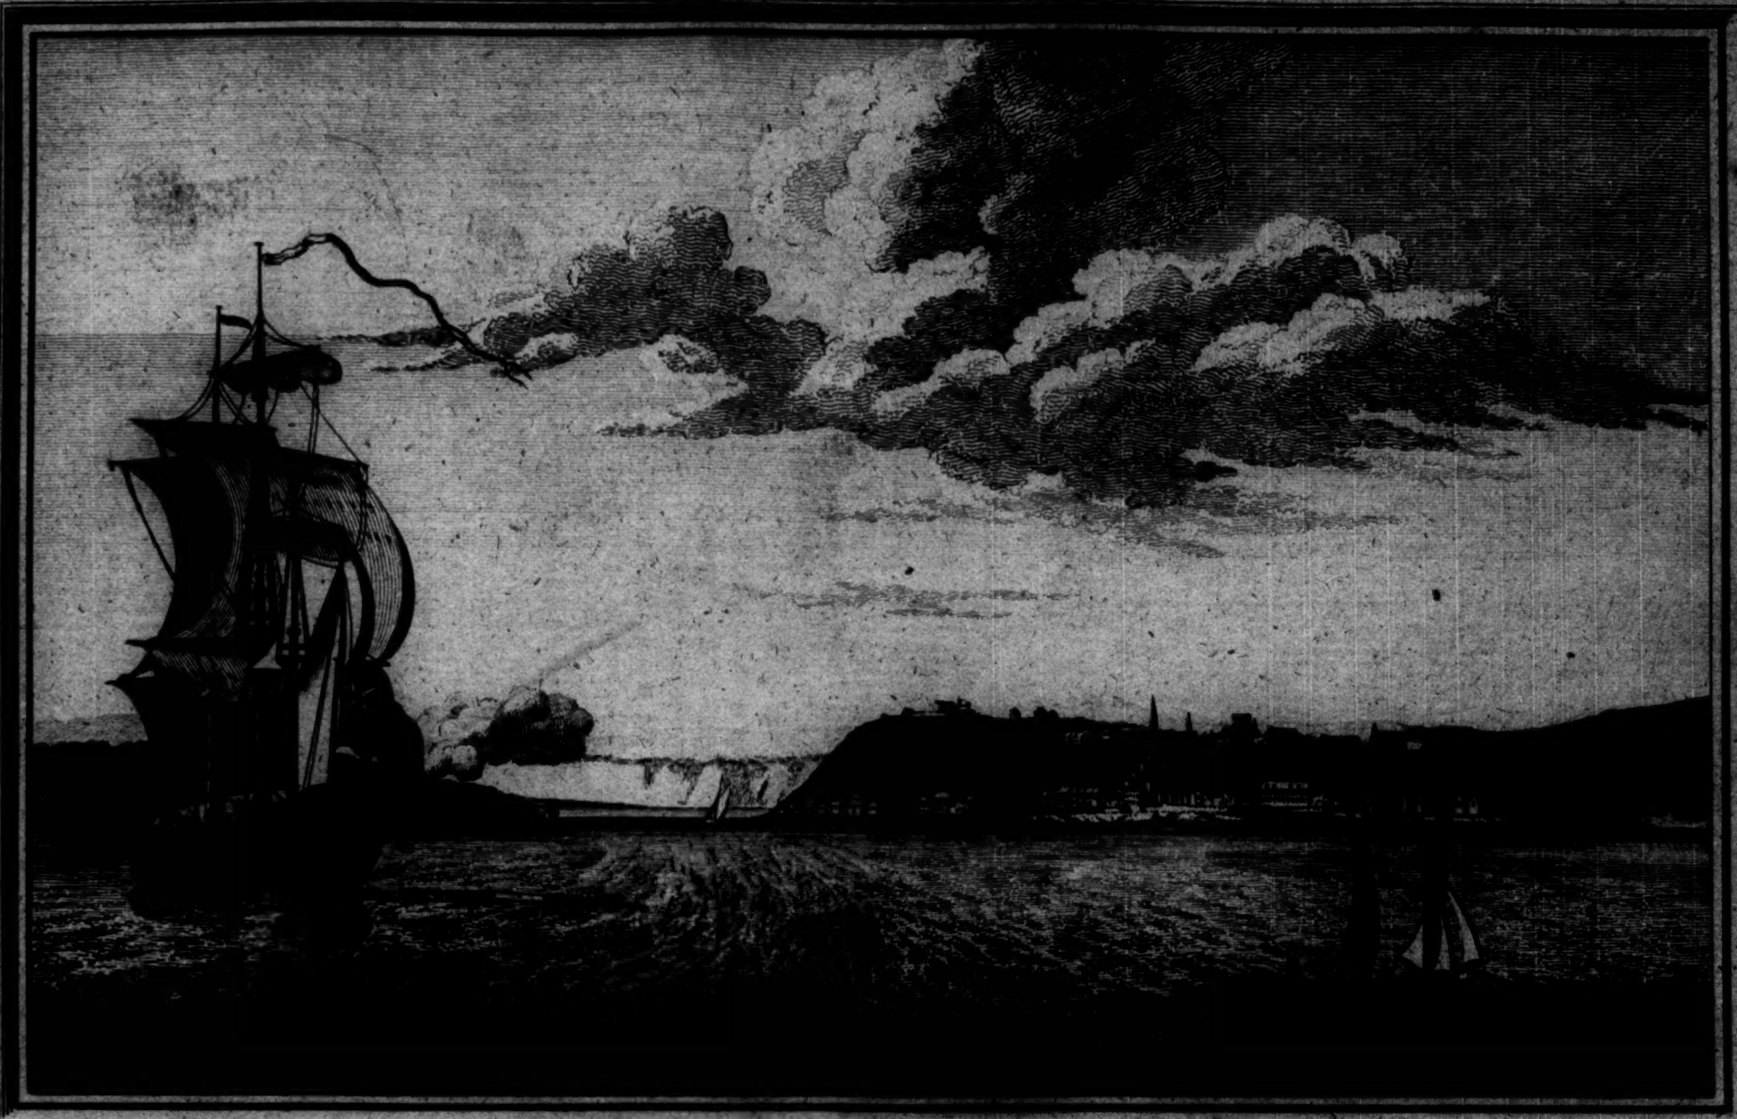
Of CANADA, *or* NEW FRANCE.

CANADA, the largeſt province upon the continent, at the peace of 1763, was bounded on the N. E. by the *Gulf of St. Laurence* and *St. John's-river*; on the S. W. by lands inhabited by the *Indians*; on the S. by the provinces of *New York*, *New England*, and *Nova Scotia*; and on the N. W. by lands claimed by the *Indians*. *Quebec*, its capital, is ſeated near the centre, in latitude 46°. 55' N. and in 69°. 53' W. longitude from *Greenwich*: The country extends, according to major *Rogers*, about five hundred miles in length, from the N. E. to the S. W. and upward of two hundred miles in breadth; but by an act of parliament paſſed in the year 1774, the boundaries of this province were conſiderably enlarged; being on the S. extended from the bay of *Chaleur* by an imaginary line drawn along the high lands to a point in 45°. N. latitude, on the eaſtern bank of the river *Connecticut*, and along the ſame latitude due W. through lake *Champlain*, until it joins the river *St. Laurence*; from thence up the eaſtern bank of the ſame river to lake *Ontario*, through that lake, *Niagara* river, and lake *Erie*, by the *Ohio* to the *Miſſiſſippi*; from thence northward to the ſouthern boundary of the territory granted to the *Hudſon's bay* company; *Newfoundland* was alſo annexed to and made part of the government of *Quebec*; but theſe boundaries have ſince been much contracted, *Canada* being now bounded by *New Britain* and *Hudſon's bay* to the N. the gulf of *St. Laurence*, *Nova Scotia*, and *New England* to the E. by *New York* to the S.; but its weſtern limits are left ſomewhat indefinite.

The *French* comprehended under the name of *Canada* a moſt extenſive territory, taking into their claim great part of the *New England* provinces, and of the provinces of *New York* and *Nova Scotia*; northerly to *Huſdon's bay*; to the W. as far as the *Pacific Ocean*; and to the S. extending to the *Gulf of Mexico*. They even endeavoured to ſupport their claim, by erecting a chain of forts from the mouth of the river *St. Laurence* to their ſettlements in *Louiſiana*.

They began the ſettlement of this province in the year 1605, at *Quebec*, which is ſeated on the N. ſhore of the river *St. Laurence*, about three hundred miles from its mouth; and about the ſame time began to form ſettlements on the *Iſland of Orleans* in that river, a little below *Quebec*; likewiſe on each ſide of the river, to its mouth, and on ſeveral ſmaller rivers that fall into it. They ſoon after began a ſettlement called *Jecorty*, about twenty miles up the river from *Quebec*, and erected a fort at *Chamblée* on the river *Sorreil*, near its influx into *Lake Champlain*. Soon after this the foundations of *Montreal* were laid, on the iſland of the ſame name, in the river *St. Laurence*, two hundred miles above *Quebec*. Another ſettlement was made at *Trois Rivieres*, or the *Three Rivers*, ſo called from a river diſcharging itſelf by three mouths into that of *St. Laurence*, about half-way

Engraved for **PAYNE'S** *New System of Geography.* Vol. II. Page 637.



Rooker sculp

QUEBEC *the Capital of Canada, from the North East.*

between *Quebec* and *Montreal*, in a very delightful ſpot.

While the above ſettlements were forming, Sir *David Kirk*, in 1626, with the *Engliſh* under his command, took *Canada*, which was then conſidered as within the limits of the *Britiſh* dominions, attacked *Quebec*, and took all the *French* ſettlements. But they were reſtored by the treaty of 1632, and continued in their poſſeſſion till September 13, 1759, when *Quebec* was ſurrendered to the generals *Monkton* and *Townſhend*, commanding the *Britiſh* troops that had been deſtined for the expedition againſt it the preceding ſpring, under the command of general *Wolfe*; and on the eighth of September, 1760, all *Canada* was delivered up to the *Engliſh* by the capitulation of *Montreal*.

The climate here is cold, the winters long and tedious, eſpecially in the N. E. parts of the province; notwithſtanding which the ſoil is in general very good, and in many parts both pleaſant and fertile, producing moſt kinds of *Engliſh* grain and vegetables in great abundance; eſpecially the *Iſland of Orleans*, and the iſlands and lands near it, which are remarkable for the richneſs of their ſoil.

The ſummers of *Canada* are exceeding pleaſant, and are ſaid to have ſo happy an effect upon the ſoil, that the farmer expects to reap his crop in ſixteen weeks from the time of ſowing his ſeed. The meadow grounds, which are well watered, yield excellent graſs, and breed vaſt quantities of large and ſmall cattle; and where the land is well cultivated, it produces rich crops. The mountains abound with coal-mines. This province has in ſome parts very excellent timber, ſuch as *white pines*, *oak* of different kinds, and *ſpruce* in great abundance.

The rivers branching through this extenſive country are very numerous, and many of them navigable a conſiderable way; but they are all ſwallowed up by the river *St. Laurence*, which is eighty miles wide at its mouth, and in its courſe forms a variety of bays, harbours, and iſlands; the moſt pleaſant and fruitful of which is the *Iſland of Orleans*, juſt mentioned, a little below *Quebec*, the ſoil of which is excellent; and being well improved, produces in abundance all the kinds of grain and vegetables common to the climate, it extending twenty-one miles in length, and three or four in breadth. The *French*, while in poſſeſſion of this province, induſtriouſly exaggerated the difficulties and dangers attending the navigation of this river; but ſince the *Engliſh* poſſeſſed the country, the utmoſt attention has been beſtowed to form accurate charts of it, and to give every kind of aſſiſtance for the ſafe navigation of it. In executing theſe deſigns the great captain *Cook* was for ſometime employed, before he became a circumnavigator, in performing which his great abilities were firſt diſcovered, and the foundation laid for his future fame.

The land in general on both ſides of the river is low and level; but oppoſite to *Quebec* are two conſiderable mountains, called the *Lady Mountains*, which run from thence S. W. through the continent to the country of the *Creek Indians*, on the N. part of the *Two Floridas*, in one continued ridge; and wherever rivers paſs through them, they riſe very ſteep on each ſide to their common height. This ridge of mountains is called the *Apalachian-hills*.

The country affords plenty of *ſtags*, *elks*, *bears*, *foxes*, *martins*, *ferrets*, *weazles*, *ſquirrels*, *hares*, *rabbits*, and other animals.

The *elk* here is near as large as a horſe, but reſembles the deer, and, like it, annually renews its horns. The *Indians* have a great veneration for this animal, and imagine that to dream of it portends good fortune and long life. The elk delights in cold countries, feeding upon graſs in ſummer, and moſs-buds, &c. in winter, when they herd together. It is dangerous to approach very near this animal when he is hunted, as he ſometimes turns furiouſly on his purſuers, and tramples them to death. To prevent this, the hunter throws his clothes to him, and while the deluded animal ſpends his fury on theſe, the man takes proper meaſures to diſpatch him.

The *wild-cats* are great enemies to the elk; and, notwithſtanding their being much inferior in ſize, often make a prey of him; for he has no other way to diſengage himſelf from them but by plunging into the water.

The *Indians* ſcarcely undertake any thing with greater ſolemnity than hunting the bear; and an alliance with a noted bear-hunter, who has killed ſeveral in one day, is more eagerly ſought after than that of one who has rendered himſelf famous in war; this chaſe ſupplying them both with food and raiment. The bears lodge, during the winter, either in hollow trees or caves; and, as they lay up no proviſions, have no food during that ſeaſon.

The bear is not naturally fierce, except when wounded or pinched with hunger. They run themſelves very poor in the month of July; and it is ſomwhat dangerous to meet them till their hunger is ſatisfied, and they recover their fleſh, which they do very ſuddenly. They are fond of grapes, and moſt kinds of fruit. When proviſions are ſcarce in the woods, they venture out among the ſettlements, and make great havock of the *Indian* corn, and ſometimes kill the ſwine. Their chief weapons are their fore-paws, with which they will preſently hug to death any animal they ſeize upon.

The *ſkunk*, which has been improperly called the *pole-cat*, but which it no way reſembles, is called by the *Indians* "the ſtinking beaſt," on account of his emiting a diſagreeable ſmell to a conſiderable diſtance, when purſued or diſturbed. It is about the ſize of a ſmall cat, has ſhining hair of a grey colour, with two white lines that form an oval on his back. The fur of this animal, with that of the ermin, otter, and martin, make up what is called the ſmall peltry.

The *ermin* is about the ſize of the ſquirrel, its fur is extremely white, its tail long, and the tip of it as black as jet.

The *martin*, or *ſable*, lives principally among the mountains; is as long as a common cat, but very ſlender: its fur is very fine and valuable.

The *muſk-rat* reſembles the beaver in every part except its tail, which is round like that of a rat. One of theſe animals weighs about five or ſix pounds. During the ſummer-ſeaſon the male and female keep together, but ſeparate at the approach of winter; and each ſeeks a ſhelter in ſome hollow tree, without laying up any proviſions.

The *foxes* here are of various colours, as black, grey, red, and white; theſe, by their craft and cunning, make great havock among the water-fowl in the lakes and rivers.

The country abounds with a vaſt variety of fowl, and the rivers and lakes are well ſtored with *ſalmon*, *eels*, and a multitude of various kinds of other fiſh.

QUEBEC, the capital of *Canada*, ſeated about three hundred miles N. of *Boſton*, in *New England*, is a handſome and large city, ſtrongly fortified. The harbour is flanked with two baſtions, which at high tides are almoſt level with the water. A little above one of them is a demi-baſtion, which is partly taken out of the rock; and above it, on the ſide of the gallery of the fort, is a battery of twenty-five pieces of cannon: above this is a ſquare fort called the citadel, and the ways from one fortification to another are difficult to paſs. To the left of the harbour, on the ſide of the road, are large batteries of cannon, and ſome mortars. It is encompaſſed with walls, and has a caſtle on the brow of a hill, about forty fathoms above the town; but it is irregularly built, and fortified with only two baſtions, and no ditch toward the town. It has alſo another fort at *Cape Diamond* of ſolid rock, 400 fathoms high, and therefore owes its greateſt ſtrength to nature. The firſt place taken notice of upon landing here is a ſquare of an irregular figure, with well-built houſes on one ſide; on the back of which is a rock; on the left it is bounded by a ſmall church; and on the right has two rows of houſes parallel to each other: there is another between the church and the harbour; as alſo another long row on the ſide of the bay. This is called the *Lower Town*, and is moſtly inhabited by merchants, but it is too much crowded. Between this and the *Upper Town* is a very ſteep aſcent, where are ſteps for the foot-paſſengers to aſcend. This has noble edifices, and between two large ſquares is a fort in which the governor reſides. Opposite the fort the *Recollects* have handſome houſes, and on the right is the cathedral, which is built in a mean ſtyle, but has a large, high, and well-built tower, that may be ſeen at a great diſtance. Over-againſt this is the *Jeſuits'* college, which is a fine building; and between the cathedral and the college are well-built houſes. The houſe of the *Knights Hoſpitallers* is a ſtately ſtructure, with two fine pavillions. In the ſecond ſquare are two deſcents to the river of *St. Charles*; an hoſpital called *Hotel-Dieu*, is in the midway, and from thence are ſmaller houſes, which reach to that of the intendant. On the other ſide of the *Jeſuits'* college is a pretty long ſtreet, in which is a nunnery. Almoſt all the houſes are built of ſtone, and there are above 7000 inhabitants. Beſide the *Lower* and *Higher Towns*, there is another beyond the latter, on the banks of the river *St. Charles*, along which are ſeveral noble country ſeats.

In 1711 the *Engliſh* fitted out a fleet, with a deſign to conquer *Canada*: but the expedition failed, from the raſhneſs of the admiral, who, contrary to the advice of his pilot, ſailed too near the *Seven Iſles*, and thus loſt his largeſt ſhips, with three thouſand of his beſt ſailors. But it was attacked with much better ſucceſs in 1759, when a fleet of twenty ſail of the line, a fifty gun ſhip, with frigates, ſloops, bombketches, and fire ſhips, under the command of Admirals *Saunders* and *Holmes*, having on board eight thouſand land forces commanded by brigadier general *Wolfe*, ſailed up the river in the month of July, to attack a place ſtrong by nature, well fortified, with a garriſon which out numbered the forces coming againſt it, commanded by *M. de Montcalm*, a brave and experienced officer. The difficulties which the *Engliſh* had to encounter would have proved inſurmountable to ordinary men; but the intrepidity, conduct, and ſpirit, which diſtinguiſhed the commander in chief, was admirably ſeconded by the army which he led on, whilſt the admirals and all on board the fleet co-operated with equal ſkill and effect in the important and arduous work. Very eſſential ſervices were rendered in this expedition by Mr. *James Cook*, then maſter of the *Northumberland*, who took the ſoundings of the river to direct the large ſhips in the courſe they were to ſteer: he it was that piloted the boats with the troops to ſhore, and conducted the embarkation on the laſt and ſucceſsful attack, [ſee page 542, of our firſt volume.] The illuſtrious commander fell on the 13th of September, in the field of battle, at the moment when the *French* began to fly, and victory declared in favour of the *Engliſh*.

This city, and the whole province of *Canada*, was ceded to *Great Britain* by the peace of 1763. Though *France* never reaped any ſolid advantages from the poſſeſſion of *Canada*, which had coſt that government very large ſums, yet the *Engliſh* have derived great benefits from thence in the extenſion of commerce and conſumption of manufactures.

The city was attacked by an *American* army commanded by *Montgomery* and *Arnold*, in the winter of 1775, but they were repulſed with great loſs, and general *Montgomery* ſlain.

The moſt conſiderable place, next to *Quebec*, is MONTREAL; which is ſeated on an iſland of the ſame name in the river *St. Laurence*, upward of two hundred miles above *Quebec*, and is nearly as large and populous as that city. The iſland of *Montreal* is exceedingly fertile, and well improved, producing great plenty of greens, and ſome fruit. It is about twenty-eight miles in length, and ten in breath. The town is pretty well fortified, and is much more pleaſantly ſituated than *Quebec*. The ſtreets are regular, and the houſes well-built, commodious, and agreeable. It ſtands by the ſide of the river, on a gradual eaſy aſcent to what is called the *Upper Town*, whence you may ſee every houſe at one view from the harbour, or from the ſouth ſide of the river. The public buildings exceed thoſe of *Quebec* for beauty, and are equal to them in number. The *Hotel-Dieu*, the magazines, and the place of arms, are in the *Lower Town*, which is alſo the reſidence of the merchants. The ſeminary, the pariſh-church, the houſe of the *Recollects*, the *Jeſuits'* college, and nunneries, are in the *Upper*. There is alſo a general hoſpital, and a church belonging to the *Jeſuits*, which is large and well built. The principal trade of the inhabitants has long conſiſted in the ſkins and furs they purchaſe of the *Indians*.

This iſland and city were taken on the eighth of September, 1760, by the generals *Amherſt* and *Murray*, without firing a gun, which completed the conqueſt of *Canada*; for, by the terms of the capitulation, all the *French* forces in that country were to be ſent to *France*. *Montreal* afterward ſuffered by a moſt terrible fire, which conſumed great part of the city, the houſes of many of the merchants, and a number of ſtately buildings. This dreadful loſs inſtantly awakened the humanity of the inhabitants of this kingdom, and great ſums were raiſed in the city of *London*, to remove the diſtreſſes of theſe new ſubjects to the *Britiſh* crown. It was taken by an *American* army under general *Montgomery*, in 1775, but recovered by general *Carleton* the next ſpring.

In the year 1774 an act of parliament paſſed, by which a council, to conſiſt of not more than twenty-three, or fewer than ſeventeen, being perſons reſident there, was to be appointed by the king to aſſiſt the governor in making ordinances for the good government of the province; all legal deciſions reſpecting property are to be made according to the *French* laws of *Canada*, but the criminal law of *England* to be adhered to: the Romiſh religion is tolerated in the fulleſt extent, or rather rendered the eſtabliſhed religion of the country, for the clergy were inveſted with a right to recover, by courſe of law, the contributions which they had been accuſtomed to receive from the laity profeſſing that religion.

At the time when theſe regulations reſpecting the government of *Canada* took place, the legiſlature aboliſhed all the duties which *France* had laid on merchandize imported there, and impoſed in their ſtead certain other duties on brandies, rums, molaſſes, and ſyrups, to a greater or leſs amount, according to the ports from whence they were brought: perſons keeping houſes of public entertainment, or where wine or other liquors were retailed, were required to take out a yearly licence, for the obtaining which a certain ſum was to be paid. The revenue ariſing from the duties on merchandize was to be applied to defraying the expences of adminiſtration of juſtice and the ſupport of the civil government in the province; the money ariſing from licences was granted to the king; thus was eſtabliſhed in this province both commercial and internal taxation, as well as the power of the *Britiſh* parliament to diſpoſe of the money raiſed by taxes; powers which the *American* coloniſts were at that time ſtrenuouſly oppoſing.

By the fifteenth report of the commiſſioners of public accounts it appears that the receipts from the cuſtoms at the port of *Quebec*, in the year 1784, amounted to 195*l*. that the ſalaries paid there were 485*l*. and the incidental charges 51*l*.

The inhabitants of *Canada* in general make no ſcruple to avow their diſcontent at the form of government under which they are now brought; and applications have been made to adminiſtration ſoliciting, among other things, that matters of litigation ſhould be decided by the laws of *England*, and by a jury; theſe have been favourably received, and ſuch aſſurances given as encourage a hope that the new modelling of this government, imparting to it more of the ſpirit of the *Britiſh* conſtitution, is at no great diſtance.

SECT. X.

Of the Interior Country of NORTH AMERICA. *The Rivers and Lakes, their Cataracts. The* INDIAN *Nations on their Banks.*

THE ſource of the river *St Laurence* has never been traced, a communication being continued with the lakes into the interior country to a vaſt extent. *Carver*, indeed, aſſerts, [Travels, page 76] that the four moſt capital rivers on the continent of *North America*, viz. the *St. Laurence*, *Miſſiſſippi*, *Bourbon*, and *Oregon*, or river of the weſt, have their ſources very near each other; thoſe of the three former being within thirty miles, the latter ſomewhat farther to the W. but the evidence on which he makes this aſſertion is by no means clear and concluſive.

Nothing diſtinguiſhes *North America* more from the other quarters of the world than its numerous and immenſe lakes, the five principal of which are ſtill included in the province of *Canada* or *Quebec*, although its boundaries have been contracted: they are generally known as the five great lakes of *Canada*, and are named *Ontorio*, *Erie*, *Huron*, *Michigan* and *Superior*. Theſe lie within about ſeven degrees of latitude and fourteen of longitude; or from 41°. 35′ to 49°. N. and from 75°. 20′. to 92°. W. There are beſide many ſmaller lakes which lie to the eaſtward and north-weſtward of theſe. To the eaſtward are lakes *George* and *Champlain*. The moſt northern viſited by the traders is lake *Bourbon*, which reaches to 51°. N. latitude, to the ſouth of which is lake *Winnepeek*, called by the *French Ouinipique*: theſe two lakes communicate by a ſtrait. A river extends from lake *Winnepeek* to lake *Superior*, which ſome Geographers have conſidered as a continuation of the *St. Laurence*: about midway of this river is lake du *Bois*, or *Wood* lake; there is likewiſe lac *Pluie*, or the *Rain* lake, and the *Red* lake, and *Niepegon*, with many others leſs conſiderable. Beyond 60°. of N. latitude, from near *Hudſon's Bay* to 131°. W. longitude, are many extenſive lakes, about which the ſavage race of *Arathapeſcow* Indians lead their wandering life. This vaſt aſſemblage of freſh waters, which are not put in motion and alternately raiſed and ſunk by tides, is ſuppoſed to contribute very conſiderably to the greater degree of cold which is felt in the northern parts of *America*, than in the ſame parallels of latitude in *Europe*.

In deſcribing theſe lakes we ſhall begin with the moſt eaſtern and proceed weſtwardly.

Lake GEORGE, formerly called by the *French lac St. Sacrement*, is about thirty five miles long from N. E. to S. W. but narrow.

Lake CHAMPLAIN is about eighty miles from N. to S. and about fourteen miles where broadeſt. When theſe two lakes were firſt diſcovered, they were known by no other name than that of "the *Iroquois* lakes."

Lake ONTARIO is the leaſt of the five great lakes of *Canada*; its form is nearly oval; its greateſt length being from N. E. to S. W. Its circumference is about ſix hundred miles. Near the S. E. part it receives the waters of the *Oſwoego* river, and on the N. E. diſcharges itſelf into the river *Cataraqui*, which communicates with the *St. Laurence*, or may be conſidered as the ſource of it; though ſome *Geographers* deſcribe that vaſt river as uniting the five great lakes, and having its ſource to the weſtward of lake *Superior*. Near to it ſtood fort *Frontenac*, which was taken from the *French* in the year 1758, by ſome provincial troops, under Colonel *Bradſtreet*. At the entrance of *Oſwego* river ſtood a fort of the ſame name, which, in the year 1756, was defended by two regiments of provincial troops, when it was attacked and taken by the *French*, and the garriſon cruelly maſſacred by the ſavages who followed the *French* camp.

Lake ERIE extends about three hundred miles from W. to N. E. It is wideſt toward the middle, where it is about ſevent ymiles acroſs from N. to S. *Carver*, a faithful narrator of what he ſaw, though not to be followed in longitudes and latitudes, ſays, the navigation of this lake is eſteemed more dangerous than any of the other lakes, on account of many high lands which lie on the borders of it, and which project into the waters, ſo that whenever ſudden ſtorms ariſe, canoes and boats are frequently loſt, as there is no place which affords retreat or ſhelter. *Travels*, p. 168. The ſame writer ſays there are ſeveral iſlands near the W. end ſo infeſted with *ſnakes* that it is highly dangerous to land upon them. The water is covered near the banks of theſe iſlands with the large æquatic lily, the leaves of which ſpread over the ſurface ſo as to cover it entirely for a great ſpace; on theſe he ſaw prodigious numbers of the water ſnakes wreathed up, and baſking in the ſun. The moſt remarkable ſpecies of ſnake which infeſts this part is the *hiſſing ſnake*, which is of the ſmall ſpeckled kind, about eighteen inches long; on the approach of any thing, it flattens itſelf in a moment; and its ſpots, which are of various hues, become vivid through rage; whilſt it diſcharges from its mouth a ſubtile wind, which is ſaid to be of a nauſeous ſmell; and if drawn, by reſpiration into the human lungs, cauſes ſo rapid a decline, as in a few months to prove mortal.

This lake diſcharges its waters at the N. E. end into the river *Niagara*, which runs due S. and N.; is about thirty ſix miles in length, and flows into lake *Ontario*. At the entrance of this river, on its eaſtern ſhore is fort *Niagara*, which was taken from the *French*, in the year 1759, by Sir *William Johnſon*, and was conſidered as a highly important acquiſition. About eighteen miles farther northward are thoſe ſtupendous cataracts, which are not to be equalled by any other falls of water on this globe. A vaſt body of water here ruſhes down a perpendicular precipice of one hundred and forty feet in deſcent, and half a mile wide; the rocks on either ſide, but particularly on the weſtern, by oppoſing the progreſs of the torrent downward, cauſe it to rebound in great quantities, with an appearance white as ſnow, being converted into foam by the violence of the concuſſion: the vaper which is thus raiſed reſembles a cloud, or pillar of ſmoke; and whenever the poſitions of the ſun and of the beholder are favourable, the appearance of a rainbow is produced. After this torrent has deſcended, it paſſes over a ſhelving bottom through a courſe of eight or nine miles; ſoon after which the waters enter lake *Ontario*. The noiſe produced by theſe falls may, in calm weather, be diſtinctly heard at the diſtance of twenty miles; ſome have aſſerted that the ſound has reached, at the moſt favourable times, to the diſtance of fifteen leagues.

Lake HURON is next in magnitude to Lake *Superior*; its ſhape is nearly triangular, and it is about a thouſand miles in circumference; on the N. ſide of it is an iſland near an hundred miles in extent from E. to W. but in no part above eight miles from N. to S.; it is called by the *Indians Manataulin*, which ſignifies a place of ſpirits. At the W. point of the lake are the ſtraits of *Michillimackinac* which connect with lake *Michegan*; and about fifty miles to the N. E. of theſe ſtraits, are thoſe of *St. Marie*, by which lake *Huron* communicates with lake *Superior*: they are about forty miles long, and very unequal in breadth: here are falls, but not perpendicular, like thoſe of *Niagara*; but the waters paſs along a ſloping bottom, which in that country is called *a rapid*: this continues near three quarters of a mile. The fall here is not ſo impetuous as entirely to prevent the navigation of boats and canoes downward. The ſouthern point of lake *Huron* runs into a ſtrait, which ſoon after enlarges into a ſmall lake called *St. Claire*, from whence runs a ſtrait, which is only diſtinguiſhed by the *French* name of *Detroit*; this diſcharges itſelf into lake *Erie*; the diſtance between which and *Huron* is eighty miles. Although the water here is level, yet the navigation of large veſſels is ſtopped by a bank of ſand. The town of *Detroit*, which contains upward of an hundred houſes, is ſituated on the weſtern banks of this river, or ſtrait, about nine miles below lake *St. Claire*. At the N. E. point a conſiderable river flows into this lake, called the *Souties*, from whence there is but a ſhort carrying-place to the river of the *Attawawas*, which diſcharges itſelf into the *St. Laurence* above *Montreal*.

Lake MIRCHEGON, to the W. of *Huron*, is long and narrow; extending near two hundred miles from N. W. to S. E. and forty broad from N. to S. Between theſe two lakes a peninſula is formed, which runs into a point at the N. W. at the ſtraits of *Michillimackinac*, where is a fort of the ſame name, which, in the language of the *Chippeway Indians*, ſignifies a tortoiſe. On the N. W. ſide of this lake is a ſtrait, about forty miles wide, called the grand traverſe, in which are many iſlands,ſome of which are inhabited by the *Ottawaws*, and others by the *Pontowattimic Indians*. This ſtrait leads into what the *French* called *Baye Puant*, but now named the *Green Bay*; it is long and narrow, and into it flows a large river, which riſes near the *Miſſiſſippi*, and is called the *Fox* river: its banks are inhabited by a powerful tribe of *Indians*. On the S. W. ſide of this river are the *Saukie Indians*. Near the borders of this lake grow a great number of ſand cherries, which are not leſs remarkable for their manner of growth, than for their exquiſite flavour. They are found upon a ſmall ſhrub not more than four feet high, the boughs of which are ſo loaded that they lie in cluſters on the ſand. As they grow only on the ſand, the warmth of which probably contributes to bring them to ſuch perfection, they are called by the *French ceriſe de ſable*; the ſize of them does not exceed that of a ſmall muſket ball. *Gooſeberries* and *juniper* trees, bearing berries of a very fine kind, abound here. *Sumack* likewiſe grows here in great plenty, the leaf of which, if gathered when red, is much eſteemed by the natives, who mix about an equal quantity of it with their tobacco. Near this lake, and on the borders of all the great lakes, grows a kind of willow, to which the *French* have given the name of *bois rouge*, or *red wood*: its bark, when of one year's growth, is of a fine ſcarlet colour; but as it grows older it changes into a mixture of grey and red. The ſtalks of this ſhrub grow in cluſters to the height of ſix or eight feet, and never exceed an inch in diameter. The *Indians* ſcrape the bark which they dry and powder, and mix with their tobacco for their winter pipes.

Lake Superior is entitled to this diſtinguiſhing appellation, not only as it ſurpaſſes every other *American* lake in extent, but as being ſituated on a much more elevated part of the country, the level of its waters being ſeveral hundred feet higher than thoſe of the *St. Laurence*. It may be juſtly called "the *Caſpian* of *America*," and is unqueſtionably the largeſt piece of freſh water in the world, being in magnitude equal, or rather ſurpaſſing that *Aſiatic* ſalt water lake. The *French* are ſaid to have obſerved of the lakes, that they riſe by imperceptible degrees, to about the height of three feet in ſeven years and an half, and ſink as much in an equal portion of time, ſo that in fifteen years, this watery cycle, if it may be ſo termed, is completed: a change ſimilar to what has been reported of the *Caſpian*, but performed in one quarter of the time. [See page 253 of our firſt volume.] According to the *French* charts, its circumference is about fifteen hundred miles. *Carver* is of opinion that "if it were coaſted round, and the utmoſt extent of every bay taken, it would exceed ſixteen hundred." *Travels*, page 132. He coaſted near twelve hundred miles on the N. and E. ſhores: "When it was calm," ſays he, "and the ſun ſhone bright, I could ſit in my canoe, where the depth was upward of ſix fathom, and could plainly ſee huge piles of ſtone at the bottom. The water at this time was as pure and tranſparent as air, and my canoe ſeemed as if it hung ſuſpended in that element. It was impoſſible to look attentively through this limpid medium at the rocks below, for even a few minutes, without feeling the head ſwim, and the eyes no longer able to view the dazzling ſcene." It was then the month of July, and although the ſurface of the water, from the heat of the atmoſphere, was warm, yet on letting down a cup to the depth of about a fathom, the water drawn from thence was ſo exceſſively cold, that it had the ſame effect as ice, when received into the mouth. It is ſaid to receive near forty rivers and ſtreams of water; the two principal rivers are the *Nipegon*, or *Allanipegon*, and the *Michipicooton*; the one from the N. the other from the W. By means of the latter a communication is formed with the lakes *Bourbon*, or *Chriſtineux*, *Winnepeek*, and *du Bois*; and in this river ſome have traced the *St. Laurence*. A ſmall river on the W. before it enters the lake, has a perpendicular fall from the top of a mountain, of more than ſix hundred feet, through a very narrow channel. The only paſſage through which the waters of lake *Superior* are diſcharged is *St. Mary's* ſtrait, already ſpoken of. There are many iſlands in this lake, two of which are very large; the largeſt has been named *Iſle Royal*, the other iſland is named *Phillipoux*, and is ſuppoſed to be near an hundred miles from E. to W.; but in no part more than forty miles from N. to S. *Miropau* iſle is likewiſe of conſiderable extent; at the entrance of *Weſt* bay is a cluſter of ſmall iſlands called "the twelve Apoſtles." On the S. ſide of the lake is a peninſula which extends into the lake ſixty miles, and is called *Chegomegan*. The Indians ſuppoſe theſe iſlands to be the reſidence of the Great Spirit.

This lake abounds with fiſh, the principal kinds of which are trout and ſturgeon. The country to the N. and E. is very mountainous and barren. *Whirtleberries* of an uncommon ſize and fine flavour grow in great quantities on the mountains, as do *black currants* and *gooſeberries*; but the moſt excellent fruit in theſe parts is a berry reſembling a *raſpberry* in its manner of growth, but of a lighter red, much larger, and in flavour more delicious. It grows on a ſhrub of the nature of a vine, with leaves like the grape.

On the N. W. border of lake *Superior* is what is called "the grand portage;" and there thoſe who go on the N. W. trade, many of whom come from *Michillimackinac* to the lakes *De Pluye*, *Du Bois*, &c. carry over their canoes and goods for about nine miles, when they again proceed by water carriage.

There is likewiſe a great mart for trade about an hundred and fifty miles to the S. W. of lake *Superior*, near the banks of the *Miſſiſſippi*, where that river forms what is called lake *Pepin*. As this was ſettled to be a place of reſort by the *French* traders, they thought fit to give it a name, and it has ever ſince been known by that of *La Prairie du Chien*, or *Dog Meadow*. Hither all the Indians who inhabit the adjacent countries reſort, and it rather deſerves to be named the meadow of concord, for whatever Indians meet there, though the nations to which they belong are at war with each other, yet they are obliged to reſtrain their enmity, and to forbear all hoſtile acts whilſt they continue there. The like conduct is obſerved at the *Red Mountain*, which is in the ſame part of the country, from whence they procure the ſtone of which they make their pipes.

SECT. XI.

The moſt remarkable Beaſts and Birds in the Northern interior Part of AMERICA.

THE beaſts and birds we ſhall now deſcribe, are thoſe principally found in the northern part of the extenſive country of which we have been treating. The moſt remarkable of theſe are the *porcupine*, and the *wolverene*, or *quick-hatch*; the *pelican*, the *white-tailed eagle*, the *brown* and *ſpotted heath-cock*, and the *white partridge*.

The *porcupine* of this northern part reſembles in ſhape and ſize the beaver; but the head has ſome reſemblance to that of a rabbit: it has a flat noſe, entirely covered with hair: its mouth is armed with two teeth above and two below, that are yellow and remarkably ſtrong: its ears, which are ſhort and ſmall, ſcarcely appear through its fur: its legs too are remarkably ſhort; but its claws, of which it has four on its fore-feet, and five on thoſe behind, are very long, hollow within like ſcoops, and very ſharp pointed. This animal is covered all over with a pretty ſoft fur about four inches long; but beneath the hair on the head, body, and tail, it is thick ſet with ſharp ſtiff quills, which are white with black points, bearded, and not eaſily drawn out when they have entered the ſkin. The porcupine uſually makes his neſt under the roots of large trees, and ſleeps much. He chiefly feeds upon the bark of trees, eats ſnow in the winter to quench his thirſt, and in ſummer drinks water; but carefully avoids going into it. The *Indians* eat theſe animals, and eſteem their fleſh a wholeſome and pleaſant food.

The *wolverene*, or *quick-hatch*, is another very extraordinary animal, and is of the ſize of a large wolf: the ſnout, with the upper and under jaw, as far as the eyes, is black; the upper part of the head whitiſh; the eyes dark; the throat and upper part of the neck white ſpotted with black; the ears ſmall and round; the whole body of a reddiſh brown, dark at the ſhoulders and rump, and lighter upon the back and ſides. The fur of the whole body is pretty long, but not very cloſe: the feet, as far as the firſt joint, are covered with ſhort black hair; but the legs are brown, and the claws of a light colour; moſt of the tail is brown, but toward the tip buſhy and black. This creature in walking carries his head very low, ſo that his back riſes archwiſe. He defends himſelf when attacked with great force and obſtinacy, and it is ſaid will tear traps and gins to pieces in a very ſurpriſing manner.

There are vaſt herds of *buffalos* to the S. of the great lakes: the *American* breed is diſtinguiſhed by having a large beard under the chin, and the head ſo full of hair as to fall over the eyes; the whole body is likewiſe covered with long hair, or rather wool, which is very valuable. Theſe creatures are ſo timid that they run at the ſight of a man, and a ſingle dog will diſperſe a whole herd.

The *dogs* which the Indians employ in hunting carry their ears erect, and greatly reſemble the wolf about the head. They are extremely uſeful to them in the chaſe, as they will attack the fierceſt animal that is purſued as game. They have that quality which is inherent to their ſpecies in every other quarter of the world, attachment and fidelity to their maſters; but being generally ill fed, probably from the ſcarcity of food (for wilful neglect and ill treatment of ſuch a ſervant would diſgrace the character of an Indian), are very troubleſome in the huts at night.

That amphibious animal the *otter* abounds in *North America*: this creature, though reſembling the beaver, in many reſpects differs from it; the teeth are very unlike, for the otter wants the large inciſors, or nippers, which a beaver has, his teeth being ſhaped like thoſe of a dog or wolf, and its hair is not ſo long. This animal is very miſchievous, and, when cloſely purſued, will not only attack dogs, but men. It generally feeds upon fiſh in ſummer, but in winter ſubſiſts by the bark of trees, and the productions of the earth. Its fleſh both taſtes and ſmells of fiſh, and is neither wholeſome nor palatable food.

There are many kinds of lizards here, but the moſt remarkable are the *ſwift lizard* and the *ſlow*; the firſt is generally about ſix inches long, it has four legs and a tail: its body is blue, and ſtriped with dark lines ſhaded with yellow; but the end of the tail is entirely blue. It is ſo remarkably agile, that in an inſtant it is out of ſight, nor can its movement be perceived by the quickeſt eye; ſo that it may be ſaid to vaniſh rather than to run away. This ſpecies are ſuppoſed to poiſon by their bite; but as they never attack thoſe who approach them, chuſing rather to make a precipitate retreat, they are not noxious. The *ſlow lizard* is of the ſame ſhape as the ſwift, but its colour is brown; it is as remarkable for its ſlow motion as the other is for its rapidity. Theſe lizards are extremely brittle, and will break off near the tail as eaſily as an icicle may be ſeparated.

The *pelican* is ſomewhat bigger than a large tame gooſe; the upper mandible of the bill is narrower in the middle than at either end, and is received into the lower, except toward the point, which widens and receives the lower into it; the point is red, but the upper and under part toward the head are yellow; the pouch when dry reſembles an ox's bladder blown, and is prodigiouſly large while the creature is living. The head and neck are covered with white feathers; the body is of a dirty aſh-colour; the quills of the wings are black, and all the under part is of a dark aſh-colour. The legs are ſhort, with four toes webbed together; the middle toe is longer than the leg; the claws are dark, and both the legs and feet are of a dirty yellow mixed with green. Theſe birds live chiefly on fiſh; they are found in many other countries, and in ſome places are much larger.

The *white-tailed eagle* is about the ſize of a turkey-cock, flat-crowned, ſhort necked, and full breaſted, with brawny thighs. Its wings are very long, and broad in proportion to its body; but darker on the back, and lighter on the ſides. The quills of the wings are black, and the breaſt ſpotted with white: the tail when cloſed is white both above and below, except the very tip of the feathers, which is black or brown: the thighs are covered with dark brown feathers, through which in ſome places a white down appears; the legs, to the very feet, are covered with ſoft feathers of a reddiſh brown. It has four toes on each foot, which are very thick and ſtrong, ſtanding three forward and one backward, covered with yellow ſcales, and armed with very ſtrong and ſharp claws of a ſhining black. There are alſo ſeveral kinds of *falcons*, *hawks*, and other birds of prey.

The *great horned-owl* is a very ſingular bird, with a head very little inferior in ſize to that of a cat; what are called the horns, are compoſed of feathers riſing juſt above the bill, intermixed at the bottom with white, becoming of a reddiſh brown by degrees, and tipped with black. The great white owl of a bright ſhining colour, ſo as ſcarce to be diſtinguiſhed from the ſnow, is alſo common in the northern part of this country, and continues there throughout the whole year, where it is frequently ſeen flying by day, and preys upon white partridges.

The *white partridge* is common in ſome other countries, but is no where in ſuch plenty as in the northern part of this near *Hudſon's Bay*. It is of a middle ſize, between that of our common partridge and the pheaſant, ſhaped very much like the former, except its tail being ſomewhat longer. Theſe birds are moſtly brown in ſummer, but in the winter become perfectly white, except the outward feathers of the tail, which are black tipped with white. In that ſevere ſeaſon they repoſe in the ſnow all night, and in the morning fly directly up to ſhake it off their feathers. They ſtay in theſe parts all the year.

The *brown* and *ſpotted heath-cock*, which alſo continues in the north all the year, is ſomewhat bigger than an *Engliſh* partridge; it is likewiſe longer-bodied, and has a longer tail, in proportion. The bill is black, covered with brown feathers; the ſkin above the eye red; the top of the head, the upper part of the neck, and down the back covered with feathers of a dark brown, mixed with a dull orange and aſh-colour: the tail is of a dark drown, the throat under the bill of a yellowiſh white; the neck and breaſt of a dull orange, with ſpots in the form of half-moons. The legs from the knee-joint down to the feet are covered with a kind of hairy feathers of a brown colour, intermixed with black: the feet are of a reddiſh brown; the three toes forward have pretty long and black claws: theſe toes are jagged; but the hinder toes are ſmooth on the ſides.

The *locuſt* is here a ſeptennial inſect, being only ſeen, in any large numbers, every ſeven years, when they ſettle in the interior parts particularly, in large ſwarms, and do great miſchief: the years in which they infeſt the country are ſtyled "locuſt years." *Carver's Travels*, p. 494.

SECT. XII.

Of the different tribes of Indians, *inhabiting the country about the five* Great Lakes.

WE ſhall now ſpeak of the *Indians* who occupy the interior part of *America*. They formerly inhabited the ſea-coaſts, where they were very numerous; but have retired into the weſterly parts of the country, ſo that few of them are to be found within leſs than two or three hundred miles of the ſea: for though many of them have been inſtructed in the knowledge of Chriſtianity, and diſtricts of land have been allotted them in ſeveral of the *Britiſh* colonies, where they have been formed into ſocieties; yet it has been found, that in proportion as they lay by their ancient cuſtoms, and conform to the manners of civilized life, they dwindle away, either becauſe the change is prejudicial to their conſtitutions, or becauſe when ſettled among the *Engliſh* they have great opportunities of procuring ſpirituous liquors, of which both ſexes are in general inordinately fond; very little care being ever taken to prevent thoſe who are inclined to take advantage of them in trade, from baſely intoxicating them for that infamous purpoſe: this has a powerful effect on their conſtitutions, and ſoon proves fatal, producing diſeaſes to which they were formerly ſtrangers. Thus where a few years ago there were conſiderable ſettlements of them, their name is almoſt forgotten; and thoſe who ſtill remain, have, for the moſt part, joined themſelves to other nations in the interior part of the country, on the banks of the lakes and rivers.

The *Indians* in *Canada*, and to the S. of it, are tall and ſtraight beyond the proportion of moſt other nations: their bodies are ſtrong; but it has been obſerved, that this is a ſtrength rather ſuited to endure the exerciſe of the chaſe, than much hard labour, by which they are ſoon conſumed; they have generally ſupple limbs, and the ſmalleſt degree of deformity is very rarely ſeen amongſt them. Their features are regular, their complexion ſomewhat of a copper-colour, or a reddiſh brown; their hair, which is long, black, and lank, is as ſtrong as that of a horſe. They carefully eradicate the hair from every part of the body except the head, and there they confine it to a tuft at the top; whence an erroneous idea has much prevailed, that the men of this country are naturally deſtitute of beards; but it is unqueſtionable that it is only an artificial deprivation.

They generally wear only a blanket wrapped about them, or a ſhirt, both which they purchaſe of the *Engliſh* traders: when the *Europeans* firſt came amongſt them they found ſome nations entirely naked, and others with a coarſe cotton-cloth, wove by themſelves, round their waiſt: but in the northern parts their whole bodies were in winter covered with ſkins.

The *Huron* Indians poſſeſs a very pleaſant and fertile country on the eaſtern ſide of the lake which bears the ſame name. Half a century ago they were very numerous, and could raiſe ſix or ſeven hundred warriors, but they have ſuffered greatly from the attacks of neighbouring tribes. They differ in their manners from any of the *Indian* tribes by which they are ſurrounded. They build regular houſes, which they cover with bark, and are conſidered as the moſt wealthy Indians on the continent, having not only many horſes, but ſome black cattle and ſwine. They likewiſe grow much corn, ſo that after providing for their own wants, they are enabled to barter the remainder with other tribes. Their country extends one hundred and fifty miles eaſtward of the lake, but is narrower in the contrary direction: its ſoil is not exceeded by any in this part of the world: the timber is tall and beautiful; the woods abound with game; and abundance of fiſh may be obtained from the rivers and lakes; ſo that if it was well cultivated, the land would equal that on any part of the ſea coaſt of *North America*. A miſſionary of the order of *Carthuſian* friars, by permiſſion of the biſhop of *Canada*, reſides among them.

Thoſe tribes of Indians which inhabit the banks of lakes *Champlain*, *George*, and *Ontario*, were formerly called *Iroguois*, but have ſince been known by the name of "the five *Mohawk* nations;" and "the *Mohawks* of *Canada*;" the former are called, according to *Carver*, *Onondagoes*, *Oniadas*, *Senecas*, *Tuſcarovies*, and *Iroondock*; theſe fought on the ſide of the *Engliſh* in the conteſt for territory with *France*; the latter, which are called the *Cohnawahgans* and *St. Francis* Indians joined the *French*." *Travels*, p. 173.

The knowledge which we have of the Indians farther to the S. W. as far as beyond 42°. N. latitude, is chiefly obtained from the very worthy provincial officer above quoted, who travelled into thoſe parts, in the year 1766, and whoſe placid manners and artleſs ſincerity could not fail of recommending him to men whom nature alone had inſtructed. He viſited twelve nations of Indians, among which the following appear to be the moſt conſiderable: the *Chipeway*, who dwell to the ſouthward of lake *Superior*, and the *Ottowaws*; the *Winnebages* to the W. of lake *Michigan*, who with the *Saukies* and *Ottigaumies* occupy the whole extent of country from that lake to the *Miſſiſſippi*, below 42°. N. latitude, where the *Ouſconſin* river diſcharges itſelf. The *Naudoweſſie*, the moſt numerous and extended Indian nation, inhabit the country on the W. of the *Miſſiſſippi*, on the borders of *Louiſiana*, on either ſide the river *St. Pierre (Peter's River)*; how far they ſtretch to the weſtward is not known. With theſe Indians our traveller paſſed the winter of 1766, in the moſt central part of *North America*, being equally diſtant from the *Atlantic* and *Pacific Oceans* on the E. and W. and acquired, in his ſeven months ſojourn, a thorough knowledge of their language. When united they can raiſe more than two thouſand warriors. They are divided into eight bands which are ſtyled, *Wawpeentowahs*, *Tintons*, *Aſrabcootans*, *Mawhaws*, *Schians*, *Schianeſe*, *Chongouſcetor* and *Waddapawjeſtin*. The *Aſſinipoils* ſeparated themſelves from the *Naudoweſſies*, and leagued with the *Killiſtinoes*, and have ever ſince lived in a ſtate of enmity with the other bands. The latter appear to have been originally a tribe of the *Chipeways*, as they ſpeak their language, though in a different dialect. They live conſiderably more to the northward. Among the *Naudoweſſia* Indians there appears to be a confederated band of outcaſts, who for their miſdeeds have been baniſhed ſociety, and wander about in queſt of plunder.

The Indians in general are ſtrangers to the paſſion of jealouſy; and the moſt profligate of their young men very rarely attempt the virtue of married women, nor do ſuch often put themſelves in the way of ſolicitation, although the Indian women, in general, are amorous, and, before marriage, are not leſs eſteemed for gratifying their paſſions. It appears to have been a very prevalent cuſtom with the Indians of this country, before they became acquainted with *Europeans*, to compliment ſtrangers with their wives; and the cuſtom ſtill prevails, not only among the lower ranks, but even among the chiefs themſelves, who conſider ſuch an offer as the greateſt proof of courteſy they can give a ſtranger.

Carver relates, that whilſt he was among the *Nawdoweſſies*, he obſerved a woman, in advanced life, to whom they paid uncommon reſpect; and learned that ſhe obtained it by ſuch means as would have rendered her infamous among any civilized ſociety. When young this woman had given what they term "a rice feaſt," which was an ancient, but almoſt obſolete cuſtom in that country: on this occaſion ſhe invited forty of the principal warriors to her tent, where having feaſted them with rice and veniſon, ſhe retired with each of them by turns, behind a ſcreen, placed in the inner part of the tent, for the purpoſe. So generally was her conduct approved, that the young Indians vied with each other to obtain her for a wife, and ſhe ſoon after was actually married to one of the principal chiefs, who ever treated her with great reſpect and love, and over whom ſhe gained a remarkable aſcendancy. Among this nation of Indians, if a married woman is found to have been falſe to wedlock, the puniſhment inflicted upon her is for the huſband to bite off her noſe: this our author ſaw inflicted whilſt he was in the country.

The women ſeldom bear more than three or four children; and theſe are brought forth with much leſs pain than *European* women ſuffer, and they very ſoon recover their uſual ſtrength.

The men are remarkable for their indolence, on which they even ſeem to value themſelves; ſaying that labour would degrade them, and belongs ſolely to the women, while they are formed only for war, hunting, and fiſhing: it is, however, their buſineſs to make arms for hunting and lines for fiſhing; to form their canoes, and to build and repair their houſes; but they frequently make the women aſſiſt them in theſe, beſides attending all domeſtic affairs, and cultivating the land. They have a method of lighting up their huts with torches, made of the ſplinters cut from the pine or birch tree.

The *Indians* have generally aſtoniſhing patience and equanimity of mind, with the command of every paſſion except revenge. They bear the moſt ſudden and unexpected misfortune with calmneſs and compoſure, without uttering a word, or the leaſt change of countenance. Even a priſoner, who knows not whether he may not in a few hours be put to a moſt cruel death, ſeems entirely unconcerned, and eats and drinks with as much cheerfulneſs as thoſe into whoſe hands he has fallen. Their reſolution and courage under ſickneſs and pain, is really aſtoniſhing. Even when under the ſhocking torture to which priſoners are frequently expoſed, they will not only make themſelves cheerful, but provoke and irritate their tormentors by the moſt ſevere reproaches.

They are grave in their deportment upon ſerious occaſions, obſervant of thoſe in company, reſpectful to the old; of a temper cool and deliberate, by which they are never in haſte to ſpeak before they have well thought of the matter, and ſure that the perſon who ſpoke before them has finiſhed all he had to ſay. In their public councils, every man is heard in his turn, according as his years, his wiſdom, or his ſervices to his country, have ranked him. Not a whiſper, nor a murmur is heard from the reſt, while he ſpeaks; no indecent commendations, no ill-timed applauſe. The young attend for their inſtruction; for here they learn the hiſtory of their nation,

tion, are animated by thoſe who celebrate the warlike actions of their anceſtors; are taught what is the intereſt of their country, and how to purſue it.

Hoſpitality is exerciſed among them with the utmoſt generoſity and good-will. Their houſes, their proviſions, even their young women, are preſented to a gueſt. To thoſe of their own nation they are likewiſe very humane and beneficent. If any of them ſucceed ill in hunting, if his harveſt fails, or his houſe is burnt, he feels no other effect of his misfortune, than its giving him an opportunity of experiencing the benevolence and regard of his countrymen, who, for that purpoſe, have almoſt every thing in common. But to the enemies of his country, or to thoſe who have privately offended him, the *American* is implacable. He never indeed makes uſe of oaths, or indecent expreſſions, but cruelly conceals his ſentiments, till by treachery or ſurpriſe, he can gratify his revenge. No length of time is ſufficient to allay his reſentment; no diſtance of place is great enough to protect the object; he croſſes the ſteepeſt mountains, pierces impervious foreſts, and traverſes the moſt hideous deſerts; bearing the inclemency of the ſeaſons, the fatigue of the expedition, the extremes of hunger and thirſt, with patience and chearfulneſs, in hopes of ſurpriſing his enemy, and exerciſing upon him the moſt ſhocking barbarities. When theſe cannot be effected, the revenge is left as a legacy, transferred from generation to generation, from father to ſon, till an opportunity offers of taking what they think ample ſatisfaction. To ſuch extremes do the *Indians* puſh their friendſhip, or their enmity; and ſuch indeed is, in general, the character of all uncivilized nations. They, however, eſteem nothing ſo unworthy of a man of ſenſe, as a peeviſh temper, and a proneneſs to a ſudden and raſh anger.

On the other hand, they are highly ſenſible of the utility and pleaſures of friendſhip; for each of them, at a certain age, makes choice of ſome one nearly of the ſame ſtanding in life to be their moſt intimate and boſom friend; theſe two enter into mutual engagements, by which they oblige themſelves to brave any danger, and run any riſque, to aſſiſt and ſupport each other. This attachment is even carried ſo far as to overcome the fear of death, which they conſider only as a temporary ſeparation, being perſuaded that they ſhall meet and be united in friendſhip in the other world, never to be ſeparated more; and that there they ſhall need one another's aſſiſtance as well as here.

It does not appear that there is any *Indian* nation that has not ſome ſenſe of a Deity, and a kind of ſuperſtitious religion. Their ideas of the nature and attributes of God are very obſcure, and ſome of them abſurd, though they conceive of him as the Great Spirit, and imagine that his more immediate reſidence is on the iſlands of the great lakes. They ſeem to have ſome idea that there are ſpirits of a higher and more excellent nature than man; and ſuppoſing them to be every where preſent, frequently invoke them, and endeavour to act agreeable to their deſires. They likewiſe imagine that there is an evil ſpirit, who, they ſay, is always inclined to miſchief, and bears great ſway in the creation; this, indeed, is the principal object of their devotions; they generally addreſs him moſt heartily, beſeeching him to do them no harm: but ſuppoſing the others to be propitious, and ever inclined to do good, they intreat thoſe ſpirits to beſtow bleſſings upon them, and prevent the evil ſpirit from hurting them. *Carver* relates that one of the moſt conſiderable chiefs among the *Ottowaws* with whom he remained a night, on attending him to his canoe the next morning, with great ſolemnity, and in an audible voice offered up a fervent prayer, as he entered his canoe, "that the Great Spirit would favour him with a proſperous voyage; that he would give him an unclouded ſky, and ſmooth waters, by day, and that he might lie down by night on a beaver blanket, enjoying uninterrupted ſleep, and pleaſant dreams; and alſo that he might find continual ſecurity under the great pipe of peace." To procure the protection of the good ſpirit, they imagine it neceſſary to diſtinguiſh themſelves, and that they muſt above all other attainments, become good warriors, except hunters, and ſteady markſmen.

Their prieſts often perſuade the people that they have revelations of future events, and are authorized to command them to purſue ſuch and ſuch meaſures. They alſo undertake to unfold the myſteries of religion, and to ſolve and interpret all their dreams. They repreſent the other world as a place abounding with an inexhauſtible plenty of every thing deſirable, where they ſhall enjoy the moſt full and exquiſite gratification of all their ſenſes. This is, doubtleſs, the motive that induces the *Indians* to meet death with ſuch indifference and compoſure; none of them being in the leaſt diſmayed at the news that he has but a few hours or minutes to live, but with the greateſt intrepidity ſees himſelf upon the brink of being ſeparated from all terreſtrial things, and with great ſerenity talks to all around him: thus a father leaves his dying advice to his children, and takes a formal leave of all his friends.

They teſtify great indifference for the productions of art; when any curious piece of mechaniſm is ſhown them they ſay, "It is pretty, I like to look at it," but expreſs no curioſity about its conſtruction. Such however is not their behaviour when they are told of a perſon who diſtinguiſhes himſelf by agility in running; is well ſkilled in hunting, can take a moſt exact aim; work a canoe along a rapid with great dexterity; is ſkilled in all the arts which their ſtealthy mode of carrying on war is capable of; or is acute in diſcovering the ſituation of a country, and can, without a guide, purſue his proper courſe through a vaſt foreſt, and ſupport hunger, thirſt, and fatigue, with invincible firmneſs; at ſuch a relation their attention is rouſed; they liſten to the intereſting tale with delight, and expreſs in the ſtrongeſt terms their eſteem for ſo great, ſo wonderful a man.

They generally bury their dead with great decency, and depoſit in the grave ſuch things as the deceaſed had made the greateſt uſe of, and been moſt attached to; as his bow and arrows, pipes, tobacco, *&c.* that he may not be in want of any thing when he comes to the other country. The mothers mourn for their children a long time, and the neighbours make preſents to the father; and he in return gives them a feaſt.

Their phyſicians have generally one uniform courſe of practice, be the diſorder what it may: they firſt incloſe the patient in a narrow cabbin, in the midſt of which is a ſtone red hot, on which they throw water till he is covered with warm vapour, and is in a profuſe ſweat, when they hurry him from thence and plunge him into the next river. This is repeated as often as they think neceſſary; and by this method extraordinary cures are ſometimes performed: but it alſo frequently happens that perſons die in the very operation; eſpecially where they are afflicted with the new diſorders, brought to them from *Europe*; and it is partly owing to this manner of proceeding that the ſmall-pox has proved ſo very fatal to them. It muſt, however, be acknowledged, that they have the uſe of ſome ſpecifics of wonderful efficacy, the power of which they however attribute to the ceremonies with which they are adminiſtered.

Every band has a leader who bears the title of *Sachem*, or chief warrior, and is choſen for his tried valour and ſkill in conducting war; to him is intruſted all military operations; but, according to *Carver*, his authority does not extend to civil affairs, the pre-eminence there being given to another, who poſſeſſes it by a kind of hereditary claim, and whoſe aſſent is neceſſary to render valid all conveyances of land, or treaties of whatever kind, to which he affixes the mark of the tribe or nation. Though theſe military and civil chiefs are conſidered as the heads of the band, and the latter is uſually ſtyled king, yet the America Indians conſider themſelves as controlled by neither civil nor military authority: every individual regards himſelf as free and independent, and would never renounce that idea of liberty, therefore injunctions conveyed in the ſtyle of a poſitive command, would be diſregarded, and treated with contempt. Nor do their leaders aſſume an aſcendancy repugnant to theſe ſentiments, but merely adviſe what is neceſſary to be done, which is ſufficient to produce the moſt prompt and effectual execution.

Their great council is compoſed of the heads of tribes and families, with ſuch whoſe capacity has raiſed them to the ſame degree of conſideration. They meet in a houſe, built in each of their towns for that purpoſe, and alſo receive ambaſſadors, to deliver them an anſwer, to ſing their traditionary war ſongs, or to commemorate their dead. In theſe councils they propoſe all ſuch matters as concern the ſtate, and which have been already digeſted in the ſecret councils, at which none but the head men aſſiſt. The chiefs ſeldom ſpeak much themſelves at theſe general meetings, but intruſt their ſentiments with a perſon who is called their ſpeaker, or orator, there being one of this profeſſion in every tribe and town; and their manner of ſpeaking is natural and eaſy, their words ſtrong and expreſſive, their ſtyle bold, figurative, and laconic, whatever is ſaid tending either to inform the judgment, or rouſe the paſſions.

When any buſineſs of conſequence is tranſacted, they appoint a feaſt upon the occaſion, of which almoſt the whole nation partakes. Before the entertainment is ready, the principal perſon begins a ſong on the remarkable events of their hiſtory, and whatever may tend to their honour or inſtruction. The others ſing in their turn. They alſo have dances, chiefly of a martial kind; and no ſolemnity or publick buſineſs is carried on without ſongs and dances.

As the *Indians* are high ſpirited and ſoon irritated, the moſt trifling provocations frequently rouſe them to arms, and prove the occaſions of bloodſhed and murder. Their petty private quarrels are often decided this way, and expeditions undertaken without the knowledge or conſent of a general council. Theſe private expeditions are winked at, and excuſed, as a means of keeping their young men in action, and inuring them to the exerciſes of war.

But when war becomes a national affair, it is entered upon with great deliberation. They firſt call an aſſembly of the ſachems or chief warriors, to deliberate upon the affair, and every thing relating to it. In this general congreſs among the *Northern Indians* and the *Five Nations*, the women have a voice as well as the men. When they are aſſembled, the chief ſachem or preſident, propoſes the affair they have met to conſult upon, and taking up the tomahawk, which lies by him, ſays, "Who among you will go and fight againſt ſuch a nation? Who among you will bring captives from thence to replace our deceaſed friends, that our wrongs may be revenged, and our name and honour maintained, as long as the rivers flow, graſs grows, or the ſun and moon ſhall endure?" Then one of the principal warriors riſing, harangues the whole aſſembly, and afterward, addreſſing himſelf to the young men, enquires who among them will go along with him, and fight their enimies? When they generally riſe, one after another, and fall in behind him, while he walks round the circle, till he is joined by a ſufficient number.

On ſuch occaſions they have uſually a deer, or ſome other beaſt roaſted whole; and each of them, as they conſent to go to war, cuts off a piece and eats, ſaying, "Thus will I devour our enemies," mentioning the nation they are going to attack. This ceremony being performed, the dance begins, and they ſing the war-ſong, which has relation to their intended expedition and conqueſt, or to their own ſkill, courage, and dexterity in fighting, and the manner in which they will vanquiſh their enemies. Their expreſſions are ſtrong and pathetic, uttered with a tone that inſpires terror.

Such is the influence of their women in theſe conſultations, that the iſſue depends much upon them. If any one of them, in conjunction with the chiefs, has a mind to excite one, who does not immediately depend upon them, to take part in the war, ſhe preſents, by the hands of ſome truſty young warrior, a ſtring of wampum, to the perſon whoſe help ſhe ſolicits, which ſeldom fails of producing the effect. But when they ſolicit an offenſive or defenſive alliance with a whole nation, they ſend an embaſſy with a large belt of wampum and a bloody hatchet, inviting them to come and drink the blood of their enemies.

The wampum uſed upon theſe and other occaſions, before their acquaintance with *Europeans*, was only ſmall ſhells, which they picked up by the ſea-coaſts, and on the banks of the lakes. It now conſiſts of a kind of cylindrical beads, made of white and black ſhells, which are eſteemed among them as ſilver and gold are among us. The black they think the moſt valuable; both of them are their greateſt riches and ornaments, anſwering all the ends of money among us. They have the art of ſtringing, twiſting, and interweaving them into their belts, collars, blankets, *&c.* in ten thouſand different ſizes, forms, and figures, ſo as not only to be ornaments for every part of dreſs, but expreſſive of all their important tranſactions. They die the wampum of various colours and ſhades; and as they are made ſignificant of almoſt any thing they pleaſe, by theſe their records are kept, and their thoughts communicated to one another, as ours are by writing. Thus the belts that paſs from one nation to another, in all important tranſactions, are carefully preſerved in the cabbins of their chiefs, and ſerve both as a kind of record or hiſtory, and as a public treaſure; hence they are never uſed on trifling occaſions.

The calumet, or pipe of peace, is of no leſs importance, nor is it leſs revered among them. The bowl of this pipe is made of a kind of ſoft, red ſtone, eaſily wrought and hollowed out; the ſtem is of cane, or a kind of light wood, painted with different colours, and adorned with the heads, tails, and feathers, of the moſt beautiful birds, *&c.* The uſe of the calumet, is to ſmoke either tobacco, or ſome other herb uſed inſtead of it, when they enter into an alliance or any ſolemn engagement; this being eſteemed the moſt ſacred oath that can be taken, the violation of which is thought to be moſt infamous, and deſerving ſevere puniſhment in the other life. When they treat of war, the whole pipe, and all its ornaments are red; ſometimes it is red only on one ſide, and by the diſpoſition of the feathers, *&c.* a perſon acquainted with their cuſtoms, knows at firſt ſight the intentions or deſires of the nation who preſents it. Smoking the calumet is alſo, upon ſome occaſions, and in all treaties, conſidered as a ſacred oath, as a ſeal of their decrees, and a pledge of their performance of them. The ſize and decorations of their calumets are commonly proportioned to the importance of the occaſion, to the quality of the perſons to whom they are preſented, and to the eſteem and regard they have for them.

Another inſtrument of great importance among them, is the tomahawk. This is an ancient weapon, uſed by them in war, before they were taught the uſe of iron and ſteel, ſince which, hatchets have been ſubſtituted in the room of them: but it ſtill retains its uſe and importance in public tranſactions, and, like the pipe, is frequently very ſignificant. This inſtrument is formed, in ſome reſpects, like an hatchet, having a long handle; the head, which is a round knob of ſolid wood, calculated to knock a man down, has on the other ſide a point, bending a little towards the handle; and near the centre, where the handle pierces the head, another point projects forward, of a conſiderable length, which ſerves to thruſt with like a ſpear. The tomahawk is alſo ornamented with painting and feathers, diſpoſed and variegated in many ſignificant forms, according to the occaſion and end for which it is uſed; and on it is kept a kind of journal of their marches and moſt important occurrences, in a ſort of hieroglyphics. When the council is called to deliberate on war, the tomahawk is coloured red; and when the council ſits, it is laid down by the chief; and if war be concluded upon, the captain of the young warriors takes it up, and holding it in his hand, dances and ſings the war-ſong. When the council is over, this, or ſome other of the ſame kind, is ſent by the hands of the ſame warrior to every tribe concerned; who, with it, preſents a belt of wampum, and delivers his meſſage, throwing the tomahawk on the ground, which is taken up by one of the moſt expert warriors, if they chooſe to join; if not, it is returned with a belt of their wampum, ſuited to the occaſion.

Each nation or tribe has its diſtinct enſigns, generally conſiſting of ſome beaſt, bird, or fiſh. Thus the *Five Nations* have the bear, otter, wolf, tortoiſe, and eagle; by

A SACHEM of North America exhorting his tribe of INDIANS to War

by theſe names the tribes are generally diſtinguiſhed, and the ſhapes of theſe animals are pricked, and painted on ſeveral parts of their bodies. Generally, when they march through the woods, they, at every encampment, cut the figure of their arms on trees, eſpecially when they have had a ſucceſsful campaign, that travellers may know they have been there; recording alſo, in their way, the number of priſoners and ſcalps they have taken.

Their military appearance is very odd and terrible. They cut off all their hair, except a ſpot on the crown of the head, and pluck of their eyebrows. The lock left upon the head is divided into ſeveral parcels, each of which is ſtiffened, and intermixed with beads and feathers of various ſhapes and colours, the whole twiſted and connected together. They paint themſelves with a red pigment down to the eyebrows, which they ſprinkle over with white down. The griſtles of their ears are ſlit almoſt quite round, and hung with ornaments that have generally the figure of ſome bird or beaſt drawn upon them. Their noſes are likewiſe bored and hung with beads, and their faces painted with various colours. On their breaſts are a gorget or medal of braſs, copper, or ſome other metal; and by a ſtring which goes round their necks, is ſuſpended that horrid weapon called the ſcalping-knife.

Thus equipped, they march forth, ſinging their war-ſong, till they loſe ſight of their village; and are generally followed by their women, who aſſiſt them in carrying their baggage, whether by land or water, but commonly return before they proceed to action.

They have generally one commander for every ten men; and if the number amounts to one hundred, a general is appointed over the others, not properly to command, but to give his opinion. They have no ſtated rules of diſcipline, or fixed methods of carrying on a war; but make their attacks in as many different ways as there are occaſions, but generally in flying parties, equipped for that purpoſe.

The weapons uſed by thoſe who trade with the *Engliſh* and *French*, are commonly a firelock, hatchet, and ſcalping-knife; but the others uſe bows, tomahawks, and pikes. As the commander in chief governs only by advice, and can neither reward nor puniſh, every private man may return home when he pleaſes, without aſſigning any reaſon for it; or any number may leave the main body, and carry on a private expedition, in whatever manner they pleaſe, without being called to account for their conduct.

When the *Indians* return from a ſucceſsful campaign, they contrive their march ſo as not to approach their village till toward the evening. They then ſend two or three forward to acquaint their chief, and the whole village, with the moſt material circumſtances of the campaign. At day-light next morning, they give their priſoners new clothes, adorn their heads with feathers, paint their faces with various colours, and put into their hands a white ſtaff, taſſelled round with the tails of deer. This being done, the war-captain ſets up a cry, and gives as many yells as he has taken priſoners and ſcalps; and the whole village aſſemble at the water-ſide. As ſoon as the warriors appear, four or five of their young men, well clothed, get into a canoe, if they come by water, or otherwiſe march by land: the two firſt, carrying each a calumet, go out ſinging, to ſearch the priſoners, whom they lead in triumph to the cabbin, where they are to receive their doom. The owner of this cabbin has the power of determining their fate, though it is often left to ſome woman who has loſt her huſband, brother, or ſon in the war; and when this is the caſe, ſhe generally adopts him into the place of the deceaſed. The priſoner has victuals immediately given him, and while he is at this repaſt, a conſultation is held; and if it be reſolved to ſave his life, two young men unite him, and taking him by the hands, lead him to the cabbin of the perſon into whoſe family he is to be adopted, and there he is received with all imaginable marks of kindneſs. He is treated as a friend, as a brother, or as a huſband; and they ſoon love him with the ſame tenderneſs as if he ſtood in the one of thoſe relations to them. In ſhort, he has no other mark of captivity, but his not being ſuffered to return to his own nation, for his attempting this would be puniſhed with certain death.

But if the ſentence be death, how different their conduct! theſe people, who behave with ſuch diſintereſted affection to each other, with ſuch tenderneſs to thoſe whom they adopt, here ſhew that they are truly ſavages; the dreadful ſentence is no ſooner paſſed, than the whole village ſet up the death-cry; and, as if there were no medium between the moſt generous friendſhip and the moſt inhuman cruelty; for the execution of him whom they had juſt before deliberated upon admitting into their tribe is no longer deferred, than whilſt they can make the neceſſary preparations for rioting in the moſt diabolical cruelty. They firſt ſtrip him, and fixing two poſts in the ground, faſten to them two pieces from one to the other; one about two feet from the ground, the other about five or ſix feet higher: then obliging the unhappy victim to mount upon the lower croſs piece, they tie his legs to it a little aſunder: his hands are extended and tied to the angles formed by the upper piece. In this poſture they burn him all over the body, ſometimes firſt daubing him with pitch. The whole village, men, women, and children, aſſemble round him, every one torturing him in what manner they pleaſe, each ſtriving to exceed the other in cruelty, as long as he has life. But if none of the bye-ſtanders are inclined to lengthen out his torments, he is either ſhot to death, or incloſed with dry bark, to which they ſet fire; they then leave him on the frame, and in the evening run from cabbin to cabbin, ſuperſtitiouſly ſtriking with ſmall twigs, the furniture, walls, and roofs, to prevent his ſpirit from remaining there to take vengeance for the evils committed on his body. The remainder of the day and the night following is ſpent in rejoicing.

This is the moſt uſual method of murdering their priſoners; but ſometimes they faſten them to a ſingle ſtake, and build a fire round them; at other times they cruelly mangle their limbs, cut off their fingers and toes, joint by joint, and ſometimes ſcald them to death.

What is moſt extraordinary, if the ſufferer be an *Indian*, there ſeems, during the whole time of his execution, a conteſt between him and his tormentors, which ſhall outdo the other, they in inflicting the moſt horrid pains, or he in enduring them: not a groan, not a ſigh, not a diſtortion of countenance eſcapes him, in the midſt of his torments. It is even ſaid, that he recounts his own exploits, informs them what cruelties he has inflicted upon their countrymen, and threatens them with the revenge that will attend his death: that he even reproaches them for their ignorance of the art of tormenting; points out methods of more exquiſite torture, and more ſenſible parts of the body to be afflicted.

The ſcalps, thoſe dreadful proofs of the barbarity of theſe *Indians*, are valued, and hung up in their houſes as the trophies of their bravery; and they have certain days when the young men gain a new name or title of honour, according to the qualities of the perſons to whom theſe ſcalps belonged. This name they think a ſufficient reward for the dangers and fatigues of many campaigns, as it renders them reſpected by their countrymen, and terrible to their enemies.

The moſt favourable accounts of the *Indians* who inhabit this part of the continent is given by *Charlevoix*, father *Hennepin*, and other *French* writers: from their information *Voltaire* has been led to draw a captivating picture of Indian manners. The *Huron* tribe, dwelling on the eaſtern ſide of the great lake ſo called, have been the ſubject of his particular panegyric. It cannot indeed be doubted that their intercourſe with *Europeans* has greatly defaced the leading traits of the primitive character of the *Americans*, and whilſt it has debaſed their virtues, has confirmed and increaſed every malignant propenſity. In the late wars, in which theſe ſavages have been engaged as auxiliaries to *Europeans*, they have been found inſidious and daſtardly in their mode of attack; faithleſs in their alliances; their inſatiable thirſt for blood equalled only by their avidity for ſpoil: and dangerous confederates when neither maſſacre nor plunder were to be effected.

CHAP. II.

The UNITED STATES of AMERICA.

SECT. I.

The firſt Settlement, Progreſs, and preſent State of the American States.

THE *Engliſh*, conducted by *John Cabot*, in the year 1497, (although the diſcovery has generally, but erroneouſly, been attributed to his ſecond ſon *Sebaſtian*, who at that time could not have been more than twenty years of age) found the way to *North America* ſoon after *Columbus* had ſucceſsfully croſſed the *Atlantic*; but as the torrents in that country brought down no gold, and the Indians were not bedecked with any coſtly ornaments, no attempts were made to explore the country for near a century after its diſcovery. *Sir Francis Drake*, who traverſed the whole circumference of the globe in one voyage, and in one ſhip, which had never been atchieved before, when afterward annoying the Spaniards in the *Weſt-Indies*, and on the main, gained ſome knowledge of the eaſtern ſhore of the northern continent, as he had before of the weſtern parts about the ſame parallel; *Sir Walter Raleigh*, however, was the firſt navigator who explored the coaſt, beſtowed on it a name, and attempted to ſettle a colony; but the lands were overſpread with thick woods, the caprices of a ſavage race were to be ſoothed, their jealouſies of new ſettlers to be removed, or their power to be oppoſed; and, when all theſe difficulties ſhould be ſurmounted, the coloniſts muſt continue ſubject to the firſt condemnatory ſentence denounced on the human race, "by the ſweat of their brow to eat their bread."

At that time colonization made no part of the ſyſtem of government, ſo that there were few ſtimulents to abandon a native ſoil for the purpoſe of ſeeking poſſeſſions in another hemiſphere. At length a powerful incentive aroſe, ſtronger than the influence of kings, than the love of eaſe, than the dread of miſery. Religion, which had long been converted into the moſt powerful engine which human ſubtilty ever made uſe of to ſubjugate the maſs of mankind, no ſooner ceaſed to be ſo perverted, than by its own proper force it impelled large bodies of people to renounce every preſent enjoyment, the inſtinctive love of a native ſoil, rooted habits, and deareſt connections, and to ſettle in the dreary wilds of a far diſtant continent.

When *England*, by a very ſingular concurrence of circumſtances, threw off the papal yoke, ſtate policy ſo predominated in the meaſure, that the conſciences of men were ſtill required to bend to the diſcipline, conform to the ceremonials, and aſſent to the doctrines which the governing powers eſtabliſhed. Although a diſſent from the church of *Rome* was conſidered as meritorious, yet a diſſent from the church of *England* was held to be heretical, and an offence to be puniſhed by the civil magiſtrate. The human mind, ſomewhat awakened from a long ſuſpenſion of its powers by a *Wickcliffe*, farther enlightened by an *Eraſmus* and *Melanthon*, and at length called forth into energy by the colliſion of thoſe two ardent and daring ſpirits *Luther* and *Calvin*, then began to bend all its attention toward religious enquiries; and exerciſed all its powers in ſuch purſuits. Hence aroſe a vaſt diverſity of opinions, which gave riſe to numerous ſects and denominations of Chriſtians; but as the proteſtant eſtabliſhment in *England* held it eſſential to preſerve a unity of faith, thoſe novel opinions obtained no more quarter there than under papal power.

The eaſtern coaſt of *North America*, comprehending a vaſt extent of country, was conſidered as of right belonging to *England*, and was then known by no other names than thoſe of *North* and *South Virginia*, which it had received from *Sir Walter Raleigh*. The perſecuted and deſperate religioniſts eaſily obtained a royal grant of a very extenſive track of land, whither they repaired, not to amaſs wealth, or to exterminate the inhabitants, but to ſubſiſt by induſtry, to purchaſe ſecurity by honourable intercourſe with the natives, and to acquire ſtrength under the auſpices of freedom. The eſtabliſhment made by the quakers, under the conduct of *Penn*, realized theſe profeſſions, in other parts a ſpirit of intolerance too much prevailed, and inſidious arts were practiſed on the Indians, which ſoon excited rancorous animoſity in thoſe tribes. The *Spaniards* had found the ſouthern diviſion of this vaſt continent peopled with a puſillanimous and defenceleſs race of men, whom they ſacrificed without ſcruple or remorſe to their ambition and avarice; the *European* ſettlers on the coaſt of *North America* were not actuated by ſuch a cruel and exterminating ſpirit; they had juſter notions of the rights of man: they alſo found the inhabitants of that country poſſeſſing very different characteriſtics, leſs numerous indeed than toward the ſouth, but ſubſiſting by hunting, expert in the uſe of offenſive weapons, ſagacious, perſevering, not inſenſible of kindneſſes conferred, but implacable when offended, and ever gratifying their revenge by means the moſt artful, concealed, and cruel. An acquaintance with *Europeans* has ever been baneful to uncivilized communities in all parts of the globe. Theſe Indians ſoon diſcovered a fondneſs for ſpirituous liquors, with which the artful traders were too ready to ſupply them; by the exceſſive uſe of theſe, their natural ferocity has been increaſed, their paſſions enflamed, their beſt principles perverted, diſeaſes never before known introduced, their lives ſhortened, and their numbers rapidly reduced.

The attention and aſſiſtance which *Great Britain* gave to theſe colonies increaſed with the increaſing commercial ſpirit of the nation; indeed the *Engliſh Americans* may be ſaid to have been, like *Minerva*, born adult: no age of barbariſm involved in obſcurity and ignorance the early period of their exiſtence. Arts and ſciences were cultivated ere their woods were cleared; their minds were enlarged without their manners being depraved. The foſtering hand of *Great Britain* nurſed the riſing genius of the colonies, and an immenſe expanſe of country taught them to contemplate on futurity with exultation. Their towns were built far from the din of war; their people had multiplied amidſt the bleſſings of peace; their ſituation and employments rendered them robuſt and enterprizing, without becoming ſanguinary. The inroads of the Indians, thoſe Aborigines, whoſe territory they had in moſt inſtances rather ſeized upon than honourably purchaſed, were confined to their back ſettlements, and ſerved to keep them attentive without endangering the general ſafety. The apprehenſions from the encroachments of the *French* were diſpelled ſoon after they had been ſeriouſly entertained, and the fortunate termination of that four years' conflict ſerved to teach them to value a ſecurity which then became permanent. Civil commotions and inteſtine wars have ſtained with blood every kingdom and ſtate, both in ancient and modern times: the *Americans* were not to expect an exemption from the common lot of humanity; and the time at length arrived, when the horrors and deſolations of war were to overſpread the country.

Perhaps no event in the hiſtory of the world has been more important than the revolution in *America*, which the contentions between the mother country and the colonies produced, by the erection of ſo many independent, but confederated, republics on that continent. The purſuits of *America* muſt now be directed to different objects. Whilſt coloniſts, they were perhaps become

too much a commercial people: as States, agriculture will demand their firſt and chief attention. The immenſe country to the weſtward is now likely to be brought much ſooner into a ſtate of cultivation than if they had continued colonies: population may be expected to advance in a proportion hitherto unknown; and, among a people enjoying ſuch advantages, the human mind ought to be exerciſed, and its powers enlarged, without being depraved; ſimplicity of manners, uncontaminated by the impatience of becoming rich, ſhould prevail; and the favoured *Americans* be known as a people exemplary for integrity in their dealings; for honour, and public virtue.

BOUNDARIES.

By the definitive treaty of peace between the king of *Great Britain* and the United States of *America*, which was executed at *Paris*, in the year 1783, the boundaries of theſe ſtates are fixed to extend on the N. from *Nova Scotia*, acroſs the four great lakes of *Ontario*, *Erie*, *Huron*, and *Superior*, aſſigning to the States the ſouthern half of each, and in the latter the iſlands *Royal* and *Phillippeaux*; lake *Michigan* they poſſeſs entire: though theſe lakes have ever been conſidered as making a part of *Canada*, and no new regulation of limits has excluded them. This boundary is farther extended through the centre of the lake of the *Woods* to its moſt weſtern point. It may be ſuppoſed that a want of acquaintance with the geography of the country has cauſed it to be added "from thence on a due *Weſt* courſe to the river *Miſſiſſippi*," for if the boundary is carried due W. it will reach the *Pacific Ocean*, about one degree of latitude S. of *Nootka Sound*. The line, in order touch the *Miſſiſſippi*, ſhould have been carried from the weſtern ſide of the lake of the *Woods* due S. In conſequence of this inaccuracy no boundary is ſettled throughout a ſpace of near three degrees of latitude; it being reſumed along the middle of the river *Miſſiſſippi* to 31° N. latitude, where that river begins to divide *Weſt Florida* from *Louiſiana*. The *American States* are bounded on the S. by the two *Floridas*. They poſſeſs all the eaſtern coaſt from the mouth of the river *St. Croix*, in the bay of *Fundy*, to *St. Mary*'s river, which divides *Georgia* from *Eaſt Florida*, and all iſlands within twenty leagues of any part of the ſhores.

The States with whom the King of *Great Britain* concluded this treaty were, *New Hampſhire*, *Maſſachuſet's Bay*, *Rhode Iſland* with *Providence Plantations*, *Connecticut*, *New York*, *New Jerſey*, *Pennſylvania*, *Delaware*, *Maryland*, *Virginia*, *North Carolina*, *South Carolina*, and *Georgia*.

GOVERNMENT.

A general Congreſs was firſt held at *Philadelphia*, in Sept. 1774, and was compoſed of delegates choſen by the houſes of repreſentatives of each of the twelve old colonies; *Georgia* alone being unrepreſented in that aſſembly, but it afterward acceded, and the number of members then amounted to fifty-four, and a preſident; two years after, the number was reduced to forty-eight. In this aſſembly each colony had no more than a ſingle voice, whether its deputation was more or leſs numerous; ſo that a contrariety of opinion among the deputies from any particular colony, if the majority were in favour of the meaſure, did not occaſion a diſſenting voice in the congreſs; the ſenſe of any colony could not be taken if its deputies were equally divided in their opinions; which was likely frequently to occur, as ſeven of the colonies ſent either two or four deputies; the other five were repreſented by three, five, ſeven, or nine.

In the year 1776 Congreſs, by a ſolemn act, renounced allegiance to the King of *Great Britain*, and declared the *American* colonies to be Independent States. In March, 1781, articles of confederation were ratified; and the ſtyle of the confederation was ſettled to be *United States of America*. The particular articles agreed upon by this compact need not here be ſpoken of, as in a convention of all the States, which was held at *New York*, where General *Waſhington* preſided, a new conſtitution was agreed upon, from which the delegates from *Rhode Iſland* alone diſſented. It conſiſts of ſeven articles, which were tranſmitted to Congreſs for their approbation, which having received, and the concurrence of *Rhode Iſland* given; in the year 1789, General *Waſhington* was choſen preſident of the Congreſs thus formed.

This new ſyſtem of republican government retains much of the ſpirit of the *Engliſh* conſtitution; and thoſe two eſſential ſecurities to individuals in their perſon and their property, the habeas corpus and trial by jury, are retained. It unites the *American States* in a much cloſer confederation than the *Helvetic* union brought the *Swiſs Cantons*, or even than the compact entered into by the *Seven United Provinces* of the *Netherlands* placed the *Dutch*. Indeed, in many important points, it is ſuch a form of government as the world had not before ſeen. The moſt effectual means ſeem to have been taken to remove what was formerly a fruitful ſource of animoſity and diſſenſion among the colonies, the undefined bounds of their reſpective territories, as every ſtate has now renounced all right of deciding upon their claims, and has agreed that they ſhall be laid before Congreſs, and decided by that aſſembly as a court of judicature. In this new form of government the ſeveral independent ſtates may be ſaid to have delegated to Congreſs all the functions of government, except retaining their interior conſtitution, but deprived of the power of levying duties on merchandize, of equipping ſhips of war, of making foreign alliances, or waging war; for, as the preamble to the new conſtitution expreſſes it, in the federal government of theſe ſtates, "it is impoſſible to ſecure all right of independent ſovereignty to each, and yet provide for the intereſt and ſafety of all."

The preſident of the congreſs, the ſenate and repreſentatives, form a legiſlative body ſomewhat ſimilar to the king, lords, and commons, of *Great Britain*, in that every act of congreſs muſt have a majority of votes in the two houſes, and receive the aſſent of the preſident, before it can paſs into a law; but the *American* conſtitution differs in many particulars; the preſident of the congreſs has not a power abſolutely to negative any bill, he can only refuſe his aſſent, and at the ſame time is required to aſſign the reaſons on which he founds his refuſal; the buſineſs is then to undergo a freſh diſcuſſion in both houſes, and the bill muſt be paſſed by two thirds of the members of each houſe, which conſtitutes it a law without the concurrence of the preſident.

No ſpecific portion of property, whether real or perſonal, is required to be poſſeſſed as a qualification either for a repreſentative, a ſenator, the vice preſident, or the preſident. Nor is any one excluded on account of the religious principles which he profeſſes, whatever they may be; ſo that *Jews* or *Roman Catholics* are as eligible as any other citizens. The houſe of repreſentatives are choſen every two years by the people of the ſeveral ſtates. The only legal requiſites in a candidate are his having attained to twenty-five years of age; having been ſeven years a citizen of the *United States*; and, at the time of his election, an inhabitant of the ſtate by which he is choſen; the holding any place of honour, truſt, or emolument, is an abſolute diſqualification. In this repreſentation there is no diſtinction of knights, citizens, and burgeſſes; it not being made out of counties, cities, and borough towns; for the excluſive rights and peculiar privileges of corporations are entirely unknown here. The deſign of the new conſtitution is that the number of repreſentatives in congreſs ſhall not exceed one repreſentative for every 30,000, but that each ſtate ſhall have at leaſt one repreſentative. An enumeration or cenſus of inhabitants is to be made within three years after the firſt meeting of the congreſs of the *United States*; and a freſh enumeration made within every ſubſequent term of ten years; but until ſuch enumeration ſhall have been made the repreſentation ſhall be as follows:

From	New Hampſhire	3
	Maſſachuſet's Bay	8
	Rhode Iſland and Providence Plantations	1
	Connecticut	5
	New York	6
	New Jerſey	4
	Pennſylvania	8
	Delaware	1
	Maryland	6
	Virginia	10
	North Carolina	5
	South Carolina	5
	Georgia	3—65

So that the *American* ſtates in their houſe of commons are not repreſented by above one third of the number by which the people of *Great Britain* are repreſented in their houſe, calculating upon the ſuppoſed population of each country.

The ſenate of the *United States*, which may be conſidered as the upper houſe of parliament, is compoſed of two ſenators from each ſtate, choſen, not from the people at large, but from the legiſlature thereof. No one can be choſen a ſenator who has not attained to thirty years of age, who has not been nine years a citizen, and is not a reſident in the ſtate where he is choſen: he cannot hold any place of honour, truſt, or profit. Theſe ſenators, when aſſembled, are to be divided into three claſſes; thoſe in the firſt claſs ſhall vacate their ſeats at the expiration of the ſecond year; thoſe of the ſecond claſs, at the end of the fourth year; and of the third claſs, at the expiration of the ſixth year.

The preſident of the *United States*, in whom is veſted the executive power, and who muſt not be under thirty-five years of age, is choſen by the nomination of each ſtate, who for this purpoſe names two, and the perſon upon whom the largeſt number of ſuffrages falls obtains this diſtinguiſhed rank, which is held for four years. In like manner the vice-preſident is to be elected, and for the ſame term. The latter is preſident of the ſenate. The preſident, vice-preſident, ſenate, and repreſentatives, are to be paid for their ſervices at a rate to be ſettled by law, and out of the treaſury of the *United States*.

As the firſt regulation, by which each ſtate had only one vote in congreſs, is aboliſhed, and the majority of voices among the repreſentatives now carry a queſtion, the weight of intereſt which the three largeſt colonies poſſeſs in that houſe may be conſidered as greatly predominating over the two ſmalleſt ſtates, who ſend only one repreſentative each; but as the ſenate is compoſed of two delegates from every ſtate, and no bill can paſs into a law without the concurrence of that houſe, the intereſt of each ſtate is equally maintained *there*. The executive powers of the preſident are likewiſe ſubject to the advice and control of the ſenate, by which participation of power each ſtate has an equal opportunity of being informed of the ſecret meaſures which are purſuing by government, and an equal power of enforcing or checking them.

That both the legiſlative and executive branches of government, over more than three millions of people, ſhould be placed in the hands of only ninety-three perſons, might be conſidered as dangerous to the pure principles of a republican conſtitution, by tending to cauſe it to degenerate into an ariſtocracy; but the moſt effectual precautions ſeem to have been taken to repreſs the ſpirit of ambition, and views of aggrandizement inherent in human nature, by every individual being choſen for a ſhort term, from his being inhibited from enjoying any kind of poſt, or receiving, without permiſſion, any kind of preſent.

The preſident, by virtue of his office, is commander in chief of the army and navy of the *United States*, and of the militia of the ſeveral ſtates when called into the actual ſervice of the union. He has power to grant reprieves and pardons for offences againſt the *United States*, except in caſes of impeachment. With the advice and conſent of the ſenate, he has the power to make treaties, but the concurrence of two thirds of the ſenators preſent is neceſſary to render ſuch an act valid. He nominates, and, with the advice and conſent of the ſenate, appoints, ambaſſadors, conſuls, judges of the ſupreme court, and all other officers of the *United States*, not otherwiſe appointed by the conſtitution. He may, on extraordinary occaſions, convene both houſes, or either of them; and, in caſe of diſagreement between them with reſpect to the time of adjournment, he may adjourn them to ſuch time as he ſhall think proper. He receives ambaſſadors, and other public miniſters, and is empowered to take care that the laws be faithfully executed.

The congreſs has the power to lay and collect taxes, duties, impoſts, and exciſes, to pay the debts, and provide for the common defence and general welfare of the *United States*; but all duties, impoſts, and exciſes, are to be uniform throughout the *United States*. To borrow money on the credit of the *United States*. To regulate commerce with foreign nations, alſo among the ſeveral ſtates, and with the *Indian* tribes. To coin money, to regulate the value thereof, and of foreign coin; and to fix the ſtandard of weights and meaſures. To conſtitute tribunals inferior to the ſupreme court. To declare war, grant letters of mark and repriſal. To raiſe and ſupport armies; but no appropriation of money to that uſe ſhall be for a longer term than two years. [The *Britiſh* conſtitution reſtrains it to a ſingle year.] To provide and maintain a navy. To provide for, call forth, arm and diſcipline the militia: each ſtate to appoint the officers of their militia, and to poſſeſs the authority of training them, according to the diſcipline preſcribed by congreſs. All bills for raiſing a revenue to originate in the houſe of repreſentatives. The privilege of the writ of *habeas corpus* ſhall not be ſuſpended, unleſs when in caſes of rebellion, or invaſion, the public ſafety may require it. No money ſhall be drawn from the treaſury but in conſequence of appropriations made by law, and a regular ſtatement and account of the receipts and expenditure of all public money ſhall be publiſhed from time to time. No title of nobility ſhall be granted by the *United States*; and no perſon holding any office of profit or truſt under them ſhall, without the conſent of the congreſs, accept of any preſent, emolument, office, or title, of any kind whatever, from any king, prince, or foreign ſtate. Each particular ſtate is, by this confederation, debarred from entering into any treaty, alliance, or confederation, coin money, emit bills of credit, make any thing but gold and ſilver coin a tender in payment of debts, or grant any title of nobility. No ſtate ſhall, without the conſent of the congreſs, lay any impoſts or duties on imports or exports, except what may be abſolutely neceſſary for executing its inſpection-laws; whilſt the nett produce of ſuch duties ſhall be for the uſe of the general treaſury; and ſubject to the reviſion and control of congreſs.

On ſurveying the nature of the government now eſtabliſhed in *North America*, it will appear, that the genuine ſpirit of the *Britiſh* conſtitution has been much diffuſed through that of *America*. The code of laws which this new ſtate will adopt, is likely to partake no leſs of the principles of *Britiſh* juriſprudence, but it is to be hoped that it will be as much ſimplified, and diveſted of legal chicane and circuity as is conſiſtent with the judicial preſervation of freedom. It is highly gratifying to an *Engliſhman*, when viewing theſe intereſting events, to reflect that not only the conſtitution and laws of his country will be thus perpetuated over a continent, which in future ages muſt be immenſely populous, but that his language will be preſerved ſo long as the world ſhall endure. In the late war, whilſt the *French* officers ſerved in *America*, many of them were ſolicitous to become acquainted with the language ſpoken in the country, and it was at that time no ſmall mortification to the *Americans* to conſider is as the language of their invaders: it became therefore common among them to call the *Engliſh* language the *American*, and to ſay to ſuch foreigners as ſpoke it, "you ſpeak *American* well." "The *American* is not difficult to learn." The Marquis *de Chaſtellux* ſays that they carried their averſion to the language ſo far as ſeriouſly to propoſe introducing another language, which ſhould be taught in ſchools and made uſe of in all public acts.

RELIGION.

The ſpirit of toleration, which prevails in *America* in the fulleſt manner poſſible, has cauſed a vaſt diverſity of ſects to be ſettled on that continent; and led it to be called "the land of ſectaries." In moſt of the *New England* provinces the *Preſbyterians* and Independents are numerous, but in *Connecticut* the form of worſhip and eccleſiaſtical government of the Church of *England* prevail. More to the ſouthward the *Quakers* are extremely numerous, and the *Moravians* are increaſing and flouriſhing greatly. *Methodiſm* likewiſe ſpreads very wide; but it has been ſaid by an extenſive obſerver of the preſent prevailing manners in theſe ſtates, that "the prevalent religion of the principal inhabitants of *America*, and particularly to the ſouthward, is pure *Deiſm*; called by the name of philoſophy in *Europe*. A ſpirit which has contributed in no ſmall degree to the revolution, and produced their unfettered conſtitutions of freedom and toleration." *Chaſtellux' Travels, II.* 197. *Note.*

When the independence of the *American States* was acknowledged by the *Britiſh* government, it became neceſſary that the clergy who adhered to the diſcipline of the church of *England* ſhould obtain ordination, and that all eccleſiaſtical affairs ſhould be tranſacted without croſſing the *Atlantic*, and applying to an *Engliſh* biſhop: at length an act of parliament was paſſed in *England*, authoriſing the metropolitan to conſecrate *American* biſhops. Theſe now ordain prieſts and deacons for the ſervice of the Church of *England* there, but have no revenues annexed to their ſees, and are no otherwiſe diſtinguiſhed from the body of the clergy than by pre-eminence of rank.

STATE OF LEARNING.

There are ſeveral *Philoſophical Societies* eſtabliſhed in *America:* that of *Philadelphia*, which principally owes its exiſtence to the late *Dr. Franklin*, was formed in the year 1771, and conſiſts of about one hundred and fifty members, beſide correſponding members in *England* and other parts of *Europe*. There is another ſociety at *Boſton* of a later origin. One of the members of the former of theſe ſocieties, not long ſince, delivered a diſſertation in which he attempted to prove that an acquaintance with ancient literature was not a neceſſary qualification for the profeſſions either of law, phyſic, or divinity, or for becoming highly eminent and filling the higheſt departments in a ſtate. He ſupported his poſition by obſerving that the two greateſt men in *America*, *Franklin* and *Waſhington*, were unacquainted with the *Greek* and *Latin* languages; he contended that *Shakſpear* derived much of the compaſs and force of his genius from having been exempted from the trammels of a learned education, and inſiſted that the years which were generally employed in teaching boys the dead languages would be much better filled in ſtoring their minds with ideas, not with words; in increaſing their bodily ſtrength and agility, and in calling forth and giving the fulleſt ſcope to every latent power of the human mind.—Such is the boldneſs of ſentiment with which the *Americans* examine and combat eſtabliſhed opinions. The ſeveral *Univerſities* will be ſpoken of when treating of each particular ſtate.

COMMERCE.

The Commerce of *America* cannot now be carried on to ſuch an extent as formerly, when many articles of merchandize, produced in that country, obtained a bounty at the *Britiſh* ports; when *Britiſh* merchants employed large capitals in various branches of *American* commerce: and when the iſlands of the *Weſt Indies* in general were ſupplied with lumber from thence. At preſent the trade with the *French* and *Spaniſh* ſettlements for that article is not leſſened, and, although it is prohibited with the *Britiſh* iſlands, much contraband trade is ſtill carried on. The exports in corn have been of late very conſiderable, and even the lives of millions on the continent of *Europe* have been ſaved by *America* imparting of her ſuperabundance of grain. The fiſheries of the *Americans* upon the banks of *Newfoundland* have ſuffered a very conſiderable dminution; and a want of a circulation of ſpecie, whilſt it gives perhaps a ſalutary check to the importation of foreign ſuperfluities, confines the exports to the natural productions of the country, ſuch as *tar*, *turpentine*, *indigo*, *cotton*, *lumber*, *bee's wax*, *tobacco*, *furs*, and *ginſang*, with ſome few other articles. The laſt year (1789) ſix ſhips went from the ports of *America* to *China*, carrying out *ginſang* and *furs*, and returned with cargoes of teas; but, a want of caſh and credit cauſed great embarraſſments.

SECT. II.

Of NEW ENGLAND.

NEW ENGLAND, when a *Britiſh* colony, the moſt powerful in *North America*, is ſituated between 40°. 55'. and 47°. 35'. N. latitude, 66°. 50'. and 74°. 20'. W. longitude. It is bounded on the N. E. by *Nova Scotia* and the bay of *Fundy*, on the N. W. by *Canada*, on the W. by *New York*, on the S. by the ſound formed by *Long Iſland*, and on the S. E. by the *Atlantic Ocean*. Its extent from N. to S. is four hundred miles, and from E. to W. where broadeſt, one hundred and ninety.

The ſummer-ſeaſon is here much warmer than in the ſame parallel in *Europe*, and generally accompanied for two months together with a clear ſky, which renders the country extremely wholſome; but the winters are much more ſevere; the froſts continuing longer, and being much ſharper.

The country abounds with mines of excellent iron, and ſome of copper; in the woods and ſwamps is plenty of good timber; *oak*, *elm*, *aſh*, *cypreſs*, *pine*, *cheſnut*, *walnut*, *cedar*, *beach*, *aſpin*, and *ſaſſafraſs*, are common here; as are alſo *ſpruce* and *fir-trees*, which are of an extraordinary growth, producing *pitch*, *tar*, *roſin*, and *turpentine*, good maſts, yards, and planks; ſo that more ſhips are ſaid to have been built here than in all the other parts of *America*. They have beſides as good *hemp* and *flax* as any country about the *Baltic*.

When the *Engliſh* firſt landed here they found a variety of fruits that grew wild, particularly *grapes*, *currants*, *raſpberries*, *ſtrawberries*, with a great variety of plants different from thoſe of *England*.

Nothing is ſo much planted here as *Indian* corn, which in ſome parts of *America* is called *maize*.

New England produces great plenty of *beaſts*, both tame and wild: among the former are *cows*, *ſheep*, *goats*, *hogs*, and *horſes*, all originally brought from *England*; but their horſes are generally ſmall, though larger than the *Welſh*, and are extremely ſerviceable. Among the wild beaſts are *deer*, *elks*, *racoons*, *bears*, *wolves*, which are only a kind of wild dogs, and, if taken when young, may be made tame; with *ounces*, *foxes*, *hares*, *rabbits*, *ſquirrels*, *opoſſums*, *ſables*, *beavers*, *otters*, *minks*, and *martens*. One of the moſt ſingular animals of this and the neighbouring countries is the *mooſe*, of which there are two ſorts; the common *light-grey mooſe*, which reſembles the ordinary deer; theſe herd ſometimes thirty together: and the large *black mooſe*, whoſe hair is ten or twelve inches long on the ridge of his back. Of this latter ſort there are ſeldom more than four or five together. The mooſe is made much like a deer, as it parts the hoof, chews the cud, has no gall, and his ears are large and erect. A ſtag-mooſe is bigger than a large horſe. The horns, when full grown, are about four or five feet from the head to the tip, and have ſhoots or branches to each horn, which generally ſpread about ſix feet. When the horns come out of the head they are round like thoſe of an ox, but at about the diſtance of a foot begin to grow a palm broad, and farther up are ſtill wider: of theſe the *Indians* make good ladles that will hold a pint. Dr. *Goldſmith*, in his *Natural Hiſtory*, ſays, the mooſe-deer is another name for the elk.

When this animal goes through a thicket, or under the boughs of a tree, he lays his horns back on his neck, not only to place them out of his way, but to ſecure himſelf from being ſcratched in the woods; and theſe prodigious horns are ſhed every year. This animal does not ſpring or riſe in going, like a deer; but a large one in his common walk has been ſeen to ſtep over a gate five feet high. He is, however, not ſo ſwift as the common deer, though he runs much farther. As the mooſe is tall, and has a ſhort neck, he does not graze like other cattle; for when he eats graſs, it is only the top of that which grows very high, or on ſteep riſing grounds. Theſe animals are fond of water-plants, for which they will wade far and deep. In ſummer they alſo feed upon other plants, herbs, and young ſhrubs; and in winter live upon the tops of buſhes and young trees. The fleſh of the mooſe is very good food; it is more ſubſtantial than common veniſon, and will bear ſalting. The noſe is admired as a great dainty.

There is hardly any where greater plenty of fowls, as turkeys, *geeſe*, *partridges*, *ducks*, *widgeons*, *dappers*, *ſwans*, *heath-cocks*, *herons*, *ſtorks*, *black-birds*, all ſorts of barn-door *fowl*, vaſt flights of *pigeons*, which come and go at certain ſeaſons of the year, *cormorants*, *ravens*, *crows*, *bats*, &c.

The reptiles found in theſe parts, are *rattle ſnakes*, *frogs*, and *toads*, which ſwarm in the uncleared part of the country, where, with the *owls*, they make a moſt hideous noiſe in the ſummer evenings. But where-ever the country is planted, it is pretty well cleared from all noxious animals.

The ſea and rivers afford abundance of excellent fiſh, as *ſturgeon*, *ſalmon*, *cod*, *thornback*, *mackarel*, *herrings*, *lampreys*, *whales*, *grampuſes*, *porpoiſes*, *ſeals*, *ſharks*, and other fiſh great and ſmall. The beſt months for fiſhing are March, April, May, and June.

There are few countries better watered with ſprings, rivers, and lakes. Of its rivers ſeven are navigable; theſe are the *Thames*, which riſes from a lake to the N. of *Maſſachuſet's* country, and running directly S. falls into the ſea below *New London*. The river *Patuxet*, which riſing in the N. W. runs S. E. through *Providence* plantation, and falls into a noble bay of the ſea, near *Swanſey*. The river *Piſcataway*, which runs from W. to E. and falls into the ſea near *Portſmouth*, in *Hampſhire*, with a mouth that reſembles an arm of the ſea, and is capable of receiving the largeſt ſhips. The *Caſco* river, which runs parallel with the former, and falls into a bay of its own name; *Connecticut* river; the great river *Merrimac*; and the river *Saco*, of which we ſhall give an account in treating of the rivers which flow from the *White Mountains* in the province of *New Hampſhire*. To the E. of theſe are many other conſiderable rivers, which riſing far to the N. run almoſt due S. and fall into the ſea to the N. E. of *Caſco-bay*.

It is owing to the conveniency of ſo many fine rivers that this country is ſo full of large and populous towns; and in the country between the rivers is ſuch plenty of ſprings, that there is ſcarce any place where water may not be had by ſinking a well to the depth of ten feet.

New England is ſubdivided into four diſtinct and independent ſtates; but when the country was ſubject to *Great Britain* they were called governments: they are, *New Hampſhire*, *Maſſachuſet's Bay*, *Rhode Iſland* with *Providence Plantations*, and *Connecticut*, of each of which we ſhall ſpeak diſtinctly.

Sir *Walter Raleigh* had given the name of *North Virginia* to the whole eaſtern coaſt of *North America*, in honour of *Elizabeth*, the virgin queen. A company was afterward formed in *England*, called "the *North Virginia* company." Having obtained from *James* I. a grant of thoſe territories, in 1614 the company employed ſome ſhips to fiſh on the coaſts; when the commanders found it expedient to go on ſhore, they were in general kindly received by the *Indians* who frequented thoſe parts. Whilſt things were on this footing, one captain *Thomas Hunt*, enticing a number of the natives on board his ſhip, made them priſoners; and, ſetting ſail, proceeded to *Malaga*, where he ſold them for ſlaves, reſerving only one man, who was called *Squanto*, and who was afterward carried back to his native country; and having been kindly treated whilſt in *England*, his mediation with his countrymen ſerved to abate their reſentment of this outrage.

When ſome years had elapſed after this tranſaction, a religious ſociety, known by the name of *Browniſts*, conſiſting of one hundred and twenty perſons, having obtained a grant of land from *James* I. arrived in November, 1621, at *Cape Cod*, near to which they landed and built the town of *Plymouth*; ſo called from the ſea-port of that name in *England*, at which they had embarked.

Great numbers, of different ſects, of thoſe who were called *Puritans*, from that time went over every year from *England* to ſettle in *America*. In the year 1629 the town of *Salem* was built; and ſoon after *Charles* I. granted theſe new ſettlers a patent, incorporating them by the name of the governor and company of *Maſſachuſet's Bay*. They were empowered to make laws for the good of the plantation, not repugnant to thoſe of *England*; and liberty of conſcience being granted to all who would ſettle there, great numbers of thoſe who could not obtain that privilege in *England* went over, and in a little time new ſettlements were made; particularly one ſtyled *Charles Town*, on the S. ſide of *Charles* river, and that of *Dorcheſter*, at the bottom of *Maſſachuſet's Bay*. Soon after, part of the inhabitants of *Charles Town*, paſſing over to the oppoſite ſhore, erected *Boſton*, the preſent capital of *New England*.

That toleration which theſe Proteſtants claimed as their natural right, they denied to thoſe who held tenets repugnant to their own. Their rigid ſeverity obliged a number of ſettlers to withdraw themſelves, and form a ſeparate colony, which they called *Providence*, upon *Newport-river*, near *Rhode Iſland*. The increaſing population of theſe colonies ſoon after cauſed the town of *Hartford* to be built, in order to form a frontier againſt the incurſions of the *Indians*; who, however had, in general, lived on a friendly footing with their new neighbours. The towns of *Windſor*, *Weathersfield*, and *Springfield*, roſe ſoon after.

A ſeparate government was formed in 1635 on *Connecticut-river*, which afterward obtaining a charter from *Charles* II. The province of *Connecticut* was founded. The charter authorized this colony to elect their own governor, council, and magiſtrates, and to enact ſuch laws as ſhould be moſt advantageous to the colony, provided they were not repugnant to thoſe of *England*.

The perſecution of the Proteſtant Diſſenters in *England* ſtill continuing, great numbers of people removed to *New England*; and the old colonies being overſtocked, there was an abſolute neceſſity of forming new plantations; and therefore, in 1637, *Theophilus Eaton*, Eſq. and the Rev. Mr. *Davenport*, finding there was not room at *Maſſachuſet's Bay*, purchaſed from the *Indians* the lands lying on the ſea-coaſt between *Connecticut-river*, and *Hudſon's* or the *North river*, where they built a town, and named it *New Haven*, from whence the colony derived the name of the *New Haven* colony.

While the ſouthern parts of *New England* were thus filling with inhabitants, other emigrants, induced by the profits ariſing from the fur-trade, ſettled to the N. E. between the rivers *Merrimac* and *Kennibec*, forming two diſtinct colonies, one named *New Hampſhire*, and the other ſtill farther to the eaſtward, was called the province of *Main*.

In the ſpace of no more than tweny years, *New England* had above forty towns, and the *Engliſh* had taken poſſeſſion of this country from the river *Kennebec* on the N. E. almoſt to *Hudſon's-river* on the S. W. an extent of upward of four hundred miles on the ſea-coaſt. Such was the firſt riſe and origin of the *New England* colonies, which from theſe ſmall beginnings, became populous, wealthy, and important.

In this colony the firſt diſſenſions with the mother-country aroſe, on the *Britiſh* parliament impoſing ſtamp-duties on all papers and parchments made uſe of in law-proceedings, and in money-tranſactions between man and man, in the year 1765. This act being repealed the following year, cauſed the general ferment to ſubſide; but in the year 1769 it revived with accumulated force, on freſh internal taxes being laid, particularly a duty of 3*d*. *per* pound on all teas. The mob at *Boſton* aſſembling, committed great outrages on the officers appointed to collect the cuſtoms, and deſtroyed great quantities of tea; for which offences an act of parliament paſſed, prohibiting all commerce being carring on at the port of *Boſton*. The provincial aſſembly had for ſome years been on ill terms with Mr. (afterward Sir *Francis*) *Barnard*, the governor of the province, and he being recalled, was ſucceeded by general *Gage*, and a body of forces, amounting to about 2000 men, which ſailed from *Ireland* and *Hallifax*, arrived ſoon after. But neither the new governor, who was known and reſpected in the province, was capable of allaying the ferment, nor could the appearance of the troops overawe that ſpirit of oppoſition which was gone forth. A general confederacy of all the old colonies from *New England* to *South Carolina* took place; and aſſociations were every where entered into, for the purpoſe of breaking off all commercial intercourſe with the mother country. A general congreſs, compoſed of deputies from each independent county, met at *Philadelphia*, which the authority of the governors of the reſpective colonies was not able to control. The right of *Great Britain* to levy internal taxes on that continent was denied, and the ſecurity of every man's property was conſidered as loſt by the *Britiſh* parliament claiming ſuch a power. Much time was ſpent in fruitleſs negociation; but in 1775 open hoſtilities commenced: the *American* congreſs, as already related, declared the *Britiſh* ſettlements independent ſtates. After a ſeven years war the king of *Great Britain* recognized this confederation by the title of "the united ſtates of *America*," with whom a treaty of peace and friendſhip was entered into in the year 1783.

We ſhall now proceed to that of the four colonies, or diſtinct governments, of *New England, viz. Maſſachuſet's Bay*, *New-hampſhire*, *Connecticut*, and *Rhode Iſland*.

MASSACHUSET'S BAY; *The Towns of* BOSTON *and* CAMBRIDGE.

THE ſtate of *Maſſachuſet's Bay* contains what were formerly the colonies of *Plymouth*, *Maſſachuſet's Bay*, and the county of *York*; the latter of which is ſeparated from the others by *New Hampſhire*, which runs in between them, and is about thirty miles wide next the ſea. That part called the province of *Main*, or county of *York*, is bounded on the W. by *New Hampſhire*; on the N. by *Canada*; on the N. E. by *Nova Scotia*; on the S. E. and S. by the ſea for near two hundred miles. The other part of this province is bounded on the N. by *New Hampſhire*; on the E. and S. by the ſea; on the S. and W. by the colonies of *Rhode Iſland*, *Connecticut*, and the province of *New York*.

There are ſeveral ſafe and convenient harbours along the ſea-coaſt, the principal of which is *Caſco-bay*. This part of the province is well ſtored with wild game, and from it are exported conſiderable quantities of furs and ſkins.

Several fiſheries are carried on to great advantage from the ſea-coſts of this province to the banks of *Newfoundland*, the *Iſle of Sable*, *&c.* eſpecially from the town of *Marblehead*, where is the moſt conſiderable fiſhery in *New England*.

The eſtabliſhed religion is that of the Independents; but there is a number of churches of the epiſcopal perſuaſion. Great care is taken of the education of children, free-ſchools being eſtabliſhed and ſupported by law in moſt of their towns, which are generally ſupplied with able maſters; and at *Cambridge*, about ſix miles from *Boſton*, is an univerſity, or public ſeminary.

This colony is divided into ſeveral counties; in the diviſion ſtyled *New Plymouth* are the counties of *Briſtol*, *Plymouth*, and *Barnſtable*. In *Maſſachuſet Proper*, are the counties of *Suffolk*, *Middleſex*, and *Eſſex*, to which muſt be added the county of *York*, already mentioned; and in each of theſe counties are ſeveral conſiderable towns.

Mr. Burnaby ſays, the lower claſs of people in theſe parts are remarkable for being impertinently curious and inquiſitive concerning every ſtranger that appears among them; and he relates the ſtory of a gentleman, who in travelling through the provinces of *New England*, having met with many impertinences of this kind, adopted a very ſingular expedient to get rid of them. Having obſerved that when he entered an inn (there called an ordinary), every one of the family had a queſtion or two to propoſe to him relative to his ſituation, hiſtory, and deſtination; and that until the curioſity of every one was gratified, and they had conferred together, and compared the information which each had obtained, no refreſhment could be procured, made it his practice, as ſoon as he entered ſuch an houſe of entertainment, to enquire for the maſter, miſtreſs, the ſons, the daughters, the men-ſervants, and the maid-ſervants, and aſſemble them all together, when he addreſſed them thus, "Worthy people, I am B. F. of *Philadelphia*, by trade a ———, and a bachelor; I have ſome relations at *Boſton*, to whom I am going to make a viſit: my ſtay will be ſhort, and I ſhall then return and follow my buſineſs, as a prudent man ought to do. This is all I know of myſelf, and all I can poſſibly inform you of: I beg, therefore, that you will have pity upon me and my horſe, and give us both ſome refreſhment."—This ſtory undoubtedly is told of the late *Dr. Franklin* at the time when he was known only as a private citizen. *Travels*, p. 143.

BOSTON, the capital of this province, is ſeated in the county of *Suffolk*, in the province of *Maſſachuſet Proper*, in 42°. 25'. N. latitude, and in 70°. 37'. W. longitude from *Greenwich*, at the bottom of a fine bay, in a peninſula about four miles in circumference. At the entrance of this bay are ſeveral rocks which appear above water, and upward of a dozen ſmall iſlands, ſome of which are inhabited. There is but one ſafe channel to approach the harbour, and that ſo narrow that two ſhips can ſcarce ſail through abreaſt; but within the harbour there is room for five hundred ſail to lie at anchor. The entrance is defended by the caſtle of *Fort William*, one of the fineſt pieces of military architecture in *America*, it being ſurrounded by a covertway, and joined by two lines of communication from the main guard to a redoubt. The caſtle is defended by a hundred guns, twenty of which lie on a platform level with the water, ſo that it is ſcarce poſſible for an enemy to paſs the caſtle. At the bottom of a bay is a pier near two thouſand feet in length, with warehouſes for the merchants on the N. ſide; and to this pier ſhips of the greateſt burden may come and unload without the aſſiſtance of boats. The greateſt part of the town lies round the harbour in the form of a creſcent; the country beyond it riſing gradually, and affording a delightful proſpect from the ſea. The town has ſeveral ſtreets little inferior to the beſt in *London*; the principal ſtreet runs from the pier up to the town-houſe, a handſome building, with walks for the merchants, as in the *Royal Exchange* in *London*; this edifice contains not only the courts of juſtice, but the council-chamber and the houſe of repreſentatives. The town conſiſts of between four and five thouſand houſes, which are in general well built, and ſeveral of the public ſtructures are very ſpacious and elegant. It has ſeventeen churches, or places appropriated to Divine worſhip. The epiſcopal church is handſomely built and adorned, and the congregation is ſaid to amount to about a thouſand.

The chief public buildings are, three churches, thirteen or fourteen meeting-houſes; the governor's houſe; the court-houſe, or exchange; *Fennieul's-hall*, ſo named after its founder; a linen manufacturing houſe; a work-houſe; a bridewell; a public granary, and a very fine wharf, at leaſt half a mile long. The church called *King's* chapel, is built in the *Corinthian* ſtyle of architecture, and is very elegant. *Haward* college, has been founded above an hundred and thirty years, (from 1790,) and is a thriving ſeminary.

The church-furniture, and ſome pieces of plate, were given by king *William* and queen *Mary*; and it has an organ. According to the computation of the late Dr. *Franklin*, the inhabitants of the northern ſtates of *America* double their numbers in the revolution of ſixteen years. Such a rapid increaſe of population was never equalled in any part of the world in any age.

Mr. Burnaby deſcribes the country round *Boſton* as very delightful. On *Bunker's-hill*, which ſtands cloſe to the town, and commands it, there is a beacon, to give an alarm in caſe of ſurpriſe. From this hill is one of the fineſt proſpects imaginable, being beautifully variegated and richly grouped.

CAMBRIDGE, the principal place in the county of *Middleſex*, is ſeated on the N. branch of *Charles* river, ſix miles to the N. W. of *Boſton*, in 42°. 25'. N. latitude, and 71°. 10'. W. longitude from *Greenwich*.

It has ſeveral fine houſes and good ſtreets. It was originally called *New Town*, but on founding the univerſity there its name was changed to *Cambridge*, and contains two ſpacious colleges, called by the names of *Haverford-college* and *Stoughton-hall*, with a public library, ſaid to be the beſt furniſhed with books of any in that part of the world. It conſiſts of a preſident, five fellows, and a treaſurer. All the magiſtrates of the *Maſſachuſet's* colony, with the miniſters of ſix neighbouring towns for the time being, are viſitors. This univerſity never conferred any degree above that of maſter of arts, till it obtained a new charter from king *William* and queen *Mary*, by which it had the power of creating doctors in divinity, but this privilege it has ſeldom exerciſed.

It is a handſome building, though not yet completed. It already contains three ſpacious halls for the claſſes, a cabinet of natural philoſophy, and inſtruments of every kind, as well for aſtronomy, as for the ſciences dependent on mathematics; an extenſive gallery, appropriated for the library, and a chapel. The greateſt part of the books depoſited here were preſents made by liberal minded and ſcientific men in *England*, but to no one is it ſo much indebted as the late Mr. *Thomas Hollis*. The profeſſors of the univerſity live in houſes provided for them, and the ſtudents board in the town.

The firſt blood that was drawn in the contention between *Great Britain* and her colonies, was in a ſkirmiſh at *Lexington*, about three miles from this town, in the year 1775, when the king's troops were driven back to *Boſton* with conſiderable loſs. *Charles Town*, ſituated on the oppoſite ſhore of *Charles's* river to *Boſton*, was unhappily ſet on fire in the attack of *Bunker's Hill*, which happened ſoon after. It then conſiſted of four hundred houſes, which were all entirely conſumed.

Salem, a ſea port to the N. of *Boſton*, ſtands between two creeks, or rather arms of the ſea, and extends near a mile inland; the ſhips and buildings which appear intermingled, form a very beautiful picture. It was the firſt ſettlement made by the *Engliſh* in *New England*.

A little to the N. ſtands *Beverley*, a town founded and rendered flouriſhing, during the laſt war, chiefly by the exertions of two *American* merchants of the name of *Cobbet*, whoſe privateers captured *Britiſh Weſt Indian* ſhips to a vaſt value.

Lynn, is a ſmall but populous town, ſubſiſting by the manufacture of women's ſhoes, with which every part of the continent is ſupplied from hence.

Nantucket, is a peninſula S. E. of *Boſton*, forming on the E. a narrow ſlip of land, which turning northward terminates in *Cape Cod*. From hence the fiſheries are carried on with great ſpirit, the place being entirely occupied by ſeamen, who are the moſt bold, hardy, and robuſt race of men on the *American* continent.

Martha's Vineyard is an iſland more to the S. a few miles to the S. E. of which is the iſland of *Nantucket*.

New Hampshire. *The White Mountains.* *The Town of* Portsmouth.

THE ſtate of *New Hampſhire* is bounded on the S. by *Maſſachuſet's Bay*, on the W. by the province of *New York*, on the N. by *Canada*, and on the N. E. by the county of *York*, having only thirty miles of ſea-coaſt.

The moſt conſiderable mountains in this province, and indeed in all the ſtates near the coaſt, are called the *White Mountains*, from their appearing like ſnow; they being generally ſuppoſed to conſiſt of a white flint, from which the reflection of the ſun is very brilliant and dazzling. From their prodigious height they are to be ſeen at a very great diſtance, and it is not certain that any perſon was ever on the top of them. The baſis of theſe mountains is a tract about fifty-five miles ſquare, from which they riſe in craggy heads one above another, in an irregular manner, all the way to the top. For the firſt four or five miles, *beech*, *hemlock*, and ſome *white pine*, grow; higher up the growth is chiefly *black ſpruce* for ſix or ſeven miles, then the ſides are cloathed with a white moſs; and ſtill farther all kinds of vegetation fail, which alone would render the aſcent very difficult, the mountain being extremely ſteep.

Many ſtreams of water guſh out of the ſides of theſe mountains, which run down with great rapidity. Indeed the largeſt and beſt rivers in *New England* riſe from ſome part of them.

In the province of *New Hampſhire* are raiſed great quantities of *Indian corn*, *rye*, *oats*, and *peas*, it being too cold for wheat. It likewiſe produces ſome *hemp* and *flax*. That part of *New Hampſhire* bordering upon the coaſt is not fertile, but the land is good at the diſtance of forty miles from the ſea; the country produces little fruit, and the cyder is indifferent. It has great plenty and variety of timber, and its foreſts abound with all kinds of game common to the climate. There are here likewiſe bred black cattle, horſes, ſheep, &c. but in no great abundance. Its rivers abound in *ſalmon*, *ſhad*, *trout*, *eels*, &c. Some fiſheries are carried on in the ſea-ports; but its ſcanty limits on the ſea, prevent the inhabitants engaging ſo conſiderably in them as their neighbours.

The religion of this province is the ſame as in *Maſſachuſet's Bay*, and there is only one epiſcopal church erected, which is at *Portſmouth*.

The town of **Portsmouth**, the metropolis of the ſtate, is pleaſantly ſeated on *Piſcataqua-bay*, having a ſafe and convenient harbour, where the largeſt ſhips may ride ſecurely. The acceſs to the harbour is eaſy, the road extenſive, and two miles above the town the depth of water is ſeven fathom. Although it is conſiderably to the north of *Boſton*, this harbour is never frozen; the rapidity of the current preventing it.

The white pine, which grows in great abundance in *New Hampſhire*, furniſhes the fineſt maſts in the world, many of them being forty yards long, and as many inches in diameter. Theſe trees are never cut down but in times of deep ſnow, as it would be impoſſible, in any other ſeaſon, to get them down to the river. When the trees are fallen, they yoke ſeventy or eighty pair of oxen, which drag them along the ſnow. It is, notwithſtanding, exceedingly difficult to put them firſt in motion, which they call raiſing them; and when they have once effected this, they never ſtop, upon any account whatever, till they arrive at the water ſide. Frequently ſome of the oxen are taken ill; upon which the drivers immediately cut them out of the gears.

In this part of the country are vaſt flights of wild pigeons; theſe are birds of paſſage, and are of beautiful plumage. At night they ſettle upon trees, to rooſt, in ſuch numbers as ſometimes to break down the largeſt branches by their weight. The inhabitants then go out with long poles, and knock vaſt numbers down. During their periodical flight the common people ſubſiſt almoſt entirely upon theſe birds.

Connecticut

CONTAINS not only the original colony of the ſame name, but that of *New Haven*, they being incorporated into one in the year 1692, and ſtill retain, by the charter then granted them, all the privileges of their ancient charters; but ever ſince their union they have kept up two ſeats of government, namely, at *Hartford* and *New Haven*; at which places their general court, or aſſembly, ſits alternately for tranſacting the affairs of the colony. This ſtate is bounded on the N. by the *Maſſachuſet's*, on the E. by *Rhode Iſland* and a part of *Maſſachuſet's Bay*, on the S. by the *Sound*, and on the W. by *New York*, extending in length from *Stonington* to *Rye*, in the borders of *New York*, about a hundred miles, and in breadth from *Saybrook* to the borders of *New Hampſhire* about ſeventy.

The ſoil of this colony is various, a great deal of it being uneven, rocky, cold, and barren; but in other parts it is fertile, and exceedingly pleaſant, particularly on *Connecticut-river*; where the fields produce all kinds of grain and fruit common to the climate in great abundance, yet the ſnow is in general the only manure. In this ſtate are bread great numbers of *black cattle*, *horſes*, and *ſwine*; and the inhabitants raiſe a conſiderable quantity of *flax* and *hemp*. Here are ſome iron works, which are carried on to great advantage.

The religious perſuaſions here are the ſame as in the other *New England* governments; but there are more adherents to the church of *England* than in all the other northern ſtates.

Here are many fine towns, agreeably ſeated on the river *Connecticut* and along the *Sound*, the principal of which, for trade and commerce, were *New London*, *Hartford*, and *New Haven*: but theſe ſuffered greatly in the late war; the latter is ſeated on *New Haven-bay*, and is elegantly laid out in regular ſtreets, having a parade in the centre. It contains about two hundred dwelling-houſes, beſide public buildings, among which was a college that made a very handſome appearance; but this beautiful place was laid in aſhes.

VERMONT.

THE ſtate of VERMONT is a vaſt country, ſituated to the W. of *New Hampſhire* and *Maſſachuſet*'s bay, and to the N. of *Connecticut*, between *Connecticut* river and *Hudſon*'s river. This country was long an object of contention between the colonies of *New York* and *New Hampſhire*. In the early part of the late war *Ethan Allen*, who undertook an expedition againſt *Ticonderoga*, without any other aid than that of the volunteers who followed him, made himſelf chief of this country, and formed an aſſembly of repreſentatives, which granted lands, and the country was governed by its own laws. *M. Chaſtellux* ſays that two hundred acres of land there might, in the year 1781, have been purchaſed for forty dollars, or nine pounds ſterling. *Travels*, I. 27. Under the pretext that they formed the frontier againſt *Canada*, and were obliged to guard it, they furniſhed no contingent to the expenſes of the war. They had long no other name than the *Green Mountain boys*, but diſliking that appellation, they tranſlated green mountain into French, which made *Verd Mont*, and by corruption *Vermont*. Repreſentatives from this ſtate have very lately been received into congreſs, and it now forms the fourteenth ſtate in the federal union.

RHODE ISLAND.

THIS ſtate contains only *Rhode Iſland* and *Providence Plantations*, which were united by charter about the ſame time as the colony of *Connecticut*. This ſtate, thus united, has but a ſmall territory, which lies and is bounded on the N. by *Maſſachuſet's Bay*, to the S. by the ocean, to the W. by *Connecticut*; to the E. is a bay in which is *Rhode Iſland*, which is about twelve miles in length, and five or ſix in breadth; this bay is formed by the peninſula of *Nantucket*, ſtill more eaſtwardly.

The climate of *Rhode Iſland* is much more mild than that of *Boſton*, though it only lies about ſixty-five miles to the S. of that town. It produces *Indian corn*, *rye*, *oats*, *peas*, *hemp*, *flax*, and ſome *wheat*; with moſt kinds of fruit, common to the climate, in great perfection, eſpecially on *Rhode Iſland*, which, for its beauty and fertility, is much admired, it being exceeded perhaps by no ſpot in *New England*. They breed *cattle*, *ſheep*, and *horſes*, in abundance; and the latter are eſteemed the beſt on the continent. They likewiſe make conſiderable quantities of *butter* and *cheeſe*.

Liberty of conſcience is here granted in the fulleſt extent, but the greateſt number of the inhabitants are Quakers. There are alſo many *Jews*.

The principal towns are *Newport*, which is pleaſantly ſeated on *Rhode Iſland*, and has a ſafe and good harbour for ſhips of burden, with its entrance defended by a fort, on which are planted three hundred guns; and *Providence*, which is alſo delightfully ſeated on a river of the ſame name, at the head of the bay, and is a thriving town, with a conſiderable trade. It lies in 41°. 51'. N. latitude, and 71°. 26'. W. longitude from *Greenwich*.

NEWPORT contains about a thouſand houſes, chiefly built of wood, and ſeven or eight thouſand inhabitants. The court-houſe is a handſome brick building; and here is a public library, built in the form of a *Grecian* temple, of the *Doric* order, with a portico in front with four pillars, ſupporting a pediment. Here is likewiſe a neat building for the uſe of the free-maſons; alſo a church, two preſbyterian meeting-houſes, one Quakers, three baptiſts, one *Moravian*, and a *Jews* ſynagogue. A lighthouſe is erected at the entrance of the harbour.

About three miles from the town is an indifferent wooden houſe, built by the famous *Berkeley*, afterward biſhop of *Cloyne*. Here he reſided a conſiderable time, and is ſaid to have written his *Minute Philoſopher* in this place. It commands a fine view of the ſea, and of ſome wild rugged rocks to the eaſtward. When he left *America*, *Berkeley* gave this houſe to the college of *Newhaven*, in *Connecticut*; his books he divided between that college and *Cambridge*.

The town of PROVIDENCE is diſtant from *Newport* about thirty miles. The country from thence to *Boſton* is chiefly grazing ground, laid out in neat incloſures, ſurrounded with ſtone walls, and rows of *Acacia*, or locuſt trees. It ſtands on the weſtern ſide of *Pentucket-river*, over which a bridge is thrown, above a fine fall of water, of about twenty feet, which ruſhes through ſeveral chaſms in a rock, which runs diametrically acroſs, and ſerves as a dam to retain the general body of water. *Burnaby's Travels*, p. 131.

This colony ſuffered greatly in the conteſt with *Great Britain*; it was early ſubdued by a detachment from general *Howe*'s army; the *American* forces afterward made ſome very ſpirited deſcents. In 1778, the count *d'Eſtaing* attacked the iſland by ſea, whilſt an army, commanded by general *Sullivan*, made an aſſault by land; but both theſe aſſailants were obliged to deſiſt. The latter end of the year 1779 the *Britiſh* troops evacuated it.

SECT. III.

The other Northern States of AMERICA.

NEW YORK *and* LONG ISLAND.

THIS ſtate is ſituated between 71°. 45'. and 75°. 20'. W. longitude, and between 40°. 30'. and 45°. N. latitude. It is bounded on the E. by *New England*, on the N. by *Canada*, on the W. by part of *Pennſylvania* and the lands of the *Five Nations*, on the S. W. by the province of *New Jerſey*, and on the S. by the *Atlantic* ocean; extending two hundred miles in length from N. to S. but not above twenty-five in breadth, particularly between *Connecticut* colony and *Jerſey*.

As this country lies to the S. of *New England*, the climate is more temperate; the ſoil is generally fertile, producing in great abundance all ſorts of grain and fruit common to that latitude. The many extended plains on the banks of its noble rivers are remarkably fruitful.

The principal river of *New York* is *Hudſon*'s, or the *North* river, which riſes within twenty or thirty miles of *Lake George*, and runs S. diſcharging itſelf into the ſea at *New York*, or *Sandy-hook*. This river is navigable for veſſels of one hundred tons as high as *Albany*, which is a courſe of one hundred and fifty miles; and ſhallops may go up eight or ten miles higher.

The towns ſeated on its banks have been particularly expoſed to the deſolations of war during the conteſt with *Great Britain*: among theſe, *Æſopus*, a particularly thriving ſettlement, was reduced to aſhes.

The next conſiderable river of this province is the *Mohawk* river, which riſes in the *Mohawk* country, and is navigable, except where there are ſome falls, for large boats, upward of an hundred miles: it runs eaſterly, and has on its banks many fine plains, particularly that called the *German-flats*, from its being ſettled by the *Germans*, and extends along the river fifty miles in length, and about two in breadth. This tract is exceeded by none in *America*, it being eaſily cultivated, and producing, in the greateſt abundance, *wheat*, *barley*, *peas*, *hemp*, and *flax*. This river diſcharges itſelf by ſeveral mouths, called the *Sprouts*, into *Hudſon's-river*, about eight miles above *Albany*; and about two miles above its confluence with that river it has a cataract, where the whole ſtream falls perpendicularly about ſeventy feet. In this part of the province many ſaw-mills have been erected, the country abounding with timber.

Theſe rivers cheriſh great plenty of fiſh; and in this part of the province are ſeveral excellent iron-works, ſome of which are ſaid to manufacture the beſt iron in *America*.

There are very fine lands upon the *Eaſt-river*, or *Sound*, though it is very rocky, as are indeed moſt of the high lands of this province on the continent; theſe being mountainous, and at preſent hard to cultivate, but afterward they richly reward the labour of the huſbandman.

The manufactures carried on in this ſtate are not to be compared to thoſe of *Philadelphia*. Here a ſmall quantity of cloth is made, ſome linen, hats, ſhoes, and other articles for wearing apparel; alſo *glaſs* and *wampum*, the current money among the *Indians*.

LONG ISLAND is about a hundred and fifty miles in length, and in ſome places twenty-five, but generally about fifteen, miles broad; the middle of it is indeed ſomewhat barren, but both ends have moſt excellent ſoil, which perhaps is improved to as great advantage as any lands in *America*, producing corn and fruit to great perfection, and abounding in *horſes*, *cows*, *ſheep*, and *ſwine*, more than any other part of the province. In the midſt of the iſland is a celebrated plain ſixteen miles long, and four broad, to which they have given the name of *Saliſbury-plain*, from its having as fine turf as that of *Saliſbury-plain* in *England*. As there is an excellent breed of horſes on the iſland, they have races here every ſeaſon, to which the gentlemen of *New England* and *New York* reſort.

It is ſaid, that the crops which have been for more than a century raiſed on the land here, without allowing it any reſpite, or recruiting it by any manure, have at length greatly reduced its fertility. *Mr. Burnaby* aſſerts, that there is not a tree growing upon the iſland, and the inhabitants ſay that there never were any. Strangers are therefore always carried to ſee this place, as a great curioſity, and the only one of the kind in *North America*. *Travels, p.* 115.

Sir *William Howe*, with an army of 35,000 men, made a deſcent here in 1776, and ſubdued the whole iſland, which the king's troops retained poſſeſſion of during the war.

There are ſome other iſlands belonging to the ſtate not at all inferior to this in fertility of ſoil, though they are of much leſs extent; as *Staten*, or *Streighten Iſland*, which is oppoſite to the W. end of *Long Iſland*, and forms the narrows or ſtraits through which ſhips paſs that are bound to and from the ſea to *New York*: *Fiſher's Iſland* lies in the ſound between *Long Iſland* and the colony of *Connecticut*; and *Manahattan*, upon which the city of *New York* is built: there are ſeveral others both in the bay and ſound, one of which, called *Barn Iſland*, about twenty-five miles from *New York*, which in 1762 obtained a charter for erecting a city; but the commotions which followed put a ſtop to all improvements.

This ſtate is divided into ten counties, which, proceeding from N. to S. down *Hudſon's-river*, lie in the following order: *Albany*, *Ulſter*, *Dutcheſs*, *Orange*, *King's-county*, *Cheſter*, *New York*, *Queen's-county*, *Suffolk*, and *Richmond* counties, which abound in farms, but have not many great towns; the principal are the city of *New York*, *Schenecteda*, *Albany*, and *Weſt Cheſter*.

NEW YORK is extremely well ſituated for trade, it having a ſafe and commodious harbour, acceſſible three different ways for ſhips of burden, namely, by way of the ſound, by the ſtraits between *Long Iſland* and *Staten Iſland*, which is the moſt uſual and eaſy entrance, and between *Staten Iſland* and the ſhore of *Jerſey*. There are alſo eaſy conveyances to it by water from the rivers and lakes, except a few carrying places, both to *Montreal* and *Quebec* on the N. and to the lakes *Erie* and *Ontario* on the W. for ſix hundred miles; and upon the ſea it has not only the advantage of its coaſts, but alſo *Connecticut* and the *Jerſeys*, their trade in a great meaſure centering here, where they exchange their ſeveral commodities for foreign goods.

The famous navigator, *Henry Hudſon*, firſt diſcovered this ſpot in the year 1689, and ſailed up the great north river, to which he gave his name. As he was then in the ſervice of the *Dutch* republic, although an *Engliſhman* by birth, he took poſſeſſion of it in their names, and the next year a colony was ſettled, and named *New Belgia*. It was taken by the *Engliſh* in the year 1664, and was confirmed to them by the treaty of *Breda* which followed; it then changed its name to *New York* in honour of the king's brother.

This city is ſituated in 40°. 43′. N. latitude, and 74°. 10′. W. longitude, from *Greenwich*; at the S. end of *York-county*, in an iſland at the mouth of *Hudſon's-river*, about fourteen miles long, and three broad. It ſtands upon an eminence, and contained between two and three thouſand houſes, generally pretty well built with brick and ſtone; but the ſtreets are very irregular, though defended by a wall and fort, which are formed ſo as to anſwer the purpoſes both of ornament and defence. It has ſeveral ſpacious public buildings, among which the college, the court-houſe, and the governor's houſe within the fort, are the moſt conſiderable. Hence there is ſcarce any town in *North America* that makes a better appearance, but it ſuffers a great inconvenience from the want of freſh water; the town being ſupplied with that neceſſary from ſprings at ſome diſtance. There are ſix handſome churches belonging to thoſe of the church of *England*, with others belonging to the *Swedes* of the *Lutheran* perſuaſion, to the *Dutch Calviniſts*, to the *French* refugees, and the *Engliſh* Diſſenters; the *Jews* have alſo a ſynagogue.

The eſtabliſhed religion here is that of the church of *England*. The clergy are twelve in number, who receive 50l. a year currency, with voluntary contributions; they are likewiſe miſſionaries from the ſociety for the propagation of the Goſpel, for which each receives 50l. ſterling a year.

The college is eſtabliſhed upon the ſame plan as that of the *Jerſeys*, except that the principles of the church of *England* are here profeſſed: its fund is ſmall, and there are not one half the number of ſtudents here as at *Naſſau-hall*. In the year 1753, the general aſſembly raiſed a ſum for its eſtabliſhment by means of a lottery. In the year 1765, a ſociety was formed in this city, by the name of "The Society for promoting Arts, Agriculture, and Œconomy, in the province," upon a ſimilar plan with that of *London*.

The army under Sir *William Howe* took poſſeſſion of this city in 1776, when it was ſet on fire by ſome incendiaries, and one third of the buildings were unhappily conſumed.

"The inhabitants of *New York*, in their character, very much reſemble the *Pennſylvanians*; more than half of them are *Dutch*, and almoſt all traders: they are therefore habitually frugal and induſtrious. The women are handſome and agreeable. Their amuſements are balls, and ſleighing expeditions upon the ſnow in winter; and in ſummer parties upon the water, and fiſhing; or making excurſions into the country. There are ſeveral houſes of accommodation, ſituated on the banks of *Eaſt* river, near *New York*, where it is common to have turtle feaſts: on which occaſions thirty or forty ladies and gentlemen meet and dine together, drink tea in the afternoon, fiſh and amuſe themſelves till evening, and then return home in *Italian* chaiſes, (which are the faſhionable carriages here, and in moſt parts of *North America*, except *Virginia*.) Each chaiſe has generally a gentleman and lady. There is a bridge, about three miles diſtant from *New York*, which is always paſſed over on returning, and is called 'the *Kiſſing Bridge*,' as it is a part of the etiquette for the gentleman to ſalute the lady, who puts herſelf under his protection, upon this bridge." *Burnaby's Travels*, p. 113.

New York is at preſent one of the moſt conſiderable ports in *North America*, from whence an extenſive commerce is carried on. Before the ſeparation from *Great Britain*, it was the rival port of *Boſton*, but ſince the peace it has left that port far behind. Two cauſes have operated favourably toward producing this pre-eminence,—the ſpecie acquired by the *Britiſh* army being ſo long ſtationed here, and the furs procured from the *Indians* on the back ſettlements.

The next conſiderable place in this province is ALBANY, which is ſeated on the W. ſide of *Hudſon's-river*, a hundred and fifty miles to the W. of *New York* city, and has a fort erected for its defence. It contains near four hundred houſes, and here the chiefs of the *Five Nations* uſed to meet the governors of the northern colonies. The laſt meeting was in the year 1685, which Mr. *Jefferſon* calls "the laſt chapter of their hiſtory." Until the year 1756, it was the practice of the farmers about *Albany*, when the river was frozen, to depoſit their dung on the ice, to be carried away by the ſtream, on the return of ſpring. In the war which then broke out with *France*, this place became the head quarters of the *Britiſh* army, and the officers firſt taught the *Americans* the value of this compoſt to enrich the land.

SARATOGA, a ſmall fort, ſituated about fifty miles N. of *Albany*, on the E. ſide of *Hudſon's-river*, will be rendered famous in the hiſtory of the world, for being the place where a combined army of *Britiſh* and *Heſſians*, amounting to 3500 men, ſurrendered priſoners of war to the *Americans*, under general *Gates*, in October 1777.

NEW JERSEY.

THE ſtate, containing the two *Jerſeys*, is ſeated between *New York* and *Pennſylvania*; and is bounded on the E. by *Hudſon's-river*, which ſeparates it from the province of *New York*, and the *Atlantic* ocean, which waſhes its coaſt, from the mouth of *Hudſon's-river* to the mouth of *Delaware-river*, on the S. E. the S. and S. W. including *Delaware-bay*, and on the W. by *Pennſylvania*, from which it is ſeparated by the *Delaware*. It lies between the 39°. and 41°. 19'. N. latitude, extending in length, on the ſea coaſt, and alſo along *Hudſon's-river*, above an hundred and twenty miles, and eighty in breadth from E. to W.

New Jerſey has very great natural advantages of hills, valleys, rivers, and large bays. The *Delaware* is on one ſide, and *Hudſon's river* on the other; beſide which it has the *Rariton*, *Paſaic*, and *Amboy* rivers, and *Newark* and *New York* bays. It produces vaſt quantities of *grain*, beſide *hemp*, *flax*, *Indian corn*, and other articles. The number of its inhabitants has been computed at ſeventy thouſand. The manufactures here are inconſiderable. This province is rich in copper-ore, one copper-mine in particular, belonging to general *Schuyter*, is worked to great advantage.

There are no remarkable rivers that extend far into the province; that named *Paſſaick, or Paſaic*, which diſcharges itſelf into the ſea to the northward of it, has a remarkable cataract, about twenty miles from its mouth, where it is about forty yards broad, and runs with a very ſwift current, till arriving at a deep chaſm or cleft, which croſſes the channel, it falls about ſeventy feet perpendicular in one entire ſheet. One end of the cliff is cloſed up, and the water ruſhes out at the other with incredible rapidity, in an accute angle, to its former direction, and is received into a large baſon. Thence it takes a winding courſe through the rocks, and ſpreads again into a very conſiderable channel. The cleft is from four to twelve feet broad. When Mr. *Burnaby* ſaw it, the ſpray formed two beautiful rainbows, the primary and ſecondary, which greatly aſſiſted in producing as fine a ſcene as imagination can conceive. This extraordinary phænomenon is ſuppoſed to have been produced by an earthquake. What greatly heightens this ſcene is another fall about thirty yards above, where the water glides over ſome ledges of rocks, each two or three feet perpendicular. *Burnaby's Travels*, p. 98.

This province contains *Eaſt* and *Weſt Jerſey*; the former of which is the largeſt and beſt inhabited, and is divided into *Bergen-county*, *Eſſex*, *Middleſex*, and *Monmouth-county*. *Weſt Jerſey* contains the ſame number of counties, which are *Burlington*, *Glouceſter*, *Salem*, and *Cape Mary*.

The chief towns in the *Jerſeys* are,

PERTH AMBOY, the capital of the county of *Middleſex*, in *Eaſt Jerſey*, which is pleaſantly ſeated at the mouth of the river *Raritan*; and is ſo commodiouſly ſituated for trade, that ſhips of three hundred tons may come up in one tide, and lie before the merchants' doors.

BURLINGTON, the capital of the county of the ſame name, and of all *Weſt Jerſey*, is ſeated on an iſland in the middle of the river *Delaware*, to the N. of *Philadelphia*, in *Pennſylvania*, and oppoſite to *Briſtol* in that ſtate.

TRENTON, a thriving town, ſituated on the *Delaware*, above *Burlington*, will be ever memorable for the defeat of a body of *Heſſian* troops, which were ſurpriſed by general *Waſhington*, and near a thouſand men made priſoners. This event gave a new turn to the *American* war.

PRINCETOWN, twelve miles from *Trenton*, is chiefly diſtinguiſhed for its ſchool and college for the education of diſſenters; in the grammar ſchool there are about twenty boys, and in the college, which is named *Naſſau-hall*, there are about forty ſtudents; but the building is ſufficiently ſpacious to contain two hundred, being likewiſe extremely convenient and airy. Here is a preſident, or provoſt, and ſome profeſſors. This ſeminary ſuffered much in the late war; the library has been in a great meaſure carried off, but the celebrated *Orrery* by *Rittenhouſe* ſtill remains uninjured. *Marquix de Chaſtellux' Travels* I. 163.

This province was contained in the grant made by *Charles* II. to his brother *James*, in 1663, who the following year made a grant of that part now called *New Jerſey* to lord *Berkley* and Sir *George Carteret*. Theſe two proprietors ſent *Philip Carteret*, Eſq. as governor; and the lands being granted to the ſettlers for ſix or ſeven years free of quit-rents, induced many of the Diſſenters of *England* to ſettle in the country.

Lord *Berkley* ſometime after aſſigned over his right to Mr. *William Penn*, and three other aſſignees, with whom Sir *George Carteret* agreed to divide the country into two equal parts, by running a line from the S. E. point of *Little Egg-harbour* almoſt due N. The eaſternmoſt part of this diviſion was allotted to Sir *George*, whoſe family was of the *Iſle of Jerſey*, and from this circumſtance the country was called *Eaſt New Jerſey*; while the other part, which was allotted to Mr. *Penn* and the other proprietors, was then diſtinguiſhed, and ſtill retains the name of *Weſt New Jerſey*; and thus they became for ſome time two ſeparate and diſtinct governments. After Sir *George's* death his truſtees ſold his right to Mr. *Penn* and eleven other purchaſers, and they not long after ſold a part of theirs to the earl of *Perth* and eleven others. Theſe diviſions and ſubdiviſions cauſed the land to be branched out into ſo many ſhares, that the reſpective owners thought them ſo inconſiderable, that they took little or no concern about them; and no proper care being taken to ſettle and fix the boundaries of their eſtates, it became difficult, if not impoſſible, to aſcertain their reſpective rights; ſo that the proprietors, wearied out, ſurrendered the entire government of both the *Jerſeys* to the crown, only reſerving to themſelves their other rights and privileges, and ſtipulating for ſome immunities to the people, which were to be given in charge to the governors appointed by the crown, as part of their inſtructions.

Upon this ſurrender the crown annexed the government of the two *Jerſeys* to that of *New York*; in which ſtate they continued till the year 1736, when they became one government, and *Lewis Morris*, Eſq. was appointed the firſt governor.

The *Jerſeys* now form one independent ſtate in the general confederation.

PENNSYLVANIA.

PENNSYLVANIA was alſo conſidered by the *Dutch* as a part of *Nova Belgia*, and was included in *Charles* the Second's grant to his brother *James*, duke of *York*, in the year 1663. It is ſeated between 39° 45' and 43° N. latitude, and between 74° 50' and 80° W. longitude; it being bounded on the E. by the

Jerſeys, on the S. by *Maryland*, on the W. by the *Alighaney* mountains, and on the N. by the lands of the *Five Nations*, and *New York*; extending in length about three hundred and thirty miles, and two hundred in breadth.

The air is here ſweet, ſerene, and clear. Autumn begins about the twentieth of October, and laſts till the beginning of December; after which froſty weather is very common, and ſometimes the river *Delaware*, notwithſtanding its breadth, is frozen over; but in ſuch ſeaſons the air is dry, clear, and agreeable. The ſpring laſts from March till June, during which the weather is more inconſtant. In the ſummer months, July, Auguſt, and September, the heats are very great, but are alleviated by cool breezes that render them very tolerable. During this ſeaſon the wind is S. W; but in ſpring, autumn, and winter, it is generally N. W.

Pennſylvania produces not only great abundance, but great variety of grain; it yields likewiſe *flax-ſeed*, *hemp*, and nouriſhes many kinds of *cattle*.

The largeſt river in this province is the DELAWARE, which riſes in the country of the *Five Nations*, and flows into the ſea at *Delaware-bay*. It is navigable for near an hundred and fifty miles up, after which it has ſome falls; the ſettlements upon this river extend an hundred and fifty miles from the city of *Philadelphia*. The lands on its banks are excellent. Its courſe is nearly S. E. and it affords great plenty of all ſuch fiſh as are common to the climate; eſpecially ſturgeon, which are here cured and exported in greater abundance than in any other part of *America*.

The SUSQUAHANNAH riſes in the ſame country, at the diſtance of about ninety miles from the *Apalachian* mountains, and runs at firſt S. W. and then S. E. nearly parallel to the *Delaware*, till it diſcharges itſelf into *Cheſepeak-bay*, in *Maryland*. This river is likewiſe navigable a great way up the interior country, and, if poſſible, exceeds the other in the pleaſantneſs and fertility of the ſoil on its banks, which produces in great abundance all ſorts of corn, eſpecially wheat.

The SCHOOLKILL, or SCULKILL, has its ſource in the ſame country, running almoſt parallel to the two other rivers, till at length it falls into the *Delaware*, near the city of *Philadelphia*, above which it is navigable for boats at leaſt a hundred miles higher up the country.

Theſe rivers, with the numerous bays and creeks in *Delaware-bay*, capable of containing the largeſt fleets, render this province admirably ſuited for carrying on a foreign trade. The country alſo abounds in ſtreams fit for mills, and all other kinds of mechanical expedients for eaſing the labour of man; hence there is here manufactured a greater quantity of iron than in any province on the continent.

PHILADELPHIA, the capital of this province, lies in 39°. 57′. N. latitude, and in 75°. 13′ W. longitude from *Greenwich*. It is built upon one of the fineſt plans that ever was formed, laid out by Mr. *Penn* himſelf, and far excels any other city in *North America*. It is ſeated between two navigable rivers, the *Delaware* on the W. and the *Schoolkill* on the E. which join each other a few miles below, and is near a hundred miles above the bay, into which the river diſcharges itſelf. It is an oblong of near two miles in length, extending nearly to each of thoſe rivers, where the front facing each is a mile in length. The ſtreets are wide and ſpacious, with a dry defended walk on each ſide, and are exactly ſtrait and parallel to each other: the houſes are in general well built, and make a handſome appearance, eſpecially ſeveral of the public buildings, which are not exceeded by any in the country. The *High-ſtreet*, which runs the whole length of the city, is a hundred feet wide, parallel to which run eight ſtreets, that are croſſed by twenty more at right angles, all of them thirty feet wide. Every owner of a thouſand acres has his houſe in one of the two fronts facing the river, or in the *High-ſtreet*, running from the middle of one front to the middle of the other. In the centre of the city is a ſquare of ten acres, encompaſſed by the town-houſe and other public buildings, and in each quarter of the city is a ſquare of eight acres. Several canals are let into the town from each river, which add to the beauty and convenience of the place. It has the fineſt market of any on the continent, it being of a prodigious extent, well built, and as well regulated and ſupplied. Its quay is two hundred feet ſquare, to which ſhips of four or five hundred tons may come up, and lay their broadſides cloſe to it; with wet and dry docks for building and repairing ſhips, beſide magazines, warehouſes, and all other conveniencies for exporting and importing merchandize. Scarce any thing can appear more beautiful than the city and the adjacent country, which for ſome miles may be compared to a fine and flouriſhing garden. The city contains about four thouſand houſes, and about twenty thouſand inhabitants, among whom are many very wealthy merchants.

In the year 1766, Dr. *Franklin* ſuppoſed 160,000 white inhabitants in *Pennſylvania*, a third of whom were Quakers, and another third *Germans*. The colony of *Pennſylvania*, including ſtrangers, the ſame calculator ſuppoſed to have doubled the number of its inhabitants in ſixteen years. There are very few negroes or ſlaves.

Earl *Cornwallis*, with a detachment from the army under Sir *W. Howe*, took poſſeſſion of this city on the twenty-ſixth day of September 1777, after the *Americans* had been repulſed with great loſs at *Brandywine-creek*; but the next year it was found neceſſary for the king's troops to abandon it, when croſſing the *Delaware*, the army marched through the *Jerſeys*, and regained their former ſtation at *New York*.

The principal towns in the county of *Philadelphia* are *Carliſle*, *Lancaſter*, and *German-Town*, the latter chiefly inhabited by *Germans*, who there ſpeak and tranſact their buſineſs in their own language. General *Waſhington* attacked the *Britiſh* troops encamped there in 1777, but was driven back with great loſs.

In the ſame country is likewiſe the city of RADNOR, on the S. ſide of *Schoolkill-river*, which is the capital of a large diſtrict planted by the *Welſh*. To the S. of the county of *Philadelphia*, lies that of CHESTER, the capital of which is the town of *Cheſter*, ſeated on the river *Delaware*. The county of NEWCASTLE lies to the E. of *Cheſter*; its capital bears the ſame name. KENT lies S. of the laſt-mentioned county, and *Dover*, its chief town, has a very commodious port. The moſt ſouthern county is that of SUSSEX, the capital of which is *Lewes*. On the weſtern ſide of the province is LANCASTER, which is about ſixty miles from *Philadelphia*, and is the ſecond town in *Pennſylvania*.

Manufactures are carried on in *Pennſylvania* to a conſiderable extent. In *German-Town* large quantities of thread ſtockings are wove. Some *Iriſh*, who are ſettled here, have introduced the *linen* manufacture. *Beaver hats* are manufactured to great perfection. The other commodities are *cordage*, *linſeed-oil*, *ſtarch*, *myrtle-wax*, and *ſpermaceti candles*, *ſoap*, and *earthen-ware*.

Its First Settlement.

The *Dutch* were the firſt planters here as well as at *New York*, and living near the bay in the neighbourhood of that province, applied themſelves chiefly to trade. Afterward ſome of the inhabitants of *Finland* ſettled near the *Freſhes* of *Delaware*, the country being ſo called above and below the falls of that river for a conſiderable length; there they applied themſelves to huſbandry, and had a governor appointed them by the king of *Sweden*, their own ſovereign. Between theſe two neighbouring ſettlements there happened frequent diſputes, till the *Dutch* becoming too powerful for the *Swedes*, the latter ſubmitted to their ſtronger neighbours, and the *Swediſh* governor made a formal ſurrender of the country to the governor, for the States-General; after which this province continued ſubject to that republic, till the *Engliſh* drove the *Dutch* out of *New York*.

Admiral *Penn*, afterward Sir *William*, who, in conjunction with colonel *Venables*, conquered the iſland of *Jamaica*, being in high credit with *Charles* II. and the duke of *York*, had the promiſe of a grant of this country from that king as a reward for his paſt ſervices; and ſome years after his death, his ſon ſtrenuouſly ſolicited the promiſed grant; which, as the king owed conſiderable ſums to his father, he obtained in the year 1679, and the original patent was dated the 4th of March 1680.

Mr. *Penn* afterward obtained part of *Nova Belgia*, or *New York*, which was added to the country he had acquired by the firſt grant, the whole of which he called *Pennſylvania*, or *Penn*'s country.

Mr. *Penn*, who had embraced the principles of the Quakers during the life-time of his father, had the more earneſtly ſolicited the above grant on account of the perſecution of the Diſſenters, and particularly of his friends the Quakers, who were haraſſed all over *England* by the ſpiritual courts, he himſelf being many times thrown into priſon, for preaching, and even for being preſent at their aſſemblies. There were at this time a few *Engliſh* in *Pennſylvania*, over whom he placed as governor colonel *William Markham*, his nephew, to whom both the *Dutch* and *Swedes* ſubmitted. Mr. *Penn* being continually under the hand of perſecution, reſolved now to put himſelf at the head of as many as would go with him, and remove to this country; but firſt ſent over a body of ſettlers from *London*, *Liverpool*, and *Briſtol*, who purchaſed conſiderable quantities of land at the rate of twenty pounds for one thouſand acres, and ſubject to the payment of a ſmall quit-rent. The male and female ſervants were to have fifty acres when their ſtipulated time of ſervitude expired; and the owners of land were to have fifty acres *per* head for as many ſervants as they carried over. In order to ſecure the new planters from being moleſted by the *Indians*, he appointed commiſſioners to confer with them about the land, and to confirm a league of peace. By theſe firſt adventurers he alſo ſent a very affectionate and friendly letter to the native *Indians*, and the ſame year went to *Pennſylvania* himſelf, taking with him a great number of people, who, with thoſe he had ſent before, and that immediately followed him, amounted to two thouſand perſons.

As ſoon as he arrived, he took the government into his own hands; entered into a treaty of peace with the *Indian* chiefs; and, inſtead of immediately taking advantage of his patent, purchaſed of them the lands he had obtained by his grant, judging that the original property and eldeſt right was veſted in them; and at the ſame time engaged the ſeveral nations of *Indians*, inhabiting or claiming this territory, to promiſe that they would not ſell or diſpoſe of any of their lands but to him, or ſuch as ſhould be authorized by him to purchaſe them; giving orders to his agents not to take poſſeſſion, or ſuffer any perſon to take poſſeſſion of any lands, till they had firſt made a fair purchaſe of them from the *Indians*. This generous behaviour not only ſtrongly recommended him to the natives, who conceived a very high opinion of his honour and integrity, but laid a foundation for a laſting peace with them, and effectually prevented many of thoſe tragical calamities which ſeveral of the *American* provinces ſuffered in their infant ſtate.

He then ſettled the conſtitution and laws of the country by the conſent of the inhabitants, who unanimouſly agreed to the fundamental conſtitution of *Pennſylvania*, which he himſelf had drawn up and publiſhed in *England*: That none who believe in the exiſtence of a God, and live peaceably, ſhall be moleſted on account of their religious ſentiments, or be compelled to frequent or ſupport any religious worſhip contrary to their declared opinion; and that all perſons who profeſs and believe in Jeſus Chriſt ſhall be capable of ſerving the government in any capacity, notwithſtanding any particularities in their religious opinions, they ſolemnly promiſing, when required, allegiance to the crown of *Great Britain*, and fidelity to the proprietor and governor of the province.

He likewiſe determined, that no laws ſhould be made there, nor money raiſed, but by the conſent of the inhabitants, who were empowered to enact what laws they pleaſed for the proſperity and ſecurity of the province. He eſtabliſhed courts of juſtice in every county, with proper officers to prevent law-ſuits and contentions; and that three peace-makers ſhould be choſen by every county-court in the nature of common arbitrators, to hear and put an end to all the differences that aroſe between man and man. He alſo ordained, that every ſpring and autumn an orphan's court ſhould be held in each county, to inſpect and regulate the affairs of the widows and orphans.

Mr. *William Penn* ſtaid there two years, till he had ſettled every thing to his own and the people's ſatiſfaction; during which he behaved in ſuch a manner to the *Indians*, that he inſpired them with the moſt extraordinary love and eſteem both for him and his people. Their deſcendants received from them the ſentiments of this benevolent man, and ſtill ſpeak of him with the greateſt gratitude and affection; and whenever they would expreſs an extraordinary regard for any *Engliſhman*, they ſay, "we eſteem and love you as if you were that good man *William Penn* himſelf."

MARYLAND.

THIS province is bounded on the N. by *Pennſylvania* and *Delaware* bay; on the E. by the *Atlantic* ocean and the three lower counties of *Delaware*; on the S. by the *Atlantic*, and *Potowmac* river, which ſeparates it from *Virginia*; and on the W. by the *Apalachian* mountains, and *Virginia*. It is ſituated between 37°. and 40°. N. latitude, and between 75°. 20'. and 79°. 40'. W. longitude, extending in length from N. to S. about one hundred and forty miles; but its breadth is not ſo conſiderable; and is divided into the eaſtern and weſtern diviſions by the great bay of *Cheſapeak*.

This country is watered by innumerable ſprings, and many fine rivers; the principal of theſe are the *Potowmac*, which, riſing in the mountains on the N. W. runs to the S. E. ſeparating *Maryland* from *Virginia*, and then falls into the middle of *Cheſapeak-bay*. The river *Patuxent* riſes in *Arundel-county*, and running to the S. E. falls into *Cheſapeak-bay*, about twenty miles to the northward of the river *Potowmac*. The *Severn* riſes on the N.W. and running S. E. falls into the upper part of the ſame bay. *Saſſafras* river riſes in the N. E. and running almoſt due W. diſcharges itſelf into the mouth of the ſame bay. *Wicomo* river riſes on the eaſtern ſhore, runs to the S. W. and falls into the ſame bay, almoſt oppoſite the mouth of *Potowmac* river.

MARYLAND is divided into ten counties, of which the four following are on the E. ſide of the bay; *Somerſet*, *Dorcheſter*, *Talbot*, and *Cecil-county*. Thoſe on the W. ſide of the bay are *St. Mary's-county*, *Charles-county*, *Prince George-county*, *Anne Arundel-county*, and *Baltimore-county*. In each county there is a public free-ſchool for reading, writing, and accounts; but there is no college in the province.

The capital of the province is ANNAPOLIS, which is ſituated on the *Severn*, and conſiſts of about one hundred and fifty houſes; the ſtreets are not regularly laid out, and are not paved; but the houſes in general are pretty well built, and ſeveral are of brick. Throughout the whole colony of *Maryland* the planters live on their ſeveral plantations, which are almoſt all ſituated upon ſome navigable creek or river. Hence all the towns are extremely ſmall; indeed, every plantation is a little town of itſelf, provided with proviſions and neceſſaries, a conſiderable planter's warehouſe being a kind of ſhop, where he not only ſupplies his own family, but inferior planters, ſervants, and labourers, and has commodities to barter for tobacco and other goods, there being but little money in the province, and but little occaſion for it, tobacco anſwering all the uſes of gold and ſilver; and indeed there are but few ſhopkeepers who live entirely by buying and ſelling. Before the rupture with *Great Britain*, the tobacco of this province, called *Oroonoko*, was ſold to great advantage, and the planters of *Maryland* found ſuch good vent for it in foreign markets, that ſeveral hundred ſail of ſhips were annually employed in the commerce between *Great Britain* and this country. The number of inhabitants amount to about eighty-five thouſand whites, and twenty-five thouſand negro ſlaves.

BALTIMORE is the next conſiderable town in *Maryland*, and is ſituated to the N. of *Annapolis*. In the neighbourhood of *Baltimore* a town has been lately erected, and called NEW TOWN; it lies on the banks of a navigable river, and is likely to grow into conſiderable conſequence, being choſen by Congreſs for the ſtated place of its aſſembly; for by a clauſe in the firſt article of the new conſtitution the Congreſs received "a power of exerciſing excluſive legiſlation over a diſtrict, not exceeding ten miles ſquare, as may by ceſſion of particular ſtates, and the acceptance of Congreſs, become the ſeat of the government of the United States."

Maryland was eſteemed a part of *Virginia* till the year 1632, when *Charles* I. made a grant of all the country not then planted on the N. of *Potowmac* river, to lord *Baltimore*, a Roman-catholic nobleman, and his heirs; and the country was called *Maryland*, in honour to queen *Mary*, conſort to king *Charles*. His lordſhip ſent *Leonard Calvert*, Eſq. with ſome popiſh gentlemen and other adventurers, to the number of two hundred, to take poſſeſſion of the country; who ſailing from *England* in November 1633, arrived at the mouth of *Potowmac* river in March following, and having fixed on a proper place for beginning a ſettlement, purchaſed the land of the natives. The place they choſe was near a ſmall bay at the mouth of the above river, and was a town belonging to the *Yoamaco Indians*, who having been defeated by the *Suſquahana Indians*, had reſolved to leave the town, and retire farther into the country. The *Engliſh* arriving at this happy juncture, and fulfilling their agreement, were immediately put into poſſeſſion of one half of the town.

The *Engliſh* having thus by purchaſe become maſters of a ſpot of clear ground, they not only began to build a town, which they called *St. Mary*'s, but to plant corn; they alſo purchaſed all the corn they could of the *Indians*, by which means they had very ſoon a plentiful ſupply; and as they prudently took care to cultivate a friendſhip with the natives, they avoided the diſtreſſes to which the neighbouring colony of *Virginia* had often been reduced. While they were cultivating the ground, and raiſing large quantities of *Indian* corn, the natives went every day into the woods to hunt for game, bringing veniſon and turkies to the *Engliſh* colony in great plenty, for which they received knives, tools, and toys.
